IBN RUSHD. Abu ʿl-Walid Muḥammad b. Aḥmad al-Dīṣad ("the grandfather" of the celebrated philosopher Averroes or Ibn Rushd [q.v.]), the most prominent Mālikī jurist of his day in the Muslim West, whose very real merits as an exponent of Mālikī have been eclipsed by his grandson’s fame as an exponent of Aristotle. Born in 450/1058-9, he died on 30 March 1126 to warn the Almoravid ruler Ibn Rujud, as our Ibn Rushd was, of the danger that still threatened Islam from within, Ibn Rushd hastened to Marrakesh on 30 March 1126 to warn the Almoravid ruler ʿAli b. Yūsuf b. ʿAṭṭūfīn [q.v.] and to advise him. Expressing his legal opinion that the Mozarabs had, by their treachery, lost all right to protected status, he prevailed upon ʿAli to have large numbers deported, and in consequence many were transported before he started on the journey to Andalus for Christendom and had gained wide-
al-Mukaddamān al-mamahhāddāt bi-bayn mā ḥaḍāthu rūṣūm al-Mudāmān-xama (Cairo 1324; Muḥāmmād ṭibr. Baghdād, n.d. but 1906). To his pupil Ibn al-Wazzān (n.b. - Wārāk) we owe an important—historically and otherwise—collection of fatāwā entitled Nawāzil Ibn Ruhdī, a selection of which, together with son illumination, an introduction, has been published by Iḥṣān Ābās in Al-Abbāh, xxii (Beirut 1969), 3-63. In such of Ibn Ruhdī’s writings as have come down to us, one perceives an incisive and logical mind and clarity of thought matched by lucidity of expression.

**Bibliography:** All the essential references have been brought together in Iḥṣān Ābās’s introduction to the Nawāzil cited above.

(I.J. Latham)

**IBN SA’DĀN, ĀBD ‘ABBĀD ALLĀH AL-HUSAYN B. AHMAD, official and vizier of the Buyids in the second half of the 4th/10th century and patron of scholars, d. 374/984-5.**

Virtually nothing is known of his origins, but he served the great amīr ‘Ābd al-Dawla Fana-Khusraw (q.v.) as one of his two inspectors of the army (ārīd al-qāyda) in Baghdad, the ārīd responsible for the Turkish, Arab and Kurdish troops. Then when ‘Ābd al-Dawla’s murderer, his son ‘Abd al-Salām al-Dawla Marzūbān assumed power in Baghdad as supreme amīr, he nominated Ibn Sa’dān as his vizier. He occupied this post for two years, and seems to have made it his policy to reverse some of the trends of the previous reign; thus according to Ābū Hayyān al-Tawḥīdī (q.v.), he favoured the release in the new reign of the historian Ibrāhīm b. Hīlāl al-Ṣabi’ (see al-Ṣabi’) and took charge of the proper burial of Ibn Bakīyya (q.v.), the former vizier of ‘Īza al-Dawla Bahjīt. As executed by ‘Ābd al-Dawla. However, his enemy Abu ‘l-Kāsim ‘Īsā b. ‘Arīd was one of his dependants, but kept himself inaccessible from the populace of Baghdad—in Rūḏrāwārī’s phrase, bādhiq’ li-ʾaṭāʾihī, māniyya li-baḥā’ihī—thus incurring unpopularity to the point that his personal boat on the Tigris (zabqah) was once stoned. His claim to lasting fame does not derive from Sirāḍī, but from his epistle on friendship, the Nishwdr al-muhddara, in which all kinds of speculative and philosophical questions were discussed. He was the friend and patron of scholars which had lapsed on ‘Ābd al-Dawla’s death—and as the organiser of a circle of literati in its highly important military district. By the early 9th/15th century the family was playing a vital part in defending Nasrid frontiers and enjoyed a reputation for valour in the oḥdd.

(C.E. Bosworth)

**IBN AL-SARRĀDĪ, appellative of a family prominent in the 9th/15th century history of the Nasrid kingdom of Granada.**

Passing into Spanish literature as “Abencerraje” in the 16th century (“Bencerraje” may date from the end of the 15th), the name appears as “Abencer(r)-age”. Although this was not completed for the 18th century later in French as “Abencerrage” (which, pace Levi-Provencal (Hist. Esp. Mus., i, 351) does not derive from Sirāḍī, and finally in English as “Abenerring-geh”).

The patronymic “b. al-Sarrādī” is known well before the 9th/15th century. It is borne, for example, by Abu ‘l-Wafa’ b. ‘Abd Allah b. ‘Abd al-Malik, a 5th/11th century panegyrist of the Hammūḏīds (q.v.), and in the 7th/13th century both by a grammarian of Pechina living in Almeria and by yet another Abū ʿAbd Allāh Muḥammad, a fākīh and khoṭṭī of the Great Mosque of Granada. Early in the next century we find an Abū ʿAbd Allāh Muḥammad b. Ibrāhīm b. al-Sarrādī, a Granadan doctor and botanist whose works, now lost, were esteemed in their day.

Up to the beginning of the 8th/14th century the patronymic is borne by isolated figures whose connections with one another are really indeterminate. If, as claimed, the B. al-Sarrādī were of noble Arab lineage—seemingly of old Yemeni stock—it is strange to find no mention of them in the great Hispanic-Arab genealogical treatises.

From the mid-8th/14th century we begin to discern in Granada the emergence of a clearly definable family, militarily successful and increasingly influential. One notable member was Abū ‘Isā b. Ibrāhīm b. Abī ʿAbd Allāh b. al-Sarrādī (d. 766/1364), commander of the kasaba of Ronda and governor of its highly important military district. By the early 9th/15th century the family was playing a vital part in defending Nasrid frontiers and enjoyed a reputation for valour in the qāwāb. Before mid-century it...
already constituted a powerful and ruthlessly ambitious political party.

In 1419 the party staged its first rebellion through members in command of Guadix and Illora. Resentful of 'Ali al-Amin, then regent for the Nasrid minor Muhammad VIII El Popa, they slew the former and replaced the latter by Muhammad IX. El Zaid, grandson of Muhammad V. The grand vizierate fell to Abu l-Hadidjadj Yusuf b. al-Sarradj, organiser of the coup, and thereafter for eight years the Abencerrajes held sway in Granada.

When, in October 1427, Muhammad was restored by loyalists led by 'Ridwan Bannigash (Banegas), Yusuf b. al-Sarradj and his followers opted not to follow their sultan into exile at the court of the Hafid Abd Fairis in Tunis, but to lie low and spy a chance for pardon. This once gained, they plotted and achieved the restoration of Muhammad IX with the aid of Juan II of Castile and Abu Faris. By December 1429 Yusuf b. al-Sarradj and his sultan were back in power in Granada and so remained till December 1431, when the former fell at Laga fighting a joint Castilian and loyalist Granadan force, whose success put Yusuf IV on the throne. But Yusuf's reign was brief: by April 1432 Muhammad IX was back on the throne and Yusuf deposed. Through the years Yusuf's deposed reign was marked by the grand vizierate up to 1445—prominent positions were assigned to the sons of Yusuf b. al-Sarradj (Muhammad and Abu l-Kasim) and other members of their family and party. The period 1445-60, on the other hand, was one of vicissitudes as the Nasrid throne fell successively to Muhammad X El Coto and Yusuf V, and then reverted first to Muhammad X and then to Muhammad IX, who reigned till the end of 1453 or early 1454. Since the sultan Sa'd (Cincia) Muley Zaid (Cah. ng. 1454-62, 1462-4) owed his throne to the B. al-Sarradj—now led by Abu l-Surur al-Mufarridj—the family enjoyed his favour for a time. In 1460 we find the son of Abu l-Kasim (above), another Abu l-Hadidjadj Yusuf, as one of the most influential khalifs of the realm, and yet another Yusuf b. al-Sarradj as a waqif in Mufarridj's administration. But soon came a rift: resentful of tutelage, perhaps, and arrogant in covert attempts to have his son Abu l-Hasan 'Ali (Muley Hacen) supplant him, Sa'd had Muhammad and the waqif Yusuf summarily removed to the Alhambra (July 1462). Muhammad and 'Ali b. al-Sarradj fled to Malaga and set up Yusuf V (Abn Isma'il)—who was assured of Castilian support—as counter-claimant. His premature death brought Abu l-Hasan 'Ali to the fore again, and in August 1464, the latter, in concert with the B. al-Sarradj, overthrew Sa'd and seized the throne. The B. al-Sarradj were back in power: an Ibrahim b. al-Ahdar, an influential khalif who had married into the family, became grand waqif. His administration included Abu 'Abd Allah Muhammad, son of Muhammad b. Yusuf al-Sarradj (above). A strange circumstance was soon to undo them. In 1419 'Ali had married Fatimah, daughter of Muhammad IX. On his death, the negotiation in which they held him as their patron shifted to Fatimah. And so 'Ali's late marriage to a Christian renegade was seen as a personal affront, and they drifted into rebellion. Savage retribution followed. Those who escaped with their lives fled, some to asylum in the noble houses of Medina Sidonia and Aguilas, other to various Castilian border towns. In 1482 they then slipped back to supplant 'Ali by his eldest son—by Fatimah—Abu 'Abd Allah Muhammad (XII), the famous Boabdil. Till the end of Boabdil's reign and of Muslim Granada, the family's party held supreme political power. Granada once in Christian hands (1492), the Abencerrajes sold up and moved to the Alpujarra, then in March 1493 emigrated almost en masse to the Maghrib. Ironically, the family that had once defended Islam in Spain so well, had, by their part in ruinous civil wars, done so much to bring about its downfall.

Their story as told in Perez de Hita's Historia de los vandos de Zegers y Abencerrajes (1595, 1619) is fiction born of a few grains of truth. In this celebrated novel, which moulded most subsequent literary treatment of "moros de Granada", the Abencerrajes are the model of all chivalry, valour and charm. Their rivals are the brave but jealous and brutally perfidious Zegers—from Thagri "borderer", a term seemingly applied to Magribi madhabli in Spain (who were in fact politically a spent force well before the 9th/10th century). False and secretly accused of dishonouring Boabdil and plotting against him, the leading Abencerrajes are unsuspectingly summoned to the Alhambra and assassinated. Not all perish; the word gets out, and insurrection follows. After a fierce struggle Muley Hacen is proclaimed, but finally the rebels are pacified, and Boabdil is restored. This once gained, they plotted and fled to refuge in Castle where they convert to Christianity. The honour of Boabdil's wife—besmirched by the Zegers at the beginning of the whole saga to turn Boabdil against the Abencerrajes—is finally vindicated and the accusers slain by Christian knights. During the 17th and 18th centuries the theme of the Abencerrajes was taken up by other European authors, notably Chateaubriand in his Les aventures du dernier Abencerage.

The Tale of the Abencerrajes, in the Cuarto de los Leones of the Alhambra, derives its name from various assertions that thirty-odd Abencerrajes were slain there by Muhammad X or, as others say, Muley Hacen or Boabdil. The fiction appears to have its roots in (a) Sa'd's assassination of Mufarridj and Yusuf (above), and (b) Hernandez de Baeza's account of the murder of Muhammad IX and his sons by Sa'd and Abu l-Hasan 'Ali in the Cuarto de los Leones.

IBN SHAKRÜN (pronounced Shukrul) AL-MIKNASI, Abu Muhammad of Abu Nasr Abū 'Abd al-Kādir b. Abū ʿAbd Allāh al-Munābbar al-Madāqārī, Moroccan physician and poet who was contemporary with sultan Mawlay Isma'il (1082-1139/1673-1727) and who died after 1149/1727-8. He received a traditional education at Fas, studied medicine under Abū Ḍarrākk [q.v. above] Ahmad b. Muhammad, performed the pilgrimage and profited by the opportunity to follow courses in medicine at Alexandria and Cairo. He then returned to settle at Meknes, where he entered the sultan's service, but led a fairly austere and cloistered life.

As well as a commentary on a grammatical work and various poems which reveal a certain talent for versifying, Ibn Shakrün owes mainly his fame to an alwīkā of 673 verses on food hygiene, the Shukrānīya, which has always been highly popular among the people; it gives interesting pieces of information on food practices of the time (ed. Tunis 1232/1905; lith. Fas 1394/1916; ms. Rabat K 1613). He was also the author of a risāla called al-Naḥa fi l-waṭriyya

IBN AL-SARRĀDJ — IBN SHAKRÜN AL-MIKNASI

**IBN AL-SUKKĀT** (vars. Sukkāṭ, ʿSukkāṭ, ʿSaqqāṭ), *al-Muwaffak Fādiʿ Allāh b. Abī ʿl-ʿAṣār ʿal-Katīb al-Naṣrānī*, officier de l’État mamlouk, qui est mort après le centenaire à Damas en 726/1325, ayant laissé derrière lui la réputation de n’avoir été un bon chrétien et un honnête homme de bien. Il composa une Harmonie des quatre gospels (un travail qui correspond à la description de ms. 400 de la Bibliothèque Nationale de Paris) et l’estima parmi les plus illustres de son temps.

The **Taʾlīh** is thus the sole work of Ibn al-Sukkāt which has survived. It is in the conventional form of a biographical collection containing entries, arranged in alphabetical order, of persons who died between 657/1258 and 725/1324. Beyond the apparently monotonous nature of the compilation, it is from the choice of persons covered, the terms used to describe them and the anecdotes related about them, that the personality of the author emerges. He appears as a Christian firm loyal to his personal dignity and without compromising his faith.

The historian al-Safādī is not confirmed by another, more elaborate account. According to one report, he visited Baghdad towards the end of the first decade of the 4th century (913-22 A.D.), he heard from a number of renowned hadith students were al-Darakūnī, Ibn Abī Ḥāmid, Ahmad ibn al-Walīd b. Iṣa b. Mūṣa al-Ḥāṣimī respectively. His father was a Khāṣīn Zaydī making a living by copying books and teaching the Kurʿān, literature and grammar, and was given the nickname ʿUkda because of his knowledge of the intricacies of Arabic grammar. He was visited Baghdād three times. The first time, he was still a youth, in 727/886, he heard hadīth from a number of renowned hadiths. According to one account, he was briefly imprisoned by the vizier ʿAlī b. Iṣa [q.v.] at the instigation of the followers of Ibn ʾAṣār until his criticism was proved correct. This detail is not confirmed by another, more elaborate account. A third time, he visited Baghdād towards the end of his life and taught in the mosque of al-Ruṣāfī, where he is known to have transmitted hadīth in Saḥra 330/November 941, and in the Shīʿī mosque of Barāṭhā. His only other trip was to the Ḥadīj. Thus he transmitted mostly from Kūfāns and visitors to Kūfā. He died on 7 Dhu ’l-Ka‘da 332/1 July 944 in Kūfā.

Ibn ʿUkda was generally recognized as the greatest hadiths transmitter of Kūfā in his time. Fabulous stories were related about his prodigious memory and the hundreds of thousands of hadiths collected and memorized by him and the camel-loads of books which his library contained. His transmission spanned the whole gamut of Kūfān traditions, Sunnī, Ḥanāfī, and Shīʿī and Sunnī and Shīʿī traditions were equally eager to hear from him. Among his prominent Sunnī students were Abū Ṭabarānī, Ibn ʿAṣīr, al-Tābakūnī, Ibn Ṭabīb, Abū ʿUbayd Allāh al-Marzūqī. Though he was criticized for relating objectionable (muḥrak) hadīth, reports on the blemishes (mubāhah) of Abū Bakr and ʿUmar, and traditions from newly-discovered books (waḏāʾa), and on this basis was accused of having spoiled the hadīth of Kūfā, he considered a faithful transmitter. Among the Ḥanāfīs, Hārūn b. Mūṣa al-Tallāʾūkbarī and Ṭabīb b. Muḥammad b. al-Saḥī transmitted from him. He appears frequently as the only Kūfān transmitter of early Kūfān Ḥanāfī traditions in his time complementing the common Ḥanāfī transmission of the school of ʿAlī ibn ʿAbd Allāh Zaydī until his death. Actually, he seems to have
supported the views of the Talibiyya, who considered in principle all descendants of Abū Tālib as suited for the imamate, rather than those of the sectarian Zaydiyya of his time, who restricted it to the descendants of 'Ali. He appears as an important informant of Abu 'l-Faradj al-Isfahani, to whom he transmitted in particular the K. Nāsib Abī Tālib of the 'Aliyd Yāḥya b. al-Hasan b. Ḍafār.

IBN 'UMDAR [see al-Dīkān, above]

IBN 'UTHMĀN AL-MIKNĀSĪ. 'Abū 'Abd Allāh Muḥādnn b. 'Abd al-Wahāb b. 'Uṯmān, a Moroccan diplomat and vizier of the 12th/18th century, who played a prominent role in the forging of ties between his country and Spain. At the start of his career he followed his father as preacher in one of the mosques of Meknes; he came to the attention of the Sultan, Sidi Muḥammad b. 'Abd Allāh (1171-1204/1757-89) who, at a date difficult to determine, took him into his service as a secretary. In 1193/1799, he was sent to the court of King Charles III of Spain with the object of obtaining the redemption of Algerian captives and of renewing friendly relations between the two states; this mission met with success and led to the treaty of Arajuz which was signed in 1780 (see V. Rodriguez Casado, La embajada del Talib Sidi Mohamed en España, Madrid 1941, 304-9; idem, Política marroquí de Carlos III, Madrid 1946, 245-306; M. Arribas Palau, El texto árabe del Convenio de Arajuz de 1780, in Tamuda, vi (1958); idem, Carta árabe de Meknès Muhammad b. 'Abd Allāh relativa a la embajada de Ibn 'Uṯmān de 1780, in Hesperis-Tamuda, ii/2-3 (1961), 327-35), and Ibn 'Uṯmān has left a detailed account of his mission, at-Hāṣir fi ṣīḥāk al-asrāf published by M. El Fasi in Rabat in 1965, with a long introduction describing the life and work of the diplomat.

On his return, he was appointed vizier, but the success of his first mission induced the sultan to entrust him with a second, to Malta and Naples, to secure the redemption of more captives; this mission, carried out in 1196/1782, was also made the subject of an account entitled al-Badr fi ṣīḥāk al-asrāf min yad al-adwār al-kitāb (this has been summarised by Ibn Zaydān, Ḥašif, iii, 320-9, and a number of manuscripts exist in Rabat and Meknès).

Three years later, Ibn 'Uṯmān was entrusted with a new mission, this time to the court of 'Abd al-Hamīd I in Isfahan, with the object of resolving the conflict between the Ottoman sultan a Persian crown protected by Turkish soldiers on the borders of Algeria and Morocco. The diplomat set out on the 1st Muharram 1200/4th of November 1785 and did not return to Morocco until 29th Shībān 1202/4th of June 1788; he had in fact taken advantage of his stay in the Orient to make the Pilgrimage, which provided him with the material for a third tābiḥ, with a more elaborate title than the preceding two: al-Tābīḥ fi ṣīḥāk al-adwār al-hāṣir wa τάμοι της του ταξιανικής προστασίας (this was also published by Ibn Zaydān, Ḥašif, iii, 50-5; an edition by M. El Fasi has been in the course of preparation for a considerable length of time).

On his return, he was sent to escort to Algeria the captives released by Spain. On the death of 'Abd Allāh b. 'Abd Allāh, he continued in the service of Mawlāy al-Yaṣīd (1204-6/1789-92) who set him on to the court of Charles IV of Spain; setting out at the end of December 1790, he was received by the sovereign in Madrid on the 27th of January 1791, but his mission was unsuccessful and he set out for home on the 18th of August; the following day, Charles IV declared war on Morocco; Ibn 'Uṯmān was however permitted to return to Rabat, where he lived as a private citizen until April 1792. Some very interesting documents concerning his stay in Spain have been discovered and published by M. Arribas Palau (La estancia en España de Muḥammad ibn 'Uṯmān (1791-1792) in Hesperis-Tamuda, iv/1-2 (1963), 120-92; cf. the same Cartas árabe de Marruecos en tiempo de Mawlāy al-Yaṣīd (1790-1792), Tetuan 1961). On the death of al-Yaṣīd, Ibn 'Uṯmān returned to Morocco and entered the service of Mawlāy Sulaymān (1206-38/1792-1823), who had already written to him in Spain entrusting him with a diplomatic mission. The new sultan did not hesitate to appoint him governor of Tetuan, as well as his representative in dealings with foreign consuls in residence in Tangier (see M. Arribas Palau, Muhammad ibn 'Uṯmān designado gobernado de Tetuan a finales de 1792, in Hesperis-Tamuda, ii/1 (1961), 113-27). Because of his talents as a diplomat, he was also given the task of resolving internal problems; one of his major achievements was persuading, in 1797, the governor of Saff, 'Abd al-Rahmān b. Nāṣir, to support the new administration; the latter had previously refused to recognise Mawlāy Sulaymān. His last important diplomatic act was the signing on 22 Ramadan 1212/2 March 1799 of the treaty between Morocco and Spain (see M. Arribas Palau, El texto árabe del tratado de 1790 entre España y Marruecos, in Tamuda, vii (1959), 9-51). He died soon after at Marrakesh, where he was travelling in the Sultan's entourage (beginning of 1214/mid-1799) and it was his rival al-Zayyānī who was entrusted with the task of returning his belongings to Meknès.
In addition to descriptions of journeys, which are also historical documents of great value, Ibn 'Uthmān is the signatory of a considerable corpus of diplomatic correspondence which has for the most part been published and translated by M. Arribas Palau. He has also left a number of poems which bear witness to a considerable poetic talent and confirm what one might be entitled to expect of a Moroccan with a strong grounding in traditional culture. His account of the journey to Istanbul and the Holy Places also reflects the education that he had received, and it often gives the impression of a stylistic exercise in rhymed prose, rich with religious and literary reminiscences. On the other hand, his other writings are composed in a simpler and more natural style; a number of dialectical forms are encountered here, and the author does not hesitate to transcribe Spanish words when he talks about Spain and describes, not what he has observed in that country.

(Ed.)

IBN WAḤB, Abū l-Ḥasan ʿAbd Allāh b. Ṣafī al-Ṭabāṭābāʾī, scion of an old and distinguished secretarial family and author of a remarkable Shi`ī work on Arabic rhetoric, style and the secretaries' art, the K. al-Baḥrān fi Ṣalāḥ al-baydān. His grandfather Sulaymān was vizier to al-Muḥtaḍī and al-Muʿtāmid, fell in disgrace under al-Muwaffak and died in his prison in 292/905. About his father and himself we know almost nothing. His florescence belongs to the first half of the 4th/10th century. His book must have been composed in or after 335/946-7, since it mentions the vizier 'Abī b. Ṣafī as already dead. He is also contemporary of Kudama b. Ḍajfār [q.c.], under whose authorship the work was placed by the editors of the truncated Escorial ms., 'Aḥā, ʿAbbādī and T. Husayn, despite strong doubts of the latter, and published under the title Nakda al-nattar (Cairo 1351/1933). The discovery by 'Abī l-Ḥasan 'Abd al-Kādīr of a complete copy of the work in the Chester Beatty Collection (ed. A. Matlub and Kh. Hadlthl, Baghdād 1387/1976) made possible the correct identification of author and title. The Baḥrān represents an interesting attempt to apply Greek, Muʿtaṣīlī and Imāmī doctrines to Arabic rhetoric. The latter trend is evidenced by positive references to some imāms of the Twelver line, including the eighth, and by the use of principles such as tākitya, ṣima, ḍāʾer-bāṭīn, taʾalīʿ, ṣuṣūr (in the Kurʿān), ḍimān and badāʿ. It also shows some influence of Dājjāz’s Bāṣān, but is strongly critical of it. Whether he was also influenced by Kudama has not yet been conclusively proved. The author also cites four writings of his own, the K. al-Hudāja, K. al-Ḥaqīqa, K. al-Ṭalābīḥa and K. Ṣārī al-Kurṭān. None of these has survived, however, and the name has been found in the sources so far.

IBN 'UThMĀN Al-MIṣNAṣĀB

...
Tlemcen, by publishing the epitaph of his tomb discovered by him at Tlemcen “three hundred paces from that of Sanût”, also corroborating the assertion of al-Warthâlâm (1121-93/1710-79) who says he had “visited his tomb, at al-Ubbâd, in the vicinity of those of Abu Madyan, al-Sanusf, the ‘Ukbanfs, Ibn Marzûk and the two sons of the ‘Imâm”.

After losing his father at an early age and being brought up by his brother, Ibn Zakî was placed at the age of twelve as an apprentice weaver. With a gift for study, the young Ibn Zakî made his way, when he was able, to the mosques and madrasâ of Tlemcen (al-Ubbâd, Ya’kûbiyya) to hear the lectures of the ‘almâni of the age, among others Ibn Zâgî (Ahmad b. Muhammad, d. 845/1441; see Ahmad Bbâ, 70, 308; al-Hajîfî, ii, 42), who was also a weaver; al-‘Ukbânî (Kasîm b. Sa’îd, d. 834/1430; see Ibn Maryam, 147; Ahmad Bbâ, 85; al-Hajîfî, ii, 85); Abu ‘Abd Allâh Muhammad b. al-Abbâs b. Isâ al-Ubbâdî (d. 871/1467; see Ibn Maryam, 223). On his relations with his masters and on his character, the biographical accounts report some anecdotal details which show him as studious, obliging and, moreover, gifted with a fine voice.

Having become in his turn a doctor of religious law, engrossed in the sources of fiqh, jurisprudence, fiqh, he exercised successfully the functions of muftî, kadi, and that he is the mufti of Tlemcen (an Andalusian author said “Knowledge of al-Tanâsîf, virtue with al-Sanusf and pre-eminence (uzûs) with Ibn Zakî’, whom another described as ibn dhidâr-i-hi (“son of his arms” or “son of his works”).

It should be added that Ibnou-Zekri (Muhammad al-Sâ’îd b. Ahmad al-Zawâwî al-Dâmânnî, professor of fiqh in the upper division of the Algiers madrasa and mufti of Algiers, originally from the tribe of Ayth Zakrî of Great Kabylia (1267-1322/1851-1914), author of Awdî al-dâlîl ‘alâ wadîdâ islîh al-zawâyâ bi-bîlîdâl al-Kabîlî, Algiers 1321/1903, used to say that he was a descendant of Ibn Zakî of Tîlimsânî, as al-Hajîfî remarks, who, with a note of scepticism, declares “In a descendant of Ibn Zakî and the Al-Hajîfî remarks, people have to be taken at their word”.

2. Ibn Zakî (Abû ‘Abd Allâh Muhammad b. ‘Abd al-Rahmân al-Fâsî), born at an unknown date in Fâs where he always lived and where he died in 1144/1731, was at first a young apprentice tanner (dubbîgh) in the service of his father with whom he used, after his manual work was done, to attend classes given by the latter’s friend Abû ‘Abd Allâh Muhammad b. ‘Abd Allâh al-Râhîmân b. ‘Abd al-Kâdir al-Fâsî [see al-Fâsî in Suppl.]. He also followed the lectures given by Abû ‘Abd Allâh Muhammad, otherwise known as al-Hâjîjî al-Kâfîyât al-Rûkî b. (d. 1155/1740; see al-Kâdirî, ii, 172-173; Kâttânî, ii, 230), always staying shyly at the rear of the auditorium. One or the other, or both, of these twoî qâhîs noticed the pertinence of the questions that he asked them and the active part that he took in discussions, and they immediately suggested to his father that he be given leave of absence from the tannery and encouraged to study, offering to take upon themselves the cost of his tuition. Their advice was followed.

The young man completed his education with other teachers, including: Abû ‘Abd Allâh Muhammad b. ‘Abd al-Kâdir al-Fâsî [see al-Fâsî in Suppl.]; Ahmad Ibn al-Hâjîjî (d. 1169/1667; see Lâkhdîr, 107-8 and Index); Abû ‘Abd Allâh Muhammad b. Ahmad al-Manâwî (1072-1136/1661-1724, see al-Kâdirî, ii, 204; al-Kâttânî, ii, 44; Ben Cheneb,
Abu'l-Hasan CAI b. Muhammad al-Manalf al-Zabadl has seen the Prophet. It is also said that, endowed with this, which he regarded as a vice. The result of this effort at explanation and deduction in the judicial and technique of 

Furthermore, to practise indecency outside the view of the Prophet and believe oneself blameless is hypocrisy!" Disconcerted, the reply, "abstinence would be imposed by decency and technique of 
mysticism composed by Muslim authors of East and

in Morocco and which bears two titles, in praise of Hamziyya of Ibn Malik, whereas in Egypt one was either a Hanafi or a Shafi'i. He asked his opponents: "Would you smoke in the presence of the Prophet?"—"No," was the reply, "abstinence would be imposed by decency and respect for the Prophet"—"Well then," he added abruptly, "should not anything that cannot be done in the presence of the Prophet be forbidden? To abstain from the performance of a duty is a ba'a (culpable innovation) and bida' and its agent are condemned to the fires of Hell. Furthermore, to practise indecency outside the view of the Prophet and believe oneself blameless is hypocrisy!" Disconcerted, the "ulama' of al-Azhar made no reply.

Ibn ZakrI al-Fasi enjoyed visiting the chotha of Wazzan, in particular Mawdlay al-Tayyib (d. 1089/1679), and was associated with their disciple and biographer al-Hadjdj al-Khayyat al-Ruk
cf, whose pupil was he. He was ultimately regarded as a miracle-worker who believed that, when wide-awake, he had seen the Prophet. It is also said that, endowed with a considerable fortune, he used it to render aid to the disinherited.

His writings, dealing with various subjects, were, it is said, "numerous, read and studied to advantage almost everywhere." These are, on the one hand, commentaries on works of grammar, theology and mysticism composed by Muslim authors of East and West, and annotations and glosses which have for the most part been left incomplete, and on the other hand, didactic poems concerning various matters, and at least one original prose work. Kattanl, i, 158, supplies the following list:

Shahr al-Farida fi 'l-nahw wa'l-farisi wa'l-khatt of al-Suyuti [lith. Fas 1319/1901]; Shahr al-Hikam at-'at'a'iyya, ms. Paris 1531, on the programme of his teaching and the object of more than twenty glosses by Zarruk (Ahmad b. Ahmad b. 'Isa al-Buransfi al-Fasi [346-1442-93 [q.v.]); not to mention other commentaries, of which the most important would seem to be that of the Spanish mystic Ibn 'Abbad al-Rundi entitled Ghayth al-mawadhib al-'atya, Bulaik, 1285/1868; see Brockelmann, G II, 143-4; S II, 145-7, Ibn 'Arrad al-Rundi and Ibn 'Ata' Allah; Shahr al-kawad fi 'l-tasawwuf by Zarruk, considered the most important and the best known of the latter's writings, Cairo 1318/1900 (see Brockelmann, S II, 326); Shahr al-Nasifa al-khaya la man khaya la Allah bi'l-'atya by the same Zarruk (see Brockelmann, S II, 361, who gives a list of other commentaries on this work); Shahr Sulai'a Abd al-Salam b. Madaghd, also known as al-Sulai'a al-maghibiya (see its text in al-Fasi (Abu 'Abd Allah and Abu 'Abd Allah Muhammad al-'Arabi b. Yusuf, 988-1052/1580-1643), 63; in Garnun, 356, and in Hadjdji, 175) which has been the object of a number of other commentaries (see Kattanl, i, 146; Levi-Provenzal, 312); notes (al-dakhil) on al-Bulgari's compilation, exegesis of Kur'an verses, an incomplete marginal gloss (hadibya) on the commentary he composed on a collection of the Makki poems on various subjects, miscellaneous mentioned by al-Kadiri and al-Kattani whose continued existence cannot be verified; a Hanziya in praise of the Prophet, modelled on that of al-Busiri (q.v. in Suppl.), with a commentary in two volumes (ms. Rabat K. 1372 and 1245); an original work which, after his death, seems to have caused a sensation in Morocco and which bears two titles, al-Sayf al-jiham fi 'l-raqi 'ul'il-mudadd fi'l-salim and al-Fawad fi-muttaha fa'awa'id al-mudadda; in these he propounds the thesis according to which "merit is a matter of piety, not of genealogy." This work exists in a manuscript volume in the library of "Abd al-Rahman b. Zaydani at Meknas (see Ibn Suida, i, no. 418, p. 118). It aroused among the Moroccan "ulama' a polemic which lasted for almost a century, on the problem of racism and anti-racism. Al-Kadiri, who could have known Ibn Zakri at the age of twenty, since he died only forty-two years later than him, at the age of sixty, claims that he heard a very widespread rumour (mustafidu) that the latter had been responsible for the publication of a book in support of the Sh'a'biyya, which asserted the superiority of non-Arabs over Arabs; he adds that all the contemporary men of religion reproached him for this and vilified him ruthlessly and justly. In the long biographical notice which he devotes to him, al-Kadiri invokes the authority of more than twenty teachers, and derives support from many Kur'an verses and hadith. In the attempt, first to give a definition of the Sh'a'biyya, those who put non-Arabs and Arabs on the same level and those who put non-Arabs above Arabs, and then to lay emphasis on the merits of the Arabs, who gave birth to the Prophet Muhammad and supported him in his noble mission, finally concluding that, as regards Muslim law, all Muslims, irrespective of race and irrespective of the period in which they embraced Islam, enjoy equal rights. However, a careful reading of this article gives the impression that, according to al-Kadiri, Ibn Zakri had appointed himself the spokesman of Muslims of Jewish origin, then very numerous in Fas, who did not care for the Arabs, to whom they denied any distinctive merit, making no exceptions in this regard even for
the Ansār, the Kurayjah and the parents of the Prophet, to whom a great many authentic hadiths explicitly gave a privileged status. Furthermore, these neo-Muslims prided themselves on being the descendants of the Banū Isrā’īl and of the prophets Mūsā, Hārūn, Zakariyya, and others, and on this account they considered themselves superior to the Arabs. By means of his treatise Ḥall al-ʿulūm al-Kādirī, Al-Kādirī, whom Zakrī had committed a reprehensible deviation and cut himself off from the faith, thus deserving "the punishment laid down for those who allow themselves to be led astray by passion." Moreover, he had not spent his time "among groups of men of his own kind, men living in ease and opulence, who arranged performances of musical entertainment in his presence, and whose sympathy he made great efforts to gain, putting forward ideas of the type which have been attributed to him, so well and to such an extent that all his associates ultimately became his disciples?"

More than half a century before, Mayyāra al-ʿAbdār (Abū Tālīf Abū ʿAbd Allāh Muhammad al-ʿAbdār, 999-1072/1566-1622, see al-Kādirī, 235; al-Kāṭṭānī, i, 165; Lévi-Provencal, 259, n. 4, 7?) had also written a book dealing with this problem and entitled Naṣḥ al-muqā Pittānāt fī-rrādāt ʿalā dhuqayl tīf tāfīkā bi-ham al-Muslimīn (Royal Lib., Rabat ms. 7148, fol. 71a-123b); its author, according to al-Kādirī, had a valid excuse, and did not deserve reproach because, in his time, the neo-Muslims were the victims of harassment and even persecution on the part of Muslim Arabs. Mayyāra took their part, arguing in favour of the "unity of the Muslim community."

Ninety years after Ibn Zakrī, Abu Tābīs Ahmad b. Abū al-Salām b. Muhammad b. Asbāb of the early Kadjar period, and a most influential agent in the transfer of power from the Zand dynasty to the Kadjar (1209/1795).

Under Fath Aḥ̀lī Shah, who owed his accession to a losing cause, was brought to betray his chief Mīrzā Muhammad Kalantar earned him the favour of the latter in his ensuing struggle against the Kadjar Aka Muhammad Khān, he entrusted the holding of his capital to this rather dubious kalāntar. Thus in 1205/1791, having turned against his chief Mīrzā Muhammad Kalantar, which the latter staged against the Zand party in 1206/1791, under Fath Aḥ̀lī Shah, who owed his accession to a losing cause, was brought to betray his chief Mīrzā Muhammad Kalantar, which the latter staged against the Zand party in 1206/1791, under Fath Aḥ̀lī Shah, who owed his accession to a losing cause, was brought to betray his chief Mīrzā Muhammad Kalantar, which the latter staged against the Zand party in 1206/1791, under Fath Aḥ̀lī Shah, who owed his accession to a losing cause, was brought to betray his chief Mīrzā Muhammad Kalantar, which the latter staged against the Zand party in 1206/1791, under Fath Aḥ̀lī Shah, who owed his accession to a losing cause, was brought to betray his chief Mīrzā Muhammad Kalantar, which the latter staged against the Zand party in 1206/1791, under Fath Aḥ̀lī Shah, who owed his accession to a losing cause, was brought to betray his chief Mīrzā Muhammad Kalantar, which the latter staged against the Zand party in 1206/1791, under Fath Aḥ̀lī Shah, who owed his accession to a losing cause, was brought to betray his chief Mīrzā Muhammad Kalantar, which partly to the wise arrangements made by the old Ḥājjī Ḥārim, the latter's prestige and fortune increased rapidly, and his sons, brothers, and relatives obtained vast tracts of land with important positions throughout the Persian provinces. However, his own arrogance, along with the offensive behaviour of his relatives, caused considerable administrative hostility, and some of his opponents presented to the Shāh convincing documents—forged or authentic—to prove his involvement in treasonable activities. A royal decree, issued in great secrecy, directed the royal emissaries to seize and prosecute Ḥājjī Ḥārim and all his relatives at one time, on a previously fixed date, in Tehran and the provinces (1215/1801). Of all his male descendants, only two small boys were spared.

Ḥājjī Ḥārim's downfall, in which his rival Mirzā Shāfiʿ Māzdandārānī had an important rôle, was later deplored by Fath 'All Shah. His political opponents, however, did not cease to criticise him severely for his so-called treacherous character, his sellish impetuosity and his lack of tact in diplomatic affairs.

(Ḥ. Zarrinḵooḵ)

IBRĪK (in Islamic art), a term used for any kind of ewer, irrespective of function or material, but generally a vessel for pouring water or wine. Together with a basin, it is also used for washing hands and feet. Other terms for specific kinds of ewers are kubra or ṭulbula (see Ābū Nuwās, Dīwān, ed. Wagnēr, i, Beirut 1958, 54, 3).

The chronology and geographical origin of early metal ewers up to the 4th/10th century have not yet been definitely established. They can be classified typologically into five groups, representing a slow departure from mainly Sāsānīd and Soghdian prototypes towards the formation of two large families of shapes. The most characteristic features are: a tendency towards heavier bodies, with an emphasis on the lower part of the body in the earlier phases, shifting to the formation of shoulders; a development of shapes in which the transition between body, neck, mouth and foot is clearly marked and set off; and a preference for faceted shapes. One group is characterised by a bipartite neck which is contract- ed in its lower part and is cylindrical and faceted in the upper half. The ovoid or cylindrical body rests on three small feet (Saray, Pl. 244A). Another group is best known from the "Marwān" ewer in Cairo (Saray, Ps. 245-6), but its traditional association with the Ūmayyad caliph Marwān has to be dis-carded. The chronologically latest type has an ovoid body, a low footing and a straight, slightly flaring neck with a flat lip. It is well-balanced in proportion and its shape was retained up to ʿSaljūq times. Except for one group (the "Marwān" ewer), the handles meet the neck by its lip. Popular types of thumb rests are a pomegranate or a full palmette.

Between the early 5th/11th and the beginning of the 7th/13th century, workshops in Khorāsān and Transoxania produced bronze ewers which carry an oil-lamp-shaped spout. Early examples have been found in Aḵšāk, in ancient Fārdāna, and in Shahrastān, ancient Ugrāsana. Late 6th/12th to early 7th/13th century specimens are inlaid with silver and copper. One ewer in Paris is dated 586/1190-1 (Saray, Pl. 1309A). Khorāsānian workshops active in the late 5th/11th and 6th/12th centuries also produced ewers with a high raised spout. Some have spherical bodies, while in other cases the body is either melon-shaped, faceted or fluted. One of the fluted ewers is signed by Muhāmmad b. Muḥammad al-Ḥarāwī and dated 577/1181 (Mayer, Islamic metalworkers, 1959, 59; for the whole group see Abū ʿAlā Yar Ḡur al-ʿUṣ, A bronze ewer with a high spout. The dates suggested by the author are debate-able).

In the 7th/13th century, Mosul, Damascus and Cairo workshops produced richly decorated inland brass ewers with a pear-shaped, plain or faceted body, cylindrical neck and straight spout. Dated and signed specimen are the "Blacas" ewer in the British Museum (Barrett, Islamic metalwork, 1949, pls. 12-13), and two ewers in Paris (Rice, Inlaid brasses, appendix, nos. 16 and 21). The pear-shaped body and straight spout remain characteristic features of 8th/14th century Mamlûk ewers. They have a high body, which is contracted in its lower part, and the neck is surmounted by a top-heavy cup (The arts of Islam, Hayward Gallery 1976, no. 216). Ewers with a strongly swelling body, curving spout and handle, a contracted or funnel-shaped neck and a high spayed foot occur in 9th/15th century Egypt and Iran simultaneously (J. Carswell, Six tiles). Their occurrence on painted tiles from Cairo and Damascus suggests a wider distribution than that attested to by preserved objects. Ewers depicted on contemporary and later miniatures seem to point to a con-tinuation of this type in the 10th/16th and later centuries.

Ceramic ewers follow the metal shapes very closely. Some early ceramic renderings even imitate solder-ing marks. Ewers with a fluted or cylindrical body and a raised spout are particularly common among Persian monochrome glazed relief wares of the 6th/12th and 7th/13th centuries.

Wine ewers and washing services are frequently depicted in miniatures and other media (for 8th/14th century washing sets, see M. S. Ipširoglo, Sary an, Diez'sche Klebebände aus dem Berliner Sammlungen, Wiesbaden 1964, pls. XVII and XVIII).

ICHTHYOLOGY [see SAMAK].

IGÇOGLAN [see iGÇOGLANT].

IDRIS B. AL-HASAN, *'Imad al-Din, the last great exponent of the Isma'ili da'wah [q.v.]* in Yaman, came from a prominent al-Walid family of Kuraysh which headed the Musta'li-Tayyib da'wah since the beginning of the 9th/13th century. He was born in 794/1392 in the fortress of Sham'it, a high peak of Mount Haraz and a stronghold of the Isma'ili's. In 832/1428 he succeeded his uncle 'Ali b. 'Abd Allâh as the nineteenth i. His three historical works are the main sources for the history of the Isma'ili's from the 5th/11th century until the second half of the 9th/15th century. The first, *U'uyûn al-âkkâb*, in seven volumes, is the most comprehensive work on the history of the Isma'ili 'inâmâ and the Fatimid dynasty. It also contains valuable information on the beginning of the da'wah in Yaman and on the Sulayhids [q.v.]. The second work, *Naqashat al-âkkâb*, in two volumes, deals with the Isma'ili history in Yaman, especially after the collapse of the Sulayhids, until the year 853/1449, and is considered to be the most important source for the three-hundred-year history of the da'wah there. The third work, entitled *Ras'asat al-âkkâb*, is a continuation of the preceding work, wherein the events are brought up to the year 870/1465. Both the latter works are of great importance, since they deal with contemporary events and shed light on an obscure period of Yaman history. In addition to panegyrics of the 'inâmâ and the da'wah, his poetic *Diwan* contains some historical information. His work on Isma'ili doctrine entitled *Zâbit al-ма'tân* is regarded as the highest achievement on *hâkit* [q.v.] ever reached by the Yamanî da'wah. He also composed several refutations of Sunni, Zaydi and Mu'tazilî doctrines. Most of his works have survived and have been preserved in private collections.

AL-IDRISÎ.

IDIWARAL, DJAMAL AL-DIN ABU DJAFAR MUHAMMAD [see IDWARAL, D. A.-AZZ], B. *'Abd al-Kâsim (d. 649/1251), upper Egyptian author of Moroccan background who wrote, under the Ayyûbid sultan al-Malik al-Kâmiil, his monograph on the monuments of Djizâ (Giza), the *K. Amâr wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa'saw wa
function as one builder of the Pyramids. In the late 13th and the 14th century, we observe the dramatic widening of this chasm between iconoclastic Muslim zealots and the moderates of Idrisi's kind who point at the unadulterable place of these 'afaq'āb within Muslim Heilsgeschichte.

In chs. 2 to 6, Idrisi gives valuable data on the sites of Džaża, many of which are not repeated by later compilers. He gives a detailed description, also architectural, of the way the traveller takes from the Bāb Zuwayla, the south gate of the Fātimid city of Cairo, to the Pyramids. He mentions all the holders of high office who, between the days of al-Ma’mūn and his own, came to the Pyramids, often in search for treasures, natalīk, as the Egyptians say. The Fātimid period saw the apogee of activities around the Pyramids; in al-‘Ałfāl b. Badr al-Djamālī’s days fires were lit on top of the Great Pyramid in certain nights. Idrisi gives a list of contemporary scholars who saw, or wrote on, the Pyramids, among them Ibn al-Djawzi, ‘Abd al-Latif b. al-Baghīdhī (whose description of the Pyramids and the Sphinx he faithfully reproduces) and Ibn Mammātr (who composed a book on the Pyramids which Idrisi counts among his sources), but also, min ghyr aḥd al-kibīr “from among the vastness of the one.”

408 AL-IDRISI — İKĀ

He was among the religious notables who actively supported the Khedive Ismā‘īl in his efforts to counter the danger of increasing international control, and played a significant role in the events preceding the Khedive’s deposition in 1879.

His role during the ‘Urabi [q.v.] insurrection, when he sided with the ‘Urābiyyān and publicly demanded the deposition of the Khedive Tawfik, caused his arrest following the British occupation of Cairo in September 1882. He was set free in the course of the subsequent court proceedings against those involved in the insurrection, on condition that he return to his native village of Idwa. He died in Cairo on 17 Ramadan 1305/19 June 1885 and was buried in the now-demolished mosque which had been constructed by him near the mosque of al-Ḥusayn (cf. ‘Alī Mubārāk, Ḥustain, v, 48) and close to the newly-erected mosque named after him, where his shrine may be found today (cf. the monthly al-Mulūm, xix (Cairo 1969), 9, 4).

(F. DE JONG)

IKĀ ‘form IV from w-k’, literally “to let fall” the wand (kābīb) in order to mark the rhythm in singing, a term denoting musical metrics or “rhythm” in the sense of measuring the quantity of notes. The early Islamic ikā’ can be considered as a forerunner of mediaeval European menauration. Based on oriental practices inherited by the Arabs, it shows elements of Greek rhythms and similarities to Indian tāla. According to Saḥīf al-Dīn al-Urmawī, the roots of ikā’ go back to Sāsānīd Iran, where Indian musical presence is attested.

The internal structure of ikā’ is obviously of Arab origin, being built up in analogy to the prosodic rules of Arab poetry. One ikā’ consists of two “cycles” (adwāt), each of them being composed of several “basic” notes (wūl) and a pause (fāṣila). In modifying the basic notes, the musician gets at the metrical patterns of the chosen “form” (ḏīnī) of ikā’. The early music schools knew seven or eight forms, namely al-thākīl al-awwal, al-thākīl al-thānī, al-ra‘īd, al-hāzād and their “quick” (fàṣilī) forms.

Al-Khālīl b. Ahmad (d. 175/791), author of a lost Kitāb al-Ha‘, is regarded as the “inventor” of this science. Citations in later sources or original texts give information about the ikā’-theories of more than ten authors up to the 5th/11th century, the most important being al-Fārābī, who dedicated two chapters of his Kitāb al-Muṣūkī al-kabīr to and two remarkable monographs to this subject.
The *ikāb* tradition of the Mawṣūl school, preserved in the Kitāb al-Aghdham of Abu 'l-Faradj al-Iṣbahānī, persisted for a long time in Spain, whilst the development in the Eastern caliphate had already given birth to more elaborate systems. The metres described by Ṣafī al-Dīn al-Ṭūrmi (d. 693/1294) led to the basic musical practice of the last "international" school of *Abd al-Kādīr al-Maḥarrī (d. 838/1435) as well as to the *wašt, azūzan, darbūt* or *adwār* (*al-ikāb*) of the succeeding local traditions in Iran (disappearing there in the 12th/18th century), in Turkey (where practice and theory continues up to our own days) and in the Arab countries (where the late 19th and the early 20th centuries have brought a revival of local metrical forms).

**Bibliography:** Almost all Arabic, Persian and Turkish musical treatises and most encyclopaedias dealing with music contain a chapter on *ikāb*. For its early Arabic theory, see F. Dieterici, _Die Propaedeutik der Araber im 10. Jahrhundert_, Berlin 1865, 112-17; H.G. Farmer, *Ṣaḥib al-‘uṣūr* (London 1943), 78-89; A. Shiloah, _L’être sur la musique des Ibnān al-Safī‘a*, in _REL_, xxxiv (1966), 176-8; E. Neubauer, _Die Theorie vom ṣīḥa_.

For Turkish musical treatises and most encyclopaedias, see F. Dieterici, _Die Theorie vom lqd* (1966), 176-8; E. Neubauer, _Die Theorie vom ṣīḥa_.

**E. NEUBAUER**

**IKHTISĀN, MUHAMMAD SĀDĪR ‘ALĀ‘**

He was the son of Ahmad Hasan, a native of Dili, and entered his ancestral profession of *dabīr* or secretary under the Dīwān al-Inghār or royal chancery some time towards the close of the Jalālīd period. On his accession to the throne in 709/1302, Sultan Qayyām al-Dīn Tughluk Shāh raised him to the position of Dabīr-i Ḫāyā in recognition of his learning whilst he was still in his early twenties, and in this capacity he accompanied the sultan on an expedition to Bengal. After the conquest of Bengal, the sultan, on his way back to Dili, invaded the independent territory of Tirhut, seized it and entrusted its charge to Ahmad Yalbugha. In Tirhut, Ikhtisan supported him in this respect; Ikhtisan calls Baranf, the author of this introduction is a document of considerable historical significance, supplementing Baranf’s *Tarīḥ-i Prūz Shāhī* with regard to the radical views of Sultan Muhammad b. Tughluk. Like Baranf, Ikhtisan also belonged to the sultan’s faction and required of the time. The orthodox ulama condemned him as a tyrant and oppressor (*gāhār* and *kabāh*).

On Muhammad b. Tughluk’s death, his confidants were either killed or thrown into jail. Fortunately, Ikhtisan happened to be in Iran at that time, having been sent there by the late sultan as an ambassador to the Ilkhanid Sultan. He may have got information of his patron’s death and the accession of Sultan Firuz Shāh III to the throne (752/1351) in Multān, then a border city. It was there that he fell ill and died after a short illness. Thus Ikhtisan escaped imprisonment, while Baranf, the author of the *Tarīḥ-i Prūz Shāhī* undertook as it is a result of the reaction against Muhammad b. Tughluk’s policies.

**IKHTIYARIYYA, the élite or veterans of an Ottoman guild or army unit (oğak).**

Ikhtiyār, “choice” in Arabic, had acquired the meaning of “old” both in Turkish and in modern Arabic, and thus came to designate the chosen and the elders of certain units, two attributes which in traditional society were virtually identical. The oğak *ikhtiyāriyya* in Ottoman Egypt consisted of retired officers and veterans of the oğak, and their function was mainly ceremonial and advisory. They were headed by a bāšik ikhtiyārī. In the guilds the informal group of *ikhtiyāriyya* was also designated by a large variety of other similar terms (cf. Baer, *Egyptian guilds*, 53, and *Structure of Turkish guilds*, 183). There were no rules to determine when and under what conditions an usta became a member of this group. Similarly, its members had no well-defined tasks. Originally, as long as *jawār* traditions survived in the guilds, they played an important role in the ceremonies and their function was to support the head of the guild in his relations with the authorities and thus to demonstrate that he was acting in the guild’s name. It was upon their recommendation that the head of the guild was appointed by the kâti, and the chief assistant of the kâti, that is, the guild’s major, was chosen from among them, and apparently by them, but their choice had to be confirmed by the authorities. In 19th century Egypt, the traditional term for veteran masters in the guilds was replaced by the term *uṣmā* (pl. *uṣmād*), but the character and functions of this group remained the same. Documents from that period show that they participated in the control of prices of commodities and the distribution of the tax burden among the members of the guilds.

SUMMARY

ILAYSH, Muhammad b. Ahmad b. Muhammad, onetime Mullah of Egypt and one of the principal protagonists in the events preceding the British occupation of Egypt in 1802. He was born in Cairo in Radjab 1217/October-November 1802 into a family of Moorish extraction. After a period of study at al-Azhar [QV] from 1232/1816-7 until 1245/1829-30, he was engaged in teaching at this institution, as well as at the Husayn mosque. In 1270/1854 he was appointed to the office of ghulam al-sida al-Mubayyad [QV] in succession to Muhammad Hubayyad, and remained in office until the end of his life.

Concomitantly, he held supreme leadership of a Shadhiliya [QV] tekfa, that of al-Arabiyya, in which position notable scholars such as Muhammad al-Amir al-Kabir and Muhammad al-Imad al-Saghiri had been his predecessors.

However, the mystical conception of Islam to which he must have adhered is only incidentally manifest in his writings—the scope of which encompasses the majority of the fields of traditional Muslim learning—such as in his Faith al-'ali 'l-mdlik ji, Id al-Djawhan (214/829) wrote a commentary on it, including, among other things, a number of figures and particular cases

Forty-eight or forty-five miles from modern Tashkent.

In early Islamic times, Ilak lay on the frontiers between the abode of Islam and the pagan Turkish steppes. During the Samanid period and just afterwards, its local princes (given the title of dihkar) enjoyed additional Muslim learning—such as in his Path al-'ali 'l-mdlik ji, id al-Djawhan (214/829) wrote a commentary on it, including, among other things, a number of figures and particular cases

(M. ATHAR ALI)
G. The work of Hero of Alexandria, notably the K. Hali shukak Uklldis ("Resolution of doubts concerning Euclid"); and the K. al-Hiyal al-ruhniyya ("Pneumatics").

We may note, finally, the translation of the Sindhutanar which familiarised the Arabs with problems concerning the measurement of solids and surfaces, and in a general manner, with the various applications of geometry.

II. The period of creativity (4th-9th/10th-11th centuries).

The translated material was, as we have noted, progressively annotated, discussed and corrected.

From the 3rd/9th century, but especially after the 4th/10th one, the specific contribution of the Arabs became more important. The latter supplemented the ancient works in a number of disciplines (astronomy, optics, algebra), with new proofs and with the resolution of geometrical problems; new applications came into being, especially in sculpture and in architecture; trigonometry was discovered and codified; important theoretical questions were raised; the authority of ancient masters was contested, and the way was open for the progress of geometry in hitherto unknown directions.

But before reviewing certain of the most celebrated Arab contributions to geometry, here follow, century by century, the authors and the works which may be mentioned:

3rd/9th century: al-Kharażmi (d. ca. 232/846); Bāb al-misāḥa—al-Dawhari (214-15/839-30); Kitāb taṣfīr K. Uklldis ("Commentary on the Book of Euclid"); K. al-Aghfāl allâti ṣādaha fi 'l-mukālā al-dâ alâ min Uklldis ("On the figures that he has added to the first proposition of Euclid"); Ḣayyāt fi a-makhrūd (Sa'īd ibn al-Hāsmid, 579-672/1201-74) in his Tahrīr wa'il Uklldis ("Restatement of the Elements of Euclid"), and his Tahrīr muṣādārāt Uklldis ("Observations on the postulates of Euclid").

C. The Conic sections (al-Kutā' al-maghārīyya) of Apollonius, a work which apparently comprised 8 propositions; the first four were translated, under the supervision of Abu d. Māsā b. Ṣhākil, by Ḥalāl b. Abī ḤiYY al-Ḩusayn (d. 218/833), and the last three by Thābit b. Kūra.

D. The Elements of geometry of Menelaus. Thābit translated three of its propositions. An unknown translator revised the chapters relating to triangles. The problem of transversals and their applications in the study of conic forms inspired Thābit to compose his work al-Kuči fi 'l-ṣā'āl al-ḥattā wa l-nisba al-ma'-ālīyya ("Survey of the transversal and harmonic division")

E. The work of Pappus (the Collection of mathematics), notably a translation by Thābit of his commentary on the Book of Polymery relating to the area of the sphere; and his commentary on the tenth proposition of Euclid.

F. The geometrical work of Archimedes: (a) His work On the sphere and the cylinder, translated by the Banū Muṣā, later by Thābit and by Ḥishāk b. Hunayn. A translation by Kustā b. Lūkā (299/912) served as the basis for the Hebrew translation of Kalonimos b. Kalonimos (728/1328). (b) On the square of the circle (Fi tākhir al-dā'ira; Tāhri al-dā'ira; Misāḥat al-dā') translated by Thābit and by Hunayn b. Ḥishāk, a translation revised by Nasīr al-Dīn al-Ṭūsī (ed. Hyderabad 1359/1940). (c) The Lemmata (al-mukālā al-kalāmīyya) translated by Thābit and annotated by Abu 'l-Ḥasan 'Ali b. Ḥamād al-Nasawī (370-431/980-1040); ṢūFI makes use of it in his study published in 1940 at Hyderabad. (d) Measuring the side of a regular heptagon inscribed in a circle (Sāhbi al-dā'ira), a work which inspired in particular, Abū Sahl al-Ḳūfī.
ON THE PROPERTIES OF THE CIRCLE IN A GIVEN POINT "In a given circle, to draw certain straight lines through given points" (ms. Paris 2458, 1; Sédillot, Notices et Extraits, 143); R. fi 'l-dawa'ir al-mawdu' min al-nukat al-mu'attāt. On the properties of the circle in a given point, to draw certain straight lines through given points.

On the other hand, in spite of the duality of origin of geometry and of arithmetic or of algebra, the two latter being initially discrete sciences, the former of continuous scope, the Muslims, since al-Khārizmī, have used algebra for the solving of geometric problems; they have also made use of geometry for the solving of new algebraic problems. It is sufficient, in this context, to recall the solution by al-Khayyām of cubic equations by means of intersection of circles, parabolas or hyperbolas; we may also cite al-Māhāni's problem concerning the plane sections of the sphere, which led him to the third-degree equation $x^3 + b^2 = bx$.

2. It is impossible to overestimate the importance of the revolution brought about in astronomical calculations, in particular, or in physics, by a sister science of geometry, developed and codified by the Muslims who made it of an independent discipline, sc. trigonometry. Thanks to this new science, a whole range of problems was completely solved, and with a precision depending uniquely on tables (ṣādīq) established at an early stage.

In the 3rd/9th century, al-Battānī solved the equation
\[ \sin x = \frac{a}{\sqrt{1 + a^2}} \] (for the arcs of the 1st quadrant).

Habashi compiled the table of tangents. In the 4th/10th century, Abu 'l-Wafā' brought real progress to trigonometry. He established the relations: $\sin (a + b) = \sin a \cos b + \sin b \cos a$

$\sin 2a = 2 \sin a \cos a$

$\sec \frac{a}{\cos a} = \frac{1}{\sin a} = \sqrt{1 - \tan^2 a}$

He set out the formula of sines in a spherical triangle:

\[ \sin a = \sin b = \sin c \]

\[ \sin A = \sin B = \sin C \]

Ibn Yūnus (958/1009) author of the Hākimī table, demonstrated the formula:

\[ \cos a \cos b = \frac{1}{2} \left[ \cos (a + b) + \cos (a - b) \right] \]

permitting the passage from a sum to a product, an operation which was to be of importance in the logarithmic system of calculation invented later.

In the 6th/12th century, Džābir b. Ḍaffāʾ knew the equation $\cos b = \cos B \sin c$. In short, Arabic trigonometry was already a long-established science when Fibonacci used it, ca. 1220, for the measuring of surfaces and when, ca. 1464, Regiomontanus, putting al-Battānī's work to good use, composed the first treatise on trigonometry published in Europe in 1485.

3. Geometry was further applied by the Arabs in geodesic measurements, executed to check the ancient propositions and to verify the conclusions of the Almagest of Ptolemy (scientific expeditions by the Banū Shakir, ca. 212/827, in the region of Palmyra and Rakka, then in the neighbourhood of Sindjār, the Latin Singara, with the object of measuring the earth's inclination). Al-Battānī fixed the geographical coordinates of 310 locations, including 30 in the West; al-Hasan al-Marrākiṣī gave the coordinates of 133 locations, of which 71 belong to the western Mediterranean. Al-Bīrūnī dealt with the problem of cartography and of the representation, on a plane surface, of the celestial or terrestial sphere. He reviewed various methods of projection, conical, cylindrical, orthographical or spherical trigonometry.
steregraphical, the lines of the sphere being represented by ellipses, parabolas or hyperbolas.

4. "Geometry," wrote the Ikhwan al-Safa', "has as its principal field of application the measurement of surfaces, measurement of which is essential for surveyors, accountants, tax agents, landowners, in their various operations or transactions, such as the collection of property tax, the drainage of water-courses, the postal service, etc."

5. An important area in the application of geometry is that of architecture and sculpture; Muslim art, inspired by geometry, invented the extended arch, cupolas resting on regular polygons, corbellings, stalactites, groups of polyhedrons of stucco and light. The work of the sculptor in stone or in stucco was designed by the mathematician.

B. Works.—Among the works of pure geometry written by the Muslims, Suter mentions only two treatises, in the 3rd/9th century the book by the Banū Shākir (Mundūf al-mukākkīl al-basīta wa 'l-kuriyya), and in the 4th/10th century, the Geometry of Abu 'l-Walā which has come down to us in a Persian edition owed to one of his pupils (cf. F. Woepcke, in J.A [1855], 210-56 and 309-50). However, it is possible to take account of other writings which in our view are of great importance:

The ms. of Thābit b. Kūra mentioned above Fi mislalat kaf al-mukākkīl alladāfiyya yāsamā l-mukākkīl, where, following the example of Archimedes, the former uses a method of integral calculus in the quest for the limit of the equivalent on "integral sums" for the determination of the volume of a paraboloid revolving around its axis or of the equivalent on "integral sums" for the determination of the sequence of progress of geometry; they posed some essential questions, from a scientific as well as from a philosophical point of view. They had the excellent idea of not limiting geometry to continuous scales. They were remarkably adept at holding the balance between theoretical abstract thought and practical art, i.e. concrete application. If they were to a great extent the disciples of Euclid and of other masters of Greek geometry, they had the courage to criticise the works that they had inherited and to express serious doubts on their subject, and their theoretical scruples were great. They thus prepared the way for the subsequent development of geometry.

'Iḥmād al-Dīn 'Alī, Fakīh-I Kirmānī

Persian mystical poet of the 8th/14th century, was born at Kirmān about 690/1291-2.

In the Sa'īda-nāma he relates that when his father died in 705/1305, he and a brother took over the direction of the khānākāh which had been founded in Kirmān by his father's shahīq, Nizām al-Dīn Māhmūd, for the benefit of the followers of the kadh al-akībāt Zayn al-Dīn 'Abd al-Salām Kāmilī. Through this line of mystical tradition, 'Imād al-Dīn was connected with the teaching of Abū Hāfīz Umar al-Suhrawardī [q.v.]. Besides his occupation as the shahīq of a convent, he was also a doctor of Islamic law, as his lākab suggests. Little reliable information concerning his life can be drawn from the traditional biographies. According to a frequently retold anecdote appearing for the first
time in the Ḥabīb al-siyar, the cat of ʿImād al-Dīn could imitate his master in the performance of his prayers. The origin of the story can be traced to a line in one of the poems of Ḥāfīz, which has been interpreted as a reference to a rivalry between the two poets. One of the favourite themes of the Mughal poet Ṣāḥib Shudra (cf. Humayūn-Farrukh, Introduction, 81 ff.). Many panegyrical references in the poems of ʿImād al-Dīn indicate that he was on good terms with the rulers of his age and several of their ministers. His most important patrons were the Mughals. Though Ṣāḥib Shudra favoured him in particular, ʿImād al-Dīn already wrote poems dedicated to Mūbhāriz al-Dīn Muhammad. Occasionally, he praised their opponent, Abū Ḫaṣtu Ṣafīr of Shīrāz, as well and it is possible that he stayed some time at Shīrāz himself. His poetry was also appreciated at the court of the Il-Khān Abū Sāʿīd. Most of ʿImād al-Dīn's life was apparently spent at Kirmān where, according to Dāwlat-Ṣāḥib, he died in 773/1371-2. The alternative, but less probable, date of 793/1391 is mentioned by Tāki Kāshfī (cf. Sprunger, Oudh catalogue, Calcutta 1854, 436-8). The convent and the tomb of ʿImād al-Dīn were still visited in the late 9th/15th century.

The known works of ʿImād al-Dīn consist exclusively of poetry. As a pen-name he used the form ʿImād, or more rarely, ʿImād-ī Ṣafīk. The Diwān contains predominantly ghazals. His place in the development of the Persian ghazal is an interesting one, as he was among the most prominent writers who cultivated the genre during the interval between the lives of Saʿdī and Ḥāfīz. The former is named by ʿImād as an admired predecessor. The latter was a younger contemporary who must have been acquainted with ʿImād's work. Not only did Ḥāfīz and Ṣafīr share a number of patrons; their poetry shows that they made use of many similar motifs. Listings of these common elements have been made by some modern researchers (e.g. Ibn Yusuf Shīrāzī, Muḥammad Muʿīn and Humāyūn-Farrukh). On the other hand, the style of ʿImād is clearly distinguishable from that of Ḥāfīz on account of the former's greater simplicity of language and the more coherent structure of his ghazals. The central theme is the longing of the lover for the transcendental Beloved. Anacreontic and kalendari elements, though not lacking, are only subordinate motifs. The mystical intention of ʿImād's ghazals cannot be mistaken, even in those cases where the poem serves as the prologue to a short panegyrical address. The poet used to recite and discuss poems of his own in his Makhānd, as ʿImān tells us in the Bahshīriyān. From this notice, the conclusion may be drawn that he used them as a tool for this mystical teaching. The ghazals of ʿImād have been analysed by K. Stolz, Der Dīwān des ʿImādīdīn Faqīh, in Ḵᵛājem, xlix (1942), 31-70.

The second part of ʿImād's literary output consists of a series of mathnawīyyāt. Apart from a few very short pieces, there are five poems of an intermediate size:

1. The Saḥā Ṕānāmā, or Muʿīns al-dawār, is a didactic poem written in imitation of Niẓāmī's Makhżūn al-dawār with which it has the same title in common. It was completed in 766/1364-5 and dedicated to Ṣāḥib Shudra. One of its original features is a description of Shīrāz. The text has been edited by Muḥammad Ḵbāl in Oriental College Magazine, v-viii (1929-32), passim.
2. The Ṣabḥāt-īnāma, or Tārisk-ī subḥat-īnāma, in the same metre as the Būstān of Saʿdī, was completed in 731/1330-1. It was dedicated to the waṣīr of the Il-Khān, Ghiyāṣ al-Dīn Muhammad b. Rāshīd al-Dīn Fadl Allāh. Ten discourses, the manners are described of the rulers, the saints, the students, the scholars, the anchorites, the travellers, the ḥāṭī fakhrāt, the beautiful ones, the lovers and the singers and musicians. To each discourse, one or more illustrative stories are added. The seventh chapter has been edited and translated by H.W. Duda, ʿImādīdīn Faqīh and (in ArO, vi (1934), 112-24.

3. The Muhabbat-īnāmā-i ṣirdābdān, a short mathnawī preceded by a prose introduction containing the dedication to the Il-Khān waṣīrī Khāṣṣa bī Taḵī al-Dīn Ṣaṭkī. The metre used in the second part is hāzādī fī masādād-ī muḥḥāfī. The theme of love, studied here in all the realms of nature, is treated in the form of a series of ten disputations, between the soul and the body as well as between a number of entities which belong to the mineral, the vegetable and the animal kingdom. The illustrative stories, added in each case, deal with famous pairs of lovers (cf. H.W. Duda, Ferhān and Schīrīn, Prague 1933, 98-109, where the story of the fifth disputition is discussed). The title of the poem is a chronogram indicating that it was completed in 732/1331-2.
4. The Tārisk-īnāma, composed in the same metre as the preceding poem, was completed in 750/1349-50 according a chronogram hidden in one of the lines, but Humāyūn-Farrukh regards the line as corrupt and dates the work between 754-9, i.e. during one of the last years of the reign of Mūbhāriz al-Dīn Muḥammad, to whom it is dedicated. The subject of the present work is an adaptation of the Miḥkāb al-bīṭāyā, the Persian translation by ʿĪz al-Dīn Mahmūd Kāshānī (died 735/1334-5) of the Aswīrī al-melā̀īn of Alāʿī Ḥafsī Umar al-Suhrawardī for (a list of the ten chapter headings, see further M. Baṣīr, The genesis and definition of a literary composition, the Dānānumā, “Ten love-letters” in cit., xvii (1971), 59-66.

5. The Dāh-īnāmā in the ms. Aya Sofya no. 4131, dated 841 A.H., the work is called Nasihat-īnāmā belongs superficially to a genre of mathnawīs in the metre of the preceding poems which consists of collections of ten letters exchanged between an imaginary pair of lovers. ʿImād has introduced several changes into the conventional pattern: he uses other metres as well, alternates between the forms of the mathnawi and the koṣīrī, and even deviates from the basic theme by inserting letters to some of his patrons instead of love-letters. See further T. Ganjī, The genesis and definition of a literary composition, the Dānānumā (“Ten love-letters”), in cit., xvii (1971), 59-66.

Contrary to the relative oblivion that has become the fate of the works of ʿImād in later centuries, they seem to have been held in high esteem during his own lifetime and the immediately-following century. Several early manuscripts have been preserved, one of which (Madjlis no. 1030) may be an autograph. Among the writers of the beginning of the 9th/15th century, Buṣṭān al-ʿAṣharī highly praised the poetical talents of ʿImād.

Bibliography: The Dīwān-ī Ṣabḥāt-ī Ṣafīk-i Kirmānī has been edited by Rukn al-Dīn Humāyūn-Farrukh, Tehran 1386/1969, with an extensive introduction; the aforementioned mathnawīyyāt, together with a short poem entitled Humāyūn-nāmā, have been edited in the same by Pandj gandj, Tehran 1923, v-vii; for descriptions of the most important manuscripts, see further Sir G. Ouseley, Biographical notices of Persian poets, London 1846, 193-200; Sachau-Ethe,
IMÁD AL-DÍN ‘ALÍ FAKHÝR-I KIRMANI — AL-IMÁRÁT AL-‘ARABIYYA AL-MUTTAHIDA

IMÁDÎ is the pen name of a Persian poet of the 6th/12th century whose personal name has not been transmitted. Sometimes the title Amîr is added to it, presumably referring to his prominence as a poet of the court in his own days. Another nisba (Rdhat al-sudur, 57) has been transmitted. Sometimes the title Amir is added in Kâzwmf, Mamduh-i ‘Imdî, Sar, etc., although he cannot be identified definitely with any ruler known from other historical sources (cf. M. Kâzwmf, Mâshîmî-nâma-i ‘Imdî, i, Tehran 1332/1953, ii, 343-51). ‘Imdâd seemingly started his literary career under the protection of this ruler, on whose death he wrote an elegy (Râhût al-sudur, 371-2, cf. especially the note by the editor). Afterwards, ‘Imdâm went over to the service of the Saljqûk court and composed several panegyrics for Sultan Rukn al-Din al-Din Toqirî (526-9/1132-4). Many other patrons are mentioned in the poems of ‘Imdâm, one of the latest may have been the Eldîgûzî dîlavâh Dîhânî, Pahlawân Muhammad (570-81/1175-86) (cf. the different opinions of Kâzwmf, op. cit., 348). It is less certain that he also praised Sultan Toqirî (351-90/1167-94), as it is sometimes asserted (for the full list of the patrons of ‘Imdâm, see S. Naftsi, Te’ilkat-i Lâhûb al-îláb, 724 f.). Of the two dates mentioned for his death, 573/1177-8 (‘Atiq Khâsqu) and 582/1186-7 (Atâegahodâ), the former seems to be the most probable.

Awlî has entered a few of ‘Imdâm’s poems under the name of ‘Imdâm al-Din Qâzamfawi. This has led to speculation among later biographers of ‘Imdâm. Later biographers mention the Ghâznawî poet Mukhâsqu as his father. According to a notice given by Taki Khâsqu, ‘Imdâm studied treatises on tapawwuf with Sanâ’î at Balkh. The same writer proposes the possibility that there might have been two different, but contemporaneous, poets by this name. This assumption was rejected already in the Haft ëklem. There is no evidence known from his own works that could corroborate the theory of his connection with Qâzamfawi.

Although ‘Imdâm was first of all renowned as a poet of the court, he also wrote religious poetry. He recites poems of this nature during the sessions held by the famous preacher Ibn ‘Abbâm (Râhût al-sudur, 209). In one of his ghâzals, ‘Imdâm clearly refers to the transcendental meaning that should be read into the conventional imagery (cf. e.g. Dzâdzûrmur, ‘Umis al-‘arâm, ii, Tehran 1350/1971, 1108 f.).

There are some indications that point to a fairly high esteem for ‘Imdâm’s poetry in his own time. Hasan Qâzamfawi, who even recommended his work as good material for the study of tyro poets (Râhût al-sudur, 57), ‘Imdâm exchanged poems full of mutual praise with another poet of Rây, Khwâmâm. Both poets were in many respects imitators of the style of Sanâ’î. ‘Imdâm even went so far that he adapted one of Sanâ’î’s poems for his own use (Shams-i Kay, 461 f.). A modern critic (Furuzân-farr) has praised ‘Imdâm’s ability to maintain a fair balance between subtility of concepts and simplicity of language.

Quite soon, however, ‘Imdâm’s poetry appears to have lost the interest of the public. No complete copy of his Dîvân is now known to exist. The largest collection now extant is the British Museum ms. Or. 298 containing more than 1400 lines, most of which belong to kaftûds. More material is scattered over a great number of sources, but a comprehensive collection is still lacking.

(J.T.P. de Bruyne)

AL-IMÁRÁT AL-‘ARABIYYA AL-MUTTAHIDA

The United Arab Emirates. The federation of seven shaikhdoms of the lower Gulf, formerly known as the Trucial States, inaugurated on 14 Shawkâl 1391/2 December 1971. The member states are Abu Zabi (Abû Dhabî), Dubayy, al-Shâriks (Shârdja), ‘Admân, Umm al-Kaywain, Ra’s al-Khâyma and Fuja’yya. The federation’s total area is about 30,000 square miles and its population (180,226 at the 1968 census) has been variously estimated, in the absence of reliable statistics, at anything between 320,000 and 700,000, mostly concentrated in Abu Zabi and Dubayy shaikhdoms.

Until December 1971, the seven shaikhdoms were
linked to Great Britain by a series of treaties, the oldest dating back to 1236/1820, whereby Britain exercised responsibility for the conduct of the shaykhdoms’ foreign relations and ensured their observance of the engagements they had entered into over the years to respect the maritime truce and to abstain from piracy and slave-trading. It was generally accepted that an implicit reciprocal obligation devolved upon Britain from these engagements to defend the Trucial Shaykhdoms against their enemies. A first step towards promoting some form of association among the shaykhdoms was taken in 1371-2/1952 with the establishment of the Trucial States Council, made up of the rulers of the seven shaykhdoms. Further steps were the setting up of the Trucial States Development Council to assist economic, and especially agricultural, progress, and the organisation of the Trucial Oman Scouts (first formed as the Trucial Oman Levies in 1950 on the model of the Jordanian Arab Legion) to keep the peace throughout the shaykhdoms and along their borders. The definition of these borders was, for the most part, accomplished in the years between 1374-5/1955 and 1380-1/1961.

In Shawwal 1387/January 1968 the British government announced that it intended to withdraw from its special position in the Gulf by the end of 1971 (Dhu ‘l-Ka‘da 1390), and at the same time to terminate its treaty relationship with the Trucial States, Bahrayn and Katār. A month after the statement was made the rulers of Ābū Zābī and Dūbāy announced (on 19 Dhu ‘l-Ka‘da 1387/18 February 1968) that they were forming a union of their two shaykhdoms with the intention of co-ordinating their foreign and defence policies, and of co-operating over such matters as internal security, education, health services and immigration. At their instigation a conference of the Trucial Shaykhs and the rulers of Bahrayn and Katār was held at Dūbāy the following week, and on 28 Dhu ‘l-Ka‘da/27 February a decision was reached in principle to create a federation of the nine shaykhdoms. Ultimate power in the federation would reside in a supreme council made up of the nine rulers, while executive authority would be vested in a federal council. The agreement to establish the federation, which was to be called the "Federation of Arab Amirates" (Ittihād al-Imrāt al-Arabiyya), was to come into force on the last day of Dhu ‘l-Ka‘da 1387/30 March 1968.

At this stage, it was necessary to elect the rulers of the shaykhdoms to being drawn into Ābū Zābī’s frontier disagreement with Sa‘ūdī Arabia. In the absence of this agreement, the federation could not come into force. The other states, however, were reluctant to risk offending Persia by according Bahrayn the support she sought. Dūbāy, for instance, because of her close commercial ties with Persia, was most averse to becoming embroiled in the dispute. There was a similar aversion on the part of most of the shaykhdoms to being drawn into Ābū Zābī’s frontier disagreement with Sa‘ūdī Arabia. Katār’s relations with the Sa‘ūdīs had been intimate for many years, whereas those with Ābū Zābī had been distant, and at times hostile, for generations. Bahrayn was counting upon Sa‘ūdī diplomatic help against the Persians, while Dūbāy had for years been locked in a contest with Ābū Zābī for political influence in Trucial Oman.

A fateful stage in the negotiations towards a federation of the nine shaykhdoms was reached in Rabī‘ I 1390/May 1970, when a resolution of the Perso-Bahraynī dispute was achieved. At the request of both parties, and of Britain as the protecting power, the UN secretary-general had appointed a personal representative in Muharram 1390/March 1970 to ascertain the wishes of the people of Bahrayn regarding the future political status of the shaykhdom and its relationship to Persia. The secretary-general’s representative reported at the beginning of May that the Bahraynīs were “virtually unanimous” in wanting a fully independent, sovereign state, and that “the great majority” desired it to be an Arab state. The UN security council unanimously endorsed the report on 11 May, and later that month (Rabī‘ I 1390) the Persian government accepted it. The renunciation of the Persian claim to Bahrayn, although it was henceforth to determine Bahrayn’s attitude to the Federation of Arab Amirates, had no effect upon the other threats to the federation’s territorial integrity. In the first week of May, Sa‘ūdī Arabia reasserted her claim to the western and southern areas of Ābū Zābī and to the Buraynī oasis. A fortnight later Persia put forward a claim to the islands of Ābū Mūsā and the Greater and Lesser Tūnbs (Tūnī Buzurk and Nābiyy Tūnī).
situated a few miles inside the Gulf to the west of the Straits of Hormuz. Abu Musa had up to this time been regarded as a possession of the Trucial Shaykhdom of al-Sharīka and the Tūnbs as belonging to Ra’s al-Khayyāma.

Having secured the abandonment of the Persian claim, the Bahrayīns had no wish to create a fresh source of friction with the Persians by taking the part of al-Sharīka and Ra’s al-Khayyāma in the controversy over Abū Musa and the Tūnbs. This caution, combined with the resentment felt over what was considered to be the insufficient weight given to Bahrayn’s interests and importance in the projected federation and the aversion to siding with Abū Zabi in its resistance to the Sa’ūdis, served to set Bahrayn after May 1970 on a political course that took it steadily away from the federation and towards independence. Where Bahrayn led, Katar was bound to follow, as much for reasons of amour propre (its ruling family had been at feud with that of Bahrayn for over a century) as out of considerations of political advantage and prudence. The final spur was applied by the decision of the Conservative government in Britain, which had been elected to power in June 1970, to adhere to its predecessor’s policy of withdrawal from the Gulf by the end of 1971. (The decision was announced in March 1971 but there is evidence that it had been reached some time previously.) Bahrayn declared its independence on 22 Dżumāda I 1391/1 August 1971, and Katar followed suit on 11 Rādjāb 1391/1 September 1971.

A few weeks earlier, six of the seven Trucial States, having concluded that a federation of the nine shaykhdoms was no longer feasible, had decided to form a federation of their own. The Trucial federation, entitled the “United Arab Amirates” (al-Imrat al-ʿArabiyya al-Muttaḥida), was proclaimed at Dubayy on 25 Dżumāda I 1391/18 July 1971. The ruler of Ra’s al-Khayyāma, Shaykh Saqr b. Muhammad al-Kāsimi, refused to join the federation, partly because its members showed no anxiety to assist him actively in opposing the Persian claim to the Tūnbs, partly because of his jealousy of the position and power which the rulers of Abū Zabi and Dubayy commanded within the federation. His fellow Kāsimi ruler, Shaykh Khalīd b. Muhammad al-Sharīka, proved more pliable over the extension of Persian authority over Abū Musa Island. His acquiescence in a Persian occupation was obtained in late November in return for an annual subsidy and an equal share in the exploitation of the submarine oilfields located off Abū Musa. On 12 Shawwāl 1391/30 November 1971, the day before Britain’s special treaty relationship with the Trucial States was due to end officially, Persian troops occupied Abū Musa and the Tūnbs, meeting with armed resistance on the Greater Tūnbs from the retainers of the ruler of Ra’s al-Khayyāma. There were a number of repercussions from the Persian occupation of the islands, among them the expulsion of several thousand Persians from Irāk and the nationalisation by the Libyan government of the British Petroleum Company’s assets in Libya. The most violent individual reprisal was the murder in Dhu l-Ḥijdżah 1391/late January 1972 of the ruler of al-Sharīka, Shaykh Khalīd b. Muhammad al-Kāsimi, by his cousin the ex-ruler, Shaykh Saqr b. Sūlān al-Kāsimi, in revenge for the alienation of Abū Musa to Persia. Shaykh Saqr b. Muhammad of Ra’s al-Khayyāma was so shaken by the assassination that at the end of Dhu l-Ḥijdżah 1391/mid-February 1972 he joined the federation.

The treaties between Britain and the Trucial States were abrogated on 13 Shawwāl 1391/1 December 1971, and the United Arab Amirates was temporarily established at Abū Zabi until a permanent capital had been built on a site on the border of Abū Zabi and Dubayy.

The fons et origo of executive and legislative power within the federation is the supreme federal council, composed of the rulers of the seven constituent shaykhdoms or amirates. Decisions of the council are by majority vote, with Abū Zabi and Dubayy both possessing the power of veto. The president appoints the prime minister, the deputy minister and the other ministers (some two dozen) who together make up the federal council or cabinet. The cabinet’s prime function is to carry into effect the decisions of the supreme council and the instructions of the president. The provisional constitution, which runs to 152 articles, also established a federal national council to serve as a consultative assembly. It consists of forty delegates appointed for a term of two years by the rulers of the amirates, Abū Zabi and Dubayy each having eight delegates, al-Sharīka and Ra’s al-Khayyāma, six, and the other three amirates, four. Although the constitution would appear to empower the national council to initiate legislation, its principal task is clearly to discuss and approve the budget and draft legislation presented to it by the council of ministers. The constitution also provides for the establishment of a supreme court for the federation and a number of courts of first instance. Responsibility for the defence of the federation is vested in a higher defence council, headed by the president and consisting of the vice-president, the prime minister, the minister of defence and the interior, and the commander of the Union Defence Force, which has been formed around the nucleus of the Trucial Omani forces.

The constitution of the UAA, both in its provisions and in its operation, reflects the primacy within the federation of Abū Zabi and Dubayy, the two wealthiest and most populous amirates. At the end of their term as president and vice-president in 1396/1976, Shaykh Zayid of Abū Zabi and Shaykh Khalīd of Dubayy were re-elected to their respective offices for a further five years. Members of their families and close adherents hold the chief portfolios in the council of ministers. The federal budget is provided almost exclusively by Abū Zabi from its large oil revenues. (Dubayy, although deriving a substantial income from oil and commerce, refuses to contribute more than a token amount.) Abū Zabi also has a defence force considerably larger and better equipped than that of the union. Naturally, the wealth and political predominance of the two shaykhdoms has inspired envy and some resentment among the less fortunate members of the federation, with the exception perhaps of al-Sharīka, which enjoys a national preponderance of influence from oil revenues. The arbitrariness of fortune which has blessed Abū Zabi and Dubayy has tended to perpetuate and to intensify the longstanding rivalries and animosities among the shaykhdoms, more particularly those between the northern Kāsimi tribal confedera-
tion and the southern Bani Yas confederation. There are other strains within the federation besides those caused by the imbalance of wealth and by old tribal and dynastic vendettas. Social and economic changes in recent years have been rapid and profoundly unsettling. A huge influx of immigrants of all kinds has broken the traditional mould of society. Unearned affluence of an unreal magnitude has corroded customary morals, values and restraints. Alien ideological notions have undermined the old political certainties, with what eventual consequences it is impossible to foretell. The basis of the UAA member states, especially the need for some kind of 'indk, mdgh, indk), INAK (spelt inak, inakh and inak), a title which existed in various Turkic and Mongol states.

The word is evidently a deverbal noun from the Turkic verb inan- ['sha'] "to trust, to rely on" etc., with the basic meaning "close friend, confidant, trusted person". The spelling 'inak, with initial qn, very often found in the Central Asian sources of the 19th century, is most probably only an indication of the initial back vowel; an explanation of this spelling given by A.A. Semenov, deriving the word from Arabic 'inak "embrace", is, at best, a late literary invention. A similar derivative from the same verb, inan-k "reliance", "trust", is registered in the Turkic texts of the 10th century and later as a title or rank of persons belonging to the close retinue of the ruler (cf. especially inan-k in Khwarezmian, 1, 10, and Kaudaeng bilig, Farghana MS. 293; this title was used through the whole Saldjik period (cf. also such titles as inan-powy, inan-hi bilig etc.; see Sir G. Clauson, An etymological dictionary of pre-thirteenth-century Turkish, Oxford 1972, 187). The same meaning, probably, had also the title inanl (another deverbal noun from the root +an-: +an-). Another reading and explanation of this title given by A.A. Semenov, deriving the word from Arabic 'inak "embrace", is, at best, a late literary invention. A similar derivative from the same verb, inan-k "reliance", "trust", is registered in the Turkic texts of the 10th century and later as a title or rank of persons belonging to the close retinue of the ruler (cf. especially inan-k in Khwarezmian, 1, 10, and Kaudaeng bilig, Farghana MS. 293; this title was used through the whole Saldjik period (cf. also such titles as inan-powy, inan-hi bilig etc.; see Sir G. Clauson, An etymological dictionary of pre-thirteenth-century Turkish, Oxford 1972, 187). The same meaning, probably, had also the title inanl (another deverbal noun from the root +an-: +an-). Another reading and explanation of this title given by A.A. Semenov, deriving the word from Arabic 'inak "embrace", is, at best, a late literary invention. A similar derivative from the same verb, inan-k "reliance", "trust", is registered in the Turkic texts of the 10th century and later as a title or rank of persons belonging to the close retinue of the ruler (cf. especially inan-k in Khwarezmian, 1, 10, and Kaudaeng bilig, Farghana MS. 293; this title was used through the whole Saldjik period (cf. also such titles as inan-powy, inan-hi bilig etc.; see Sir G. Clauson, An etymological dictionary of pre-thirteenth-century Turkish, Oxford 1972, 187). The same meaning, probably, had also the title inanl (another deverbal noun from the root +an-: +an-)...
In the third quarter of the 18th century, Muhammad Amin Inak, chief of the Uzbek tribe, became the ruler of the khānate and the founder of the dynasty, which remained in power till 1920 and is called sometimes in scholarly literature “Inaks.” The third ruler from this dynasty, Eltuzar Inak, proclaimed himself khān in 1219/1804. After that, Inak became the highest title for the Uzbek nobility in Khiva (the historians of Khiva mention cases of promotion from the rank of atalik to the rank of inak, see e.g. Fanarx al-askāl (ms. cit., ff. 117b, 358a). During the reign of Muhammad Rahim Khān (1220-1408), his elder brother Kutlug Murād had the title ināk-bek and was styled amīr al-umūr (ibid., f. 316a; but the atalik was still considered as senior Uzbek amīr; he was called also biy-inak and inak-ādār). In the middle of the 19th century, the title of inak-bek (that is, senior I.) was given to the khān’s heir, who was mostly governor of the town of Hazārāsp before the Khokand conquest (1873), however, this title was applied not to the heir, but to one of senior relatives of the khān (cf. A.L. Kuhn’s papers in the Archives of the Leningrad Branch of the Institute of Oriental Studies, file 1/13, ff. 36a-38b). Besides him and the four inaks of the Uzbek tribes, the title was granted sometimes to the tribal chiefs of the Turkmen.

The title inak existed also in the Khānate of Khokand (q.v.), where it was given to a court official (or official in charge of the provision for the court and for the khān’s bodyguards; they supervised also the personal domains of the khān. At the same time, apparently, it was here also, as in Bukhārā, an honorary rank given to various dignitaries, such as provincial governors (cf. V.P. Nailikvin, Histoire du khutat de Khokand, Paris 1889, 104).

INĀT, a town in Hadramawt, about 10 miles/15 km. due east of Tarīm, and situated at the confluence of the Wādis ‘Ināt and Hadramaut. The holy family of ‘Ināt is the Al Bū Bakr b. Shaykh and the illustrious mansūb, Shaykh Bū Bakr b. Sālim, known as Mawālī ‘Ināt, is buried in the town. The family has been subjected to severe criticism from other Sayyid groups because of its bearing arms. ‘Ināt has become one of the most important hājpas (q.v.) in Hadramawt. It is famous for its own breed of hunting dogs which seem to be indistinguishable from the common “pie-dog.” With these dogs the inhabitants participate in the ibex hunt under the direction of the Mansāb. The number of the inhabitants of the town was greatly reduced after the war-time famine in Wādi Hadramaut, and a fairly recent figure suggests a population of about 1,300. The old quarter organisation has in reality disappeared, though originally there were several quarters. Landberg employs the spelling ‘Eynat (‘Aynā), though it seems that all other European forms proposed are erroneous.

INAYAT KHĀN, a noble of the Indian Mughal emperor Awarangzub. He stemmed from the Mangit tribe, became actual ruler of the Khanate of Khokand after its conquest by Nadir Shah in 1696. He certainly already held the title inak before (cf. A.L. Kuhn’s papers in the Archives of the Leningrad Branch of the Institute of Oriental Studies, file 1/13, ff. 36a-38b).

INAYAT KHĀN, an obscure general of the Mughal emperor Awarangzub. He was appointed head of the divān-i khalīsa (division of crown lands). In 1079/1668-9 he was promoted to the rank of pishdast-i daftar-i khalīsa, and was promoted to the rank of 900 suwar. In 1080/1669-70 he reported that the expenditure had increased since the time of Shāh Dāיוān and that there was a large deficit; Awarangzub thereupon ordered an enlargement of the khalīsa lands and a reduction in expenditure. In 1082/1671-2 he was appointed faṣūdār (q.v.) (commandant) of Cakla Barelf and in 1086/1675-6, governor of Adjmer. He took part in a campaign against the Rathaors, but died in 1093/1682. He was apparently not implicated in the conspiracy of Padshah Kulf Khan, his son-in-law, who was killed at about 2/1680-1. When in Dhu ‘1-Hijja 1091/January 1681 Awarangzub advanced to Do-raha, in the Adjmer region, ‘Inayat Khān was ordered to write to Tahawwur Khan, one of the principal supporters of Awarangzub’s son Akbar during the rebellion of 1091-2/1680-1. When in Dhu ‘1-Hidjdja 1091/January 1681 Awarangzub advanced to Dōrāha, in the Adjmer region, ‘Inayat Khān was ordered to write to Tahawwur Khān inducing him to desert the prince’s army,
then at Kurkê, Tahawwur Khan compiled, but on his arrival in Awrangzib's camp some confusion arose in which he was killed. 

INCENSE [see LURÂN].

INDEPENDENCE [see İSTIKLAL].

INFALLIBILITY [see İSMA].

INHİSAR, or in Ottoman Turkish also Hàşîk, were the words used for monopolies and restrictive practices of Ottoman guilds, the full term being inhîsâr-i beyi ve şirîr. These monopolies included restrictions concerning the number or kind of people allowed to perform a trade or a profession, as well as limitations imposed on production or on commerce. Restrictions of this kind were considered necessary and beneficial to society. As against this, monopolistic hoarding or cornering was condemned and prohibited by the government. To distinguish between the two kinds, the second was called in Turkey ihtikdar, but this term was used in Arabic for both kinds of monopolies (cf. Baer, *Monopolies*, 145-6; *Egyptian guilds*, 107 n. 11, 159-61).

Documents relating to Istanbul and Cairo dating from the 18th and 19th centuries show that a craftsman or merchant who wanted to practice his craft or trade independently needed the agreement of the guild's head. In earlier periods, and in some smaller towns, economic activity seems to have been less restricted, though there is evidence that in the 17th century Cairo craftsmen in various branches underwent ceremonies of initiation in order to acquire an idâza, without which they were not allowed to practice their craft. One of the main purposes of these restrictions was to limit the number of shops or people occupied in a trade or craft. Such limitations are indeed documented for Istanbul from the 16th century onwards well into the 19th. In addition, efforts were made to prevent the establishment of "wildcat" enterprises, and especially to eliminate the illicit trade of hawkers and peddlars (kolukulalar).

Another kind of restriction was the limitation of each guild to producing or selling specific goods only. The aim of such measures was to eliminate external and internal competition and thus to prevent social upheavals and unrest. For the same purpose it was ordered, in some cases, that specific production of particular dresses was limited to specific communities in order to maintain their distinctive costume. Many trades or guilds were confined to specific places or markets, which often bore the name of the craft or the trade.

Most of these restrictions were controlled by the gedî system. Gedî literally means "breach" and hence acquired the meaning of privilege. Thus a gedî was the right to exercise a craft or a trade, either in general or, more frequently, at a special place or in a specific shop. Most gedîs included the right to the tools of a workshop or a business. The number of gedîs in each craft was fixed, though it could be changed from time to time. Since nobody was allowed to become a master or open a shop without owning a gedî, new masters could be accepted only when a vacancy occurred. Gedîs were inheritable if the heir fulfilled all other conditions for becoming a master in the craft; otherwise the rule was that they be transferred to apprentices or journeymen of the guild, not to outsiders.

All monopolies and restrictions of the guild system were sanctioned by the authorities, decreed as government orders and enforced by the officers of the state. After some unsuccessful attempts to abolish them in Egypt in the middle of the 19th century, they gradually disappeared, in Egypt as well as in other parts of the Ottoman Empire, in the course of the second half of the century. On 9 January 1890 it was decreed in Egypt that every person was free to exercise any craft or occupation or profession or trade, except for dangerous occupations or for those which were government monopolies.

INIMITABILITY OF THE KUR'ÂN [see ʿīgâz].

INSPECTION OF TROOPS [see İSTİRÂD and (above) DÂĞI VE TASHIÎRA].

INSTITUT DES HAUTES ÉTUDES MAROCAINES (I.H.E.M.) al-Maḥâd li l-ʿulâm al-uḫyâ al-maghribiyah, one of the most important centres of intellectual life in Morocco over a period of forty years, bearing in mind the fact that it followed on from the École Supérieure de Langue Arabe et des Dialectes Berbères opened in Rabat in 1915 for the training of highly-qualified civilian interpreters.

The I.H.E.M. was established, by decree of the grand vizier, on 11 February 1920/20 Dümâdî 1338, with "the object of instigating and encouraging scientific studies relating to Morocco, of co-ordinating them and centralising the results." It was replaced, in 1956, after Moroccan independence, by the Faculté des Lettres et des Sciences Humaines of Rabat. If the École Supérieure had been directed by interpreters of distinction like M. Nehill and I. Hamet, the I.H.E.M. was headed by a succession of professors of high renown, sc. H. Basset, E. Lévi-Provençal, L. Brunot and H. Terrasse. The staff of directors of studies, lecturers and research supervisors has included among its more distinguished members now dead, F. Arin, A. Basset, E. Biarnay, R. Blachere, H. Bruno, H. de Castris, J. Gelezier, P. de Cernat, L. Chatelain, G.S. Colin, J. de Cossé-Brissac, R. Hoffler, M. Bendaoud, E. Laoust, C. Le Ceur, R. Le Tournue, V. Loubignac, G. and W. Marçais, G. Marcy, P. Mauchausse, J. Meunie, R. Montagne, L. Paye, H. Renaud, P. Ricard, J. Riche and A. Roux. Many of these have been contributors to this Encyclopaedia.

The achievement of the I.H.E.M. has been considerable. Morocco has witnessed the emergence of a strong school that has addressed itself with energy and enthusiasm to the scientific study of the country and has almost entirely re-evaluated our knowledge of the Maghrib and Muslim Spain. The Institute first published, as successor to the review *Les Archives Berbères*, a *Bulletin de l’I.H.E.M.* which after the first issue, took on the splendid title *Hespéris*, which it kept until it ceased publication. The scientific authority and exceptional documentary interest of this publication were such that in 1972 a complete facsimile edition was published (comprising the *Archives Berbères* and the unique *Bulletin*).

*Hespéris* published among its articles a *Bibliographie Marocaine* of a very wide-ranging character since it embraces, under some forty headings, all that is known concerning Morocco and its successive
civilisations. Edited by specialists from the Bibliothèque Générale de Rabat, it has made an unrivalled contribution to any methodical study of the Maghrib. This bibliography was published between 1923 and 1953.

Hespéris merged in 1960 with the review Tamuda, born in Tetuan in the last years of the Spanish Protectorate, and it continues in this form to serve Morocco and the pursuit of knowledge.

Besides Hespéris, the I.H.E.M. has published several collections comprising the complete Hespéris (15 volumes); collected Arabic texts (12 volumes); Publications of the I.H.E.M. (62 volumes); collected articles of the Centres d'Etudes Juridiques (45 volumes); Proceedings of the Congresses of the I.H.E.M. (9 volumes); some extra-mural publications, including *Initiation au Maroc* (3 editions), a *Notice sur les règles d'edition des travaux* and some *Brefs conseils pratiques* for the transcription and printing of Spanish and Portuguese words (R. Ricard); collected Notes and Documents (21 volumes); and collected Moroccan Berber Texts (2 volumes).

In addition to research, publications, public sources in Arabic (classical and dialectal), in Berber and in law without the obligation to Moroccan civilisation, the I.H.E.M. provided trainings for the various degrees and the Casablanca law degree awarded by French universities. It thus enabled many young people to start and complete their higher studies in Arabic and in law without the obligation to go to France.

Also worthy of mention is the Institut Scientifique Cherifien, founded in 1920, an institution of higher learning founded in Tetuan, by the decree of 31 March 1960.

Apart from routine education, the Institut des Hautes Études included a number of laboratories and study centres, providing and co-ordinating specialised equipment and research facilities for the students of the various departments. Similarly, a university library offered its resources to the students, resources that in time were added to the study facilities provided by the General Library of Sūk al-ʿĀṯārīn.

Finally, the Institut des Hautes Études was responsible for the creation of two reviews: the *Cahiers de Tunisie*, a quarterly review of the arts, replacing the former *Revue tunisienne*, and the *Revue de droit*, also quarterly. A certain number of volumes were published in the form of specialised collections: a Library of Law and Economics, Publications of the Section and the Literature Section (Paris, P.U.F.).

Thus there operated for some fifteen years an institution of modern higher education, equivalent to that of the French universities. The patronage of the University of Paris, reinforced by numerous visits from French professors, ensured that a high standard was maintained.
Superiure, Ahmed Abdesselem, both of them intellectuals, writers and academics of great distinction. Thus the University of Tunis, totally and progressively integrated with the country, and totally independent in its fortunes, in the framework of the institutions of independent Tunisia, has become distinguished and effective universities of the Arab world. Straightaway, in spite of its relative youth and in spite of its scattered, it has entirely integrated with the country, and totally independent in its fortunes, in the framework of the institutions of independent Tunisia, has become distinguished and effective universities of the Arab world.

INSULT [see SHATM].

INTERPRETER [see TURQUUMAN].

INTERROGATION [see ISTIFHAM].

INVENTIVE [see HEG].

INZAL (French spelling: "enzel", from anjala, to lodge, give hospitality), traditional type of lease peculiar to Tunisia. Presumably a survival of the Roman emphyteusis, it served as a means of circumventing the inalienability of pious foundations. The Malikis define it as a "lease in perpetuity (kird mub'ahad) of a property to a person engaging himself to build a house, or any other edifice, or plant trees on it and pay a perpetual rent calculated by the year or month" (D. Santillana, Istituzioni di diritto musulmano malichita, Rome 1925, i, 441). E. Clavel's definition distinguished between the two domanial aspects of the estate: "L'enzel est un contrat sui generis, par lequel le wakf ou le propriétaire d'un bien mulk se dépouille, à perpétuité, du domaine utile d'un immeuble, n'en conservant que le domaine éminent, à charge par le tenant de payer un canon annuel fixe" (Le Wakf ou Habous, Caire 1896, 2, 188). The rights of the lessee are so wide as to place him in loco dominici: he may build, plant, make improvements (which become his property), bequeath or transfer his rights, etc. The inzal resembles the Tunisian khadr and the Egyptian kisr, but differs from both in four points: (1) it has lost its original purpose, viz. to render wakf property productive thus providing income to its beneficiaries; (2) it is no longer limited to wakf, but includes private property as well; (3) it is annulled in case of non-payment of rent for two consecutive years; (4) the amount of rent cannot be adjusted to the fluctuations of the rental value of the property. Under the French protectorate, the practice of inzal gained momentum, as it enabled the colons to acquire extensive land holdings without prior capital investment.

(P. SHINAR)

AL-'IRAKI, SAYYID SHAAMS AL-DIN, religious leader active in the evangelisation of Kashmir. He was the son of Sayyid Ibrahim, a Mughal Sayyid, and was born in the small town of Kund Sullkan, situated near Tehran on the road to Kashmir. He received a good education, and, while still young came under the influence of Sayyid Muhammad Nurbakhsh. (see NURBAKHSHIYYA ORDER [see KSIR, NASIM AL-DIN].)

Impressed by his eloquence and learning, Sultan Husayn Mirza Bakyara (873-911/1469-1506) took him into his service and sent him as his envoy to Sultan Hasan Shah (877-89/1472-84) of Kashmir. On arriving in the Valley, where he stayed for eight years, he became the disciple of Baha Ismali, a Kubrawi saint, and then secretly won over Baha Ali Nadjdar, one of his most devoted followers, to the Nurbakhshiyaa creed, which was a mixture of Shi'i and Sunni doctrines, leaned on by Shi'i pantheism. But his success was limited because, being an envoy, he could not preach openly. Besides, the Sunnis 'ulama came to know of his religious beliefs and compelled him to leave Kashmir. He returned to Harat, but as he lost the favour of Sultan Husayn Mirza on account of his unorthodox beliefs, he left for Ray to live with 'Ali Kasm, the son of Sayyid Muhammad Nur Bakhsh.

While he was in Ray, Shams al-Din heard that those whom he had converted to Kashmir had relapsed into orthodoxy; so, on the advice of 'Ali Kasm, he decided to proceed to the Valley. He left Ray in Rabii' 1 907/September 1501. Travelling via Mashhad- Kandahar-Multan, he entered Kashmir in the spring of 1502 through the Punja-Baramula route. On arriving in Srinagar, he again won over Baha' Ali Nadjdar. But the most important convert was Mirza Rayna, a powerful noble, who supported him in his activities, and gave him money to build a khankah [q.v.] at Doodhbal in Srinagar. But on account of the opposition of the orthodox 'ulama and of and of Sayyid Muhammad Bayhaqti, the waqfi of Sunnan Muhammad Shah, he left Kashmir. He went to Baltistan, to the northeast of Kashmir, and carried on missionary work among its Buddhist inhabitants with considerable success. He stayed there for over two months until the defeat and death of Sayyid Muhammad Bayhaqt [see BAYHAKTI SAYYID above] in 911/1505, and returned to Srinagar at the invitation of Mirza Rayna, who had again become powerful. During the nine years that Misa Rayna was waqfi, Shams al-Din carried on his activities without any hindrance. The conversion of Tadjji Cak and other Cak nobles further enabled him to consolidate his work.

Meanwhile, a great change had come over the Nurbakhshiyaa which, under the influence of Sufism, increasingly began to identify itself with Shi'i by shedding those of its doctrines which it had borrowed from Sufism and Sunn Islam. Shams al-Din, too, felt the impact and, inclined as he had always been towards the doctrine of the Twelvers, he now openly preached it, so that by the time he died in 932/1526, Shi'Iism had become well established in Kashmir. In remote Baltistan, however, the Nurbakhshiyaa beliefs survived.

Bibliography: The only biography of Shams al-Din known to exist is a Tahfjat al-abhabh by a contemporary of his whose exact name is not known. The manuscript of the work is with Sayyid Muhammad Yuusuf, a Shi'i muqaddas of Kashmir and a descendant of Shams al-Din. Other works to be consulted are: Pr Hasan Shah, Ta'riikh-i Hasan, ii, Srinagar 1954; Mirza Haydar Dughlat, Ta'riikh-i Ragisti, tr. E.D. Ross and N. Elias, London 1895; Nur Allah Shusharti, Muqaddas al-mu'minin, Tehran 1299/1882; Mohibbul Hasan, Kashmir under the Sultans, Srinagar 1974; Oriental College Magazine, Lahore (February and May 1925, and August 1929).

ii. LANGUAGES

(a) Pāhsto [see AFGHAN. (ii). The Pāhsto language]
(b) Kurdish [see KURDS, KURDISTAN. v. Language]
(c) Zaza [q.e.]
(d) Khārazmian
(e) Sogdian and Bactrian in the early Islamic period
(f) New Persian
(g) New Persian written in Hebrew characters [see JUDEO-PERSIAN. ii. Language]

(d) Khārazmian.
Khārazmian, last attested late in the 8th/14th century (before yielding to Turkish), belonged to the Eastern branch of the Iranian language family, being most closely related to Sogdian, its southeastern neighbour. Pre-Islamic records are limited to coin legends and other inscriptions in a regional, partly ideographic development of the Aramaic script, found on wooden tablets, ossuaries, and silver vessels, and some documents on leather. Surviving Iranian sources consist almost exclusively of [a] some 400 isolated sentences quoted in Arabic books of case-law, and [b] the Khārazmian glosses (in one case almost complete) in different copies of al-Zamakhshārī’s Arabic dictionary, Muqaddimat al-adab. They use the Arabo-Persian script, augmented by two letters (h and f) with triple dots above, producing چ (for both affricates چ and چ as originally in Pāhsto) and ب (i.e. گ, distinct from گ) respectively. While چ, گ, چ (f), گ (k), چ (k) and گ, the emphatics ۚ, گ (k), گ, گ, گ (d), گ, گ presumably had their Persian values, the remaining letters, including گ, گ (fricative گ, گ) evidently kept their original pronunciation. The letters are, however, often unpointed and for the most part unvowelled. Remarkable is the distinct spelling of words in pause position, with a presumably stressed vowel گ (before the last consonant, e.g. گرک [پرگ] ‘wolf’, in pause گرک [پرگ] ‘wolf’). The basic numerals exemplify some typical consonant developments: ١ گر (بیچ), ٢ گار (بیچ), ٣ گی (as Christian Sogdian, گی); also ٣٠ گی (بیچ), but ١٣ گی (بیچ), cf. Parthian گود (بیچ), ٤ گر (بیچ), ٥ گر (بیچ), ٦ گر (بیچ), ٧ گر (as Sogdian, گر) (for both affricates گر and گر), ٨ گر (بیچ, گر) (for both affricates گر and گر), ٩ گر (بیچ, گر) (for both affricates گر and گر), ١٠ گار (بیچ) in a regular order, even when they appeared later as independent forms, e.g. گودعَلَم گودعَلَم ‘he recited the greetings before him’ (literally, “he read-him-them-off-upon-the greetings”).

(e) Sogdian and Bactrian in the early Islamic period.

1. Sogdian (or Soghdian) was the Middle Iranian language of Sughd [q.v.] and adjacent areas. As an Eastern Iranian language, Sogdian is related fairly closely to Choresmian (Khārazmian, see above) and Bactrian, more distantly to Middle Persian (Pahlavi). The form of Sogdian known from texts seems to be based on the language of the capital Samarkand, but the limited evidence available indicates that the dialects spoken in areas such as Bukhārā and Čāč (Shah, Tahkent) were quite similar and no doubt mutually comprehensible with Sogdian proper.

Most of the surviving Sogdian manuscripts date from the 4th to 10th centuries A.D.; in addition to secular texts such as letters and business documents, they include a mass of Buddhist, Christian and Manichaean literature, written in four different scripts. Almost all of this material was found far to the east of the Sogdian homeland, in areas where Sogdian merchants had founded trading colonies, in particular the Turfan [q.v.] oasis in Chinese Turkestan (Xinjiang) and Dunhuang in western China. The most important Sogdian texts found in Sughd itself are the so-called “Mug documents” (published by L. A. Ziegler and Bogoljubov-Smirnova). These date from the period of the Islamic conquest of Sughd under Kusayba b. Muslim [q.v.] at the beginning of the 2nd/8th century and represent part of the administrative archives of its last independent rulers. Of particular interest is a letter in Sogdian from an Arab official named ʿAbd al-Rahmān b. Suḥb to the Sogdian king Dheväšāṭī (see I. Yakubovich, Magh. I, revisited, forthcoming in
As a result of the important role of the Sogdian merchants in the long-distance trade between China, India and the West, Sogdian came to be used as a "lingua franca" of the Central Asian trade routes and many Sogdian documents may have been written by and for non-native speakers. This is particularly obvious in the latest Sogdian documents (3rd-4th/9th-10th centuries), some of which display strong influence from Turkish. Soon after the beginning of the 5th/11th century, Sogdian seems to have gone out of use as a written language, having been superseded by Turkish and in Sughd itself by Persian. Although New Persian is in origin the language of the south-western Iranian Turks and other Eastern Iranian words (see W.B. Henning, Mitteloiranisch, 84-6), particularly remarkable is the philosopher al-Farabi's discussion in his Kitab al-Huruf of the means for expressing the notion of existence in Sogdian (see A. Tafazzoli, Three Sogdian words in the Kitab al-Huruf, in Bull. of the Iranian Culture Foundation, i/2 [1973], 7-8).

The disappearance of Sogdian as a language of culture and administration did not immediately lead to its disappearance as a spoken language. Indeed, one Sogdian dialect has survived to this day as a result of its speakers' location in a remote mountain valley in northern Tajikistan. Now known as Yaghnoé, this language was estimated in 1975 to be spoken by some 2,000 persons, mostly Sunni Muslims.

2. Bactrian was the Middle Iranian language of ancient Bactria with its capital Bactra, later Balkh [q.v.]. Bactrian is generally reckoned as an Eastern Iranian language, but it is now becoming clear that it has much or most in common with Western Iranian especially Parthian, as with Eastern Iranian languages such as Sogdian and Choresmen (Khâræzamian). Unlike other Middle Iranian languages, Bactrian was usually written in the Greek script, a legacy of the conquest of Bactra by Alexander the Great. It is chiefly known from short inscriptions on coins and seals from Afghanistan and the north-west of the Indian sub-continent; a few more substantial monumental inscriptions (mostly found in Afghanistan, but also in the neighbouring areas of Uzbekistan and Pakistan); a handful of manuscript fragments from Chinese Turkistan (Xinjiang), including a unique folio in Manichaean script; and a recently-discovered group of more than 150 documents, including letters, legal and economic documents and a couple of fragmentary Buddhist texts, most of which appear to originate from the principality of Rôb (al-Tabarî's Ru'îb, modern Rûî in the northern Hindûkush). These documents now form by far the largest part of the surviving corpus of Bactrian, so that all surveys of the material written before they began to come to light in the 1990s must be regarded as seriously out of date.

The earliest Bactrian inscriptions date from the 1st to the 2nd centuries A.D., when Bactria was the centre of the Kushân empire, the latest to the 3rd/9th century. The documents belong to the intervening period, from the 4th century A.D. to the 2nd/8th century, during which time Bactria was subject to a succession of foreign rulers: the Sâstânà dynasty of Iran, the Chionites, Hepthâlites (Arabic Ḥayûlî, see Haytatîla), Turks and finally Arabs. By the middle of the 2nd/8th century, the area was substantially under Muslim control. Some of the latest Bactrian documents refer to the use of "Arab silver dirhams" and to taxes payable to the Arabs (the word used being Tâzîg), while the very last (dated in the year 549 of the local era, probably corresponding to 164/781) seems to have been written by a Muslim ruler, who prefaces the text with a Bactrian version of the hamildih.

A number of Bactrian words and titles are cited by Muslim writers, who refer to the language as al-balkhîyya (the language of Balkh) or al-tukhdriyya (the language of Tukhristân [q.v.], a term commonly used in Islamic sources but first attested in two Bactrian documents of the Hepthâlîte period, ca. 6th century A.D.). A list of Bactrian month-names is found in some manuscripts of al-Bîrûnî's Chronology, for example, though this does not seem to have the authority of al-Bîrûnî himself (see N. Sims-Williams and F. de Blois, The Bactrian calendar, in Bull. of the Asia Institute, x [1996 [1998], 149-65).

(f) New Persian.

1. General introduction: definition, position, periodisation, denominations

i. General introduction
   1. Definition

New Persian is the name given by Western scholars to the language written in modified Arabic script,
which has been used roughly in the past millennium, from the 9th century A.D. up to the present day, that is, historically, in the Islamic period of the Persian-speaking population. Geographically, it was first spoken in Western Iran, with the south-western province of Fars or Fars (Arabicised form; Late Persia) acting as a centre in mediaeval times. However, the bulk of its earliest literary documents (9th-10th centuries) originated from the north-east (Khurāsān, including Niāhāpūr, Marw, Harāt, etc.) and Central Asia; but from the late 10th century, it became the literary language in Western Iran as well. In the subsequent centuries, parallel with the Islamisation of the neighbouring countries, Persian as a language of culture, administration and everyday communication dominated vast territories ranging from Anatolia to the Indian subcontinent (North India), including Transoxania and Afghanistan, developing various written and spoken standards and dialects. Shortly after its emergence, Classical Persian became the culturally-dominant language of the area in question. Its latest representative, Modern Persian, called Fārsī by native speakers, with its closely related dialects and variations is spoken by approximately 50 million people as their mother tongue or their second standard language. Today, Modern Persian is the official language of Iran, spoken as a mother tongue by 50% of the population (ca. 30 million). Its closest relatives are Tādžīkī [q.v.], the official language of Tadžikistān, written in modified Cyrillic script, and Afghān or Kābulī Dart [q.v.], the second official language after Pashto (which was declared to be the first in 1936) [see Ariqān, ii] in Afghanistan (ca. 5 million) and, in Central Asia, in the modern republics of the former Soviet Union (ca. 5 million). These three languages, Modern Persian, Tadžīkī and Dart, regard Classical Persian as their common ancestor with which unbroken continuity is supposed to have been maintained. Therefore the latter two are sometimes described as the varieties or dialects of Persian (see G. Lazard, *Le persan*, in *Compendium linguarum iranicarum* (= CLI), ed. R. Schmitt, Wiesbaden 1989, 289; J. Wei, *Dialektale Differenzen zwischen drei standard varietäten von persisch, toehari, kahul, und tojiki*, Center for Applied Linguistics of the Modern Language Association of America, Washington D.C. 1962; G.L. Windfuhr, *Persian, in The world’s major languages*, ed. B. Comrie, London and Sidney 1987, 523). Small segregated Persian-speaking communities can be found in neighbouring multilingual areas as well.

2. The position of New Persian among the New Iranian languages

New Persian is a member of the South Western group of the New Iranian languages within the Indo-Iranian branch of the Indo-European language family. From among the Western New Iranian languages (e.g. Kurdish dialects, Balōčī, etc.) New Persian is the major representative, sharing a series of phonological and grammatical features with them while also exhibiting innovations. See, for instance, the preservation of the Old Iranian initial voiced plosives b, d, g both in the South-West Iranian New Persian brādās < Middle Persian brādas < Old Iranian *bhrāt- “brother” and in the North-West Iranian Balūč brāt vs. Eastern Middle Iranian Sogdian brāšt and Eastern New Iranian Pashto uto (cf. D.N. MacKenzie, *Pashto*, in Comrie, *op. cit.*, 548). New Persian is the only New Iranian language which is documented in all three of its historical periods (Old, Middle and New Persian), displaying various local dialects as well. After an approximately two-century period of cultural and linguistic dominance of Arabic between the collapse of the Sāsānīd empire (7th century) and the emergence of a new literary Persian language (ca. mid-9th century), it became the culturally dominant language in subsequent centuries. Its first documents appeared in the eastern provinces after its having supplanted Middle Persian and Arabic in the written medium and other Middle Western and Eastern Iranian languages such as Parthian in Khurāsān, and Sogdian, Bactrian and Khārazmian in Transoxanian (cf. Lazard, *The rise of the New Persian language*, in *CHr*, iv, Cambridge 1975, 595-632).

Genetically, New Persian derives from Middle Persian, although not without breaks in the continuum. Geographically, the two preceding phases, Old Persian and Middle Persian, are linked to the regions of the southwest of Iran (i.e. the province of Fars), while New Persian appears to have emerged first as a language of literature in the East. Typologically, however, the differences between Old Persian and Middle Persian are very considerable (especially in phonology and grammar), but less so between Middle Persian and New Persian (see H. Jensen, *Neupersische Grammatik*, Heidelberg 1931, 4; Lazard 1975, 596; idem, *Les modes de la virtualité en moyen-iranien occidental*, in *Middle Iranian studies*, ed. W. Skalskiowski and A. van Tongerloo, Leuven 1984, 1-13). The changes concerned mainly the exponents of inflectional morphology which induced alterations in the language type. Old Persian, like many other old Indo-European (Greek, Latin) and Indo-Iranian (Sanskrit, Avestan) languages, was inflectional, while Middle and New Persian became a language of a mixed type displaying less inflectional and more agglutinative characteristics. That is to say, grammatical categories earlier expressed by inflection and conjugation were partially preserved, even though with significant restructuring in the verbal paradigm, but some of them were completely abandoned (see W. Sundermann, *Westmitteliranische Sprachen*, in *CLI*, 110-11). In nominal morphology, for instance, the old case system was supplanted by new ways of expressing grammatical categories such as by pre- and postpositions, *ufa* structure or word order, supposedly due, among other factors, to stress placement. As a result, analytic structures began to be dominant in New Persian morphology, while inherited Old Iranian synthetic structures came to be gradually, but not completely, abandoned. Simultaneously, the vocabulary incorporated a large number of northwestern and eastern Iranian elements (see W. Lentz, *Die nordiranischen Elemente in der neupersischen Literatursprache bei Firdosi*, in *Zeitschrift für Indologie und Iranistik*, iv [1926], 251-316, and W.B. Henning, *Sogdian loan words in New Persian*, in *BSOA*, 43 [1938-42], 93-106) and, in increasing proportion, Arabic lexical items. More recently, there has been considerable borrowing from various Turkic languages and neologisms from such Western languages as French, English and Russian.

3. Periodisation

New Persian, which spans more than a thousand years, has undergone considerable changes. Persian as it appears today is markedly different from the language of the classical authors, displaying considerable variations in both the spoken and written standards. Traditionally, the periods of Persian, especially those of its written variants, are linked to the alternation of the ruling dynasties (cf. Old Persian as the official language of the Achaemenids in the 6th-7th centuries B.C., or Middle Persian, the language of the Sāsānids in the 3rd-7th centuries, and further used by the Zoroastrian clergy in religious writings in the 8th-10th
centuries; see J. de Menasce, *Zoroastrian literature after the Muslim conquest*, in *CHR*, iv, 543-65). Similarly, the emergence of New Persian is connected with the fall of the Sasanid empire and the Arab conquest. The transition periods, however, appear to be the most tangible if they are accompanied by a change in the writing system, or in close connection with a W. Change in faith. Nevertheless, neither Middle Persian and New Persian nor the various stages of the last thousand years’ history of New Persian in the Islamic era can easily be separated. It is well known from the more recent periods of Persian how much written and spoken varieties can differ from each other. Certain spoken forms were used in Persian for centuries without being incorporated in the literary language, or else they were taken over with a certain delay, sometimes centuries later, under social pressure, as a result of literary and political movements. As a consequence, the various linguistic stages can only be set up post hoc and always with a certain degree of idealisation and oversimplification. This is the more so since the transmission of all ancient texts was very uncertain because the copyists often “normalised” them by introducing or abolishing archaisms and dialecticisms. Consequently, the actual use of the language, which must have been marked by individual features and periods and changes that cannot be accounted for.

According to generally accepted views, after its emergence in the spoken registers (ca. 7th-9th centuries) New Persian is divided into Early Classical (9th-12th centuries), Classical Persian (from the 13th century on), and Modern Persian (from the 19th century on), which is supposed to be based on the local dialect of Tehran. Windfuhr provides a classification into five periods such as “formative” (7th-10th centuries), “heroic” (10th-12th centuries), “classical” (13th-15th centuries), “post-classical” (15th-19th centuries) and finally “contemporary” Persian, following a predominantly literary periodisation (Persian grammar. History and state of its study, *The Hague* 1979, 166).

Other views, found especially in former Soviet studies written in Russian, ascribe the splitting of Classical Persian into three new, closely related literary languages such as the Modern Persian of Iran (Farsi) and Afghan (or Kabuli) Dari and Tadžik to the beginning of the 16th century when the disintegration of the earlier common classical heritage and the first steps towards developing new local standards might have begun (see L.S. Peyskov, *Problema yazika daru v trudakh sovremenikh iranskikh visselkh*, in *Voprosy yazykозnania* 1960, 120-5; V.A. Yefimov, V. V. Rastorguev and Y.N. Sharova, *Persiyskiy, tadzhikski, dari v Osnov iranskogo yazykозnania (= OII)*; *Novoiranskije yazichi, zapadnaye grupp*, eds. V.A. Aabe, M.N. Bogulyubov, V.S. Rastorguev, 1982, 2 Tadžik, by I. Steblin-Kamensky; Zs. Telege, *Beitrage zur historischen Grammatik des Neupersischen. I. Ueber die Partikelkomposition im Neupersischen*, in *Acta Linguistica Academiae Scientiarum Hungaricae*, v [1955], 68 n. 1). In earlier Soviet publications the denomination “classicalny persidsko-(dari)-tadzhikskiy” (OII 1982, 20) or simply “Tadžik” (Rastorguev, *A short sketch of Tadjik grammar*, Bloomington, Ind. 1963, 1) was used to refer to the common origin, claiming an unbroken continuity with the Classical Persian language and literature (OII, 1982, 9, 15). Another periodisation marks off the last (19th-20th centuries) when the emergence of the three modern languages was supposed to have begun (A. Pisozwicz, *Origins of the Neo and Middle Persian phonological systems*, Cracow 1985, 9 n. 1; Lazard 1989, 289). The divergent opinions on the periodisation can be attributed to the different ways of evaluating spoken and written forms. The new written varieties, Dari and Tadjik, are obviously based on ancient local spoken dialects (Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 15), but the characteristic features of these dialects were first observed in written media only in the last century (W. Windfuhr, *Das Tadjischt*, in *Grundris der iranischen Philologie (= GiP)*, ed. W. Geiger and E. Kuhn, Strassburg 1895-1904, i, 2, 407-8; I.M. Oranskij, *Die neusprachlichen Sprachen des Osten*, The Hague 1975, i, 22; A. Farhádě, *Le persan parlé en Afghanistan: grammaire du Kaboli*, Paris 1955, 2; L.N. Dorofeeva, *Taqz̤ farsi-kabuli*, Moscow 1960, 9-10). Meanwhile, the overall cultural dominance of Persian, both as a common *Hofsprache* and as a spoken language continued also to prevail in the former Persian-speaking area.

### 4. Denominations

As the periodisation indicates, the division between the classical language and its modern continuations presents peculiar difficulties, reflected in the denominations of Persian in Western scholarship and in the native tradition. The two main varieties of New Persian are generally called Classical and Modern Persian in the West with further subdivisions into diachronic, local and style or register variants. In linguistic literature, both scientific and popular, New Persian is sometimes called Modern Persian (e.g. J. Darmesteter, *Etudes iraniennes, 2 vols.*, Paris 1883; H. Paper, in *Current Trends in Linguistics (= CTL)*, vi [1970], Introduction, or Windfuhr 1979, 7) vs. contemporary Persian or contemporary colloquial or Neo-Persian (see F. de Blois in *Persian literature. A bio-bibliographical survey begun by the late C.A. Storey (= PL)*, v, part 1, London 1992, part 2, 1994 or in French, neopersan (Lazard 1989, 260). Native speakers use the name Parsi or its Arabised form, Farsi, or both, without distinction (see M.T. Bahār, *Sakht-šinhā-yi tatawwur-i naafar-i Farsi, Tehran 1337/1958, i, 2), denoting all varieties of New Persian. In scholarly publications, the denomination farsi-i bâstani vs. farsi-i nowe distinguishes an “old archive” and a “new” variety of [New Persian, can also be found in Iran (see *Lughat-nāma (= LN)* by Dihlghādāt). Farsi is the name of the official language of today’s Iran, which has come to be used as an equivalent of Modern Persian, or simply Persian in modern text and grammar books outside Iran as well (A.K.S. Lambton, *Persian grammar*, Cambridge 1967, p. xi n. 1; D. Crystal, *The Cambridge encyclopedia of language*, Cambridge 1987, 301; similarly Lazard, *Le persan*, 1989, 263). In native sources the name Dari [q.v.] or Farsi-i dāri is also used, referring to the oldest and most respected variety of [Classical] literary Persian or, simply as an equivalent of Farsi or Farsi. The speakers of Tadžik, who are very closely connected to Persian, use also Farsi to designate their mother tongue (Fārsīzān, Fārsīzān, or Farsi-gū[y] Tadžik.

#### ii. History of the language

### I. The emergence of New Persian: Pahlavi, Farsi, Dari

#### 1. The native tradition

The complexity of the linguistic situation in Iran is clearly indicated by the wide range of names used for Persian since the time of its emergence, either as common names, synonyms or denominations, or without clear distinctions being made. Therefore the history of the language starts here with investigations into the early native tradition as a source of language history. The early history of the names applied to the various forms of Persian and the alleged change of
their references may elucidate the eclectic use of these denominations in more recent periods and the difficulties of the periodisation of the language history as well. It must be emphasised, though, that the authors of these early Islamic sources who spoke about the varieties of Persian or the dialects of the ancient texts as well as Persian and non-Persian dialects (see the summary in La formation de la langue persane, Paris 1995). One of the earliest sources mentioning the names Pahlavī, Pārsi and Dari, which denoted the languages used in Iran at the end of the Sāsānīd period, was attributed to Ibn al-Mukaffa (d. 757 [q.v.] by Ibn al-Nadim (p. 987) in his Fihrist and repeated by Khārazmī (d. 985), and by Yaḥyā (d. 1229) through Ḥamzah al-Ḥasānī (d. 970) (see Bahār 1958, i, 19; Lazard, Pahlavī, Pārsi, Dari. Les langues de l'Iran d'après Ibn al-Muqaffā, in Iran and Islam. In memory of the late Vladimir Minorsky, ed. C.E. Bosworth, Edinburgh 1971, 261-91; idem, art. Dari in Ehr, vii, 1954, 34-5). These descriptions continued to be repeated by Persian lexicographers until the 19th century, albeit with certain modifications (cf. E.M. Jeremias, Pahlavī, Pārsi and Dari in Persian lexicography, in Acta Ant. Hung., xxxviii [1998], 175-83).

In the following, some shifts in the meanings of these terms will be shown through some characteristic passages quoted from this native tradition. After talking about Pahlavī as the language of Fāhā (i.e. the ancient Media) the earliest informant, Ibn al-Mukaffa, says that Dari is "the language of the cities of Madā'm; it is spoken by those who are at the king's court. [Its name] is connected with presence at court. Among the languages of the people of Khorasan and the east, the language of the people of Bahā is predominant." He continues on to say that Pārsī is "the language spoken by the mowbeds (priests), scholars and the like; it is the language of the people of Fāhā" (translated by Lazard in his art. Dari, 34). This rather incoherent description can be better elucidated by Arabic and Persian sources originating from the subsequent (10th-11th) centuries, e.g. al-Mas'ūdī and al-Ṭūsī (Firdawsi, Šah-nāma, Hakīm Maysarf, Kaykāwīsī b. Iskandar, etc. As evidenced by these texts, the denominations Pahlavī, Pārsī and Dari may have changed their references to varying degrees during the first centuries of the Islamic era, denoting various written and spoken varieties depending on the text where they appeared. Accordingly, Pahlavī or Pahlavīti (literally meaning "Parthian" originating from Pahlāw). Pārsī and Dari may have changed their references to varying degrees during the first centuries of the Islamic era, denoting various written and spoken varieties depending on the text where they appeared. Accordingly, Pahlavī or Pahlavīti (literally meaning "Parthian") appears to have referred at one time to Parthian and Middle Persian but also to the local dialect of the northern region called Fāhā in an Arabised form (see the poems written in this dialect and called Fahlavīyya, cf. Ehr, ix, 158 and the most recent publications on this topic in Magalla-i zabāngānī, sv [1379/2000, no. 1], Pārsī, "the ancient language" first denoted Middle Persian (Pārsī as described by Ibn al-Mukaffa, but with a shift of meaning it came to mean New Persian and has continued to denote New Persian of whatever kind until today (see LN, art. Pārsī/Pārsī). Dari (etymologically, "belonging to the royal court") also denoted the Persian language which was supposed to be spoken both in the capital of the Sāsānīd empire (Ĉesiphon) and in the East. It was the name of the language of literature which appeared in the eastern part of Iran, sc. Khorāsān, and has been used in Persian texts since the 10th century. In his earlier studies, G. Lazard explained the linguistic situation of the post-Sāsānīd period by contrasting Pārsī and Dari as the written and spoken form of the same language. According to his interpretation, it was the spoken language that spread to the eastern region, as Ibn al-Mukāfā's report suggested after having gradually supplanted the local dialects (e.g. Partamian). As a spoken variety, it was supposed to have been used in the whole empire, but it was in Khorāsān that it was first used for literary purposes and became the new literary language of the subsequent centuries.

5. Early dialectal sources (8th-11th centuries): the evidence of Judaeo-Persian texts

Recently published sources on local dialects and on the Judaeo-Persian texts, however, have helped throw new light on the linguistic situation and the rise of the new literary language in the first centuries of the Islamic era, as described earlier (Lazard, Lumieres nouvelles sur la formation de la langue persane: une traduction du Coran en persan dialectal et ses affinités avec le judéo-persan, in Iran-Judaica, ii, ed. Sh. Shaked and A. Netzer, Jerusalem 1990, 184-98 = 1995, 107-21). A manuscript discovered in Mahzázd which contained an anonymous and undated Kurān translation (Kurān-i Kud, kuburariin baghārān-i Kurān bā farsi, ed. 'A. Rawākī, Tehran 1362/1984) was written in a local dialect of Sistān in the 11th century, as supposed by Lazard. This text shares a series of dialectal features with Judaeo-Persian texts (mainly Bible translations and paraphrases), and both show common peculiari-
which had spread throughout the north, but evinced the influence of the dialects that it had supplanted there, particularly Parthian. It thus diverged noticeably from the original form. Both were called Parsi (Persian), but it is very likely that the language of the north, that is, the Persian used on former Parthian territory and also in the Sasanian capital, was distinguished from its congener by a new name, Dorb (language of the court). It was only natural that several centuries later, literary Persian, based on the speech of the Northeast, bore the same name" (1994, 35; see also 1989, 263 n. 1).

This hypothetical reconstruction might be extended in the future by investigating other Persian sources as well, the text editions of which are far from being completed, and these may help clarify some more details. True, there are other interpretations also. For instance, Khānlarī has developed the (unlikely) hypothesis, relying on al-Mukaddasī’s report (10th century), that Dorb, the chancery language of Bukhārā, had been transported there from the royal court of the Sāsānids by the state officials (1986, i, 280-1).

4. More recent native sources on the languages of Iran: lexicography and grammar from the 17th-19th centuries

Extensive descriptions of the languages used in Iran, like those of Ibn al-Mukaffa’ and his contemporaries, can only be found much later, in the huge Hinduastānī lexicographic compilations written in and after the 17th century. These works, of which the most famous are the Farangī-i Dākhānīī (=FD), 1609-8, ed. R. Affifi, Mashhad 1351/1972; Burhān-i kātī (=BK), 1652, ed. M. Mu’in, Tehran 1341/1962; and Farangī-i Rāghādī (=FR), 1654, ed. M. Aβbāf, Tehran 1337/1958 (see KĀM. 2. Persian lexicography), partly preserved the old heritage and partly added some new information on language varieties, grammar, style of letter writing, etc. These accounts about the grammar, dialects, history and vocabulary of Persian, which occasionally bear witness to fantasy at work, were collected in chapters and placed as an introductory part to the farangī, serving as a kind of grammatical introduction. The very first chapters usually dealt with the varieties of Persian (Pārsī) which were supposed to be of seven gūnā “species”: four of them (haraṣ, sagz, ʒaŋd̪ut and raŋg) were regarded as obsolete (matrād), in which “letter, book and verse cannot be written” (FD 15; FR 46) and three others as currently used (matadād), these being Dorb, Paḫvāst and Pārsī. Apart from the suprising fact that these languages were treated as the variations of Pārsī still in living use in Iran in the 17th century (e.g. Pārsī was described as the common language of Iran, with InstanceState as its capital), they covered slightly or markedly different notions as compared to earlier sources, but also contained ideas similar to those found in the first grammatical compilations that relied heavily on lexicography, e.g. ‘Aḥad al-Wāsī Hāfṣī’s Rūsāl from 18th-century India (lith. Kānpūr 1872) or Irawānī’s Kāvādī (lith. Tabriz) 1262/1846; see Jeremias, Tradition and innovation in the native grammatical literature of Persian, in Histoire, Épistémologie, langage (Paris), xv [1993], 51-68). In these denominations were treated fairly consistently in these sources, differences existing only in detail, emphasis and arrangement. In comparison with older sources, however, the authors of these compilations did not bother to reconcile the most contradictory and fabulous accounts in the description of the single languages; they simply quoted them as differing opinions on the same subject (e.g. on Dorb: “some said that it was spoken in Balkh, Marw, Bukhārā, Badakshān . . ., but according to others it was spoken in the Kayânī court, and then there were those who regarded it as the purest, unmixed language” (see FR 47; FD 16; BK 20, 500). Entirely new motives also appeared in these descriptions: one was something like “ideological”, and another might be called “linguistic argument”. Both concerned the repuation of Persian and the languages spoken by different peoples. The eminence of Persian as the second language after Arabic was illustrated by various stories and supported by a tāfṣīr [q.v.] called Daylamī with the intention of symbolising the role of Pārsī as a common language in the whole empire (BK 500; Irawānī, fol. 4b, see Jeremias 1998, 181). The superiortiy or dignity of the Islamic languages like Arabic, Persian or Ottoman Turkish appears to have been a matter of debate since the 15th century, enthusiastically treated by Mir ‘Alī Shīr Nawā’ī and Kemal Paşa-zāda [q.v.].” (see R. Brunschvig, Kemal Pāḥāzādah le persan, in Mélanges d’orientalisme offerts à Henri Massé, Tehran 1963, 48-64 (=Études d’islamologie, Paris 1976, i, 379-95); B.G. Fragner, Mir ‘Alī Shīr Nawā’ī: the “Jugendm” reconsidered, in Iran-Τurkic cultural contacts in the 11th-17th centuries, ed. E. Jeremias, Budapest 2002; idem, Die “Persophonie”. Regionalität, Identität und Sprachkontakt in der Geschichte Asiens, in Anor, v, Halle-Berlin 1999).

This linguistic argument was even more clearly spelled out in the 17th-century lexicography where Dorb was treated. The compilers declared that “Dorb is the language in which there is no deficiency (m ukānī)” (see FD 16; FR 47; BK 20). The idea of m ukānī seemed to denote something missing from the “authorised” (suḥḥ) form. In fact, this assumption is corroborated by various stories, the authors quoted two lists of doublets: nouns with the same meaning, but written with or without the initial aṯf, which represented the vocalic core, e.g. aṯr aθr-hututm “silk”, aṯr aθr-qalut ‘white’, aṯr aθr-dhakum “belly”, aṯr aθr “camel” etc. and imperative verbal forms with or without the verbal prefix bī-, e.g. bī- rās rū “go”, bī- bās bāw “listen”, etc. According to the commentary, the “defective” words are not correct Darī forms. The sources say almost unanimously that Persian is regarded as “correct, uncorrupted” (fasih) only if there is no m ukānī in it.

This very peculiar interpretation of Darī goes back to the traditional treatment of lexical and grammatical doublets based on a peculiar analysis of the (morphological) structure of the word. Ancient lexicographers and prosodists listed all the so-called “meaningful letters” (hu ruf-i ma’dnāt) occurring in different positions in the word, first at the end where rhymes denoted the base which marked any additional element, mainly inflectional and derivational morphemes attached to this base form. Later, the term ma’dnāt came to be used in a somewhat different meaning in lexicography denoting any letter which was added to or removed from the base form without changing its meaning (cf. Jeremias, ma’dnāt and aṯf in early Persian prosody, in JSAL, xxi [1997], 167-86). All the sources from the 17th century seemed to agree that these doublets were used only in poetry as required by prosody but never in common speech. However,
talking about Dari, the author of FR (47) added that the "defective" forms were also used in towns, by which he probably meant that these forms were used both in poetry and the spoken idiom. The problem with the past forms was in a way that it was sometimes quite confusing. Imperative forms may appear with or without the verbal prefix bi- in literary texts. But it was obligatory for the imperative in genuine sabtā darāi forms, as Shams-i Kays remarked (232). Prestigious authors such as Ni'mat Allah (ca. 1540, cf. A.M. Piemontese, Catalogo dei manoscritti persiani conservati nelle bibliothèque d'Italia, Rome 1898, no. 403, fol. 296) or even earlier, Muhammad b. Hindishā Shāh-či (sp.), the author of Shāh-i Farsī (1392), seems to share this opinion (cf. Æ "come" imperative) bo-mōšē dar-ā wa bi-yē'd, ed. A. Ta'ṣāt, Tehran 1941/1962, 19). Moreover, BK and FL distinguish between the different functions of the verbal prefix bi-; it was regarded as obligatory in the imperative but obsolete in past forms, where it was used as embellishment. This usage may have indicated a change in the language (see below, on grammar). In more recent native sources, however, this distinction seems to have become dimmed and the verbal prefix bi- in both present and past forms was called "bi" in most cases. This is an element which only has an aesthetic function (cf. FR, 15; Hansāwī, 3; Irawānī, fol. 22b). This topic was also dealt with by Irawānī (1846), who used a strange "linguistic" argument proving the eminence of Persian against other Islamic languages; this argument rests on its [grammatical] simplicity: there is no trāb, no dual and no feminine gender which would make the language difficult for beginners, says Irawānī (fol. 30r).

The scattered references on language and its different variations may help one to draw the following conclusions. It seems to be a communis opinio that from the very beginnings the most highly respected literary variety of Persian was called Darāi in indigenous sources, sometimes as an extension, and sometimes as an equivalent of Parsī or Farsī, and this view continued to prevail in subsequent centuries. More recent sources, however, tend to talk about the "rules of Farsī" or Farsi (see Ni'mat Allah, 'Abd al-Wāsī Hansāwī, Khowān 'Ali Dāmānī, Irawānī, Taḥākānī, Habīb Iṣlāhmānī, to mention only a few, cf. the references in PL, iii/1, 1984, 125ff.). But despite this preference for the name Darāi in older sources, the denominations Parsī, Farsi or Farsī-i Darāi or Darāi seem to have been used almost interchangeably. One must not forget that these eclectic sources did not use well-defined terms when they talked about language. On the contrary, literary persons (akh-ī zabān) usually thought of the language in terms of "ancient" or "modern" and "common (spoken) or "dialectal" forms. The reason for that was quite obvious: there was no grammatical tradition in Persian, "no exact norm (mikyās) of the rules (kawdmān) of Persian (Darāi) on the basis of which the correct (sabtā) and corrupt (fīsād) usage could be defined and on which one could rely when defining what was right (sawād) and wrong (khatā) in Persian speech (kalam-i Parsī), to which one could turn in case of need," thus noted by Shams-i Kays in the 13th century (ep. cit., 205) and repeated almost word for word by Shams-i Fakhrā in the 14th century (Lexicon persicum et est liber Mīyāw i' Gāmālī pars quarta, ed. C. Salesmann, Kazan 1887, 3), and the author of FL in the 17th century (4). But even if writers were unaware of the fine grammatical distinctions of social or historical dimensions, they must have had some knowledge of the differences between

the usage of the "ancient" (mutakaddāmin) and "modern" (muta'ākārīn) poets (see Shams-i Kays, 208-9) or of the language of literary or common speech (mukhāsaranā pārsī, in FL, 42; BK, 26; Habīb Iṣlāhmānī, Darātāri sadīq-i Farsi [Farsi] sudān-i haftād, 1991, 7) or poetry and prose (see 'Abd al-Wāsī Hansāwī, 41; Habīb Iṣlāhmānī, 15). Scattered hints at some "virtual" norm in Shams's poetic manual, which never came to be institutionalised, or the lists of doublets and denominations such as Farsi-i kadīm (FL, 8; FR, 47), Farsi-i bāstānī (FL, 4; BK 500) in lexicography might serve as proofs (cf. Jereumāj, Grammar and linguistic consciousness in Persian, in Proceedings of the Third European Conference of Iranian Studies, ii, ed. C. Melville, Wiesbaden 1989, 19-31). The literary model was but the poets' use of the language, which was far from being uniform. This discrepancy between linguistic and literary norms may be the very reason for the lack of clarity and the contradictions in the sources (see the definition of Darāi in LN: zabān-i pārsī-i rasmi-mā hadīmī: imāra "the official Persian language used today"), which makes the separation of Farsi and Darāi almost impossible. Paradoxically, however, the lack of a strictly regulated norm preserved more of the linguistic reality of the previous periods. As the Pahlāwī writings from the 9th-10th centuries attest, the knowledge of the "old" language, that is, Middle Persian, and its inscrutable script was a privilege of a few. However, Persian was never abandoned but was allowed to thrive in the spoken idiom and from the mid-9th century in the East, and from the end of the 10th century in the West, it began to regain its position in culture and literature (cf. IRAN, v. History [a]). Moreover, Persian not only survived as a spoken idiom, and began to appear in the written documents, but was also imported by Muslim conquerors into further eastern areas, unlike the other territories of the caliphate, and a considerable proportion of the Arab population which had settled in the towns of Iran were assimilated rapidly. In the subsequent centuries, in Transoxania, Afghanistan, North India (and later also westwards to Anatolia), Persian became the main literary language. But this new literary language, which is called New Persian and was based on the spoken variety of the East, showed essentially new characteristics due to the impact of Arabic and the culture imported by this language. Despite the Persians' increasing national identity, Arabic as the language of science became gradually adopted and cultivated by a growing number of significant scholars of Iranian origin (cf. C.E. Bosworth, The political and dynastic history of the Iranian
world (A.D. 1000-1217), in CHIR, v. 4). Contemporaneously, models of Arabic scientific thinking began to be adapted to Persian. The sphere of literature adduces a good example of this development: although Iranians retained and cherished the ancient tradition in mind and memory, as Firdausi’s Siyāh-nāma shows, Persian poets tried to follow the rules of the Arabic prosody from the other hand, the general respect and poetry, in sharp contrast to the previous literary canons. As a consequence, the following centuries saw the infiltration of a large number of Arabic loan words into New Persian (ca. 30% in the 10th century and 50% in the 12th century: cf. Lazard, Les emprunts arabes dans la prose persane du Xe au XIIe siècle: apéru statistique, in Revue de l’École nationale des langues orientales, ii [1965], 53–67; ‘A.A. Sadiki, The Arabic element in Persian, in EL, ii, 229–31). As a result, Persian, as a new literary language “appears to have from the start a mixed language, based on the Persian dialect but bearing marked traces of other Iranian dialects and infiltrated with Arabic words” (Lazard 1975, 597). This mixed nature of Persian, and the fact that their language is essentially different from those of their neighbours, was well known to the Iranians themselves from the start, as evidenced by the first works in literary sciences (prosody and lexicography), which mixed Persian letters, words and word formation in most cases. Moreover, this knowledge subsisted until quite recently in the native tradition (see “the [farsi] language is a mixture of two languages” (mawṣak aṣ du zabān), written by Habib Iṣfahāni, op. cit., preface, 4, in the 19th century).

III. Classical Persian and its variants

The script, religion and literary models (e.g. the new system of versification) are the most decisive characteristics which distinguish the period of New Persian from the previous ones (see, also W.B. Henning, Die Schrift als Symbol der Einheit des Mitteliranischen, in Mitteliranisch, Hdb. d. Or., I, iv, Iranistik, Linguistik, Leiden-Köln 1958, 21). Despite its bewildering variety at the outset—Khūrašān and Sīrān especially displayed markedly distinctive features—New Persian appears to have become a surprisingly “unified” literary language after the 13th century (Lazard 1963, 23–4) and continued to be regarded as such during the subsequent centuries. This is a process which the common name Farsi indicates. But this was an apparent homogeneity which might be attributed to at least two main factors: the highly conservative script, which remained practically unchanged over the last thousand years, and the prestige of Classical Persian literature. Due to its Semitic character, the Arabic script by its very nature disguised changes in the pronunciation of words or in the meaning in most cases of the grammatical morphemes, giving the impression of a static language situation. One of the reasons for the admiration surrounding the classical literature, especially poetry, helped keep the language of the classical authors alive for centuries until fairly recently.

It does not mean, however, that men of letters and scholars were or are not aware how significantly speech and writing differ in Persian (see, for instance, P.N. Khānārī, Zabān u leḥāja, in Dar bān-i zabān-i farsi, Tehran 1340/1961, 75–85; M.R. Bātinī, Tawṣif-i sīhāmān-i dastār-i zabān-i farsi, Tehran 1348/1969, 11; ‘A.A. Sadiki, Zabān-i farsi wa ganuhi-i madhāfat-i din, in Ferang u zāndegī, ii [1349/1970], 61–6; T. Waḥhāyīn, Dastār-i zabān-i ʿemīnāna-i farsi, Tehran 1343/1964). However, the first attempts to include linguistic expressions closer to the colloquial style in text and grammar books (e.g. Sadiki, and Gh. Arzhang, Dastār, Sāvī i shanawm, Tehran 2535/1976) were received with sharp criticism at first (see M.S. Mawliʿī, in Tagmān, xxx [2536/1977], 245–51), though it was common experience that the characteristic features of classical and modern standards, even the least formal or vulgar forms, could appear in literature either intermingled in the same text, or else clearly distinguished. This might also explain why the language is simply called Farsi, that is, “Persian” implying all the variants. The differences between the diachronic (“les formes anciennes” Lazard 1989, 288) and synchronic variants (formal and colloquial standards, local usage or the new literary standards like Tādīkī and Afghan Dari) in phonology, grammar and vocabulary came to be described by linguists, although much remains to be done. It must be emphasised, however, that the apparent variations in the grammar of Persian do not always reflect ongoing changes in the language but rather the standardisation process of the literary language. As the formation of the Classical Persian literary language clearly testifies, dialectal or colloquial forms may have disappeared or become incorporated in the written language, occasionally or else in varying degrees, depending on the literary genre. Poetry, for instance, preserved more of the earlier archaic forms, supposedly due to the requirements of prosody, while prose displayed considerable variation in the same genre (see, for instance, the early tasfīr, in Jeremias, Some grammatical problems of early New Persian syntax, in Proceedings of the second European conference of Iranian studies, Rome 1995, 325–34). This linguistic diversity was occasionally associated with divergent stylistic values. For instance, some recurrent patterns could be classified either as archaic, dialectal or colloquial or as social variants. This was mainly due to the lack of a firmly established linguistic norm based on a highly respected canon such as the Kūrān in Arabic, on the basis of which the grammar of the language might have been worked out. Paradoxically, this diversity inside Classical Persian or between classical and modern usage, and the maintenance of the classical literary norm, causes difficulties in defining stages in the linguistic history of Persian (see A.V. Rossi, Sprachwandel und historische Übergänge in der münzischen Literatur, in Transition periods in Iranian history, Studia Iranica, Galil 5, 1987).

IV. Modern Persian: spoken and written variants

This phenomenon gives a special status to Persian: the fact that even today, native speakers can understand (though not always in the strictly linguistic sense of the word) ancient texts, and by reading and memorising them they become acquainted with some grammatical characteristics of the ancient language, sometimes dating from a thousand years back. The message of verse or prose written occasionally (not typically) by modern authors in the style of the ancient language seems to be fully understood (see, for instance, Partizād u Perimān by Sādik Čubak in the collection of short stories, Ćarāgāh-i ʿakhrī, Tehran 1948). In these literary works, the ancient language is imitated by using “classicsising” grammatical archaisms like obsolete prepositions or verbal forms. The maintenance of this very formal style as a literary norm has been backed by social institutions: this language was taught in school as the norm of Persian. The same divergence between the newly-arising spoken variant and its acceptance as a literary (written) standard is likely to have existed throughout the modern period, which makes it almost impossible to tell the
exact point in time of the beginnings. But Modern Persian, as it appears today, is distinctly different from the classical language, displaying also a wide range of social, dialectal, diachronic and stylistic variations, which are consciously used by authors in most cases. Style, therefore, remains one of the most essential factors in the definition of Modern Persian (see C.T. Hodge, *Some aspects of Persian style*, in *Language*, xxxii [1957], 355-69).

The crucial question is, therefore, in what sense the term Modern Persian is used. It is generally linked with the spoken dialect of Tehran (see IRAN, vii, Literature; J. Trowihi, *Studies in the phonetics and phonology of Modern Persian*, Hamburg 1974; Pevskiy 1960; Wajdiyin 1964; etc.). This view is a consequence of the periodisation which marks the beginning of the modern period with the rule of the Kadjar dynasty, with the capital Tehran as a centre from the 19th century onwards. It must be emphasised, however, that, on the one hand, certain typical characteristics of Modern Persian's formal and informal standards can be traced back in other local dialects as well. That is, not all the typical features of Modern Persian can be restricted topographically to Tehran and chronologically to the 19th century, though there are many belonging to them. For instance, from the 15th century on, a set of "archaisms" (e.g. the verbal prefixes hami- instead of mii- or bi- with past forms such as bi-gift and certain preposition like far, far? or the combination of the pre- and postposition mar . . . ra, etc.) were gathered in a separate chapter and labelled as *embellishments* (*zanat, typah*) by native lexicographers (*Laghat-i Nma* Aliah; FD: BK: TF), clearly indicating their archaic character. Similar lists were repeated from time to again until recent times in native lexicography and grammar (see 'Abd al-W?si H?ns?wi; Iraw?n). As well, this shows that native scholars came to realise that grammatical forms such as certain prepositions or verbal forms, abundantly used in ancient texts, had ceased to belong to living usage. They became obsolete and served only as a "decoration" of style for their age (see Teleld 1955, 134 ff.; M. Bakr, *Bi-zmat bar sar-i farsi*, (*The ornamental verbal prefix bi-*), in *MDA Teb*, viii [1961], 1-10; Jeremias 1993, 63, 1997, 183). Similarly, in some of the earliest descriptions of Persian in the West—though not in all of them—the verbal morpheme bi- prefixed to simple past forms was characterised as redundant or pleonastic (W. Jones, *A grammar of the Persian language*, London 1828, 49; J. Platts, *A grammar of the Persian language*, London 1894, 174; C. Salemann and V. Shukovski [Zukovskiy], *Studien zur persischen Grammatik*, Berlin 1899, 60). Beyond doubt, these grammars were intended to describe the language of the Classical texts, but occasionally hints were made at the living usage, which might have differed from the classical forms in many ways. Early evidence for this may be the first collections of Persian and non-Persian spoken local dialects from the last century. Z?kovskiy, one of the first dialectologists of Persian patois, immediately recognised the richness of the non-standard Persian local varieties during his first field trip (1893-96) along the Tehrana-Shahrud-Kaf?n route. In his materials of Persian and non-Persian dialects, and in those of his later followers such as O. Mann (1901-3, 1906-7), K. Hadank and A. Christensen, a set of characteristic features which are the same or similar to those of the spoken (colloquial) language of Tehran appears. See some examples from the phonology and morphology: (a) *dN > u* or *Zukovskiy, Materializya izuchenii persidskikh narov*, i, St. Petersburg, 1888, 212; V.W. Geiger, *Kleine Dilatikale und Dialektgruppen*, in *GPH*, i, 2, 357, 422; K. Hadank, *Die Mundarten von Khuras?, in *Kurdist-Persische Forschungen*, 1926, iii, 1, XXXIX; A. Christensen, *Iranische Dialektforschungen, Nachlass von F.C. Andreas*, zusammen mit Kaj Barr und W.B. Henning, in *Abhandl. Gittingen*, Phil.-Hist. Kl., Dritte Folge, Nr. 11, 1939, 15; Lambton, *Three Persian dialects*, London 1938, 44; O.I. Smirnova, *Izuchenii geograf ilirishia*, Moskow 1978, 13; (b) the colloquial variations of the verbal personal affixes in Singh, *ad > ε* (ε, ι, ε, etc.) (Geiger in *GPH*, 411; Mann, *Die Mundart der Mekri Karden*, in *Kurdist-Persische Forschungen*, iv, III, 1, 1906, LXXV; idem, *Die T?f- und denvers der Persischen Farsi*, in *KFE*, i, 1909, 24; Christensen, op. cit., 267), in Pl. 2, *ad > an, -i(t)* and in Pl. 3, *and > an, -i* (Mann, op. cit., 1909, 25); (c) the progressive verbal forms constructed with the auxiliary *d?st* collected in Isfah?n in 1885 (see Zukovskiy, *Osobennoe izuchenii glagola *d?st* v persidskom razgovornom yazike*, in *ZVARO* in [1888], 376-77; A.Z. Rozsenfeld, *Vospomagatel'nyaya funktsiya glagola *d?st* v sovremennom persidskom yazike*, in *Sovetskoe Vostokovedemye*, v [1948], 305-310) and also used in the Central dialects and Mazandaran (see the bibl. in Jeremias, *On the genesis of the periphrastic progressives in Iranian languages*, in *Mehroonima* [1993], 104 n. 10), (d) colloquialisms in the nominal morphology: the omission of the *id?fa* vowel (*Zukovskiy, 1888, 214) or the determinative morpheme, the stressed suffix *-ad > -i, (ε* (Hadank, op. cit., 10-13, Christensen, op. cit., 42), etc. This collection of the relevant features seem to support the opinion that some essential characteristics of Modern Persian, both its literary written form (*farsi-i muhdwara'i*) and its oral variants (*farsi-i dikho?l*), its oral variants (*farsi-i muhdwara'i*), must have existed centuries earlier. Its modern descriptions, however, are primarily based on the usage as it is written and spoken in Tehran (*farsi-i *d?m?y?ne*), the present capital of Iran, which is becoming the common spoken standard all over Iran through the modern mass media (cf. Lavard 1989, 299; F?wiczoc; 9). V. Scripts 1. Perso-Arabic script a. New Persian, including its chronological and dialectal variants used in Iran, Afghanistan and Central Asia (except Tadjik [q.v.] in the 20th century), since the Islamic conquest has been written predominantly with the Arabic script augmented with four modified letters for denoting peculiar Persian phonemes (p, ϕ, χ, ψ, ž, ẑ, ẑ, etc.) which do not exist in Arabic. These "Persian letters" were created from their nearest equivalent letters (b, w, j, x, ẑ, ẑ, etc.), and both series continued to be used in the manuscript tradition until the 12th century and beyond (for the details of adaptation from the time of Sibawayhi [8th century a.c.] see P. Horn, *Neupersische Schriftprache*, in *GPH*, i/2, 12; Lazard 1963, passim; F. Meier, *Ausprechfragen des alters neupersich*, in *Orins*, xxvii-xxviii [1981], 71; Kh?nlar?, *Wz?i *g?r*-i *farsi*, Tehran 1354/1975, 117, etc.). The Arabic writing being a Semitic, consonantal alphabet, it was not designed for an Indo-European language like Persian, consisting as it did only of consonantal signs (baf) representing the semantic load whereas, in Central Iranian consonants and vowels are of equal value. In this system vowels are represented only partially and in various ways: by consonantal letters, orthographic devices and superscript signs. In the script, therefore, there is no one-to-one correspondence between graphemes and phonemes (e.g. the geminated consonants are written with one baf with
the superscript sign called tashdid as hism = hamzah ([“bath” in most cases], although there is a regularity in denoting or omitting certain phonemes. The Persians, while having for most part the fixed letters and the principles of the Arabic writing, developed innovations in order to denote the peculiarities of the Persian language. In the Semitic system, three letters (kaf, ayn, and waw) are used to mark long vowels ā, ē, ī and the sequences āy, āw (traditionally called diphthongs), whereas short vowels remain normally unwritten. Exceptions are the word initial and word final positions: word initial short vowels (a, i, u) are represented graphically by the letter alef and their long equivalents with alif and the corresponding kaf (ka‘a or wa‘a). Furthermore, the letter alif is the sign of the glottal stop which is practically used as an orthographic device following the principles of the Arabic (Semitic) orthography which do not allow a syllable to start with vowels, and do not allow a sequence of two vowels (cf. G. Endress, Die arabischen Schrift, in Grundriss der arabischen Philologie, i, ed. W. Fischer, Wiesbaden 1982, 163-97, e.g. ‘kran = aktun “now”, ‘fīdam = ‘ifdad “to fall” and ‘īn = ‘ifdān “Isfahan”, ‘ū = ‘u “be/she” and ‘īn = ‘ān “Iran”.

Initial long ā and ē are rendered with alif surmounted by the superscript sign maddi.

The Perso-Arabic script gradually developed a special system of denoting word final short vowels (a, i, u) in the Classical Persian transcription system and ē, in the Modern system) by the “silent” letters (hayn-i haraka), e.g. kād: s‘īmah = Shah-nāma, kh = k (in ancient texts also written as š, k and wa‘ā, e.g. dī = “two” and tī = “you”, but tr = tī = “you (acc.)”). Historically short vowels (a, i, u) can be denoted orthographically in all positions by superscript signs (zām or zahr in Modern Persian) = Ar. fathā, zār = Ar. kāra and pāsh = Ar. domāmā. In ancient manuscripts, the early calligraphic word long vowels (mājīhāt ā and ē were distinguished occasionally by special superscript signs on the letters yā and waw (e.g. Codex Vindobonensis, ed. F.R. Seligmann, Vienna 1859, and Bukhārā Persian texts, cf. Horn, in GIPh, 1/2, 33; the Lahore Tafsīr (majhīl ē), cf. MacKenzie. The evolut-

The orthography of alif and hamza representing phonemes or serving as orthographical devices display intricate problems both in Arabic and Persian. The complexity or sometimes confusion in their description can be ascribed to the double adaptation (first of the Nabatean Aramaic writing to Arabic in the late 7th century, then the Arabic script to Persian) and to its relatively late standardisation. Its orthography was not yet fixed in the 9th century (see Endress, 189). A Persian characteristic of the orthography is that hamza, the sign of the glottal stop in Arabic, does not necess-

The Perso-Arabic script, which is written from right to left, contains 32 letters: 28 letters are taken over from Arabic plus four special Persian letters supplied with three dots. But not all the letters distinguish phonemes in Persian (see below, iii. Phonology). These letters (allographs) came mainly, but not exclusively through Arabic loan words, e.g. ẓ, ẓī = /zd/, ẓī = /zd/, ẓāf = /għ/, ẓāf = /għ/, ẓāf = /g/, ẓāf = /g/ (or zero). Some of these letters (ẓ) do occur in words of Persian origin due to various reasons, e.g. as reflexes of earlier linguistic periods or the unified and wavering orthography (see, for instance, pārdī-tar, in Modern Persian pronunciation pāzdī-tar, and pārdītgāh) = TURNER (see Horn, in GIPh, 1977; Meier 1981, 105). The digraph khī/khī = ⟨kh⟩ is a remnant of the aramaic spelling of a labialised fricative (Pisowicz, 201). Ancient manuscripts show sporadically the spellings of the early Persian period. E.g. the triple-dotted letter fī (J) denoted the postvocalic sibilant labiodental /ʃ/ (see also some sparse examples in word-initial position in Lazard 1963, 137-8; idem, 1989, 264; Meier 1981, 72; Pisowicz, 119), and the dotted dīl (J) denoted the spi-

The first attempts to put Persian texts into Arabic script originate from the 9th century. After some fluctua-

For the various styles of handwriting, see Cyriath., ii.

2. Non-Arabic scripts used for New Persian texts (for a summary, see Meier, 188-9; Lazard 1989, 264-5)

(a) Hebrew characters have been used from the 8th century onwards by Jewish communities to denote their own dialect called Judaeo-Persian (j.b.), related very closely to the southern dialect of early New Persian.

(b) an undated bilingual Poem-fragment written by Christians in New Persian with Syriac characters has been preserved in the materials found in Chinese Turkestan (see F.W.K. Müller, Ein syrisch-neupersisches Poemelbruchstück aus Chinesisch-Turkestan, in Festschrift Eduard Suchan, ed. G. Weil, Berlin 1915, 215-22; W. Sundermann, Einige Bemerkungen zum syrisch-neup-

(c) Among the fragments written in Manichean script there are also some New Persian texts (see M. Boyle, A catalogue of the Iranian manuscripts in Manichean script in the German Turfan collection, Berlin 1960, 150; W.B. Henning, Persian poetical manuscripts

(d) Religious writings and a fragmentary dictionary were written by Armenian Christians in their own script in the 9th century (see Pisowicz, 70).

(e) The Latin script was used by travellers and missionaries to describe Persian texts for centuries, the supposedly oldest one in the Codex Cumanicus written in the 13th century (see D. Monchi-zadeh, 1962). Early glossaries were compiled in the 13th century (see D. Monchi-zadeh, 1962). Early glossaries were compiled in the 13th century (see D. Monchi-zadeh, 1962). Early glossaries were compiled in the 13th century (see D. Monchi-zadeh, 1962). Early glossaries were compiled in the 13th century (see D. Monchi-zadeh, 1962). Early glossaries were compiled in the 13th century (see D. Monchi-zadeh, 1962).

The most significant characteristics of the phonological development in New Persian are the loss of contrast between long and short vowels and the lowering of the historically short high vowels /i/ > /e/; and /a/ > /o/. Early Classical Persian contained two more long vowels /e/ and /o/ which merged with /i/ and /a/ by the Classical period (see F. Meier, Aussprachfragen des älteren Neupersisch, in Ortes, xxvii-xviii [1981], 70-176). The vowels /y/ and /w/ as well as the diphthongs /ai/ and /au/ (or, according to others, with high, mid-high and low (d) Religious writings and a fragmentary dictionary were written by Armenian Christians in their own script in the 9th century (see Pisowicz, 70).

II. Phonology

phoneme is restricted to certain medial and final positions before and after consonants in careful speech represented with the letter 'ɣn and the signs hamza or alef, such as ma'lmum/malum "known", al-áin/alain "now" or ròb/robii "quarter". It can also occur in intervocalic position in words of Arabic origin in place of the genuine /a/ (cf. Kramsky, 1979, 143-4; Lazard 1989, 266). The syllable structure is V, CV, VC, CVC, VCC, and CVCC, if initial glottal stop is disregarded. But their types are CV, CVG and CVCC if it is regarded as a separate phoneme. There are no genuine clusters in initial position in New Persian. Old and Middle Persian initial clusters were replaced by syllables containing prothetic or anaphoric vowels (Middle Persian sîd > Classical Persian sîd or sîd / sîd / Modern Persian sîd "white"). For details, see J. Kramsky, A study in the phonology of Modern Persian, in J.O. lit [1939], 66-83; C.T. Scott, Syllable structure in Tehran Persian, in Anthropological Linguistics, V [1964], 27-30; Windfuhr 1979, 143-4; Lazard 1989, 266.

Stress in Modern Persian is expository and non-phonemic. In general it falls on the final syllable of non-verbal forms (nouns, adjectives, adverbs). Certain conjunctions, adverbs and particles have initial stress, such as wâlī "but", dîr "yes", ãdâ "whether", etc. Nouns (incl. infinitives, participles or verbal nouns) retain their final stress if the following suffices are attached to them: final particle (hârâ), definite article (al-), the connecting vowel of the idafa -e, the conjunction -e and, ham "also" or one of the pronominal clitics -am, -at, -ast, -mân, -tân, -gân or, one of the clitical forms of the verb "to be" -am, -i, ast, -im, -i, -and. By contrast, the plural markers -hâ and -an carry the stress (kedâb-hâ "books", zân-ân "women") and forms in apostrophe (vocative) preserve an archaic initial stress (pedâr (voc) vs. pedâr (nom) "father"). On the other hand, all verbal forms have non-final stress (except for the form of the 3rd person singular in the simple past, which carries the stress on the final syllable, e.g. kharid "bought"). It may fall on the stem (kharâd-am "I bought"), on the verbal prefixes (mi-khar- "I am buying/I buy", bi-khar-am "[that] I buy"), on the preverbs (bî mi-andâz- "he abolishes") or on the nominal part of the verbal phrase (hâfî mi-zan- "I am speaking/I speak"). The verbal prefixes of negation or prohibition (ma-, ne-, ma-) are always stressed (nem-khar-am "I am not buying/I do not buy", ni-khar- "I did not buy", ma-khar "don't buy"). In true compounds or in compound nominal phrases, a secondary (weaker) stress may occur on the first nominal element in addition to the main or primary stress, e.g. ates-pardst "fire-worshipper", kedâb-e pedâr "the father's book".

As the examples attest, stress is relatively fixed in words and phrases. However, it may be weakened, shifted or completely disappear according to the speaker's purport, if there is emphasis upon the sentence, e.g. hâtî mi-zan- vs. hâtî mi-zan- am. In a typical sentence, the primary stress falls on the last syntagm, which is normally a verb or verbal phrase. At the beginning, a conjunction, an adverb or a vocative may appear with initial accent followed by nominal phrases with final or nearly final accent. Affirmative sentences have a falling intonation, but in interrogative sentences the pitch rises.

Although stress is non-phonemic, certain phonemic sequences may appear as contrasting minimal pairs, such as màdî - màdî, ãdâ - ãdâ, kharî - kharî. In colloquial Persian there are several such minimal pairs originated from contracted
forms, e.g. kharidan (< kharīd-ām) "I have bought" vs. kharid-am "I bought".

The transcription of Classical Persian phonemes, e.g. "I have bought" kharid-am (< kharide am) is based on two stems, i.e. present (I) or past (II). Past stems always end in dental plosives (after vowels, n, r in -d, otherwise in -t) and are derived from infinitives by dropping the ending -an. Present stems can be either regular or irregular. The first group can be obtained from past stems by cutting -t, e.g. kharidan "to buy" → kharit- (II) → khar (I). Present stems of irregular verbs are to be found in vocabulary, e.g. karden "to do" → kard- (II), kon- (I) or didan "to see" → did- (II), bin- (I). Certain groups of irregular verbs share certain common features in deriving their present stems from past stems, e.g. sikhātan "to make" → sikhāt (II), sīzā (II), gorkhtān "to fire" → gorkhāt- (II), gorg- (I) or formudān "to order" → formudāt (II), farnāyī (I), sourudān "to sing" → sourūd- (II), saravy- (I), etc. (see more details in Lazard 1992, 131-5).

Verbal stems can combine with two sets of personal suffixes: the first set is attached to the forms based on stem (I): 1.-am, 2.-i, 3.-ad in singular and 1.-im, 2.-id, 3.-and in plural; the second set attached to the forms constructed with the stem (II) is the same except sing. 3rd person (a zero morpheme). Complex (called also "compound" or "analytic" vs. "synthetic") verb forms consisting of more than one constituent are constructed on certain nominal forms of the main verb, i.e. the past participle (past stem + -e, e.g. khārd-e, sikhāt-e) or the so-called short infinitive (which is formally equivalent with the past stem, e.g. kharid) plus auxiliary verbs like the various types of the verb "to be" (i.e. the full verb budan, bāsī or its clitic forms like -am, -ni, est, -ni, -d, -and), kāst, kārd-e, mhāčad-e, etc. The so-called progressive form has a special structure: both the main verb and the auxiliary (dāstān, dār "to have") are conjugated forms (dārt-ad mi-kon-ad, dārt-ad mi-karad-ad, etc.) and can be separated from each other by other words.

The use of this periphrastic progressive is restricted in several ways, e.g. it can be used only in indicative mood and in affirmative sentences (see for more details, below).

The future tense is expressed with a special morphology of the auxiliary kāst, kārd-e "to wish" the present form of the auxiliary without the verbal prefix plus the short infinitive of the main verb, e.g. kārd-ad kārd "he will do" cf. also the use of kāst in a modal auxiliary, e.g. mi-kārd-ad bi-kan-ad "he wants (would like, etc.) to do"). The majority of finite verb forms have one or two verbal prefix (mi-, be-, na-, mi-), which may express various meanings like mood, aspect, negation or prohibition. Their use is partly, but not wholly, exposed to the stylistic levels of their context. The verbal prefixes mi- (< Classical Pers. hamāt < Early Classical and Middle Persian hamā) occur with both simple and complex forms constructed on present and past stems or on past participles: mi-kon-ad, mi-kārd-e, mi-kard-ad, dāst-e mi-karad-ad. The prefix be- (< Classical < Middle Persian be-) or its allomorph variations bi- or be- are used only with non-indicative forms in Modern Persian, based on the present stem such as subjunctive present (be-kon-ad) and imperative (br-kon).

All simple and complex verb forms in the indicative are negated with na-. It is prefixed to the finite forms of simple main verbs (na-kard-ad) or to the participles of complex verbs (na-karad ast, na-karde bude ast, etc.), except for the future and passive forms where it is prefixed to the auxiliary (na-kārd-ad kard, karde na-šud-ad). In the prohibitive, the prefix na- (na-kon, na-kon-ad) is used generally, except for very formal (literary) style where ma- (ma-karad, ma-kon-ad) appear instead. Colloquial language does not use ma- at all. The prefixes na- and mi- may be used simultaneously (with the allomorph na- of the morphology na-) if it is followed by e.g. mi-ne-kard-ad, be- to mi-ne-kar-d-ad: ma- and mi- may not in Modern Persian (see the different usage in Classical Persian).

The paradigm of the verb kardan, kon- "to do": indicative mood present mi-kon-ām "I do, I am doing", preterite (simple or "aoristic" past) kard-ām "I did", imperfect mi-kard-ām "I was doing, I did", etc.,
progressive forms in the present and the past: dīr-am mi-kār-dām "I am (in the act of) doing", dāšt-am mi-kār-dām "I was (in the act of) doing", (present) perfect karde-am "I have done", etc., past perfect (or pluperfect) kārde budam "I had done", etc.; there are three more ("double") complex forms based on the perfect, mi-kārde-am "I have been doing (indefinitival)", kārde budam-ām "I had done" (indefinitival) and dīštāši mī-kārde-am "I have been doing (indefinitival)"; periphrastic future kār de- dh-un "I will/shall do"; subjunctive mood: present be-kon-dām "I may do", "that I do", subjunctive mood: past mi-kār de-dām kard "I had done" (inferential) and (gerondifm) "writing", etc.) are based on two stems: nevis-ānde- (present stem plus -(a) -and- "writing (adj.), writer" (see nevis-ānde- in "writers"), nev-āl-e (past stem plus -(a) "written, writing") (see nevēl-e, nevēl-e-ād "writings"). Nominal forms derived from verbs are the full (or long) indefinite kār dam which can be used in all functions where a noun can appear, but the occurrence of the short indefinite is strictly limited: apart from future forms it appears after impersonal expressions only (būyād raft "one must go"). The two participles, nevis-ānde- "writing" or "written" can be used as verbal adjective, e.g. sīl-e āyande "the next (coming) year", or as noun, e.g. nevis-hā- ye Bahār "B.'s writings." The participles nevēl-e, kārde- etc., are suggested to have active meaning in modern Persian (see Telegdi, 1961, 186; Hūmāyūnfarī, 1964, 79-9; see also LN nevest-e = neveste sode) in contrast to ancient usage in which it was regarded as having passive meaning. A homophone form of the past participle of certain transitive verbs (actually nonfinite verb forms) has been distinguished by Lazard (gūmānī) expressing co-ordinated "circumstantial constituent" on the basis of their differing syntax (see bāste "closed" used as "gerundive" in bāste ast "it is closed" or bāste nist "it is not closed" vs. the verbal form "perfect" like bāste ast "he has closed" and nābaste ast "he has not closed") (cf. Lazard 1989, 273, 281; 1992, 687-94; S. Obolensky, "Miscellaneous notes on the Persian passive", in L. Hutyra, The persian Passive, 1963, 8, 253; M.R. Bātīnī, Sākhītān-i dastūr-i zabān-i farsī, Tehran 1340/1961 (passim); Bātīnī, Masūlītā zabānīgūr-nāsī-nī nāvēn, Tehran 1354/1975, 191.

This rather poor inventory of verbal morphology does not reveal all the underlying semantic distinctions which verb forms can cover. The overlap of tense and aspect or mood and aspect cause considerable difficulties whose details have not been wholly explored. In addition, the syntactic realisation of aspect can be limited by further facts, e.g. by social context or lexical choice. Therefore, the main oppositions may differ to some extent in formal and informal standards: the use of the so-called progressive forms, for instance, can alter aspectual oppositions (on this novelty in colloquial Persian see Salamann and Shokouvi, 1968; Rozenfeld 1948; Lazard 1957, 151 = 1992, 160; K. Feithāvarī, Mahdī wa mādī-i malmūs, in Rahnamā-yi kārbā, v (1962), 687-94; S. Obolensky, Persian passive construction, Washington 1963, 8, 253; M.R. Bātīnī, Sākhītān-i dastūr-i zabān-i farsī, Tehran 1348/1969, 15; Jereimias, Dialectologia in Persian, in Acta Linguistica Acad. Scient. Hung., xxxiv (1983), 280-3. The most essential points of the semantics of verbal forms are as follows: the present forms mi-kār-ān "I do" and be-kār-ān "that I do" (meaning obligation, possibility, etc.) express a clear opposition of moods between indicative and subjunctive expressed by verbal prefixes (mi-, be-). On the other hand, mi-kār-ān "I do" and dār-ān mi-kār-ān "I am (in act of) doing" are contrasted with reference to the first: the form is unmarked for aspect and mi- simply indicates indicative, but the periphrastic construction expresses a progressive ongoing action. This latter construction is stylistically marked: it occurs in the written and spoken informal standard only. In addition, its use is morphologically and also lexically limited: verb forms two disjoint sets according to their inherent aspectual properties: those which can appear in the progressive and those which cannot. The latter group called "stative" or "non-progressive" verbs, e.g. istādān "to stand", mordān "to die", etc. expresses the present progressive by means of perfect (nīast-e am "I am sitting") and the past progressive by means...
of pluperfect (nelāsē budam "I was sitting"). These "stative" verbs have also progressive forms conveying another modal implication, the so-called "ingressive": dār-am mi-nēn-am "I am going to sit down" (cf. Sa'dkhāri Arzang 2535/1976, 40; Wahidyān, 68). Because of this restricted use of progressive forms, the progressive indicative mik-ond-am can also convey various imperfective (continuous, durative, iterative, progressive, etc.) values, but in formal Persian only ("I do" or "I am doing"); in Modern spoken Persian this "aoristic" form means "I do" only.

The past tense offers a larger scale for expressing aspectual nuances than the present. The past forms kard-am "I did" and mi-kard-am "I was doing" convey distinctions between perfective (traditionally called sim-"kard-am "I was doing" in the past. mi-kard-am
formal Persian. Similarly to the present forms, informal Persian has an additional form with progressive value dāl-am mi-kard-am "I was doing" in the past. This latter verb contrasts with continuous but non-perfective inner perfective (mi-kard-am) as well as with non-perfective past forms (kard-am). It means that both mi-kard-am and mi-kard-am can convey more aspectual values in the formal language than the same form in the informal register. On the other hand, mi-kon-am "I do" (and also "I am doing") in formal Persian and kard-am "I did" can be in opposition with the perfect karda-am "I have done" which indicates the present relevance of a past situation (e.g. nām-e rā neveste-am "I have written the letter"). Note that this phonological form of the perfect belongs to the formal language. In the spoken variety, contracted forms are used like kande-am > ḫanidam with a unique stress vs. kard-am in the simple past which has stress on the stem (cf. stress in (iii) Phonology, above). The past perfect (called also pluperfect) kande bud-am "I had done" indicates an anterior event completed before another action was taking place (vaqti ke ḡasan vārese šod Piruz rafte bud "When H. arrived, P. had (already) gone"). In fact, these perfect forms belong to a semantically complex category of fairly wide applicability expressing various aspectual features of resultative character. It also includes an aspectual nuance called "inferential", "distanced past" or "aditive", a well-known aspectual category in Tādžik and Turki languages ("non-evident" verb forms). These terms indicate that the speaker is reporting an event which he has not witnessed himself and his knowledge is from second hand ("reported speech"). A series consisting of four such verbal forms (karte-ast, mi-karte ast, dāste mi-karte ast, kande bude ast) began to be interpreted as "inferential" in the Modern Persian paradigm only recently (see Windfuhr, The verbal category of inference in Persian, in Acta Iranica, xxii (1982), 263-87; Lazard, L'inferentiel ou passé distancé en persan, in Stud. Ir., xiv (1985), 27-42; idem, 1989, 273). It should be noted, however, that in earlier descriptions of Persian grammar (Horn, in GIP, 154; Jenson 1931, 158; Rastorgueva 1964, 38; Lazard 1957 = 1992, idem, 63, 295) the "double" compound verb forms (sometimes mentioned only cursorily) were interpreted on the basis of their morphology as extended forms of the perfect, the imperfect or the past progressive (sorne such forms as "the compound imperfect" in Lazard, 1992, 154 or "perfect durative" in Rastorgueva 1964, 43, rafte bude ast "the double compound past" or "the completed past of the perfect" in Lazard 1992, 156, dāste... mi-karte ast "the completed past" of the progressive in Lazard, 1992, 160) and accordingly, they were regarded as forms which combined certain nuances of the perfect ("completed time") with the durative meaning of the imperfect, etc. Their relationship with equivalent Tādžik forms was expressly denied (cf. Lazard, Caractères distinctifs de la langue tadjik, in Bulletin de la Société Linguistique, bb (1963), 131; idem 1963, 295). On the other hand, in one of the earliest descriptions of the informal standard of Modern Persian, Wahidyān (1964, 62-6) described these forms as nəblī "narrative" verb forms by giving the following examples: [be-tooni ke mi-guy-and] Vohād az safar bar gošte [asf] "[it is said that] V. has returned from journey" in contrast to Vohād az safar bar gošt "V. returned from journey", goft-ze-hā mi-khīd mokhārī "He said [that] you used to sleep at noon" and [mi-guy-and] dāste mi-kard-arde "[it is told] he was eating (had been eating)" (cf. also Sa'dhānji 2535, 60-6). It is emphasised that if there are expressions like zāhorna, gāyī "apparently", mi-guy-and "it is told" and šand-e-ast "it is heard (reported)", etc. the use of the inferential is obligatory, otherwise it is the language users' choice.

For compound or periphrastic verbs, see below, V. Word formation and vocabulary.

The characteristics of the verbal system in the early classical periods should not be applied to the whole of Persian. The verbal forms (prefix + stem + verbal suffix) is the same in the earlier periods of Persian as in Modern Persian. There are, however, essential differences both in the behaviour of certain constituents of the verbal form and also in the set of grammatical devices, the use of which was abandoned in the subsequent periods or preserved only for conveying highly formalised archaic or "neo-classical" style. Such a difference between Modern and Classical Persian appears in the use of verbal prefixes: the meaning and rules of their order and combination with each other and the two stems (past and present) varied widely: e.g. the classical prefixes (hāmī- and bi-) expressed mainly aspectual differences and could combine with both stems, e.g. bi-nuji, bi-šād "he went away, passed away" with perfect, resultative nuance vs. (hāmī-)sāvād "he is going" with continuous, progressive, iterative, etc., aspectual meaning (note that hāmī was still used as an adverb in early classical sources written separately).

These verbal prefixes were precisely defined for their origin in ancient texts: bi < Middle Persian be- was a preverb attached inseparable to the verb, while hāmī < early Classical and Middle Persian hamī "always", being an adverb, moved freely, and its place became fixed only in later periods.

On the other hand, the minimal verbal form consisting of the present stem joined by personal suffixes (na-o) was used widely as an "aoristic" unmarked neutral form. Thus, with some oversimplification, the set of prefixes and suffixes attached to verbal stems remained unchanged almost totally in the past millennium, but the meaning and ordering of morphemes, that is, the internal composition of verbal forms varied significantly throughout history. For the details of the combinations of the verbal prefixes (hāmī- and bi- or br- and the negation na- or (hāmī) prefixed to imperative and nominal forms, or bi- prefixed to forms in the simple past, complex verbal forms or nominal forms, etc. see Lazard 1963, 274-326; Ahmadzī Givī, Dastīr-i tādžīki-fīlī, passim; on the pre-classical use of the preverb bi- see I. Josephson, The preverb bi- and the verb kardan in Book Pahlavi Texts, in Proceedings of the Second European Conference of Iranian Studies, ed. B.G. Fragner et al., Rome 1995, 335-46.

Early Classical Persian texts have preserved a group of archaic elements of verbal morphology (see the
ancient forms of personal suffixes or verb forms without any suffix, etc.). The most characteristic features of this early period are: the morpheme *-i < *-i (attached to conjugated forms (incl. the clitic forms of the verb "to be" or rarely, stem forms) was used in differing functions in present and past forms expressing various values of mood (optative, conditional or irre ale modality), but in the past it could also convey the habitual, durative, etc., nuances of aspect (similarly to *hmn). In old prose it appears to have been a productive morpheme and was used simultaneously with the verbal prefixes *b- and *mrd-; but subsequently it fell into disuse and its function was taken over gradually by the verbal prefix *m- even though not completely—the morphology and semantic values of these forms or the differing use of *i and *-i have not been fully explored, see the examples in Ahmadī Gīwī, 337-42, and Lazar 1963, 327-38, e.g. *gar ma anjā na-budam-ż... "If I had not been there..." (irreal), or *ćun pāt-e payghdmbar amad-ż gyft-ż "when he used to come to the Prophet he used to say..." (habitant). For other archaic elements occurring in ancient texts such as the old precative or optative (*dār-ād, rasān-ād, kun-ād), the imperative formed by *-e (dih-e, bi-Jirist-e), or the old precative or optative (*hmn "the upper part of the street"); or *bād-hd "afterwards", cf. *bād-ye khiydbdn (otdq-e bald "the upper country" vs. standard *mamdlek-e khmor) or postponed (*harej-e made bakun-hd "somewhere outside", *ba^d-hd "afterwards") or postponed (the latter, which is more colloquial, is constructed with *uʃaʃa, such as *mād-e to *ahr-r-e *hmn "loiness" and *war-r-ı *šir-e *nār "(male) lion"). The feminine ending of the Arabic loans -at > Class. Pers. -a > Mod. Per. -e (male) "king", *maleku "queen", but also *at as in *̄a-t "mouth", *war-r-ı *nār "(male) lion").

Gender, number and other categories (the morphemes *-i, *-e, *-a): Gender is not marked morphologically in Persian. Female and male can be expressed lexically by the words māde "female" and nar(ê) "male"; or postponed (the latter, which is more colloquial, is constructed with *uʃaʃa, such as *mād-e to *ahr-r-e *hmn "loiness" and *war-r-ı *šir-e *nār "(male) lion"). The feminine ending of the Arabic loans -at > Class. Pers. -a > Mod. Per. -e (male) "king", *maleku "queen", but also *at as in *̄a-t "mouth", *war-r-ı *nār "(male) lion").

Plural is expressed by two alternating stressed morphemes: *-a with inanimates and *-ān (variants: gān or *gān according to the word's final vowel) with human beings, such as kād-hb-ba "books", zār-ān "women" or bād-šar "servants" (exceptions are numerous, e.g. der-akht-ān "trees", akhtlar-ān "stars", etc.). The stressed plural marker has a firmly fixed position immediately following the noun. Sometimes it may also be added to constructions consisting of two nouns in juxtaposition or adjectival phrase, such as *kot-ā salvar-hd "coat-and-trousers = suits".

In Modern Persian, except in very formal styles, *-i is widely used in place of *-ān. In addition, certain Arabic loans have preserved their original plural formation, both regular (*-i, *-i, *-i, *-i, *-i, *-i, *-i, *-i, *-i, *-i) or irregular (*-i "vessels", *-i "words" or zār "minister" and vazār "ministers"). In the formal language, the plural marker *-at or *-i occurs with non-Arabic words as well, e.g. farmāyš-āt "instructions" or mowj-ijt "fruits". Arabic broken plurals were widely used in Classical Persian and continue to be retained in modern formal style. Sometimes Persian plural markers are also added to Arabic broken plurals cumulating the two types of plural formation, such as *zaf "vessels", zara or zara-hb- "vessels". In the classical period, certain Persian words were re-borrowed from Arabic with their broken plurals modelled on patterns of Arabic morphology (where they are in use to this day), such as famān "order" and zāmīn "orders", bostān "garden" and bašān "gardens", etc. Certain nouns have double plurals, each with its separate meaning, such as sar-ān "chiefs" and sar-hb- "heads" or harr-hb- "letters" and harr-hb- "speeches". Selection from among the alternative plural forms is mainly governed by stylistic factors.

There is a special use of the plural marker *-ha occurring in adverbial expressions conveying a shade of meaning "approximation" (cf. bād-hb- "afterwards") in Lazar 1992, 93; bīn-ähl- "somewhere outside",

Historically, both -an (< Old Iranian pl. gen. *-anān) and -hā (< Book Pahlavi -hā) had their roots in Middle Persian. The former was older and more widely used in Sogdian; the latter took its place gradually (see W. Sundermann, Mittelpersisch, in CIL, 155). For further details cf. Jensen, 1963, 195-9; idem 1992, 57-66; R. Hūmāynfarrūkh, Dāstār-i ālam-e zabān-i fārsī, Tehran n.d. (1337/1958), 253-74; M. Muñoz, Muñoz wa ālam, Tehran 1369/1991; Hincha 1961, 141-60.

Idāfa (possessive and attributive constructions): The modification of a noun with a following modifier is expressed by a clitic vowel -e or after vowels -y (Class. Pers. -i or -y) attached to the head noun(s). The construction is called idāfa (Class. Pers. īzāfa, Mod. Pers. īzāfī) “annexation” (cf. the similar but not wholly equivalent construction in Arabic). The head noun(s) in singular or plural is (are) followed by one or more modifiers, which can be an adjective (as in most cases) or a noun, a pronoun, or more complex spatial and temporal expressions consisting of nouns, adjectives, prepositions, etc. Two main types can be distinguished according to their inner structures: (1) idāfa (the genitive case), or (2) idāfa (the dative case).

The same clitic morpheme -i with a restricting function can be attached to the antecedent of a restrictive relative clause (mard-i ke tu-ye otdq ast “that man whom . . .”) and the stressed morpheme -i “a brave man”, inanimate style, remain unresolved (see L.S. Peysikov, taksisa persidskogo yazika, Moscow 1959, 41-108 (the most detailed description); M.R. Bātini, Tazqifī dastār-i zabān-i fārsī, Tehran 1348/1969, 137-52; Lazard 1992, 66-71; idem 1989, 275).

Definition—Innennens: The unstroked clitic -i (< Class. Pers. -ī, < early Class. Pers. -ē < Old Persian aha- “one”) traditionally called “indefinite article” or “article of unity” is joined to a noun in singular or plural or to a noun phrase, e.g. ketdb-i “a book” or ketdb-hā-i “some, certain books” (vs. ketdb-hā “books”) or ketdb-e bozorg-i “a big book”. In the colloquial language indefiniteness is often expressed by the numeral yek “one” which precedes the noun (yek ketdb “a book”) and may be used simultaneously with the clitic -i (yek ketdb-i). Although the expression yek ketdb-i appears to be equivalent in certain contexts, they may also have different stylistic values. There are, for instance, cases, where -i and yek are not interchangeable; see the terms “Kennzeichnung der Individualisiertheit” (“the sign of individualisation”) for yek and “Restriktion” (“restriction”) for -i by Hincha, 169-70, e.g. yek nazar “(one of the) Tages” (“a particular day”) vs. nazar-i “pro Tag, ein einzelner Tag” (“daily, every day”). Although the fine points of the use of the clitic -i have not been wholly explored, there can be a restricting function, which appears to make the reference of the noun phrase more precise. In addition, its relatively independent character are manifested in phrases like in the following examples by Hidżāzī (quoted from ‘Etedglī, 1961, 192); jāmīv-e ṣekastā va nābīm-i “a tired (lit. broken) and sick young man” (Hidżāzī) or hū jāhēl-e ez, dānya bikhābār-i “each ignoramus who does not understand the world”, or hū dānya-i digā “einer anderen Welt” “in a different world” (Čukkā). This is especially common in Classical Persian, where the clitic -i tended to be joined to the first head noun.

The same clitic morpheme -e with a restricting function can be attached to the antecedent of a restrictive relative clause (mard-i ke tu-ye otdq ast “the man who is in the room”). This morpheme is called yi-ye-e šāye by native grammarians. The antecedent noun may be preceded by a demonstrative pronoun and is compatible with the stressed object suffix -ā (in mard-i ro ki . . . “that man whom . . .”), and the stressed morpheme -e which is used only in colloquial style (in mard-ī ke . . . “that man who . . .”). According to Hincha, the clitic -i is in complementary distribution with Ez. II and the pronominal possessive suffix -āi in each position (171). There is considerable disagreement, however, on whether these two functions of the clitic -i with different distributions are to be regarded as one or two morphemes. Native speakers seem to distinguish the two functions (cf. Lazard, L’inclitique nominal -i en persan: un ou deux morphèmes, in BSL, li (1966), 249-64; idem, 1989, 275-6). For more details see Meier, 139-44; Windfuhr, 3-40; Ch. Lehmann, Yī ye-e šāye. Zur Grammatik des persischen Relativsatzes, in IndoGermanische Forschungen, lxxiii (1977), 97-106.

A stressed morpheme -e is used after nouns in
singular (تستی‌ت "the hotel [in question]") as if it was a definite article (Hincha’s term is “Punktualisierung”, 176), but its use is restricted to the colloquial style in Modern Persian only. In formal language there is no direct way of expressing “definiteness”, but it is possible to indicate the definite or indefinite nature of the noun acting as an object in the sentence (see the object suffix -rā). The morpheme -rā has a limited distribution as it may occur with demonstrative pronouns (این pesar-ā), but never with the so-called indefinite “article” -i (for a different view, see Hincha, 176). If the -i is joined to a noun phrase (Ez. I) the eįče vowel -e is dropped, e.g. کتاب‌بوزرگ -ihet (cf. A.A. Sāddīkī, Dastīr. Sīl-i dawzawm, Tehran 2535/1976, 131). Apparently its occurrence is widespread in both Persian and non-Persian dialects (see Christensen 1939, 42, and also Windfuhr, 41).

The object marker -rā: The unstressed morpheme -rā (also called particle or postposition, which indicates its relatively independent or word-like character) is attached to a noun in singular or plural, or to a noun phrase of whatever length, indicating direct object under certain conditions. These “conditions” are a matter of debate and are impossible to grasp by hard and fast rules: its place, functions, appearance or disappearance seem to be dependent on grammatical, semantic and stylistic factors. In the sequence of the postponed morphemes which can follow a noun or a noun phrase, -rā is always the last in the sequence in Modern Persian (e.g. کتاب‌بوزرگ -ihet). It is said to mark the direct object in the sentence if it is made “definite” by pre- and postponed determiners, modifiers or by context, e.g. کتاب‌بوزرگ -ihet "that book (ace.)", کتاب‌بوزرگ -ihet "his book (ace.)", کتاب‌بوزرگ -ihet "I read the book". There are cases, however, where the direct object can also be followed both by the morpheme -i and by -rā. In these cases the morpheme -i appears to make the object not indefinite, but rather restrictive or “individualised”, e.g. کتاب‌بوزرگ -ihet "a certain book (ace.)". On the other hand, the object marker is not used if the object is generic, e.g. یک -ieb کتاب -ihet "the book" (in the evenings I read book(s)" (cf. Lazard 1989, 280). The rationale for its occurrence is far from clear. It may be connected with the semantic nature of the noun acting as object or with the relationship between object and predicate (“caractère humain de l’objet” or “absence d’affinité sémantique entre le verbe et l’objet”) or, with the complexity of the expression (cf. Lazard 1989, 280; idem 1992, 74-6, 183-90). Its use in the colloquial language is very unstable: it is often missing where formal language would use it.

In Modern Persian -rā sometimes appears where a direct object marker is not expected to occur. Some of the instances of these “unmarked” uses of the morpheme -rā do occur in both formal and informal Modern Persian, while others may be seen only in the very formal (literary) style. The first group includes elliptic exclamative phrases, such as کودتی‌ر -išb "thanks to God", -rā "I swear you by God" or کودتی‌ر "for God’s sake!" or عکس‌کر -ieb "(as an عکس)" "by chance". An emphatic use of the morpheme -rā introducing a topic at the beginning of the sentence occurs in the less formal style, such as -rā "can you name?". What am I to do with you?" (lit. "As for you, what shall I do?"). Sometimes it is used with adverbial expressions denoting time (ژوهرتی "at noon" quoted by Lazard from Sāddīkī Hidīkatī). The second group whose construction is characteristic of the very formal (literary) style in Modern Persian consists of expressions where the noun followed by -rā features as indirect object, like -rā -istfam (= به -istfam) "I told you" or سمتی‌ر کر -daram (= به سمتی‌ر کر -daram) "I have to speak to you". In these examples -rā is substituted by prepositions in the equivalent expressions which are equivalent grammatically but not stylistically. Another archaic and very informal use of this morpheme is the construction where -rā is attached to the complement of the existential verb “to be” expressing possession (that is, to the possessor noun), such as -rā pesar-i bud "he had a son", an equivalent of the sentence a pesar-i dāšt (cf. Lazard 1992, 191; Hincha, 186). These latter two functions are obviously remnants of old usage. Not only these two points but the whole domain of its use (place, functions, distribution, etc.) show differences between Modern and Classical Persian displaying also dialectal variability (cf. its use with the proposed particle man). See further details in Telegdi 1961, 194; Lazard 1963, 356-84; idem, Le morpheme rā en persan et les relations actancielles, in BSL, lxviii (1982), 177-207; I.K. Ovtšinnikova, Funktii poslegova rā v suvremennoi litteraturum pereiskom yazyke, in Trush Instituto yazykозnaniy, vi (1956), 356-391; idem, Izpósýzanie poslegova rā v prizvegetnykhjagl expirek in pereiskoj klas- 

Adjectives and adjective phrases

Adjectives are invariable words in Persian showing no distinction of gender, number or case. Comparative adjectives are formed by the suffixes -tar and -tatin (boland-tar “high” boland-tarin “highest”, note that the same suffix can be attached to adverbs as well). There are certain adjectives which have suppletive comparative and superlative forms, see beh, and beh-tar (“better”), beh-tarin (“best”) in relation to کت (good) or بی (more, numerous) in relation to به (much, many), etc. These doublets can be used in different social contexts in Modern Persian. The comparison between two gradable adjectives are made by the preposition از (in pesar az an boland-tarin ast “this boy is taller than that”). Superlative forms usually precede the head noun (قادر-tarin کت (the oldest book)), similarly to certain adjectives with special semantic value (کت pesar-ī (a “good boy”), see Lazard 1989, 277). Adjectives may be preceded by adverbs or adverb phrases. The most commonly used premodifiers of this type are به (very), به (strange) (mas-aule 

Because of their “unmarked” nature, adjectives easily change their word-class membership without any morphological modification—for instance, a large part of them can be used as nouns or adverbs (see above, I. Generalities). The syntactic behaviour of these words, which obtain their new meaning via transposition, is similar to the other members of the same word-class even though their original word-class attributes do not disappear completely. For instance, nominalised adjectives take the same exponents as the noun proper while preserving some features of their own in certain constructions (e.g. in idrīf or in compounds such as دیل "today", see Telegdi, Zur Unterscheidung von Substantiv und Adjektiv im Neoptersischen, in AO Hung., xv (1962), 325-56).

4. Adverbs and adverb phrases

This heterogeneous class overlaps with other word classes such as nouns, adjectives or prepositions, etc. The group of words which are traditionally regarded as adverbs are کون (akon) “now”, emruz “today”, fardā
“tomorrow,” *za* “under,” *ceh* “above,” *nazdik* or *nazd* “near,” *dar* “far,” *agah* “behind,” *pis* “before,” *pas* “after,” *biron* “outside,” *bîlî* “up,” *pâm* “down,” *sabîh* “very,” etc., in addition to the morphologically derived adjectives from adjectives by the still creative suffix of Arabic origin -an, e.g. *etfelâyân* “by chance,” *jîdân* “seriously,” *jînîm* “whole-heartedly,” etc. The syntactic behaviour of certain simple adverbs, however, varies according to the constructions where they occur. For instance, *pis, pas, biron, bîlî, pâm* used in combination with verbs of movement function as adverbs of space (*bîlî* *rafl* or *rafl* *bîlî* “he went up” in modern colloquial); used in noun phrase they appear as attributives (*ofîy-e bîlî* “the upper room, mansard”), *bîr-e pis* “the previous night”; used in adverb phrases, they behave as nouns (called “adverb-substantifs”) by *Lazard 1957, 84 = 1992, 90, for a different view see *Telegdi 1961, 187-9*) displaying nearly all the properties nouns have to things varying degrees. That is, they may occur with or without prepositions, with certain determiners (e.g. demonstrative pronouns) and plural markers indicating “approximation” (cf. *Telegdi 1961, 189; Lazard 1992, 65*). They also occur in *iddfa* constructions, but they never appear with articles (see *bîlî* “the upper part, top, height” in the examples *dor bîlî-ye* “above, over s.th.”, *bîlî-yâ bûh* “at the top of the mountain”, etc. or *hâmîn aknun* “just now,” *bîlî-dâh* “later” or more complex phrases such as *az *emrân* *bêr-fândâ* “from today till tomorrow”, cf. *Telegdi 1961, 187-9*). Actually, a large group of nouns may also occur in such adverb phrases either with or without prepositions (e.g. *dor* *poishte dîvar* “behind the wall”, *be manzjîl* [*rafl* manzjîl “he went home” (colloquial); see *prepositional phrases*). Similarly, most of the adjectives may function as adverbials (of manner in most cases, called “adjectifs-adverbes”) by *Lazard 1957, 59 = 1992, 90, e.g. *tond “quick, quickly”). For various ways of intensifying or concretising the meanings of adverbial expressions, see *tahâ “alone”, hâm “also, even”, ric “also”, hûttâ “even”, hâz-ham “still, yet,” etc. (see *Lazard 1992, 90-5*).

The manifold behaviour of certain adverbs might be explained by their historical development: e.g. *bîlî* and *pâm* were originally nouns, but they became adverbs while preserving some features of their former class-membership. By contrast, some old adverbs (*bar, dar, foru, far*) became fixed in preverbal position used formally as verbal prefixes (and not as adverbs) and formed a single lexical item with the verb while abandoning their independent meaning as adverbs (e.g. *MP* *abar* *âmadan > Class. P.* *bar* *âmadan “to rise [sun]” > Mod. P. *bar* *âmâdun “to cope, rise [dough]”). Not that some of them became obsolete already in the classical language and were substituted by “new” adverbs, e.g. *foru* by *pâm “down” or *dar* by *tu “in”; others merged into one single word (see the modern homophones of various origins, e.g. Class. Persian *andor > dar “in” (adv.) and *dar* “door” (noun) in classical phrases such as *dar* *âmâdun* “to come in” and (ba-)*dar* * mâmadun “to come out” > Mod. Pers. *dar* *âmâdun “to come out” —for substitution, see Class. Persian *bar* *âmâdun > Mod. Pers. *bîlî* *râfl* “to rise, go up”).

In addition, in the course of time certain adverbs had partly or wholly lost their ancient meaning, e.g. *pis* or *pas* were local-temporal adverbs in Classical Persian, but they have only temporal reference in Modern Persian, or *bar* in *bar* *sâfân* = *saflân “flare up, agitate” (see also the modern continuation of the old homophones: *MP* *abar > Cl. Pers. *bar* “up, on” and *MP* *war > Cl. Pers. *bar* “breast” [noun] > Mod. P. (az) *bar-e* “over, upon, on [prep.]”). For more details of these highly heterogeneous, sometimes obscure groups of words called adverbs or sometimes particles, see *Telegdi 1955; idem, 1961.*

5. Prepositions or postpositional phrases

There are only a few true prepositions in Persian such as *be “to, at, in, with”, etc., dar “in, into (litera-).”, bar “on, to”, az “from, since”, bi “with”, bi “without”, tâ “until”, jec “except”, jîmîn “as, like”. They can precede the noun (*dar* *oîy-e* “in the room”), the noun phrase (*dar* *oîy-e* bozorg “in the big room”) or the co-ordinated nouns (*dar* *oîy* va *dâlpazhkhâne “in the room and the kitchen”). These prepositions are never followed by *îdâfâ*.

In addition, there are various types of “compound” prepositions: e.g. adverbs followed by prepositions (*pis az “before [of time]”, gâlaz “before”, pas az “after”), nouns (or substantivised adverbs) with or without prepositions connected to another noun via *îdâfâ* (*dar* *poishte dîvar* “behind the wall”, *az* *tajr-e “from the side of” be-tajr-e “towards”, *be* tawassot-e “by the intervening of”) (dar) *tu-ye “inside”*, az *zî-r “from under” etc., or adjectives followed by prepositions (*nîsê “concerning” etc.).

Both true prepositions and the connecting vowel of *îdâfâ* may be dropped in colloquial style (see *Lazard 1992, 76-9*).

There were some more prepositions in Classical Persian, but they became obsolete in post-classical Persian as early lexicographic sources indicate, e.g. *andar, foru, farî* etc. Another characteristic of Classical Persian was the joint use of certain prepositions (be, bar) and certain postpositions (*bar, (an)dâr, hâm*), e.g. *be Taman dar “in Y.” (cf. *Lazard 1963, 399-123; Kh Kl. Ralbar, Dastâr-i zahân-i farsî). Khîhî bar-kî wîzî* *îdâfâ* *se rahî, *’Tehran 1367/1988, 69-396.*

6. Numerals

The cardinal numerals between 1 and 20 (jek “1”, *do “2”, *se “3”, etc.), all tens (*t* “30”, *cehel “40”, *panjîh “50”, etc.), hundreds (*sad “50”, etc.), thousands (*asd “100”, *cehel “200”, *sisad “300”, etc.) and thousand (*rezîr* are single words. The other numbers consist of either two or three or more words connected by *o “and” (e.g. * bist-e jek “21”, *hezîr-o jek “105”, *hezîr-o bist-e jek “2021”, etc.). Nouns following the cardinal numerals are normally in singular (*do* kâhî “two books”). Characteristic of Persian is the use of so-called “numeratives” words, a certain type of classifiers, between the numerals and the head noun. The most used “numeratives” are *nafar, tan, tô, dast, etc.* (do *nafar dâneñî “two persons students”), do *tâ kâhî “two (pieces) books”)*. Ordinals are derived from the suffixes *om or -om (kâhî-om or cîhrah-om “fourth”). If they consist of more than one member they are attached to the last member, e.g. *jek hezîr-o panjâh-o halî “1058”*. The two series of ordinal numerals (*panj-om or panj-om “fifth”) display different syntactic and semantic characteristics. The first type used as an attributive follows the head noun with *îdâfâ* (kîhî-e panjom “the fifth book”) but the second precedes it (panjom-e kîhî). For their differing semantic values, see *Lazard 1992, 101*. The first cardinal numerals have a variety of forms (*yekom / awal / nolzad / first, dastom / dastem “second”, sasom / sasem “third”). For various numerical expressions, see *Lazard 1992, 102-5.*

7. Pronouns: personal, possessive, reflexive, reciprocal, demonstrative, interrogative and indefinite

Person and some other pronouns can be expressed in two different ways: by stressed independent words or by clitic morphemes. The members of the two sets can substitute each other in certain, but not in all
positions. The choice of clitic pronouns is heavily dependent on stylistic factors.

Stressed personal pronouns have the distinction of number (singular and plural), person (1st, 2nd and 3rd), and gender with a strictly limited force (animate and inanimate in the 3rd person: man "I", in "you", 
v, 
ve, 
fi) or an (denoting inanimate things in most cases) "he/she/it", 
v, ainda or 
"they". There is a variety of forms and meanings in polite or colloquial usage. For instance, characteristic of modern colloquial is the occurrence of plural forms with a singular value or the forms 
v-hu "us", ainda-hu "you". 
I, 
I, is often used as a polite equivalent of the third person singular pronoun. Similarly, in polite speech, the first or second person pronouns in singular may be substituted by various forms, e.g. 
I, "serving", in 
in this" (lit.), 
Janeh-e 
and 
Janeh "Your Excellency" (see further details, incl. concordance, below, in 8. Syntax).

Personal pronouns, as usual, share the functions of nouns, but not all of them. For instance, they may be preceded by prepositions, e.g. 
I, "with us", or postponed by object markers, e.g. 
I, as (acc.). But see 
man-rd > ma-rd "me" (acc.). Having determining function, a pronoun with an extended determiner like 
v, "my book" (ace.) acting as a qualifying determinative pronoun. But in this function pronouns do not exhibit exactly the same syntax as nouns or adjectives when they act as modifiers. For instance, they do not allow any further extension of the noun phrase, but they terminate the chain of noun(s) and adjective(s) (cf. 
I, bozo-e zard-e ma "our big books", 
I, pedar-e ma "the book of my father" or 
I, pedar-e bozo-e ma "the book of my grandfather".

Clitic pronouns are: 
I, at- et (coll.), 
I, et (coll.) in the singular and 
I, et, 
I, in the plural. As a matter of fact, these clitic morphemes are personal suffixes used in two differing functions: if they are attached to the noun phrase acting as determiner they refer to the possessor as a kind of "determinative possessives" or, if they are used as complements in verbal phrases they refer to the direct or indirect object, rarely (and redundantly) the subject. These clitics, although their phonological shapes and allophones are the same in both functions, differ as for their modification or complementation: clitics used in determinative functions appear to be suffix-morphemes and the word so produced has a complex morpheme structure ( 
I, I, = 
I, 5 his book") which can take the object marker ( 
I, 5 his book (ace.)). In the second case, where clitics are used to denote complements of verbs or verbal phrases, the verb and its complement appear to be rather a syntactic construction that cannot be extended ( 
I, at, 
I, et et 
I, at, 
I, don). This construction itself is rather unique in that it can be expressive of both the predicate and the object or (more rarely) the subject (cf. 
I, 
I, 5 his book (ace.). Interrogative pronouns are: 
I, ki (coll.) "who", 
I, ki (coll.) "what", 
I, (coll.) "which one". The latter two pronouns can be used as adjectives as well. 
I, and 
I, how much/many shares the syntax with cardinals: it precedes the noun in singular ( 
I, rz ru "how many days"), but its other form follows it with 
I, (rz-e 
I, 5 "how much/many") shares the syntax with cardinals: it precedes the noun in singular ( 
I, rz ru "how many days"), but its other form follows it with 
I, (rz-e 
I, 5 "how much/many"). Interrogative pronouns can act as determiners with definite or indefinite references, but their syntax is still to be investigated.

Indefinite pronouns and determiners: There is a relatively small number of simple indefinite pronouns which can be compounded with various nominal morphemes, like kas, sahe (person), 
I, "thing", 
I, place", 
I, "quantity", or the pronoun 
I, which (one) to produce a large set of expressions acting as determiners and fulfilling various syntactic functions. Occasionally they can be followed by the indefinite -i, but the syntax of its use is not wholly explored ( 
I, has or 
I, has-i
"no one", hīt čiz “nothing”, hīt vaqit (determinative functions combined with the definite article -i or -ye). Semantically they appear to belong to various classes (universal, assertive, negative, etc.) like hame “all”, hāčiz “some”, hāčiz (somebody), hāčiz (is not the subject) or hāčiz (is affirmative sentence) “anybody”, similarly čiz “something”, hīt čiz(i) or hār čiz(i) “anything”, hīt ye, hīt kodīm “neither”, etc. For further details, see Lazard 1992, 124-9.

8. Syntax

The simple sentence consists of a subject and a predicate. The predicate, which occurs at the end of the sentence in most cases, can be a (conjugated) verb, a noun, a pronoun, an adjectival or a prepositional phrase acting in predicative function followed by various forms of the verbal copula. The subject, however, can be omitted and in this case the predicate alone constitutes a sentence of minimal size (e.g. rafīndand “[they] went away”). Characteristic of Persian are the various types of sentences constructed with so-called “impersonal” verbs or verb phrases, e.g. monān ki (it is possible), cyb mādārd “it does not matter”, etc. In another common type of simple sentences the logical subject is expressed by the clitic pronoun attached to the predicative adjective, e.g. sard-am ast “I am cold”. The coproagreement between the subject and the predicate is normally simple: a singular subject requires a singular object. But there are exceptions, mainly due to semantic or stylistic factors: if the subject is a collective noun or a noun designating inanimate things, the predicate is in singular; in elevated style, honorific addresses are used with predicate in plural, e.g. somā gīyēd “you (sing.) told”, dpā (sing.) natand (pl.) “the master is not at home” (for more details see above, 2, and Lazard 1992, 178-82; Mu’in, Nog. Singular and plural, Tehran 1369/1991).

The two major constituents of the simple sentence can be further extended by direct or indirect objects and adverbial phrases (for the details of their use, see previous sections). General characteristics of the behaviour of the constituents in the smaller or larger units of the sentence are mobility and optionality even though the constituents show these features in varying degrees. This means that grammatical morphemes like the object suffix -i or the dropping of prepositions in less formal styles in above, 4; cf. also Lazard 1992, 183-212). Interrogative sentences have the same word order as affirmative ones differing only in intonation. Juxtaposed units (phrases or clauses) are coordinated by va (or by the clitic -o in special cases), ham ... (tou) ham “and, also” (-ham also used as a clitic, e.g. somā ham gīyēd “you also told ...”), na ... na “neither ... nor”, yā “or”, kār-dās “either ... or” and so forth. Subordinate clauses of different types (object, subject, causal, temporal, etc.) are connected by the conjunction ke in most cases, esp. in informal styles, e.g. gōt ke peyar-nā amād “he said that his son arrived”. Normally this conjunction simply indicates subordination. The most common conjunctions (consisting of one or more words) that introduce subordinate clauses are: tā, tā ba niya ye in ke “that, until that”, etc. (object, final temporal, etc.), čin, čin, čin ke, zārā (ke) “when, as, because”, etc. (temporal, causal) and the conditional subordinate agor “if” (in negation magār ina “unless”). There is a relatively free freedom or selecting the mood of the verb of subordinate clauses: it can be either in indicative or in subjunctive depending on the speaker’s choice of modality. Tense, mode and aspect features of the predicate in conditional clauses are more (but not wholly) fixed: the selection of the verb form in the main (or “matrix”) clause and in the conditional clause is directly connected with fulfillment of a real condition or a hypothetical one with present or past reference. See some examples by Sādīkī: agor Huṣang kār konad, mōaftqīd mi-lāvad “if H. works, he succeeds”; agor Huṣang bi-yāyad hā u be gardes mi-ravam (or ke) “if H. should come, I (will) go walk with him”; agor dirūz barf nemi-bārd, havā sard nemisod “if yesterday the snow had not fallen (or there had not been snow), the weather would not have become cold”, etc. (see more examples in his Dastār, 105-6). Relative clauses are constructed in a special way: due to the lack of relative pronouns such clauses are introduced by the conjunction ke and the head noun can be (optionally) repeated in the clause by a pronoun: yek mānd vārd ke man u-rā nemānšād “a man entered whom (ke u-rā) I did not know”. In restrictive relative clauses constructed with a definite head noun the antecedent is supplied by the morpheme -i, e.g. mord-i ke ānād “the man who came” (see Lazard 1992, 229-36). Spoken style is developing special syntactic and semantic characteristics of subordinate clauses (see A. Nadjafī, Rāyānd-i “kit” dar šār-i gūfārī, in Nāma-i Fārābī, i [1374/1995], 7-19).

This short enumeration of the semantic and syntactical properties of simple and complex sentences does not cover all the possibilities that occur in Modern Persian (see more details in Lazarda 1992, 218-57, and for earlier usage, idem 1963, 455-92; Bahār, Sakkīnsādi, passim). This field of Persian grammar, however, has remained unexplored.

V. Word formation and vocabulary

1. There are various ways of word formation in Persian such as transposition, derivation, suffusion or preflxation and composition, some cases of which have been already treated in the morphology of the verb, noun and prepositional phrase. Transposition is one of the most common and productive processes which makes new words without adding any morphological marker, e.g. adjectives from nouns or vice versa, or adverbs from adjectives (e.g. kārāb “sleeping” in kārāb-i “are you sleeping?”, sobāq “tumult” → tārmulūtuous”, sond “quick, quickly”, etc. See more examples above, in iii. IV. 2. Nouns and noun phrases. Generalities. Similarly, certain verbal stems or conjugated forms can be used as nouns (e.g. khārd [stem II = simple past tense, 3rd person, sing.] “he purchased, purchase”, ma-gr [prohib., 2nd person, sing.] “do not say, top secret”); see also more complex compound forms like composition made of the stems (II+1) of the same verb (gōt-o gu “conversation”) or the stems (II+II) of different verbs (ābd-ā vaqit “intercourse, familiarity = lit. coming and going”), etc.

Word formation in Persian also displays a large set of suffixes, some of which are still productive, whilst certain others are stylistically coloured (e.g. colloquial, obsolete or archaic). The most common suffixes of nominal derivations are: -i (or -gi after final -e) which creates abstract (rarely concrete) nouns from adjectives and nouns (bozorg “big, great” → bozorg “bigness, greatness”, mard “man” → mard “manliness”, bande
The most common types of derivation by prefixation are: ná- (ná-pák “impure”), ná-márd “[a] coward”, ná-márd (ná-márd “step-mother”), hám- (hám-vátan “compatriot”), and pár- (pár-har “loquacious”). Zaban (Jdrsi “Persian”) is used process of word formation in Persian. The principal types of compound words, according to the syntactic and semantic relations between their two constituents and according to the word class produced by the composition, are: “determinative” (endocentric) compounds made up of two nominal parts (kár “work” + kháné “house” → kárkháné “work-shop, factory”); “possessive” (exocentric) compound (fársi “Persian” + zábán “language” → fárzábán “Persian-speaking, i.e. a person whose language is Persian”); a noun followed by a verbal stem (I), whose relation is equivalent to a verb and an object or a verb and another verbal complement and the compound so produced can have an active (or passive or locative, etc.) meaning, e.g. áтаš “fire” + parasistand/parast “to adore” → átašparast “fireworshipper”, dast “hand” + nevistand/nevistand “to write” → dastnemist “hand-written, manuscript (lit. written by hand)”; a noun followed by a verbal stem (II) forms a compound with passive or intransitive meaning, e.g. kháné “house” + zábán “zabán” → zábánzábán “to be born” (lit. “to be born at home”). These compounds represent only a few of the possible types. In certain cases, however, one cannot judge with certainty whether they represent phonological sequences held together by stress and intonation, or whether they have become lexicalized compositions (see Lazard 1992, 261-91). Their exact nature and status, however, are still to be scrutinised although much has been done in this field (see the discussion of the types delfaft (“heart-tightened”) and tagdel “right-heart(ed)” in Telegdi, Zur Unterscheidung von Substantiv und Adjektive im Neu- persischen, 325-36).

A particular type of verbal expression is represented by two large groups, called “verbs with preverbs” and “verbal phrases” (or “compound verbs”, Fr. “locations verbales”), whose use appears to be one of the main characteristics of Persian vocabulary since earliest times. The two sets present different types of lexical items with regard to their syntactic and semantic properties. The first group also consists of at least two subgroups which are very similar to each other, but only on the surface; they display two different types depending on their inner semantic structure: the first subgroup represents an ancient procedure of verbal composition, where verbs are preceded by more or less “living” adverbs of place (e.g. píš “before”, pas “after”), birun “outside”, bálá “up”, pán (páyín) “down” as in bálá raftan “to go up”, pán ánândan “to come down”, birun bordan “to take out”. The meaning of such a phrase is made up of the meaning of the two constituents.

In the other subgroup, the first member is also an adverb of place, but in this kind of verbal phrase the adverb ceases to behave as an adverb (losing its original adverbial meaning), and the sequence acquires a new, secondary meaning, e.g. forá-regefán “to learn”, forú-raftan “to plunge” (very formal), bar-úsdan “to return” (neg. bar-na-gášt, dar-raftan “perceive, understand” (note that bar and dar are formally identical to the prepositions bar, dar). In Classical Persian, this type of new verb formation was a living procedure, but over the course of time these verbs with preverbs have acquired a secondary meaning, e.g. bar-úsdan (“to overcome, result, rise (dough)”), and their original meaning began to be expressed by a new phrase, e.g. “to come up” > bálá raftan (see details in Telegdi, Beiträge zur historischen Grammatik des Neupersischen. I. Über die Partikelkomposition im Neupersischen, 67-183).

The most developed system of enlarging verbal vocabulary was, however, the formation of “compound” verbs. This heterogeneous group of words sometimes very peculiar verbal constructions, consisted of two, sometimes more words in addition to the “base” verb. The most common type is formed with verbs of exclusively Persian origin such as kárđán “to do”, zádan “to strike, cut”, dáštan “to give”, kórstan “to eat”, kórhtán “to know (method), kórstan, kór “to eat” kórhtán “knowledge, raftán “to go” raftár “behaviour”, etc. For other sorts of derivations by suffixation which are not productive anymore, see causative forms in verbal morphology (endirán, menár “to recognise” → tendrásín/tendránsín/síld “to make known”, etc.).
also broken plurals or genitive structures, appear as lexical borrowings. That is, these loans, though their Arabic morphological structures are clear, have not usually become integrated into the morphology of Persian except in some rare cases, but have mostly remained part of the vocabulary, signifying a highly elevated style in the majority of cases. This means that, apart from some rare examples, the Arabic grammatical structures, e.g. the Arabic plural or nouns supplied with Arabic feminine ending -e (mellæk-e “queen”, hamîr-e “sister”), or a feminine adjectival form governed by a broken plural, which are present in these loans, do not represent creative morphological categories in Persian. They do not generally function in order to create Persian structures analogously even though they occur sporadically in highly elevated style (see above, IV. 2.). Arabic lexemes, and especially participles used in Persian context, show some modification of various degrees in pronunciation and meaning. See Meier 1981, passim; Dj. Mattiø, Tahawwul-i tahlîf-i kalimît-i farsi, in Madâgal-i dânîgk nud-i adâbiyyât-i Mâghâb (1550/1971), II, 249-83; Ali-Asrafih Sadeghi, L'influenza de l'arabe sur le système phonologique du persan, 145-52; Pruceicz, passim (esp. 67). See more detailed and specific problems of borrowings in Lazar, Le emprunts arabes dans la prose persane du X' au XII' siècle: aperçu statistique, in Revue de l'Ecole nationale des langues orientales, ii (1965), 53-67; Telegdi, Remarques sur les emprunts arabes en persan, in Acta iranica, ii (1974), 337-45; Pysikov, Leksykdypäga sovremennogo perskogo yazika, Moscow 1975; W. Skalmowski, Ein Beitrag zur Statistik der arabischen Lehnwörter im Persischen, in Folia Orientalia, iii (1961), 171-5; Kh. Farjadidard, Arab dar farsi, 1387/1968; M.D. Mostâr, Le vocabulaire arabe dans le livre des alphabets de Firdawsi, Wiesbaden 1970. For borrowings other than Arabic, see G. Doerfer, Türkische und mongolische Elemente im Neopersischen, i-iv, Wiesbaden 1963-75, and M.A. Jazârey, Western influence in contemporary Persian: a general view, in BSOAS, xxix (1966), 79-96; Windfuhr (incl. Arabic) 1979, 135-8 (for earlier literature, see Horn, in GIPh, i, 2-29; Jensen, 4-5 and Bahâr, Subh-gînâsi, passim).

Persian, as the cutturally dominant language in the area, has influenced considerably both the narrower and larger surrounding languages. This influence has been exercised both by literature and through everyday communication. There is some information on the influence made upon Ottoman Turkish, but only scanty information concerning such languages as Urdu or Hindi (see Hardev Bahri, Persian influence on Hindi, Allahabad 1960, cf. Windfuhr 1979, 219; and see further the general bibliographies on linguistics and languages).

iv. History of grammar writing: Western-type and indigenous

The first grammatical descriptions of Persian appeared from the 18th century onwards in Europe, although there were scattered references on Persian in the previous centuries as well (the oldest such source is the Persian part of the Codex Cumanicus, see D. Monchi-Zadeh, Das Persische im Codex Cumanicus, Uppsala 1969; A. Bodrogigeti, The Persian vocabulary of the Codex Cumanicus, Budapest 1971; P. Orsatti, Poudromi della stori europei sul persiano nel Rinascimento, in Italia ed Europa nella linguistica del Rinascimento, ed. M. Tavoni, Ferrara 1996, ii, 551-67). These first descriptions written by missionaries, theologians, scholars or people of practical orientation (e.g. Lodovicus de Dieu [1628], John Greaves [1649], Ignazio di Gùsì [1661]) were meagre collections of paradigms in most cases. Sometimes they offered some (not always reliable) hints about the spoken variety, but their subject of “linguistic” description was the written (literary or formal) language (cf. P. Orsatti, Grammatica e Lessico nazione persiana nell'opera di P. Ignazio di Gùsi, in RSO, iv (1981), 55-83; Jeremias, Grammatical rule and standard in the first Persian grammars written in Latin (XVIIIth century), in Tavoni (ed.), op. cit., ii, 569-80; G. Doerfer, The impact of Semitic linguistics on the first Persian grammars written in Europe, in Iran, Studia, and Ammon Netzer, Jerusalem 1990, 159-71). However, the latest grammar of this century by J.B. Podesta (1991) stands pre-eminent in terms of quality and quantity (cf. Jeremias, The knowledge of Persian and a scholarly approach to the language; a Persian grammar by J.B. Podesta, 1969, Wien, in AO, xviii [1995], 71-86. On the famous “Geographikon”, an early lexicographic work containing also a meagre description of Persian, see M. Bastiaensen, La Persia Sepofide vista da un lessicografo europeo, Presentazione del, in RSO, xviii (1973-4), 175-203. The earliest really good description written in a modern language was made by the famous Sir William Jones (see G.H. Cannon, Sir William Jones’s Persian linguistics, in JASO, lxxxvii [1958], 262-73; Jeremias, The Persian grammar of Sir William Jones, in History of Linguistics, ed. D. Cran et al., Amsterdam 1999, 277-88). The 19th century saw a proliferation of Persian grammars written in various languages of Europe (see C. Salemann – V. Shukovski 1888, 106-9; Windfuhr, passim, and below, Bibli.).

2. Persian grammars by indigenous authors.

The earliest Persian sources offering data on linguistic thinking came from “scientific” works such as those on prosody, metrics or philosophy (logic), e.g. Shamsâli Kaye’s al-Magâm fi nasrû bi al-sugâr al-maghâm, Ibn Shùa’s Dânînghâmâ, Na’îr al-Dîn Tòsîl’s Kòbîs Asâs al-ikhtâbâs or Şajîr Dîrdjânî’s logical works (see Jeremias, Arabic influence on Persian linguistics, in History of the language sciences, ed. S. Aurox et al., i, section IX. The establishment of Arabic linguistics, ch. 49, Berlin 2000, 329-34; for earlier borrowings, see G. Doerfer, The influence made upon Ottoman Turkish, but only scanty information concerning such languages as Urdu or Hindi (see Hardev Bahri, Persian influence on Hindi, Allahabad 1960, cf. Windfuhr 1979, 219; and see further the general bibliographies on linguistics and languages).

Bibliography: Valuable grammatical studies on certain stages of the history of the language are numerous, but for some other fields research has only just begun. A concise descriptive grammar or a detailed and reliable description of the language history is still missing. In addition to the
references given above, for a general orientation, see Lazard, Persian and Tajik, in CTL, vi, The Hague-Paris 1970, 64-96 (bibl. from 1950 until 1968 at 77-96); Ehsan Yar-Shater, Iran and Afghanistan, in ibid., 689-89; Windfuhr 1979; CLI, ed. Schmitt, 1989. For the best bibliographical journal for Iranian studies, see *Abstracta Iranica*, supplement to Studia Iranica published by L'Institut Français de Recherche en Iran, Paris-Tehran. In Iran there is an increasing number of general and specific bibliography and periodicals, e.g. M. Gulbun, *Kishkhan-i zahhān u khaṭṭ*, Tehran 2536; Aflāhār, *Zahhāngīāton*, in *Fezrān-i makālat-i flāh*, i, Tehran 1369/1990; see also the studies published in *Magāqāl-i zahhān-gūnāt* (Iran University Press).

*Éva M. Jeremías*

viii. ART AND ARCHITECTURE

(a) Art.

The arts of Iran will be analysed according to five broad periods; the first stretches from the Islamic conquest to the rise of the Saljukids in the mid-11th century, a period characterised by the lingering effects of Sasanian rule, and strong cultural, artistic and economic ties with the Persian and Parthian kingdom. The second, which encompasses the next two centuries when Iran was ruled by the Saljukids and their successors, is characterised by an expansion in the quality and quantity of goods manufactured in the cities of Iran. The third, which stretches from the consolidation of Mongol conquests in the mid-13th century to the rise of the Safavids in the early 16th century, is dominated by the artistic patronage of various courts. The fourth period coincides with Safavid rule (1501-1722); their contribution was to unify Iran under a single government which facilitated a diffusion of court culture to a broader spectrum of the population. Some members of the dynasty also fostered a more commercial focus in the works of art produced within the court itself. The concluding phase of traditional Iranian art lasted from the fall of the Safavids in 1722 to the end of the Kādjar in 1925. During this time, Iran was subjected to new pressures that brought it into ever closer contact with other regions such as India and Europe. Some aspects of artistic culture suffered from external competition but others were reinvigorated, particularly court portraiture and the commercial production of carpets. The weaving, sale and collecting of carpets involved a wider spectrum of Iran's population than had earlier phases of artistic production and patronage.

1. The Sasanian heritage and the beginnings of Islamic art 630-1056

The abrupt demise of the Sasanian Empire in the mid-7th century A.D. helped to shape artistic development of Iran under Islam. The hasty departure of the Sasanian court from the royal palace at Ctesiphon allowed the conquering Muslim armies to witness the sumptuous surroundings in which those rulers had reigned, and which eventually by illustrated copies. Literary references mention the post-Sasanian use of textiles bearing the likenesses of these monarchs, and depictions of "Bahram Gur at the hunt" appear on both textiles and ceramics (Maria Vittoria Fontana, *La Leggenda di Bahram Gur Aṣāda*, Naples 1986). Memories of Sasanian life were also transmitted through texts such as the *Shāh-nāma* of Firdawsi [q.v.] completed in 404/1010, describing the accomplishments of Iran's pre-Islamic rulers. Its themes were popularised through wall-paintings and eventually by illustrated copies.

In Iran there appears also to have been a substantial continuity in textile production between the pre-Islamic and Islamic era. The ties between a ruler and the textiles produced in his territory codified in the *tīrūz* [q.v.] system continued from the Sasanian to Islamic periods, although there was a shift from the figural designs that included portraits of the rulers themselves to inscriptions giving the titles and epithets of Muslim rulers. The production of figural textiles did not, however, extend with the Sasanians. Some silks ornamented with roundels containing birds or animals that survive in European collections, or have been discovered through archaeology, appear to postdate the Islamic conquest. Included among them are fabrics showing a composite creature that combines the legs and head of a feline with the wings and tail of a bird. One of these, made into a man's *kāfūn* and now preserved in the Hermitage Museum, St. Petersburg, appears to date from the 10th century (Anna Jerousalimskaia, *Soirées sasanides, in Splendour des Sassanides*, Brussels 1993, 113-26, ligs. 127-8). Melikian-Chirvani has identified this type of textile with a silk fabric known as *parand* that is associated with Khuzistān in Persian sources (Parand and Parniyan identified, in *Bull. of the Asia Institute, N.S.*, v [1991], 175-9). Older textile practices may also have lingered along the southern coast of the Caspian, an area noted for both its conservatism and its production of silk fabrics. These included green silk brocades known as *tābār* after their place of production, *Tabaristan*. They were highly valued as carpets and may have had both figural ornament and Arabic inscriptions (R.B. Serjeant, *Islamic textiles. Materials for a history up to the Mongol conquest*, Beirut 1972, 74-80).

Iran's integration into the wider Islamic polity ensured that major changes also occurred in other artistic media such as calligraphy, bookmaking and ceramics. In all three cases, Iranian developments mirrored those in 'Irāk at the centre of the 'Abbāsid
The rise of local lines of rulers such as the Buyids of central Iran or the Samanids of Khurasan caliphate. The style was a result of the region’s economic and cultural vitality. Glass excavated at Nishapur and other Samanid centres such as Samarkand, are notable for their innovative decorative techniques and their excellent craftsmanship. The strong foundations of this period’s artistic culture also allowed it to survive for several decades after the demise of the Seldjukid dynasty itself. Dated and inscribed objects suggest that several crafts, including metalworking and ceramics, reached a peak of quality in the first two decades of the 13th century. The practice of inlaying objects of brass or bronze with copper, silver and gold was developed with particular skill in eastern Iran and Khurasan. During the 12th century this technique was associated with the city of Harat, where some of the finest pieces are known to have been made, including a bath-bucket known as the “Bobrinsky Bucket” dated to 1186 and now in the Hermitage Museum. Objects given this distinctive and painstaking form of embellishment include ewers, bowls and trays intended for use in celebrations and implements such as pen cases and inkwells that were part of the paraphernalia of government officials. This technique was also practiced by craftsmen in the western sections of Iran, and by the first quarter of the 13th century it had spread to the city of Mawsil in Iraq. Melikian-Chirvani has suggested that the pieces made in western Iran drew their inspiration from the Khurasan tradition, but it is unclear whether such connections would have been established through trade or because of the migration of craftsmen from east to west (Metalwork from the Iranian world, 8th-18th centuries, London 1982, 23-54, 136-42).
Although utilitarian ceramics continued to be produced in many places, the most ambitious objects are associated with the workshops of the central Iranian town of Kāshān. This centre was well endowed with raw materials needed for the production of a new type of body based on the use of crushed quartz and other forms of silicon which could be shaped to an unparalleled thinness and even to create white bodies that were translucent. Although the ultimate inspiration for these changes is thought to have derived from a desire to imitate the thin and translucent bodies of Chinese porcelain, the Kāshān potters embellished their wares with painting executed in several different techniques (Ethinghausen, Evidence for the identification of Kāshān pottery, in Ars Islamica, iii [1956], 44-72).

The best-known decorative mode employed by the Kāshān potters is that of over-glaze painting in metal oxides and other pigments. The resulting "lustre-painting" [see ٤٥٣٣] gave the objects a metallic sheen and brilliance. This technique had been applied to ceramics already in 9th-century ٤٥٤٢ and in Egypt during the 10th and 11th centuries. Its use at Kāshān appears to date from the late 12th century, and the technical secrets involved in its production may well have been carried there by emigre craftsmen fleeing the collapse of ٤٥٤٢ rule in Egypt. Whatever the source from which this knowledge was obtained, the potters of Kāshān made this technique their own, applying it both to vessels destined for household use and to tiles used in the embellishment of architecture. They also employed other decorative techniques such as the use of moulded ornament or painting in under- and over-glaze colours. The most laborious of these techniques known as "seven-colour ware" could be executed with great finesse and allowed the ceramics to bear designs of increasing intricacy. Notable examples decorated in this technique include cups associated with the workshops of the central Iranian technical past, in which deeds of the Biblical ruler Solomon were used in illustrated manuscripts of the period (Melikian-Chirvani, Metalwork from the Iranian world, 136-230). Although these objects are often autographed, the name of the craftsman is often omitted, and the recipes for the lustre paints are not recorded. The most elaborate decorative occurrences in ٤٥٤٢ manuscripts, such as the one copied and illuminated at Hamadān in ٤٥٤٢; but similar embellishments appear in a few secular manuscripts, and some illustrated books were produced in Iran and Sūjarid Anatolia (Ethinghausen, Manuscript illumination, in Survey of Persian art, 1937-54; Melikian-Chirvani, Le somon de Varge et Golhāz, in Arts asiatiques, xxi [1970]).

3. Persian art of the Mongol and Timurid periods

The initial devastation of the Mongol invasion of Central Asia and Iran (٤١٢٨-43) was followed by a second, less destructive wave of conquests in the ٤٣٢٠s which brought the remainder of Iran under Mongol control. Although skilled craftsmen were usually exempted from the general slaughter that ensued when a city or town resisted Mongol forces, the population and artistic productivity of the most devastated regions, such as Khorāsān, plummeted and would not recover until the 15th century. By way of contrast, the cities and towns of western and southern Iran including Kāshān, Tabrīz and Shīrzabh not only escaped destruction but even provided the catalyst for a revival of artistic production in the later 13th and 14th centuries. Two major changes helped to transform the arts: increased connections between Iran and East Asia, especially China, and the growing importance of the princely courts as loci of artistic consumption and even of initiated production. This gave Iran's rulers a greater role in shaping its artistic traditions than they had previously exercised.

The first of the arts to revive may have been ceramics, led by the production of lustre-painted tiles and vessels at Kāshān. An important group of such tiles was produced to embellish a palace constructed by ٤٥٤٦ (r. ٤٥٤٦-82) at Ťakht-e Sula'mān in north-west Iran (R. Naumann, Die Ruinen von Tacht-e Sula'mān und Zeitgenosse Sula'mān, Berlin 1977). Here for the first time vegetal and animal themes of Chinese origin such as lotus and prunus blossoms, many-clawed dragons and birds with extravagant plumage became part of the repertoire of Iranian craftsmen. Many of these same elements are also prominent in the luxurious silk textiles embellished with gold and produced under Mongol patronage in various sections of their domain, some of which have recently come to light among objects taken from Tibet. Even before their arrival in the Near East, the Mongols had demonstrated that they placed a high value on textiles, particularly those of silk brocaded with gold, and took pains to ensure their access to a steady supply. Those measures included seizing skilled weavers and moving them from one region to another to establish workshops where they would produce textiles for their Mongol masters (M. Rossabi, The Silk trade, in J.C.Y. Watt and Ann Wardwell (eds.), When silk was gold, New York 1997, 14-19). Although it is difficult to link surviving fabrics with any specific production centre, textiles depicted in Persian manuscripts of the late 13th and early 14th centuries demonstrate that textiles designs of Far Eastern origin were in use there as well.

The history of Shīrzabh shows a different aspect of this era. Its rulers, the Salghurids [٤٥٤٧], forged an alliance with the Ilkhanid Mongols which ensured the city's survival, and local traditions helped to shape its artistic production. A long-standing association of the nearby monumental ruins of Persepolis with a mythical past, in which deeds of the Biblical ruler Solomon and the Iranian hero Dāmghād were interwoven, provided the basis for a distinctive local titulature used by the city's Islamic rulers who declared themselves to be "heirs to the Kingdom of Solomon". These titles appear in a group of brass vessels inlaid with silver produced in Shīrzabh during the 14th century. Although Khurāšān typologies of shape and decoration from the pre-Mongol era appear in some of them, other metalwork from Fārs displays complex faceted, fluted and imbricated shapes. The new emphasis on figural compositions in their decoration is akin to those used in illustrated manuscripts of the period (Melikian-Chirvani, Metalwork from the Iranian world, 136-230).

Ghāzān Khān's acceptance of Islam in 1295 helped to integrate the traditional arts of Islamic Iran with the new cultural modes of the Mongol period. This is evident in two main areas—the creation of sumptuous, large-scale Kūrānic manuscripts and the preparation of illustrated copies of Persian texts. Ghāzān's interests included medicine and various scientific disciplines, and he commissioned the translation of Ibn Bukhtīshū's Manāfi' al-hayawān into Persian. An illustrated copy of it dated to either 1297 or 1299, now in the Pierpont Morgan Library, New York, was probably prepared for him (Barbara Schmitz, Islamic and...
Indian manuscripts and paintings in the Pierpont Morgan Library, New York 1997, 9-23). Ghazān also ordered his vizier Rashīd al-Dīn to compile a history of the Turks and Mongols, a project that during the reign of Ghazān’s brother and successor Uljaytu (r. 1316-35) was expanded to encompass the history of the rest of Eurasia. Some copies of the resulting text, the Ḍjamāʾ al-tawārīḫ ("Compendium of chronicles"), were illustrated. The earliest and most important of these, now divided between the Edinburgh University Library and the Khalili Collection, London, was completed in 1314, probably for presentation to Oldjeuyt (Sheila S. Blair, A Compendium of chronicles, London 1995, 16-31). As befits the text’s wide-ranging sources, its illustrations show the impact of the several pictorial traditions available in Mongol Iran, including illustrations executed in Byzantine, Nestorian and Armenian workshops, Chinese cartography, Chinese printing, as well as earlier Persian paintings.

The gradual assimilation of the Mongols to Islamic culture was also marked by the creation of large-scale richly illuminated copies of the Kurʿān. The most impressive, executed by the period’s leading calligraphers and embellished with full-page illuminations, were commissioned by Oldjeuyt, most probably for the religious complex at Sulṭānīyya which became his tomb. Copies were prepared for him simultaneously in three cities: one was made in Baghādād, another in Māwšīl, and the third in Hamadān. All shared with the manuscripts of Rashīd al-Dīn’s history an unusually large size, measuring 50 × 37 cm, and all were adorned with extensive gilded ornamentation (D. James, Qur’ans of the Mantuks, New York 1968, 92-126). A number of impressive Kurʿān manuscripts were also produced at Shīrāz for local dignitaries, including female patrons such as Tāsh Khatun, the mother of Abū Iṣḥāq Indju (r. 1343-57), and her sister Fārs Malik Khāṭīr. Their manuscripts combine well-executed gold calligraphy in ‘Irākī modes with a local style of illumination (ibid., 162-73; James, The master scribes, London 1992, 122-35).

The Mogol period also marks the beginning of the creation of illustrated copies of Firdawsī’s Shāh-nāma, a text often regarded as historical and a source of edification for rulers. Copies produced between the late 13th and mid-14th centuries exhibit diverse features, suggesting that they were commissioned by a variety of patrons. Some, although lavishly illustrated, are compact in size, whereas others are on the scale of large Kurʿān manuscripts. One such large copy has been linked to the reign of the last important Mongol ruler, Abū Saʿīd (r. 1316-35), and may have been commissioned either by him or by his vizier, Rashīd al-Dīn’s son Ghiyāth al-Dīn Muḥammad (O. Grabar and Sheila Blair, Epic images and contemporary history: the illustration of the Great Mongol Shahname, Chicago 1980).

The death of Abū Saʿīd in 1335, without an heir, set the stage for conflicts between rival Mongol factions for control of his domain. The most influential among these factions for artistic development were the Djalavīrs (q.v.). They seized the region of Tabrīz as well as much of ‘Irāk including Baghādād, and endowed important patronage and manuscripts. They continued their patronage even under the successor, Timur. It is generally believed that during the 15th century patterns and decorative schemes created by court workshops were first used in the design of textiles and carpets. Although literary references to carpets indicate that they were produced in Iran from the Sāsānīd period onward, those descriptions are inadequate for reconstructing either their technical characteristics or their appearance. It seems that in Iran the production of knotted pile carpets only became common after the influx of Turkish nomads that began in the 11th century. Depictions of carpets in Persian manuscripts of the 14th and 15th centuries suggest that most had a central zone occupied by small-scale repetitive motifs similar to those used in Anatolian carpets of that period. During the 15th century, some carpets depicted in Timurid paintings have designs focused
on a central medallion that may be round, oval or star-shaped. Often the carpet's corners contain quarter-medallions while the remainder of its field is filled with vegetal ornament usually in the form of spiraling vines with a variety of blossoms placed along them at intervals (Amy Briggs, Timurid carpets. I, in Ars Islamica, vii [1940], II. in ibid., xi-xii [1946]). These painted carpets resemble the finest extant 16th-century carpets as well as designs used in manuscript illumination and book bindings [see also bâixo, in Suppl.].

4. Iranian art of the Safavid period

The Safavid creation of a kingdom whose boundaries resemble those of the modern Iranian state served to encourage a more homogeneous artistic tradition within the region as a whole, a process also furthered by two of the dynasty's most influential rulers, Shah Tahmasp I (r. 1524-76) and Shah 'Abbâs I (r. 1587-1629). Shah Tahmasp's approach to the arts is an extension of the cultural attitudes which characterised late Timurid Harât in the period of Sultan Husâyn Baykara, a connection that is understandable since Tahmasp spent much of his youth in that city. The prince showed an aptitude for painting as well as calligraphy, so that when he returned to Tâbrîz to ascend the throne he was able to commission for his new capital the progressive illustrated manuscripts reproduced in this book. During the first decades of his reign, the royal workshop was engaged in the production of manuscripts, particularly copies of the classics of Persian literature. The most important manuscript associated with his patronage is a copy of Firdâswî's Shâh-nâmâ which is almost a picture album, for its 759 folios contain 258 illustrations and most of these occupy almost the entire surface of a page. As might be expected from a project of this size, it gives evidence of having been executed by numerous painters and the paintings show a range of styles and quality. By and large, the most impressive paintings are those situated in the manuscript's earliest sections where some of them continue trends originating in Tîmûrid Harât while others echo features of western Iranian art under the Turkmans. The most elaborate compositions depict complex architectural structures the divisions of which are separated by a well established western technique and mood. These pages have an even larger range of styles and quality than those in the manuscripts of the previous section. The most impressive paintings are those situated in the manuscript's earliest sections where some of them continue trends originating in Tîmûrid Harât while others echo features of western Iranian art under the Turkmans. The most elaborate compositions depict complex architectural structures the divisions of which are separated by a well established western technique and mood. These pages have an even larger range of styles and quality than those in the manuscripts of the previous section.

Tahmasp I's enthusiasm for manuscript patronage was echoed by other members of the dynasty, notably his brothers Sâm Mirzâ and Bahârân Mirzâ as well as his nephew Sultan Ibrahim Mirzâ. The last-named devoted considerable time and energy to artistic pursuits and employed a substantial number of calligraphers, painters and illuminators. A copy of Qâdi'm's Haft awrang produced for him between 1556 and 1565, and now in the Freer Gallery of Art, shows the manner in which an illustrated manuscript could become a "world unto itself". Every folio provides a feast for the eye, contrasting finely executed calligraphy with colourful gold-decorated borders, while its paintings draw the viewer into a self-contained universe inhabited by people of various ages and social stations (Marianna S. Simpson, Sultan Ibrahim Mirzâ's Haft awrang. New Haven 1997).

During the Safavid era, the popularity of illustrated manuscripts spread beyond the confines of the court, and they were produced also in non-royal workshops for a widening circle of patrons. Workshops in the city of Shîrâz were particularly active in the book trade. During the 16th century, in addition to the ever-popular poems by Firdâswî and Niżâmî, texts by several writers active in the late Timurid period continued to be both widely copied and frequently illustrated, including the poetry of Dîâmî, Hâfîz and the prose of Husâyn Gawzargâhi (F. Richard, Splendours persans, Paris 1997, 157-204). By the early 17th century, however, the attention of artists and collectors had shifted to single-page paintings, especially portraits, which were often gathered in murakkâb's (q.v.) (albums) (Sheila R. Canby, The rebellious reformer, London 1996).

The Safavid court was also involved in the production of various other kinds of artifacts, particularly silk textiles embellished with gold and silver and carpets with complex patterns which echo the intricate designs of book illumination or even of book illustration. Annually on the occasion of Nawrûz (q.v.), following a well-established Islamic practice, Safavid rulers were expected to provide their courtiers and retainers with garments appropriate to their status and position. Some garments worn by the ruler and his close associates were made of silk woven or embroidered in intricate patterns and embellished with gold and silver; used textiles were routinely destroyed in order to recover the metal which they contained. Safavid rulers sent luxury textiles as diplomatic gifts to their rivals, the Ottomans and the Mughals. Historical accounts confirm that several towns in Iran produced luxury textiles and rugs, including Kâshân, Yazd, Kirmân and Isfâhân, although it is difficult to link surviving examples with any particular centre (Carol Bier (ed.), Weven from the soul, woven from the heart, Washington, D.C. 1987; May Beatte, The carpets of Central Persia, Westerham 1976).

The few surviving rugs from 16th-century Iran follow designs created by professionally trained designers or painters. Some have elaborate figural and landscape compositions, whereas others are noted for their multi-level designs of vegetal scrolls. Shah Tahmasp I is known to have taken a personal interest in the production of carpets, and Shah 'Abbâs I is even said to have practised the weaver's craft. During his reign, weavers worked in the grounds of the royal palace at Isfâhân, although production of luxury textiles and rugs also continued in other centres. The intricate time-consuming designs and lavish use of silver and gold that characterise Safavid court carpets and textiles preserved in shrines or sent as diplomatic gifts suggest that court production was viewed as an index of royal prestige, rather than as a commercial venture (M. Aga Oghlu, Safavid rugs and textiles, New York 1994; Bier and Bernard, The Persian weavings at Rosenborg, Copenhagen 1995; F. Spuhler et al., Denmark's coronation carpets, Copenhagen 1987).

5. Iranian art from 1722 to 1925: the Afghârî, Zand and Kâdîgâr periods

Although the period from the effective end of the Safavid dynasty in 1722 to the emergence of the Kâdîgârs in 1794 was marked by chronic political instability, artistic patronage still continued on an intermittent basis largely echoing trends of the late 17th century. Lacquerwork (avârnam watercolour paintings, usually on a papier-mâché surface which had earlier been used for bookbindings, was also used for pen-boxes, mirror cases and caskets. A few paintings and luxury textiles can be linked to Nadîr Shâh (r. 1736-47), and his seizure of Mughal treasures during his invasion of India provided Iran's rulers with...
jewels later used with great effect by the Kadjars in their court regalia. Karim Khan Zand's reign (1751-79) is notable for a stress on large-scale figure paintings on canvas that were used to embellish buildings, a practice expanded under the Kadjars. It was that dynasty's second ruler, Fat' Ali Shah, who made the most extensive use of decorative, pictorial imagery as an adjunct to state policy. He revived the use of rock-cut reliefs for heroic images of himself and of his court and similar compositions were also used on portable objects such as lacquerwork bookbindings or mirror cases. Enthusiasm for large-scale figurative painting was not limited to the Kadjar court. Itinerant story-tellers used portable picture scrolls (sometimes identified as "Coffee-house paintings") as an adjunct to the recitation of stories and to performances of the passion play or tazya [q.v.] see Layla S. Diba and Maryam Ekhhtian (eds.), Royal Persian paintings, The Qajar epoch 1785-1925, Brooklyn 1999.

The second half of the 19th century witnessed a decline in most local crafts due to the competition created by imports from Europe and India. One exception was the production of carpets, which were much in demand both within Iran and abroad. The old system of court production was replaced by commercial workshops that drew on the skill of many segments of Iran's population. Large-scale enterprises, situated in major urban centres such as Isfahan, produced standardised carpets to the specifications of a mostly foreign clientele. Smaller production centres, situated in villages, the homes of private citizens or even in nomadic encampments, created more varied wares which often combined traditional schemes with idiosyncratic embellishments. This broadly based "folk-art" provided a kind of democratisation of Iran's artistic tradition that carried it into the 20th century (A.C. Edwards, The Persian carpet, 1953).

(Priscilla Soucek)

(b) Architecture.

The buildings erected in Iran during the Islamic period are some of the finest constructed anywhere in the Muslim lands. They are noteworthy for their sophisticated vaulting systems and their sublime use of coloured decoration on both interior and exterior. Both traits may have been encouraged by the materials available for construction. Although large supplies of wood grow near the Caspian Sea and good stone for masonry is found in Fars and Adharbaydjan, brick is the predominant building material in most of the region. Already in pre-Islamic times, builders in Iran had devised ways of roofing their structures with domes supported on squinches, arches thrown over the corner of a room. Buildings in Islamic times maintained the tripartite elevation of wall, squinch and vault, but divided the zone of transition into increasingly smaller and more elaborate segments, culminating in the mukarnas [q.v.]. At the same time, they carved and painted the stucco covering interior surfaces and developed several methods of glazing tiles in a full range of colours, so that brick surfaces covered with brilliantly coloured tiles became a hallmark of Islamic architecture.

The following discussion surveys the development of these trends in Iranian Islamic architecture in five chronological periods. Within each period, a short assessment precedes discussions of the major building types and of form, materials and decoration. The article considers Iran in the broadest sense, comprising the plateau between the Tigris and Oxus rivers, and occasionally includes sites beyond these confines, such as Baghdad or Samarkand. Naturally, more buildings and more types of buildings survive from the later period, making it possible to sketch a fuller picture from the extant record. By contrast, relatively few buildings survive from earlier times, and the evidence for early Islamic architecture in Iran has to be pieced together from widely scattered remains and snippets of information gleaned from texts.

1. Before 900

Virtually nothing is known about buildings from the period of the Abbasid rule when the Islamic capitals were in Syria, but, as befits Iran's position as one of the most important provinces in the 'Abbásid empire, most of its architectural remains reflect the forms and styles used in the capital province in 'Irāq. Compared to 'Irāq, contemporary buildings in Iran are generally smaller, but show a wider variety of materials, including rubble and mortar, fired brick, mud brick (particularly in northeast Iran and the adjacent regions of Central Asia) and wood. Many are decorated with the styles of carved stucco development at the 'Abbásid capital of Šāmarrāt [q.v.].

The most important building type known from early Islamic times in Iran is the congregational mosque. Congregational mosques built in Iran resemble those constructed elsewhere in the 'Abbásid domains, for virtually all of them are (or were) large buildings with a central courtyard surrounded by porticos or arcades and a large covered prayer hall on the kibla side (in Iran, the southwest). The prayer hall was a hypostyle room, in which the roof was supported on a multitude of single supports, either piers or columns. The best standing example of a hypostyle congregational mosque is the one known as the Taft Khāneh, erected at Dāmghān in the 3rd/9th century. The remains of others have been excavated at several sites, including Sūs in Khuzistān in southwestern Iran and at Sirāf on the Persian Gulf (dateable A.D. 815-25), but the largest and most important of these hypostyle congregational mosques was the one erected at Isfahān. Founded ca. 771, it was expanded under the 'Abbásid caliph al-Mu'taṣim (r. 238-27/853-42) and served as the basis for the present Friday Mosque (Masjīd-e Džumā) in the city.

In addition to the hypostyle congregational mosque, there were other types of small mosques. One type had an attached courtyard leading to a rectangular prayer hall (measuring between 5 and 10 m on a side) divided by one or more transverse arcades, with a projecting mahāb [q.v.] in a rectangular salient. At least ten examples were excavated in the residential quarters at Sirāf, and some may date as early as the 3rd/9th century. Another type of small mosque is a square covered with nine domes. The one that survives at Bālkh is about four times the area of the small mosques at Sirāf (measuring ca. 20 m to a side) and was elaborately decorated on the interior with extravagantly carved stucco.
The same forms and decoration were used on a smaller scale in domestic architecture. Vaulted and domed houses excavated at Marw (now in Turkmenistan) were decorated with Sāmarrā'-style stucco. Houses excavated at Nišāpūr also had stucco dados elaborately carved in a similar style (several are now on display in the National Museum in Tehran and the Metropolitan Museum in New York).

Caravanserais [see KĀN] erected along the major trade routes across Iran and Central Asia also reflect the plans of those found elsewhere in the 'Abbāsid lands. Three mud-brick forts erected at Darzān in Kirmān province, for example, are square buildings (25 m on a side) with round buttresses and tunnel-vaulted chambers.

2. 900-1250

This was the most creative period in Iranian architecture, and all of the distinctive features of Iranian Islamic architecture—the use of fine-quality baked brick as the primary material of construction and decoration, the development of glazed tile as an important medium of both interior and exterior decoration, the four-iwan plan, mausolea, minarets, the tripartite elevation of dome chambers, the subdivision of the squinch into increasingly smaller units and the mukarnas, and minbar pulpits—appear for the first time during this period. Most of these features are commonly associated with the patronage of the Sāljuq dynasty (432-590/1040-1194), whose territories stretched from Central Asia to 'Irāk, but many were introduced earlier and were not limited to the Sāljuq domains.

New congregational mosques were built to suit the need of the growing Muslim community. Those erected in the 4th/10th century, as at Nāšāpūr and Ardīsān, continued to use the hypostyle plan, but the major feature of this period was the development of a new plan having a courtyard surrounded by arcades linking four iwan, high vaulted rooms open to the court at one end. The transformation from the hypostyle to the four-iwan plan is best seen in the mosque at Isfāhān, an early capital of the Sāljuq domains. In 483/1086-7, the twenty-four columns in front of the miḥrāb were replaced with a free-standing domed pavilion supported on giant polyched piers. Then, later, probably in the early 6th/12th century, four iwan were added around the court. This combination of four iwan plus dome chamber was soon repeated in congregational mosques in nearby towns such as Ardīsān, whose hypostyle mosque was revamped between 553 and 555 (1158-60).

Despite the occasional use of other types of congregational mosque, the four-iwan plan became the standard for congregational mosques erected all over Iran from this period onwards. Scholars have long debated why this change occurred. Although the reasons are not entirely clear, it may have been due to practicality and utility. This plan had already been used in many pre-Islamic buildings in 'Irāk and Iran, ranging from the Parthian palace at Ashur (1st century A.D.) to Sāsānīd houses at Ctesiphon (6th century A.D.). It provided a suitable setting of monumentality, without any rigid princely or cultic associations.

From the 6th/12th century the four-iwan plan also became standard for many other types of buildings. To judge from later examples, this plan may have been used for mausolea, which began to proliferate at this time. This plan was also used for caravanserais, such as Rīhāt-i Shāraf, built in 508/1114-15 by the Sāljuq vizier Shāfar al-Dīn Kūmmī on the old route from Nišāpūr to Marw. Building civil structures was considered an act of piety and a sign of sovereignty, and many local rulers embellished their domains in this way. The Kurdish prince Bād r b. Ḥasanawāy (r. 370/404/980-1013), for example, erected a series of bridges along the pilgrimage route near Khurramābād; Kākūyād ānīs added iron gates to the mud-brick walls around the city of Yazd in 432/1040-1, as did the Shāhābīs, viz. Shāwūr I b. Fadl at Gandāja in 455/1063.

From the 5th/11th century onwards, minarets began to proliferate throughout Iran. Most are tapering brick cylinders about 30 m tall, decorated with horizontal bands of elaborate brick patterns and elegant inscriptions. In earlier 'Abbāsid times, minarets had been attached to congregational mosques and normally set opposite the miḥrāb. In this period they were erected by a broader spectrum of people, including viziers, judges and private individuals, and sometimes set as isolated, free-standing constructions. Their proliferation may also indicate a revolution in technique which made these tall brick minarets resilient to earthquakes.

The monumental tomb [see KUBBA; TURBA] was another major type of building erected in this period. Tomb towers were popular along the Caspian littoral, as exemplified by the Gunbad-i Kābus (597/1066-7), the earliest of which to survive. The classic example of the domed tomb is the mausoleum of the Šāmānīs at Bukhārā (310/920s), but its exquisite form and decoration in carved plaster and baked brick bespeak a long tradition. The domed tomb became the most popular type. Three fine examples were erected at Marāgha in the 6th/12th century, but the largest and most splendid is the one built at Marw for the Sāljuq sultan Sangār (r. 511-52/1115-16).

Larger tomb complexes also developed during the period. Some, such as those at Māshāqūd or Kūmm, surrounded the graves of Shī'ī imāms. They were underwritten not only by wealthy Shī'īs but also by government officials seeking to garner the support of heterodox segments of the local population. Other complexes grew up around the graves of such learned figures as al-Ḥakīm al-Tirmidḥi or such mystics as Abū Yazīd al-Bīrūnī or Abū Yazīd al-Bīstānī [q.v.]. These shrine complexes were often agglomerative, and the specific stages of construction can only be revealed by detailed archaeological investigations, usually impossible because of the sacred nature of the sites.

Texts mention large palaces and elaborate houses for the upper classes in the Būyids at Baghdād and Shīrāz and the Sāljuq capitals at Isfahān, Baghdād and Marw. Excavations have revealed only tantalising fragments from minor sites, such as limestone panels from the palace of the Hasanawayhids at Sarmājid in southwest Iran or carved stucco panels from Tirmidḥ on the Oxus. Contemporary houses excavated at Nišāpūr were lavishly decorated with painted stucco.

Domes were elaborated and articulated during this period. In order to lighten the domical mass, both physically and visually, builders developed the double dome, in which two shells of slightly varied profile are connected by intermittent ties. Niẓām al-Mulk's Šāsān-tūmān (ed. H. Darke, Tehran 1340/1962, 211, tr. idem, London 1978, 167) mentions that in the 4th/10th-century tombs of the Būyids at Ravy already had such a double dome ('ba dawdādghī), and extant examples survive from the end of the 5th/11th century (e.g. the tomb at Kharrākān dated 486/1093-4). Ribs were used to facilitate construction in a land where wood was unavailable for centring. As the dome
was built, the ribs were bonded into the construction and often exploited for decorative effect. The inventiveness Iranian builders displayed in the manipulation of domed spaces is clear from the Friday Mosque at Isfahan, where over two hundred examples cover all periods from the early Islamic period, had a pishtak in the middle of the facade, and by the 4th/10th century builders used this form in Iranian mosques and mausoleums (e.g., the Isfahan Friday Mosque). Builders exploited the spaces between the bricks for decorative effect. The increased use of glazed tile, which contrasted with the matte, reddish or yellowish brick. Holes in the brickwork on the earlier tomb tower erected at Marv-din in 460/1067-8 were probably filled with these glazed pieces, and small fragments are still preserved in the dome chamber. The most elaborate building to be erected at Marv-din was the Gunbad-i Sharaf. By further subdividing the squinch, builders often painted the stucco coating in addition to unglazed bricks. They added other techniques of tile decoration, including bandi and other service buildings. Buildings also exploited the spaces between the bricks for decorative effect. Builders in northeastern Iran often laid bricks in double bond so that the vertical joints created a pattern of light and shade across the wall. Builders sometimes filled the joints with plaster, which were stamped or carved with geometric, floral or epigraphic patterns. Other structures include geometric and vegetal ornament as well as figures, animals, and birds. The increased use of colour and the growing taste for covering up wall surfaces foreshadow later developments, but at this time structure and decoration were kept in balance. The increased use of colour and the growing taste for covering up wall surfaces foreshadow later developments, but at this time structure and decoration were kept in balance.

During this period, fine baked brick was the preeminent material for the construction of important buildings, while mud brick, pisé and stone were used for subsidiary structures or in specific areas. By the 6th/12th century, a standard baked brick measuring ca. 25 x 25 x 5 cm had replaced the large rectangular bricks used in the early period and the smaller bricks associated with Buyid buildings in the Isfahan region. Bricks were laid in a variety of flush or bas-reliefs, and walls were sometimes painted to imitate brick bonding patterns. Other subjects include geometric and vegetal ornament as well as figures, animals, and birds. The increased use of colour and the growing taste for covering up wall surfaces foreshadow later developments, but at this time structure and decoration were kept in balance.

This period marked the triumph of coloured decoration. Builders elaborated the technique of tile mosaic so that it covered the entire surface. They also expanded the palette to a full range of seven colours (dark and light blue, white, black, yellow and green). In addition to glazed brick, they added other techniques of tile decoration, including celdes and lidijvandina, overglaze painting. This period also saw an increase in the height, verticality and size of buildings, and the enormous complexes ordered by Mongol and Timurid rulers attest the wealth available in this period of trans-Asian trade. Individual buildings were often incorporated into complexes, which combined a mosque, madrasa, khanqah and other service buildings around a tomb, either for the founder (as in Oldjeytu's tomb at Sultaniyya) or for a Sufi saint (as at Natanz, Bistām and Gūr Gāh outside Herat).

Congregational mosques followed the standard
four-iwan plan. The one built at Warāmīn in the 1320s exemplifies Ilkhanid work, but the most impressive is the elephantine one erected by Ṭīmūr in his new capital at Sāmarghānd. Known as the Mosque of Bbī Kūhārūn, after Ṭīmūr’s favourite wife, it measures a gargantuan 100 × 125 m. Wherever space was available, as in these two examples, these congregational mosques had regular exteriors, but whenever they had to be shoehorned into the space available in a city, as in the one that Ṭīmūr’s daughter-in-law Gwāshaghād added to the shrine of the Imām al-Ridā in Mašhād in 821/1418-19, the interior was irregular. As before, these mosques focus on the courtyard, and the one at Mašhād is truly magnificent, with dazzling tile mosaic and underglaze- and overglaze-painted tiles.

Madrasas of the period are even more homogeneous than mosques and have a similar plan of a court surrounded by two stories of students’ cells connecting four iwāns, as at the Madrasa Imāmī (755/1354) at Isfahān or the one built at Khwārgird in 846-8/1442-5 by the architect Kāvārīn al-Dīn Shīrāzī, the first Iranian architect whose career and style can be delineated. The madrasah built by Shīr Rūḥī’s son Ulūgh Beg in Būkhārā and on the Rūgsīn in Sāmarghānd (both 829-3/1421-2) are variations on the same theme.

A similar plan was also used for rural caravanserais, often erected along major trade routes as part of the flourishing overland trade. Caravanserais were also built within cities. One of the few urban commercial buildings to survive is the Kūn al-Mīrjān (or Kūn al-Urtma) in Baghdad (758/1359); its sophisticated transverse-vaulted roofing system, which allows light to flood the interior, shows that the patron, the governor of Baghdad for the Dithlāvīrīds, considered the caravanserais as important as the other parts of his complex.

Both the tomb tower and the domed square chamber continued to be used for funerary monuments. Mausolea built for lesser figures, such as descendants of the Imāms or minor princes or princesses, were relatively small, free-standing buildings (e.g. the Imāmzāda Ḏārūr at Isfahān, 725/1325). The most striking example, notable for its fine tile decoration, are found in the necropolis outside of Sāmarghānd known as the Shāh-i Zinda, where many domed structures lining the street leading to the principal shrine were built ‘around the tombs of Sufi saints, for female members of Ṭīmūr’s family. Since some orthodox scholars condemned the building of mausolea, the cenotaph was sometimes set in the open air in front of an iwan. Several Timurid examples of this arrangement, which has been called a ṭāqāra, are found at Gāzur Gāh, Turbāt-i Shāhī Djam and Tāyba’ābād.

Richer patrons, mainly sultans and their chief ministers, built larger tombs as part of elaborate funerary complexes. The best example to survive from the Ilkhanī period is the mausoleum of the Kūn al-Ordjeytī at Sulvjntiyā, but the foundations established by Ghāzīn Kūn and his vizier Raṣḥīd al-Dīn at Ta’brīz were equally large. Large complexes were also built around the tombs of Sufi saints. A few honoured contemporary shaykhs, such as the complex built at Naṭanz in the opening decade of the 8th/14th century for the Suhrawardī shaykh ‘Abd al-Salām (d. 699/1299-1300), but more commonly they honoured saints long since dead, as at the complex of Abū Yazīd Bīstāmī, which underwent major restoration at the same time. These complexes, like mosques, had regular exteriors whenever space allowed, as at the gigantic shrine that Ṭīmūr erected on the steppe for Ahmad Yasawī [q.v.] at Turkestan (799-801/1397-99) and the one that Shīr Rūḥī erected for ‘Abd Allāḥ Ansārī [q.v.] at Gāzur Gāh (829-32/1425-29).

A few palaces were permanent constructions. Ca. 1275, the Kūn al-Abāk, for example, constructed a summer residence at Sāfārīk (now Tākht-i Sulaymān [q.v.]) on the foundations of the Sāsānid sanctuary of Shīr. The quality and abundance of the architectural décor, particularly the marble carvings and the lustre and lāqcedārīn tiles, show that the Mongol ruler spared no expense. Both the site, which has been identified as the place where the Sāsānid emperors had been crowned, and the decoration, including lustre tiles with quotations and scenes illustrating themes from the Shīr-nāma, may have been chosen for their association with pre-Islamic Iranian kingship. The ruins of the Ak Sarāy, Ṭīmūr’s palace at Shahr-i Salz (781-98/1379-96) show the same concerns for size and fine tile decoration.

More often, however, the Mongols lived in elaborately tented courts [see KHAYMA. iv]. Ghāzīn’s summer palace, for example, was said to have been a tent of golden tissue which took two years to make, and the Spanish ambassador Ruy González de Clavijo described the many more sumptuous pavilions inhabited by Ṭīmūr. These tents were often set in gardens, and the Timūrids constructed several canals outside Harāt to water their extensive suburban estates set in gardens with such evocative names as the Bāgh-i Dithān-ārī (“World-adorning garden”). Observatories are the most notable civil structures to survive from this period. The one ordered by Hūlēgī in 758/1258 for the celebrated astronomer Naṣr al-Dīn Ṭūsī [q.v.] on a hill north of his capital at Marāgha served as the model for the one that Ulūgh Beg built at Sāmarghānd in 823/1420 for Ghāzīnd al-Dīn Kūsht [q.v.].

Builders in this period shifted their attention from structure to space, developing new and inventive ways of covering both square and rectangular areas. The solid walls of earlier buildings were pierced with openings and bays, and several types of transverse vaulting were developed to admit light and air. Experiments with transverse vaulting over rectangular spaces in the 9th/14th century led to the development of squinch-net vaulting in the 9th/15th. Builders transformed the traditional square room into a cruciform chamber with broad niches on the sides. Both the recesses and the central square are spanned with four broad arches. The intersection of these eight arches creates a smaller square which supports the traditional arrangement of four squinches, an octagon, a sixteen-sided zone and the dome. The interstices between the ribs and squinches are filled with faceted and painted plaster, hence the name “squinch net”. This new system has many advantages: the vault itself is significantly smaller than the square room it covers; it is relatively light in weight; and the loads are concentrated on points rather than walls, as in Gothic architecture, so that the walls can be opened up with windows or filled with staircases and subsidiary rooms.

Builders also altered the proportions used in this period, making rooms taller, arches more pointed and minarets more attenuated. Typical of the new verticality and refinement of form are the monumental portals with soaring double minarets preserved in Isfahān, Yazd and Aḥāḵūt. Many of these soaring vaults are decorated with plaster mukamas shells that are suspended from the outer shell by ropes. Those used at Naṭanz in the early 8th/14th century are relatively simple, but the ones erected a century later at Turkestan are of unparalleled complexity.
Decoration, too, became more complex. Entire wall surfaces were often covered with banbd'i, thereby enveloping the building in a web of pious phrases. Tile mosaic became more common, with floral and curved designs replacing the angular ones used earlier. Interior plaster surfaces were often covered with intricate molded and painted designs, often derived from book painting and thereby suggesting the existence of a central design studio in this period.

4. 1500-1800

The buildings erected during this period are some of the most alluring and attractive in all Iranian architecture, and for many viewers, their glittering web of religious scenes, and some others, such as a group of oil paintings, depict foreigners. In many cases, these wall paintings seem to be the work of the same artists who illustrated manuscripts and single-page paintings.

In general, buildings, especially religious ones, use the same type of plans found in earlier periods. The four-iwan plan, for example, continued to be standard for congregational mosques, as in the splendid one, now called the Masdjidi-i Imam, that Shâh 'Abbâs (r. 995-1038/1587-1629) ordered for his new capital at Isfahân. The same plan was also used for madrasas and khânâsâh. So, too, the domed tomb remained popular. The tomb of Kâ'ârâjâ 'Abbâs at Isfahân (1030/1620) is a domed octagon, whereas that of Tahmàsp I's father Shaykh Djibra'îl, in the village of Kalkhurân near Ardabîl, is a square surmounted by a tall bulbous dome recalling Timûrîd tombs of Central Asia.

In comparison with earlier times, much more civil architecture survives from this period, particularly from the reign of Shâh 'Abbâs, who saw architecture as a means of enhancing his economic policies. An extensive system of kanâsâh [q.v.], subterranean aqueducts directly linked to aquifers, were dug to supply new settlements. Bridges were set up along important roads, as in the superb examples over the Zayanda Rud [q.v.] at Isfahân. Different types of buildings for collecting and storing water were developed, such as the water storage tank (Pers. dbd-anbar, usually a large domed cistern ventilated by means of pipes (Pers. bdgîr [q.v. in Suppl.]). To make and store ice, builders developed ingenious mud-brick structures (Pers. yâgkîlî), often decorated with inventive brickwork. 'Abbâs also encouraged the construction of thousands of pigeon towers (Pers. bdgîs bâdîbâr) on the fertile plain around Isfahân so that he could heavily tax the guano harvest. Similarly, the city of Bûkhrâ, one of the Shâbâyâdí capitals in Central Asia, was dotted with caravanserais (Pers. fîw) and domed markets (Pers. ûhâr-sî).

These many buildings were often integrated into five ensembles centred around a large maydân [q.v.] or public square. In Isfahân, 'Abbâs had four new buildings strategically and symbolically positioned around the maydân; the bazaar entrance on the north faced the congregational mosque, which is now known as the Masjd-i Shâhêjâh Lutf Allah on the east faced the 'Alî Kapu, the entrance to the palace precinct. Between 1596 and 1606, 'Abbâs's governor Gandj 'Alî Khan laid out a similar complex in the provincial capital of Kirmân, with a bath, caravanserai, mint, water tower, mosque and other public buildings connected by a continuous portico around a large rectangular maydân (100 x 50 m). Many of these urban developments continued under Muhammâd Karîm Khân Zand at Shirâz, who glorified his capital with broad avenues and more than 25 public buildings. As in Isfahân and Kirmân, the most important structures, including the citadel or ag, the congregational mosque known as the Masjd-i-Wâkîl (begun in 1766), a public bath and a vaulted bazaar, were grouped around a maydân.

This was also the period when the major shrine complexes in Iran took on their definitive shape. To mark their claims of sovereignty and establish their legitimacy, the Safawid rulers began to build sumptuous shrines. One of the finest is that for Shaykh Nîrâm Allah Wali at Mahân outside Kirmân, whose sequence of courtyards and richly-carpeted and splendidly-vaulted halls evokes the wealth and authority accorded these brotherhoods in Safawid Iran.

Town planning and building on such a wide scale necessitated the employment of dozens of architects and master-builders assisted by calligraphers, tile-makers, plasterers, woodworkers and painters. The workforce, especially at the top, was highly mobile and dominated by the Isfahân school, which had the finest talent from throughout the Safawid domains. The vast scale of architecture during this period led builders to standardise exteriors but to experiment with structure. They perfected the system of ribbed vaults developed during the 9th/15th century by empirical study of the strength of materials. For example, large rooms were spanned by ribbed arches with forked bases which distributed the weight on to piers concealed within the walls. These structural experiments have only been revealed during the course of restoration, as in the upper two floors of the 'Alî Kapu palace at Isfahân. New forms include the tabâr, the pillared hall known from Achamaenid times and adopted during this period for audience halls. Flat walls were often decorated with paintings of varied subjects. Some illustrate current events, such as the series of embassies and battles depicted on the walls of the Çihl Sutûn palace at Isfahân. Others evolved classic Persian themes, such as the romance of Khusrav and Sîrîn. A few, such as the murals in the Imamâbâd Shâh Zalâd in Isfahân, depict religious scenes, and some others, such as a group of oil paintings, depict foreigners. In many cases, these wall paintings seem to be the work of the same artists who illustrated manuscripts and single-page paintings.
5. 1800 to the present day

Architecture in this period can be seen as a struggle between tradition and innovation. Under the Kājārān [q.v.], new Europeanising features were grafted on to traditional ones. Thus congregational mosques, erected at Kazvin, Zandājān, Simnan and Tehran, followed the now-classic plan of an open court with two or four iwans, but interior façades were articulated with such new features as kiosks, windcatchers or clocktowers. The increasing acceptance of European architecture, especially under Nāṣīr al-Dīn Shāh (r. 1264-1313/1848-96 [q.v.]), is especially clear in secular architecture, exemplified by several palaces in and near Tehran, such as the Gūlīstān Palace and the Kājārān Kājāgār. Traditional forms such as the īlān are combined with such European elements as tall windows, engaged pilasters and grand staircases. The mixture of tradition is also evident in the decoration, in which tile mosaic, underglaze-painted tiles and the like are combined with such European elements as tall windows, engaged pilasters and grand staircases. The following includes only books and other major studies. Ruy Gonzales de Clavijo, Embassy to Tamerlane 1403-1406, tr. G. Le Strange, London 1928; E. Diez, Karaschische Baukunst der Perser, Berlin 1918; Survey of Persian art; Aghār-e Iran, i-iV (1936-49); M. Siourou, Caravanserails d'Iran et petites constructions routières, Cairo 1949; D.N. Wilber, The architecture of Islamic Iran, The Il Khoiin period, New York 1955; D. Hill (photographer), Islamic architecture and its decoration, A.D. 632-1800, Chicago 1964; A. Godard, The art of Iran, ed. J.M. Rogers, London 1965; Lisa Golombek, The Timurid shah at Gazur Gah, Toronto 1969; Wilber, The Masjids-i 'Atiq of Shiraz, Shiraz 1972; Nader Ardalan and Laleh Bahtit, Die islamische Schule in der persischen Architektur, Frankfurt a. M. 1977; R. Hodivala, A history of Persian architecture, New Haven 1973; Barbara Finster, Ausstellung 'Art and architecture of Islam, 1250-1800', Cambridge, MA 1986; Sheila S. Blair and J.M. SHEILA S. BLAIR and J.M. BLOOM

IRĪC, also ERĪC, ERAČ, on modern maps Erachh, a small town of north-central Iran, situated on the south bank of the Betwā river, 65 km/40 miles northeast of Jāhanī and 100 km/62 miles southeast of Gāvarī (lat. 25° 47' N., long. 79° 9' E.). It is now in the Jāhanī District in the extreme southwest of Uttar Pradesh Province of the Indian Union. Although now within a region largely Hindu, the area round Irīc is rich in Indo-Muslim remains and monuments. It was in Muslim hands by 709/1309, when the Khalidī commander Malik Kātūr [q.v.] stayed at Irīc, then renamed Sulānsūp, en route southwards for warangal [q.v.]. The Qāmī Masjīd there was built by Gāzī Diyā al-Dīn in 815/1412 during the time of the last Tughlukīd Mahmūd Shīh II, and was added to in the time of Awrangīž. There is also a fort and five gates to the town. Under the Mughals, it was the centre of a sarkār in the sūha of Agra, but by the mid-18th century was under Marāṭhā control until the region passed to the British.

C.E. BOSWORTH

IRTISH, conventionally Irtysh, a river of Siberia and the main left-bank affluent of the Ob [q.v.]. It rises from glaciers on the southern slopes of the Altai mountains near the modern frontier of the Mongolian Republic and Chinese Turkestan or Sinkiang [q.v.] through the Zaysan lake into the Kazakh Republic, then out of it into the Omsk oblast of the Russian Federation and joins the Ob at Khanty Mansiysk, its complete course being 3.720 km/2,312 miles, the greatest part of it navigable. The Irisht is mentioned, as ārīs, in the Otrkhan inscriptions (Kültügin E37; Būgā Kagan E27), where it is stated that the Kagan's armies crossed the Altai and then the Irisht, and attacked the Tūrgeš on its further (i.e. western) side (cf. Barthold, Zeitschrift für orientalische Wissenschaft, 46, 112). But the history of the Irisht basin in early Islamic times is very obscure; none of its peoples can have become Muslim before the post-Mongol, later mediaeval period. A geography like the Hudūd al-'ālam mentions the Arūsh [r. 764] as located between the Oghuz and Kīmāt tribes, but the author was clearly describing a river further west (possibly the Yayık [q.v.], which rises in the Ural and flows into the...
Abarkūh, Gunbad-i ʿAlī, 448/1056-7.
Tehran, Gulistān Palace, Shams al-Imāra, completed 1282-84/1865-67, view from the rear.
Isfahān, Masjīd-ī Imām, formerly the Masjīd-ī Shāh, begun 1020/1611, courtyard.

Sangbast, tomb and adjacent minaret, probably 6th/12th century.
Damghan, Congregational Mosque, known as the “Tari-Khana,” 3rd/9th century, courtyard looking toward prayer hall (vaults restored 20th century).

Nayin, Congregational Mosque, 4th/10th century, court façade showing brickwork added during the Buyid period.
Māhān, Shrine of Niʿmat Allāh, vaulted hall adjacent to the tomb, early 11th/17th century.

Yazd, Congregational Mosque, west prayer hall, late 8th/14th century.
Nāyīn, Congregational Mosque, 4th/10th century, stucco miḥrāb.
Caspian), since he says that it emptied into the lower Volga (tr. Minorsky, 75, §6.42, comm. 215). Mahmoud al-Kashghari mentions the Ertish sauw as a river in the Yemak/Yemak steppes which flows, so he says, after receiving many tributaries, into a lake; this error would appear to stem from the same source as the Hudud al-Islam, since the Arctic Ocean, the Bahut al-Zalimát of Arabic travellers, can hardly be meant (Dinâm bughûtul-turk, tr. Atalay, i, 97, tr. Dankoff and Kelly, i, 129). The Islamic geographers seem to locate the Kimak [q.v.] roughly between the (true) Irtysh and the Ob, and Gardizí writes of the trade route which led northwards from Transoxania to the land of the Kimak, on the Irtysh (cf. Barthold, op. cit., 112-13; but the lower course of the river, beyond the Kimak, must have been the home of Uigrin peoples, the ancestors of the peoples found there in the 16th century, the Oystaks or Khanty). During these later mediæval times, the former lands of the now vanished Kimak, were apparently occupied by the Tatars (perhaps including aboriginal Ugrians now Turkificed) and, to their south, the Kazaks occupied this region (see J. Forsyth, A history of the peoples of Siberia, Russia’s North Asia colony 1581-1990, Cambridge 1992, 10-16, 27).

It was on the banks of the Irtysh that Cingiz Khan in 1208 defeated the remnants of his Mongolised Turkish rivals, the Nayan tribe; he halted in the summer of 1219 on the banks of the Irtysh before his troops appeared in Transoxania; and towards the end of Cingiz Khan’s life, his son Djöchí established his ardo on the river (Barthold, Turkستان, 361, 392-3, 403, 450; idem, Zweif Vorlesungen, 163, 180). The Great Khan Ögedeï was buried, when he died in 639/1241, on a mountain in Mongolia near the headwaters of the Irtysh (Rashid al-Din, in Barthold, Turkستان, 473). Islam may have appeared amongst Turkish nomadic tribes in the region when the Blue (or White) Horde came to control its southern and western fringes. In 792/1390 Timur despatched from Tashkent an army against a Khan called Kamar al-Din, and this marched north from the Issik-Kul [q.v.], crossed the Ili and reached the Irtysh (Sjaraf al-Din Yazzid, Zij-jíl-níma, Bibliotheca Indica, i, 495; and at the end of the 15th century, the Khánate of Sibir [q.v.] moved its capital to Sibir or Ourgiak or later the confluence of the Irtysh and its tributary the Tobol. The overwhelming of the Khánate of Sibir in the 1590s (see KUÇÚM KHÁN), however, brought the greater part of the course of the Irtysh under Russian control.

(G.E. Bosworth)

ISFÍJDÁB, a town and an extensive district of mediaeval Islamic Central Asia, identifiable with the later Islamic town of Sairam. Popular etymologising saw in the name the Persian component sipid, sipid “white”. It lay on the Aris river, a right-bank affluent of the Sir Daryá [q.v.], 14 km/8 miles to the east of the later town of Chinkent (lat. 42° 16' N., long. 69° 05' E.); Chinkent itself, now in the southernmost part of the Kazakhstan Republic, is mentioned in the historical sources from Timurid times onwards, e.g. in Shíchar al-Din ‘Ali Yazdi.

Isfíjdáb apparently had a pre-Islamic history, though nothing is known of this; it is known that it was also in the hands of the Islamic rulers, as is said, the adjacent regions of Ílák [q.v. in Suppl.] and Istrúghana [q.v.]. The incursions into Transoxania of Kutayba b. Muslim [q.v.] are said to have reached as far as Sháh and Isfíjdáb, but it appears more firmly in history with a report that, in 225/840, the Sámnádí governor of Samarkand Núth b. Asad subdued it and built a wall round its vineyards and cultivated lands (presumably as protection against raids by the steppe Turks) (al-Baladhuri, Futûh, 422; al-Sam’ání, Ansâb, ed. Haydarábad, vii, 26). Being on the northernmost edge of the Islamic lands in Central Asia, Isfíjdáb was never more than a frontier town, the resort of ghiláth and other fighters for the faith, who congregated in ribáh [q.v.] fortified against the infidel Oghuz and Kimak Turks, and numbered by al-Mukaddás, 273, with palpable exaggeration, at 1,700. Many of these ribáhs were built and financed by the people of the Transoxanian towns well behind the frontier, and manned by them in relays; ribáhs of the men of Nakhshab, Buhárá and Samarkand are mentioned, and another ribáh was that financed by the Sámnádí commander Karátín al-Isfíjdáb, with Karátín and his son Músár buried nearby (al-Mukaddás, loc. cit.; Ibn al-Athir, ed. Beirut, viii, 492). That this Karátín—obviously a Turk—was the local ruler of Isfíjdáb in the early 4th/10th century, Barthold assumed, is by no means sure. At all events, because of its role as a vital frontier post (būghár djjíl um-dár al-dhjidí) it was, unusually for Transoxania, exempt from taxation, and the local ruler paid only a token tribute and forwarded presents to the Samanid amir in Buhárá (Ibn Hawákal, 510, tr. 488; al-Mukaddás, 340; cf. Barthold, Turkistan, 175-6, 211-12, and idem, A history of the Turkman people, in Four studies on the history of Central Asia, iii, 77-8).

The geographers describe it at this time as thoroughly well defended, with a citadel (ruinous, however, in Ibn Hawákal’s time) and walls round the ghuristán and ribáh respectively. As a place where the products of the steppes could be exchanged for those of the settled lands, it is mentioned in the 4th/10th century, as a place where the tributes were built and financed ribdts [q.v.] that yielded 7,000 dirhams a month (Ibn Hawákal, 510, tr. 487-8; al-Mukaddás, 273; cf. Le Strange, The lands of the Eastern Caliphate, 483-4, and Barthold, Turkistan, 175-6).

We do not know what ultimately happened to the local rulers of Isfíjdáb, but in 382/992 the Karátání ruler of Balaságún, Buggá Khán Hárrín or Hasan, occupied the town as he advanced into the Samanid dominions, and it is mentioned that a certain Abu Mansür Muhammad b. Hasan al-Isfíjdábí rebelled against Samanid authority in the very last days of the dynasty (387/997) and summoned help from the Karáhání Ilíg Nasár.

In the early 7th/13th century, the inhabitants of Isfíjdáb, together with those of Sháh, Fargháná and Kásán, were removed by the Khán-razm Shah ‘Alí of the Almohamadid and the land laid waste because he was unable to protect them from the destructive raids of the Mongol Kúrlig [q.v.] (Yakús, Balúdan, ed. Beirut, i, 179; Ibn al-Athir, xii, 271; Barthold, Turkistan, 368-9). The second disaster which Isfíjdáb suffered, according to Yakús, loc. cit., was devastation by the Mongols of Cingiz Khán.

It is around this time that the name Sairam begins to replace Isfíjdáb, although already in the later 5th/11th century, Mahmúd al-Kashgharí, Dinâm bughûtul-turk, tr. Atalay, i, 176; tr. Dankoff and Kelly, ii, 241, equated Sairam/Sayram with the older Isfíjdáb. As such, Sayram figures in the history of the western part of what became, from the 8th/14th century onwards, Mogholistán [q.v.], e.g. in the history of the later Çaghatayids as recounted by Mírzá Muhammad Haydar Khán. Thus it is recorded that ‘Išá Bugha Khán devastated Sayram, Turkistán and Tashkent in...
ISFIZARĪ. Muʿīn al-Dīn Muhammad Zāmī, epistolary stylist and historian in Timūrid Khurāsān whose birth and death dates are unknown but who flourished in the second half of the 8th/14th century. From what he says in his own works, he arrived in Harāt, probably from Isfizarī in what is now western Afghanistan, in 873/1468-9, and was employed as a mādījī at the court of Sultan Ḥusayn Baykāra[1] (see above, Vol. III). As far as we can tell from his patroguage of the vizier Īkhwān al-Dīn Nīzām al-Mulkī (d. 964/1457-8), Isfizarī is most famous as the author of a history and compendium of information about the city of Harāt, its topography and its faḍīlī, the Rawdat al-ḏjamātī fī awsāʾ malānāt Harāt, dedicated to Ḥusayn Baykāra, begun in Muḥarram 897/November 1491 and completed two years later at the end of 899/autumn 1494. Noteworthy here is his use of earier, lost sources, such as a history of the Kart or Kurt dynasty of Harāt by one Rābl lost sources, such as a history of the Kart or Kurt dynasty of Harāt by one Rābl (see above, Vol. III). This history was edited by Sayyid Muhammad Kāzīm Imāmī, 2 vols., Tehran 1338-39/1961-62 (non vidi); description and inshād to it was back

IBN-štīF, MUḤAMMAD RIDĀ MĪRZĀD, modernist poet, playwright, journalist and fervent Iranian nationalist (b. 31 March 1860, d. 3 June 1924 = 12 Tir ASH 1303).

IštīF’s life is shrouded in legend because of his ultra-patriotic pronouncements in his writings and speeches, his unconventional and often militant ideas in politics and literature, and above all, his tragic death at the early age of thirty from an assassin’s bullet. He received his elementary education in his native Hamadān, attending the Ulāfī and Ālīnī (Alliance) high schools, in the latter of which he learned French and was introduced to Western civilization. His knowledge of French helped him to gain employment as a translator/interpreter for a merchant in Hamadān. However, before finishing school, he travelled around the provinces and towns, his eyes being thereby opened to the dismal social and economic conditions of his country and countrymen. At the beginning of the First World War, IštīF was back in Hamadān, where in ca. 1915 he started his career as a journalist by publishing Nāma-yi IštīF; from the start, he was an engājī journalist with leftist leanings. As Iran became a theatre of war with the movement of foreign armies, IštīF joined a group of expatriates and settled for several years in Istanbul. It seems that even before he left, IštīF was a Turcophile and was interested in the activities of the reformist and nationalist group of the Young Turks. According to some writers, while in Istanbul he attended the Dār al-Funūn for courses in science and philosophy.

IštīF’s poetic gift now suddenly blossomed. This took place whilst travelling in Mesopotamia, in the midst of the ruins of the Sāsānīd royal palace at Ctesiphon. The remains of the palace, with its huge iwān, triggered off a poetic rapture in IštīF, and he composed Rāstāhā-ī iškāriyān-ī Irān ("The resurrection of Iranian kings"). It became the first opera in the Persian language, and was first staged in Išfahān on IštīF’s return to his homeland, to the tumultuous reception of the audience. IštīF himself sang the part of the poet. This one-act opera play is a mixture of realism and fantasy, and is full of patriotic pathos, with dramatic personae including the poet (IštīF); Khusrav-dukht (the Sāsānīd princess); Darius the Great; Cyrus the Great; Anushirvān; Khusrav Parvīz and his wife Shīrīn; and the prophet Zarōstrā. The
purpose of this opera was to juxtapose the glories of the ancient Iran with that of the land of 'Ishkif's own day, the ancient kings accuse contemporary Iranians of having no energy and will and of leaving the country in a state of apathy and lethargy. 'Ishkif's second poem inspired by the Sasanid ruins was Kafan-i siydh musammat form set in the time of Khusraw and ShfrTN, and what was meant to be a romantic epic turned out to be a powerful social commentary and criticism.

'Ishkif's criticism of the Iranian policy was carried to its height upon his return to Iran from his self-imposed exile in Istanbul after the end of the War. He wrote his vehement opposition to the 1919 Anglo-Iranian treaty in a form of a patriotic khayyâ, Muhâlii- at bâ Kândisti-i Iran wa Ingâlis ("Opposition to the Iran-England treaty"), in which he ridiculed the Prime Minister Wuthük al-Dawla [q.v.] as well as the passivity of his compatriots, and this resulted in his being sent to prison. In 1920, he published a new journal Karn-i bistum ("The twentieth century"). His poetry and prose now became more and more inflammatory as he demanded radical reforms from the government, the Russian Bolshevik Revolution of October 1917 having had a clear impact on his ideas; in 1922, on the occasion of the Iranian New Year, he composed a poem Tsh-kî kângârn ("Festival of the Workers"). In his poetry, as in his journalism, he focused unrelentingly on Iran's national and social problems. In his satirical works, 'Ishkif came to use an increasingly malicious language, full of invective, against members of the government as well as against deputies in the Majlis, and he rapidly moved to the extreme position of vigilantism, calling for an annual blood-bath in order to cleanse Iran of corruption. In 1924, he participated in a nationwide canvass for an ideal model (archetype) of each field of endeavour to which prominent thinkers were invited to write and publish. Answering that call, he wrote his revolutionary narrative poem Sik tâbâk-yi ayyâlî ("Three ideal tableaux"). Ahmad Karimi-Hakkak has written that this work was 'Ishkif's "solitary attempt to break through the constraints of poetic diction and to liberize the concept of rhyme and meter ..." Since, however, 'Ishkif ends his poem advocating a bloodbath "to cleanse the country of all traitors", Karimi-Hakkak adds that "The Three Tableaux must ultimately be seen as an angry young man's frustrated outburst against the political situation in Iran during the last years of Qajar rule."' Ishkif's next angry outburst turned out to be fatal. It was the time when Rîdà Khân [see Rîdâ Khân] was preparing to become the first President of the Iranian Republic, and 'Ishkif strongly opposed this idea for two reasons, being afraid that the president, Rîdà Khân, would establish a military dictatorship, and also that Iranians were not yet ready for a republican democratic polity. He opted therefore for the continuation of the Kândîr dynasty. A few days after the publication of his attack on Rîdâ Khân, 'Ishkif was assassinated in Tehran.

'Ishkif's contribution to Persian literature, journalism and political thought has yet to be fully examined and described, but there is no doubt that, had he lived longer, he would have been regarded as the writer who laid the foundation of modern Persian letters.

ISHKODRA, the Turkish form of the name of the town of Shkodër/Shkodra (Slavonic, Skadar) in the north of modern Albania.

The town is situated at an altitude of 16 m/52 feet near the banks of the lake of the same name, at the confluence of an arm of the Drin, the Bunca/Bojana arms and the Kiri, and is dominated by the fortress of Rozafa and by Mt. Tarabosh. This ancient urban centre was founded in the 4th century B.C., in the Illyrian period, around the acropolis. It was successively dominated by the Romans [in 168 B.C.], Byzantines, Serbs (from 1043), Byzantines again, Serbs again, Ottomans (1393) and Venetians (from 1396). It became definitively Ottoman after two sieges (1474 and 1476-9). After the departure of the greater part of its population in accordance with the Ottoman-Venetian peace treaty, Ishkodra (equally called Eksen- terrye or Skutari) became the centre of a sanjak of the same name and was gradually repopulated and Islamised. The tax registers show that, in addition to the troops of the garrison and their families, there were in 1485 27 Muslim and 70 Christian hearths, in 1528 119 and 43 respectively, and in 1570-1 217 and 27 respectively.

The town owed its importance, right up to the early 20th century, to its politico-administrative role and also to its location (situated at the confluence of the Adriatic Sea (some 20 km/12 miles away by water) and the Italian ports, plus its situation on important trade routes (northwards to Montenegro, eastwards to the centre of the Balkan peninsula (Ishkodra-Prizren road) and southwards to the plains of the Albanian coastline. As the centre of a frontier sanjak (comprising the modern regions of Montenegro and northern Albania), Ishkodra enjoyed its greatest period of florescence from the mid-18th century onwards, when the office of sanjâk-beyi passed into the hands of a local ayân family, that of Bugâšî. There they succeeded at the head of the town and sanjak, which last they tried to enlarge: Mehmed Pasha, then his three sons Mustâfa Pasha, Kara Mahmûd Pasha [q.v.] and Ibrahim Pasha, and, finally, Mustâfa's grandson, also Mustâfa Pasha [q.v.], who was in the end subdued by the Porto in 1831. In 1862 Ishkodra became the centre of an 'âdût with just one sanjak, then from 1875 it was the capital of the smallest Ottoman vilayet, with two sanjaks, those of Ishkodra and Draç [q.v.] (Durrës). Being on the frontier with Montenegro, the province retained a special character (mustehnâ) until the Young Turk revolution. Reforms were never completely introduced. The 'âdût was also the military commander. The Muslim population did not perform military service but went out on campaigns in byâns (there being 15 in the town). No population census was made. The Muslims and Christians of the adjacent mountain areas freely bore arms.

During the last century of Ottoman occupation, the town expanded towards the north. Because of epidemics, flood problems the Drin changed its course in 1865 and earthquakes (notably in 1905), the old quarters within and around the fortress (Ailibe, Tabak, Ayazma, etc.) were abandoned for new ones (Parutsa,
was the product of oriental, western and local influences. It was not chosen as the capital, to the great chagrin of Degrand and Th. Ippen, have left writings on the Cultural significance except for the “Leaden Mosque” in the Tabak quarter, south of the citadel), the presence of Muslim gypsies. Towards the end of the 19th century, the bazaar [see p53], which stretched between the fortress and the new town, and trade in general, lost their importance relative to that of Rumelia because of the development of Salonica and the construction of the Salonica-Mitrovica railway line.

The cultural and social development of Ighodora was the product of oriental, western and local influences which met there. The importance of Islamic culture is attested by the rate of Islamisation, the existence of mosques (almost 30, without much architectural significance except for the “Leaden Mosque” in the Tabak quarter, south of the citadel), the presence of dervish tekkes ([the Bektashfs are said to have been allotted, with other troops from the Iranian and Central Asia East, a special quarter, whilst at Samarra they had a citadel, a ghābristān and a rahab or suburb; a village of the same name exists on the site today.]

Syrian poet. Born in 619/1222 in Ischird or Sicird [q.v.] in Southeastern Anatolia, which he sentimentally remembers in his Diwan, he lived in Baghad and visited Egypt, but most of his adult life was, it seems, spent in Damascus (and al-Salihiyya). There the kāfi Sadir al-Din Ibn Sami al-Dawla (390/588/1194-1260), for whom al-Isirīd expressed biting contempt, appointed him one of the official witnesses (attorneys) doing business under the famous clock of the great mosque. He won the favour of al-Malik al-Nāṣir Salāh al-Dīn Yūnus, ruler of Aleppo (since 634) and of Damascus (since 648) until his sad end in 658/1260, who made him his boon-companion. He was in contact with many of the litterateurs and other important men of his time, such as Djamal al-Dīn Ibn Yāghmūr (599-663/1203-64) and the ambassador of the Diwan.

His Diwan is so far known to be preserved only in ms. Escorial ar. 472 (with the title-page bound into ms. ar. 399), incomplete at the end. In addition to the many poems addressed to al-Malik al-Nāṣir on a large variety of personal and public events, it includes poems addressed to, among others, the caliphs al-Mu'tasim and al-Malik al-Mu'tazz, as well as fellow-poets, dāhayāt, ghazals, riddles, and the like, as one would expect in a diwan of the period. Wine-drinking plays throughout its customary large role. The Diwan offers valuable sidelights on the political and cultural history of Syria and Egypt immediately before the coming of the Mongols. Another work, apparently lost, Salālah al-zābā'iq fī l-khāli'a wa l-majdūn, dealt, as the title indicates, with lewd verses of his own composition, and also by others. Most of the verses quoted by the biographers, including the Rungest poem of wine and baghdad (cf. F. Rosenthal, The Herb, Leiden 1971, 6, 163-4), may well go back to this work, as only a couple of them can be traced in the extant manuscript of the Diwan. The same applies to additional verses quoted by al-Safādi in al-Ghayth al-muṣāqādīm fī sāḥt Lāmnayt al-nilūm.

Al-Isirīd represents the lighthearted side characteristic of Syrian secular life and culture before “the days of joy in Damascus” (Ibn al-Suka, ed. J. Suhler, 168, tr. 196), which came with the Mongol al-Nāṣir's downfall and the Mongol invasion. Little as we know about him, it seems clear that he, in common with numerous contemporaries, combined serious activity with a great zest for life and provided and enjoyed an atmosphere in which, despite all the political turmoil of the age, ease and elegance flourished as they were scarcely ever to do afterwards.

Ritter, i, 188-92; who furnishes most of the information for later biographers, also, in a slightly shortened and rearranged form in his Nakt al-hamīyān, Cairo 1299/1911, 255-7; Kutubi, Fawqī, Cairo 1951, ii, 329-34, ed. i. ‘Abbās, Cairo 1974-3, iii, 271-6; Ibn Kathīr, Bīrāya, xiia, 212; Ibn al-‘Imād, Shadhdhārī, v, 294; Ḥādījī Khālīfa, ed. Yalikaya, 995; Brockelmann, P, 299 (where the wrong date of death, 652, goes back ultimately to Flügel’s ed. of Ḥādījī Khālīfa).

ISKĀN (Iskān), lit. “coming into a peaceful state, settlement, the allocation of living quarters or space,” hence in modern usage, “sedentarisation” as a stage after a migratory or nomadic existence.

Unlike hidūr [q.v.], “desert, people of the desert”, and ḥudur “settled lands, people of the settled lands”, iskān is not a concept often used in the Arabian peninsula and its fringes. In the recent past, the Beduin of northern Arabia, when talking about the town of Shaykh Miskīn in the Hawrān [q.v.], ostensibly connected the term miskīn with the root s-k-n (when it is, in fact, derived from a quite separate, ancient Semitic usage, see miskīn); these townspeople were said to be descendants of people who had been unable to cope with the rigours of Beduin lifestyle and had therefore settled. In fact, equating iskān with “sedentarisation” places an undue emphasis on the locale of towns described, when town or village and countryside were generally enmeshed in multiple relationships. Hence in what follows, some separation of contexts is attempted in an otherwise generalised discussion.
The Arabian peninsula and its ancillaries include a great diversity of physical environments, habitats and natural resources. Urban and rural settlements differ, not only from each other but also between themselves, and over time. Middle Eastern patterns are similarly diverse and shift through time. Factors affecting settlement and nomadism over the region can be discussed in general terms only, with regional and historical examples indicated in the bibliographical references. Settling and settlement take place in economic and political—often administrative—contexts; religious reasons have been important at some times and places. The economic context changes from the traditional period when animals were an essential source of energy and the more recent one, starting about the 1850s or 1860s, and involving modern sources of energy culminating with oil from regional oilfields [see SART. 3] and electricity grids. In traditional political economies, governments or rulers got wealth from taxation, tribute and booty, most of which ultimately went to government agents, directly, and participation in the global political economy. Environmental factors necessitate some seasonal mobility in most modes of livelihood, agricultural, commercial, and administrative as well as pastoral. In most social groups, households were and are the productive and consuming units, which may or may not have all members present. They drew and draw resources from various directions, drawing on two or more components from herding, agriculture, commerce and services. Towns and countrysides continue to be enmeshed in some places, the settling was permanent; for others, the Arab world. For some groups, at some times and reasons have been important at some times and places. As pastoral livelihood become untenable for many, these summer water points became the bases for settlements, first as storage depots and then as villages. All modern nation states of the region, with the exception of Oman/Umān, apart from its Dhofar/Zufar region (Chatty 1996, 9, 188-9), regard settlement of nomads as a means of imposing or encouraging incorporation into the state and identity as citizens. States with potentially rich agricultural areas like Irāk and Syria initially left the settlement of nomads to market forces, changes in land laws and the provision of hydraulic schemes. Later, their more revolutionary governments saw nomadism and nomadism as primitive survivals to be eradicated by social engineering. Saudi Arabia set up agricultural schemes in the 1960s to settle nomads and established the National Guard to provide employment for tribesmen after a long series of drought years in the 1940s and 1950s (H.H. Hamza 1982; W. and Fidelity Lancaster 1986, 1993). Later, state provision of water, electricity, health and education services, and subsidies for agriculture and housing, distributed oil wealth to rural areas (W. Lancaster 1997, 139-50, 166-80; A.-R. al-Sudairi 1995). The UAE urged settlement in government-sponsored housing schemes and employment as a way of forming a modern society, Oman, after 1970, provided services to all citizens without requiring settlement.

Living quarters may be allocated by an individual family with the agreement of the heads of other families of the place, by a šākhd or headman, or by a government agent, depending on the nature of the living place. Tent sites of nomad encampments arrange themselves along lines of closeness and distance of members; links through women influence the sitting of particular tents. Women's relationships similarly affect those who live in small villages and in house groups throughout the peninsula. Some recent settlements developed by state governments attempted to break up traditional residence patterns and to form new bonds of citizenship. Large hydraulic and agricultural developments in Syria had, along with economic objectives, the political aim of generating a "new class of socialist peasants". Between the late 1950s and early 1960s, rural people from more than a hundred villages wanting to acquire land poured into one development (Françoise Metral, 1984). The agricultural reform service scattered populations with shared common origins, settling individual families in housing along roads and canals. Twenty years later, these housing groups had not become communities; many households have rebuilt extended family structures along lines of kinship, and communities have been less cohesive than they were in the past as a result of government changes in the land
law and of changing market forces. From the 1860s in 'Iraq, Syria and what is now Jordan, as the value of transit trade and desert products declined, many nomadic and semi-nomadic groups moved to agriculture, or else to sheep-herding rather than camel herding. From the 1930s, there were mass movements from the Trakf countryside to towns and cities, caused by debt among agricultural workers, repressive land laws and the uncertainties of agricultural production (H. Batatu 1978, 35). In Syria, after the Second World War, nomads, especially camel herders, had to adapt fast to the fully mechanised cultivation of grain and cotton (J. Hannoyer 1980, 294); later, more grazing lands were lost to irrigated vegetable and fruit growing for export to the oil states of Saudi Arabia and the Gulf.

Scholars frequently discuss settlement in terms of “the frontier of settlement” and make a positive correlation between strong government, commercial agriculture and settlement. It used to be assumed that from near the end of the 'Abbasid period, settlement declined in rural areas but increased in cities, and nomadism took over countryside until the process was reversed from the middle of the 19th century onwards. Archaeological and historical research has shown that settlement continued, with fluctuations, in the countrysides of Syria, Jordan and 'Iraq, although it appears that there was an urban demographic decline from the 15th century to the late 18th century (Beaumont, etc. 1988, 212-13). In the Arabian peninsula itself, the “frontier of settlement” thesis was not developed. It seems that there was here more rural settlement than had been previously thought, and that there was movement between settlement and nomadism, with some settlements disappearing and others being founded. The general thesis linking strong government, commercial agriculture and settlement is not wholly consistent with actual historical examples, since it ignores particular events and local circumstances along with governments’ sources of revenue; what is meant by commercial agriculture; access to land, sources of labour and the established social processes utilising these; the service provision of pastoralism; distribution of goods by means other than an obvious market; and the nature of the household and multi-resource livelihoods. Social practices negate ideas of settlement and nomadism, as distinct entities of hadar and hodar is, according to these authorities, unsatisfactory, since here the crucial determinant is the ability to get one’s living and security by one’s own efforts and networks, rather than by accepting government employment and provision. Of course, there are many who do both at the same time, and are in fact “settled” and “nomadic”. Movement is now important to households in order to link employment and traditionally-owned resources in the countrysides.

Bibliography:

ISKANDAR KHAN B. DJANI BEG, ruler in Transoxania, from his capital Bukhara, of the Turco-Arabian Iskandars (shuf’a). As the Great Khan Iskandar b. Djani Beg, he ruled 968-91/1561-83. Iskandar was in fact a weak and ineffective ruler. Real power was in the hands of his son Abd Allah, who had shown his ability against rival families in Transoxania as early as 958/1551 and who became the greatest of the Shu’i Iskandars. Iskandar’s dynasty was unchallenged for a further sixteen years (see ‘Abd Allah b. Iskandar). For the course of events in these decades, see SHIBANIDS and R.D. McChesney, The Middle East and Central Asia, vi. In the 10th-12th/16th/18th centuries.

Bibliography: See those to the two arts, mentioned above, and also C.E. Bosworth, The New Islamic Dynasties, a chronological and genealogical manual, Edinburgh 1996, 288 no. 153. (Ed.) ISKAT (x), a legal term meaning “relinquishment”, specifically of a right (hak). In general, four conditions must be met to make the relinquishment of a right valid: (a) that the right should exist at the time it is relinquished (e.g. the right to collect a debt to be incurred in the future may not be relinquished); (b) that the right relinquished does not concern milk al-qayn (i.e. the ownership of the substance of a thing, whether movable or immovable, is not subject to relinquishment, but only to transfer, nakl); (c) that the interests of the person entitled to the right should be absolute and not limited by other interests (e.g. it cannot be an interest such as that of a trustee in a waqf property); and (d) that the relinquishment of the right does not involve an illegal result.

Iskat may be of two kinds: iskat mahdī (true relinquishment) and iskat ghayr mahdī (quasi-relinquishment). The first kind includes divorce (talak), manumission of a slave (i’tak), and the relinquishment of the right of pre-emption (takārī). In the latter case, clear clauses of relinquishment of the right of pre-emption are often added to deeds of sale of houses (e.g. kad iska’ābukīsh, šay‘a’tan mīn ḥabīk), neighbours of the vendor in Islamic law having the right of pre-emption [see shuf’a].

The term iskat ghayr mahdī includes legal transactions such as acquittance of debt (ibnā‘an al-dīn), which is not regarded as a pure relinquishment since it partakes of the nature of a donation (tabarrû‘). ISLĀH
v. CENTRAL ASIA

Central Asia (here basically understood in the sense of the pre-modern Mawarri‘a al-Nahr [q.v.]), notwithstanding its regional peculiarities, historically is to be regarded as an integral part of the Islamic world. Hence, in one way or another, its Muslim communities—at least until the Russian “October Revolution” of 1917—was influenced by and/or contributed to reformist trends and movements current in other Muslim regions, in particular, those of Russia, Ottoman Turkey, the Arab world and also India. The course of the religious discourse on islāh in the 18th-20th centuries, as described in the previous sections of this article (see Vol. IV) are to be found in Central Asia as well. But, because of the impact of roughly seven decades of Soviet rule, our knowledge about the specific nature of islāh in Central Asia, and about its various supporters, actual developments, exchange of ideas, etc., is still rather poor in comparison to that about other regions. The inaccessibility of relevant sources during the Soviet period, as well as the application of Marxist-Leninist concepts of history, have led to a somewhat ecletic picture.

As a result of the prolonged Soviet impact, reformism in Central Asia appears predominantly as a more or less obscure and finally political (nationalist) movement among Muslim intellectuals emerging around the turn of the 19th to the 20th centuries, and considerably gaining strength after 1905-7 when censorship in the Russian empire was loosened and the press could function more freely [see DARDAN IV]. This reform movement was the so-called Djadidism [see PAJDAD], but the usual self-designations of its representatives were different, e.g. islāhāt, tanqishpan (progressive), munassar (enlightener), šaykh or ga‘ūn (young).

It figures as a historically more or less isolated phenomenon, directly inspired by an identical movement which started somewhat earlier among Russia’s Muslims. A key role in these endeavours, in the first place directed to renewing the Muslim educational system, disseminating Western-type knowledge, and fighting harmful social conditions and customs, falls to the Central Asia of the Khanates (Bukhara, Khiva and Khokand [q.v.]) in the 18th-19th centuries. But, because of the impact of roughly seven decades of Soviet rule, our knowledge about the specific nature of islāh in Central Asia, and about its various supporters, actual developments, exchange of ideas, etc., is still rather poor in comparison to that about other regions.

It figures as a historically more or less isolated phenomenon, directly inspired by an identical movement which started somewhat earlier among Russia’s Muslims. A key role in these endeavours, in the first place directed to renewing the Muslim educational system, disseminating Western-type knowledge, and fighting harmful social conditions and customs, falls to the Central Asia of the Khanates (Bukhara, Khiva and Khokand [q.v.]) in the 18th-19th centuries. But, because of the impact of roughly seven decades of Soviet rule, our knowledge about the specific nature of islāh in Central Asia, and about its various supporters, actual developments, exchange of ideas, etc., is still rather poor in comparison to that about other regions.
that such eminent precursors of reformism and modernism in the Volga-Ural region as ‘Abd al-Nasır al-Kūrsāwī (1776-1812) and Shāhāb al-Dīn al-Mardżānī (1818-89) both finished their studies in Bukhārā, Central Asia’s most famous centre of Muslim learning. A decisive role in their taking up positions against traditionalism and favouring modernism was played by Bukharan scholars and brothers of the al-Mardżānī family, who were affiliated with the influential Nakshbandiyah (Mujaddidiyyah) and see AHMAD NAKSHBANDIYYA (MUJADDIYYA) is worth mentioning that Central Asia, and particularly Bukhara, was not an isolated region but was connected through extensive trade relations with China, India, Russia, and also Western Siberia, where, besides the Tatars, BUKHRĀL played a major role in spreading Islam and building up Muslim institutions, thereby in some cases showing reformist approaches at a comparatively early date. “Critical erudition” also can be found in 19th-century Bukhārā itself, among what might be called the teachers’ generation of its later modernists (the Young Bukhārans, emerging around the end of the first decade of the 20th century), such as Ahmad Makhādūm Dānish (1827-97) [see AZADI, in Suppl.] who subsequently, under Soviet auspices, was praised as a [Tāfīd] “enlightener” (al-Kursawī and al-Mardżānī were removed from their Islamic context in a similar way); Mīrzā ‘Abd al-‘Āzhīm Sāmī (ca. 1835-1914) who served as a mansūḥ of the amīr Muzaffar (1860-85) and ‘Abd al-‘Abdī (1885-1910); Dāmmullā Muhammad Ikramī (1847-1925) who was appointed in 1913 one of the twelve official Bukhārā maktābs; Muhammad Sharīfīān Makhādūm, named Sadr-i Diyā (1867-1932), from a well-known kūdi family, himself being appointed 1917 for three months kūdi-yi kūla, the highest judicial officer in Bukhārā. All of them, except Sadr-i Diyā, shared the characteristic of having stayed for some time abroad, either by travelling to Russia or by performing the Ḥajj.

To be sure, all this does not mean that Bukhārā in the 18th-19th centuries was a stronghold of islah. On the contrary, al-Kūrsāwī, for example, already met with sharp opposition and even condemnation by the overwhelming majority of Bukhārān ‘ulamā’, including the then ruling amīr ‘Haydar (1800-26), when he, in regard to the question of the divine attributes [see SūT, 2], opposed the generally accepted doctrine that God possesses either seven or eightṣifāt by arguing that the only way to formulate a qualification of God is His own word, the Kur’ān, in which theṣifāt are not at all limited to a definite number of seven or eight. Leaving aside that kind of subtle debates, it can be stated at least that Bukhārā was in constant exchange with the outside world, and to some extent participated in current Islamic developments, thereby providing certain prerequisites for a more evident manifestation of reformist endeavours that was to happen only at the beginning of the 20th century, then taking shape in Ḏādīdīm, current amongst Russia’s Muslims. The main impetus to Ḏādīdīm, the followers of which—beyond the basically regressive concept of islah—also believed in Western ideas of progress, thus came from outside. But in Central Asia it met with an already existing specific spiritual basis of genuine islah, namely, a critical attitude towards traditional ways of rule, social life and religious learning which, as their critics saw it, were incompatible with “true” Islamic principles.

Unlike the Muslims of the Volga-Ural region, who already for centuries had stood up against Russian rule and various policies of Russification, Central Asia had to face the challenges of colonial rule only from the second half of the 19th century, when it was conquered by Russia (abolishing the KHĀNATE of KHOKAND finally in 1876, and reducing Bukhārā in 1868 and KHIWA in 1873 to protectorates). At that time Russia’s Muslim communities had for almost one hundred years already for centuries had stood up against Russia’s rule and various policies of Russification, Central Asia already for centuries had stood up against Russia’s rule and various policies of Russification, Central Asia

The majority of outstanding Central Asian modernists, although of different social origins, belonged to the younger generation and had gone through a traditional maktāb and madrasa education. Some had a Russian education, and finally, a considerable number of them had fruitful experience of the outside Muslim world. Another group of supporters of modernism, at least in Bukhārā, was made up of traders and entrepreneurs. Their business interests led them to welcome efforts towards reform oriented towards interpretations of Western standards of knowledge and civilization. At the same time, endeavours of this kind were combined with a more or less conscious harking back to the fundamentals of the “true”, early Islam. This synthesis of both following the dictates of the Kur’ān and “keeping up with the times” in practice mainly resulted in activities to disseminate knowledge (the press, publications, textbooks, founding of charitable societies [dīn-e ṭabarrūʿī, dīn-e ṭarbiyāt], and their own educational system the maktāb, madrasa), and to criticize “backward” administrative institutions (e.g. the judiciary, awkaf) and social conditions (e.g. features of popular religion, certain activities of Sufi brotherhoods, lavish festivities and moral decline—the latter, by the way, was a field...
in which the Djadids largely shared the opinion of the Kadimos).

These general characteristics are mirrored in the basic biographical data of distinguished Central Asian modernists (their backgrounds and their entire work are, for the most part, not yet sufficiently studied), such as: (1) Sayyid Ahmad Siddiki, named ‘Adji (Samarqand, 1864-1927, madrasa education, published the first textbook for “new method” maktabs [Ustid-i avval, Tashkent 1901], ca. 1901-3 Hadjji and residence in the Hidjaz, Egypt and Russia; then founding “new method” maktabs, writing textbooks and contributing to modernist press; (2) Mahmund Khadi Bibi (Samarqand, 1873-1919, madrasa education, 1900 Hadjji, 1903-4 stay in Cairo, Istanbul, Ufa and Kazan; then founding a “new method” maktab, acting as mufti, publisher, editor of the newspapers Samarqand [1913-4] and Athina [1914-5], writer of textbooks, theatrical plays); (3) ‘Abd Allâh âl-Wâli (Tashkent, 1878-1934, madrasa education, editor of newspapers Shubrat [1907], Aşı (1908) and Tûrân [1917], founder of “new method” maktabs [1908, 1912], charitable society [1909], writer [textbooks, anthologies, theatrical plays], organising [1913] a theatre group; (4) Munawwar Khân (Bukhara, 1886-1938 [?], editor of newspapers Khârîgarh [1906], Sadî-ye Turkistan [1914] and Naﬁgât [1917], published textbooks); and (5) ‘Abd al-Ra’ûf Fira ‘ (Bukhara, 1886-1938?), madrasa education, 1904 Hadjji, ca. 1910-14 studying in Istanbul, the starting point of his career as an important writer and as theorist of Central Asian modernism.

Within the Central Asian context, the activities of these and other adherents of modernism represented a remarkable phenomenon that successfully challenged traditional society and colonial rule. But these modernists were few in number and, beyond shared basic ideas and goals, they seem to have formed a rather disparate movement of limited success. They lagged behind the modernist debate in other parts of the Muslim world. Their influence did not apparently reach beyond the borders of Central Asia, and even in their homeland they had no firm socio-political grounding. When finally, in the course of the Russian Revolution of 1917, some of the Central Asian modernists entered the political stage (striving for an autonomy of Turkistan within a Russian federation, or for an implementation of reforms in Bukhârâ), they were quickly swept away and successively absorbed by various more firmly-based social and political forces and realities (ranging from Soviet power to the armed resistance of the BasmacTs [q.v.]).

dence in Anadoluhisar and was buried in the cemetery next to the Fatih Mosque.

In addition to Turkish, he knew Arabic, Persian and Bulgarian. His writings include a translation of, and commentary on, *Al-Kazâda al-nâšîyya* on the Islamic creed by *Khabir* Beg [*q.v.*]; *Beyyindül Ahmediyye* (Leiden and Paris 1879; originally published as *Het Islamisme*, Haarlem 1863), translated by 'Abdallah Djeddet. For his other works, *see B.H.*; he also contributed numerous articles to journals and newspapers.

2. *Hidayat al-ârîfîn, Ama'â al-mu'âllîfîn wa-âdûr al-musamânîn*. This is the monumental biographical counterpart to the previous work. It is a list of approximately 9,000 authors of in all some 50,000 works (vol. i, which ranges from âdûr to âmam, mentions 5,398 authors and ca. 25,000 works). It was edited by Kilişi Rifat Bilge and İbnülemîn Mahmud Kemal İnal (vol. i, Istanbul 1951) and İbnülemîn Mahmud Kemal İnal and Avni Aktuç (vol. ii, Istanbul 1955). It has been reprinted several times in Bagdadî and Tehran. Nail Bayraktar has published a register of the sâhîrÎn mentioned in the *Hidayat al-ârîfîn* (*Hediyetî-i 'ârîfîn, esma'î-i-mu'ellîfîn ve âdûrî-i-musamânîn yebretlet indexi*, Istanbul 1990). The work is arranged by ism of the author, followed by the patronyms and other names of an author, with personal details, notably the year of demise, and it then provides the reader with the titles of the books composed by these authors.

Given in the article.

**ISMET İNÂNÜ** (Ottoman form, İsmet), b. 1884, died 1973, Turkish military commander and statesman, who served on three occasions as Prime Minister in the Turkish Republic (October 1923-November 1924; March 1923-November 1937; and November 1961-February 1965) and once as President (1938-50). He played an important part in the Turkish War of Independence (1919-12), made significant contributions to the institutional framework of the Turkish Republican state, initiated multi-party politics in 1945, acted as champion of the procedural rules of democracy as well as of secularism, and had a critical role in the relatively speedy return to civilian politics following the military interventions of 1960-1 and 1971-3.

The son of a lawyer in Izmir, İsmet made a career in the Ottoman army, and during the First World War served on the staff of Ahmed 'İzett Pâsha, the military commander of the Arab Expeditionary Force and Allied occupation force in Syria, and when the Greeks invaded western Anatolia, he became chief of the General Staff of the Nationalist army and repelled the invaders at the two battles of İnönü to the west of Eskeşir ([January and April 1921]), from which engagements he later took his European-type surname.

When the Grand National Assembly met in Ankara

**İSTANBUL.**

**VIII. MONUMENTS.**

The first and most important of the Ottoman monuments of Istanbul is Saint Sophia. The only church to be transformed into a mosque immediately after the conquest of the city (others followed later, mostly in the reign of Bayezid II), it remained symbolically the model of imperial religious architecture. From the reign of Selim II onwards, it became a place of burial reserved exclusively for the Ottoman royal family and was restored on numerous occasions between 1573-2 and 1847-9.

Ottoman building activity dates from 1458, when Mehmed II built the mosque of Eyüp and decided to construct his own imperial complex (Fatiş) at the square of the Holy Apostles, and the Topkapı Palace on the site of the ancient acropolis of Byzantium. This plan, added to other decisions taken in the course of the same reign—building of the bezistan (1456), of the first palace on the site of the Theodosian forum (1453-5), of the barracks of the Janissaries (Eski odalar), of the saddlers’ market (Sarrâj Khâne, 1475), of the markets of the major and the minor Kârâmen (after 1467)—led to the formation of a monumental axis which, while initially retracing the route of the Byzantine Meaus (Diwan Yolu) from Saint Sophia to the Old Palace, from this point follows a northerly direction, across the complex of Fatiş and extending as far as the Adrianople Gate (Edirne Kapısı).

This activity also corresponded with the choice of architects of non-Muslim origin, apparently in contrast to what is known of the builders of the first
period of Ottoman architecture, that of Bursa and of Edirne. This practice could also be linked with the policy of recruiting from among all the peoples of the Empire and even beyond, implemented broadly by Mehmed II in almost all sectors of public life, but also with the search for new technical solutions. This appears to have been the case in choice of Sinan the Elder (‘Atık), a freedman of Byzantine origin, supposed to have built the Fatih mosque on the model of Saint Sophia. This was also the time of the introduction into Ottoman architecture of the demi-cupola, as is mentioned in a passage from Tursun Beg (Ta’rikh-i Abu ‘l-Fath, fol. 56), who applauds the outstripping of Saint Sophia, and another from the Anonymous Giese (99), who de-nounces the latter as sacrilege, inviting comparison with the imperial Byzantine model.

Parallel with the founding of these imperial edifices, Mehmed II encouraged his entourage to follow his example. This injunction was implemented to varying degrees: individuals such as Mahmod Paşa or Khalîs Murâd Paşa, of Byzantine origin and graduates of the Palace school, built some important mosques, their architecture, paradoxically, mirroring that of the first Ottoman mosques of Bursa; others like Gedik Ahmed Paşa [see Ahmed Paşa Gedik] or Ishak Paşa, contented themselves with constructing secondary buildings in the capital and established their major projects in the towns of Anatolia.

The accession of Bâyezid II in 1481 marks a halt in monumental construction in Istanbul.

The sovereign initially built mosques and large religious complexes at Tokat, at Amasya and at Edirne, while other leading figures of the regime confined themselves to converting the churches of the capital into mosques. Seventeen of them are known to have been adapted for Muslim worship, as opposed to four during the reign of Mehmed II. The only monumental project completed during the last twenty years of the 15th century was the mosque built by Dâwûd Paşa (1485). It conforms to the model inaugurated by Bâyezid II in the provinces, with a single cupola resting on a cube. With a diameter in excess of 18 m, this remains the largest cupola of all the vizieral mosques of the capital.

Deciding, at the opening of the 16th century (in 1500–1), to build a religious complex in the capital, Bâyezid II borrowed the system of roofing of Saint Sophia, with two demi-cupolas flanking the central cupola, but also followed the model of the mosques of Bursa in adding ah-khânê (lodgings for dervishes) on both sides of the prayer hall. The complex was built on land reclaimed in its entirety from the Old Palace, in a place chosen more for purposes of seeing and being seen, seems henceforward to have been a decisive factor; it was to find its most absolute expression with the Suleymâniye. The mosque known as that of Sultan Selim (1522) is also the last imperial edifice to reprise the model of a single cupola resting on a cube; it is inspired directly by that of Bâyezid II at Edirne.

This monument to filial piety apart, the first two decades of the reign of Suleyman I (1520-66) were marked in monumental constructions of religious character. On the contrary, the sovereign and his entourage were competing in the construction of palaces. Suleyman renovated the Topkapî Palace and built a palace on the hippodrome for his Grand Vizier Ibrahim Paşa [see Ibrahim Paşa]. Monumental building activity was resumed with the appointment of Sinân to the post of chief architect in 1538 and was to continue without intermission during the first half-century of his activity [see Sinân].

The sovereign gave the signal for the start of this activity in 1539, ordering the construction of a complex for his wife Khûrûm Sultanê [see Khûrûm], built on the site known as ‘Avret Bâzârî (women’s market), in the vicinity of the column of Arcadius. It consists of a mosque, progressively complemented by an ‘imaret and a hospital (dûr al-dîfî). It is probably that Suleyman subsequently decided, on his return from the Hungarian campaign in 1541, to begin a monumental assemblage situated on the triumphal axis, on the site of the Janissaries’ barracks (Eski odalar) which he intended to appropriate. On the death of the prince Mehmed, in 1543, this mosque was dedicated to him, and the complex probably remained incomplete since it was situated exclusively on the northern part of the axis, the barracks situated to the south being retained. In this mosque, his first monumental project, Sinân took to the very limit the process in which Ottoman architecture had been engaged since 1453, proposing a system of roofing in perfect symmetry, with four demi-cupolas. But after the peace treaty concluded in 1547 with the Emperor Charles V, Suleyman decided to commission a new imperial complex, returning to the model of Saint Sophia and also attempting to attain its dimensions. This was to be the Suleymaniye (1550–7), overlooking the Golden Horn and likewise built on land reclaimed from the Old Palace, competing with its rival for prominence in the vista of Istanbul. Similarly, the totality of religious and social institutions which surrounded it stole primacy from the Fatih complex, since henceforward the medrese of the Suleymaniye constituted the highest level of religious education in the Ottoman empire.

Members of the Ottoman royal family and their entourage shared in this construction frenzy. Mihr-i Mah Sultanê [q.v.], daughter of Suleyman and Khûrûm, had her first complex, consisting of a mosque, a medrese and a caravanserai, built at the quay of Üskûdar, on the Asiatic bank, the place where the Bosphorus was crossed (1548). Twenty years later Sinân completed, again on behalf of Mihr-i Mah, a mosque with a courtyard medrese at Edirne kapi, at the point where the triumphal axis joins the land wall. In experimenting with the cupola on pendentives, which frees interior space entirely, Sinân here definitely
outstripped the model of Saint Sophia, achieving the absolute unity and disengagement of interior space, more in accordance with the Muslim tradition.

The Grand Vizier Rustem Paşa (in office 1544-53, 1555-61 [q.v.]), husband of Mihr-i Mâh, chose for his buildings the most densely populated areas of the city and found himself obliged, no doubt for this reason, to disperse them. He built a *köhan* (ca. 1550) at Ghalata [q.v., in Suppl.] on the site of the former Genoese cathedral dedicated to Saint Michael, a *medrese* with octagonal courtyard enclosed within a square, situated below the mosque of Mahmut Paşa (1550) and a mosque facing the *hammam* of Taht al-kâla', completed after his death in 1562. This mosque, built on the site of that of *'Atâr Khâlid*, the most ancient attested in the city (1457), had interior surfaces entirely covered with magnificent ceramics from Iznik, used here on a massive scale for the first time. Sinân Paşa, brother of Rustem, Grand Admiral of the Ottoman fleet (1550-4), built in its turn a mosque with a courtyard *medrese* at Beshiktâş, embarkation-point of the fleet.

Kara Ahmed Paşa, Grand Vizier 1553-5, drew up shortly before his execution in the latter year a *vakifâye* in which he gave instructions for the construction of a mosque with the surplus yielded. His steward, Ferruh Khethâbud, undertook the search for a site and acquired a piece of land close to the land walls inside the gate of Topkapı, where in 1560 Sinân completed a mosque with a courtyard *medrese*.

While the successors of Süleymân, Selim II (1566-74 [q.v.]) and Murâd III (1574-95 [q.v.]) built their mosques respectively at Edirne and at Magniás, Istanbul continued to be endowed with monumental constructions under the long vizirate of Şokollu Mehmed Paşa (1565-79 [q.v.]), benefiting from the energy of Sinân’s workforce. Şokollu’s first project in the capital was a funeral monument, built in 1568-9 at Eyyûb. This consisted of a mausoleum accompanied by a *medrese*, a combination which became standard from the end of the century onward, contributing to the transformation of the suburb of Eyyûb into a necropolis for the military and religious dignitaries of the empire. Şokollu subsequently built below the hippodrome, near the docks used by galleys of the navy, a complex situated in proximity to his palace. This consisted of a mosque with courtyard *medrese*, completed in 1572, to which a *zâviye* was added. Another mosque was built by the same Grand Vizier in 1577-8, outside the walls of Ghalâta, beside the Arsenal, to commemorate his service at the head of the Admurlûty (1546-50). Fıyâle Paşa [q.v.], High Admiral 1554-68, commissioned from Sinân a mosque situated behind the arsenal, in an area populated by rural immigrants drawn by the functions of religious education and the judiciary—virtually the only professions open to persons of Muslim birth.

In 1573-4 Djerrâli Mehmed Paşa built the last vizzorial mosque to be completed before the 18th century. The density of the city seems not to have permitted monumental constructions without costly extractions. Thus in order to build her own mosque, on her acquisition of the title of queen-mother with the accession of her son Mehmed III in 1595, Safiyye Sultanî [q.v.] made inroads on the Jewish quarters of the city’s port. Harassed by the death of the architect Dâvûd Agha in 1598, by technical problems arising from the digging of foundations at a site close to the water, and by the death of Mehmed III in 1605, relegating Safiyye Sultanî to the Old Palace, construction remained incomplete and was only to be resumed sixty years later by Khâlid Turâkân Sultanî [q.v.], the mother of Mehmed IV, being completed in 1663 (Wâlîde Jâmi’). The new sultan, Ahmed I (1603-17 [q.v.]), was the first since Süleymân to undertake the construction of an imperial complex. The latter, situated above the hippodrome, necessitated a massive expropriation of the vizzorial residences which were situated there. The manner in which the buildings of the complex are dispersed is testimony to the difficulties of expropriation. The complex of the Blue Mosque, the name given to the mosque of Ahmed I on account of its extensive decoration in ceramics of this colour, marks the end of the first period of monumental edifices of Istanbul.

Şehmet Paşa, on account of its extensive decoration in ceramics of this colour, marks the end of the first period of monumental edifices of Istanbul.

Ghadanfer Agha, senior eunuch of the palace, introduced into the capital the combination of a *medrese*, a mausoleum and a fountain. The latter, built in 1590-1 at the foot of the aqueduct of Valens (Bozdogân kemeri) rapidly started a trend. These more modest combinations were more easily integrated into the dense urban fabric and contributed to the vitality of the principal axes of the city. Thus the combinations of this type built by Sinân Paşa (1592-3), Kuyuoglu Murad Paşa (1610), Köprülu Mehmed Paşa (1660-1 [see KÖPRÜLU PAŞA], Merzifonlu Kara Mustafa Paşa (1681-90 [see KARA MUSTAFA PAŞA]), Amâzârâzâde Hüseyin Paşa (1700-1) and Dâmad İbrahim Paşa (1719-20 [q.v.]) were situated on the triumphal axis of the city, while that of Ekremджi-zâde Ahmed Paşa
that of Bayram Pasha (1634-5) situated in the vicinity of the complex of Khorser Sultâne. The Topkapî Palace, the most architecturally imposing and sole markers of the 17th century, when new imperial constructions—with the exception of the completion of the Wâlide mosque and the small mosque built by Kösem Sultan on the heights of Uskûdar—were non-existent. The return of the sultans to Istanbul after a period of residence at Edirne, with the accession of Ahmed III in 1703, marked the start of a new phase of architectural activity, responding to new needs and new styles. The needs resulted from the development of the city, where density of population led to increasingly frequent fires and epidemics. These induced the prosperous classes to take refuge in the periphery, such as the Eyyûb, the northern shore and the Bosphorus, where new residences were to be constructed, soon to be followed by new mosques. At the same time, the need to protect collections of precious manuscripts from fire required the construction of libraries as independent buildings, while the shortage of water resulting from overpopulation led to new projects of water provision, including monumental fountains. These secular buildings, less hampered by the weight of tradition, also gave opportunities for new stylistic experiments, often described as Ottoman baroque art, first coming to prominence in the “Tulip Period” (1718-30) [see LALE DEVRI].

The fountains and the sebil (places for the distribution of water, see SABÎL) regularly accompanied combinations of a medrese and a mausoleum, but it was to them that the first stylistic innovations were applied. These were already perceptible in the sebil of Amâdjäzaâ Hüsâyn Paşa, at the turn of the 18th century and developed in that of Dâmûd İbrâhîm Paşa twenty years later. In another arrangement, where sebil and fountain became the principal elements in a small complex also containing a mausoleum, as well as a school no longer in existence, built at Dolma Baghçesi by Hâdevi Mehmed Emin Âgha (1741), the baroque elements attained their fullest expression. The sebil or fountain was also to be found in association with a primary school (bâtûn mektebi) situated on the upper level (fountain school of Reçîşâ il-Kuttab Ismâ‘îl Efendi at Karaköy [1742] and sebil school of Reçîşâ Mehmed Efendi at Weft [1775]), but this combination, frequently encountered in Ottoman Cairo, remained exceptional in Istanbul.

The monumental fountain standing alone in a covered space was first seen at the very end of the Tulip Period, the first five known examples being virtually contemporaneous. Dâmûd İbrâhîm Paşa, responsible for the drawing of water from Uskûdar, built the first of these four-faced monumental fountains beside the harbour of this suburb in 1728-9. The same year, Ahmed III built the monumental fountain before the main entrance of the Topkapî Palace. His successor, Mahmûd I (1730-54) undertook the conveyance of water from the northern shore of the Golden Horn (waters of Topkâm) and three other monumental fountains were built in 1734 on this network: that of Topkâm by the sovereign himself, that of Azâz Kapî (in front of the Arsenal) by the queen-mother Şâlîfâ Sultan and that of Ka’ba Tâsh by the Grand Vizier Hekîm-oglu ‘Ali Paşa [see ‘ALÎ PAŞA HAKIM-OGHUL].

The first independent library was built by Köprülü Fâdîl Ahmed Paşa as an extension of the familial complex on the Diwan Yolu (before 1676), and Schehid ‘Ali Paşa also built a free-standing library behind the mosque of Şâlî-zâde in 1715. This type of building nevertheless acquired a monumental nature—while retaining modest dimensions—with the library built in 1719-20 by Ahmed III in the third courtyard of the Topkapî Palace. The architectural preoccupations were evident in that of Âşîf Efendi at Weft (1741) and were to be most fully expressed in the library of the Nûr-u Othmânîyye complex (1755). Among later buildings, those of Râşûl Paşa (1762) at Lâlîli and of Dâmûd-zâde Mehmed Murad Efendi—known as Murad Molla—(1775) at Çarşamba are worth mentioning.

A new type of building linked with projects for the provision of water consisted of dams, reservoirs placed in the Belgrade forest to the north-west of the city, a happy combination of utility and ornament. The oldest, a straight wall supported by four buttresses, is known by the name of the Dark Dam (Karanlik Bend); dating from 1620 it was located on the network set up by Sinân. The Topluzu Bend, built in 1750 on the network of Topkâm, introduced cut-off corners, more resistant to the pressure of water. By way of the Aywad Bend (1765) and the Wâlide Bend (1797), progress was made towards the vaulted dam, realised in 1839 with the dam of Mahmûd II.

The 18th century also marked a renewal in the construction of religious buildings, but the first phase was slow and hesitant. The mosque built by Ahmed III for his mother Emetullah Gûlnûş Sultané at Uskûdar (1708-10)—a place apparently reserved for the wives of the imperial family—revived the models of the 16th century, albeit with some adjustments to the lines of the sebil typical of the Tulip Period. Similarly, it was again the sebil, as well as the school, placed above the entry-gate, rather than the mosque, which represented innovation in the monumental complex built by Hekîm-oglu ‘Ali Paşa in 1734-5. This makes even more surprising the full-scale renewal of architectural motifs in the Nûr-u Othmânîyye complex, begun in 1748 by Mahmûd I and completed in 1755 under Othmân III. Even though the daring solutions, such as the horseshoe-shaped courtyard, were not to be repeated in subsequent centuries, the Nûr-u Othmânîyye marked a new phase in imperial building activity which was not to be discredited for as long as the empire lasted.

Mustafa III (1757-74) built no fewer than three imperial mosques: that of Ayazma at Uskûdar, named after his mother, in 1758-61, that of Lâlîli in 1760-3, and that of Fâtih, rebuilt in 1766-71 after the earthquake of 1765. His successor, ‘Abd ul-Hamîd I (1774-89) dedicated to the memory of his mother Rabî’a Sultané the mosque of Beylerbey on the Asiatic shore of the Bosphorus, and to the memory of his wife Hûmsâh Kadın that of Emîrgân on the European shore. He also built near the port his own funeral monument, consisting of a medrese, an imaret, a sebil and a mausoleum. In this complex, constructed in stages between 1775 and 1789, what is observed is the transition from baroque in the sebil to Ottoman neo-classicism in the mausoleum.

The reign of Selim III (1789-1807 [q.v.]) marked the zenith of a flamboyant baroque which was expressed essentially through funereal monuments: the complex composed of an imaret, a sebil and a mausoleum of the queen-mother Mîhr-i Şâlî Sultané, built at Eyyûb in 1792-5, and the mausoleum was accompanied by a school and a sebil of the sovereign’s sister Şâlî Sultané, built at Eyyûb (1800). The tendency continued beyond the reign with the mausoleum and sebil of Naşirîl Sultané built by Mahmûd
II in memory of his mother in the cemetery of Fatiha in 1818. Finally, baroque and rococo decoration, abundantly present in those parts of the Topkapı Palace dating from the second half of the 18th century, also infiltrated the mosque, but it was only in the monumental Edirne Mosque of the second half of the 19th century that the Renaissance style was exploited and given a national character.

The latter is manifest in modern buildings such as the main Post Office or the office building built for the benefit of the postal service in the 19th century as much as it is in mosques seeking classical inspiration from the Ottoman past. The mosque of Ayazma, completed in 1907, is an example of this.

During the 19th century, Islamic architecture was influenced by both foreign and local sources. The Swiss brothers Gaspare and Amico Mengoni were invited by the Ottoman government to design the new Archeological Museum in Istanbul in 1862, and they also designed the Archeological Museum in Athens.

The activity of the Balyans was manifested essentially towards the end of the 18th century and the beginning of the 19th century, when the Ottoman empire was in need of reform. The Ottoman state was in crisis and the Ottomans were forced to adopt new architectural styles to satisfy the needs of the time.

The Ottoman state was forced to adopt new architectural styles to satisfy the needs of the time. The mosques erected during this period were characterized by a greater sense of unity and a more disciplined layout. The mosques, such as the Edirne Mosque, were designed in a more classical style, with a greater emphasis on symmetry and proportion.

During the reign of Mahmut II (1808-39), baroque and rococo decoration, abounding in the Topkapı Palace, was used to decorate the interiors of the palace. İSTILHAK (А.), the verbal noun of Form X of 
the verb labita “to reach, catch up with,” having the 
meaning of “to try to reach, attack, adopt, affiliate 
s.o. to s.th.” (see ḳÂṢÂS, letter lám, 330). In Early 
Islamic history, it was especially used for the attempt 
in 44/665 of the Umayyad caliph Mu‘awiyya I (q.v.) 
to attach the very able official Ziyaâd b. Abihi (q.v.) 
to his own, ruling clan of Umayya. Ziyaâd was of 
doubious parentage, his mother Sumayya being appar-
tently a slave, and Mu‘awiyya aimed at linking Ziyaâd 
to his own family as the putative son of his own 
father, Abi Sufyân (q.v.). For details of this istilhak 
process, see ziyâd b. Âbîhi, with full references.

İTHEM (А.), a term of Islamic theology meaning
“sin,” used in Kur’ân, II, 216/219, V, 32/29, 
XLIX, 12, amongst various other terms denoting sin 
and sinfulness in varying degrees, such as ḳamâh, pl. 
dhâmbâh, used in Kur’ân, III, 129/135 and passim. For 
a discussion of the concept of sin and its consequences, 
see KHÂTA.'
his horse to enable him to escape at a time when he was in a perilous situation on the banks of the Nahravan. According to some (e.g. al-Tabari, i, 1029), the hero of this story is Iyās; for others (Levi della Vida, Livres des Chevaux, Leiden 1928, 32; al-Masʿūdī, Murūḡ, ii, 216-7 = § 636), it was his nephew, Hassān b. Hamzah al-Taʿīfī, who gave the king his horse, al-Duḥayl, and subsequently received as a land grant the faṣūḥ of Ḳhutarmiya. The chronicles mention a victory won by Iyās over the Byzantines near Sāṭi-damā, but the most important event of his life was his appointment to succeed al-Nuʿmān III after the Emperor of Persia had taken his revenge by putting the latter to death. Although the date of this appointment is hard to establish, it may be located between A.D. 602 and 604/5. Ḳhusraw Aparwāz appointed to serve at his court a Persian official whose title of Nakḥwraḡān appears in various forms in the Arabic sources (cf. A. Christensen, Sasanides, 452). According to the same sources, Iyās governed al-Hira for nine years, and it was in the eighth year of his reign that the prophetic mission of Muhammad began. He died probably in the year A.D. 611 or 612.

It was during the period when he governed al-Hira that there took place the famous battle of Ḩitū Kār [q.v.], in which he participated as leader of the Arab warriors. According to the Arabic sources, the Arabo-Persian troops were defeated, but Iyās was spared drastic punishment and retained his responsibilities. He was, essentially, the last Arab “king” of al-Hira since the town was subsequently placed in the hands of exclusively Persian officials until the Islamic conquest. Finally, the sources consider him a talented poet, but very few of his verses have been preserved (see, however, Ābkāryūs, 46-9).

IZMĪD, modern form Izmīt, a town of north-western Turkey, lying at the head of the Gulf of Izmīt (Izmīt Kūfret) in lat. 40° 47′ N., long. 29° 55′ E.

It is the classical Nicomedia, named after Nicomedes I of Bithynia, who in 264 B.C. founded it as his new capital. The Roman emperor Diocletian made it in the late 3rd century A.D. his capital in the east; it remained in Byzantine hands until captured after a long siege by the Ottomans under Orkhan. The dates for this vary in the Greek and Turkish sources, the former placing this in 1338; at all events, it must have been soon after the fall of Nicæa in 731/1331

(cf. Pitcher, An historical geography of the Ottoman empire, 38). In 1402 the Turkish town was sacked by a group of Ṭımūr’s troops. In Ottoman times Izmīt, in the sanjak of Kōḏja-či [q.v.], became especially important as a naval arsenal, reportedly founded by the Kopitūs, and for building small merchant vessels using timber supplied by the extensive forests of the vicinity.

In the earliest register so far known, an ʿīṣāzī dated 937/1530, the settlement is on record as one of the five towns (nefs) of the province. As it is mentioned first in the list, it must have been the residence of the local governor. The town contained 389 men of tax-paying age, 86 of whom were exempted from certain dues. Of the remainder, 351 were heads of households and 152 were bachelors. These figures indicate a settlement of about 2,000-2,500 inhabitants.

In the kāḍā, there were two madras and two children’s schools, as well as two Friday mosques, in addition to five public baths (Ahmet ʿOzkılınç, ed. al-īli, 438 narmah muḥāsib-e-i vilāyeti-i Anadolu defteri (937/1530), dizin ve tezkirname, Devlet Arşivleri Genel Müdürlüğü 1994, ii, 65-6).

In 962-3/1555, Hans Dermisch saw a fortress on a hill with a new mosque, which supposedly had been built in place of a previous church. A sizeable part of the town was also located on this hill. At the time of Dermisch’s passage, the classical ruins were being quarried for stone. This was soon locally into the sizes required by Istanbul builders, presumably for use in the construction of the Suleymaniye, then in progress (Tagebuch einer Reise nach Konstantinopel und Kleinasien (1553/55), ed. F. Babinger, Munich and Leipzig 1923, 153-4). The area’s abundant water resources also served for the operation of mills grinding flour for the consumption of Istanbul, including the Janissary bakeries. Due to its functional link with the capital, Izmīt formed an exception to the rule that towns were to feed themselves from the product of their own kāḍās. For the hinterland was heavily forested rather than agricultural, with high-quality pine trees suitable for ships’ masts abundant. As late as the second half of the 11th/17th century, the French ambassador was permitted to export a certain number for the use of the French navy (R. Mantran, Istanbul dans la seconde moitié du XVIIe siècle. Essai d’histoire institutionnelle, économique et sociale, Paris and Istanbul 1962, 445).

The only surviving register enumerating individual taxpayers (muṣafād) and covering Izmīt dates from 1034/1624-5. At this time, the town consisted of 29 fully-fledged town quarters or, in some cases, recent accretions to older urban wards. The total tax-paying population numbered 849; no data on bachelors being available, our estimate of total population cannot be very precise, but probably the number of inhabitants had about doubled since 937/1530. One of the quarters was named for the local Friday mosque. Since another urban ward was called Dūm, it is likely that the town possessed two structures suitable for Friday prayers; possibly one of these was the Süleyman Paşa mosque which, according to a rescript dated 1171/1568, was recorded in the official registers of the time but has not been located in the surviving adhārvis (Ahmet Kâl’a al-īli, ed. al-īli, Istanbul adhārvis defterleri Istanbul avukat sanıhi, Istanbul 1998, i, 238). Near the port there was a Christian quarter; this may well have grown in later years, as in 1165/1752 the town boasted a metropolis, albeit one who resided in Istanbul (ibid., i, 338-9). During this same period, the town also possessed some Jewish residents (ibid., i, 164). As
IZMID — İZMİR

477

the non-Muslim quarter is described as lying "under the town", we may assume that most of the Muslim wards lay on the hill, as they had done in Derin-
scham's time (Ankara Tapu ve Kadastro Genel
Mudurlugu, Kuyudo Kadime, no. 19, fol. fol. 12b).

Ewliya Celebi visited Izmir in 1642, describing the ruined fortress, which in his opinion had been destroyed by Sultan Othman to prevent its use by the Byzantine nobles with whom this ruler was at war. Among the notable buildings, Ewliya mentioned a mosque built by Pertev Pasha on the seashore, a work of Mim'at Sinan, along with a public bath and kırkandıryası by the same vizier. A garden palace with an extensive park had been built for Murad IV. The town contained 23 quarters, three of which were inhabited by Christians while one was settled by Jews. There was no bedesten, normally the hall-
mark of a major commercial centre, but the exten-
sive docks located near the port seem to have served similar purposes. Timber merchants formed a signi-
ficant part of the urban elite Seyhatnamesi, Topkapi Sarayi Bogaz 304 yazmasının transkripsyonu dizesi, Istanbul 1999, 39-40).

In the 12th/13th century, woodworking crafts, such as the manufacture of combs and spoons, appear to have been of some significance. However, the Izmir kiln craftsmen did not supply themselves with wood directly from the forest villages, but purchased it in Istanbul.

Yet there must have been economic opportunities available in the town itself, as toward the end of the century, Izmir supposedly held 30,000 people. A.D. Mordtmann Senr., who saw the town shortly after the end of the Crimean War, claims that it was inhabited by 2,000 Turkish, 1,000 Armenian and 200 Greek families, which means that he estimated a population size of about 15,000 (Anatolik, Skizen und Reichweite
aus Kleinasi (1850-1859), ed. Babinger, Hanover 1925, 282-3). According to Mordtmann, a small salt pan, already mentioned by Ewliya, was in operation, the local harbour was still of some importance and the arsenal was, at the time, building a warship for the Ottoman navy. Further development of the town was, however, impeded by the prevalence of malaria. In the closing years of the 19th century, Izmir formed the centre of the mîaneseriflik of Izmir. Under Ahmed V. (Crete, La Turquie d'Asie, Paris 1890-4, iv, 301-
400). Urban growth had probably been promoted by the railroad linking Istanbul to Ankara, and the town's population now amounted to about 25,000, living in 5,857 houses and purchasing their daily needs in 1,140 shops. Stone quarries and a sawmill were still active: two state-owned factories had been established, making fezzes and woollen cloth for uniforms; another such factory, producing fine silk fabrics and located in Herke, administratively was situated in the wâlîyât of Istanbul but geographically much closer to Izmir. In the immediate vicinity, the townlet of Armach (Cinett's spelling) was inhabited by Armenians who in 1019-20/1611 had immigrated from Iran. Housing a seminary for Gregorian priests, this locality specialised in silk cultivation. However, Izmir's transformation into a major industrial centre has come under the Republic, and especially, after the Second World War, with the town being cut off from the easy access of Istanbul. Until 1974, a state-owned paper mill opened in 1936 produced practically all the paper used in Turkey (arti. Kocaeli, in Yurt ankslopekodisi, Istanbul 1982-3, vii, 5037). Since the 1960s, car tyres, petrochemicals and liquid petrol gas (the major fuel for cooking in Turkey) have been developed there, and since there is now an autoroute along the northern shore of the Gulf of Izmir, the area between Izmit and Istanbul is becoming the major coherent industrial area of Turkey. Izmit itself is now a city of over 300,000 which attracts migrants; its factory workers, now organised, were major par-
ticipants in the labour unrest of summer 1970. It suffered badly from the 1999 earthquake, when amongst many others, buildings of the recently-
established provincial university were destroyed. Yet despite this industrialisation, away from the coastline, some of the area's agricultural potential remains, including the cherries of Yarmaca, known to Ewliya Celebi, and also tobacco, sunflowers and sugar beet.

IZMIR, the Turkish form of the ancient Greek name SYMNA, one of the great mercantile cities of the Eastern Mediterranean. It lies in western Anatolia at the head of the Gulf of Izmir, and the pre-modern city lay mainly on the small delta plain of the Kazıklı (ancient Melas) river.

Izmir has a history going back five millennia, archae-
ological evidence indicating that this town formed the greatest level of occupation as contemporary with the first city of Troy at the beginning of the Bronze Age (ca. 3,000 B.C.). Greek settlement is indicated from ca. 1,000 B.C., and Herodotus says that the city was founded by Aeolians but then seized by Ionians. It became a fine city, possibly re-founded by Alexander the Great in 334 B.C. Under the Romans it was the centre of a civil diocese of the province of Asia, and was one of the early seats of Christianity. In Byzantine times it continued as a metropolitan see and was the cap-
tal of the naval theme of Samos.

With the invasions of Turkmen across Anatolia towards the end of the 11th century, the Turkish chief Çaka/Tzachas established himself at Smyrna in 1081 and from there raided the Aegean islands. But after the Turks were driven out of Nicaea in 1097 [see Izmih, in Suppl.], Smyrna reverted to Byzantine rule in 1098. It was over two centuries before it passed under Turkish control again, when it was con-
quered by the Aydınogulları (see sivas-ogullar) (1716-
1721: Kadife Kafè, 729-30/1329: Aaghi Kal’ç) (Tuncer Baykara, Izmir gezri ve tarihi, Bornova-Izmir 1974, 28; for slightly variant dates, see Irene Melikoff-
Sayar, Le destan d’Umar Pacha, Paris 1934, 40). On his visit in ca. 1731/1331, Ibn Battuta found a largely ruinous place, whose upper fortress was held by the Aydınogulları and which possessed at least one çarşih (Rihla, ii, 310-12, tr. Gibb, ii, 445-7). The city was captured by the Knights of Rhodes on 28 October 1344, although the Aydınogulları and later the Ottomans held on to the citadel or upper fortress. The Knights were finally expelled by Timur in 804-
5/1402, when he took the lower fortress, and the Aydınogulları briefly reinstated.

However, in 817/1414-15, Izmir became an Otta-
man possession, after the last Aydınogulları to rule, Djinved, known as İzmir-oglu, had been defeated by Sultan Mehemmed I (Himmet Akin, Aydınogulları tarihî hakkinda bir araştırma, Ankara 1968, 80; for a later date of the final Ottoman conquest, namely 828-
9/1425, see D. Goffman, Izmir. From village to colonial port city, in Ethem Eldem, Goffman and B. Masters, The Ottoman city between East and West, Cambridge 1999, 86). As the new governor, an Islamised son of the former Buğlar Tsar Shishman, was appointed, but
IZMİR

the first extant tahrir describing the town only dates from 935/1528-9 (physical damage to earlier registers accounts for this absence: Başbakanlık Arşivi, İstanbul, Tapu Tahrir no. 146).

In the 9th-10th/15th-16th centuries, Izmir was a small settlement; in 957/1550, 304 adult males, both Turkish and Greek, were recorded; 42 of these were Christians (Ismet Binark et alia (eds.), 166 numarası maddesi-i vilâyet-i Anadolu (957/1550, Ankara 1995, 392). There were no more than five urban wards, one of them situated in the immediate vicinity of the port, rather active in spite of the town's small size. By 983/1575-6, Izmir had grown to house 492 taxpayers in eight urban wards; in addition, a group of former İzmirlis had settled in the nearby village of Boynuzseki, but continued to pay their taxes with the town's population (Tapu ve Kadastro Genel Mudurlüğü, Ankara, Kuyudu Kadime no. 167, fols. 3b ff.). One of the port's major functions was the supply of Istanbul with grain, raisins, cotton, and other agricultural products (Zeki Ankan, A Mediterranean port, Izmir in the 15th and 16th centuries, in Three ages of Izmir, palimpsest of cultures, ed. Enis Batur, tr. Virginia T. Şaçoğlu, İstanbul 1995, 59-70).

But İzmir’s remarkable growth really begins in the late 16th century when the cotton, cotton yarn and other products of the region began to attract French, English, Dutch and Venetian traders. İzmir thus took over the role of mediaeval Ayatholough (Éphesus, Atılılugo), which was losing its commercial significance due to the siting up of its port (D. Goffman, Izmir and the Levantine world, 1550-1650 (Seattle and London 1990). At first illegal, the exportation of cotton was legalised in 1033/1623 (Surayet Farnoqhi, Towns and townsmen of Ottoman Anatolia, Cambridge 1984, 130-7). In the 18th century, Izmir and the surrounding region were settled by numerous migrants from other provinces, including Jews from Salonika who fled the mounting exactions and diminishing rewards of the Macedonian woolen industry (Goffman, op. cit., 97-102). Toward the century's end, J.-B. Tavernier estimated the population at about 90,000 (Les six voyages en Turquie & en Perse, ed. St. Yerasimos, Paris 1981, i, 138, for a general overview of the descriptions of İzmir by 17th-century European travelers, see Sonia Anderson, An English consul in Turkey, Oxford 1989, 1-18). Turks formed the vast majority (about 60,000), while there were also 15,000 Greeks, 8,000 Armenians and 6,000 to 7,000 Jews. A major earthquake destroyed the city in 1099/1688, with the heaviest damage in the seaside quarter, but continued to pay their taxes with the town's population (Tapu ve Kadastro Genel Mudurlüğü, Ankara, Kuyudu Kadime no. 167, fols. 3b ff.). One of the port's major functions was the supply of Istanbul with grain, raisins, cotton, and other agricultural products (Zeki Ankan, A Mediterranean port, Izmir in the 15th and 16th centuries, in Three ages of Izmir, palimpsest of cultures, ed. Enis Batur, tr. Virginia T. Şaçoğlu, İstanbul 1995, 59-70).

But İzmir’s remarkable growth really begins in the late 16th century when the cotton, cotton yarn and other products of the region began to attract French, English, Dutch and Venetian traders. İzmir thus took over the role of mediaeval Ayatholough (Éphesus, Atılılugo), which was losing its commercial significance due to the siting up of its port (D. Goffman, Izmir and the Levantine world, 1550-1650 (Seattle and London 1990). At first illegal, the exportation of cotton was legalised in 1033/1623 (Surayet Farnoqhi, Towns and townsmen of Ottoman Anatolia, Cambridge 1984, 130-7). In the 18th century, Izmir and the surrounding region were settled by numerous migrants from other provinces, including Jews from Salonika who fled the mounting exactions and diminishing rewards of the Macedonian woolen industry (Goffman, op. cit., 97-102). Toward the century's end, J.-B. Tavernier estimated the population at about 90,000 (Les six voyages en Turquie & en Perse, ed. St. Yerasimos, Paris 1981, i, 138, for a general overview of the descriptions of İzmir by 17th-century European travelers, see Sonia Anderson, An English consul in Turkey, Oxford 1989, 1-18). Turks formed the vast majority (about 60,000), while there were also 15,000 Greeks, 8,000 Armenians and 6,000 to 7,000 Jews. A major earthquake destroyed the city in 1099/1688, with the heaviest damage in the seaside quarter, but it was soon rebuilt (N.N. Ambrasayes and C.F. Finkel, The seimicity of Turkey and adjacent areas: a historical review 1500-1800, İstanbul 1995, 90-1). To a large extent, the exportation of Persian raw silk to Europe passed through Izmir; thus this port had entered into a successful competition with the much older mart of Aleppo, as wars accompanying the decay of trade. It was also the case that by the mid-16th century, Izmir had passed through your access to alternative sources in Bengal and China. While English merchants, specialised in the commercialisation of silk, largely gave up trading in the Levant, French merchants, in particular, continued their activities. At the beginning of the 17th century, İzmir and Iskenderun constituted the major exporting centres as far as the Marseilles trade was concerned, while at the century's end, Iskenderun had faltered. French shipowners, in particular, benefitted from the vats majority of French exports (Élena Françagis-Syret, The commerce de Smyrne in the eighteenth century (1700-1820), Athens 1992, 257-9). In certain years, over 45% of all Ottoman goods shipped to Marseilles passed through İzmir. Exports included mohair yarn from Ankara, silk, cotton, both spun and raw, and wool. Among imports, the only manufactured item were Languedoc woolen fabrics, produced exclusively for the Corsoin market (Cl. Marquie, l'industrie textile corsoinante au XVIIIe siècle, Carcassonne 1993). In addition, İzmir imported coffee from the Caribbean, sugar and indigo.

Of the numerous public buildings of Ottoman İzmir, very little survives. Ewliya Çelebi, who visited the town in 1081-2/1671 and admired the relief of a female face at the entrance to the seaside fortress, praises the Biyklikhoğlu Džami‘i, later destroyed in the earthquake of 1099/1688, and also mentions the Fâk Pasha Džami‘i, one of the oldest mosques in town (Sevâlhatnamesi, Istanbul 1935, ix, 88-100). His descriptions in part reflect the data collected by the officials who, in 1068/1657-8, put together a tahrir under the orders of a certain Ismâ‘îl Pasha (for further information on this document, see Faroqhi, Tomes, 276). At different times in İzmir’s history, 25 medreses were active (Munir Aktepe, Ottoman medreses in İzmir, in Three ages of İzmir, 85-99). Éwliya also mentioned the multitude of kâns (Aktepe, İzmir hanların ve çarşılarnın hakkinda inââ-i buh, in Tarih Dergisi, xxv [1971], 100-3; W. Müller-Weinert, Der Bazar von Ismîr, in Mitteilungen der Frankischen Geographischen Gesellschaft, xxvi-xxvii, [1980-1], 420-54). In the late 18th and early 19th centuries, certain İzmir buildings were decorated with elaborate reliefs, featuring slightly stylised views of local mosques and other buildings. The popularity of this decoration may indicate the donors’ pride in the prosperity of their city (Aydâ Arel, Image architecturale et image urbaine dans une serie de bas-reliefs ottomans de la region egienne, in Turcica, xviii [1986], 83-118).

An active trade resulted in the residence of foreign consuls, the English historian Paul Rycaut officiating as Charles II’s representative between 1077-8/1667 and 1089/1678 (Anderson, An English consul, passim). By contrast, the Ottoman central administration was merely represented by the kâfi and the tax farmers collecting customs and other dues. Unlike in many other Ottoman commercial centres, foreign traders were not obliged to reside in the khâns but could inhabit houses by the seaside, many of them with landing stages of their own. Houses for rent, known as fênik kâhîne, were built by Ottoman notables as an investment and sometimes passed on to pious foundations. Thus the seaside quarter became known as the “street of the Franks”. The latter also were permitted their own churches, the French worshipping at St. Polycarpe, whose parish registers survive from the 18th century onwards (Marie Carmen Smyrnélis, Colonies europeennes et communautés ethno-confessionnelles à Smyrne: existence et réseaux de sociabilités, in Vivre dans l’Empire ottoman, ed. F. Georgeon and P. Dumont, Paris 1997, 173, 194). Entertainments might take on a public character, with plays performed in the French consulate even in the 11th/17th century, while a hundred years later, the Jewish community also staged
plays (Eftal Sevincli, Theater in Izmir, in Three ages of Izmir, 370). Officially speaking, neither French nor English merchants were expected to bring their wives, much less marry local Christian women, for this would have made them subjects of the Sultan, sojourn in the Ottoman Empire was expected to be a temporary affair. In practice, certain French and English families lived in the city for generations, and marriages of Frenchmen to Roman Catholics of Greek or Armenian background were common enough.

Ewliya Celebi vaunted the enormous revenues which the küdsı of Izmir enjoyed in his own time, partly due to regular emoluments and partly due to the presents which he could expect (ix, 89). But in the 18th century, the major Ottoman presence in the area was not the küdsı but a family of tax farmers and dues collectors acting for absentee governors and known as the Kara 'Othmânoghulları. The economic power of these personages derived from the fact that they marketed the cotton and other agricultural produce they collected from local peasants to foreign exporters (G. Weinstein, "Aşmın de la région d'Izmir et le commerce du Levant (deuxième moitié du XVIII siècle)," in ROMM, xx [1975], 131–46; for a contrary position, emphasizing the role of the family as actual landholders, see Yüzü Nagata, Tarihde aşmın, Karaosmanoğulları izinde bir incedem, Ankara 1997, 89-142). Political power and status allowed the Kara 'Othmânoghulları to drive hard bargains, so that peasants also entrusted them with the goods they wished to sell on their own behalf. Socio-political status also was documented by the numerous pious foundations this family established in the region, for which the two kühs constructed in Izmir by different Kara 'Othmânoghulları were meant to produce revenue (İlçe Kuyu, Kara Osman-âğlı viâ-i cem imtiyazi, Ankara 1992, with extensive bibli.).

In the 19th century, Izmir continued to function as a city specializing in foreign trade. However with the Ottoman Empire's increasing integration into a transcontinental economy dominated by Europe, the character of this trade changed, while its volume continuously expanded. Grain, sesame, figs, raisins (at the end of the century by far the single most valuable crop), the tanning agents sumach and valonia, and opium, all arrived in the depots of Izmir's "gentlemen traders," many but not all of them non-Muslims. Ottoman merchants operated as middlemen, dependent on exporting European merchants (Halit Ziya Úşakgılı, citing a passage from kirk yıl, 5 vols., İstanbul 1936, cited in English tr. in C. Issawi, The economic history of Turkey 1800-1914, Chicago and London, 1980, 72-3; V. Cuinet, La Turquie d'Asie, Paris 1892-4, iii, 362 ff.).

Izmir's role as a centre of export trade encouraged investment in the construction of railroads; thus one of the first Anatolian railways linked Izmir to Turgutlu, then known as Kasaba, and another line connected Aydin and Izmir. However, the orientation of these railways according to the needs of import and export merchants limited their overall economic usefulness (Orhan Kurmus, İmparatorluk Türkiye'ye gelisi, İstanbul 1974). Between 1867 and 1875, the port of Izmir was modernized, with quays and a breakwater constructed (Mubahat Kütükgölü, İzmir hımzıma iştiradi ve iştıname(PC), İstanbul 1974, 495-530). A few industrial enterprises were then prepared to receive the output of agricultural goods for export. While most of the olive, sesame and other vegetable oils were still pressed in old-style mills, there were a few ventures, undertaken by members of the Ottoman minorities but also by the occasional Englishman, to found modern-style factories (Abdullah Martal, Doğum sürecinde İzmir'de sanayileşme, 19. yüzyıl, İzmir 1999, 144-5). In the import sector, textiles assumed a greater importance after about 1840. At that time, the output of English cotton factories began to flood the Izmir market, unimpeached by any protective duty since the Anglo-Ottoman commercial treaty fixed custom duties at a low level and prohibited monopolies (Martal, Sanayileşme, 123-5). This did not, however, prevent the emergence of a flourishing textile industry specializing in home furnishings (Cuinet, iii, 429).

Moreover, rising standards of living among the European middle classes, as well as the stylistic preferences of the Victorian age, led to an increased demand for carpets. What had previously been a luxury trade expanded to cater for mass markets which by around 1900, came to include the more affluent sectors of the working class. While these carpets were manufactured in small towns of the Aegean region, notably Uşak [see 'uşak'], they became known as Smyrna rugs in Europe, not only because they came out through the city's port but also because the merchants organizing this enterprise, British traders occupying a prominent position, were frequently based in Izmir (D. Quataert, Carpet industry of western Anatolia 1860-1908, repr. in Workers, peasants and economic change in the Ottoman Empire 1730-1914, İstanbul 1993, 117-36).

Trade and an active public administration had by the end of the 19th century stimulated urban growth, the population of Izmir proper reaching the 200,000 mark. About 89,000 were Muslim Turks and 39,000 Orthodox Greeks, while over 36,000 inhabitants carried foreign passports (Cuinet, iii, 440; for further statistical information, see the anonymous art. Izmir, in Yatt anotología, Türkiye il il, dünü, bugiin, yanm, 4271-87). Steamboat lines and a tram assured intra-urban communication and, in 1905, electricity was introduced. The city became an educational centre, with nine state schools on the secondary level. For the Greeks, there was the "Evangelical School" famed for its high level of instruction, in addition to numerous foreign, especially French educational establishments.

Izmir was not directly affected during World War I, although many young men were drafted into the army or into labour battalions. But in 1919, with the Ottoman Empire defeated and Istanbul occupied by the Allies, the Greek government, with the backing of the British Prime Minister Lloyd George, landed troops in Izmir and occupied the city until 1922, when the invaders were driven out by the Nationalist army under the command of Mustafa Kemal [ Atatürk]. Both the Greek occupation and the later withdrawal of the Greek forces were accompanied by large-scale flight from Izmir, which in September 1922 was moreover destroyed by a major conflagration (M.L. Smith, Ionian vision, Greece in Asia Minor 1919-1922, rev. ed. London 1998). The exchange of populations decided upon in the Treaty of Lausanne (1923) involved the exodus of the remaining Greek population, whose places were taken by Turks who had been forced to vacate Greek territory.

In the 1960s, Izmir began to add new functions to its traditional role as an export-import centre serving an agricultural hinterland. Small-scale industry developed, and in automotive transportation, numerous minute undercapitalized entrepreneurs were also active. As in all large Turkish cities, migration from rural areas led to the hasty construction of shantytown housing and the emergence of a large informal
IZMIR — JAMIA MILLIA ISLAMIA

JAMIA MILLIA ISLAMIA (AL-QI'MI'YA AL-MILHIYYA AL-ISLAMIYYA), a Muslim University, formerly in British India and now in the Indian Union.

In September 1920, the Indian National Congress adopted the non-cooperation resolution against the British government. The Jamia Millia Islamia (National Muslim University) was the "hasty child of the non-cooperation days", according to Jawaharlal Nehru, independent India's first Prime Minister 1947-64.

Mawlana Mahmud Hasan (1851-1920), the first Principal, lectured at the Jamia. According to him, the institution's chief objective was to create Muslims who would be men of refinement and character, living according to the highest moral standards and being, and has been, progressive, Indian, and Muslim."

M.K. Gandhi, the main inspiration behind the founding of the Jamia, hoped that this institution would interpret Muslim culture in a manner consonant with truth and the requirements of a people diverse in culture. He hoped that it would produce good Muslims who would be men of refinement and character, living according to the highest moral standards and serving the people with devotion and sincerity.

In 1935, Halide Edib Hanum, the Turkish author, lectured at the Jamia. According to her, the institution's chief objective was to create a harmonious nationhood, and she observed that, in its aim, if not always in its procedure, it was nearer to the Gandhian movement than any other Muslim institution she had come across in India. In 1943, W.C. Smith, the historian of Islam, commented that the Jamia "has been constantly growing, ever refurbishing its methods, and branching out from time to time to meet new needs. . . . Its education has aimed at being, and has been, progressive, Indian, and Muslim."

The pursuit of such ideals ran into rough weather owing to paucity of funds, and yet dedicated teachers kept the Jamia going under adverse circumstances. They did not have money, and worked amidst and through poverty. They did not even have the shelter of houses, so they taught under the open sky. Yet they cheerfully faced the hard trials in an atmosphere of enthusiasm and optimism. Zahir Husain, vice-chancellor from 1926 to 1948, remembered those years of deprivation as "days of joy".

In the 1930s, the All-India Muslim League staked its political claims as the sole spokesman of the Muslim community. Muhammad Mudjib, the historian at Jamia, sector" (Mubecel Kiray, Ögülüşmeyecek Kendi, Izmir'de i̇z hayatının yapısı, Ankara 1972). By 1980, Izmir had developed into a city of over half a million inhabitants, surrounded by highly urbanised suburbs. Apart from the beginnings of an investment goods industry, factories processing tobacco, olives and fruits continue to be a local specialty, and tourism also plays an important role in the urban economy. With two universities, the city also has become one of the educational centres of Turkey.

Bibliography: Given in the article. See also J.H. Mordtmann, Ef art. s.v. (Suraya Faroqui) 'IZZET HÖLÖ (AL-)Abid, Ahmad b. Muhýf٢-Din Abu 1-Hawl b. 'Umar b. 'Abd al-Kadîr, popularly known as 'ARAB IZZET Pasqa (1272-1343/1853-1924), late Ottoman statesman and close counselor of Sultan 'Abd al-Hamîd II [q.v.].

Born in Damascus (hence his nickname "Arab") as the son of a wealthy local notable, Holö Pasqa, he was educated in his hometown and in Beirut and became proficient in Turkish and French. Counted among the reformers, he edited a weekly in Arabic and Turkish, named Demâşq. Moving to Istanbul, he eventually joined the ranks of the chamberlains (karende) of 'Abd al-Hamîd and then became a Second Secretary (kândî-Ê kântî) of the Mâtyan [q.v.]. He gained great influence at court and was finally appointed Vizier. In May 1900 he was made head of the supervisory committee for the Hijâz Railway [q.v.]. From gifts of the Sultan and from kickbacks paid to him by foreign companies he acquired great wealth, and became the object of public outrage. The then famous satirist Şâhir Eşref (1847-1912), in a lampoon against 'Abd al-Hamîd, wrote: Besmele gûdh evlenen dreyan gûbî, Korkuyarsun "hot" dese bir efneki. Padiyâhâm öyle alcaksın ki sen Izzet-i nefân 'Arab Izzet gûbî! Like Satan, when he hears the bismillâh, you panic, if a foreigner says "hum". My Lord, you are so lowly that your soul's nobility is like unto 'Arab Izzet.

At the outbreak of the 1908 revolution he fled to London and thenceforward lived outside his own country, mainly in England, Switzerland and France. He died in Egypt, where he had gone for medical treatment, and was buried in Damascus.

told Muhammad Idbāl (1876-1938 [q.v.]), the poet of
Indian Islam, that his plea for a Muslim state in
north-western India was opposed to their cherished
ideal that Muslims live and work with non-Muslims
in order to realise common ideals of citizenship. In
March 1940, Muhammad 'Ali Djinah (1876-1948 [q.v.])
put forward the “two-nation” theory to legitimise his
demand for a Muslim homeland. Unlike the university
at 'Aligarh, which turned into an “arsenal of Muslim
India”, the “two-nation” theory found no supporters
in the Jamia brāndī (fraternity).

An institution with a nationalist record could not
escape the fury of the angry mobs that rioted in
independent India’s capital after the country’s Partition.
The Jamia’s property was looted and destroyed. But
it lived through this experience to provide the healing
touch and was, in the opinion of Gandhi, “like
an oasis in the Sahara”.

The university, in search of moral and political support
after independence in August 1947, could have
turned into a quasi-religious or quasi-communal insti-
tution, but this did not happen, and the Jamia’s his-
toric character has remained unchanged. “I look on
this,” claimed Mughīb, “as a secular school.”

In the mid-1920s, the total enrolment of the schools
and colleges was about eighty, with 25 to 30 teachers.
Today, the Jamia is a central university, admin-
istered by an act of Parliament. Over 5,600 students
receive education and training in social, physical and
natural sciences, humanities, education, law, engineer-
ing and mass communication. From a few thousand
ruppes in the 1930s, its maintenance budget, in 2000-1,
is approximately 36.11 crores.

KABBAMI — KABBANI

Hanafi, and president of the Consultative Council. The second held various offices with the reformist ministers before going into exile, after Khayr al-Din’s fall, at Istanbul and then Cairo, where he instigated a reformist newspaper, *al-’Itim*, and a reform movement.

If Muhammad Kabbadi is considered as a precursor of reform in Tunisia, this stems mainly from his role in the education of a political and religious elite to which he remained close and which put into action the reform of institutions in 19th-century Tunisia. At the Bardo School, as at the Zaytuna, he inculcated those reformist ideas which had begun to be known within the Muslim world at the end of the 18th century. This spirit, which Kabbadi defended in his writings and in his official duties, rested on the will to reconcile the Arab-Islamic heritage with the ideas and knowledge that had brought about progress in Europe.

Not all of his work has come down to us, and what he wrote before 1842 is essentially lost. Even of his later works, at least a commentary on the reform of institutions in 19th-century Tunisia. At the Bardo School, as at the Zaytuna, he inculcated those reformist ideas which had begun to be known within the Muslim world at the end of the 18th century. This spirit, which Kabbadi defended in his writings and in his official duties, rested on the will to reconcile the Arab-Islamic heritage with the ideas and knowledge that had brought about progress in Europe.

His political ideas are especially to be found in his eulogies of the three Beys whom he knew between 1842 and 1871, and of the viziers and influential figures of the same period, as also in his poems hailing such events as the promulgation of the *Fun‘t al-am‘arat al-mamlaka al-tunisiyya* in 1852. His later works, at least a commentary on the reform of institutions in 19th-century Tunisia. of some twenty poems by singers such as Umm Kulthūm [q.v.]. Fayrūz, 'Abd al-Halīm Hāfīz (d. 1977), Mādjīda al-Rūmī (b. 1957), Kāẓīm as-Sāhir, Nādīr as-Saghira and others have also contributed. His prolific works include statements on poetry, and the autobiographical Kīsīyāt maṣlaʾ al-kāmi‘a (1973) and Min awdīkī l-nāqūshā: sīru ḍhāḥiyatū ṭābī‘a (2000; not seen).

Kabbānī’s contacts with Spain (with a professional stay at the Syrian embassy from 1963 till 1966) have contributed to a focus on Andalusian themes, and several poems have been translated into Spanish, notably three volumes by P. Martínez Montávez, Poemas amorosos árabes, Madrid 1965, 1988; Poemas políticos, Madrid 1973; ‘Ādī, amor, Madrid 1987. An Italian collection Poesie, tr. by G. C�novā et al., was published in Rome 1976. Volumes in English are Arabian love poems, tr. by F. Frangieh and C.R. Brown, Colorado Springs 1992, with the original texts in the surveys of modern Arabic poetry.

Bibliography: I. Works. The collected works (including poems, interviews and commentaries) have been published in nine volumes, Beirut 1997. They lack a common name, and are entitled al-dīn al-ḥāyya al-kāmi‘a (vols. i, ii, iv and ix); al-dīn al-sā‘iya al-kāmi‘a (vols. iii and vi); and al-dīn al-nātiṭiya al-kāmi‘a (vols. vii and viii) [earlier editions in eight volumes].

KABĪR, North Indian mystic and poet (d. ca. 1448). Although Kabir is regarded as one of the most influential saint-poets of mediaeval Northern India, there is very little authentic information concerning his life. We can reliably state that he was born in Benares to a family of low-caste Muslim weavers called gujālāhs, probably in the opening years of the 9th/15th century. Beyond this, various hagiographies of Kabir, depending on the authors’ sectarian affiliations, make competing claims that he was a Muslim Shī‘a, a Hindu with liberal Vaisnava leanings or a champion of Hindu-Muslim unity who rejected institutionalised forms of both Islam and Hinduism. Kabir’s fame is based on the numerous couplets (doḥān) and songs (pādas) attributed to him and called kabhrānīs, or “words of Kabir”. Written in a caustic colloquial style in a mediaeval Hindi dialect and sung in folk melodies, these compositions have been an integral part of oral religious literature in North India, being recited by Muslims and Hindus alike. Selections of Kabir’s verses have been incorporated into the Adī granth, the scripture of the Sikh community, as well as the Pāṇḍīṇa, the hymnal of the Dādipañtha sect. The Kabir Panthi, “the followers of the path of Kabir”, have a compilation of his poetry called the Bījak. Since Kabir’s verses, like most mediaeval Indian devotional poetry, were initially transmitted orally and recorded in writing only later, there are serious doubts concerning the authenticity of much of the corpus attributed to him.

Kabir, who was influenced by various religious currents including forms of Śiṣūm and tantric yoga expounded by the Nāth yogis, is regarded as the pioneer poet of the saṅkh movement that swept across North India in the 15th century. The saṅks, or poet-saints, were participants in a grassroots religious reformation that rejected the worship of multiple deities in favour of an esoteric form of religious practice whose goal was union with the one attributeless (nirguna) God. They also questioned the efficacy of religious rituals and.validity of scriptural authority. Expressing themselves in vernacular poems, the saṅks conceived of the human-divine relationship in terms of śivāna, or yearning, longing love. Union with the Divine could be attained by anyone, regardless of caste, through meditation on the divine name and with the guidance of a guru. In poems attributed to him, Kabir is particularly harsh in his attacks on the representatives of institutionalised religion, the Hindu bhāṣān and the Muslim mālūl or kāfī, whose bookish learning and religious rituals he considered entirely useless in the spiritual quest. After his death, some of Kabir’s disciples organised themselves into a sect, the Kabir Panth. Notwithstanding Kabir’s anti-institutional and anti-ritualistic stance, at the sect’s central monastery in Benares, both monks and lay people engage in a ritualised recitation of Kabir’s poems and make offerings to an image of their master.

KABIRA [pl. kabhrān], a term of Islamic theology meaning “grave [sin]”, occurring in Kur’ān, 112, 42/39, 138/143 and passim. It was the stimulus for much discussion amongst theologians and sectaries like the Kāharījites [q.v.] on what constituted a grave sin and how committing one affected a man’s salvation. For a discussion, see KABIR.
archives, the most used ones, are far from having been fully scrutinised. In the Ottoman archives, only the surface has been scratched, chiefly due to the efforts of French scholars (A. Bennigsen, Ch. Lemeret, Quequet, V. Vannevent et al.). The rich local collections, or rather those that have survived war, deportations, confiscation and deliberate destruction, have only begun to be intensively collected, catalogued and studied in the 1980s, mainly by Dagestani scholars (A. Shikhsaidov, Kh. Omarov, G. Orazayev et al.). Their works, published mainly locally, are not easily obtainable, however. The result is that most of the information available on this period is from the viewpoint of the neighbouring Great Powers (above all, Russia) competing for mastery over the Caucasus.

Yet even the scant information at our disposal points to the importance of the internal processes that occurred during these three centuries. To start with, this seems to be the time when the Northern Caucasus was converted to Islam. In the 16th and 17th centuries, the Adighe peoples (known collectively as Circassians) and the Kabartay (see Karabars) of the north-western and central Caucasus respectively, were Islamised by the Crimean Tatars and the Ottomans. In the mountainous west, the Adighe peoples as well as the Gumiaks were written down, usually in their local idiom (for an example in Russian tr., see Kh.-M.O. Khashaev (ed.). Rukopisnaya i pečatnaya kniga v Dagestane, Moscow and Leningrad, 1960, vi, 574-84).

Nevertheless, the daily life of the Muslims in Dagestan, as all over the Northern Caucasus, continued to be regulated by the local 'uda (pronounced 'udat) rather than by the 'ajam ('ajam). On some occasions the local 'udas were written down, usually in the local idiom (for an example in Russian tr., see Kh.-M.O. Khashaev (ed.). Rukopisnaya i pečatnaya kniga v Dagestane, Moscow and Leningrad, 1960, vi, 574-84).

The Ottoman overlordship was recognised over the western part of Georgia (i.e. the kingdom of Imereti and its "vassal" principalities of Guri, Svaneti and Abkhazia), while Saqafid overlordship was recognised over its eastern parts (the kingdom of Kartli and Kakheti), and in present-day Armenia (Artsvan and Nakhchivan). Adjara, Abhydjan (Artsvan, annexed in 1536) and the southernmost corner of Dagestan (Derbend, annexed in 1509). This line of division would remain in force throughout the period with two notable exceptions (1578-1602 and 1722-35), when the Ottomans took advantage on the first occasion of internal struggles within the Saqafid house, and on the second occasion, of the disintegration of Saqafid power temporarily to seize control over the entire Caucasus.

North of the main mountain range, the Sunni Muslims habitually recognised the Ottoman Sultan's authority. This, however, was far from constituting even a shadowy Ottoman rule. In the west and centre, the Ottomans exercised a very limited, indirect and ineffective control over the Circassians, mainly via the Crimean Khans. In the east, in the various polities of Dagestan (remote, cut off and claimed by the Saqafids and their successors), the Ottomans usually enjoyed nothing more substantial than sympathy. Nevertheless, their Sunni identity added to the obstinate resistance by some Dagestani polities to the rashid, i.e. the Shi'ite Persians. Several fragments on the margins of manuscripts testifying of such acts of resistance in different places and times were published by Shikhsaidov in 1991 (in Russian tr., in A.A. Isayev (ed.). Rukopisnaya i pečatnaya kniga v Dagestane,
Makhazadzala 1991, 128-9. On many occasions the mountain dwellers managed to beat the invading armies, the most resounding defeat being that dealt in 1744 to Nadir Shah’s troops by the joint forces of the confederation of ‘Askhāja and other qanāts. The futility of the attempts to conquer the mountains gave rise to a Persian proverb to the effect that "when Allah wants to punish a Shah, He inculcates into his head the idea of campaigning in Dagestan."

The collapse of Nadir Shah’s empire after his assassination in 1747 was not followed by any Ottoman attempts to seize the area. This granted the kings of eastern Georgia half a century of freedom, and allowed for de facto independent khānates to be established in Derbend, Kuba, Baku, Shkil, Shifian, Gandja, Karabaghi, Erivan, Nakhchivan and Tbilisi. The resulting vacuum on their southern borders permitted different Dagestani communities and rulers to expand and raid the lowlands, mainly into eastern Georgia. The boldest raids were carried out by ‘Umar (pronounced ‘Ummah), Khān of Avastanāt (1774-1801). Once the Kadjars started to bring together the lands of the Safawids, they turned towards the Caucasus. In 1795, after the local rulers had ignored a series of demands to acknowledge his suzerainty, Ağha Khān Muhammad, the founder of the dynasty, led a campaign into Trans-Caucasia, which culminated in the sack of Tiflis. However, the Kadjārs’ attempts to incorporate the Caucasus into their empire met a new obstacle in the shape of Imperial Russia.

Muscovite Russia had shown interest in the affairs of the Caucasus already in the second half of the 16th century. Having seized control over the entire Terek (Volga) basin by conquering the khānates of Kazan and Astrakhan [q.v.] (1552 and 1556, respectively), Tsar Ivan IV (“the Terrible”) tried immediately to expand south into the Caucasus. For that purpose he pursued three goals: (1) the settlement of Cossacks on the Terek river; (2) alliances with local chiefs in the area, the most important of which was his marriage in 1561 to the daughter of a Kabartay prince; and (3) an attempt to help his coreligionists, the kings of Georgia, who had appealed for help to the new Orthodox power in the north. The Ottomans, though unsuccessful in capturing Astrakhan (1569), were nevertheless strong enough to thwart the attempts by Ivan as well as by his two successors Feodor (in 1594) and Boris Godunov (in 1604).

Weakened by the “time of troubles” of the early 17th century, Russia was deterred for more than a century and a half by the might of both the Ottomans and the Safawids from any initiatives in that direction. Nevertheless, additional Cossacks settled on the Terek and were incorporated by Peter I (“the Great”) into a continuous line of defence facing the eastern Caucasus. It was he also who ventured a campaign to the south. In 1722, following the Aghān invasion of Persia he marched with an army and navy along the western and southern shores of the Caspian as far as Astrabād. Yet he did not dare to challenge the Ottomans by advancing inland beyond the littoral, and the campaign achieved nothing tangible. Only Catherine II (“the Great”) successfully realized Russia’s advance southwards with a double-pronged policy.

In the Northern Caucasus, the erection of the fortress of Mordzok (1765) was the immediate cause of the 1768-74 war with the Ottomans and of a fourteen-year long struggle with the Kabartay. Following the peace of Kiucht Kaynarica [q.v.], Cossacks were settled opposite the western Caucasus and a continuous line of defence established, to be known in the 19th century as the “Caucasian Line”. These events were the trigger for the ten-year long resistance (1785-94) led by Mansūr al-Ushara [q.v.], a Cecen who assumed the title al-Imām al-Mansūr, and called on all the Muslims of the Caucasus to return to the Sūra’a and to unite against Russian encroachment. In this he provided a foretaste of the events of the 19th century.

At the same time, Catherine re-established Russian ties with the king of Kart’o-Kakheti (i.e. Georgia; see Al-kurj) and during the war of 1768-74, a Russian force crossed for the first time the Caucasus range and then operated against the Ottomans in Georgia. In 1783 the treaty of Georgievsk made Kart’o-Kakheti a Russian protectorate. A Russian force was stationed in Tiflis and a paved road, “the Georgian military highway”, was cut across the mountain range. However, the Russian force was soon withdrawn (1784), which left Kart’o-Kakheti exposed to the Kadjars while the king, confident in Russian protection, provoked the 1795 sack of Tiflis by his refusal to accept Ağha Khān Muhammad’s overlordship. The Emperor Paul, Catherine’s son and successor, was averse from involvement in the affairs of the Caucasus. Yet in 1799 he found himself obliged to protect Kart’o-Kakheti against the threats of Fath ‘Ali Shah, Ağha Khān Muhammad’s successor. Finally, on his deathbed, Giorgi XII, the last king of Kart’o-Kakheti, asked the Russian Emperor to take his kingdom under the Tsar’s protection. On 30 December 1800 N.S., Paul issued a manifesto incorporating Kart’o and Kakheti into the Russian Empire.

Alexander I, Paul’s son and successor, confirmed his father’s decision on 24 September 1801 N.S. Unlike Paul, Alexander used the annexation of Kart’o and Kakheti as the first step in Russia’s expansion into and beyond the Caucasus. Thus began the sixty-five years’ long struggle to conquer the Caucasus, known in Russian historiography as “the Caucasian War”, one that would drastically alter the political, religious, economic, social, ethnic and demographic composition of the Caucasus.

3. The period 1800 to the present day.

a. Introduction

Any attempt to furnish a coherent and objective overview of the history of the Caucasus in the modern period is hampered by the scarcity of local sources and by the inherent biases of the historical accounts generated by its colonisers, the Ottomans, Persians and Russians, who, for more than a century, were vying with one another for sovereignty over this strategically important area. The same goes for European historiography of the region, which was likewise shaped by political agendas of the European states and their colonial designs. This is especially true of the works of 19th-century British writers, both lay and academic, who viewed Russia as its principal colonial rival and Persia as its principal colonial rival and took the Ottomans as an ally against their mutual adversary. Consequently, the literature on the Caucasus has been largely shaped by the interests of those countries, and the field has been dominated by Russian scholarship, which has tended to present a one-sided view of the region's history.

In 1826, the Persian army led by the Kadjar Crown Prince 'Abbas Mirzâ [q.v.] invaded Karabakh in an attempt to regain control of Persia's former dependencies in the central Caucasus. Despite initial successes, the Persian advance was eventually repelled by the Russian army under the command of Ivan Paskievich, who led the Russians to victory over 'Abbas Mirzâ's forces at the battle of Gandja (Elizavetpol) in September 1826. In 1828, after two years of hostilities between the Russian Caucasian Corps and Persian forces throughout 1804-13 were, as a rule, favourable in outcome to the Russians. Russian victories can be attributed at least in part to the dynastic struggles within the Persian ruling elite, which weakened its ability to resist Russian encroachments on Persia's former dependencies in the region.

Russian claims to its new domains in the Caucasus and Transcaucasia were formalised by the Gulistán Treaty of 1813. This document decisively redrew the map of the Caucasus in favour of the Russian Empire. By 1826, the Persian army led by the Kadjar Crown Prince 'Abbas Mirzâ [q.v.] invaded Karabakh in an attempt to regain control of Persia's former dependencies in the central Caucasus and Transcaucasia. Despite initial successes, the Persian advance was eventually repelled by the Russian army under the command of Ivan Paskievich, who led the Russians to victory over 'Abbas Mirzâ's forces at the battle of Gandja (Elizavetpol) in September 1826. In 1828, after two years of hostilities in which the Russians scored one victory after another, Persia was forced to sign the humiliating treaty of Turkomâncây [see TÜRKMEK ĖCAY (i)]. This document all but eliminated Persia's influence in the northern Caucasus by denying it any direct contact with its potential Muslim allies in Dagestán. On the Ottoman front, in 1828-9, Russian troops penetrated as far as Erzurum [q.v.] and Adjaria (Adjaristan) and blocked the strategic Black Sea ports of Poti and Anapa [q.v.]. The Russian military successes drastically reduced the Ottoman Empire's ability to exercise its influence over the Circassian (Adyghe [see ÇERKES]) tribes of the northwestern Caucasus, which even at the height of Ottoman power were Ottoman vassals in name only. Under the treaty of Adrianople (Edirne [q.v.]) of 1829, the Ottomans...
had to cede to Russia many of their former territories along the Black Sea coast. These territorial losses deprived the Ottomans of direct access to Circassia. Countless tribes along the Black Sea coast. These territorial losses had to cede to Russia many of their former dependencies in the Caucasus under Russian rule. Appointed by Tsar Alexander I as the military governor of the Caucasus in 1816, Ermolov consistently implemented what many Russian and Western historians view as “policies of terror” toward the mountaineer communities and local principalities. His brutal treatment of his Caucasian adversaries was deliberately aimed at breaking their will to resist Russia’s rule and to cow them into submission. Granted full authority over the area by the Tsar (in the Russian sources of the age, Ermolov was often referred to as the “proconsul of the Caucasus”), his own personal memoirs of the Caucasian campaigns seem to have been consciously patterned on Caesar’s Commentaries on the Gallic Wars, reflecting his desire to emulate his illustrious predecessor. Ermolov ruled over Russia’s new colonies with an iron fist, sparing neither his new subjects, nor his own troops, nor even the Russian irregulars, known as “Cossacks”. Parallel to his often merciless “pacification” of Caucasian tribes and principalities, Ermolov embarked on a series of ambitious administrative and military reforms that sought to consolidate Russian colonial authority over the region and encourage immigration of Russian settlers (Cossacks) to the area. In some regions (e.g. Kabarda), Ermolov also implemented a sweeping judicial reform. Thus in 1822 he replaced the local Shatfa and ‘Inda’ jurisdiction with civil courts staffed by Russian colonial officials. This measure undermined the positions of the local aristocracy and sparked several riots that had to be suppressed, with its usual brutality, by the Russian Caucasus Corps.

Controlling this vast and rugged area with just 49,000 troops (of which only 40,000 maintained at least some semblance of military readiness) proved to be a great challenge to Ermolov and his chiefs of staff. Their responses to the tremendous difficulties faced by the Russian colonial enterprise amounted to sustained social engineering, such as the forced resettlement of some tribes (Osetes and Noghay Tatars (q.v.)), the brutal “pacification” of “hostile” mountaineer communities, and the imposition of corvee services on others, e.g. the Çeçen (q.v.). These measures disrupted the customs and lifestyles of the mountaineers, who retaliated by attacking Russian forts and settlements and carrying off prisoners and booty. Another source of resentment against the Russian military administration was its attempt to eliminate the widespread slave trade in the northern Caucasus. For many centuries this business had been an important source of income for many local tribes, which sold captives to Ottoman merchants. The captives were then re-sold in Ottoman slave markets. Initially, the captives to Ottoman merchants. The captives were then re-sold in Ottoman slave markets. Initially, Russian efforts to eradicate the slave trade bore only limited results. It took the Russians several decades of thorough policing and enforcement of their anti-slavery edicts finally to put an end to this practice.

The mountaineers responded to Russia’s interference in their traditional occupations with armed uprisings. They were brutally put down by the Russian Caucasus Corps. The rebels’ villages and fields were burned to the ground. The “hostile” populations were chased into the inhospitable mountains. Such punitive campaigns, however, had only a limited impact, since the villages were easily rebuilt once Russian troops had left the area. At the same time, this brutal repression against a people unaccustomed to foreign rule bred and sustained hatred towards the Russian administration among the mountaineers. Ermolov soon realised the inadequacy of his policy, and embarked on military and administrative measures aimed at consolidating Russian presence in the region. The new policy consisted in the construction of fortified defence lines. They were formed by Russian fortresses and forts connected by networks of roads. Cut through the virgin forests of Çeçenya, the roads were meant to separate “pacified” tribes and villages from those which continued to resist Russian rule. In the process, the “hostile” communities were pushed ever deeper into the barren mountains, where they faced hardship and starvation.

Throughout Ermolov’s tenure as military governor of the Caucasus, mountaineer resistance (1816-27) in the eastern and central parts of the region remained spontaneous, unorganised and localised. Sporadic insurrections against Russian rule were easily suppressed by the better-equipped and disciplined Russian troops, which made good use of their superior firepower. Despite their personal bravery and intimate knowledge of the terrain, the mountaineer levies of Dâgîştân, Kabarda, Çeçenya and Ingushetia were unable to defeat the Russians due to a lack of co-ordination and organisation. The local ruling elites were usually unable to provide leadership, since they had been either tribed by the Russians or torn by internal strife. In other cases (e.g. in Çeçenya and some “democratic” Çerkes (Adygeh) tribes of the north-western Caucasus), the mountaineer elite had not yet been formed. Such “democratic” mountaineer societies posed an especially severe problem for the Russian authorities, which preferred to deal with local nobility rather than entire communities. Furthermore, Ermolov’s cunning implementation of “divide and rule” policies led to the decimation of many ruling families, who tried to resist Russian rule, especially in Dâgîştân. Some historians of the Caucasus even argue that Ermolov, steeped in the idea of “progress” and “civilisation”, viewed the local rulers as brutal and ignorant despots, who were inherently incapable of embracing Russia’s “civilising mission” in the Caucasus. He therefore considered them irrelevant and dispensable. Whether intentional or not, Ermolov’s policies seem to have led to the considerable weakening and discrediting of the local elites, which may explain why most of the leaders of the mountaineer resistance to Russian rule in 1829-59 came from relatively humble backgrounds and relied for the most part on free peasant communities for their support. Be this as it may, it is obvious that Ermolov’s rule permanently upset the earlier balance of power in the region. His draconian measures set the mountaineer resistance movement on its feet on an unprecedented scale. The movement developed its vitality from the idea of equality of all Muslims before the Divine Law and their duty to actively resist “infidel” Russian rule. Since the majority of the subjugated tribes and communities of the northern and central Caucasus professed Islam, it was only natural that resistance to Russian domination took the form of ghazawat, which, in the local tradition, is usually referred to as ghazawat.

c. The Caucasian ghazawat and its leaders

As with many contemporary Muslim movements, the leaders of Caucasian resistance often began their
In any event, the careers of the Çeçen Şaykh Mansur Ushurma and the three Daghstani imāms of the northern Caucasus [see Şamil] unfolded according to this scenario. The extent of these leaders' affiliation with the age of myuridizm, namely, the Nakhabandiyya-Mujaddidiyya-Khididiliyya Sufi order (in the case of Ushurma there is no historical evidence of his association with any Sufi silsila, while the three imāms were at least nominally Nakhabandi Şaykhs) remains a moot point. However, many Russian and Western historians of the Caucasus continue to view myuridizm/Nakshbandi Şī‘ism as the principal vehicle and source of inspiration for the movements in question.

The events of the thirty-year war led by the three imāms of Daghstān and Çeçenya, Ḥādīdji Muḥammad (Kazi Mulla), Hamzat (Gamzat) Bek and Şamil (Şamwil) are discussed in the article Şamil and will not be detailed here. The war cost both sides dearly in casualties and material resources. Russia's initial military strategy, imported from the European theatre of war, was geared to winning victories in pitched battles through an orderly movement and deployment of large military contingents. Much value was placed by the Russian military command on besieging and capturing enemy strongholds and headquarters. Such strategic assumptions proved to be ineffective or outright counterproductive in the Caucasus, where the Russian army faced a highly mobile and elusive opponent. The headquarters of the mountaineer levies could be easily moved from one village to another without impairing their ability to effectively fight the Russians through swift night raids, ambushes, diversionary tactics, misinformation and other forms of guerrilla warfare. These tactics were honed to perfection in Daghstān and Çeçenya under the talented leadership of the Imam Şamil, who implemented it with remarkable success from 1834 to the late 1840s, when the Russians were finally compelled to reconsider their military doctrine. Nevertheless, in spite of repeated military setbacks, the Russian military command continued to cling stubbornly to the ineffective "one-blow" strategy for over ten years. Its flaws culminated in the disastrous expedition of 1845 against Şamil's headquarters at Darghi (Darghiya, in present-day Çeçenya). Led by the newly-appointed viceroy of the western Caucasus Prince Mikhail Vorontsov, the Russian expeditionary force lost almost 1,000 men killed (including three generals), almost 2,800 wounded, 179 missing in action, three guns and all its baggage, including the army war- chest.

Vorontsov realised his error and convinced Tsar Nicholas I to implement the siege strategy that was first introduced by Ermolov but had been abandoned by his successors following his removal from office in 1827. Efforts were made to construct fortifications, to build new ones and to connect them with a network of improved roads. These defence lines cut through Şamil's domains in Daghstān and Çeçenya, gradually reducing his sphere of influence and depriving him of provisions and manpower. This slow and less spectacular military strategy, which following Vorontsov's retirement in 1854 was continued by his successor, Prince Aleksandr Baryatinskiy, eventually bore fruit. Deprived of the resources to wage war against the superior Russian military machine and abandoned by the majority of his former followers, the third imām of the Caucasus surrendered to the Russians in the summer of 1859. The bloodiest episode of the Russo-Caucasian war came to an end, although armed resistance to Russian rule continued throughout the Caucasus for another decade.

c. Circassia and Muhammad Amin

Şamil's long resistance to Russian conquest had wide-ranging repercussions for the mountaineer communities and tribes throughout the Caucasus, including those areas that remained formally under Russian rule or were contested by the Russian and Ottoman empires, namely, Kabarda, Balkaria, Ossetia and the western Caucasus (Circassia, Akhkhazia, Guria, etc.). Thirty-seven Kabardian princes and nobles went over to Şamil in 1846, following his raid into Kabarda. At the same time, the majority (around 200) remained loyal to the Russians and were richly rewarded by the Russian administration for their refusal to support Şamil's movement. Throughout Şamil's imate, the Transkuban region and Circassia (Adygheya) remained, for the most part, outside his direct influence. However, news about his military successes against the Russian forces periodically reinvigorated local resistance. In 1840 four major Russian fortresses along the coast of the Black Sea were captured and destroyed by Çerkes tribes. In 1842, Şamil sent his emissary, Ḥādīdji Muḥammad, to Circassia instructing him to spread ghazawat among the Muslim populations of the western Caucasus. After Ḥādīdji Muḥammad's death in 1845, he was succeeded by Şamil's nāṭeb (military governor) named Sulaymān Efendi. On Şamil's instructions, he began to preach ghaza- wat against the Russian garrisons stationed in the area and attempted to recruit several Çerkes (Adyghe) tribes to Şamil's cause. However, Sulaymān Efendi soon fell out with Şamil and defected to the Russians.

At the end of 1848, Şamil appointed Muhammad Amin as his next nāṭeb in Circassia. The new nāṭeb, who was not familiar with local realities, soon became embroiled in a power struggle between the aristocracy and free squires (fokoldes) of the Abadzekh, the largest Adyghe (Çerkes) tribe. After flirting for some time with the Abadzekh princes, Muhammad Amin eventually decided to throw in his lot with the peasants, promising them independence from their aristocratic masters and equality under the Şamwil law. His populist politics alienated the nobility, who turned to the Russians, hoping to retain their traditional privileges. Throughout the 1850s, Muhammad Amin was able to secure the loyalty of just one Adyghe tribe, the Abadzekh. He later extended his rule to some other Adyghe (Çerkes) communities, such as the Nalukhays and Shapsugs. Muhammad Amin modelled his administration of the nascent Çerkes (Adyghe) state on that of Şamil's imate. The lands under his jurisdiction...
were divided into a number of territorial units called *mahkama*. Each *mahkama* consisted of around 100 households. The administrative centre of the *mahkama* was located in a fortified Cerkes village (*aui*), which usually had a mosque, a court of law, a prison and a *mahkama*.* Each *mahkama* consisted of a religious officer, the *murtazik* (kadis), and a council of three Muslim judges (*köştsis*). Each Adyghe (Cerkes) household was to supply one mounted warrior (murtazik) for Muhammad Amin’s military force. The *murtazik* constituted the military foundation of Muhammad Amin’s rule. In all, Muhammad Amin’s state at its height consisted of four *mahkamas* among the Abadzekhs, one among the Shapsugs and two among the Natukhaya.

I. The Crimean War and its impact on the Caucasus

The beginning of the Crimean War in 1853 galvanised the mountaineer resistance movement on both sides of the Main Caucasian Range. In the eastern and central Caucasus, Şahmîl was preparing to invade Georgia, to cut the Russo-Georgian Military Highway and, finally, to effect a juncture with an invading Ottoman force at Tiflis. The capital of the Caucasian was expected to fall to the allied Muslim army within a few days. In the western Caucasus, Muhammad Amin and his Cerkes levies, supported by an Ottoman sea-borne expeditionary force, were bound to disrupt Russian communications and capture the lands of the Turkic-speaking Karaçay [g.e.] on the northern slopes of the Main Caucasian Range. Muhammad Amin was then to march across Kabarda and Osetia and to join Şahmîl’s forces there. In Guria (a part of present-day Georgia), which had been under Russian administrations since 1840, a large Ottoman force attacked the fortress of Shchtetelli (St. Nicholas Port) on the Black Sea and wiped out its small garrison, which consisted of a Russian detachment and pro-Russian Gurid militia.

These developments awoke the Russian administration of the Caucasian to the possibility of a powerful military coalition between the invading Ottomans and their local supporters among the Adygles. In response to the repeated pleas of his viceroy, Prince Vorontsov, Taar Nicholas I agreed to send reinforcements to the Caucasus. In the hostilities that followed, the Ottomans’ expeditionary force (the so-called Anatolian Corps) was defeated by the Russians in several pitched battles in the southern Caucasus. The Porte’s plans suffered another major setback in the harbour of Sinop in November 1853, when a Russian naval force led by Admiral Nakhimov attacked and destroyed the Ottoman fleet that was to land at Sukhjm-Kaf’e in order to join forces with the Cerkes levies. In March 1854, a joint Anglo-French naval squadron sailed into the Black Sea. Its appearance forced the Russian military command to dismount or to blow up a number of Russian fortresses along the Circassian coast (the so-called “Black Sea Defence Line”), including Anapa. Only those fortresses deemed able to withstand a prolonged siege from the sea were preserved and received fresh reinforcements.

These measures and the absence of a Russian naval presence in the Black Sea gave the Anglo-French fleet full control of sea communications off the Circassian coast. The allies tried to establish direct ties with Şahmîl and Muhammad Amin in order to better coordinate their military operations in the Caucasian theatre of war. While the Anglo-French emissaries failed to reach Şahmîl, they succeeded in securing Muhammad Amin’s commitment to participate in joint Ottoman and Anglo-French operations against the Russians. The allied plans were upset in the summer of 1854, when several Ottoman brigades were defeated by the Russian army in a series of bloody engagements. The Circassian tribes, which expected the Ottoman troops to help them in their unequal struggle against the Russians, were surprised to discover that their Ottoman allies were not prepared to offer any kind of assistance. These reversals may explain why Şefer (Safar)-bey (beg), an Adighe prince of the Natukhay tribe, whom the Ottomans had appointed as governor of Sukhum-Kaf’e with the rank of pasha, was unable to recruit enough Cerkes fighters to form a separate corps under his command. The Akhfhz, who had both Christian and Muslim princes, were divided, with the Christian part of the population favouring the Russians. The Ottoman cause was not helped by Şahmîl’s inactivity. Burdened by the internal problems of his imamate and incapable of undertaking any large-scale military operations due to the lack of resources and growing war fatigue among his followers, he was unable or unwilling to respond to the Ottoman and Anglo-French pleas for a more aggressive strategy against the Russians.

The next year (1855) of the Crimean campaign did not bring any dramatic changes to the stalemate on the Caucasian front. Şahmîl remained inactive, while neither Sefer-bey nor his allies were themselves in a position to convince the Cerkes chiefs to form a separate corps under Ottoman command. Their efforts were hampered by their personal rivalry and their dependence on mutually hostile social groups within the Cerkes (Adyghe) communities. While Sefer-bey, a Cerkes prince, represented the interests of the mountaineer aristocracy, Muhammad Amin relied on the free Cerkes peasantry, which was anxious to minimise its feudal obligations vis-à-vis the nobles. As a result, the two leaders often worked at cross-purposes. The Russian military successes in Transcaucasia, such as the capture of Kars and Bayazet, and the lack of a decisive allied victory in the Crimea, hampered the efforts of Ottoman military commanders in the western Caucasus. With the fall of Sevastopol in September 1855, Muhammad Amin attempted once again to form a Cerkes corps under his command, but to no avail. The Cerkes tribes were not ready to relinquish their independence and to join the Ottoman-led military coalition, whose ultimate goals they did not share. Besides, the plans of the European allies to mount a massive offensive against the Russian troops stationed in the Caucasus never materialised. Without the support from their European partners, the Ottomans proved unable to dislodge the Russian forces from the western Caucasus. At the same time, with no major victories to their credit, they were unable to convince their potential allies among the Cerkes tribes of the necessity to launch an all-out attack against the Russians. ‘Umar (‘Omer) Paşa’s initially successful campaign against a Russian force near Zugdidi (Georgia) in the autumn of 1855 failed to impress the Cerkes and Akhfhz enough to join his expeditionary force. In the end, the European powers’ decision not to shift the centre of hostilities from the Crimean Peninsula to the western Caucasus, which would allow the Ottomans to make decisive advances in that area, worked to Russia’s advantage. Despite the loss of its naval power in the Black Sea, Russia retained her overall strategic superiority in the region, which eventually enabled her to bring it firmly under control.

The allied plans to invade the Caucasus were shelved when the warring parties began peace negotiations.
and signed a peace treaty in Paris during the winter of 1856. The results of the Crimean War, although by no means favourable to the Russians, failed to reverse Russia’s inexorable expansion in the Caucasus and to put an end to her domination over the areas already conquered by Russian troops. If anything, it strengthened for many mountaineer leaders the futility of resistance against Russian rule. If Russia was able to withstand the attack of the greatest European and Muslim powers of the age, how could their small levies have any hope of defeating her on their own? It is even more remarkable that, despite the growing war fatigue and despondency among his supporters and the overall devastation suffered by his realm, Shamil was able to continue his struggle until August 1859, when he surrendered to the Russian forces at the village of Gunib in Dagestān.

Following the collapse of Shamil’s movement, in November 1859, Muhammad Amin started negotiations with the Russian military command of the Kuban military district. He pledged allegiance to the Russian Empire, recognised its sovereignty over his lands, and signed a peace treaty in Paris during the winter of 1856. The results of the Crimean War, although by no means favourable to the Russians, failed to put an end to her domination over the areas already conquered by Russian troops. If anything, it strengthened for many mountaineer leaders the futility of resistance against Russian rule. It is even more remarkable that, despite the growing war fatigue and despondency among his supporters and the overall devastation suffered by his realm, Shamil was able to continue his struggle until August 1859, when he surrendered to the Russian forces at the village of Gunib in Dagestān.

During and after the Crimean War, Chechen rebellions against Russian rule were encouraged and assisted by outside powers, especially Britain and France. To a lesser extent, France, the provisions of the Paris Peace Treaty seriously impaired Russia’s ability to control the Black Sea coast. In the absence of a Russian naval force to patrol the coastal area (under the Paris Treaty, Russia was allowed to have only six corvettes in the entire Black Sea area), Britain and France gained free access to the Chechen populations of the western Caucasus. Some elements within the British government accepted the advice of the British diplomat and Turkophile, David Urquhart, to assist the Chechens in establishing an independent state that would serve as a buffer between the Ottoman lands and the Russian colonial possessions in the western Caucasus.

To this end, the British and the French enlisted the help of Polish emigrants to England and France who had fled their country after the Russian crackdown against Poland’s bid for independence in 1830. In addition, there were many Polish deserters from the Russian Army stationed in the Caucasus who had joined the Chechen tribes to take an active part in anti-Russian resistance. Throughout the late 1850s and early 1860s, several Polish-led and Chechen contingents of European volunteers equipped by England and France landed on the Circassian coast in an effort to encourage the local tribes to rise against the Russians. However, they were not always well received by the Chechens, who were wary of the motives of these self-appointed supporters of their independence. Moreover, the efforts of small foreign contingents were not enough to change the overall strategic situation in the Caucasian theatre of war, which was dominated by Russian military might. Faceless Russian lagers—united by the lack of support from the local populations, all foreign contingents gradually withdrew from the western Caucasus, leaving their Chechen allies face-to-face with the Russian Empire.

h. The tragedy of mass emigration

In the early 1860s, the Russian administration of the Kuban military district (oblast’) embarked on a large-scale plan to resettle the Adyghian tribes. These measures were proposed and implemented by the military governor of the Kuban region, General Nikolai Yevdokimov (Evdokimov), who was intent on preventing the Adyghian tribes from resuming their resistance to Russian rule by undermining their economic and geopolitical foundations. Unlike Dagestān with its barren mountains, the Kuban area with its extraordinarily fertile and fertile arable lands was quite suitable for resettlement with Russian and Ukrainian peasants, who were considered to be much more “reliable” than the warlike Chechen tribes with their long history of anti-Russian warfare. Aided by Russian resistance, the Ubykhs, Bzedukhs, Abazins, Karacays, Abkhaz, and to put an end to her domination over the western Caucasus. Some members of the local Chechen and Kabardian nobility anxious to preserve their influence over their former bondsmen, the emigration turned out to be a terrible tragedy for the mountaineer peoples. The emigrants, known as muhādīrīn, came from practically every North Caucasian community: Kabardians, Čećens, Ossetes, Natukhays, Abadzekhs, Shapsugs, Ubykhs, Bzedukhs, Abazins, Karacays, Abkhaz, Temirgoys, Nogay Tatars, and a few others. During the winter and spring of 1864 alone, 257,068 individuals departed for Anatolia from seven Black Sea ports under Russian control. The refugees were motived by a variety of factors, such as the dislocation and resentment produced by the Russian resettlement schemes and oppressive rule, hopes for a happy life under friendly Muslim rule in Anatolia (inspired in part by Ottoman propaganda), and the religious rulings issued by Muslim religious authorities, which proclaimed living under infidel rule to be a grave sin for any Muslim who had other options. Once the emigrants found themselves on board ships headed for Ottoman Turkey, they were readily preyed upon by Ottoman slave-traders and greedy crews who charged their passengers by the head and therefore packed as many of them as possible into each ship.
Crammed conditions combined with various infectious diseases took a heavy toll on the human cargo. The ships, usually commercial craft not intended for carrying passengers, quickly turned into abodes of death. According to some chilling eye-witness accounts, they left hundreds of dead bodies in their wake. The statistics indicate that over 20,000 refugees perished at sea in the 19th century, and their remains were later found on the shore of the Black Sea. The survival rate was particularly low among the sick and the elderly, who made up a significant portion of the refugees, especially the sick and the elderly, who were often the victims of cholera and other infectious diseases. The makeshift refugee camps at the ports of destination, which, for the most part, were totally unprepared for such a massive influx of refugees. emphasised solicitude for the needs of one's neighbours, mutual assistance and the necessity to share one's wealth with the poor and needy. Kunta Hadji's also advocated peaceful co-existence with the Russians as long as they revered the Cecens and Ingush freedom to practice their religion and follow their customs.

As mentioned above, Kunta Hadji's pacificistic message ran counter to Shamil's ideology of armed resistance to Russian rule. Moreover, Shamil also saw in Kunta Hadji's a rival in the struggle for the loyalties of the mountaineers, a struggle that Shamil was already losing due to the growing war fatigue and despondency among his supporters in the face of Russian military superiority. Shamil is said to have summoned the young preacher to his headquarters and subjected him to a close interrogation. Upon witnessing the vocal *zikr* and dance that Kunta Hadji performed in accordance with the precepts of the Kadiiri brotherhood, Shamil allegedly declared it contrary to Nakhshbandi precepts and "orthodox" Islam. He then ordered the preacher of *zikr* (a Russified version of the Arabic *zikr*) to leave the territory of his imamate to perform a second pilgrimage and to gain a better knowledge of the intricacies of Islamic law.

Kunta Hadji reappeared in Cecnya after the collapse of Shamil's imamate in either late 1861 or early 1862. With Shamil no longer on the scene, his message received an eager hearing among the war-weary Cecens and Ingush. Accounts of Kunta Hadji's sermons indicate that, in addition to pacifism, his teaching was tinged with millenarian expectations and a doomsday mentality. He called upon his audiences to prepare for the Day of Judgement by purifying their *shahdda* [q.v.] the one hundred times a day, and to leave the territory of his imamate to perform a second pilgrimage and to gain a better knowledge of the intricacies of Islamic law.

Accounts of Kunta Hadji's sermons indicate that, in addition to pacifism, his teaching was tinged with millenarian expectations and a doomsday mentality. He called upon his audiences to prepare for the Day of Judgement by purifying their *shahdda* [q.v.] the one hundred times a day, and to leave the territory of his imamate to perform a second pilgrimage and to gain a better knowledge of the intricacies of Islamic law.

Kunta Hadji's supporters, ascribe to him a number of miracles that allegedly demonstrated the superiority of his spiritual teaching over the dry scholasticism of his detractors.

In early January 1863, after some hesitation, the Russian authorities decided to put an end to Kunta Hadji's preaching. On the orders of the viceroy of the Caucasus, the Grand Duke Mikhail Romanov, Kunta Hadji and fourteen of his closest followers and *vakils*, including his brother Mowsar, were arrested and sent to the Russian city of Novozerkassk. Several months later, he was separated from his companions and exiled to the town of Ustuzno in the Novgorod province of northern Russia. There he spent the rest of his days in misery under police surveillance. Throughout his exile he balanced on the brink of starvation, as his daily six kopeks' allowance was barely enough to buy a piece of bread. The Russian authorities ignored his repeated requests for an increase in allowance; his letters with pleas for help addressed to his wife and family were intercepted by the Russian secret police and never reached their destination. In any event, by that time, his wife and other members of his family had already emigrated to Anatolia with thousands of other *muhadżir*un. Kunta Hadji died around 1867, his health undermined by a life of deprivation.

Kunta Hadji's arrest in early 1863 triggered a rebellion of his followers that became known as "The Battle of Daggers" (Rus. *kizal'nyi boi*). On 18 January 1863, a group of 3,000 to 4,000 of Kunta Hadji's followers, armed only with daggers, sabres and sticks, charged against a Russian detachment near the Cecen village of Shali. As they found themselves within the firing distance of the Russian troops, dancing and singing Kadiiri litanies, they were mowed down by Russian fire. The "*zikr* army" dispersed, leaving behind some 150 dead, including several women dressed as men. The site of the Battle of Daggers near Shali has become one of Cecnya's most sacred places, along with the grave of Kunta Hadji's mother at the village of Guní, in the Vedan district of Cecnya. It is said that Kunta Hadji's *nāʾib* Myačik-Mulla had persuaded the attackers that their *usuli* would miraculously protect them from Russian bullets and cannon-fire. Following the massacre, the Russian administration arrested and exiled to Russia many members of the *zikr* movement. Some of them managed to escape and became *abreks* (that is, bandits of honour, who vowed to fight the Russians to the death),

Russian sources claim that, despite its pacificist message, some of Shamil's former fighters among the Cecens came to see Kunta Hadji's teaching as a new version of Shamil's *ghazawī* ideology. The Russian authorities were to launch the first any popular religious teaching that called mobilise the mountaineers for a certain political cause, encouraged renowned local scholars, such as 'Abd al-Kadiî Khordae and Mustafa 'Abdullaie, to condemn *zikr* as being contrary to the *Sharfa*. In particular, the scholars denounced Kunta Hadji's loud *zikr* techniques and musical instruments that induced ecstatic states in the participants.

They also pointed out that Kunta Hadji had no scholarly qualifications to substantiate his claims to the spiritual leadership of the Cecens and Ingush. Kunta Hadji responded with his usual humility. He readily acknowledged the authority of his learned critics as interpreters of the outward aspects of the Islamic revelation. However, he presented himself as an exponent of its true essence, which was hidden from the majority of believers. Later accounts, circulated by Kunta Hadji's supporters, ascribe to him a number of miracles that allegedly demonstrated the superiority of his spiritual teaching over the dry scholasticism of his detractors.
In May 1865, a Ccčen shepherd of the Kharačoi anl named Taza Ekmirža(ev) proclaimed himself a new imām and attempted to raise the population of a mountainous part of Čecnja known as Ikererja. Taza claimed to have performed a hajj to Mecca (mawlāq [q.v.]), during which God himself had ordained him as the new imām of Čecnja in the presence of the Prophet and Shaykh Kunta Hāḏḏjī. Taza’s claims were endorsed by a number of former followers of Kunta Hāḏḏjī, especially Myaqič-Mulla. The Russian administration reacted strongly by sending three infantry detachments, led by Colonel Goloćačev, against the rebels. Fearing Russian reprisals, the Čecnja population of Ikererja seized Taza and his closest supporters and handed them over to the Russian command. Taza was convicted, sentenced to 12 years of hard labour and sent to Siberia. The spring of 1865 witnessed a massive exodus of the Muslim population, including many of Kunta Hāḏḏjī’s former supporters, from Čecnja and Inguşetiya to Ottoman Turkey. Scared by the rumours of impending forced resettlement and conversion to Christianity, some 23,000 Čccens boarded Ottoman ships bound for Anatolia. Of these, around 2,100 individuals later returned to the Caucasus, bringing with them stories of hardship and deprivation. These stories stemmed the tide of refugees, although some families continued to emigrate to the Dīr al-islām in the decades leading up to the Russian Revolution of 1917.

j. The Russo-Ottoman War of 1877-8 and beyond

The dhikr movement, now effectively banned by the Russian authorities, was reduced to a semi-clandestine existence. To protect its leaders from Russian persecutions, the dhikr claiming descent from Kunta Hāḏḏjī and his lieutenants grew extremely secretive and fraticious. In 1877-8, some of their members took an active part in the rebellion of ‘Alī-šek Hāḏḏjī Aldanov, during which, for the first time, the Kādirīs fought side by side with the members of the Nakshbandī tariqa of Dāḡhīštān led by Hāḏḏjī Muḥammad of Sogratī (Thughūrī). His father, ‘Abd al-Rahmān al-Thughūrī (d. 1882), also took an active part in the rebellion. A renowned scholar, ‘Abd al-Rahmān was considered to be the chief Nakshbandī shaykh of Dāḡhīštān and Čecnja after the emigration to the Ottoman realm of Šāmīl’s spiritual preceptor, Dīmāl al-Dīn al-Ghāzī Ghumukī. After the followers of Shaykh Muḥammad Hāḏḏjī proclaimed him imām of Dāḡhīštān and Čecnja, he began to send his nāḥiās and wādikhs to various Dāḡhīštān communities, inviting them to fight the Russians in the name of “freedom and Sharrā’. The revolt was triggered in part by the Russian policy aimed at limiting drastically the jurisdiction of the Sharrā and replacing it with the customary law (‘Idāt [q.v.]). This fact explains the large number of religious leaders among the rebels. Another important motive of the rebellion was Ottoman propaganda, which predicted an impending victory of the Ottoman army in the Caucasus and the Balkans. Some of the inflammatory flyers that circulated among the mountain communities were signed by Šāmīl’s second son, Ghāzī Muḥammad, now a general of the Ottoman army. The rebellion lasted for a whole year, until it was finally quashed by a Russian military force led by General Sovstitov.

Following the suppression of ‘Alī-šek Aldanov’s movement, the abolition of Hāḏḏjī Muḥammad’s imāmate and the execution of twenty-eight of his leaders by the Russian military administration, their surviving supporters went underground. The early 1880s witnessed the emergence of three principal branches (known locally as wādiks) of the Kādirīiya under the leadership of Bamat-Gīrey (Bamatgīrī) Hāḏḏjī Mitāev and Cīm-Mīrzā in Čecnja and of Batalhāḏḏjī Bēlıkhorī(ev) in Inguşetiya. Their influence on the mountain communities was of great concern for the Russian administration, which suspected the leadership of the new brotherhoods of trying to create an alternative power structure completely outside Russian control. Continual Russian surveillance and persecutions turned the brotherhoods into secret societies, whose members often practiced endogamy and were suspicious of outsiders. This is especially true of the Batalhāḏḏjī wādik, which was characterised by particularly strict discipline and fear of outsiders. Each male member of this brotherhood carried a long dagger, which he did not hesitate to use to protect his honour or to retaliate against any attack on the honour of his wādik. Each of the three wādiks that emerged from the Kunta Hāḏḏjī movement practiced a distinctive type of dhikr. Thus the members of the Bamat-Gīrey wādik are known for their high jumps (hence their Russian sobriquet, pryguny “jumpers”); the Batalhāḏḏjī dhikr is distinguished by the intensive clapping of hands, while the Cīm-Mīrzā brotherhood is characterised by the use of drums (hence their Russian name harkashdikhs “drummers”). Many members of the abek movement, including the famous Čccen “bandit of honour” Zelimkhan, were associated with one or the other wādik. Consequently, Russian attempts to crack down on the abeks were often accompanied by persecutions against the Kunta Hāḏḏjī wādiks. Thus in 1911, the Shaykhs of the three Kunta Hāḏḏjī wādiks, Bamat-Gīrey, Batalhāḏḏjī and Cīm-Mīrzā, together with their closest followers (thirty in all) were arrested and exiled to Kaluga.

These persecutions and the dire economic conditions in Čecnja and Inguşetiya, which were suffering from chronic food shortages, triggered a new wave of emigration. In 1913 alone, some 1,000 Čccen families left their homeland for Anatolia in search of a better life. Paradoxically, similarly dire economic conditions in neighbouring Dāḡhīštān did not prevent it from retaining its position as the major centre of Islamic learning and literacy in the northern Caucasus. In many areas of Dāḡhīštān, even after the Russian conquest, Arabic retained the principal language of administration and correspondence among isolated mountain communities, whose multilingual inhabitants continued to use it as a lingua franca up until the late 1920s-early 1930s, when it was finally supplanted by Russian. Before the Russian Revolution there were, according to different estimates, from 800 to 2,000 Kurman schools in Dāḡhīštān alone, enrolling around 40,000 students. At the beginning of the 20th century, Dāḡhīštān boasted five printing presses, including the Mavraev Publishing House at Temfr-Khanshūrā (Makhačkal’ [q.v.]), which specialised in Arabic books. It also produced books in major Dāḡhīštān languages: Avar, Dargān, Kumuk and Luk [q.v.]. In 1911 alone, it published 256 titles in these languages.

The strong position of Islamic learning in Dāḡhīštān was recognised by the Russian administration, which prohibited Russian Orthodox missionaries from proselytising in the area. The powerful local popular uprising against the local Muslim population, Russian attempts to replace local religiously-based education with Russian schools had only limited success. The so-called “new method” gymnasia and technical schools in the urban centres of Dāḡhīštān, Čecnja and Ossetia were dominated by non-native, Russian-speaking students and faculty. At the same time, the last decade of the 19th
century and first decade of the 20th century witnessed the steady growth of a small but active Russian-educated intelligentsia among the Caucasian ethnicities, which became an important vehicle in spreading Russian culture among their respective ethnic groups. Overall, however, the literacy level among the mountaineers remained relatively low throughout the Caucasus. The Russian census of 1897 shows Dagestan to be in the lead with 9.2%, followed by Adygeya (7%), Karačay (4.6%), Kabarda (3.2%), and Balkariya (1.4%).

k. The Caucasus on the eve of the Russian Revolution

Following the discovery of commercial amounts of oil in some areas of Cecnua in 1894, the region underwent a rapid economic and social transformation and by 1910 had become a major centre of oil production in the Caucasus, second only to Bakú. Radical changes in the social and economic landscape of the region were underway throughout the first decade of the 20th century, as Cecnua and its neighbours were going through a rapid economic and social transformation and by 1910 had become a major centre of oil production in the Caucasus, second only to Bakú. Radical changes in the social and economic landscape of the region were underway throughout the first decade of the 20th century, as Cecnua and its neighbours were becoming increasingly integrated into the world economy. This process is attested by the emergence of a number of local companies with links to major European and Russian entrepreneurs and banks. They proved especially prominent, especially in Cecnua and Ossetia. While the majority of the mountaineers worked in the oil industry and the construction of the railways, many local peasants lost their property as a result of widespread land speculation. Several newly-built railways linked central Russia to the major urban centres of the Caucasus—Ekaterinodar, Vladikavkaz, Novorossisk (former Saduj-Kal'e), Stavropol' and Bakú. These cities soon became centres of anti-government agitation spearheaded by, for the most part, Russian revolutionary intelligentsia and Russian-speaking industrial and railway workers. While the majority of the mountaineers from the northwestern and central Caucasus did not benefit from these developments (in fact, due to widespread land speculation, many local peasants lost their property and were forced to migrate to the rapidly-growing cities), some members of the Cerkos, Cecen and Ingush elites, including some wealthy leaders of Süfí wonds, profited from this economic boom. The growing economic inequality and abiding hostility between the Russian settlers (Cossacks) and the mountaineers fuelled rural unrest, especially in Cecnua and Ossetia. As usual, the Russian administration resorted to the tactic of deportation and exile to Russia and Siberia of real or imaginary “troublemakers”. Among those deported from Cecnua and Ingushetia in the first decade of the 20th century were shykhos of the Nakshbandiya (e.g. Abd-al-'Aziz Shaptukaev, also known as Dokku Shakyh and Deni Arsanov, and wakifs of the local Kádirí wonds, Batalhadjdi Belkhoroev, Baminigrey-Hadjidi and their closest followers. The Russian revolution of 1905-6 galvanised local resistance movements, which were driven in part by the forced Russification of the rural population and the growth of the number of Russian settlers and landlords. In line with Marxist principles, the Russian Communist agitators, who, for the most part, were based in the industrial centres of the region, attempted to reach out to the mountaineer masses and to rally them to their cause. However, these attempts met with limited success among the majority of mountaineers, who remained suspicious of the goals of the agitators, many of whom espoused atheism. As a result, the revolutionary movement in the Caucasus was for the most part confined to the urban centres with a substantial Russian population. Local disturbances continued throughout the first decade of the 20th century, despite severe repression. In 1914-15, the hardships and short-

ages of World War I triggered another wave of anti-government protests in both cities and the countryside. The military defeats of Russian armies on the Western front and the wartime requisitions instituted by the Russian administration resulted in acts of sabotage and mass desertions among mountaineer recruits.

l. The Russian Revolution and civil war

The victory of the democratic revolution in Russia in February 1917 installed in the Caucasian nations a hope to finally rid themselves of the oppressive imperial rule. In the heady days after the revolution, mountaineer leaders saw their chance to secure independence from Russia. Throughout the Caucasus, there mushroomed numerous “civil committees” and “revolutionary councils”, which represented a wide spectrum of political views from “Muslim Communism” of various shades to bourgeois liberalism and parliamen
tary democracy. At the same time, many mountaineer communities remained committed to the more traditional religious values and leaders. Thus a “congress of the Cecen people” that spontaneously assembled in Grozny in March 1917 demanded the reinstatement of the Sharia as the law of the land and the creation of the post of the chief mujtih of the Terek aqil, a post widely seen as a rival institution. Such demands were actively supported by local scholars, many of whom were leaders of the Cecen Kádirí wonds and the Nakshbandiya, namely Sugaii-Mullah, 'Ali Mitaev, Deni Arsanov and ‘Abd al-Wahhab Hadjidi. The spiritual authority and economic power (the individuals just mentioned were wealthy landowners and successful entrepreneurs) wielded by such traditional religious authorities made them indispensable for the new crop of local politicians, who represented the interests of the nascent mountaineer bourgeoisie. Thus the famous Cecen oil tycoon and politician ‘Abd al-Majidjá Amyrev was anxious to secure the support of the influential Süfí shykh Yusuf Hadjidi and Deni Arsanov. On 1 May 1917, the “First Congress of the Mountain Peoples” was convened at Vladikavkaz (North Ossetia). Presided over by the Balkar intellec
tual Buniyat Shakhanov, it lasted for ten days. Of its 400 participants many were authoritative religious scholars and Süfí wáqifs, namely, Deni Arsanov and Sugaii-Mullah Gaysumov from Cecnua, Uzun Hadjidi and Nadjin al-Din Efendi Gotsinskii from Dagestan, Hamzat Hadjidi Uruvos from Karačay, etc. The Congress called for the formation of the Union of the Mountain Peoples of the Caucasus, which, in turn, was supposed to be part of a larger political structure called the “All-Caucasus Muslim Union”. The resolutions of the Congress included a demand for the establishment of the office of Shaykh al-kilám at the government of the Russian Federation, who would preside over a consultative council of six representa
tive of the three major schools of law on the territory of the former Russian Empire, namely, Shahí', Hanafi and Dja'fari (Shí'). Another resolution called for the creation of an academy of Sharia sciences at Vladikavkaz and the declaration of the Sharia as the only law of the land. In June 1917, the famous Muslim scholar and Naqshbandi Shaykh of Dagestan, Uzun Hadjidi, arrived in Cecnua. He had already acquired a reputation there for piety and clairvoyance during his earlier sojourn at the Cecen village of Shatoi, whose inhabitants had given him shelter from the persecution of the Russian military police shortly before the Russian Revolution. At a meeting of the inhabitants of the Shatoi district, Uzun Hadjidi declared Nadjin al-Din...
Gotsinski, a respected scholar of liberal leanings and son of a nādīb of Imām Şamil, as imām of Cēcnya and Daghistan. The shaykh confirmed his nomination by a display of his miraculous powers. According to some "eye-witness" accounts, he performed his prayer on his felù (boat) which he had spread in the middle of lake Eyzenn-Am.

In September 1917, the Second Congress of the Mountain Peoples was assembled at Andy, on the border between Daghistan and Cēcnya. It attracted some 20,000 participants from all over the Caucasus. In addition to traditional religious and political leaders and members of the nascent mountaineer bourgeoisie, the Congress was attended by representatives of leftist political parties, including the Bolsheviks, and a number of political emissaries from the Provisional Government of Russia. Another congress took place at Temir-Khān-Shūrā, in Daghistan. Its participants ignored Uzun Hāждjf's appointment of Gotsinski as imām of Daghistan and Cēcnya. Instead, they bestowed upon him the title of chelī muftī, which carried less political authority. This event upset Uzun Hāждjf, since it nullified his earlier appointment of Gotsinski as imām. Upon hearing the news, Uzun Hāждjf withdrew from Temir-Khān-Shūrā together with some 10,000 of his supporters. Uzun Hāждjf's departure reflected his frustration with the growing influence of leftist, "socialist" groups on the events in Daghistan and Cēcnya and their attempts to seize the initiative from the traditional mountaineer leadership and to use it to their advantage. Gotsinski's authority was drastically reduced when a mass meeting of Daghistani villagers (apparently orchestrated by the opponents of Gotsinski) named the Nakshbandi shaykh 'Ali Hāждjf of Akso—a village in the Dargin region of Daghistan—as the second muftī.

Similar tensions between various tribal, ethnic and political factions, often working at cross-purposes, were in evidence in other areas of the northern Caucasus. Thus at a meeting of the Cēcēn National Council, the murāds of the Nakshbandi shaykh Deni Arsanov attacked and beat up the Council's chairman Ahmad-Khān Mutuğhev. As a result, Arsanov became chairman "by default". The breakdown of centralised authority resulted in chaos and political assassinations, which had begun shortly after the February revolution of 1917 and which continued uninterrupted throughout the rest of the year.

Against this background, the long-standing animosity between the Russian and Ukrainian Cossacks and the Cēcēns burst into the open, leading to a tit-for-tat warfare between the two groups. Several Cēcēn and Cossack settlements were plundered and put to the torch. In the course of these hostilities, a Cossack detachment murdered shaykh Deni Arsanov, along with his 35 murāds, after he had attempted to broker a peace agreement between the warring parties. This tragic episode led to a further escalation of violence. In December 1917 the members of the Cēcēn National Council were forced to flee from Grozny, which had fallen into the hands of revolutionary workers and soldiers, most of whom were of Russian or Ukrainian backgrounds. This event led to the isolation of the capital from the rest of the country and the emergence of two parallel power structures, the Russian-dominated Sowet (councils of representatives of workers and soldiers) and the one which was controlled by traditional Cēcēn leaders, such as shaykh 'Ali Mītaev and the former chairman of the Cēcēn National Council, Ahmad-Khān Mutuğhev, both of whom were affiliated with different branches of the Kunta Hāждjf tartūk. Into this complex and near-chaotic political landscape came former officers of the "Wild Division" of the Tsarist army, who tried to form a political alliance with the traditional Cēcēn leaders against the Bolsheviks in Grozny.

The situation grew even further confused after the collapse in late October 1917 of the Provisional Government of Russia and the seizure of power in the Russian capital by the Bolsheviks and their radical political allies. In the Caucasus, the power vacuum created by the change of guard in St. Petersburg (Petrograd) was filled in the early months of 1918 by a series of short-lived "unions", "congresses" and "councils", which were usually organised by ethnicity. All these political bodies proved to be extremely fractious and incapable of reaching consensus on any given proposal or policy. Under the circumstances, leftist political parties, such as the Bolsheviks, Mensheviks, and Social Revolutionaries, which had been cemented by a strict party discipline and decades of struggle against the Russian imperial government, turned out to be the only viable alternative to the authority of the traditional religious leaders of mountaineer society. Steeped in the arts of political agitation and revolutionary demagoguery, the leftist parties soon gained the upper hand in the struggle to win over the masses. Their clear and catchy political slogans, promising social and ethnic equality and an equitable distribution of land, resonated with the aspirations of the impoverished Russian and mountaineer classes. To enhance their influence even further, in January 1918, a group of representatives of the leftist political parties of the northern Caucasus agreed to form the so-called "Socialist Bloc".

After a period of political jockeying, the Bolsheviks, led by Sergey Kirov, succeeded in wresting the leadership of the Bloc from their rivals, the Mensheviks and Socialist Revolutionaries. On 4 May 1918, the leaders of the Socialist Bloc declared the creation of the Terek Peoples' Republic, with its capital in Vladikavkaz. The new republic was to be part of the Russian Federation. It included Ossetia, Cēcnya, Ingushetia, Kabarda, Balkaria, and the lands of the Kumuks and Noghay Tatars. As Russia descended ever deeper into the chaos of civil war, many mountaineer leaders began to consider the possibility of creating an independent state. In the early months of 1918, a group of politicians led by Tapa Cermoev, Vassan-Girey Džiabsig, Phemkho Kozsev and several other mountaineer leaders of a liberal slant, formed the so-called "Mountain Government" at Tiflis. On 11 May 1918, they declared an independent "Mountain Republic". The primary goal of the new state, as envisaged by its founders, was the immediate cessation of civil war on its territory and the construction of a new life on democratic principles.

This programme was, however, never implemented. Soon after the fall of the Bolshevik-dominated Terek Peoples' Republic, the country was occupied by the White Army of General Denikin. Since Denikin's political programme rested on the idea of the restoration of Russian imperial rule and revival of a "one and undivided Russia", he hurried to abolish the independent "Mountain Republic" and attacked its supporters in Kabarda and North Ossetia. When the White Army arrived in Cēcnya and Ingushetia, it unleashed a brutal punitive campaign against the local population, burning down dozens of villages and executing hundreds of their inhabitants. The protests of the Mountain Republic's leadership addressed to the Western powers, which had actively supported and
equipped Denikin, went unheeded. In the meantime, the Bolsheviks of the Terek Peoples’ Republic went underground. Many Bolshevik ministers (commissars) found refuge in the remote mountains of Ickeriya (Čećnya). From there, they directed a campaign of sabotage and agitation against the Whites. Their calls to resist the White Army and expel it from the country found an eager reception among the mountaineers, who had realised that Denikin’s victory would lead to the restoration of the oppressive Russian imperial rule over their lands. Playing on such fears, the Bolsheviks made a pact with the local religious leaders, such as the Kădirī šaykh ‘Ali Mītāev and the Nakăhbašdī elder šaykh Sugaip-Mullă, who enjoyed wide support among the mountaineer masses. The Bolsheviks did not hesitate to promise their allies, in the case of victory, full political autonomy and freedom to practice their religion and to implement the rule of the Šārī’a.

In June 1919, the popular Čecen revolutionary Aslanbek Sherīpoğlu and the Dăghestān leader Uzun Ḥājdīyī agreed to form a unified front against the occupying White Army. In September, Uzun Ḥājdīyī proclaimed himself imām and military commander (umlī) of the “North Caucasian Emirate” with the capital at Vedeno (Vedan), the Čecen village that some 80 years earlier had served as a headquarters of Shamil’s imāmate. Simultaneously, Uzun Ḥājdīyī declared a “holy war” (ghażāra) against the White legionsniers. Uzun Ḥājdīyī’s headquarters became the recruitment point of mountaineer fighters from all over the northern Caucasus, especially Kabarda, Balkaria, Ingushetia, and Dăghestān. Many volunteer detachments were led by Šūfī šaykhī, who often arrived in Venedo accompanied by their murīds. Some of them were given ministerial posts in the Emirate government. The leaders of this new state, which they classified as a “Šārī’a monarchy” (Rūs. šarhattayskaya monarkhия), declared their primary aim to be full independence from Russia under the rule of the Šārī’a. The territory of the Emirate was divided into seven provinces that were administered by Uzun Ḥājdīyī’s na’ibs. In addition, he sent his ambassadors to the neighbouring states, such as Adharbadγān, with which he maintained close ties throughout his political career.

Impressed by Uzun Ḥājdīyī’s influence on the mountaineers of different ethnic and tribal backgrounds, the Bolsheviks endeavoured to secure his support in the struggle against their common enemy, the Whites. On 4 February 1920, the Bolsheviks formed a special “committee for the restoration of Soviet rule in the Northern Caucasus” under the chairmanship of Ordžonikidze with Kirov as his chief lieutenant. They succeeded in convincing the mountaineer leadership of the necessity to join forces against the White Army. From then on, the Caucasian Red Partisans and the Fifth Red Army led by the Bolshevik commander Nikolai Gikalo fought alongside the murīds of Uzun Ḥājdīyī and of other local wīlds. Some members of the Čim Mirzā wīld of the Kunta Ḥājdīyī tărīka even decorated their sheepskin hats (pupalibas) with red bands to demonstrate their solidarity with the Bolsheviks.

In March 1920, after having suffered a series of crushing defeats at the hands of the Muslim-Bolshevik coalition, the White Army abandoned the major cities of Čećnya and Dăghestān and began to withdraw to the coast of the Caspian Sea. The city of Darband was liberated after a nineteen-day, street-by-street battle, giving the Whites no alternative but to put their entire army on ships and sail from the port of Petrovsk.

Their departure ushered in a new stage of the war, during which the former allies soon found themselves locked in a life-and-death struggle for control of the country they had just liberated. This, however, did not happen overnight, as the Soviets initially did not feel strong enough to turn against their Muslim comrades-in-arms. A cable from Vladimir Lenin addressed to the Bolshevik Revolutionary Committee (rekom) of Grozny instructed its members to respect the mountaineers’ desire for religious and political autonomy and independence. This was, however, apparently only a temporary tactical manoeuvre that was to be supplanted by a more aggressive strategy on the part of the Bolshevik party leadership, which was determined to bring the entire Caucasus under communist rule.

The death of Uzun Ḥājdīyī in May 1920 did not lead to the dissolution of his Emirate. His functions as head of a theocratic state were taken up by a number of authoritative religious leaders, such as the Šūfī šaykhī ‘Ali Mītāev, who had about 10,000 followers in Čećnya and Ingushetia. Like Uzun Ḥājdīyī, Mītāev maintained close relationships with Nadim al-Dīn Gotsinskii, who was generally recognised as the current “chief Shāhī” of the Anti-White Coalition in many parts of Dăghestān and Čećnya. They were fuelled by the highhandedness of the Red Army’s commanders and political commissars, who were ignorant of the customs, religious beliefs and social institutions of the local populations and tended to dismiss them as contrary to Communist ideology. Steeped in atheistic propaganda, they viewed the mountaineers’ attachment to the Islamic religion as a “reactionary superstition” that had to be discouraged, if not uprooted altogether. The constant influx of fervent revolutionary propagandists and atheistic-minded political representatives (gōnomsenniki) from Rostov and other cities of southern Russia added to the growing discontent with Soviet rule among the mountaineers and their leaders. The defected political groups established their base in the rugged mountainous areas of western Dăghestān, from where they attempted to orchestrate resistance to the Bolshevik authorities.

In August 1920, Nadim al-Dīn Gotsinskii and Colonel Kaitmas ‘Alīkhānōv convened an assembly at the remote village of Gidial, during which ‘Alīkhānōv was proclaimed “war minister” of the newly formed “Šārī’a Army of the Mountain Peoples”. The uprising spread quickly among the mountaineers of Avarستان and the Andy range. The area’s rugged terrain made it a natural fortress for the rebel army. In a matter of weeks, Soviet rule in Upper Dăghestān was effectively eliminated and replaced by authorities loyal to Imām Šāhīl, who had joined the rebellion at Gotsinskii’s invitation, Colonel ‘Alīkhānōv, a few traditional leaders affiliated with Šūfī frak, and some former officers of the Tsarist army, including Colonel Dja’farōv, who was appointed commander-in-chief of the rebel military forces. Food and supplies were provided by the local population, but each fighter had to have his own weapons. The army was divided into 100 strong infantry units, supported by
small cavalry detachments. Throughout the rebellion, the rebels suffered from shortages of weapons and ammunition and had to rely heavily on the supplies captured from the Red Army. This disadvantage was counterbalanced in part by the rebels' intimate knowledge of the local terrain and their mastery of the art of mountain warfare.

The Bolsheviks' initial reaction to the rebellion was ineffective and confused. Their detachments stationed in the area suffered heavy casualties and had to abandon their base at Botlikh, which was occupied by the rebel troops. In less than six weeks, most of Upper Daghistan on the border with Cecnya was cleansed of Red Army units and their local allies, the Red Partisans, and fell under the control of the rebels. The only Red Army units that still remained in Upper Daghistan were trapped within their fortresses. To relieve them, during the first two weeks of October 1920, Red Army reinforcements were sent to Temur-Khan-Shiraz from Adharbaydjan. Upon arrival, they were dispatched to the rebel-controlled areas with the orders to occupy the strategic village of Arakany (Harakan). As a 700-strong Red Army expeditionary force led by the head of the Daghistan Cheka ("Committee for Struggle Against Counter-Revolution, Sabotage and Speculation") was approaching Arakany, on 30 October 1920, it was enticed into a narrow gorge by the rebel levies under the command of Shaykh Muhammad of Balakhany and massacred to the last man.

Following this military disaster, which was a re-run of many similar ones suffered by the Imperial Russian army in the 19th century, the Bolshevik military command of the Caucasus began to prepare a massive military expedition into the mountains of Upper Daghistan with the mission to crush the rebellion once and for all. The new Red Army force under the command of Todorski was supported by the pro-Russian and pro-Bolshevik mountain fighter (Red Partisans), who had distinguished themselves in the struggle against the White Army of General Denikin. The Red Partisans took an active part in the ensuing hostilities and were instrumental in relieving the Red Army garrisons besieged at Khunzakh and Gunib. Intent on quelling the rebellion at any cost, the Red Army command continued to pour more reinforcements into Daghistan. They were deployed against the rebel army at Ghimrah (Gimry), Botlikh and Arakany, which counted some 3,500 fighters among its ranks.

The Red Army detachments continued to suffer heavy casualties (almost 400 men) at the hands of the rebels throughout November 1920; during that month the Red Army garrisons were effectively reduced to holding their positions at Gunib and Khunzakh. Their occasional punitive forays into the mountains failed to suppress the rebels, instead arousing the hatred of the population, which actively supported the rebels. The loss of the elite "First Model Revolutionary Discipline Rifle Regiment" near Botlikh in late November 1920 was a dramatic evidence of Red Army's inability to achieve its strategic objectives as well as the counterproductive nature of its scorched-earth policy against the civilian population. On the other hand, the reversals suffered by the Red Army infused the rebel forces with confidence, and gave them much-needed supplies and ammunition. In the end, the Red Army regiments led by Nadjam al-Din Samurski were forced to seek refuge in their last remaining strongholds at Gunib and Khunzakh. Their siege by the rebel army lasted for two months, during which the Red Army fighters suffered terrible deprivations. At the end of 1920, the Red Army command made another attempt to quash the rebellion. Fresh Red Army divisions from Russia and Adharbaydjan were dispatched into the region with the orders to turn the rebels off from their supply base in Cecnya, to punish the local population for their co-operation with the rebel force, and to surround and eliminate the enemy force. Valley after valley was occupied by the fresh Red Army troops and a renewed scorched-earth policy applied to the conquered villages, forcing the rebels to withdraw ever deeper into the barren mountains. Supported by armoured vehicles, the Red Army scored an important victory in early January 1921 at Khoobal-Makhi. The remaining rebels, some 1,000 men, retreated to the ad of Gergebil, where they took their final stand against the superior Red Army force. In the course of the all-out advance that began on 7 January, the Red Army forces suffered heavy casualties, and were still unable to capture the well-fortified ad until 26 January 1921.

In the course of the siege, the Red Army units lost a total of 877 men, with the rebels' casualties probably twice, if not more than that number. The remaining rebel forces evacuated the area around Gergebil and retreated to the ad of Arakany (Gimry). Arakany was captured by a Red Army unit on 16 February 1921 after a fierce hand-to-hand street battle, leaving most of Upper Daghistan under Soviet control. Gimry, an almost impregnable mountain fortress and the birthplace of Shamil, remained the last rebel stronghold. Due to its natural defences, it could only be forced to surrender by around-the-clock artillery fire. Within a week, 90% of the buildings in the ad were reduced to rubble. The rebels responded by lightning night raids against the artillery units positioned around the village.

After the capture of Gimry on 17 February 1921, its surviving defenders withdrew to western Daghistan. The Soviet victory was due in part to the fall to the Soviets of the independent Georgian Republic in late February 1921, which left the rebel forces exposed to Red Army attacks from Georgian territory, now firmly under Soviet control. The last rebel detachment led by Colonel Dja'larov counted some 250 to 300 men, including a few surviving leaders of the rebellion, such as the "war minister" Colonel 'AliKhânov and lieutenant Abakarov. They assembled at the ad of Gizard, the birthplace of their resistance movement, in April 1921. The ad fell in May after several days of fierce fighting. Some rebel commanders managed to escape, only to be hunted down, captured and executed by the Soviet interior troops within the next few years. Of the principal figures of the Daghistan rebellion, only Sa'id-Beck, great-grandson of Imam Shamil, was able to make his way to Turkey.

The war between the Soviets and their Muslim opponents was accompanied by atrocities on both sides. The bodies of the fallen Red Army combatants were routinely mutilated by the rebels in response to their indiscriminate violence against the population of the adu suspected of supporting the guerrillas. As a result of several years of hostilities, most of Daghistan lay in ruins; it took more than a decade of strenuous effort to rebuild the country. The brutal suppression of Daghistan's bid for independence was a legacy of mutual hatred between the local population and the Soviets. This hatred manifested itself in the series of small-scale uprisings that continued throughout the late 1920s and early 1930s.

n. "Class struggle" and Communist purges in Cecnya and Ingushetia, 1920-38

In Cecnya and Ingushetia, now firmly under Soviet
control, the Muslim population was in no position to participate actively in the Daghistan rebellion, although some minor disturbances did take place on the border between Čečena and the rebel-controlled parts of Daghistan. In Čečena, the role of traditional leaders and pro-Communist elements came to the fore in the course of public debates over the future of the Autonomous Mountain Soviet Socialist Republic, which was proclaimed on 17 November 1920. It included the territories of present-day Čečena, Ingushetia, Ossetia, Kabard–Balkaria, and Karačay.

The government of the infant republic was dominated by revolutionary-minded intellectuals, who had supported the Bolsheviks from the early days of the February Revolution in Russia and were willing to co-operate with the Soviets in return for domestic autonomy. Under Lenin, the Russian political leadership was ready to accommodate their nationalist agendas and grant them independence vis-à-vis the Bolshevik régime in Moscow. The secularised revolutionary leaders of the Mountain Republic faced opposition from the more religiously-minded political factions, whom Bolshevik sources described as “supplanters of the Mountain Republic faced opponents eventually triumphed over the supporters of the shirāṣ, a branch of the Kunta Mitaev, founder of the Bamatgirey. His efforts were rewarded with the appointment of the “ulama class, he was to be kept under close police surveillance.

That year witnessed the dismantling of the Soviet Central Committee of the Communist Party in Moscow. That act triggered a series of new persecutions against the members of the implicated party and of fomenting an armed rebellion against the Soviet authorities of Čečena and Ingushetia. Among those implicated in the “anti-party activities” was ‘Ali Mitaev. He was enticed into a trap by OGPU operatives, arrested and executed in 1925. The OGPU also arrested the prominent Naqibbādi elder and Islamic scholar Sugaip–Mullā Gaysumov. His life was spared, due in part to his old age and his active role in the struggle against the White Army. However, as with most members of the “ulama class, he was to be kept under close police surveillance.

From that time on, the OGPU pursued a relentless campaign to isolate and neutralise the Muslim “clergy” of Čečena, Ingushetia and Daghistan as well as other sectors of the Islamic intelligentsia in the northern Caucasus. Many prominent local scholars versed in Arabic and Islamic culture were arrested on trumped-up charges of conspiracy, espionage or membership in the parties and factions that had been condemned by the Central Committee of the Russian Communist Party as “deviant” or “dangerous”. Later, in 1926, the local party cadre, including the President of the Central Executive Committee of Čečena, Taşqūmir “Etkhānūmov and his several aides, were accused of sympathising with the “reactionary clergy” and “bourgeois nationalists” and removed from their offices. They were replaced with Russian party apparatchiks, such as Ivanov and Cernoglaz, whose wanton disrespect for local customs and beliefs and fervid implementation of anti-religious policies triggered several small-scale uprisings, which were brutally suppressed by the Soviet interior troops. Many participants of these movements, including those responsible for the assassination of Ivanov and Cernoglaz, were arrested 300 Čečens, Ingush and Daghistsāns, including 39 religious leaders, and accused of plotting an armed rebellion under “religious and nationalist banners”. Simultaneously, the Soviet administration of the northern Caucasus sought to undermine the economic foundations of the “ulama class by confiscating local religious endowments and prohibiting the collection of the zakāt [zakah]. These measures, combined with the introduction of the hated kol’khoz and crackdown on the kul’aks (wealthy peasants) by the Soviet authorities, provoked a wave of local uprisings and unrest that continued throughout 1929-30. Some of the uprisings were led by the former Red Partisans.
such as Şhita İstamulov and his brother Hasan of the village of Shali in Cecnya. On 5 December 1936, the Cecen-Ingush Autonomous Region (əblās') was “upgraded” to the status of an autonomous republic. This act was accompanied by another wave of reprisals against local communities. In the process, the NKVD (the Peoples' Commissariat of Internal Affairs) forces rounded up and imprisoned thousands of men and women. Most of the arrested were tried under Article 58 of the Soviet criminal code, which envisaged punishments by death and hard labour for such crimes as treason, espionage, fomenting an armed rebellion, sabotage, terrorism, anti-Soviet propaganda, etc. Hundreds of mountaineers were executed; others were sent to Siberia or concentration camps. Some Cecen and Inguş men escaped into the mountains, from where they launched revenge attacks against NKVD operatives and Communist Party functionaries. A decade of political purges left the Cecen and Inguş population demoralised and exhausted by the unequal struggle against the Soviet state and its giant apparatus of political repression. The ranks of the traditional religious leaders were decimated, while those who survived the horrors of Stalin's extermination campaigns—men, women, and children—were either forced underground or placed under the close surveillance of the Communist secret police.

- World War II and the mass deportation

Against all odds, resistance to Soviet rule continued throughout the 1930s under the leadership of some members of the Soviet-educated intelligentsia, whose goal was to free their country of the Soviet yoke. Inspired by the Red Army reversals during the Finno-Soviet war of 1939-40, a former Cecen writer and party official, Hasan Israilov, started an armed insurrection in the remote mountain area of Galiânoz, near Shatoi. His movement received a new impetus after Nazi Germany began a large-scale military operation against the Soviets on the eastern front and in the Caucasus. In February 1942, when the German troops approached the Russian city of Taganrog, approximately 350 miles from the Cecen-Ingush Republic, another rebel group headed by Mairbek Sheripov joined Israilov's insurrection. To suppress it, the Soviet military command resorted to an indiscriminate bombing of Cecen villages in the areas under rebel control. In 1943-4, Stalin and his Politburo, accomplished what some Russian military rulers (General Ermolov) and radical politicians (Pavel Pestel, a leader of the "Decemberist" movement) had only dreamed of a century earlier—a massive expulsion of the "hostile" mountain population to Russia and Siberia. The intention of eradicating its resistance to Russian rule was justified by the fact that the population of these republics had not only "co-operated" with the Nazis, but also "invited" them to conquer their lands and promised them full support. While the German troops had indeed occupied briefly the lands of the Karacays—men, women, and children—were rounded up en masse by special Red Army detachments, placed in freight cars and transported to Central Asia. Only three-quarters (some say 50%) of the deported Cecens and Inguş are said to have reached their destination. The rest died en route of disease, crowded conditions and starvation. The survivors were placed in special settlements where they remained under the close surveillance of the forces of the Soviet Ministry of Internal Affairs until the end of exile in 1957. Those few Cecens and Inguş who were able to escape into the mountains, continued an abrek-style resistance to the Soviets by assassinating Red Army and police officers, robbing and burning down the farms of new settlers from Russia and neighbouring republics, engaging in sabotage, etc.

Deprived of the benefits of culture and education, many members of the exiled nations turned to Islam for consolation and guidance. For many, Islam became a badge of honour and the powerful source of identity and resistance to the Communist regime's attempts to erase any distinguishing ethnic and religious characteristics of its subjects. As a result, during the years of exile, the position of traditional religious leaders, which had been undermined by two decades of Communist rule and by competition from secular nationalists, was reinforced. This is especially true of the exiled Cecens and Inguş, among whom the traditional Şiffi ābdams remained active throughout the period of exile. Moreover, a new ūmil named after Vis (ūmā) Hāţdjî, a branch of the Cüm Ṣîrā Hāţdjî əsilã, is said to have come into being during this period. Şülim survived also among the exiled Karaçays, many of whom were affiliated with the local branch of the Nakşbandîyya taşka. At the same time, there is no evidence to support the oft-repeated claim that, in the 1960s, after the return from Central Asia, from 90% to 95% of the Cecen and Inguş believers were affiliated with a Şiffi taşka. Given the fact that this period coincided with Khrushchev's campaign to cut down on "religious superstitions" in all Soviet republics and that leaders of the atheist campaign tended to provide grossly inflated statistics in order to secure additional resources from the Communist Party authorities, such statements have to be treated with extreme caution.

The exile lasted for thirteen years for the Cecens and Inguş and fourteen for the Balkars and Karaçays. In January 1957, the Twentieth Communist Party Congress, presided over by Nikita Khrushchev, declared the "rehabilitation" of the four deported mountain nations along with the other victims of Stalin's terror, namely, the Kalmuks, the Crimean Tatars and the Volga Germans. The Cecens, Inguş, Karaçays and Balkars were allowed to return to their native lands and their autonomous republics were re-established by the Soviet government. Upon arrival, many exiles found their lands and houses occupied by the people who were resettled there on Stalin's orders. This created a fertile ground for conflicts and turmoil between the new settlers and the returning indigenous population. Thus in Ingushetia, the lands that had been vacated by the exiled Inguş population were occupied by the settlers from neighbouring North Ossetia. With the weakening of the Soviet state in the late 1980s, the long-standing conflict between these
two ethnic groups escalated into violence and bloodshed to the extent that the Soviet government was forced to send regular army units to the area in order to separate the combatants. In Cēcaña, the majority of new settlers were Russian Cossacks from the neighbouring Stavropol’ region (krai). The Russo-Cēcan military conflicts of 1994-6 and 1999-2002 led to an upsurge of Cēcan nationalism and anti-Russian sentiment. As a result, many Cossack families were forced to flee to Russia along with thousands of Russian and Ukrainian families that had resided in Cēcaña’s urban centres, especially in Grozny and Gudermes.

The developments in the Caucasus following the dissolution of the Soviet Union in December 1991 cannot be detailed here, especially since many aspects of local social and political life are still in flux and require a careful analysis. In the absence of precise data and opportunities for on-site research, any general conclusions are at best premature. The old biases and stereotypes of Soviet historiography are now being replaced by new ones. They spring from the proliferation of nationalist mythologies associated with the process of nation-building and forging new religious and national identities. Unfortunately, despite the opening up of the area to Western scholars in the aftermath of the collapse of the Soviet regime, the ongoing warfare and continuing hostage-taking in various parts of the Caucasus, most notably in Čechnya, Ingushetia, Dagestan, Karabagh, Abykhazia and Ossetia, make research trips to the area extremely dangerous. In many senses, the Caucasus has all the typical characteristics of the so-called “post-Soviet” political, social and economic space, i.e. general political instability, massive unemployment and crime rates, a steep decline in industrial and agricultural output, high unemployment and crime rates, a feeling of nostalgia for the stability and certainties of the late Soviet era, corruption at all levels of the state apparatus, etc.

Since the disintegration of the Soviet Union, the political landscape of the area has been determined by several military conflicts, of which the two Russo-Cēcan wars, the war between Abykhazia and Georgia and the struggle for [Nagorno-]Karabagh [z.g.] between Armenia and Aghardarbaydjan, deserve special mention. In all these cases, religion plays an important role, at least on the rhetorical level, as the parties to the conflict adhere to different religious traditions, i.e. “Christian” Russia versus “Muslim” Cēcaña; “Muslim” Abykhazia versus “Christian” Georgia; “Christian” Armenia versus “Muslim” Aghardarbaydjan. As the political space in the new ethnic formations is being contested by multiple forces and factions, Islam has come to serve as a powerful source of rhetoric and legitimacy for the participants. Furthermore, different political factions uphold different interpretations of Islam, which further complicates the local discursive landscape.

So far, the most prominent and consequential divide has been between the supporters of “traditional” Islam and the so-called “Wahhābīs”. The former emphasise loyalty to the local version of Islamic religion as explained and maintained by mountaineer ‘uddadīs and Sufi elders (wastā’īs). The “traditionalists” encourage the reverence of local saints, the continuing use of the local customs (uddad), participation in Sufi rituals and respect for the traditional clan structure. The “Wahhābīs”, who style themselves salafyīn [see salafīyya], claim to follow the teaching of Ibn ‘Abd al-Wahhāb [z.g. and its modernised version upheld by ‘uddadī-based scholars. They are particularly active in Čechnya and Dagestan. In 1996-9, in the Buynak region of Dagestan, several local “Wahhābīs” groups attempted to create small enclaves of Shari’a rule. Their leaders declared their independence of the official Dagestani government at Mahazal’-khe [z.g.]. In late 1999, they fought against Russian troops, which had been sent to suppress them, alongside the Čechen Wahhābīs led by the field commander, Amrī Shamil Basayev. According to the Caucasian “Wahhābīs”, their teaching represents the “pure and simple” Islam of the primaeval Muslim community. They demand that their followers and Muslims at large strictly adhere to their version of the “Islamic” dress code (described as “Arab” by its opponents) for men and women, carefully observe the basic Muslim rites and restrictions and participate in dhikr against the “enemies” of the Muslim community worldwide. The supporters of Caucasian “Wahhābīs” reject as bid’a [z.g.] many key elements of “traditional” Caucasian Islam, namely, belief in the supernatral and intercessory powers of Sūfī shaikhs and wastā’īs, the practice of dhikr and the use of the local ‘uddad alongside the Shari’a.

To what extent “Wahhābīs” can be seen as a mere foreign import (as argued by its detractors), deliberately introduced into the Caucasus by missionaries and volunteer fighters (mudjdhīdun) from Su‘udi Arabia, the Arab states of the Gulf, Afghanistan and Pakistan, and cultivated through an elaborate system of material incentives and sophisticated propaganda, remains unclear. One cannot deny that “Wahhābism” has found a wide following among the Čechen and Ingush youth, as well as some middle-aged men and women, whose lives have been shattered by the brutality of the Russo-Cēcan wars. By infusing its followers with a sense of camaraderie and common cause that goes beyond the immediate goals of nationhood and independence, “Wahhābism” serves as a powerful source of identity and mobilisation that renders it especially well suited for the trying times of war. At the same time, by its sweeping rejection of local customs and practices, Caucasian “Wahhābism” inevitably creates a rift between different groups of mountaineers. Often, but not always, this rift is generational in its nature. The fact that “Wahhābism” has been embraced by the younger generation of Čechen military and political leaders (Shamil Basayev, Mowladu Udugo, Arbi Barayev, etc.) in opposition to the “Sūfī” Islam of the supporters of President Maskhadov may indicate that the former are eager to free themselves from the traditional sources of legitimacy and authority in order to enter into a dialogue with, and perhaps secure assistance from, the Muslim community worldwide.

Mamakava, *Chekenskii taip (rod) v period ego razlozheniya*, Grozny 1973 (a detailed account of the role of the local population in the Caucasian conflict and its causes is not realised in the subsequent narrative).
east of Nishāpūr at the southern edge of the Kūh-i Bīnālād (lat. 36° 07' N., long. 59° 00' E.). It is locally famed as a ziyārat or place of pilgrimage, since the Eighth Imām of the Shī'a, 'Alī al-Riḍā [q.v.], is said to have halted there and left the imprint of his foot on a stone, henceforth to be regarded with reverence; see Bess A. Donaldson, *The veil unraveled. A study of Muhammadan magic and folklore in Iran*, London 1938, 59, 148-9.

The concept of sacred imprints on rocks, on the roof and walls of caves, etc., is widespread across the Old World, certainly from the Middle East to South and South-East Asia (in the latter regions, with e.g. footprints of the Buddha, as at Adam's Peak, Ceylon). In the Islamic lands, imprints of the Prophet Muhammad's foot are early found all over the Arab lands, and subsequently in Ottoman Turkey, and are especially objects of veneration in Muslim India (as likewise are imprints of holy men in non-Muslim India); see Kadam Sharif and also Annemarie Schimmel, *And Muhammad is His Messenger. The veneration of the Prophet in Islamic piety*, Chapel Hill, N.C. 1985, 42-3.

There are in fact numerous similar kadamgāhs or shrines of saints and holy men, often not but always 'Alīds, apart from the one mentioned above near Nishāpūr, throughout Eastern Persia, Afghanistan and Northern India; among the larger places of the caliph 'Alī b. 'Abī Tālib at the (Sunni) shrine of MazārdārSharif [q.v.] in northern Afghanistan. One should also mention pandajgāhs, "places of the [imprint of the] palm of the hand", impressions of the hands of holy men. Thus in Kābul, to the east of the Bāla Hisār above the city, is the shrine of the Pandja-yi Shah ("Lord of Manhood", i.e. the Prophet Muhammad) mentioned by the traveller Charles Masson (*Narrative of various journeys in Balochistan, Afghanistan, and the Punjab*, London 1842, ii, 236, iii, 95; and cf. R.D. McChesney, *Wofg in Central Asia*. Four hundred years in the history of a Muslim shrine, 1480-1889, Princeton 1991, 226).

(C.E. Bosworth)

KĀDĪ-ZĀDE RUMĪ, ŚALĀH AL-DĪN MOṢAḤ b. Muhammad b. Maḥmūd al-Kādī-zāde, usually referred to as Kādī-zāde al-Rūmī or Muṣaḥ Kādī-zāde al-Rūmī, lived ca. 760-ca. 835/1359-1432, dates derived from an early work written in 784/1382-3 and from his having outlived Ghiyāth al-Dīn al-Kāshī (d. 832/1429 [q.v.]), noted astronomer/mathematician from Bursa who played a substantial role in the Samarkand observatory [see marāṣaṯ] of Ulugh Beg [q.v.] and whose commentaries were used extensively as teaching texts for mathematics and astronomy. After studying for a time in his native Bursa, where his father Maḥmūd was a prominent judge at the time of Sultan Murād I, Kādī-zāde travelled to Persia to pursue an education in the philosophical and mathematical sciences. There he studied with the famous theologian al-Sayyid al-Sharīf al-Djurdjānī [q.v.], probably at the court of Timūr in Samarkand; this was, however, an unhappy experience for both parties with al-Djurdjānī complaining of the student's infatuation with the mathematical sciences while Kādī-zāde made it known that his teacher was deficient in those subjects. After Timūr's death, Kādī-zāde found both a student and patron in Timūr's grandson Ulugh Beg, also in Samarkand. He became the head of the large madrasa there and Ulugh Beg himself sometimes attended his lectures. Sometime later, ca. 823/1420, he collaborated with Ghiyāth al-Dīn al-Kāshī under the directorship and patronage of Ulugh Beg to build the famous Samarkand observatory and undertake its observational programmes. After al-Kāshī's death in 1429, he no doubt assumed additional responsibilities. By then he was assisted by the talented young 'Alī Kāshīḏī [q.v.], who continued the observational programme after Kādī-zāde's death. Kāshīḏī's daughter would marry Kādī-zāde's son Šams al-Dīn; a grandson of this union was the famous Ottoman astronomer/mathematician Mīrīm Čelebi (d. 931/1525).

Kādī-zāde was not noted for his innovations or creativity, and his works reflect this. He was most famous for his commentaries on al-Djarmīnī's [q.v.] astronomical compendium al-Mulakākhās fi 'l-hay'a (814/1412) and Šams al-Dīn al-Samarkandī's [q.v.] geometrical tract Aḏġālāt al-la'tāsī (completed 815/1412); the large number of extant manuscripts of both commentaries indicates their enduring popularity as teaching texts. A work on determining the value of Sin 1° is heavily dependent on the more mathematically accomplished al-Kāshī. His supercommentary on Aṯḡīr al-Dīn al-Abhārī's [q.v.] *Hidāyat al-bīsma* seems to be his only philosophical or theological work, though he did intend to write a refutation of parts of al-Djurdjānī's famous commentary on al-Jīdī's *Mawdūkīf*.

The common contribution to Kādī-zāde's observatory is Medicea Laurenziana or. MS 271, a commentary on Naṣr al-Dīn al-Tūsī's astronomical work *Tādhbīr*, incorrect; it is actually by al-Djurdjānī.

KAFAN (A.), "shroud".

In the Islamic world, a dying person was often forewarned of imminent death by a dream, or by a dream that an inhabitant of his town had had during the preceding days, to the effect that the Prophet or some other great figure like Abu Bakr, 'Umar or 'Alī, was waiting for him and he should get ready for the meeting. Since death is the natural goal of life, its approach should be managed calmly. When the death agony is imminent, the dying person pronounces the shahāda or profession of faith, while raising one finger of the right hand to re-affirm for the last time his belief in the unity of God. If he is too weak, someone close to him murmurs in his ear just as his father murmured to him at his birth. The corpse is washed, unless the dying person has washed himself in preparation, and then wrapped in three cloths, white shrouds, or cloths of any other colour except red, fastened very tightly. A professional embalmer, kaffin, takes charge of this process using cloths woven by an askinī. The shroud has often been mentioned in the preceding days, to the effect that the Prophet or some other great figure like Abu Bakr, 'Umar or 'Alī, was waiting for him and he should get ready for the meeting. Since death is the natural goal of life, its approach should be managed calmly. When the death agony is imminent, the dying person pronounces the shahīda or profession of faith, while raising one finger of the right hand to re-affirm for the last time his belief in the unity of God. If he is too weak, someone close to him murmurs in his ear just as his father murmured to him at his birth. The corpse is washed, unless the dying person has washed himself in preparation, and then wrapped in three cloths, white shrouds, or cloths of any other colour except red, fastened very tightly. A professional embalmer, kaffin, takes charge of this process using cloths woven by an askinī. The shroud has often been mentioned before....
value could increase considerably. At his death, the Fatimid vizier Ibn Killis [q.v.] was buried, at the expense of the caliph al-Mustazhir, in fifty perfumed shrouds and cloths of various fibres, with a total value of 10,000 dinars [see al-Makrizi, Ittihād al-maḥfūz, ed. D. Shavdi, Cairo 1387/1967, i, 268; see also the story of Fatimid shrouds mentioned by al-Musabbih, Akhbār Mur, ed. A.F. Sayyid and Th. Bianquis, Cairo 1978, 107]. The fibres used in spinning these costly shrouds, and also the inscriptions on them—a politico-religious content in Fatimid Egypt, and often poetical, on the theme of the inevitability of death, in Būyid Trāk—have been studied by both archaeologists and museum specialists (R. Gayraud, al-Qādī al-kabīr, décrire demure des Fātimides, in M. Barrucand (ed.), L’Égypte, son art et son histoire, Paris 1999, 433-64; bibl. and characteristic texts in E. Garcin, Le textile dans l’histoire, et son histoire, Paris 1999, 443-64; bibli. and characteristic texts in E. Garcin, Le textile dans l’Islam médiéval, productions byzantines et fātimides, diss. DEA, Lumière-Lyon 2 [1999], unpubl., 59-60).

The corpse was borne, on the same day, but rarely at night, on a simple bier, naṣīb (l.id-humila naṣīb hu ’lā yād) [q.v.], by men who would sometimes run: “If I am good, bear me speedily to God, and if I am bad, get rid of me quickly.” A prayer was pronounced over the corpse near a mosque. Everyone would stand as the corpse passed by, for the corpses of Jews and Christians (it was usual to be present at the funerals of important members of the other religious communities), out of respect for the angels accompanying it. It was even more meritorious to bear a corner of the bier. Sometimes the dead person was borne along without a bier, like a package wrapped in a white shroud, or conversely, the corpse could be carried in an open wooden coffin (sandûl, haddiyya, sandûl meaning cenotaph). The chroniclers mention this fact as a sign of respect felt for someone of a distinguished social group.

The corpse, wrapped in the shroud, is lowered into a tomb dug out for this purpose (see the detailed description of the types of Muslim tombs in Y. Raghib, Structure de la tombe d’après le droit musulman, in Archéologie, xxxix [1992], 395-403). The shroud is then loosened so that the dead person can be at his ease, and the face is turned towards Mecca (archaeologists have found skeletons with post mortem fractures of the cervical vertebrae). Three handfuls of earth are thrown over the corpse, whilst pronouncing the words “We created you with this [earth], we give him back to it, and We will resurrect him anew” (cf. the myths of ancient Mesopotamia and Kūnân, XXII, 5, XXX, 19, etc.). The cavity is filled with earth and pebbles, with an orifice left for the deceased to get water. From this point onwards, and until the palms planted on the tomb become dried up, the deceased is given over to interrogation by the angels of death preparatory to the Last Judgement [see ‘ADĪR AL-KABIR].

KAFAES (A. t.) “cage”, the popular term in Ottoman Turkish usage for the area of the harem of the Topkapi palace in which Ottoman princes of the blood [sheh-zadeler] were confined from the early 17th century onwards.

In a more abstract sense, historians apply the same term to the system whereby the rights of claimants to the Ottoman throne were determined, as opposed to the “law of fratricide” which it was gradually superseding during this period. In the sources, the term is of late usage only (d’Ohsson uses the word in the plural; Tableau de l’Empire ottoman, vii, 101; ‘Aṣīm, Tārīkh, Istanbul n.d., ii, 32). Earlier and more widely attested, however, is the appellation Şimşirlik (or Çimşliylık “the box shrub”) or Şimşirlik (or Çimşirlik) odası (“the boxwood chamber”), a reference to the little courtyard planted with box, at the north-east corner of the courtyard of the Wâlide Sultan (Silahdar, Tārīkh, Istanbul 1928, ii, 297; Uzuńçarşı, Sosy, 91; Raidijd, Tārīkh, Istanbul 1282/1865-6, ii, 2-3; Necipoğlu, Topkapı Palace, figs. 94, 168, 178). It consisted of a set of pavilions (twelve, according to d’Ohsson, who presents each as “comprising several rooms and surrounded by a high wall”), surmounted by cupolas, fitted with chimneys and windows which, for the preservation of sexual segregation, did not overlook the harem. Some were decorated with the mural tiles of the 17th century and with marble niches (Necipoğlu, 178). Similar arrangements existed in the palace of Edirne: the princes were transferred thither when the Sultan made it his residence.

Adult sheh-zadeler lived in the innermost [esnād] of Topkapi from the time, in the second half of the 16th century, when the practice of entrusting them with provincial governorships in Anatolia was partially and then totally abandoned. This then became the exclusive path of the reigning sovereign. On the other hand, on the accession of Ahmed I, while still a minor (1603), the leading dignitaries of the state allowed his younger brother Mustafâ to live installed in a niche within the palace. Furthermore, on the death of the same ruler (1617), they preferred this brother to succeed him rather than his eldest son Othmân, who was still very young (Peczewi, Tārīkh, Istanbul 1283/1866-7, ii, 360-1; Kâbit Çelebi, Mifḥileke, Istanbul 1281/1864-5, i, 305). Having thus emerged from his confinement, Mustafâ I was deposed after an initial reign of three months, on account of mental disorders; he “returned to his former apartments” (Na’inma, Tārīkh, Istanbul 1281/1864-5, ii, 163). He was brought out once again to be restored to the throne after the insurrection which resulted in the assassination of his nephew Othmân II (May 1622). No more successful than the first, this second reign lasted only sixteen months and Mustafâ returned to his prison, where he died in 1639.

These events were the harbingers of important changes: henceforward, despite continuing attacks mounted by Othmân II and Murâd IV against their respective brothers—outdated practices denounced by public opinion—the brothers of reigning sovereigns were allowed to live, but were politically neutralised by rigorous seclusion in the most secure and secret area of the Palace. In parallel, despite the inclination of numerous sultans to promote one of their sons to the succession, the principle of seniority, made possible by the survival of the sultan’s brothers, led, by gradual stages, to the establishment of a successorial system in the Ottoman dynasty: in the early 18th century, the chronicle Râşid presents the eldest of the brothers of Mehemmed IV, Süleymân II, who succeeded the deposed sultan in 1687, as “the august person who in his turn took charge of the sultanate
potential rivals. The anxiety which could be thus intriguing sultan who, while stringently kept apart from any company of their pages, their eunuchs and Tdrikh, shared his prison (Silahdar, ii, 298). Reduced khdît-i humayun ante...wearing an old robe and shod in heavy cavalry boots; Silahdar, Tdrikh, ii, 298). More generally, in the course of time a progressive humanisation of the kifes is observable, associated no doubt with the individual personality of certain sultans, but especially with the stabilisation of the new successorial system; during his 39 years on the throne, Mehemmed IV (1648-87) made no further attempts to harm his two brothers, and even with the outside world were not entirely severed: “Sultan Soliman, brother of the current emperor, has acquired universal esteem throughout the empire . . . and his renown has induced all ranks of the militia to declare themselves his protectors,” Bobovius noted (122-3), with regard to the future Suleyman, disparaged as he was in other respects. Worth noting, on the other hand, is the energy displayed by Ahmed II when, on emerging from 43 years of the kifes he inaugurated his brief reign (1691-5) played by Ahmed II when, on emerging from 43 years of the kifes he inaugurated his brief reign (1691-5) Worth noting, on the other hand, is the energy displayed by Ahmed II when, on emerging from 43 years of the kifes he inaugurated his brief reign (1691-5) Worth noting, on the other hand, is the energy displayed by Ahmed II when, on emerging from 43 years of the kifes he inaugurated his brief reign (1691-5) Worth noting, on the other hand, is the energy displayed by Ahmed II when, on emerging from 43 years of the kifes he inaugurated his brief reign (1691-5) Worth noting, on the other hand, is the energy displayed by Ahmed II when, on emerging from 43 years of the kifes he inaugurated his brief reign (1691-5)
was to allow a free hand to his brother Abd-iil-'AzIz his nephews, having two of them accompany him on his journey to Paris and London in 1867 (Alderson 34-5).

**A/-KAFF** (a.), verbal noun of the verb kaffa in the sense of "to abstain, desist [from s.th.]," and "to repel [s.o. from s.th.]." (see WADAS, 1, 192-9), in a religious-political context, refers to the quiescent attitude of some Khārījīte [q.v.] groups in early Islam, called ka'da "those who sit down", i.e. stay at home, in abstaining from overt rebellion and warfare against the ruling authority. See further KFUD. (Ed.)

**KĀHĪ** (late 9th century-988/late 15th century-1380), the tahkīla [q.v.] or pen-name of an Indo-Muslim poet, Naṣīm al-Dīn Abu l-Kāsim Muḥammad, who wrote at the courts of the Mughal emperors Humāyūn and Akbar [q.v.]. According to most writers he was born in Transoxania at Mīyankīl, a district situated between Samarkand and Buhārā, but stayed a long time in Kābul, whence he is also known as Kābulī. When fifteen years old he is said to have visited Djāmī (d. 889/1492 [q.v.]) at Harat, and spent some seven years in the poet's company. Subsequently he went to India on two separate occasions, once in ca. 936/1530 and then in 961/1554. In his first visit he travelled to Bhaikār in Sind to meet the Sufi mystic Shāh Dihāngīr Ḥādzīm (d. 946/1539-40) of Kirmān, a poet of the Persian mathnawī Mazhar al-dīghār, and lived in Gudjarat writing for Bahādur Khān and Muhammad Khān, to whom he is attributed. In 956/1549 he returned to Kābul and entered the service of prince Akbar. It was as a member of Akbar's reign, noted for his poetry as well as other attainments. Besides writing mathnawī and ghazals, he displayed special skill in composing chronograms and riddles. He is also said to have written a mathnawī on the model of Sa'dī's Būstān entitled Gul-āfgān. His other accomplishments included the study of Kurānic exegesis, scholastic theology, music, astronomy and mysticism.

this difficulty is the fact that very few of them have been rigorously studied. Their typology is based mainly on adding as evidence the various types of the Arabic alphabet and, additionally, on examining the distinct and homogeneous zones of their distribution. It is further not very easy to give a name to the various groups of graffiti at present recognized, since the identity of their authors is unknown. At an early stage, specialists isolated two groups, called Sufaitic [q.v.] (from the Djabal al-Safa to the southeast of Damascus) and Thamudic [q.v.], making a connection with the ancient tribe of Thamud [q.v.]. But it soon became apparent that the Thamudic ensemble, in which were grouped all the non-classified graffiti, was a vast hold-all term for an extremely heterogeneous group. A first tentative step to devise a new order for them was made by F.V. Winnett, who added five sub-groups, each defined by a variety of the Arabian alphabet, A, B, C, D and E. Later researches by this same author, continued by those of M. Macdonald and G. King (Macdonald-King, 2000), have shown that two of these sub-groups belong to particular regions, Hismā [southern Jordan and northern Hidjaz] and the district of the Tayma' oasis, whence the names Hismaic (former Thamudic E) and Taymanitic (former Thamudic E) have been proposed.

There remains to classify the numerous other Thamudic graffiti, notably those found in the region between the Hidjaz and Yemen, these being especially numerous in the regions of Nadjdān [q.v.] and Karyat al-Fāw [see faw] (the latter 280 km/165 miles to the northeast of Nadjdān (Jammé, 1973). For these, the terms “Southern Thamudic” (see Macdonald-King, 2000, 44) or “Kāhtānīte” (Robin, 1978, 106-7) have been proposed, but these terms remain provisional whilst a typology of the whole ensemble remains to be sketched out. The task is difficult because a number of these graffiti recall the proximity and prestige of the South Arabian states by mixing together, in varying proportions, the regular South Arabian script letters and those reflecting local graphic forms.

This name “Kāhtānīte” stems from Kāhtān, the ancient eponym of the South Arabs, according to the purveyors of traditions on the beginnings of Islam (see especially Ibn al-Kalbi’s Dhabarat al-nasr). The name of this eponym probably comes from a tribe established at Karyat al-Fāw (the ancient Karyat[w] dhih Kahl [q.v.], sc. “the Karya of Kahl”, Kahl being the name of a god of the oasis). Two inscriptions mention this tribe. The first, found at al-Fāw, is the tombstone of “Mu‘āwiyah, son of Rabī‘at, of the line of M. . . . [the Kāhtānīte, king of Kāhtān and of Madīḥq]”; from the style of writing, this would date from the 1st century A.D. (Anṣārī-Qurayt al-Fāw 2/1-2). The second inscription, stemming from the temple of Ayyūm at Ma‘rib in Yemen, has a dedication to the Sabaean god Almaqah in which the writer evokes an expression of universal conquests by the Turks and the universal triumph of Islam. Little is known of his life, but he seems to have been in easy circumstances and to have lived most of his life in Sarajevo [q.v.], where he was born by 1039/1630. He was apparently an adherent of the Kādīriyya tariqa, and ḥulūl of the tekke of Sinān Agha in Sarajevo, and he dedicated poems to the founder, ‘Abd al-Kadr al-Dižānī. He seems to have left Sarajevo towards the end of his life, perhaps driven out of the Sarajevo rebellion of 1093/1682 and to have lived in Zvornik, where he died and where he has his ṭūbr. He is the author of two Dīwāns in Turkish, the first one of mystical poetry and the second, smaller one of ḵafṣa only called Wādātī ("incoming, gains"), the whole comprising several thousand verses, extant in a hundred mss., mostly copied in the 19th century. In the Wādātī, he touched upon political events, such as the long campaign by the Ottomans for the conquest of Crete from the Venetians, a war which also affected Dalmatia and its coastal towns. In the first ḵafṣa of this Dīwān, comprising 174 beyts, he correctly foretold the date of the end of the war (1079/1669), giving him great celebrity; and much of the enthusiasm for copying Kāmī’s works arose after 1878 when the Austrians extended their protectorate over Bosnia and Hercegovina, since the poet had alluded to universal conquests by the Turks and the universal triumph of Islam. Modern Bosnian scholars, on the other hand, have claimed him as a Bosnian patriot (although the concept of “patriotism” did not exist in his time) or even as a proto-Marxist; at most, one can note his evident love for Bosnia and, especially, for Sarajevo. Kāmī also wrote alhamiado poetry, including an
“ode against tobacco”, written when Murād IV banned the use of tobacco [see TUTUN] in the Ottoman empire, and a second, shorter ode on the Cretan War in addition to the one in Turkish.

**KÂ‘IN**, conventionally Qayen, etc., a town of eastern Persia (lat. 33° 43′ N., long. 59° 06′ E.), now in the administrative province of Khūrāsān but in mediaeval Islamic times falling within the region known as Kūhīstān [q.v.]. It lies on the road connecting the urban centres of northern Khūrāsān (Mashhad, Turbat-i Haydārīyā, etc.) with Birdjand, Persian Sfstan which flourished as an emporium (tdk) in Rome 1931, 12, 53). In the 4th/10th century it appears in the urban history of the 8th century Armenian (tdk), and in early Islamic times it continued to link the towns thus (Moujahed-Zadeh, 431; al-Mukaddasī, 321; Ḥudaydā al-tīlīm, tr. Minorsky, 105). Nāṣīrī Khūrāsaw passed through it in 444/1052 and found it a large, fortified town he marvellled at the great arch (tdk) of its mosque (Safar-ndma, ed. M. Dabīr-ṣīyāḵ, Tehran 1335/1956, 127, tr. W. M. Thackston, New York 1986, 102). In the ensuing Salajgī period, Kā‘īn and fortresses in its surrounding district became known as haunts of the Ismā‘īlī; an Ismā‘īlī presence, including within the town of Kā‘ūrāsān, has persisted until today (see F. Dastārī, *The Ismā‘īlīs, their history and doctrine*, Cambridge 1990, 341, 387, 543; C.E. Bosworth, *The Ismā‘īlīs of Qāṣimīya and the Maliks of Nībārīya; or Sīstān, in Dastārī [ed.], Medieval Ismā‘īlī history and thought*, Cambridge 1996, 221-9; and ḵᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛᵛventus). It has often been assumed that the name of the Persian principality Tanawīn mentioned by Marco Polo is a conflation of Kā‘ūn and the town of Tūn [q.v.] and some 18 farsakhs north-north-west of it (see Yule-Cordier, *The Book of Ser Marco Polo*, London 1903, 1, 83, 86, 127-8); certainly, Bābur, two centuries later, continued to link the towns thus (Bābur-ndma, tr. Beveridge, 296, 301). Two generations or so after the time of Marco Polo, the town was still large and flourishing, on the evidence of Ḥamd Allah Mustawff; he mentions how most houses had cellars from which they could tap into the adjacent subterranean kanāts and how the men all carried arms and were ready to use them (Nuzhat al-kulūb, 1454, tr. 144).

The subsequent history of Kā‘īn is substantially that of its traditional boundaries of Kā‘ūn and Sīstān as far as Maḥāḏ and Harāt in the north and Persian Bāličīstān in the south (1748-53). In the Kādjar period, the family continued as guardians of the eastern frontier of Persia against the Qāna, the Balūcs, described by Īsmā‘īlī, al-Muk ‘Alam Kān Ġīān (d. 1891) as “probably the most powerful subject of the Persian crown” (Persia and the Persian question, i, 200), and C.E. Yate, who was at Kā‘īn in 1894, met his second son Shawkat al-Mulk Muhammad Ḥāmī Kān, who became Īsmā‘īlī, al-Muk ‘Alam (Khuṣūs and Sīstān, Edinburgh and London 1900, 66 ff., 76-7). The Khuṣūz family adopted the family name of ‘Alam when Rūd Shāh Ḥāfīẓ introduced this requirement in the 1930s, and Ṣadād Allāh ‘Alam (d. 1978) had a distinguished career under the last Shāh, Muhammad Rādī, beginning with his appointment as the youthful governor of Sīstān and Bāličīstān in 1945 and ending as Minister of the Imperial Court in 1966-77; his memoirs, published in English as Ṣadād Allāh Ḥāfīẓ, *The Shah and I*, London 1991, are a prime source for the later years of the Shāh’s reign. See for the history of the family and its role in the political and military history of Persia’s eastern frontiers, Firouz Moújahed-Zadeh, *The Amirs of Ka’inat, the borders and Eastern Iranian bounces*, London 1995.

The region of Kā‘ūn’s of recent times corresponded largely to the ancient Kūhīstān, but was in the 1937 administrative reorganisation subdivided into two ṣuḥrastāns, that of Kā‘īn or Kā‘ūnāt and that of Bīrājānd [q.v.]. This was modified in the 1980s under the Islamic Republic, when three ṣuḥrastāns were formed: Kā‘ūnāt, Bīrājānd to its south; and Nībārīya in the further south, adjoining Sīstān and Kirmān. Thus the town of Kā‘ūn is at present the chef-lieu of its ṣuḥrastān (which contains a single bakhsh, the Bakhshī-Markāzī, and eight dīwāns). The population of Kā‘ūn itself was in 1986 15,955, and that of the whole ṣuḥrastān 122,149 (Moujahed-Zadeh, 50-5; this information on administrative arrangements replaces that given in the arts. bīrājānd, in Vol. I, 123b, and Kūhīstān, in Vol. V, 355b).

**KĀ‘AR**, a Gharaḵwī Pāshūn tribe concentrated in southeastern Afghanistan and Pakistanī Bāličīstān. Though not prominent among Afghān [q.v.] groups migrating to India during the early Dihī Sultūnī [q.v.] periods, Khāṣb Khān Kākar, patron and collector of materials for Nīmar Allāh’s *Makkān-i Afghānī*, demonstrates Kākar participation in Mughal literary production. Kākarjastān designates territory on and between the Tūla and Sulumān mountain ranges, including the microregions of Būrī, Pīšūn, Sībī [q.v.] and Ẓōbī/ Ẓōb [q.v.]. Within this area Kākars incorporated non-Pāshūn minority groups such as Gadūn and Watnsī speakers in many dependancy relationships, and there is a lack of consensus about whether other local Pāshūn groups, including the Panīr and Nager, are Kākars. Surrounding Afakzay, Ghayzay [q.v.], Tarīn and Ważīr Pāshūn and various Balūc [q.v.] communities form the social boundaries of Kākar territory, which is economically linked to the greater Indo-Islamic world through the markets of Khandārā, Kwatta, and the Dērāgāt [q.v.].

(KALANUUWA. KALUSWA (a), the name for a cap worn by men either under the turban proper or alone on the head. The word, from which verbal forms are derived as denominative verbs, is apparently of foreign origin; while it was used to be commonly connected with the Latin calatha (for which, however, the term calatha is difficult to quote and besides, it means a head-covering for women), Fraenkel wished to derive it through the Aramaic *la* (< Arabic kallus, kâli, Dony, Supplement, ii, 395) from Hebrew *kalah* (< Arabic kalaswa; kallusa the Coptic priests of modern Egypt and is there called kalluses; kallusa the name of the root plant, which seemed to represent a human head with a high cap. Kalansuwa was also the name of a fortress near al-Ramla in Palestine, see G. Le Strange, Palestine under the Moslems, London 1890, 476.

(W. BJÖRKMAN)

KALIKAT, locally KOLIKOODU (interpreted in Malayalam as “cock fortress”, see Yule and Burnell, Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases, London 1903, 148; conventionally całikat and, in modern Indian parlance, Kozhikode, a town of the Western Deccan or Peninsular Indian coastland (lat. 11° 15’ N., long. 75° 45’ E.) in what was known in pre-modern times, and is still known, as the Malabar coast [see MĀVAR]. In British Indian times it was the centre of a sub-district (ullâk) of the same name in the Malabar District of the Madras Presidency, later Province; it is now the centre of the District of Kozhikode in the Kerala State of the Indian Union.

In pre-Muslim times, the region around Kalikat fell within the powerful Hindu kingdom of the Cola. The commander of the Khâdżi sultans of Dihli, Malik Kâfr (q.v.), broke through the Deccan to the Malabar coast for the first time in the opening years of the 8th/14th century, although this success was short-lived [see MĀVAR]. It was, however, probably as a result of Muslim knowledge of the region that the traveller Ibn Bâjûtî was able ca. 739/1338 to visit the Malabar coast and, specifically, Kalikat (which he spells as Kalkânî). He describes the ruler there as an infidel having the title of Sêmârâ, a rendering of Malayalam sâmârî or sâmâtî, a vernacular modification of Skr. sâmâtra “sea king”, which the Portuguese subsequently rendered as Samorin or Zamorin. There was already a substantial community there of Muslim traders, who
had commercial connections with the Maldives Islands, Ceylon, Java and China. There was a šāykh[^1] or head of the Muslim merchant community miṣrī in the ruler, called Ibrahim, who came from Bahrain, and also a šāhi and the šaykh of a Shīʿite ḥawza or irshad in the town. Ibn Battūta noted a large number of Chinese ships in the busy harbour, and it was in one of these junks that he then embarked for China (Rīḥārā, iv, 88-94, tr. Gibb and Beckham, iv, 812-14, cf. Yule-Cordier, Cathay and the eastern isles, London 1914-15, iv, 24-6; on the Chinese presence at Kalikat, see Yule-Cordier, The Book of Ser Marco Polo, London 1903, ii, 391-2 n. 5).

In 1370 the Malabar coast passed into the general control of the powerful Hindu kingdom of Vijayanagar[^2] and remained under non-Muslim rule with the exception of a short period towards the end of the 17th century when the Mughal emperor Aurangzeb overran the Deccan. As in Ibn Battīṭa’s time, Kalikat itself remained under the rule of its Zamorins till the 18th century.

Another Muslim, the historian ʿAbd al-Razzāk[^3] al-Samarkandī, was sent as an envoy to the Zamorin of Kalikat by the Timurid Ṣāḥīḥ Rakh in 846/1442, and mentions seeing ships from the Horn of Africa and Zanzibar in its harbour; the numerous local Muslim community had two mosques and a Shāfiʾi šāhi and kādi. It was just after this, in 1444, that the first European to visit Kalikat, Nicolò Conti, came from Cochin. The Zamorins extended their authority with the help of the Muslim traders, and in the 15th century Kalikat became the most important town on the Malabar coast. Malabar was also a part of India where the Portuguese endeavoured to establish forts and trading factories, with Covilhā at Kalikat in 1480 and Vasco da Gama there in 1498. A factory was set up in 1500, but immediately destroyed by the local Muslims, whose monopoly of trade was now seriously and, in the end, fatally challenged; a fort was built in 1511, but evacuated in 1525, the end of Portuguese activities at Kalikat. European settlements were more successful at Cannanore and Kannānāṭ[^4] and at Cochin, whose Rājās were enemies of the Zamorins, hence sought European help and support.

The English first appeared at Kalikat in 1615 when three ships under Captain William Keeling arrived. In 1664 the English East India Company opened a factory; in 1698 the French Company opened one; and in 1752 the Danish did likewise. The extensive trade in cotton cloths exported from Kalikat—Marco Polo mentions the fine textiles of Malabar—was the origin of the English term calico (see Yule and Burnell, Hakōn-Jabon, 147-49). By the later 17th century, the power of the Zamorins was in decline, but they continued to be hostile to foreigners. Kalikat suffered badly in the Mysore Wars of the later 18th century, being sacked by the Muslim armies of Ḥāydar ʿAlī[^5] of Mysore in 1773, and those of his son Ṭipū Sultan[^6] in 1788, who tried to establish a rival capital in Malabar on the south bank of the nearby Beypour river. In 1790 Kalikat was occupied by East India Company troops, and by the Treaty of Seringapatam of 1792, the town passed finally under British control.

A significant proportion of the town’s population remained Muslim, under their Hindu and then British rulers, being part of the Mappila community of Muslims on the Malabar coast (see MAPPILA). In the 1901 census, they formed 40% of Kalikat’s 77,000 population, with over 40 mosques, including the Sheikkinde Palli, with the shrine and tomb of Shaykh Mīnu Kōyā, said to have come from Egypt to Kalikat in the 16th century. In 1970 the town had a population of 330,000, and in 2003, 453,700.

**KALIMANTAN**

PULAU KALIMANTAN, or KLEMAN, one of the pre-colonial names of the island of Borneo[^7] in suppl., one of the larger Sunda Islands in present-day Indonesia and Malaysia. The name is officially used in Indonesia for the whole island, whereas in Malaysia the term Borneo derived by the Portuguese from the name of the old and once powerful sultanate of Brunei[^8] in suppl. in the north, is still in use. About three-quarters of the island is part of the Indonesian Republic, being divided into four provinces: West, Central, South and East Kalimantan. The northern states of Sarawak and Sabah[^9] are part of the Federation of Malaysia (since 1963), while the Sultanate of Brunei re-obtained its independence from British protection in 1984.

The present article deals essentially with the ethnic and social structures of the whole island, for the Indonesian part of the island specifically, see BORNEO, in suppl. The whole island covers an area of ca. 755,000 km². As most of the area is, or was, covered by tropical rain forest growing partly on swampy ground, particularly in the vast plains in the south, the population density was very thin; an average of 22 people per km² was counted. Bigger settlements are usually found on river shores not too far away from their mouths, thus presenting themselves as strategic places for rule and commerce. The people used to live in villages or longhouses on the shores of the huge rivers that, until recently, together with their tributaries, were almost the only ways of communication for most parts of the island, except in the mountainous areas where rapids and ravines made shipping almost impossible.

Ethnologists usually divide the indigenous population of Kalimantan into two major groups: the “Malays” and the “Dayaks”. These terms, however, should not be taken necessarily to denote ethnic, or even cultural identities. In both groups, a large variety of ethnic, cultural, linguistic and tribal entities exist. In very general terms, “Malay” denotes those individuals or groups who masak Islam (“became Muslims”) and therefore either considered themselves to have taken over “Malay” religion and adat (custom), or who were considered by their former kinsfolk to have left their old relationships and adopted a new and strange identity, namely, the Malay one. “Dayak” then covers all those indigenous tribes and groups who did not become Muslim but either kept to their traditional religious and cultural identities or, later, became Christians.

Such “ethnic switching” of the “Malays” was not a general rule, however, as sometimes is taken for granted. Some of those groups who turned to Islam still maintained a number of their traditions, e.g. living in longhouses, or continuing their own nutrition habits. Thus, e.g. the Bakumpai in the south Barito districts in South Kalimantan did not take over Malay habits, although they became strong propagators of Islam to the Dayaks in the interior. Other tribal entities maintained parts of their traditional social structure and habits after converting to Islam, e.g. the Bajau on the west coast of Sabah and the Bajau Laut...
(Sea Bajau) in the Tawau region (who may, however, originate from the Southern Philippines). The Islamic Malay who were transplanted from the island of Madura and Eastern Java to West Kalimantan by the Indonesian army after 1965 and settled there on land owned formerly by Chinese refugees living there since the fall of the Ming dynasty in 1644, met with the unanimous hostility of the Chinese (now partly Protestant, Catholic or traditional Chinese), the Dayaks (partly Christian or traditional), and the “Malays” from the former sultanate of Sambas. After the collapse of President Sukarno and the power of his army who had sheltered them, they suffered a severe series of massacres.

The first strongholds of Islam on Kalimantan were those settlements that were already established as harbour and military watch stations under the Maritime Kingdom of Sri Vijaya which had its centre near Palembang [15] in south Sumatra, and which vanished in the 14th century (particularly in West Kalimantan, like Sukadana, Sambas), or by the Javanese Empire of Majapahit which decayed at the gua franca [16]. Dutch, attempted to promote their trading interests.

...b. Husayn al-Nabhanl, seems to have lived in Kufa...
the Ottoman Empire, tr. N. Tindal, 2 vols., London 1734-5; Systema religione et statu Imperii turcici (Systematicum seu intromixtoria religiae mohammadanæ), tr. V. Cândea, Bucharest 1977; Kâid-i lynn-i musiki 'ali weghi ul-harâtî, ms. Türkütat Institütü Y. 2768.

KAPLAN MUŞTAFA PASHA
(1603/1609). Ottoman vizier and kapudan pasha. Educated in the palace school at Istanbul, he made his early career in the private household of the sultan or ederin. Launched afterwards into a military and administrative career, Kaplan Muştafa Pasha was appointed beglerbeg of Damascus before 1076/1666. From 6 February 1666 to April 1672, he served as Grand Admiral (kapudan pasha). Under the Grand Vizier and Commander-in-Chief Fadlî Ahmed Paşa Köprülü, he commanded the main squadron during the War of Candia (Gerâr Seker [see li rritos: kandvâ]. In 1077/1666 his fleet of 47 galleys served to transport men and materials to Crete. On 30 October 1666, the Grand Vizier boarded the admiral’s flagship (başgördû) and joined his fleet, before 975/1667. From 1089/1678, Mustafa Pasha fought before Cehrin (Cyhyryn), the leader of the Crimean Tatars, and reconquered that fortress on 2-3 Redâbi 1089 (2-3 December 1680) while cruising the Archipelago.

KARAM (A.), the qualities of nobility of character, magnanimity, generosity, all the virtues making up the noble and virtuous man (see WbKAS, Letter Kâf, Wiesbaden 1970, 142-3). For a discussion of honour and nobility, see ’rück, Mûra’A and şirâf.

KARMANLIDIKÂ [see Turks. II, vi, in Suppl.] KARA'IYAT [or KARAY] (or IZ'IZ AL-KHâZIÎNÎR), an author of the Mamlûk period about whom very little is known.

His name would seem to indicate that he was a mamlûk of a Khâzâînîr or treasurer. Three fragments of his chronicle, called Ta'tîrîk al-Nawâdir minâmâ dâjdî li ’llawâ’il wa ’llawâjkân, have been preserved, the most interesting being that covering the years 6268/1228-90 (Gotha A 1655), in which the author says that he was writing between 1293 and 1341. This latter part is not free from faults (chronological errors, anecdotes which are hard to verify, and legends mixed with real events), hence should be used only with care, but its interest lies in the fact that it transmits oral sources contemporary with the author, certain information stemming from highly-placed personalities of the final years of the Asüûbîd period, such as Djâmal al-Dîn Ibn Ma'rûf [q.v.], and likewise some fragments of the abridged, and little-known, history of al-Nâşir Kâlâwûn’s reign composed by the kâdî Sharf al-Dîn Ibn al-Wâhid. The author was, moreover, largely inspired by the well-known chronicle of Ibn Wâsîf [q.v.] and may have used a source common to himself and Ibn al-Dawâdî [q.v.].

KÂSIM ARSLÂN (5995-1587), Indo-Muslim poet, court panegyrist of the Mughal emperor Akbar [q.v.] in the late 16th/17th century.

Details regarding his life and career are scanty. According to Muntakhab al-tawârikh, he was originally a native of Tūs; but most other writers refer to him as Mâghâdî, which would indicate that he might have lived in Mâghâd. He was brought up in Transoxania and went to India during Akbar’s reign. It is related that he took Arslân as his pen-name because his father claimed descent from Arslân DJâdî, a military commander of Mahmûd of Ghaznâ. Kâsim Arslân is described as a man of broad religious views, enjoying a witty, sociable and generous disposition. Apart from his status as a poet, he was known in his time as a skilled calligrapher, specially in the naskh style. His ālâm, which is rare, comprises various kinds of poems. One of his āsâd, which is addressed to the Eighth Imam Allî al-Rida, expresses the poet’s devotion to the Shî‘î leader. His ghazals, mostly short, describe amatory feelings in simple speech. His chronograms, for which he is especially noted, are useful in providing dates of certain historical events. He died, according to most accounts, at Lahore in 955/1587.

KAŠR (a), pl. kāsār, most probably from Grk. kastron, Latin castrum, has the general sense of “a fortified place”, hence “residence of an amīr or ruler, palace, or any building on a larger scale than a mere house”.

1. In the central and eastern Islamic lands. See for this, sārār, and note also that in the Persian lands, a synonym for this in early mediaeval usage (e.g. in Narseh-ḵāy, Bayḥāḵ, Dīḏāḏdīr) is often kāḥī (MP kāḥū, yielding Eng. and Ger. kāsh, Fr. kasque).

2. In the Maghrib.

Here, from the vocable changes frequent in Maghribi dialects, we often find the pronunciation kasr, pl. kāšār. The term has here various semantic strata that have to be illuminated by close examination of the various texts available and by archaeological investigation, and in the light of the complex material factors concerning the Maghribi habitat from mediaeval times until modern times as such. It is here: (a) a palace, a place from which political power is exercised, or an aristocratic residence; (b) a fortified place, a small fort or a full-scale fortress; (c) a fortified complex for community habitation; and (d) a collective granary or store house.

A. The evidence of mediaeval texts

The palace. The term is usually used in the texts to denote a palace, a place of residence for a person wielding authority, such as the kasr al-ğultrim which the Aghlabid amīr Ḫurābī I had built in 184/800, on the site of the princely town of al-Ḫabbāṣiyah, not far from al-Kayrawān (q.v.) (al-Baladhurī, Futūḥ, 328; al-Bākīr, al-Masālīl, wa l-ḵamāslīl, ed. and tr. de Slane, repr. Paris 1965, 26/64), or the places (kāšār) built in 263/876 by the amīr Ḫurābī II in his new princely residence of Rakkāda (q.v.) (al-Bākīr, op. cit., 27/62, 147/135; Ibn Ḫāḏhir, i, 289). Al-Mahdīyyah (q.v.), the first royal residence founded by the Fāṭimidūs in Iṣrāyīlī, additionally included the palaces of Ḫubayd Allāḥ and Ḫabū Ḫāṣān (Ibn Ḫawāq, 71/67; al-Bākīr, op. cit., 30/67-8).

In the far Maghrib, the fortress built by the Almoravids at the moment of the foundation of Marrāḵuḵ (q.v.) was called the Kasr al-Ḥadjar (Ibn Ḫāḏhir, iii, 20). The term served to designate at one and the same time palaces, including the governmental headquarters or princely residence, and also the residences (kāšār) of the Almohad leaders, each of which comprised houses (dūyār), gardens (ḥasāṭārīn), a bathhouse (khamāmān) and stables (iṣṭābārī) (al-Ḵumārī, Masālīk al-ḥāfi ḵī lamāslīk al-āmṣar, B.N. Paris ms. No. 5868, fol. 67b, tr. M. Gaudefroy-Demombynes, Paris 1927, 179).

Fortresses, places for garrisons and the fortified community habitats. Although frequently used in texts from the mediaeval period, the term kasr has no homogenous geographical distribution. It is rare in the western regions, from Tilmīš/Tlemcen to the Atlantic, where toponyms like ḥīṣn and kāla are very clearly predominant, but places denominated as kāšār are numerous from Tripolitania to the region of Ṭāḥart, passing through Iṣrāyīlī, where they often correspond to fortresses whose construction goes back to Byzantine times (al-Bākīr, Masālīl, 31/69, 50/108; al-Ḡīrīsī, Maghrib, 157/144-5). However, in their grouping, the fortified sites thus described as kasr or kāšār do not appear to be, above all, places for garrisons but rather centres for population, a role that certain fortresses dating from Byzantine times already played at the time of the Arab conquest (Ibn Ṭābul-Ḥakām, Futūḥ, 224, 228, 239; al-Bākīr, op. cit., 13/34). In Iṣrāyīlī, as in the far Maghrib, the term thus denotes a village or a fortified town (ibid., 47/101, 159/292), or a fortified place where the surrounding people come to take refuge when necessary (al-Tāḏīnī, Rihla, Tunis and Tripoli 1981, 56, 119). Corresponding to an agglomeration on a more important scale, the term finally denotes nuclei of people, and these may be of a pre-urban or an urban nature. Thus Ṭāḥart was in origin made up of several kāšār (B. Zerouki, L’emmanuel de Tahart, premier état musulman du Maghreb, i, Paris 1987, 132-3); it was probably similarly the case at Sidjīmās (ibn Ḫawāq, 91/89).

B. The pre-modern kāšār in the Maghrib

The fortified villages of the Saharan wastes. In North African toponomy, Arabic kāšār frequently replaces its Berber equivalent qāwran (pl. qāwrān) when applied to the fortified villages characteristic of a type of habitat peculiar to the ante-Saharan zones: in Morocco, in the valleys of the Zīr, Dādès and Draa, from the Sīn in the west to Taṭīfālī in the east, and from the Atlas from north of the Draa to the south; and in Algeria, the term kāšār (q.v.) is frequent in the region of Suppl. and that of Mażāb (q.v.). In its “completed” form, i.e. pre-modern one, such as one still finds in Morocco, the kāšār appears as a fortified village with a rectangular plan, surrounded by a protective wall flanked with towers and with angled bastions; the space thus circumscribed, with a dense network of contiguous houses, is criss-crossed by several narrow streets whose pattern is based on more or less orthogonal axles. The regular form depends on the topographical conditions of the site; if the kāšār of the plains of southern Morocco most often show a regular pattern, the mountain villages are made up of houses huddled together and presenting a continuous front view, whilst in the Algerian Sahara, the overwhelming majority of kāšār simply consist of an agglomeration with a dense and complex pattern whose general contours attest an organic pattern of growth. As an economic centre and place of refuge, and as a nucleus for sedentarisation, the kāšār forms the basic political unit of these regions. In the southeast of Morocco, the management of the internal affairs of the kāšār is confided to two distinct political entities: the chief (ṣaybāḵ or amḏar) elected once a year is seconded by the chiefs of the quarters or the great families (mḥnag or amīr) in order to avoid power being gathered up into the hands of a single kinship group. These balancing factors, which make up a small council (al-ṣaybāḵ, q.v.), are guarantees of a social order that is expressed by means of prescribed forms and customary rules, often set down in writing.

The collective granary in the eastern Maghrib. In southeastern Tunisia, the term kāšār further denotes a collective storehouse where the local people, living in the valleys near to cultivated fields, come to store their grain. The mountainous Tunis-Libyan arc and its outliers, some 150 km/95 miles long, contains a hundred or so of these kāšār, with similar ones in Algeria, in the region of Gourara. Built on a hilltop with escarpmented slopes, the kāšār here generally has a quadrangular plan, with its protective wall formed by the placing together of narrow rooms (khirāna) with cradle vaulting, sometimes placed above each other on two or three levels, access to them being by an improvised outside ladder. Although nobody lives there,
the ksar is nonetheless a focus for the social life of peoples living a dispersed or troglodytic way of life. Sometimes it provides shelter for some artisanal activities, and it forms the point near to which an important market may on occasion be held. Likewise, one sometimes finds the mosque or masjid (q.v.), sometimes with a cemetery associated with it, at some distance away from the ksar yet at the same time associated with it.

The overall view. It is extremely difficult, for reasons both historical and methodological, to trace the evolution of the habitat which finally contributed to the emergence of the "completed" form of the ksar, the fortified village of the high plateaux of the Moroccan steppelands, more characteristic of certain regions which are in majority Berberophone than really "typical"—as has often been said—of a certain "Berber style of architecture". Various influences have been suggested in this regard: that of Africa, put forward at the time of the first exploratory travels, has speedily been forgotten, even if Terrasse perpetuated it in a certain manner by finding in the ksar an imprint of Pharaonic Egypt. The geometrical disposition of the Moroccan ksar, above all the presence of a principal axis which serves the groups of dwelling places, has generated as many arguments in favour of the thesis of an influence from the Roman-Byzantine castel-lum, whilst the brick decoration which often ornaments the whole ensemble has raised the question of connections with the East and with Hispano-Moresque art. Suffice it to say that these suggestions still today do not go beyond simple formal or stylistic likenesses.

The problem of tracing the origin of the type is further exacerbated by the difficulty of dating these groupings, given the very fragmentary historical data and the absence of archaeological remains which can be firmly dated. Thus, although the Moroccan ksar has for a long time been considered as an example of a "traditional" and "archaic" form of architecture, and therefore of an undatable nature, its existence is not attested by any sure material piece of evidence before at least the 17th and 18th centuries. The uncertainty over the dating—or at least, over the relative chronology—of these fortified villages has given rise to two postulates: (1) the present dating of those with regular plans shows an organic growth compared with those with geometrical plans—ksar with regular plans are considered later than those which, in Tuwät and elsewhere in the Sahara, show in their plans no concern for symmetry; and (2) terre pisée was substituted for stone—the ĵén or constructed of baked earth is seen as the end product of a process of change from the more ancient fortresses built in stone. These theories, even if they cannot be regarded as totally invalid, must, however, be approached with great prudence because of their neglect for the socio-economic and topographical considerations which brought about the conditions for the construction of these sites, and because of the a priori definition of a linear evolution of the construction techniques which they presuppose.

Studies on the typologies involved, supported by the most rigorous possible surface explorations, are required to understand the phenomenon of the ksar in all its breadth, geographical and chronological. J.-Cl. Echallier has accordingly made an exploratory and investigative effort of over 300 ksar in the Gourara-Tuwät region. Starting from formal criteria, he proposes classifying the ensemble of these sites into six main groups, ranging from storehouses used as refuges on rocky peaks (type I) to regular walled enclosures in unfired brick, displaying a sense of care in the organisation of the interior spaces (type VI). In southeastern Tunisia, some inscriptions on plasterwork placed on the arceding of the entrance vaulting, from which access leads into the ksar, bear a date. A. Louis has studied and published the account of a granary which served as a place of refuge, the Ksar Djo'ama, which in this case dates to 475/1082-3, whilst at the Ksar Djo'ama, an inscription dates either the building or the restoration of this part of the building to 1178/1764-5. The gap between these two dates indicates the degree of uncertainty which still reigns in the studies on the evolution of these forms of habitation in the Maghrib.

Often placed in connection with the general phenomenon of a crisis which ruptured the complementary relationship between two types of economy, the nomadic and the sedentary, and which led to periods of conflict and change, it seems that the ksar of southern Morocco and southern Algeria, like the communal storehouses of southeastern Tunisia, can be placed, in a more global and more nuanced way, in relationship to a situation of transition between nomadism and sedentarisation. This particular form of a place for keeping commodities and for refuge, or as a place for habitation, would thus form a nucleus for sedentarisation around which the territory of a given human group becomes organised. The ksar, so characteristic of certain North African landscapes, is an architectural form on the verge of disappearing because of the major changes of recent decades in social relations and techniques. In these regions, it is now the village which has succeeded the ksar as the basic element of social cohesion.

KA SR ABĪ DĀNIS, a settlement of Islamic Portugal, revealed by archaeological excavations on the ancient site of Salacia, to the south of Lâbion, and on the site of the present convent of Arcaceoi, the modern Alcácer do Sal.

It dates from the 3rd/9th century, when coastal defences were being erected against the Viking attacks which had begun in 230/844 [see al-Majtās]. The fortress occupied a major strategic site, up-river from the mouth of the Tagus, and on the site of the present convent of Arcaceoi, the modern Alcácer do Sal.
KASR ABÍ DÁNIS — KASTAL

capital of a kāra and grew into a prosperous centre. Ibn Abí 'Amir [sec Al-MAŠṌR bi 'LÁH] made it into an important naval dockyard for attacking the shrine of St. James of Compostella in 387/997. As the main maritime outlet for the Aládíd [q.v.] of Badajoz, Kasr Abí Dánis retained its role as a dockyard and arsenal and was also, according to al-Idríší, a prosperous commercial port. After the fall of Lisbon in 542/1147, the town was first taken by Afonso Henriques, but recovered by the Almohad caliph al-MAŠṌR in 587/1191 before its definitive fall in 614/1217. Immediately after this, Muslim Alácer declined in favour of Setubal.

KASR AL-MUSHÁSH, an Umayyad period archaeological site in Jordan located 40 km/25 miles southeast of 'Ammán. The core of the site consists of a kāṣr, a water reservoir and a bath, surveyed by King in 1980-1 and excavated by Bisheh in 1982-3. The kāṣr measures 26 m/85 feet square and consists of rooms around an open central courtyard, without any corner towers, and could accommodate up to 40 people. Re-used in one wall is a stone with a Kufic inscription asking for the forgiveness of the sins of an unknown Radja b. Bashshar. Nearby is a plastered cistern 4.8 m/16 feet in diameter once roofed with drinking water. At 400 m/1,312 feet west of the kāṣr is a plastered cistern 4.8 m/16 feet in diameter once roofed and could accommodate up to 40 people. Re-used in one wall is a stone with a Kufic inscription asking for the forgiveness of the sins of an unknown Radja b. Bashshar. Nearby is a plastered cistern 4.8 m/16 feet in diameter once roofed with drinking water. At 400 m/1,312 feet west of the kāṣr is a plastered water reservoir measuring 25 m/82 feet square. The excavated bath house was a simple structure with four rooms: an apodyterium, frigidarium, tepidarium and caldarium with a furnace. The bath has none of the lavish decorations characteristic of Kusayr 'Amra or Hammán al-Sahrāḥ [q.v.]. Other uninvestigated reservoirs, cisterns, walled enclosures and barrages dot the site. The potter’s site is predominantly Umayyad. The function of the site, without a sizeable resident population, was to serve as a watering stop for caravans travelling between 'Ammán and the northern Arabian Peninsula via the Wādī Sirýán. Reduced traffic along that route after the 'Abbasid revolution soon led to the abandonment of the site.

KASR ṬÚBÁ, one of the so-called "desert castles" in Jordan, is located ca. 100 km/60 miles southeast of 'Ammán. Since it is unfinished, information on the intended design of the elevations and the decorations are limited. The enclosure walls and the foundations were built of limestone, the remaining parts of brick. The building has a rectangular shape, measuring ca. 140 m (east-west) by 70 m (north-south) and is flanked by five semicircular towers on the south side, two on the east and west sides. There was a round tower at each corner. In the north the arrangement is different (see below). The structure consists of two individual and identical halves, divided by a wall and connected with each other by a small passage. Each of the two buildings has a central courtyard of ca. 30 m by 30 m with rooms and/or smaller courtyards built around it. Entrance is given to each of the buildings by a gate flanked by square towers in the middle of the northern façades. Between the two gates, a semicircular tower projects from the northern façade. Behind the gate, passages, ca. 6 m deep, lead into the courtyards. In each of the corners of the courtyards, traces of typical Umayyad kubs, i.e. two rooms flanking a central hall or courtyard on two sides, are to be found. This feature, in addition to the use of brick, the vaulting technique and the few decorations preserved, shows that the building must have been built in the late Umayyad period. Most authors consider al-Wádh II [q.v.] as the patron of this building.

KASTAL, one of the so-called Umayyad "desert castles", now in the Kingdom of Jordan. It lies ca. 15 km south of the centre of 'Ammán. Its existence became known only at the beginning of the 20th century, following a publication by Britnów and von Domaszewski (see Balk.).

Until the 1970s, the period of its construction remained speculative, but since then there is little doubt that this desert castle was built in Umayyad times. The site consists of a palace and a mosque, the latter lying north of the palace. Changes in the construction as well as ceramic finds indicate that the place was used in the Ayyubid-Mamlûk period as well as in later Ottoman times. The palace is a square construction of ca. 59 x 59 m (without counting the towers), made of ashdars with cast work between the surfaces, with round corner towers and three semicircular intermediate towers on the northern, southern and western sides each, while the entrance was on the eastern side. The latter has four semicircular intermediate towers, two of which can be considered as part of the wings of the main entrance. Through a ca. 2 m-wide gate one enters into a space inside the tower, which is ca. 16 m deep and leads to an inner court of ca. 28 x 28 m. Around the inner court was a peristyle, behind which lay six groups of rooms, arranged bay-wise (four on the eastern and western sides, with adjoining rooms in the corners, two on the northern and southern sides). Remains of an upper storey, which formerly surrounded the entire building, are only found in the neighbourhood of the tower room. The building thus
resembles other Umayyad sites, the palace at Djibal Saysa [q.v. in Suppl.], Kharana and Kašr al-Hayr al-Sharqi [q.v.] in particular.

A few metres off the western part of the northern palace wall lies a construction which originally was interpreted as a praetorium, but which is undoubtedly a mosque. Preserved are the remains of a rectangular surrounding wall of ca. 21 x 18 m, which encloses a courtyard and a prayer-house. Its northwestern corner encloses a round tower with a diameter of ca. 6 m. From the southern side of the court a door leads to a rectangular prayer-room with a deeply vaulted mihrab [q.v.] in the middle of the southern wall. The mosque clearly shows three construction phases. The masonry of the earliest phase is the same as that of the inside constructions of the palace. It belongs to a mosque, which probably had a saddle roof. To this mosque also belonged the round tower, beyond all question one of the earliest minarets in the area.

From the southern part of the courtyard a flight of steps led to the roof, always vulnerable from the sea, was not only reinforced, and the original roof replaced by a barrel vault. In late Ottoman times, the mosque was deepened and vaulted in the middle of the south-ern wall. The mosque clearly shows three construction phases. The masonry of the earliest phase is the same as that of the inside constructions of the palace. It belongs to a mosque, which probably had a saddle roof. To this mosque also belonged the round tower, beyond all question one of the earliest minarets in the area.

KATHIRI, a South Arabian tribal group and sultanate, the latter eventually becoming part of the Eastern Aden Protectorate prior to the departure of the British from South Arabia in 1967. Their origins were in the area of Zafr [q.v.] on the Indian Ocean, now within the Southern Region of the Sultanate of Oman [see 'UMÂN], and they appear suddenly on the stage of history in the 9th/15th century. By the time the Eastern Aden Protectorate collapsed in 1967 after the departure of the British, the Kathfrfs sultanate was made up of the centre and eastern end of the Wadâf Hadramawt, tribal lands to the north of the Wadî towards the Empty Quarter [see AL-RUB' AL-KHALI] and to the south in the eastern and northwestern region towards the sea, although by this time they had no access to the sea. Their main towns were Sayâ'n [q.v.], the capital of the sultanate, Tarîm [q.v.], the intellectual centre, al-Ghuraf, Bûr and al-Ghurfa, all within Wadî Hadramawt.

The Kathfrî tribe was of Zanâna (sometimes written Danna in the Arabic sources) and, according to al-Shihârî (Adwâr, 234), Kahtanfs of Saba', and not of Hamdân. Al-Shihârî adds (352) that Zanâna are believed to have come from Muscat (Mašqat) and Zafrâ.

The Kathfrîs first took Zafrî in 807/1404 (al-Allawi, Ta'rîkhî, ii, 684). They took the important port of al-Shihâr [q.v.] from the Tahirids [q.v.] in 867/1462. The port, always vulnerable from the sea, was not only the emporium of Indian trade in the area but also handled the traffic of the pilgrims bound for Kafr Hûd in Wadî Hadramawt (Serjeant, Portugal, 25 and see also his Ha'dî). Both trade and the pilgrimage traffic were huge sources of revenue. The exact situation is not clear, however, and it seems that the Kathfrîs on occasion held al-Shihâr as governors of the Tahirids.

The expansionist policies of the Kathfrîs are associated with the famous Badr Bî Tuwayrîk (r. 922-77/1516-70). He fought the Mahra [q.v.] tribes to the east of al-Shihâr, and endeavoured to keep the Portuguese and the Turks at bay as far as he could, playing them off against each other. He was able to pursue campaigns into Hadramawt, using Turkish-Portuguese rivalry to his own advantage. Badr even made use of the Turks and the Portuguese: with the aid of the former in 926/1520 he took Sâhibîm, and with Portuguese musketeers he made gains in Wadî Hadramawt in 945/1539 (al-Kindî, Ta'rîkhî, i, 164; Serjeant, Portugal, 28). His successes in Hadramawt may well have been because of his access to firearms introduced by the Turks in the expedition against Sâhibîm. He had no strong religious sentiment against the Portuguese, but this earned him the resentment of many Hadramîrs who urged holy war against him (Serjeant, Portugal, 27-30, 57). Al-Kindî in his Ta'rîkh provides a whole catalogue of Kathfrî activities in mediaeval times in Hadramawt and on the coast. In 926/1520, for example, Badr went on to take both Tarîm and al-Ghurfa. In 934/1527, he struck coins in al-Shihr. Under the year 942/1535, the killing of a number of Portuguese is reported, others being shackled and plundered. The Kathfrîs were also in touch with the Turks and the Egyptians. In 943/1536, Badr began the building of the fortress of Gâl al-Bâ, Wadî Hadramawt. The year 944/1537 marked the arrival in al-Shihr of a Turkish galley to assist Badr against the Portuguese. It was announced that the khutba was to be pronounced in the name of the Ottoman sultan, Suleyman Bâ Yazid (i.e. Suleymân the Magnificent). After Badr's death in 977/1569, there was less stability in the Kathfrî house. Reports for the following years reflect internecine squabbles (al-Kindî, Ta'rîkhî, i, 164, 165, 180, 182, 185, 215, 216 and passim).

The struggle in 1064/1653 between the two Badrs of the Kathfrî family, Badr b. 'Umar and Badr b. 'Abd Allah, brought the Zaydiy [see ZAYDIYYA] of the Yemen into the affairs of Hadramawt (al-Wâzîr, Tahabit al-halwâ, 135 ff.). Badr b. 'Umar al-Kahtîrî, lord of Hadramawt, al-Shihr and Zafrâ, having already embraced the Zaydi rite, had the khutba pronounced in the name of the Zaydi Imam al-Mutawakkîl (r. 1054-87/1644-76 [q.v.]). His nephew, Badr b. 'Abd Allah al-Kahtîrî, had Badr b. 'Umar arrested and imprisoned at Sayân (Serjeant, Oman naval activities, 28). Al-Mutawakkîl reacted swiftly to Badr b. 'Abd Allah's action against his uncle. Much correspondence passed between him and the Kahtîrî, and the latter finally submitted, although Badr b. 'Abd Allah was resentful of the Imam's intervention and his submission was clearly a sham. Badr b. 'Umar was obliged to flee Zafrâ, where the Imam had secured his governorship as part of his agreement with Badr b. 'Abd Allah, and finally arrived at the Imam's court in Samân [q.v.] in 1069/1659. This state of affairs now brought about a full-scale Zaydi military expedition into Hadramawt under the command of Sâfi 'l-Islâm Ahmad b. Hasan and accompanied by Badr b. 'Umar. Sâfi 'l-Islâm was able to subdue Hadramawt itself, but then experienced difficulties in supplying his large Zaydi army. He was thus unable to deal with the problem of Zafrâ, by this time under an 'Umâni amîr. He returned from Sayân to Zafrî (Serjeant, Oman naval activities, 78-80). By about 1080/1670, Zaydi influence in Hadramawt had declined and the Kathfrî sultans were in independent control there (ibid., 84).

Once again, sources provide a rather confused and lengthy catalogue of Kathfrî activities: military movements, battles, tribal problems and agreements, these involving also the Yâfi'îs [see YÂFI'], who had entered the area, on occasion the Zaydis, and from the mid-19th century onwards the Ku'ayîfs.
The Government of Bombay's *Account of the Arab tribes*, compiled at the beginning of the 20th century, indicates (123) that Kathfiri territory had originally been carved out of 'Awda'ji lands in the west and Mahra in the east, and included al-Mukalla on the coast, until 1891 when it passed to the Ku'aytis and the Kathfiri. The Kathfiri sultanate lost much ground to the Yafi'is and Ku'aytis in the latter half of the 19th century. The *Account*, reporting on the Kathfiri, also reports a total of 7,000 fighting males. Many Kathfiri subjects were scattered over parts of India, Java, Singapore and East Africa, engaged in trade.

In 1883, Sultan 'Abd Allah b. Sahl al-Khatfiri visited the British Resident in Aden to assess the attitude of the British to his seizing al-Mukalla and al-Shihr from the Ku'aytis. The British answer was firm and to the point: if the Kathfiri attacked the ports, the British would come to the aid of the Ku'aytis. The British Resident in Aden later recommended (123) to the British Government that the Kathfiris be armed and given a gunboat. The Kathfiri continued to smart at ports, the British would come to the aid of the Ku'aytis.

'The sultanates, the Kathfiri signed no 19th-century formal treaty of protection with Britain (Account, 130). They are, however, listed (154-5) among those states "having relations with Aden Residency". Their annual revenue is quoted as 24,000 rupees, although there was no stipend from the Residency. The sultan in 1906 when the *Account* was published was Mansur b. Ghilabi.

It was only during the 1930s that relations between the Kathfiri and the British became closer, the rapprochement occurring in the wake of the famous "Ingrams Peace", when the first British political officer in Hadramawt, Harold Ingrams, brought about a general peace between the years 1937-40 in the tribal lands of both Ku'aytis and Kathfiris (Ingrams, *Arabia, 10-19*). This resulted in the political, social, agricultural, educational and medical development of both sultanates, including the completion of a road from Tarin in Wadi Hadramawt to al-Shihr on the coast, and the increased British involvement in their affairs, culminating in the separate British administration of the Kathfiri, Ku'aytis, Mahra and Wa'idiyya [q.v.] sultanates as the Eastern Aden Protectorate. In March 1939, a treaty between the Kathfiris and the British was finally signed (Smith, "Ingrams Peace", *Hadramawt* 1937-40, see Bahl; for the terms of the treaty, see *Records of Aden*, 2:29-40).

The sultanates of the Eastern Aden Protectorate never entered the Federation which was formed and fostered by the British in the Western Aden Protectorate. At the time of the withdrawal of the British in 1967, the Kathfiri sultanate became a part of the People's Democratic Republic of Yemen. In 1990, with the unity of north and south Yemen, the whole of what had been the Eastern Aden Protectorate became a part of the Yemen Republic [see *Al-Yaman.* 3(b)] with its capital at San'a'.

*AL-KATIFI, IBRAHIM b. SULAYMAN, Imam Sh'i jurist of the 9th/10th/15th/16th centuries.* He is most famous for his acrimonious dispute with his supposed classmate (or teacher), the influential 'Ali b. 'Abd al-Al-i al-Karakr (d. 940/1534 [q.v.]). Al-Katif maintained that in his supposed classmate's influential *Kdti'at al-laajdaj*. The dispute is mostly inspired by his personal and religious animosity towards al-Karakr. Al-Katif accused him of egotism and legal chicanery aimed at personal enrichment. Such accusations can be found throughout al-Katif's most famous work *al-Siraj al-wwahhidi*, a detailed refutation of al-Karakr's *Kitab al-ladidaj*. The debate here concerned the legitimacy of land-tax (*kharij*) payable to the ruler. Whilst al-Karakr, benefiting personally from *kharij* revenue, argued that it was a permitted tax during the occultation (*ghayba* [q.v.]) of the Imam, al-Katif maintained that Safawid rule was legally speaking illegitimate; no Safawid tax could be legitimated and no gifts bestowed by the Shii could be accepted. In one incident in Karbalah, al-Katif publicly refused to accept a gift brought by al-Karakr from Shii Ta'nkh. Most of al-Katif's works remain in manuscript, and nearly all appear to be refutations of al-Karakr's views on subjects such as the *djamila* prayer, fastering and fasting. Some have linked al-Katif to the emerging *Khatibi* school [see *Khatibiyya*, in Suppl.], but his juristic reasoning, though conservative, appears within the mainstream of *Shi'i* jurisprudence. His date of death is unknown, but he is reported to have been alive as late as 951/1544.
(R. Gleave)

KAWĀ‘ID FIKHIYYA (Ka.), legal principles, legal maxims, general legal rules (sing. kawā‘id), these are madzhab-internal legal guidelines that are arrived at by the methods of similar cases in various fields of the law, whereby the legal determinations (akhām) of these cases can be derived from these principles. They reflect the logic of a school’s legal reasoning and thus impart a “scaffolding” to the “case-law” (furū‘).

Historically, general rules can be found already strewed throughout early furū‘ works. They were first collected by Ḥanafīs like Abu l-Ḥasan al-Karkhī (d. 340/952), but under the title of furū‘ rather than kawā‘id. (As a result, the term asl acquires, minimally, a fourfold meaning: (1) an act that has already been legally determined and now serves as a “model” for similar cases; (2) a scriptural pronouncement (Kurān or Hadith) that is considered decisive for the legal determination of a given act; (3) a legal principle, under which several individual cases are subsumed; (4) a source of the law, such as the Kurān.) But this early start hardly bore fruit, and it is only around the 7th/13th century that all the legal schools began to produce books on kawā‘id (predominantly with this term in the title of their books), except (!) the Hanafīs. This strange gap in the latter’s record is probably not to be attributed to a loss of their works, because the Ḥanafī scholar, Ibn Nudaym (d. 970/1563), complains about the fact that his school has nothing to compete with against the Shāfī‘īs in this respect (Ashbīh, 15)—a situation that he tries to redress by writing a kawā‘id book on the model of the Shāfī‘ī Tājī al-Dīn al-Suhbī (d. 771/1370) work. Some of the most influential kawā‘id works of the later period bear the title al-ʿAṣbīh wa-naʿzūrî, such as those of the Shāfī‘īs Ibn al-Walkī (d. 716/1317), Tājī al-Dīn al-Suhbī, and al-Suyūṭī (d. 911/1505), as well as that of the Ḥanafī Ibn Nudaym. According to the editor of Ibn al-Walkī’s book, Ahmad b. Muḥammad al-Ankārī, ʿAṣbīh refers to cases that are alike in appearance (ṣabīh) and legal status, while naʿzūrî denotes cases that are alike in appearance, but differ in legal status. Whether this is generally true remains to be seen. Look-alike cases of the latter type are dealt with in the furū‘ literature, the furū‘ being the decisive difference that brings about a different legal determination (ḥukm). Since sections on furū‘ do occur in ʿAṣbīh wa-naʿzūrî works, one may consider such works an umbrella genre that comprises both the kawā‘id deduced from truly similar cases and the furū‘ indicating the differences between outwardly similar cases. Logically, and probably also historically, the establishment of similitudes among cases precedes the formulation of legal rules/maxims based on them as well as the recognition of furū‘ as obstacles to the subsumption of cases under a single rule.

However, with regard to the kawā‘id, this picture is too simple. Although generally valid rules (al-kawā‘id al-kulliyya al-fikhiyya) do exist, they are outnumbered by rules that are only “preponderant” (al-kawā‘id al-dā‘ī al-fikhiyya al-ṣiḥṭīyya). In the Idāh al-masūlah tālā kawā‘id al-imām Mīkhāl al-Wangharī (d. 914/1508) (p. 3), the relationship of the two types is 17 to 101, and a number of legal scholars assert that legal rules, as opposed to other rules, are always preponderantly valid. The generally valid rules are couched in maxims, the preponderantly valid ones in double questions, thus e.g. dar ʿalā “l-maṣūlah” makādan “‘alā ʿalā “warding off corruptions has the priority over bringing about benefits” is a kā‘ida kulliyya, whereas al-zan‘ hal yuṣnakh bi-t-zan‘ ʿām la “can a presumption be canceled by [another] presumption or not?” is a kā‘ida ʿalā al-kulliyya. The term ʿalālīk refers to the fact that the non-subsumable cases are看不到 “exceptions” to the rule, rather than constituting a competing kā‘ida.

The unmistakable blossoming of kawā‘id literature from the 7th/13th century onward expresses several tendencies:

(1) The focus of the ʿukā‘ah is madzhab-internal, not independent, ʿiṣbīhî (i. mutlak). A good command of the kawā‘id will qualify the jurisprudent as a muqaddhī al-fikri, someone who can issue a legal opinion on the basis of the kawā‘id of his school.

(2) The school-specific kawā‘id were collected from the furū‘ works or, where the imams and other earlier authorities had not been explicit about their principles, were arrived at by induction from their furū‘ decisions (kawā‘id istiṣqā‘īyya). Ibn al-Walkī (d. 716/1317) and Abī ʿAbd Allāh al-Makkārī (d. 758/1357) are said to have done their own istiṣqā‘ of the major Shāfī‘ī and Mālikī sources respectively (see al-Bāḥūṣayn, Kāwa‘id, 324 and 328).

(3) There is a certain competitiveness among the schools to reduce the kawā‘id to the lowest possible number. The generally valid rules, as a result, are the “Major Principles”, to the number five may be reduced to the number two, and so on. Particularly famous are the so-called al-kawā‘id al-khams “Five Principles”. Attested since the 8th/14th century, they are the following (there are variations in wording and sequence):

(1) al-umur bi-muṣâra al-didha “Things [acts] are what they are through the intentions that bring them about”;
(2) al-dinna wa-dar bi-maṣūlah “Harm shall be removed”;
(3) al-dinna wa-dar bi-maṣūlah “Costum is made the arbiter”;
(4) al-siṣṣa wa-la-maṣūlah “‘Hardship brings about facilitation”;
(5) al-yaqīnī la yāzīl bi-‘l-yakīn “Certainty is not erased (superseded) by doubt/uncertainty”.

Restricting these principles, also called al-kawā‘id al-kabriyya, the “Major Principles”, to the number five may result from a desire for balance; an attendant saying goes: bannya ʿl-muṣāra ʿalā ʿl-khams wa-naʿzūrī ʿalā ʿl-khams “Islam has been built on five [sc. the aqāla] and so has jurisprudence.”

As for the position of the kawā‘id literature within legal studies, one may quote the Shāfī‘ī al-Karāfī (d. 684/1285), who says at the beginning of his furū‘ work that there are two kinds of usūl: usūl al-furū‘ and al-kawā‘id al-fikhiyya al-kulliyya (al-Furū‘, i, 2), and the Ḥanafī Ibn Nudaym who made the shocking statement that the kawā‘id are the real usūl al-furū‘ (al-ʿAṣbīh, 15). While the latter statement seems exaggerated, it is clear that the kawā‘id were considered an important third “player” alongside the usūl and the furū‘.

It should be mentioned that the usūl formulated hermeneutical principles that were called kawā‘id usūlīyya, these are at times not carefully separated from the kawā‘id fikhiyya.
KAYSUM (modern Turkish: Kaysun; Grk. Kaison; KAWIR, DASHT-I [see IRAN. I. 3]).

**Description**

Kaysum is now the Kazakstan Republic includes what was in parts of the country, while the northern part is largely the Russian Federation of States, on the east with (formally, Kazakstan Respublikasi) is the largest state of Central Asia; it borders on its north and west with the Caspian Sea. The capital since 1997 has been Astana, which is mentioned up to 1177 and a Jacobite one disappeared. During this Frankish occupation, Kaysum was re-occupied by the Byzantines and at the end of the 11th century became the capital of the Armenian patriarch for a few years. All this indicates that there was living there an important Christian population.

**Bibliography:**

**KAZAKSTAN,** conventionally KAZAKSTAN, a region of Inner Asia lying essentially to the south of Siberia and north of the older Islamic Transoxania [see MA WARA AL-NAR]. The southern part of what is now the Kazakstan Republic includes what was in medieval Islamic times rather vaguely known as Moghollistan [q.v.]. The modern Kazakstan Republic (formally, Kazakstan Respublikasi) is the largest state of Central Asia; it borders on its north and west with the Russian Federation of States, on the east with China and on the south with Kirgizistan [q.v. in Suppl.].

**1. Topography and climate.**

Kazakstan covers an area of 2,724,900 km² and stretches from almost the lower Volga and the Caspian Sea in the west to the Altai and Tien Shan Mountains in the east. Deserts occupy the central and western parts of the country, while the northern part is largely covered by steppes. The highest point is Khantangirî peak (6,995 m/22,944 feet) in the southeast. Main rivers are the Sar Darya [q.v.] which flows into the Aral Sea, the Eritis (Irish [q.v. in Suppl.]) and Išim (Išim) which join the Ob river, the Ile [q.v.] which empties into Lake Balkaš (Balkhash [q.v.]), and the Oral (Ural [see YAYIK]) river which drains into the Caspian Sea.

The average January temperature rises from -17°C in eastern modern Turkey on the Keşalyan-çay, an affluent of the Suriçay-çay, in the upper valley of the Euphrates. Considered in the 9th century A.D. as one of the marches of the Byzantine frontier, it commanded a col on the Besni road. Its fortress served as a base for the revolt of Nasr b. Shabab [q.v.] but was dismantled after Nasr's submission to al-Ma'mun in 208/824-5.

Kaysum was re-occupied by the Byzantines ca. 958, and at the end of the 11th century became the capital of the Armenian lord Gogh Vasil (d. 1112). The Franks annexed it in 1116 and it became part of the lands of the lord of Mar'ash. Baldwin of Mar'ash (d. 1146) rebuilt the fortress in stone, but this has now disappeared. During this Frankish occupation, Kaysum was the seat of a Latin bishopric. An Armenian biblio- graphic is mentioned up to 1177 and a Jacobite one till 1174. It was even the place of residence of the Jacobite patriarch for a few years. All this indicates that there was living there an important Christian population.

Between 545/1150 and 568/1173 the Saljuqs of Rûm and Nur al-Din b. Zangi occupied it alternately. During Ayyubid times it came within the territory of Aleppo, but its strategic role declined, and after the passage through it of the Mongols in 1260 it is mentioned only as a village under Armenian domination.

**Bibliography:**

in the north to 0° C in the south, and the average July temperature increases from 19° C in the north to 28° C in the south. Annual precipitation levels are generally low, ranging from about 100 mm in the deserts to between 250 and 400 mm on the steppes, but higher levels are observed in the foothills and mountains: e.g. in Almati at the foot of the Alatau Mountains, it is 640 mm.

2. Demography and ethnography.

According to the results of the census in 1999, Kazakhstan has a population of 14,953,100, giving it an average population density of 5.5 persons per km². The proportion of the urban population is the highest among the Central Asian states (56%). The proportion of the urban population is the highest among the Central Asian states (56%).

Kazak is still spoken in rural areas, particularly by the elderly and those who have recently returned to the countryside after working in cities. The language is also taught in some schools and universities, and there are numerous Kazakh-language publications and media outlets.

Kazak history and culture are closely intertwined with the development of the state of Kazakhstan. The country has a rich cultural heritage, including music, dance, literature, and art. Kazakh culture is also known for its hospitality and traditional values.

In 1991, Kazakhstan declared independence from the Soviet Union and became a republic of the Commonwealth of Independent States. Since then, the country has made significant progress in areas such as education, healthcare, and infrastructure.

5. History.

From ancient times, present-day Kazakhstan was the territory of various nomadic tribes and states: the Sakae, the Usun, the K'ang-yiieh, the West Turkic Khaganate, the Turgesh, the Karakhanids, the Karakhitays, the K'maks, the Kipcak, etc. Based on the Soviet theory which stresses the "autochthonness" of ethnogenetic processes, most Kazak historians think that all these tribes are the "autochthones" of ethnogenetic processes, most Kazak historians think that all these tribes are the "autochthones" of ethnogenetic processes, most Kazak historians think that all these tribes are the "autochthones" of ethnogenetic processes, most Kazak historians think that all these tribes are the "autochthones" of ethnogenetic processes.
KAZAKSTAN — KHWAĐAGAN

After they increased their power, they returned to the Dash-i Kipčak and replaced the Özbek, who moved to the south of the Sir Daryá. Their dynasty is known as the Kazakh Khanate, but its government structure and territory were unstable, and there is a dispute among Kazakstán scholars on whether the khanate can be called a “state” or not. In any case, there is scant evidence of the ethnic consciousness of its inhabitants, and it is not clear whether the word “Kazakh”, which originally means a “dependent man” or a “wanderer”, meant at this time a distinctive ethnic group.

In the late 17th and the early 18th centuries, fierce battles occurred between the Kazaks and the Oyirads or Oinats (Kalmaks [see Kazakh], of the so-called Dzungar Khanate (western Mongolia). This confrontation, on the one hand, consolidated the Kazaks’ ethnic identity, and on the other hand, induced some Kazak khojs in 1990, was known as a pragmatic and power in the Middle and the Junior Djuz, and started Anna Ivanovna, though in practice they remained first secretary of the Communist Party in 1989 and USSR collapsed. Nursultan Nazarbaev, who became increased the power of the president and restricted independence. In the 1820s, Russia abolished the Khan’s power in the Middle and the Junior Djuz, and started to rule directly most parts of Kazakhstan. The territory of the Senior Djuz, which was under the rule of [g.v.] Khanate, was incorporated into Russia by the 1830s.

During the 1917 October Revolution and the ensuing civil war in Russia, Kazakh intellectuals established the Alash-Orda autonomous government. After it collapsed, the Autonomous Kazakhstan (mistakenly called “Kirgiz” in Russian usage until 1925) Socialist Soviet Republic was formed inside Soviet Russia. After receiving and abandoning some territories in 1925, it was in 1936 upgraded to the Kazakh SSR, one of the fifteen constituent republics of the USSR.

The 1920s and 1930s were especially hard times for Kazakhstan; purges, mass collectivisation and forcible sedentarisation killed a large number of politicians, intellectuals, nomads and peasants. But at the same time, the Soviet government started the industrialisation of Kazakhstan, which was accelerated during World War II, when factories were evacuated from Central Russia. The ethnic Kazakh cadre grew, especially since the 1960s under Dimmukhamed Konaev, who served as first secretary of the Communist Party of Kazakhstan for 25 years. When he resigned under pressure from Moscow in December 1986, Kazakh youths in Almati and other cities held demonstrations, which were suppressed violently.

Although the leadership of Kazakhstan actively advocated maintaining and renovating the USSR, it declared independence in December 1991 when the USSR collapsed. Nursultan Nazarbaev, who became first secretary of the Communist Party in 1989 and president in 1990, was known as a pragmatic and semi-democratic reformist. But in 1995 he took drastic measures to concentrate power in his own hands; the parliament was suddenly dissolved, the constitution of 1993 was abolished, and the new constitution increased the power of the president and restricted the functions of the parliament. The opposition’s sphere of activity is very limited, though it has not been physically liquidated as in Uzbekistan and Turkmenistan.

Although the country is undergoing economic hardship, Kazakhstan has rich natural resources (especially oil and metals), which have not yet been fully exploited. Kazakhstan’s resources, as well as geopolitical importance, have drawn the attention of many foreign countries, and it maintains basically good relations with all neighbouring countries including Russia and China, as well as with the United States, Japan and European countries.

Kelantan, a state of northeastern Malaysia.

Lying on the coast adjoining the Malay areas of southern Thailand, Kelantan has long been a centre of devout Islamic scholarship and education, of Malay cultural creativity, and assertive forms of Malay-Islamic politics. Kelantan’s traditional religious boarding school academies (pondok [see pesantren]) and their more illustrious teachers were well known throughout the Malay world; together with Malay from the Karen or Oinats (Kalmaks [see KALMUK]) of the so-called Djdwa or Southeast Asian Malay community in 19th century Mecca. By the early 20th century, Kelantan was an important centre of publication of religious and Malay vernacular works and the site of important innovations in the collection and management of religious taxation (zakat and fitrd) through its state religious council (Majlis Ugama Islam). With its people intensely committed to their own local variants of the Malay language and culture, Kelantan has over time elaborated a powerful sense of its own distinctiveness within the wider Malay-Islamic world. It resisted Thai domination in the 19th century, succumbed to British rule in the first half of the 20th, and achieved independence in 1957 as part of the Federation of Malaya, later Malaysia. Since 1959 it has been the stronghold of PAS (Parti Islam Se-Malaysia [g.v.]), an avowedly Islamist party which, while playing a leading opposition role in national politics, has held power at the state level in Kelantan for much of the post-independence period (1959-78, and 1990 to present).

Since the 1980s, and especially since its return to power in Kelantan in 1990, PAS has promoted a strongly “Sherifian-minded” neo-traditionalist Islamism. Since 1993, Kelantan has mounted a powerful challenge to the ascendancy of Malaysia’s ruling multi-ethnic coalition by questioning the national government’s Islamic credentials, most notably through its efforts to secure constitutionally-required federal assent to implement the Sharis law, including the hudud punishments, in Kelantan state.

C.S. Kessler
KHWAĐAGAN, a Sufi brotherhood of Central Asia.

520 KAZAKSTAN — KHWAĐAGAN
The movement of the Khwādghagan belongs to the proto-history of the Nakshbandiyya order, which often combines the two groups as the Khwādghagan-Nakshbandiyya. This movement, whose first figure is Abū Ya‘qūb Yusuf Hamadānī (d. 535/1140), took over a Sūfī tradition going back to the Prophet through Bāyāzīd Bistāmī, Sahāmī al-Fārizī and the caliph Abū Bakr. This Sūfī tradition was at first known as the Tarīkāt-i baksara (“Abū Bakr’s way”) or Tarīkāt-ī Siddikīsī, and then at the time of Bistāmī, as the Ṣaddjādīsī (from another name of Bistāmī). The main representatives of the Ṣaddjādīsī were Abu ‘l-Ḥasan Ḥaraharānī, Abu ‘l-Ḡāsim Ṣawī and Abū ‘Alī Fārmādī. It is only with Hamadānī, a pupil of the last-named, that the Ṣaddjādīsī assumed the designation of Tarīkā-ye Khwādghagan ("way of the masters").

Yusuf Hamadānī, having studied fiqh at Baghdad and being connected with the Naḥaṭī law school, spent his time between the cities of Merv and Harrāt in Khūzestān. He was initiated into Sūfism by Abū ‘Alī Fārmādī and a family of eastern Anatolia, originally from Ghurtūn in the Bukhara oasis, and studied in Bukhara. He soon evinced an interest in silent dhikr, to which he was initiated in a dream by the prophet Khwādghagan. The great merit of Ghudjduwānī was to have stated succinctly and codified, in the form of the eight adages or rules called "Holy Sayings", kalimat-i wakfiyya, the essentials of Khwādghagan doctrine and thought. Bahā’-dīn Nakshbandī enriched these eight rules with new ones, the whole making up his famous "Eleven Rules" of the Nakshbandiyya, adopted and made the subject of lengthy commentaries by adepts of the order right up to the present day.

At the time of Abū al-Khitāb, the "Holy Sayings" had the following eight rules which, if followed, enabled the Sūfī to concentrate his attention and to organise for himself the contemplative life. Abū al-Khitāb seems to have given preference to four of the rules, and these were the subject of a special commentary by such a Nakshbandī author as Ahmad Khwādghagan Kāsānī (d. 949/1542; see his Risāla-yi ṣahāli kalima, ms. 501/XVI, Bīrūnī Institute of Oriental Studies, Tagkent). The four rules were: (1) "assuming awareness in breathing", ḥikr dar ādam; (2) "observation of one’s steps", nazar dar kadam; (3) "journeying in the homeland", safar dar vostāv; and (4) "taking up a position of retreat within society", khānwāt dar omdānum. The remaining four rules were: (5) "retaining in memory", yād kard; (6) "return [to God]", bāz gash; (7) "maintaining awareness", nāzih dāgh; and (8) "keeping in mind", yād dāgh.

Nevertheless, the Khwādghagan movement had no doctrinal unity or agreement regarding the mystical exercises, and far from remaining united, Ghudjduwānī’s disciples split into several rival groups after his death. One of these groups became known as the Abū al-Khitābinī, "the founder’s partisans". The main Khwādghagan who figure in the Nakshbandī order’s silsila after Ghudjduwānī are: Ārif Riwāgarī (d. 649/1251); Mahmūd ʿAdīr Faghmawī (d. 710/1310); Allī ʿĀzīzī Ramīnānī (d. 716/1316 or 721/1321); Muḥammad Bābā-yi Sammānī (d. 755/1354); and Sayyīd Amīr Kulaī (d. 771/1370). Despite the importance laid on it by Ghudjduwānī, to be likewise stressed by Bahā’-dīn Nakshbandī, silent dhikr was not followed by all Khwādghagan circles. These circles developed a strong criticism of Sūfī movements contemporary with themselves and which they used to describe as corrupt. Above all, the Khwādghagan held fast to a strict regard for the traditions of Islam, as reported in the Qushqāhāʾ ʿayn al-hiyāt, where it is stated that Ghudjduwānī encouraged his disciples to study Islamic law and the Ḥadīth, to avoid ignorant Sūfīs (ṣafadīn-i dhāʿ).
14th century and the Manākh of Khu`ada ‘Ali ‘Azzān-ı Ramitani (cf. D. DeWeese and J. Paul, below, in Bibl.), which are, at the present time, the two main sources on the practices and doctrines of the Khwaja ‘Adjağān before Baha` al-Dîn Nakşband. The Khwaja ‘Adjağān were mainly divided by the questions of ginâ and桩m retreat (khāwan). In Bâhâ al-Dîn the group was headed by ‘Arif Rifwâtîyî had good relations with that headed by Awdîyâ Kaybi, but these deteriorated after the death of the former because his successor, Mâbûd Angîr Faghnaîi, made the group adopt the open, vocal ginâ. The sources also tell us that Baha` al-Dîn Nakşband, who had been initiated into ginâ khâf of ‘Abd al-Khalîk Ghudjîwândî in a dream, came into conflict with his own master, Sayyîd Khûlîî, who was personally a proponent of ginâ ginâ. Ghudjîwândî’s followers practised ginâ during which they held their breath, whilst concentrating on their yanqî’s heart, keeping their eyes closed, lips pressed together and tongue up against the palate. Amongst certain of the Khwaja ‘Adjağān, music and dancing were not formally proscribed. Likewise, khîlîkî, rejected by ‘Abd al-Khalîk as also rejected, later, by Baha` al-Dîn Nakşband, was nevertheless adopted by some members of the order; it was done in a darkened cell, where the adept had to struggle with his self by means of a physical expression attributed to ‘Abd al-Khalîk, “close your door to khîlîkî, but open it to spiritual companionship (sukha)”, shows the position of the early Khwaja ‘Adjağâns on this subject and further reveals that ‘Abd al-Khalîk attributed a major importance to sukha, mystical discourse with the spiritual master, which was to become an essential feature for the Nakşbändîyya. Like ‘Ali ‘Azzân-ı Ramitani, ‘Abd al-Khalîk was opposed to the institution of Sûfî communal life par excellence, the khâlah, but it is known that there existed amongst Sayyîd Amîr Khûlîî’s disciples a form of association, whose precise nature is not clear, a djâmâ’a at-khâna “house for social gatherings”.

The Khwaja ‘Adjağâns nevertheless remained essentially united in face of the other Sûfî currents in Central Asia, against the Kalandars [q.v.] and, in particular, against the Yasawî groups, whom they castigated for their lack of respect for the precepts of Islam. In sum, everything which symbolised Sûfî community was rejected from a khâlah to the derwîsh cloak (khîrak).

The Khwaja ‘Adjağâns were little attracted by asceticism, even if some of them preached abandonment of the secular world, tark-i dânp, and encouraged khîlîkî, and Ramitani went so far as to recommend that the Sûfîs should have a trade (hiya), a feature later found amongst the Nakşbändîyya. In fact, a famous formula popularly attributed to Baha` al-Dîn Nakşband, “the heart should be with God and the hand with some piece of work”, dil ba-yâr ub dast ba-bân, seems to have been inherited from a very similar maxim which one group of Khwaja ‘Adjağâns held as a “Fifth Holy Saying” added to the four first ones: “the heart should be with God and the body in the market”, dil ba-yâr wa tan ba-bân. Another criticism of the Sûfîs on which they were united was rejection of the hereditary succession of shaykhs. This explains why, after the deaths of ‘Abd al-Khalîk and Baha` al-Dîn Nakşband, their communities of disciples split into several groups. In the 8th/14th century, Baha` al-Dîn was unable to unite the various Khwaja ‘Adjağâns groups and was only the master of one group out of many. Even if he did succeed in giving a more homogenous form to the doctrines and practices taught by ‘Abd al-Khalîk, and in retaining as vital principles for his own communi-
Transoxania and came to Altishahr at an unspecified moment (between 990/1582 and 999/1591) where he stayed for some years; he died in Samarkand in 1007/1599. He left behind an already powerful organisation that was to become the Black Mountain faction [1102-1125]. Very much like their counterparts in Transoxania, the representatives of Khwādja Ikhwān acted as intermediaries between the Caghatayid rulers and between the rulers, the begs and their subjects. They acquired considerable wealth (pious foundations, waqfs, and donations, miazmand) on which their influence rested as well as on the communal affiliations of settled and nomadic communities. Almost from the start, they were active promoters of Islam among the still shamanistic Khirgiz [q.v.], and Kazaks [see KAZAK] (J. Fletcher, Confrontations between Muslim missionaries and nomad believers in the late sixteenth century: notes on four passages from the 'Diyâ' al-qulūb', in Tractata Altera, ed. W. Heissig, Wiesbaden 1976, 167-74). These endeavours must have gone on throughout. Later on, the White Mountain faction was instrumental in spreading Islam to China proper, beginning in the middle of the 17th century. (Fletcher, The Naqshbandiya in northwestern China, in his Studies on Chinese and Islamic Inner Asia, ed. B. Manz, Variorum, Aldershot 1995, no. XI, 1-66; this book also contains reprints of other relevant published texts by Fletcher).

It was unusual that a ruler came to occupy an elevated position in the spiritual hierarchy. This was, however, the case with Muhammad Khān (r. 999-1018/1591-1609), who is even said to have been the Axis (kutb) Shāh Mahmūd Čūrās, Tārīḵ (Kronika), ed. O.A. Akmuqghin, Moscow 1976 [Pamantani pis-memnosti sostoka, 45]). But apart from this, leadership in the Black as well as White Mountain group seems to have been hereditary, this principle extending even to the khwādja and sometimes to affiliations as well. The spiritual organisation adapted itself to the strongly localised political system of Altishahr: a city oasis governed by members of the ruling family or leading men of certain clans, with sometimes only nominal overlordship of the paramount khan. The cities all had their khwādjas. Whereas the centre of the Black Mountain faction was at Yarkand [q.v.], where the khan also had his capital, the White Mountain faction centred on Kashgar [q.v.].

The Ishakīya Khwādjas did not achieve a monopoly of spiritual guidance, however; at least in the north and northeast of Altishahr and beyond in the area where the Caghatayid rulers held sway, other (sometimes local) groups were also active (in Kuljā: see Masami Hamada, De l'autorité religieuse au pouvoir politique: la révolte de Kūta'i et Khwādja Raghatan, in M. Gabornieau, G. Vemstein and Th. Zarcone (eds.), Naqshbands. Cheminement et situation actuelle d'un ordre mystique musulman, Paris-Istanbul 1990, 455-89, in Turfan, the local shrine of Alpātā/Alfātā; see Akmuqghin, op. cit., 165). To what extent other brotherhoods were active in the region remains open to question.

The Ishkīya supremacy did not last long. Sometime before the middle of the 17th century, another descendant of Makhdūm-i Aqmān made his appearance in Altishahr in the person of Muhammad Yusuf (d. 1618/1619), son of Muhammad Amīn, the elder son of Makhdūm-i Aqmān. He was able to gain a foothold in Kashgar and soon became influential with the Caghatayi khān. As a result of the rivalries that surrounded and followed his death, his son Hidżāyat Allāh, better known as Khwādja Alīkh ("Master of the Horizons", whence the name by which the White Mountain faction was also known, sc. Afkārīya) was compelled to take flight. The influence he had gained may be seen from the fact that he was given a Moghul (although not Cingisid) princess in marriage. Alīkh then succeeded in persuading Quldan, the Zunghar khān, to mount a campaign against Altishahr. Alīkh was only beginning his career as a conqueror. The report of Muhammad Sādīk that this was achieved due to a letter from the Dalai Lama (the Zunghars had by then become Lamaist Buddhists) should perhaps also be seen as indicative of the view that spiritual leadership should prevail over military (Muhammad Sādīk, Tədrisxan-yi khwādjaqīn, epitome by R. Shaw, A history of the Khogas of Eastern Turkestan, in JASB [1897], extra number, pp. i-xi and 1-67, at 36-7; German version by M. Hartmann, Ein Heiligenstaat im Islam. Das Ende der Caghatiden und die Herrschaft der Chogas in Kalganen, in Der islamische Orient. Berichte und Forschungen, vi-ix, Berlin 1905, 195-374, at 210-2). The Zunghars conquered Altishahr and reinstated Khwādja Alīkh as their viceroy (r. 1090-1105/1679-94). The White Mountain faction now ruled with a degree of independence, but acknowledged Zunghar overlordship, paying them tribute (a comparatively heavy one, according to Fletcher's figures, unp. 16-37, 149-51) and accepting that members of their family be held as hostages. The area under this kind of Khwādja authority cannot have extended much over the four cities of Khotan, Yarkand, Kashghar and Aksu, the Orot Zunghars having established their rule over the northeastern regions already in 1659. Nor had Caghatayid rule come to an end, and even if the newly appointed khan 'Abd al-Raquīd (who married his daughter to Alīkh, who thus became tied to the Cingisid house) was a puppet of the Zunghars, he was influential enough to build a faction together with the ousted Black Mountain followers; his attempt at a Moghul-Black Mountain revival was, however, worsened in 1682-3, and he was replaced by his brother. The White Mountain faction then set out to destroy their Black Mountain opponents, and after the Caghatayid figurehead had died in 1103/1692, they tried to make do without a Moghul khan. In the ensuing strife, the deciding force in the southeastern part of Altishahr came to be the Kirghiz, but it was still a Moghul who called back Khwādja Dāniyāl of the Black Mountain faction. Dāniyāl established himself with Khirgiz help, and until 1125/1713, when the Zunghars re-established their rule under Tsawang Rabtan, the oasis cities were under different nomad-Khwādja coalitions. After Dāniyāl had died ca. 1142/ 1730, the cities of Yarkand, Khotan, Kashghar and Aksu were divided up between his sons, thus furthering localisation. The next turn was induced by an attempt of the Black Mountain faction to break loose of the Zunghars, countered by their appeal to the White Mountain group (1166/1753); fights ensued between the two Khwādja factions, some Khirgiz begs, urban local begs, the nominal Zunghar ruler and his opponent Amursana, who was backed by the Chinese. As a result, the Zunghar empire was taken over by the Manchu Emperors, who consequently also came to be overlords of the Tarim [q.v.] basin as well.

The Khwādjas failed because they were unable to build up a unified leadership, but more importantly still was their failure to gain a military basis of their own, not easily achieved under the circumstances. The resources available in the sedentary oasis economy could hardly support a state apparatus for revenue raising, and revenue was inadequate for building enough military strength to keep the nomads out.
Therefore, throughout this period, military power rested not with the urban-based Khwajas, but essentially with their mainly nomadic Zunghar overlords and, as far as the region itself is concerned, with various Kirghiz groups.

It might appear that after the Chinese conquest of Altishahr, the fate of the Khwajas was sealed, but this was not the case. After the first attempts at restoring White Mountain power had been crushed by the Manchus and their representatives in Altishahr (Amin Khadja of Turfan [q.v.], whose spiritual affiliation is not altogether clear), a period of relative stability ensued, which came to an end in 1820. By this period, the Khokand [q.v.] Khânate had consolidated itself in the Farghana basin, serving as a platform for repeated Khwaja incursions, the last of which occurred as late as the 1820s when Buzurg Khân, together with Ya'kub Beg [q.v.], invaded Kângharia. It was only after the short-lived state of Ya'kub Beg had been crushed in 1878 that the region was incorporated into the Chinese empire under the name of Sinkiang (1884). The Chinese conquest of Syria, in which they collaborated by going over to the Ottomans at the decisive battle of Marjî Dâbîk [q.v.] (25 Radjab 922/24 August 1516). This act of treachery won him his final and supreme promotion, when Selim, before leaving Cairo on 13 Sha'bân 923/ 24 August 1517, appointed him viceroy of Egypt. He held this position until his death on 14 Dhul-Qa'da 928/5 October 1522 and, although he kept up something of the state and usages of the defunct Mamluk sultans, he remained ostentatiously loyal to his Ottoman suzerain. His viceregalty began with the capture and execution of Kâsim Bey [see Kâsim, 4], a grandson of Bâyezîd II, to whom Kânsawâl al-Ghawrî had given asylum. When Süleymân became sultan in 926/1520, and Dânîbîrdî al-Ghazarî [q.v.], the governor of Damascus and his former accomplice at Marjî Dâbîk, rose in revolt, Khârî Beg studiously kept aloof, and prevented disaffected Mamlûks from joining him. Within Egypt, Khârî Beg’s viceregalty witnessed the restoration of stability. The terrorisation of the defected Mamlûks was reversed; they emerged from hiding, and resumed their traditional dress. Relations with the Ottoman troops, who envied their better pay and rations, were naturally uneasy. Although the former hierarchy of rank and office had fallen with the Mamlûk sultane, the old administrative system largely survived, to be codified and perpetuated in the kânûnî-nîme of Egypt, three years after Khârî Beg’s death. Presiding over a crisis of transition in Egypt, Khârî Beg was thus one of the most successful survivors of the old regime.

KHÂRÎ BEG (Khâyîr or Khayîr Bey), the last Mamlûk governor of Aleppo, subsequently first Ottoman viceroy of Egypt. He was the son of Malbây b. ‘Abd Allâh al-Djarjâsî (sic), a Muslim Abaza trader in Circassian lands. He was born at Samsun (on the Black Sea coast within the Ottoman Empire), and his father presented him, although not a slave, with his four brothers to the Mamlûk Sultan al-Ashraf Kâ‘îr Bây [q.v.]. He was enrolled in the Royal Mamlûks, and was formally “emancipated” by the grant of a steed and uniform. He became an amîr of Ten in 901/1495-6, and subsequently an amîr tabîkhânî, making his first contact with the Ottoman court as an envoy in 903/1498 to announce the accession of al-Nâṣîr Muhammad b. Kâ‘îr Bây to Bâyezîd II. He was promoted amîr of a Hundred by al-Ashraf Dânîbîrât [q.v.], who was appointed governor of Aleppo, where he was regarded as a severe but capable administrator. He was very wealthy, and maintained a large manlûk household as his power-base, significantly including a company of arquebusiers “as in the Ottoman

man armies” (kâmî fi ‘asâkir al-mamlakâ al-râmîyâ: Durr, i/2, 607). To Kânsawâl he must have seemed an overmighty subject, and the sultan unsuccessfully attempted to poison him. His governorship of Aleppo ended with Selim I’s conquest of Syria, in which he colluded by going over to the Ottomans at the decisive battle of Marjî Dâbîk [q.v.] (25 Radjab 922/24 August 1516). This act of treason won him his final and supreme promotion, when Selim, before leaving Cairo on 13 Sha’bân 923/24 August 1517, appointed him viceroy of Egypt. He held this position until his death on 14 Dhul-Qa’dâ 928/5 October 1522 and, although he kept up something of the state and usages of the defunct Mamlûk sultans, he remained ostentatiously loyal to his Ottoman suzerain. His viceregalty began with the capture and execution of Kâsim Bey [see Kâsim, 4], a grandson of Bâyezîd II, to whom Kânsawâl al-Ghawrî had given asylum. When Süleymân became sultan in 926/1520, and Dânîbîrât al-Ghazarî [q.v.], the governor of Damascus and his former accomplice at Marjî Dâbîk, rose in revolt, Khârî Beg studiously kept aloof, and prevented disaffected Mamlûks from joining him. Within Egypt, Khârî Beg’s viceregalty witnessed the restoration of stability. The terrorisation of the defected Mamlûks was reversed; they emerged from hiding, and resumed their traditional dress. Relations with the Ottoman troops, who envied their better pay and rations, were naturally uneasy. Although the former hierarchy of rank and office had fallen with the Mamlûk sultane, the old administrative system largely survived, to be codified and perpetuated in the kânûnî-nîme of Egypt, three years after Khârî Beg’s death. Presiding over a crisis of transition in Egypt, Khârî Beg was thus one of the most successful survivors of the old regime.

KHÂL’ (a’), the verbal noun from the verb khal’a “to take off (a garment), to remove, to discharge from an office, to depose” (sc. ‘an ‘amâlihî, Lane, i, 2, 790a), “to dethrone (e.g. a ruler),” is the technical term for deposition. The modern Arabic term is khâla’t min al-sâlîr or tâla’a min al-marânah.

(i) Historical development. There are many cases of deposition or forced abdication throughout the course of Islamic History, e.g. in the Umayyad period (cf. Mu’tawwiyî I, 6/684 and Ibîrîhîm, 126/744) and especially in ‘Abbasîd times. During this period, about a quarter of the rulers were deposed or forced to abdicate, pressured by the de facto ruling military leaders, after years of military disaster and misrule through favourites who had amply demonstrated the incompetence of the caliphs. The unstable caliphs, many of whom had something of a genius for making bad situations worse, inevitably stimulated the claims of usurpers. After the war between the brothers al-‘Amin and al-Mâ’mûn, who each declared the other deposed [see Sâmîrî, (Vol. IV, 940a)], the situation culminated in the anarcistic period of Sâmîrî and continued under Bûyîd rule (529-447/932-1055) and that of their
successors, the Saldjuk sultans of Irak and western Persia (447-590/1055-1194), in whose hands the caliph was but a mere tool. The majority of the 'Abbāsid caliphs were forced to abdicate, e.g. al-Musta'za in 252/866 and his two successors, the Saldjuk sultans of Irak and western Persia (447-590/1055-1194), in whose hands the caliph was but a mere tool. The majority of the 'Abbāsid caliphs were forced to abdicate, e.g. al-Musta'za in 252/866 and his two successors, and al-Muhtadr the following year. Often the military leaders forced them, sometimes brutally, to abdicate, issuing an elaborate, sometimes falsified, document of the deposition, accusing them of treason, oath-breaking, etc., and insisting on a formal, written document of abdication. This act, considered as an essential part of the deposition process and registered officially by the judges, aimed at the nullification of the oath of allegiance. The forced abdication was accompanied by symbolic acts such as the taking off of clothes or shoes (cf. in the Old Testament, Ruth, iv. 7; see Goldräher, Abhandlungen i, 47-8), or turbans, or rings, and the anointing of the insignia. Thus deprived of the sovereign dignity, the deposed caliph had to pay homage to his tractable successor, who was speedily installed. Often kept prisoner thereafter, many rulers were murdered, usually by rivals and relatives, or installed. Often kept prisoner thereafter, many rulers were murdered, usually by rivals and relatives, or installed. The utterance fitadbir ahl al-islam, ed. H. Kofer, in Islamica, vi [1934], 349-414, vii [1935], 1-64, and [1938], 18-129, see ch. 1, § 3, and ch. 2, § 7). Other than a single passage in al-Fārābī's work on the perfect state (Mūhabbāt 'arī ‘ahl al-mutawâ al-firdās, ed. F. Dieterici, Leipzig 1894, repr. 1964, ch. 29, 63, tr. F. Dieterici, Leipzig 1900, 100, ed. R. Walzer, Oxford 1985, 258, tr. R.P. Jaussen et alii, Cairo 1949, ch. 29, 87), the sources of political theory contain no distinction in the two bodies of the ruler, the visible individual and the objective institution, as in medieval European theories; see the exhaustive study of E. Kantorowicz, Die zwei Körper des Königs. Eine Studie zur politischen Theologie des Mittelalters, 2 Munich 1994, esp. 385.

KHAL, 'ABD AL-GHAFFAR (1890-1988), Pathan leader and politician. He was born at 'Udhamzay in the Peshawar district of the North West Frontier province of British India, his father Bahram Khan of the Muhammadzay clan being a wealthy landowner and the chief Khan of his village Hashstanagar. Educated first at a Kur'an school in North West Frontier province, out of the Punjab in 1901 to strengthen border security. The problem was that the British, given the province's strategic role and
the relative backwardness of its people, were unwilling to give it the political advancement which had been given to the rest of India. To remedy this situation, ‘Abd al-Ghaffar founded in 1928 the Pakhtun, the first political journal in Paktia/Paqhta, and in 1929, the KhudaYY Khdmtgar or “Servants of God” organisation, Khudayy Khidmtgar, whose aim was the uniform of a red shirt, did both social service and political tasks. ‘Abd al-Ghaffar’s second guiding principle was non-violence. His Khudayy Khidmtgdr, though drilled in a military fashion, bore no arms and vowed to be non-violent, while he cooperated closely with India’s leading apostle of non-violence, Mahatma Gandhi; in 1940, for instance, he resigned from the Working Committee of the Indian National Congress when it rejected a pacifist stance in World War II. Not once throughout a long life of protest did ‘Abd al-Ghaffar betray this principle, a remarkable fact given the warlike and vengeful traditions of his people.

From the early 1930s onwards, ‘Abd al-Ghaffar was the most influential figure amongst the Pathans, and between 1931 and 1947 he led large numbers of them in support of the Indian National Congress. From 1931, his Frontier Afghan Dilruga [q.v. in Suppl.] became the Frontier Congress, and the Khuday Khidmtgdr, the Congress Volunteers who were the uniformed, and largely responsible for bringing Congress ministries to power in the Province between 1937 and 1947. But why did these Pathans, staunch Muslims to a man, support the Congress which revealed, on occasion, strong elements of Hindu revivalism? The great personal influence of ‘Abd al-Ghaffar and his close relations with Gandhi and Nehru played some part. The power of the Congress in India played the major part, however: it offered the best chance of promoting Pakhtun, Afghan interests—of winning provincial autonomy, of establishing a Pathan state, Pakhtunistan, although this idea was never seriously proposed.

Within Pakistan, ‘Abd al-Ghaffar fought for the establishment of a Pathan state, Pakhtunistan, although the area which it should include, and the degree of autonomy which it should have, remained ill-defined. He was not able to publish the Pakhtun, the Khudayy Khidmtgdr organisation was banned, and he spent most of his remaining days either in prison or in exile. In January 1988 he died at Peshawar but was buried in Sâmarra’. He was nominated by the former tutor of the caliph al-Mu’tazz [q.v.], with eight other scholars, for judgehips. But they were accused by palace personnel of being members of secessionist groups, so the caliph ordered their expulsion to Baghdad, and al-Khassaf was attacked by a mob (al-Tabari, iii, 1685). Following the deposition of al-Mu’azz in 255/869, and the start of the brief rule of al-MuhtadT (255-6/869-70 [q.v.]), al-Khassaf was brought back to the caliphal court as the court lawyer. It was during this period that he wrote a book about khordaj [q.v.], which unfortunately has been lost. Other books were also lost when his possessions were plundered following the murder of his patron, al-MuhtadT.

Ibn al-Nadmir, tr. Dodge, i, 509, says that al-Khassaf advocated the doctrines of the Djamhiyya [q.v.]. Since it is known that some Hanafis advocated these doctrines, it is not unreasonable that al-Khassaf was one of them.

In the descending order of seven ranks of Hanafi jurists in the practice of idbiht [q.v.], al-Khassaf has been placed in the third, following the first rank of Abi Hanifa and the second rank of Abi Yusuf and Muhammand b. al-Hasan al-Shaybani [q.v.]. Jurists of the third rank elucidated problems (ma’as’i) not previously covered by jurists of higher rank (see Tahqiv al-yazidy, Tahqiv al-‘ihsani, Mawlid 1954, 8-10). His books, according to Ibn al-Nadmir, included the following: (1) K. al-Khordaj, which has been lost. (2) K. al-Hijay wa i-makhdarij. This book, which deals with legal devices and stratagems, was edited by Schacht, Hanover 1923, but Schacht thought that the book was written in the 4th/10th century and retrospectively attributed to al-Khassaf. An earlier printing appeared in Cairo in 1314/1896. (3) A. Khâlam al-‘asatidî, Cairo 1322/1904, and a later and authoritative treatise on usul. (4) K. al-Najjabî, ed. Abu ‘I-Walî’ al-Afghani, Haydarabåd 1349/1929 and Beirut 1404/1984. (5) K. Abad al-kâdi, which has been the subject of no less than ten commentaries (Hadjjdî Khaliﬁa, i, 72-3) including the commentary by Ahmad b. Alî al-Djasâs, ed. Farhat J. Ziadeh, Cairo 1978, and that by ‘Umar b. ‘Abd al-Azîz b. Maza, ed. Moust Hâlâl al-Sirhî, Baghdad 1978. Other works mentioned by Ibn al-Nadmir, and not yet discovered/edited, may be looked up in Ibn al-Nadmir, tr. Dodge, i, 509-10.

AL-KHA’SSAF, Abd BAKR Ahmad B. ‘AMIR (‘Umar) b. Muhayr (Mahr? also Mîhrân and Mîhrwân) al-Shaybânî al-Khâsâf (d. 261/874), famous Hanafi jurist in the practical fields of wakiî, hijîal [q.v.], or legal stratagems and devices, and abad al-kâdi, or laws of procedure and evidence. The sources speak of him as an expert also in the law of inheritance. He transmitted the doctrines of the Hanafi school from his father, who had transmitted them from Hasan b. Ziyád (d. 204/819-20) and Abî Yusuf [q.v.], the students of Abî Hanifa. He was also known as a student and transmitter of hadîth from no less than twenty scholars.

His family background, as well as the names of his father and grandfather, cannot be definitively determined, although the possible names of his grandfather suggest a Persian ancestry, as a client of the Arab tribe of Shaybân [q.v.]. In early life he must have worked as a cobbler (khassaf), since most sources say he lived off this calling. His scholarly endeavours nevertheless attracted the attention of the ‘Abbasid court, then in Sâmarra’. He was nominated by the former tutor of the caliph al-Mu’tazz [q.v.], with eight other scholars, for judgehips. But they were accused by palace personnel of being members of secessionist groups, so the caliph ordered their expulsion to Baghdad, and al-Khassaf was attacked by a mob (al-Tabari, iii, 1685). Following the deposition of al-Mu’tazz in 255/869, and the start of the brief rule of al-MuhtadT (255-6/869-70 [q.v.]), al-Khassaf was brought back to the caliphal court as the court lawyer. It was during this period that he wrote a book about khordaj [q.v.], which unfortunately has been lost. Other books were also lost when his possessions were plundered following the murder of his patron, al-MuhtadT.

Ibn al-Nadmir, tr. Dodge, i, 509, says that al-Khassaf advocated the doctrines of the Djamhiyya [q.v.]. Since it is known that some Hanafis advocated these doctrines, it is not unreasonable that al-Khassaf was one of them.

In the descending order of seven ranks of Hanafi jurists in the practice of idbiht [q.v.], al-Khassaf has been placed in the third, following the first rank of Abi Hanifa and the second rank of Abi Yusuf and Muhammand b. al-Hasan al-Shaybani [q.v.]. Jurists of the third rank elucidated problems (ma’as’i) not previously covered by jurists of higher rank (see Tahqiv al-yazidy, Tahqiv al-‘ihsani, Mawlid 1954, 8-10). His books, according to Ibn al-Nadmir, included the following: (1) K. al-Khordaj, which has been lost. (2) K. al-Hijay wa i-makhdarij. This book, which deals with legal devices and stratagems, was edited by Schacht, Hanover 1923, but Schacht thought that the book was written in the 4th/10th century and retrospectively attributed to al-Khassaf. An earlier printing appeared in Cairo in 1314/1896. (3) A. Khâlam al-‘asatidî, Cairo 1322/1904, and a later and authoritative treatise on usul. (4) K. al-Najjabî, ed. Abu ‘I-Walî’ al-Afghani, Haydarabåd 1349/1929 and Beirut 1404/1984. (5) K. Abad al-kâdi, which has been the subject of no less than ten commentaries (Hadjjdî Khaliﬁa, i, 72-3) including the commentary by Ahmad b. Alî al-Djasâs, ed. Farhat J. Other works mentioned by Ibn al-Nadmir, and not yet discovered/edited, may be looked up in Ibn al-Nadmir, tr. Dodge, i, 509-10.

KHATMIYYA [see MIQDÂNHAYYA]

KHA’TT vi. In Chinese Islam.

The evolution of the calligraphic art over almost a millennium amongst Chinese adherents of Islam (those now called the Hui) reflects the history of the implantation of Islam in China and its Sinicisation. During the first centuries of its presence in China,
when this new faith was the achievement of merchants and of emigrants, temporary or permanent, coming from the Near East, Central Asia, Persia and India and mainly settled on the southern coasts of China, the texts written in Arabic, Persian or Chinese are the found inscriptions and literary works. Some date from the 12th century, but most are from the 13th and 14th centuries, the period when the Mongol rulers of China recruited foreigners for governing their Chinese subjects. They are first of all in an ornamental Kufic and, later, in rounded characters—specimens of what one might call muhakkak, or rasmi, or rihân (see the corpus of some 200 examples existing in southeastern China made by a Chinese Islamic scholar, Chen Dasheng, and by an Arabic epigrapher, French by adoption, Ludvik Kalus, Corpus d'inscriptions arabes et persanes en Chine, I. Province de Fujian, Paris 1991). But from the 15th century onwards, funerary inscriptions are in Chinese, bearing witness to the integration of foreigners within the enveloping Chinese environment.

However, it was inevitable that, in a land where, in association with poetry, calligraphy was par excellence the art of cultivated persons, the Muslims should develop a personal calligraphic art there, if they were in possession of their own literature. They themselves characterise their calligraphic hands (see [in Chinese]
Ch’en Chih-hui/Chen Jinbui, Shih-lun al-a-lo-sa-fu-tsoi Chung-kue Mu-szu-lun-ch’ung te ch’uan-yo yu fu-ch’uan/Sihun, aloho shufai zai Zhanggongshin Muslim zhonghe chuwan yu fazhan ["On the dissemination and development of Arabic calligraphy among Chinese Muslims"], in Shih-chih tiang-chao yün-chia/Shijie zhongguo yanjiu, 1994, no. 2, 96-9) in terms of the actual instrument used for writing, whether it was bamboo reed or, more often, a brush made from the hairs of various animals, or in terms of a style inspired by Kufic, nastîfli, thulût or "Persian" (i.e. probably nastalîk). But these styles are, in fact, so strongly marked by Chinese influence that they speak of a "Chinese style" of their Arabo-Persian calligraphy, whence a cursive script which imitates the Chinese writing "of grass" (t’ien-liu-ch’ien2), one almost unreadable for the uninstructed.

Another, more realistic, classification, operates substantively in terms of support for the writing and, consequently, of its destination. Books entirely in Arabic or Persian are extremely rare, Islamic literature being generally written in pure Chinese. Nevertheless, the Mission d’Ollone, which explored Western China during 1906-9, reported from the strongly Islamised region of Kansu [q.v./] that the existence of some ten manuscripts in Persian, locally written and in a good nastâ’î hand of the 18th or 19th century, and two in nastalîk (see Mission d’Ollone, Recherches sur les musulmans chinois, Paris 1911, 284-93, or in RMÉ, viii-ix [1909]). Of a wider distribution, there are, from the 19th century, cheap, bilingual publications, in which the Arabic words, glossing the Chinese words and themselves accompanied by an approximate phonetic "transcription" in Chinese characters, are in a clumsy script (arising from the difficulty that Chinese engravers find in preparing plates for impression in the Arabic alphabet and, probably also, because of an imperfect education in local Kur’ân schools). Books where the Chinese characters are in a deformed state in imitation of Arabic characters are especially curious.

The type of calligraphy of which the Chinese Muslims are excessively fond, in the 1900s more often than not, is a stylised, decorative calligraphy in which "calligraphy and design make up a single whole (shu-hua he-i-shu-hua heyi)" and which plays a role at the same time both propitiatory and displaying identity. These may be on paper, at the head of certain publications; or, above all, in the form of the so-called "designs of Kur’ânic letters" (chung-tzu-hsin/jingzhuan), with a composite Sino-Arabic technique and model, often found in vertical decoration (causing an extreme distortion of the Arabic script) or in a band in the centre of the prayer room, either in two parallel bands here and there in the mosque’s mihrâb [q.v.] or the prayer corner in a private house, or else in four bands put together on screens. In passing judgement on a piece of decorative calligraphy in Arabic characters, the believers are unconcerned about the form of the letters or the deformations necessary to fit them within a geometrical figure or to form the silhouette of an auspicious Chinese character; they make, rather, a general judgement using the same ideas with which they would judge a piece of Chinese calligraphy. Hence they recognise the use of the "northern style" for what is vigorous, and the more supple "southern style", of the northwest being the most distinguished. In China, calligraphy, however Arabic it may be, forms an undeniable role in making up the Chinese culture of believing beings.

FRANÇOISE AUBIN

KHAWLA BT. ḤAKIM b. Umayya b. Ḥārīğa al-Sulaymîa, an early supporter of Muḥammad’s cause at Mecca and an associate of his.

She was the daughter of a man of Sulaym [q.v.] who had come to Mecca and had become a confederate there of ‘Abd Manâf, and of a woman of ‘Abd Shams b. ‘Abd Manâf; hence Khawla was related maternally to the Prophet himself. She was an early convert to the new teaching, in company with her husband, the ascetic ‘Uṯmân b. Maṣ‘ūn [q.v.]. When he died in 3/624-5, Khawla is said to have “offered herself” (wababat nafsah) to Muḥammad, but the latter “put her off” (anjarahab). She plays a role in Muḥammad’s liturgy as the person who looked after him when Khâlid al-Ju’fârī [q.v.] died and who counselled him to marry the child virgin Ṭashīa and the widow Sawda b. Zam‘a [q.v.].

Khawla b. Ḥakîm flourished in the early Aḥnûdîan period in post-Alamût Nizârî history, when the Nizârî da’în and literary activities had begun to revive under the direct leadership of the Nizârîs themselves. In fact, Khawla b. Ḥakîm represents the second most important literary figure, after Ṭabîb Bischârî, in the contemporary Nizârî Ismâ’îlî community; and his works are invaluable for understanding the Aḥnûdîan revival in Nizârî Ismâ’îlism and the Nizârî doctrine of the time.

KHAYRKHâ‘I—HARÂTî, MUHAMMAD RIDA b. SULTÂN HUSAYN, Nizârî Ismâ’îlî dâ‘i and author. Born into a leading Nizârî Ismâ’îlî family in Ghûrîyân near Harât, in present-day Afghanistan, towards the end of the 9th/15th century, Muhammad Rida b. Khâdîja Sulṭân Husayn Ghûrîyânî, better known as Khayrkhâ‘I—Hârâtî, died not long after 960/1553, the latest date mentioned in his writings. Thus Khayrkhâ‘I—Hârâtî flourished in the early Aḥnûdîan period in post-Alamût Nizârî history, when the Nizârî da’în and literary activities had begun to revive under the direct leadership of the Nizârîs themselves. In fact, Khayrkhâ‘I represents the second most important literary figure, after Aḥbâb Isâkî, in the contemporary Nizârî Ismâ’îlî community; and his works are invaluable for understanding the Aḥnûdîan revival in Nizârî Ismâ’îlism and the Nizârî doctrine of the time.
A cheap production, from Shantung/Shandong in 1874, in which the Arabic gloss (comprehensible by turning the book through 90°) has a supergloss of a transcription of the Arabic with the help of Chinese characters the Chiao-k’uan chiai-yao/Jiaokuan jieyao ("Quick résumé of the articles of the Faith") by Ma Po-liang/Ma Boliang, 1678.
A small Qur’anic manual from 1912, in which the Chinese script tries to resemble Arabic writing.

Examples of different types of artistic calligraphy made, as is stated in the lower part of the illustration, by the imām (ahong) Chang Kuo-chiin/Zhang Guojun, of the mosque of Yang-ch’i’ao-chen/Yangqiaozheng ("town of the Yang bridge"), in the sub-prefecture (hsien/xian) of Chien-ch’iian/Jianquan in Anhui/Anhui province. In the centre, on the left-hand side, the Chinese seal of Chang Kuo-chiin stands instead of a signature, according to Chinese custom (illustration taken from the journal of the Islamic Association of the PRC, the Chung-kuo Mu-ssu-lin/^hongguo Musilin (1995), no. 6, at p. 45.)
Written by a celebrated calligrapher of the present time, an imām (in Chinese, ahong) of Tientsin/Tianjin, Liu Ch‘ang-ming/Liu Changming (b. 1927), the Chinese character, above all auspicious, shou/shou, is formed by the upright shafts of the Arabic letters. The artist's signature is given in Arabic below, and above, with a Chinese seal (work dating from 1985).
In the autobiographical section of his Risāla, Khayrkhwāh relates how his father, a dādī in the Harāt region, was murdered by brigands whilst on a journey to see the imām in Andijān near Mahlabat. Subsequently, the Nizārī imām, probably Muṣṭafā b. 'Abd Allāh (d. 1009/1600), better known as Shāh Gharbī, appointed Khayrkhwāh, then only twelve years old,general, to the position of the chief dātī or khudāinan, then more commonly designated as ḫār of Khurasān and Badakhshān. Khayrkhwāh also visited the Nizārī imām of the time at Andijān and has preserved unique details in his Risāla on how the imām managed the affairs of the Nizārī dā'a in his headquarters in Persia.

Khayrkhwāh-i Harātī was a prolific writer and his works, all written in Persian, have been largely preserved by the Nizārī Isfāḥānī communities of Badakhshān (now divided between Afghanistān and Tādzhikistān), Hunzā and other northern areas of Pakistan. Khayrkhwāh also composed poetry under the pen-name (takhallus) of Ghanbf, based on the name of his contemporary Nizārī imām. His writings include Fāṣīr dār bāyan-i ḥaqqīkāt-i imām (ed. and tr. W. Ivanow in his Ismā'ili, in Memoirs of the Asiatic Society of Bengal, viii [1922], 1-49; later editions and translations of this work by L. Ivanow in Islamic Research Association series, no. 4, Bombay 1935, introd.), attributing it to Nasir-i Khusrav in order to enhance its popularity among the Nizārī communities of Persia and Central Asia. 

KHODJAS (see KHODJAS, in Supp.).

KHODJA-ZADE, Muṣṭafā al-Dīn Muṣṭafā b. Yūsuf, born into a well-to-do family in Bursa, was one of the leading Ottoman scholars of the 9th/15th century. Among others he studied with Khādir Beg [q.v.], and began his career as kādi in Kastāl under Murād II [q.v.]. After 857/1453 he was appointed a private teacher of Meḥmēned II and held high positions in the law administration (kādi 'askar [q.v.], kādi in Edirne and Istanbul) and in the educational system of the empire (professor at the Sultānīyun in Bursa and in Istanbul). After 1470, following intrigues at the court, he was removed to İznik. Under Bāyezīd II [q.v.] he was rehabilitated and reappointed as professor and mufti [q.v.] in Bursa, where he died in 893/1489.

Most of his works have been lost, but those which have survived show the high level of his knowledge as well as of the educational system at the Ottoman universities in the 9th/15th century. Among the works that have survived are publications on the following subjects: (a) Grammar: a commentary on al-Zanjānī's al-'izzī fi 'l-tasni' (evidently composed as a textbook for Meḥmēned II); (b) Fikr: 1. Glosses to al-Taʿfāz̄ānī's commentary on Maḥbūbīn's Tānārī. 2. Glosses on al-Djurjānī's glosses on al-Idījī's commentary on Ibn al-Hādījīn's maqāṣīd al-ʿādām; (c) Kalām: 1. Commentary on al-Bayḍāwī's Tawāṣ̄ūl al-anwār; 2. Glosses on al-Khayālī's glosses on al-Taʃṭāz̄ānī's commentary on al-Nasā'īn's ʿĀkāla; 3. Glosses on al-Djurjānī's commentary on al-Idījī's muḥākaf (this last work of Khodja-zade, apparently unfinished, is critical of al-Djurjānī); (d) Philosophy: 1. Glosses on Mawātīnī-zade's commentary on al-Abhāhīn's Hīdāyat al-hikmā. 2. Commentary on al-Urmāwīn's Muṭtābil al-anwār.

Khodja-zade's fame here is above all based on a work called Tahājūt al-falāsīfā (printed in Cairo in 1321/1903-4, together with the Tahājūt of al-Ghzālī and the Tahājūt al-tahājūt of Ibn Rushd). The work was written at the instigation of Meḥmēned II, who organised a competition between Khodja-zade and 'Alā al-Dīn Tūsī to answer the question who had been right in the dispute between al-Ghzālī and Ibn Rushd. Khodja-zade gave a politic answer. Basically he sided with al-Ghzālī but corrected the latter's views on several points at the same time, he emphasised that only the less important philosophers had made mistakes, while Ibn Rushd had a thorough command of his subject. This compromising attitude apparently carried approval, for Khodja-zade was not only proclaimed winner by Meḥmēned II, but his Tahājūt al-falāsīfā was still much read in the 10th/16th century and commented upon by several authors, among whom Kemāl-Paşa-zade [q.v.].

umma [q.v.] and its faith and for upholding the Prophetic heritage, should come from Kuraysh, a feeling later crystallised in a hadith attributed to the Prophet, "authority shall not depart from this tribe of Kuraysh."

It was Abu Bakr who first adopted the title of khalifat Rasul Allah "successor of the Messenger of God", with the implication of a necessity for the caliph to uphold and to further the Prophet's heritage; for the genesis of the title and its early development, see Khilafa (I).

The three decades of the Rightly-Guided Caliphs saw the extraordinary expansion of the small Arab Muslim community based on Medina as the mudātillu or warriors overran the outlying parts of the Arabian peninsula, Sāsamān 'Irāq and Persia, and Byzantine Palestine, Syria and Egypt. By the time of 'Ali's death, the Arabs were already raiding across the Oxus and into southern Afghanistan in the east, and Armenia or warriors overran the outlying parts of the Arabian peninsula. The military role became the requisite for full membership of the new community, creating the entitlement to share in its privileges [see 'Ā'īn; Dīwan, I]. The longer-term financial stability of the new state was ensured by the ruling authority's utilisation of a considerable proportion of the booty captured from the conquered lands for state and community purposes rather than it being shared out among the warriors and thereby dissipated [see BAYT AL-MAL; FAY'; QĀSHĀMA]. Hence by the end of the period of the Rightly-Guided Caliphs, the Islamic community was no longer a purely Arabian affair but was well established outside the peninsula. Although the Muslims were for long a minority in the conquered lands, the bases were being laid for the slow transformation of the societies of the conquered lands and their religious complexes. A pointer to this new orientation of the Muslim state was 'Ali's move of the capital from Medina to the new military encampment of Kufa in 'Irāq; it was never to return to Arabia which, while remaining the locational focus for the Muslim cult, became from the political point of view, increasingly peripheral.

The end of 'Uthmān's reign and the whole of that of 'Ali's were marked by religio-political disension. 'Uthmān's murder accordingly inaugurated for the community a period of fitna [q.v.] or internecine strife, out of which eventually emerged such groups as the Khārijījēs and the Shi'ā [q.v.]. Hence the preceding part of the age of the Rightly-Guided Caliphs came in later times to be regarded through a nostalgic haze as a Golden Age of early Islam, when the community was undivided. The period was invested with the pristine virtues of piety, simplicity, justice, equality of all (male, free) Muslim believers, all the more so as later pietistic, traditionalist circles contrasted it with what they regarded as the worldly-oriented mulk of the later 'Abbāsid kalifahs, and especially Harūn al-Rashīd and al-Amin, who, in the Khilafah palace, and the latter tried to escape by water from its riverside quay when Tahir's [q.v.] b. al-Husayn's attackers were about to break into the city in 198/813 (al-Tabari, iii, 917 ff.). It suffered badly from Tahir's bombardment, and al-Ma'mūn stayed elsewhere on his first visit to Baghdad from the East in 204/819. The seat of the caliphate was moved to Sāmarrā' some fifteen years later, and the Khilafah palace must thenceforth have become completely ruinous; when, at the end of the century, al-Mut'ādīd moved back to Baghdad he occupied palaces on the eastern side. The site was only re-used when in 368/979 the Bāyād 'Aṣād al-Dawla built there his Bīrārīstān or hospital.

It was built by the founder of the new capital Baghdad, al-Mansūr [q.v.], in 158/775 on the west bank of the Tigris outside the walled Round City, possibly on the site of a former Christian monastery (al-Tabarl, iii, 273; Yakūt, Budān, ed. Beirut, ii, 382). It was strategically placed between the two great military areas of the Harbiyya and al-Rusafa on the east of Arak/Sultanabad of Kum in modern Iran (lat. 33° 38' N., long. 50° 09' E.) some 70 km/42 miles to the south-south-east of Arak/Sultanābād [q.v.]. It is unmentioned in the mediaeval Islamic geographers, but now has fame as the birthplace of the Ayātallāh Ruh Allāh Khumaynī (1902-89 [q.v. in Suppl.]). It is at present administratively in the Shahrastān of Mahāllāt. In ca. 1950 it had a population of 7,938, which in 2003 had risen to 59,300.

**AL-KHULAFĀ’ AL-RĀSHIDŪN — KHUMAYNĪ**
part of the 1930s apparently caused the local police
mentary legislation and the deeds of the monarch.
ix, 15-17). muajtahid
mical, but also in the Persian everyday sense, to extend
the muajtahids had the authority to supervise parlia-
a book written in
some apprehension. Khumayn's entry into the pub-
his formative years in Kum, where as an atypical
of clerics he never forgot nor forgave, encompassed
and in a thousand years.

In the course of the ensuing power struggle of the early 1980s among the partners in the revolutionary
cumayn first appeared on the national political
scene in A.S.H. 1342/1963 as an outspoken critic of the Shafi hierarchy and his reform program. The Shafi character-
ised his movement as "black reaction", and took
pressive measures against it. Khumayn was impris-
oned in June 1963, and demonstrations by his sup-
porters were violently suppressed. He was exiled to
Turkey in November 1964, and moved on to the Shi'i holy cities in 'Iraq. In January 1965 a group of his followers assassinated the Prime Minister, Hasan-
Ali Manşur, with a plan for setting up a "unified
Islamic government". While in exile in Najaf,
khumayn developed his theory of wilayat al-fakih as
the mandate of the jurist to rule, both in a series of
lectures in Persian, which were published in Beirut
in 1970 under the title of Wilayat-i fakih, and in a
work of jurisprudence on transactions, published in
He argued that the rule of a jurist devolves from
the Imam to the mujtahids during the Occultation of the
Twelfth Imam, and, further, that if one of them
were able to exercise that right by establishing a govern-
ment, it would be incumbent upon other mujtahids
to obey him. With this theory made public in cler-
ical circles, Khumayn began to prepare a beleaguered
Shi'i hierarchy for the takeover of a hostile, secular-
ising state. His former students played the leading role
in moving and mobilised many younger cler-
sics from humble rural and small town backgrounds
in opposition to the monarchy and to Western cul-
tural domination. As the leader of the Islamic revo-
olutionary movement, Khumayn assumed the title of
imam, a title reserved for the twelve holy Shi'i Imams
and not used by anyone else in Persian for over a
thousand years.

On the victory of the Islamic revolution, Imam
Khumayn exercised his prerogatives according to the
theory of wilayat al-fakih, in ordering the confiscation
of the property of the Pahlavi family and other indus-
trialists of the old regime as war booty, and in appoint-
ing Mahdi Bazarqan, who represented the liberal and
nationalist elements in the revolutionary coalition, as
provisional prime minister. However, he was careful
not to alienate the followers of the ayatollahs and to
bring clerics and Ideological and linguists, such as Djalal Aki-Ahmad and 'Ali Shar'i'at'i, and did not proclaim a theocratic
government at once. The wilayat al-fakih entered pub-
dic debate only when a clerically-dominated Assembly of Experts was elected, in place of a constituent assem-
ly, and bypassed the draft constitution prepared by the
provisional government to institute theocraticgov-
ernment according to Khumayn's theory. Some of
the features of the original draft were retained, how-
ever, notably the elected president and parliament
(Maqlis), and a Council of Guardians (shara-yi nigah-
bon) which was modified to increase the number and
power of its clerical jurists by giving them the exclu-
sive right to veto any Maqlis enactment they found
in violation of Islamic standards. The new Constitution
was approved by a referendum in December 1979,
shortly after the occupation of the American embassy
and the taking of its staff as hostages and the resig-
nation of the Shah.

In the course of the ensuing power struggle of the early 1980s among the partners in the revolutionary
cumayn sanctioned the violent suppres-
sion of the leftist and secular elements. Despite his
apparent initial disinclination, the Iranian state and
the revolutionary structures were brought under direct
clerical control. Once the revolutionary power strug-
gle ended with the complete victory of his support-
ers, cumayn sought to maintain unity between the
conservative and the radical clerics and their respec-
tive allies, and intervened a number of times to pre-
vent the tilting of the balance of power in favour of the
former. Meanwhile, he oversaw the constitutional
development of the Islamic theocratic republic he had
founded. The failure of a variety of principles drawn from Shi'i jurisprudence, including the distinctions
between primary and secondary commandments
(ahkam) of the Shafi hierarchy and the introduction of a new
category of "governmental (basami) commandments",
to solve the impasse between the
Shafi hierarchy for the takeover of a hostile, secular-
ising state. His former students played the leading role
in moving and mobilised many younger cler-
sics from humble rural and small town backgrounds
in opposition to the monarchy and to Western cul-
tural domination. As the leader of the Islamic revo-

decided to drink “the cup of poison”, and accepted a ceasefire with "Trak on 18 July 1988. Two days later, the 'Trak-based forces of the Islamic radical group, the majdhibdin i khalk, attacked western Iran and were wiped out. In the following weeks, despite the veheemous protest of the Islamic regime, the Fakhrul Islam, the 'Irak-based forces of the Islamic radical forces in 'Irak on 18 July 1988. Two days later, they decided to drink “the cup of poison”, and accepted the execution of about 3,000 Islamic radicals who had already served or were serving sentences given them by revolutionary courts. The incipient collapse of communism in the last year of his life renewed Khamayni's optimism, and in January 1989, he told the Soviet leader Mikhail Gorbachev that he should learn about Islam as communism now belonged to the museum of history. Finally, Khamayni caused another international crisis by issuing an injunction (fatwa) that sanctioned the death of Salman Rushdie, a non-Iranian writer who lived in England.

Khamayni died on 14 Khur'dad 1368/3 June 1989. He was a charismatic leader of immense popularity. Millions of Iranians massed to welcome him when he returned as the Imam from exile in 1979, and a million or more joined his funeral procession after he died ten years later.
minors who have no father, (4) the indigent (masakin), who correspond to the "poor and indigent" of Qur'an, IX, 60 [see Zakat, 5. xj], and (5) the traveller, defined as for zakat (cf. al-Bajuri, al-Hakim 'alä Ibn Khish al-'Assir, ed. Cairo, ii, 274). After the Prophet's death, his share and that of his family lapsed according to the Hanafis, who appeal to the practice of the first four caliphs as evidence for this view (K. al-Kharaj, 19). The Hanafis do, however, give preference to indigent members of the Prophet's family under the remaining three classes, in recognition of their ineligibility to receive zakat [see Zakat, 5. xi]. The Malikis regard the classes named in Qur'an, VIII, 41, as illustrative (Ibn Rushd, al-Mukaddimah, ed. Haddjji, Beirut 1408/1988, i, 357) and treat the entire khamis as fai [q.e.] to be expended upon the needs of the Muslims as the ruler sees fit (Sahnun, al-Mudawwana, ed. Muhammad, Beirut 1419/1999, ii, 604), a view also adopted by Ibn Taymiyya (d. 652/1254 [q.e.]). They do, however, recommend that distribution of the khamis begin with grants to the Haghmîs (al-Kharsî 'alä mukhtasar Khali, ed. Beirut, iii, 129).

The obligation of paying the khamis is incumbent on Muslims (cf. al-Dardur, al-qurş 'alä al-saghr, ed. Wasfi, Cairo 1912, ii, 306), and the Malikîs, who thus regard the classes named in Qur'an, VIII, 41, as for zakat, do not apply to the expenditure of the share for the needs of the community (al-Ramlî, Qayyat al-haytn, ed. Cairo, 345).

The rules for the khamis apply specifically to ghanima [q.e.], the spoils of war taken by armed force, except according to the Shafiîs (al-Shafi, al-Umm, ed. Cairo, iv, 64; al-Mawardî, al-Hawi al-kabir, ed. Cairo, iii, 247; Ibn Kudâmâ, al-kâfi, ed. al-Shâfi, Beirut 1421/2001, iv, 183), this restriction has been said not to apply to the expenditure of the share for the needs of the community (Malikî, al-istidhâq, ed. Khalîj, Cairo 1414/1993, xiv, 192-3). The rules for the khamis apply in the first instance to moveable property, which includes the captured slaves of the non-Muslim enemy. In the case of combatants taken prisoner and captive women and children, the Malikis do not, while the Hanafis and Hanbals leave the matter of division to the discretion of the ruler. Where the division is of the booty itself, rather than of its sale price, the determination of what constitutes the khamis is made by lot, with a special designation for the khamis (li 'ilâh, li 'mâsikîh, li-raṣil Allah) (al-Wâkidî, ii, 523-4; Ibn Abî Shayba, al-Kutub al-muwaqqif, ed. Nadwî, Bombay 1402/1982, xii, 429-30; al-Ramlî, Nihâyat al-muwâfiq, Cairo 1306/ 1967, vi, 196; al-Hasânî al-Îsandrî, al-Mawdhib al-ajamî, ed. Umarî, Beirut 1416/1995, iv, 584).

There is disagreement as to what extent the ruler can avoid the application of the general rules for the division of the booty, including that of the khamis, by declaring that what each combatant takes is his as a reward (al-Nawwâr wa 'l-ziyadân, iii, 252; Ibn Abî al-Barr, al-Istidhâq, ed. Khalîj, Cairo 1414/1993, xiv, 102-3; Ibn al-Nahhâb, Mağharî al-aṣgharî, ed. 'Afî and Istanbulî, Beirut 1410/1990, ii, 1033-6). According to many Hanafis, the booty taken pursuant to such a general offer of reward (tâjjîl âmm), in the case of a detachment (sârîj), but not the entire army, dispatched from within enemy territory, is not subject to the khamis (al-Qaṣâsî, Abâm al-Kur'ân, ed. Istanbul, iii, 55; Ibn Abî Din, Radd al-muâfarî, Cairo 1386/1966, iv, 155-7; cf. Ibn Nâjiyy, al-Bahr al-râdî, ed. Cairo, v, 92; C. Imber, Ehu 'l-Salih: the Islamic legal tradition, Stanford 1997, 87 [with reference to a declaration of the Ottomans in sultane 1948/1341-2]).

The institution of the khamis appears to have fallen into neglect from an early date. The students of Malik (d. 179/796 [q.e.]) already addressed questions concerning the purchase of slave girls from sellers suspected of not having paid the khamis (al-Nawwâr wa 'l-ziyadân, iii, 215-6; Mawdhib al-âjjâmî, iv, 568-70) as well as the status of privately owned Andalusî estates on which khamis was not known to have been paid at the time of their conquest and, according to the Malikîs, irregular distribution to individuals (al-Nawwâr wa 'l-ziyadân, iii, 364-65). Even revivalist movements such as that of the Almoravids and Almohads found it difficult to ensure consistent implementation of the law of the khamis (J.F.P. Hopkins, Medieval Muslim government in Barca by the ninth century of the hijra, London 1958, 28-9; al-Tajjâjî, al-Isân al-îlâmî fi 'l-îslâm wa-tatbûkhiythu fi 'l-Maghrib, al-Muhammadiyya 1410/532

The booty subject to division does not include food consumed by the combatants or their animals (al-Mudawwana, ii, 612-14; al-Kâshânî, Baddî 'al-sarâ'y, ed. Mu'awwad and 'Abd al-Mawjûd, Beirut 1418/1997, ix, 494-6) nor, during the Prophet's lifetime, such booty as he selected as a personal prize (saft) (K. al-Kharaj, 22-3). The khamis is calculated on the total booty net such expenses as those incurred for its transport and safekeeping, and, according to the Shafiîs and Hanbalis, after subtraction of the clothing, weapons, mounts, and other personal effects (salâb) of enemy soldiers earned by the individual Muslim combatants who have killed or disabled them (cf. Schacht, Origins, 70-1). The Hanafis and Malikîs treat such claims to personal effects as rewards (rafa'), for which they require an express grant by the ruler, preferably, according to the Malikîs, after the battle has ended so as not to compromise the purity of
The burden of paying on the purchasers not being divided in accordance with the law and ceded. al-imdal-Shark Istanbul, i, 651; cf. Radd al-muhdhur, iv, 157-8.

Commonly treated by the jurists in connection with zakáát (cf. al-Zarkání, al-Sháhr ‘úlÁ muwassát al-imám Málik, ed. ‘Awad, Cairo 1381/1961, ii, 321) but regarded by the Hanafis, Málkís and Hanbalís as analogous to the one-fifth payable from booty, is the one-fifth due upon the discovery under certain circumstances unrelated to combat of pre-Islamic treasure, or occasionally mixed with gold and silver (nádhr), analogous to the one-fifth payable from booty (ghánímat). The Shafís limit this obligation to gold and silver, according to hadith (fi sáfa, as enjoined by the Shafís). The Malikis (al-Dardfr, Umdat al-kdrl, ed. al-Nadjjar and Shark ma, xxiii, 98-108 (takhmis), 1277), the Hanafís, Malikfs and HanbalTs as pure pieces of gold and silver according to (nadhr), to refer to wealth more generally. The Imam's original ownership of the world and its products (e.g. "the earth is ours, and what God brings forth from it is also ours,“ al-Kulayí [d. 1277], maldha. This made seven categories in all, hardm). The financial system of Egypt, the sale by foreign merchants of imported merchandise (e.g. "all the earth is ours, and what God, the Prophet, the near relatives, the orphans, the needy and the wayfarers). Whilst Sunni exegetes consider this verse to relate to war booty (ghánímat [q.]), Imamí and Zakdí writers associate the phrase annamd ghanímat (what you acquire”) to refer to wealth more generally. The last term, akbhr, was supported by other akbhr, e.g. "a fifth of the wayfarers). A minority of jurists refer to wealth more generally. The Imamí tradition, there are reports to support such a definition. "Everything from which the people gain benefit is ghánímat,“ the Imam al-Rídá (d. 203/818) is reported as saying. A number of akbhr refer to the Imam's original ownership of the world and its products (e.g. "all the earth is ours, and what God brings forth from it is also ours," al-Kulaíí [d. 328/939], Kháft, i, 408). The khums, therefore, was analogous to a tenant's payment of a fixed percentage of the harvest to the landowner. Since the Shafís, due to passages in the midst of a discussion of war, some exegetical effort was required to translate this verse. This normally began with a grammatical analysis of the term ghánímat and the verb gháníma (see al-‘Üsí [d. 460/1071], Mu‘add, ii, 64, where the verb means “acquiring something with the purpose of turning it to profitable use”). This was supported by other akbhr (e.g. "a fifth of the earth is ours, and a fifth of all things is ours," al-‘Üsí, Tahdhib, iv, 123). The term liable for khums were defined in both collections of akbhr and works of fikh. In the earliest works of fikh, the discussions formed part of the kiáth al-zakát or occasionally kiáth al-fayawá irt-ghanímat, a separate kiáth al-khums (located after the kiáth al-zakát) later became the norm (see e.g. Muhammad b. Makkí, al-Sháhid al-Awwal [d. 786/1384], al-Lusn a-dimámádpga, 45-6). The earliest categorisation of taxable wealth comprised booty, produce of the sea, buried treasure, minerals and maldha. The last term, obscure in reference, was interpreted through juristic reasoning and the citation of other akbhr to refer to profit (from trade, agriculture and craft), ðhámsíland bought by a Muslim and "halál goods mixed with haráms ones". This made seven categories in all (see such a categorisation in al-Muhádák [d. 676/1277], Sharh, i, 179-81). These categories, once established, remained remarkably stable in the subsequent tradition. When present, the Imamí receives and distributes the khums (though he may, it seems, appoint a representative). The khums, following Kuráán, VIII, 41, is distributed amongst the six categories mentioned (God, the Prophet, the near relatives, the orphans, the needy and the wayfarers). A minority of jurists argued that the shares of God and the Prophet were actually one (hence there are five not six recipients, of debate within both juristic traditions. The main Kurˈanic reference is VIII, 41 (“Know that what you acquire, a fifth is for God, His Prophet, the near relatives, orphans, the needy and the wayfarer”). Whilst Sunni exegetes consider this verse to relate to war booty (ghanímat [q.]), Imamí and Zakdí writers associate the phrase annamd ghanímat (what you acquire”) to refer to wealth more generally. The Imamí tradition, there are reports to support such a definition. "Everything from which the people gain benefit is ghánímat,“ the Imam al-Rídá (d. 203/818) is reported as saying. A number of akbhr refer to the Imam's original ownership of the world and its products (e.g. "all the earth is ours, and what God brings forth from it is also ours," al-Kulaíí [d. 328/939], Kháft, i, 408). The khums, therefore, was analogous to a tenant's payment of a fixed percentage of the harvest to the landowner. Since the Shafís, due to passages in the midst of a discussion of war, some exegetical effort was required to translate this verse. This normally began with a grammatical analysis of the term ghánímat and the verb gháníma (see al-‘Üsí [d. 460/1071], Mu‘add, ii, 64, where the verb means “acquiring something with the purpose of turning it to profitable use”). This was supported by other akbhr (e.g. “a fifth of the earth is ours, and a fifth of all things is ours," al-‘Üsí, Tahdhib, iv, 123). The term liable for khums were defined in both collections of akbhr and works of fikh. In the earliest works of fikh, the discussions formed part of the kiáth al-zakát or occasionally kiáth al-fayawá irt-ghanímat, a separate kiáth al-khums (located after the kiáth al-zakát) later became the norm (see e.g. Muhammad b. Makkí, al-Sháhid al-Awwal [d. 786/1384], al-Lusn a-dimámádpga, 45-6). The earliest categorisation of taxable wealth comprised booty, produce of the sea, buried treasure, minerals and maldha. The last term, obscure in reference, was interpreted through juristic reasoning and the citation of other akbhr to refer to profit (from trade, agriculture and craft), ðhámsíland bought by a Muslim and "halál goods mixed with haráms ones". This made seven categories in all (see such a categorisation in al-Muhádák [d. 676/1277], Sharh, i, 179-81). These categories, once established, remained remarkably stable in the subsequent tradition. When present, the Imamí receives and distributes the khums (though he may, it seems, appoint a representative). The khums, following Kuráán, VIII, 41, is distributed amongst the six categories mentioned (God, the Prophet, the near relatives, the orphans, the needy and the wayfarers). A minority of jurists argued that the shares of God and the Prophet were actually one (hence there are five not six recipients, of debate within both juristic traditions. The main Kurˈanic reference is VIII, 41 (“Know that what you acquire, a fifth is for God, His Prophet, the near relatives, orphans, the needy and the wayfarer”). Whilst Sunni exegetes consider this verse to relate to war booty (ghanímat [q.]), Imamí and Zakdí writers associate the phrase annamd ghanímat (what you acquire”) to refer to wealth more generally.
see Zayn al-Din 'Ali al-Shahid al-Thani [d. 966/1558], Musâdîk, ii, 470, but this opinion was not popular. The juristic reasoning (authoritatively summed up in the later tradition by al-Najjâr) [d. 1266/1850] commentary on al-Muhaqâkik’s Shari‘a? [d. al-Najjâr, al-Muhaddith, iv, 1-112) proceeded as follows: God’s share was clearly owned by the Prophet, and he could dispose of it as he saw fit. After the Prophet’s death, the two shares (of God and the Prophet) were, through inheritance, due to the Imâm. The share of the “near relatives” was also due to the Imâm, since they were the heads of the ahl al-bayt after the Prophet’s death. The Imâm, when present, was, then, due half the khums. The remaining shares were distributed by the Imâm. The move might indicate that the orphans, needy and wayfars were from the population generally (as argued by Ibn Hâmza [living in 566/1170] in al-Wasâlî, 718), though most jurists argued that these three categories applied to the family of the Prophet (the Banû Hašîm). A minority also argued that descendants of Hâghîm’s brother (Muţalîb) were also included (analogous to the sayyid status of descendants of both al-Hasan and al-Husayn: see Zayn al-Din ‘Ali al-Shahid al-Thani, Shari‘a al-Imami al-dimaghkiya, 57-8), but this did not become the influential position. The above commentary provided the jurists with an opportunity to link the discussion with the vexed issue of community leadership during the ghayba (q.v.). Was khums during the ghayba lapsed (sâkîf)? because the Imâm could not collect it in person (a view attributed to Salar al-Daylâm [d. 57-8]), but this opinion was not popular. The contribution of an Imam in power, the âhzâr records that the (Zaydî) Muslims must collect and distribute it themselves. The governance of an Imam does not affect the duty to distribute khums. The continued existence of a Zaydi Imam (though with limited suzerainty and disputed identity) did not encourage the discussion of delegation (nizâha) characteristic of the Imâm tradition.

The absence of the Imam through occultation provided part of the financial base for the Zaydî opposition movement in 20th-century Iran. Al-‘Ali in [d. 877/1472] and al-Shawakhâni [d. 1250/1834] elaborated on this brief explanation. The produce of the land and sea constituted the produce gained from fishing and farming (with some restrictions) as well as precious stones and metals obtained through mining. Also included was treasure (kunuz) found by the Muslim but buried during the ghâthî period. War booty encompassed the booty from wars with both non-Muslims (ahl al-harb) and non-Zaydi Muslims (ahl al-baqây). The ongoing revenue after a campaign included produce from land seized from the enemy, the khurâş (land-tax) and the djizya (the tax on non-Muslim communities living under Muslim control). It might be argued that Zaydi jurists envisaged an even larger amount of revenue as liable to khums than their Imâmî counterparts.

In Zaydi fiqh, the khums is to be transferred to the Imâm when he demands it. When there is no legitimate Imam in power, the âhzâr records that the (Zaydi) Muslims must collect and distribute it themselves. The governance of an Imam does not affect the duty to distribute khums. The continued existence of a Zaydi Imam (though with limited suzerainty and disputed identity) did not encourage the discussion of delegation (nizâha) characteristic of the Imâm tradition.

The distribution of khums, according to the Zaydîs, should be according to the established six categories of recipients. For al-Hârûnî (d. 424/1032), God’s share is to be spent by the Imam on general benefits, such as mosques and roads (muṣârâ). The Prophet’s share goes to the Imam who can spend it on his family, home and servants. The near-relatives’ share is distributed, without regard for age, wealth or sex, to the descendants of the Prophets (with a broad definition of which lines of descent are to be included). The only restriction is that the descendants must recognise the Zaydi Imam (ma’tamassî) bi ‘l-hukk li-imâm al-muslinîm. The three portions for the orphans, needy and wayfars of the Prophet’s descendants can be diverted if there are no such persons within the Prophets’ descendants. First, the portions are available for the descendants of the Prophet. If unexhausted, the portions are distributed amongst the mu‘addûn, if not, then amongst the ansâr, and if not these, then amongst the orphans, needy and wayfars of the rest of the Muslim community (al-Hârûnî, Tahrîr, i, 166). Though Zaydi thought on khums bears some resemblance to Imamî fiqh (e.g. the expansion of the definition of goods liable for khums), it avoids the contentious issues of ‘ulamâ’ authority present in the Imâmî tradition.

The Ismâ‘îlî Shi‘i tradition produced very little in terms of juristic literature, but one can conclude that, in terms of khums, it was much closer to the Sunnis than either Zaydi or Imamî fiqh. In al-Kâdî al-Nu‘mân’s [d. 363/974] edition of the Ismâ‘îlî corpus, khums is discussed in the context of the kâthî al-qâthî, mainly through citations of reports from Imam ‘Ali. The implication is that khums is only due on war booty. The resultant jurisprudence could fit well within the Sunnî hukûmat (q.v.) on the issue.

Bibliography: A. For Twelver Shi‘ism:
important source of income (see Musil, Ar. Petr., iii, 52-3).

Wallin suggested that the payments to a tribe were often related to certain payments levied by the Bedouin for certain tribesmen—tribute must have been an important source of revenue as well. 

The Bedouin look on the regions where they live as being divided into tribal territories, and Wallin suggested that the payments to a tribe were made in exchange for the right to be in the territory of that tribe and to enjoy its protection. The degree of protection offered varied greatly: a village might receive no more from its "protectors" than the temporary cessation of their depredations, while a client tribe or a caravan might receive not merely protection but also mutual assistance between an urban notable and a Bedouin shaykh. 

Tribute levied from a particular source was assigned to certain persons, or leaders of the Bedouin tribe. Some were retained by the tribe or a caravan might receive not merely protection but also mutual assistance between an urban notable and a Bedouin shaykh.

KIRGIZSTAN

KIRGIZSTAN (official designation: Kyrgyzstan, Kyrgyz Republic), is the smallest of the five Central Asian republics emerging from the collapse of the Soviet Union, with an area of 198,500 km² (77,415 sq. miles), and with boundaries adjoining China 858 km, Kazakhstan 1051 km, Tajikistan 870 km and Uzbekistan 1099 km. Kyrgyzstan is landlocked, like most of its neighbours. In 1999 it had a population of 4,832 million, its ethnic composition at various points in the 20th century being shown in Table 1 as percentages of the whole population.

Russians are concentrated in the capital and in the north, Uzbeks in the south (Osh and Djallalabad provinces). Changes in the ethnic composition of the Kyrgyz population are explained by much lower fertility among the Russians and other Europeans and massive outmigration of the “European” groups since the late 1980s. In the earlier Soviet period, the drop in the Kyrgyz population was linked to the crisis following collectivisation.

Kyrgyz, the official language, belongs to the northwestern group of Turkic languages [see TURKS. II], and for Kyrgyz literature, III. 6 (e). Russian was declared an official language in territories and work places where Russian dominates in March 1996, and is now termed the “language of inter-ethnic communication”. Uzbek is granted no official status. The capital has been called Bishkek since 1993 (750,000 inhabitants in 1999); Frunze in Soviet times since 1926, and Frunze [q. v.] before then. Other towns include Talas [see TARAZ] in the northwest and Osh and Ozkend [q. v.] in the Farghana valley. Regarding natural resources, Kyrgyzstan, as a mountainous country, is rich in water and has a high potential in hydro-electric power (Toktogul dam on the Naryn river, built 1962-73). Coal was mined for Central Asian consumption. After independence, gold has been deemed to be worthwhile exploiting (the Komtur gold field).

The country is divided into two main geographic zones, the Tien Shan mountains, with their highest peaks in the far eastern corner (Pik Pobedy, Zengish Cokusu, 7,439 m), and the Pamir Alai range. To the south, the hills slope down to the great steppe zone (northern Kyrgyzstan); migration reached its highest levels in the years immediately preceding World War I. In the Semirecye, between 1903 and 1913 about 60% (D. Brower, Kyrgyz, nomads and Russian pioneers. Colonization and ethnic conflict in the Turkestan recoll of 1916, in Jahrbücher fur Geschichte Osteuropas, N.F., xliv [1996], 41-53).

The Russian colonial period.

The Russian advance into what is now Kyrgyzstan was aided by a number of Kyrgyz delegations to St. Petersburg and to the Russian authorities in Siberia asking for help against the Khokand khânate, which, by 1830 had gained at least formal authority over the Kyrgyz tribes. In 1862, Kyrgyz contingents fought alongside Russian soldiers to take the fort of P positivity, and when Russia liquidated the Khokand khânate in 1876, all of the Kyrgyz tribes had formally submitted to Russian rule (V.M. Ploskikh, Kirgiz i kokand-skoe khânsto, Frunze 1977). The area they inhabited fell into the Governorates of the Steppes and of Turkistan, and there was continuous reshuffling of the administrative organisation. Russian rule at first did not deeply affect local affairs, but this changed soon with the influx of settlers into the Semirecye region (northern Kyrgyzstan); migration reached its highest levels in the years immediately preceding World War I. In the Semirecye, between 1903 and 1913 about 4.5 million ha were allotted to settlers, thus provoking a drop of about one quarter in livestock. Land issues, as well as ethnic conflicts and accelerated social differentiation among the Kyrgyz, are seen behind the great steppe uprising in 1916, which was triggered by a decree to recruit local people as labourers in support of Russia’s war effort. The rebellion was crushed, leaving an unknown number of Kyrgyz dead; about a third of the Kyrgyz population is said to have fled to China, partly returning after the Revolution in 1917. Again, the Kyrgyz herds decreased by about 60% (D. Brower, Kyrgyz, nomads and Russian pioneers. Colonization and ethnic conflict in the Turkestan recoll of 1916, in Jahrbücher fur Geschichte Osteuropas, N.F., xliv [1996], 41-53).

3. Scout times.

The Russian Revolution provoked the creation of new Kyrgyz and Kyrgyz/Kazak organisations; at first, locals were reluctant to participate in the institutions created by Russians. Local (“Muslim”) organisations included the Alash Orda [see KAZAKSTAN, in Suppl.], Shiri-yi islimiya (founded in Khokand in April 1917) and Bukar (from Ar. fukar “paupers”). National demands came to the fore, and federal structures were demanded in a number of meetings (e.g. the First All-Russian Muslim Conference held at Moscow in May 1917). All of them were intent on preserving local interests, above all regarding the land question, against Russian encroachments.

After the civil war, Kyrgyzstan changed masters several times. The “Turkistan Autonomy” (November 1917-February 1918) was a short-lived attempt at creating a state structure in the Farghana valley and one of the origins of the Basmachi guerilla movement, which became strong enough to pose a threat to Osh, Djallalabad and Naryn in late 1918. In the north, Alagh Orda struggled between Whites and Reds to conserve a measure of regional autonomy. But in the end, Mikhail Frunze led the Red Army to success.

In April 1918 the territory of the Kyrgyz was included into the Turkestan Autonomous Soviet Socialist Republic. Only in 1922 was the question of a separate representation of the Kyrgyz raised; until then, the ethnonym “Kyrgyz” had denoted those peo-
ple whom we presently know as Kazak, whereas the “real” Kyrgyz were called either Karakkyrgyz “Black Kyrgyz” or otherwise, but in any case, were linked to the Kazak. First, some former Alash members (now within the Bolshevik party) worked for the creation of a “Kara-Kyrgyz Autonomous Mountain District”, arguing that the splitting of the Kyrgyz over several administrative units was detrimental to their development as a nation. The district was to include the northern foothills as well. This move was at first viewed positively by party and state organs, but quashed later in 1922. Thus, the “Kara Kyrgyz” had to wait until the national demarcation (razmezvanie) in the second half of 1924 (the date retained was the decision taken by the Central Executive Committee of the USSR—TSIK SSSR—on 27 October 1924); this process provided them, for the first time in their recorded history, with a state-like structure in the form of an “autonomous district” (avtonomnaya oblast”) within the Russian Federation (not the Kazak ASSR). Soon afterwards, the structure was promoted into an Autonomous Soviet Socialist Republic (ASSR), still within the Russian Federation (1 February 1926). Status as a full member of the Soviet Union was achieved when the new Soviet Constitution was proclaimed on 5 December 1936, which counted eleven republics, among them the Kirgiz Soviet Socialist Republic.

Until then, the country had undergone significant change in line with the general evolution (for better or worse) within the Soviet Union. For the nomadic Kyrgyz the collectivisation of agricultural land (for which a ruthless campaign was launched in 1929) meant that they were forced to settle. R. Eisener, “Kontinenzierung auf dem Lande”. Zur inneren Sicherheitslage in Mittelasien 1929/30 aus der Sicht der OGPU, Berlin 1999 [ANOR, no. 6]. This again meant a sharp drop in livestock (from 3.8 million to 2.3 million in 1931-2; sheep and goats dropped from 3.1 million in 1924 to just under 1 million in 1932; livestock reached the levels of the late 1920s again only by the 1950s or later) and widespread famine; though the Kazak steppe regions were hardest hit, Kyrgyzstan also was a disaster area. Repression was rampant; in 1932 during tax collection, more than 100 persons were shot (U istokov kirgizskoy natsional’noy gosudarstvennosti, Bishkek 1996, 121). No reliable figures are available for human losses in this period, but they must have been massive. Hence by 1940, almost all Kyrgyz farmers worked on collective or state farms.

In 1938, as in other parts of the Soviet Union, the local intelligentsia was physically destroyed together with the “old guard” of revolutionaries. This included some of the former Alash members who were involved in the affairs surrounding the “Social Turan Party”. Industrialisation was one of the main targets of Soviet development policies, and during the first Five-Year Plans, coal mining was developed, but also metal working and industries related to the agricultural production of the country (textiles, foodstuffs, meat). Nevertheless, Kyrgyzstan has remained a largely agricultural country.

In the post-Stalin period (beginning with the XXth Congress of the CPSU in 1956), developments in Kyrgyzstan closely followed the general Soviet pattern. This meant that a precarious balance was established by the Republic’s leadership between utter devotion to the centre and the slow but irresistible localisation of decision making, using patron-client-relationships to a very large extent (O. Roy, The new Central Asia. The creation of nations, London 2000). These networks tend to have a regional basis; in Kyrgyzstan, this means the south-north divide. Whereas the last Soviet leaders were southerners, the new leadership is northern. During Turdakun Usunbaev’s term as the party’s first secretary (1961-85, when he was removed by the new leadership under Gorbachev), Kyrgyzstan was increasingly unable to attract new capital investment, and the republic was the second poorest part of the Soviet Union (after Tajikistan).

4. Independence and after.

In the case of Kyrgyzstan, national independence was spurred by an outburst of communal violence in Osh between Kyrgyz and Uzbeks in the summer of 1990, with land shortages and poor representation of Uzbeks as background. This led to the election of an outsider as chairman to the Supreme Soviet (28 October 1990); Askar Akaev, who came to be the only president in the new Central Asian republics not to have held high party office before. Akaev was re-elected president on 24 December 1995 (75% of expressed votes) and again on 29 October 2000 (74.5% of expressed votes, but major competitors were prevented from running).

Kyrgyzstan won its independence on 31 August 1991. The country has made rapid moves towards democracy and a market-oriented economy, earning the label of “Central Asia’s island of democracy”; this characterisation has been questioned since more autocratic features have appeared. Economically, crisis has bordered on collapse during the first years of independence, the GDP plummeting by around 45% in 1992-5, industrial production by nearly two-thirds and agriculture by around one-third. Again, as in other crises all through the 20th century, reduction in live-stock numbers is a good indicator: sheep and goats

felled from 8,741,000 heads in 1993 to a mere 3,716,000 in 1997. Inflation has also been a major problem since the creation of a national currency, the som, in 1993; soaring up to more than 1000% in 1992-3, it has been down to 18% in 1998, rising again to 36% in 1999 in the aftermath of the financial crisis in Russia. In spite of this, the GDP was up by 3.6% in 1999, mainly due to over-average agricultural production. But economic prospects do not seem as bright now (2000-1) as in the latter 1990s.

Kyrgyzstan faces serious security problems, mainly in the Farghana region. In 1999 and 2000, Muslims from northern Tadjikistan have made incursions into Kyrgyzstani territory. Previously, security had not been a priority issue for the Kyrgyzstani government, but in 2001, military expenditure was increased by 250%. Linked to this is the drug traffic (cannabis, but mostly opiates from Afghanistan and Tajikistan), making Osh one of its major hubs in Central Asia. Other transnational problems include an increasing water problem (downstream Uzbekistan and Kazakhstan).

In 1999, mainly due to over-average agricultural production, the GDP grew by 3.6%, but has now (2000-1) as in the latter 1990s.

In 1999, the GDP was up by 3.6% in 1999, mainly due to over-average agricultural production. But economic prospects do not seem as bright now (2000-1) as in the latter 1990s.

The nation-building process involves a re-interpretation of the past, focusing on attempts at statehood in the more distant past and a re-evaluation of early Kyrgyz nationalism, including those who fell victim to the Stalinist purges.

KIRMANI, HADJDJI MUHAMMAD KARIM KHAN [see SHAHYDDA]. [2]

KISAKUREK, Necip Fazılı (1905-83), Turkish poet who wrote metaphysical poems of anxiety, darkness, loneliness and death, and whose tone became progressively mystical and, at the end, dogmatically religious. Already a bohemian as a student of philosophy, he continued a life of gambling, drinking and womanising as he worked first as a bank inspector and then as a teacher at various post-secondary schools in Ankara. Meeting the Nakshbandi sheikh Abdułhakim Arvaci in 1934 became a turning point in his life by providing an answer in religion for his spiritual and intellectual crises. He quit his job in 1942 in order to devote all his time to writing and publishing. He published two journals: Ağaç ("Tree", 1936), and Büyük doğu ("The Great East"), 1943-78. He was politically active in religious causes, and used especially Büyük doğu as an ideological platform.

Although he also wrote short stories, novels, monographs on as diverse topics as İmam 'Ali, 'Abd ul-Hamid II and Nāmik Kemal, and plays of which the most noteworthy is Bir adam yaranmak ("To create a man"), 1938, Kisakürek is first and foremost admired as a poet. With his first three books of poetry, he was hailed as a new voice in Turkish poetry. The tone of feverish nightmare in his early poems is created by striking, sometimes erotically charged images, by paradoxical metaphors of being and nothingness which dissolve into each other, and by experiments with the lengths of syllables that play with the traditional syllabic measure of Turkish folk poetry. After his conversion, he publicly disowned all but a few of his previous poems. His lifelong goal was to create a definitive book which would include all of his poems. He achieved this with Cice ("Suffering"), 1974. It has 395 poems which has come is of impatient waiting for death because he believed that the terror of death and loneliness ended in dying and uniting with God. He defines a poem as a thought stated in emotional terms, and argues that the structure of a poem should be completely absorbed by the theme. Details of his life can be found in his two books of memoirs: O ve ben ("He and I"), 1974 and Babula (1975).

KIT'A (a.), pl. kit'ö, or mukatt'a, pl. muhat'tat, literally "piece, part cut off from the whole, segment". As a literary concept kit'a denotes a form of poetry.

1. In Arabic poetry A kit'a or mukatt'a is a short monothematic poem or fragment of a poem, in contrast to the long (often polythematic) poem, the kasida [q.v.]. The term kit'a can actually denote a piece or part of a longer poem (e.g. poetic quotes in anthologies) [see MUKATTARA]. However, it is, in particular, independent short poems that are named thus (in rare cases, they are also termed kifā al-kasida). However, it is, in particular, independent short poems that are named thus (in rare cases, they are also termed kifā al-kasida; see al-Dhāhīz, K. al-Ḥawāānī, iii, 98). Western scholars usually equate kasida and kit'a with polythematic and monothematic poems respectively, while indigenous Arabic critics in general consider only the length of a poem as a criterion for distinguishing between the two forms (cf. van Gelder, Brests, 79, 1). They could, however, never agree on the number of verses that determines the borderline between the two forms. Ibn Rāshīk names seven or ten verses ('Umada, i, 188-9) as the lower limit for a kasida; other numbers are mentioned as well, however (cf. van Gelder, 79-80). According to the Arab, and in contradistinction to the Persian, critics, the non-existence, of an opening verse (matla') with internal rhyming (tasrif) does not count as a criterion for the kit'a. As a matter of fact, there are more than enough kit'a containing such opening verses even in the earliest times. Thoughts as to the purpose for which the ancient Arabs preferred short poems have already been formulated within the context of pre-systematic criticism. Abā 'Amr b. al-'Aţā and al-Khaṭīb b. Ahmad [q.v.s] are said to have remarked on this; they were used whenever a poet had to be remembered. Others think that the kit'a is especially useful for expressing disputes, proverbs and jests (cf. Ibn Rāshīk, i, 186).

kit'a can be found in almost every diwan of poetry and in numerous other works dealing with poetry and other topics (inter alia in the igiyām al-arab, and also in such historical works, such as Ibn Hāshām's Sr, al-Ta'bārī's Ta'rij and al-Baladhidī's Anāb al-adhrāf). The kit'a is not subject to any thematic limitations. A classification and characterisation of the contents...
of the *kifā* among the ancient Arabs has been offered by Alfred Bloch. His principle of classification is the degree of the poem’s “distance from life or from specific situations in life”. As a result, the different categories are: (1) *work-songs* or *songs that accompany a certain job* (*nasīb* or *little distance from life*); (2) poetry of the moment; (3) poems containing a proclamation or message (medium distance from life; poetry of the occasion); (3) poems expressing a sentiment of life and poems of remembrance (timeless artistic degree of the poem’s “distance from life or from specified situations”).

**Category no. 1**: An impromptu poem of the moment, very often composed in the easiest metre, *radāz*. Mainly war cries belong to this category, in addition to songs for round dances to which mothers let their children dance, and work-songs in the narrower sense that accompany real activities (rarely ever transmitted) (cf. Ullmann, *Untersuchungen*, 18 ff.). The contents of the war poems is mostly self-praise: “I am Ibn Wars, horseman without pusillanimity, who through his courage inspires admiration, who advances boldly when the weakling retreats, and on the day of horror with the sword I strike the towering (adversarial) hero until he falls” (al-Baladhuri, *Anāb*, v, 268, 6).

**Category no. 2**: Are abundantly represented in ancient Arabic poetry and is, according toBloch, its most characteristic genre. In proclamation poems the poet expresses his opinion on a certain event; they are occasional poems born out of daily life, “pamphlet verses”, the contents of which are valid for a certain period, e.g. “your slaying of al-Mukanna, we have slain Ubayda”, or “(a-la) aabligh 'in fulan” (ibid., c, 18 ff). A sizeable number of the short poems of these old poets (from Muhammad b. Wasff via Rudakf up to Manucihrf).

Moreover, the short poems are often short; there are, however, also very long poems, sometimes even containing several parts, which can especially be found among the *khamrīyyāt*. These poems may also be seen as approaching the praise *kāṣida* in their structure (they have—albeit seldom—a *nasīb*; or—very often—a parody of a *nasīb* as a prologue; the rahil can also be found). Among the so-called neo-classical poets (Abū Tammām, al-Bohtuf, and al-Mutanabbl) the short poems, although abundant, stand entirely in the shadow of their *kāṣida* poetry. However, there are cases like Abū Tammām’s *ghafoziyyāt*, whose importance should not be underestimated (see Bauer, *Abū Tammām’s Contribution*, 13 ff.). Most of them are short and it is noteworthy that pieces consisting of four verses are particularly numerous (cf. ibid., 18-19; Seidensticker, *Die Heidentum*, 920). In al-Mutanabblf’s *diwān* one can find numerous short poems addressing more than one theme; al-Wuhufit, in his commentary, criticises two *kifān* that contain sundry descriptions—a genre not mastered by al-Mutanabbl, according to him (Dīwān, ed. Dieterici, 774). The themes of *kifās* from the 3rd/9th to the 5th/11th century are extremely varied. Next to the short poems of the new established new genres one can find pieces that in their themes are close to the epigrams of late antiquity: descriptions (Ar. *awāfīf*, sing *wasf* [q.v.], Greek *ekphrasis*) of a large variety of objects (especially in Ibn al-Rūmī, Kugheadnit, al-Šarī al-Šafiit and al-Maārifi); descriptions of flowers and gardens (zahriyyāt [q.v.] in Ibn al-Rūmī, Ibn al-Mu’tazz and al-Sanawbarī; especially in the latter, one can also find long garden poems), reflective poetry (especially in Ibn al-Rūmī), jesting, riddles, requests for gifts, mockery, blame, excuses, thank-you notes, requests, invitations, etc. In Ibn al-Mu’tazz’s praise poetry one can find a remarkably large amount of short pieces; al-Ma’arrī, finally, in his philosophical poems (hājamiyyāt) chooses the short form of the *kifā* as often as its long form.

**2. In Persian literature**

The Persian critics define the *kifā* or *mukattāt* as a poem that has the same metre and rhyme throughout, and the opening verse (*matla*) of which does not contain internal rhyming (*taqrīt*). Most often, two verses are named as the minimum amount whereas there is no upper limit as to the number of verses (Dīlhubdī, s.v, *kifā*, Ruckert-Pertsch, 64). This means that the length of a poem, which for the Arabs is its decisive feature, has been completely abandoned as a criterion. As with the Arabic *kifā*, the choice of topics is arbitrary. As can be expected, *kifās* are found already among the poems of the oldest Neo-Persian poets (from Muhammad b. Wasif via Rūdākī up to Manuchihr). A sizeable number of the short poems of these old
poets, however, begin with a matla' that contains a tasrīf, hence cannot be counted as kit'as. Such is the case with the whole of Manūchehr's wine and love poems (ed. de Biberstein Kazimirski, nos. 3, 4, 54, 69-75, 77-83, 85, 56, 59). Terminological kit'as occur much more rarely in Manūchehr. In the more prolific poets beginning in the 5th/11th century the kit'as often occupy their own more or less voluminous chapter. Famous for their kit'as are Anwārī (d. 587/1191 at the latest [q.v.]) and especially Ibn-i Yāmīn (d. 769/1368 [q.v.]). Anwārī's dīwān contains a very large chapter comprising them. These are of extraordinary variety in their topics: in addition to praise, blame, mockery, threat, request (especially frequent is the request for wine), thanks, mourning, congratulation, complaint, description of personal circumstances (hash-i ḥāl), one finds advice, admonishment, maxims, and reflective poems (occurring very frequently), jesting, epistles, riddles, chronograms, maddāzāns, and many others, among them very unusual topics, for instance, a poem about toothache, in which the word "tooth" occurs in every verse. Descriptions are remarkably rare; there are, however, a few descriptions of banquet and palaces. Poems containing 20 and even 30 verses do occur. As for the period only 128 kit'as; thematically, these do not offer any remarkable short. Most of them consist of only two verses, usually in the usual themes (praise, mourning, longing, wine, chronograms, maxims, congratulations, request for a reward, etc.), there are also some remarkable poems like the one in which Hāfiz describes for a reward, etc.), there are also some more remark-

all in all, is considered the most important Persian kit'as, see the article on this poet. The dīwān of Hāfiz [q.v.] also contains a small section of kit'as in addition to the usual themes (praise, mourning, longing, wine, chronograms, maxims, congratulations, request for a reward, etc.), there are also some remarkable poems like the one in which Hāfiz describes in many verses the loss of his poetic powers, which can only be restored by the ruler's grace. Kamāl Khudjandī's and Dājīmī's [q.v.] kit'as are predomin-

nantly short. Most of them consist of only two verses, a peculiarity that is not found in the kit'as of Kamāl's contemporary Hāfiz. Dājīmī's three dīwāns contain altogether only 128 kit'as; thematically, these do not offer anything out of the ordinary. It has been remarked, however, that Dājīmī's "advice and admonishments" (pand u madāżīn) are mostly of a sarcastic and pessimistic character, since, in any case, the kit'as of this epoch are critical of society and complain about the upheavals of the day (H. Rida, in his introduction to the dīwān of Dājīmī, Tehran 1341/1962, 84).

KITĀBA [see ʿINSĪL; KATĪB; BEṬṬI].

KOÇO (Khocho, Chotocho, Koko; Uyghur; in Chinese K쪽; also known as Ik dok-t-qahhibīr, and locally as "Asu [Epheus], the town of Dākāylonā", i.e. the Roman emperor Decius (regn. 249-51) [see AḤĀB AL-KÂBI] [cf. A. Von Le Coq, Auf Helens' Spuren, 41], of the name of an Uyghur state (850-1250) and of an ancient, walled city, now in ruins, adjoining Karakhoja in the desert to the east of Turfan [q.v.] in Eastern Sinkiang Uyghur Autonomous Region, China.

According to Von Gabain, the name is neither Turkish nor Chinese, but an ancient, indigenous one, meaning "highly brilliant". In the 9th century A.D. the Koço state reached as far east as Tshinhuang in Kansu [q.v.], famous for its "Cave of the Thousand Buddhas", and its "Jade Gate" (Chin. Yù-môn-kuan), where all the traffic between China and the West had to pass. In the north this state included the so-called "Four Garrisons", i.e. Bishābālīg [q.v., Kūča, Karakahr and Koço town itself, all on the northern branch of the Silk Route and described by the 7th-century Chinese traveller and monk Hsien-tsang. In 791 the Tibetans, in alliance with the Karūk [q.v.] and the Sha-tō ("the People of the Sandy Desert"; see Chavannes, Documents, 96-9), defeated the Chinese and the Uyghur, and occupied the Tarim Basin [q.v.]. In 840 the Kirgiz [q.v.] put an end to Uyghur power in Mongolia. Uyghur groups fled southward and settled in the Turfan region, where they established a state, with Koço as its capital, which was recognised by the Chinese in 836. The earliest record of a Muslim presence in Koço is 902, when Ibn Khurraḍādhīb (Ar. text 164, Fr. tr. 126) of his journey from Sāmarmāt to Sinkiang in 230-2/842-4. Before reaching Ha-mi [see KOMUT, in Suppl.], he met followers of the Prophet who apparently had settled there more or less permanently since they had mosques and madrasas.

In 848 Chang I-ch'iao, the Chinese regent of Sha-
chou, "the town of the sands" as Turfan had been renamed under the T'ang dynasty (618-907), began to oust the Tibetans from northwestern Kansu, and in 855 the Koço Uyghur followed his example. In the 10th century they entertained good relations with the Tibetans, as they did with the Kitai [Liao] [see KARA KITAI], who in 924 toppled the Kirgiz state of which Koço had become a vassal. In 1001 the hikān of Koço requested the emperor of China to wage war against the Tangut or Hsi Hsia, a people of Tibetan origin, who lived in the great loop of the Yellow River [see HAMASA, iv, KANSU]. He boasted to the emperor about the large extension of his state. At that time the Koço Uyghurs had moved their residence further westward to Kuča. In 1125 the Liao were overcome by the Jučen, who until 1234 ruled over Manchuria, much of Central Asia, and all of North China. With these new overlords, too, the Koço Uyghurs had friendly relations. In 1209 King Barčuk of Koço surrendered peacefully to Čingis Kāhan in order to rid himself of pressure from the Naiman of Western Mongolia. He was adopted as "the fifth son". After the Mongolian conquest, Koço was added to the Çaghatay hikānate [q.v.]. The Mongols were instructed in Buddhism by the Koço Uyghurs, Buddhism being strongly established in the region. But the famous Turfan finds also include fragments of Syrian manuscripts, most of them with texts from the Peshitta, while von Le Coq also found in Koço a wall painting of Mani, the founder of Manicheism, dated to the 9th century A.D. The towns along the Silk Route thus had a rather mixed population of merchants who professed various religions. Over the centuries, Koço seems to have adapted itself to its respective over-

probably including Komul, was dominated by the Chinese Turkestan, Beijing 1928; M. Cable and F. French, The Great Central Asian trade route from Peking to Kashgaria, in Proc. Royal Geographical Society, xii (1890); A.H. von Le Coq, Buried treasures of Chinese Turkestan, Beijing 1986; E. van Donzel, KONKAN, the coastal region of the western Deccan, or Peninsula India lying roughly between Thalner and Bombay in the north and Goa in the south, i.e. between latitudes 19° 30' and 15° 30' N., and extending for some 560 km/350 miles. It has been known under this name in both medi- eval Islamic and modern times. Within British India, it was formerly in the Bombay Presidency, later Province, and is now in Maharashtra State of the Indian Union. It comprises a highly-forested, low-lying plateau down to the ocean, until in 876/1472 the Mughal empire defeated a small Uyghur state, i.e. a large, walled-in fortification with barracks, arms depots, fields, and two gates (see Luo Zhewen, The Great Wall, 39- 41). According to Sallam, the distance between this town and Dhu ’t-Karnayn camped in Iku, but this remark is probably part of what he thought he should report to the caliph al-Wāthiq [q.v.], who had sent him on his mission. During his journey to Iku/Komul along the northern branch of the Silk Route, Sallam, before reaching Iku/Komul, met a community of Muslims who spoke Arabic and Persian and had mosques and madrasas. He was astonished that they did not know who the caliph was.

In the 13th century, Komul was Mongolian people who conquered Central Asia and gave their name to Dzungaria and the Dzungarian Gate, at present the northern part of the Sinkiang Uyghur Autonomous Region. In 1896 the Chinese Ch'ing emperor defeated the afternoons chief Dzam-i-Idan. After the death of the latter’s grandson Dzak-i-Idan Gereng in 1745, internal Dzungarian strife led to their complete destruction in the war against China (1755-8), during which the Chinese used Komul as a base. After the fall of the Dzungars, the Muslims of the Tarim Basin staged an independence movement, but by 1760 this was suppressed by the Ch'ing, who established control over the Basin by granting official status to the former rulers of its oasis states. In the 18th century, China’s boundaries reached as far as Lake Balkhash [q.v.] and parts of the Kazakh steppe.

During the great Muslim rebellion of 1862-78 under Ma Hua-jung [q.v.], Komul was badly damaged. It was visited by Col. Mark Bell in 1886, by A.H. von Le Coq in 1904 and by Cable and French in 1940. Von Le Coq describes the riches of the palace of the Muslim khan of Komul: Chinese and Bukhārā carpets, porcelain, Khotoan [q.v.] jade-carvings, silk embroidery, a cuckoo-clock and even French champagnes and Russian liqueurs. In 1932, after an abortive uprising, the town suffered terribly at the hands of the Chinese. Its population in 2003 is estimated at ca. 118,000.

1816-17 with Britain at the end of the Marathā Wars, the region was in 1818 incorporated into the Bombay Presidency. The local language, Konkani, is a dialect of Marathi containing Dravidian elements probably borrowed from Kannarese.

Konkani — Ku’ayṭī

1827-38 and some tribal lands north of the Wadi. One of the defenders surrendered, stipulating that, though between 10 and 30 August. After long negotiations, the landlord and the envoy of the Emperor Ferdinand I mandated by Miklos Jurisics (Nikola Jurisic), a Croatian

Kőszeg, German Guns, a small Hungarian town near the Austrian border with a mediaeval castle which was besieged and symbolically taken by the Ottomans in 1532.

In the first decades of his reign, mainly under the influence of the Grand Vizier Ibrāhīm Pāgha, Suleyman the Magnificent cherished world-conquering ambitions. To achieve this goal, he intended, among other things, to defeat the Austrian Habsburgs by occupying their capital. After the unsuccessful 1529 campaign, he undertook another military operation in 1532 with the aim of marching against Vienna.

The Ottomans wanted to avoid a pitched battle with the Austrians, employed Hadrami and South Arabian as mercenary soldiers. The British, also fearing Turkish encroachment as well as the coastal region in the south, and were able to deny the ports to the Kathm. A generally held view which was supported by the British sources). 'Umar's three sons, Salih (called Barak Jung in India), 'Awad and 'Abd Allah, in particular, built fortunes in India and Arabia and had much influence on the later development of the dynasty.

During the 1280s/1860s and 1290s/1870s, full-scale wars were fought for control of Hadrāmatwšt between the Kaṭhīrī and the Ku’ayṭī (Government of Bombay, Account, 125; al-Shāhitī, Adwar, ii, 405; Gavin, Aden, 160-62; Burrowes, Dictionary, 290-1; Dresch, Yemen, 21).

In 1293/1876, the ports of Al-Mukallā and al-Šībhr were both controlled by Yafī, and when the latter called for help, Salih and 'Abd Allah sent funds from India and both Yafī and Indian troops were despatched to the area. In the following year, both ports were taken by the Ku’ayṭī, and the British became involved directly in the inter-dynasty struggles. The British, also fearing Turkish encroachment in the area, became apprehensive. In the confused situation, British policy was to cut off supplies and monies from India (Gavin, Aden, 162-8). In 1298/1881, they sanctioned Ku’ayṭī control of the southern coastal plain, and in 1299/1882 a treaty was drawn up between the two, the latter agreeing to accept British advice in exchange for an annual sum of 360 Maria Theresa dollars (Gavin, Aden, 171-2; for the text of the treaty, Government of Bombay, Account, 169-70).

In 1307/1888 a full protectorate treaty was signed between the Ku’ayṭī and the British, one of a number of such treaties. The British government agreed “to extend to Mokalla and Shehr and their dependencies which are under their authority and jurisdiction the gracious favour and protection of Her Majesty the Queen-Empress”. In return, the Ku’ayṭī agreed “to refrain from entering into any correspondence, agreement or treaty with any foreign nation or power except with the knowledge and sanction of the British Government…” (Government of Bombay, Account, 186-7 for the full text). The Ku’ayṭī were in control of Shibām and the western end of Wādī Hadrāmatwšt, as well as the coastal region in the south, and were able to deny the ports to the Kaṭhīrī. A generally cordial relationship developed between the British and the Ku’ayṭī (ibid., 145; Gavin, Aden, 172-3; Ingrams, Arabia, 10).

In 1320/1902 the title of jemār was finally abolished and ‘Awad b. ‘Umar became Ku’ayṭī sūltān. He died in India about 1325-7/1907-9 and was succeeded by his son Ghālīb who himself died in 1340/1921. Ghālīb was followed as sūltān by his brother ‘Umar, who died in 1354/1935. Sālīh b. Ghālīb became sūltān in 1354/1935 and died in 1373/1955. ‘Awad b. Sālīh reigned from that date until his death in 1386/1966 and ‘Awad’s son, Ghālīb, was the last Ku’ayṭī sūltān until the withdrawal of the British from the area about a year later (al-Shāhitī, Adwar, ii, 407-8).

The year 1933 and the visit to Hadrāmatwšt of the
Political Resident in Aden, Sir Bernard Reilly, marks the beginnings of the widespread development of the two sultanates, the Ku'ayti and the Kahtiri, the peace which was negotiated among the tribes and the much closer involvement in their affairs by the British government, manifest in the establishment of an Eastern Aden Protectorate (EAP), quite separate from the Western Aden Protectorate (WAP). The peace, widely known as "Ingrams Peace" after its architect, Harold Ingram, was finally brought about in 1355/1937 and was to last for three years. In 1937 also, an advisory treaty was signed between the Ku'ayti and the British in which an adviser was to be appointed, Ingram himself (Smith, "Ingrams Peace", 6-7, 21; for the text of the advisory treaty, see Ingram, Records, ii, 296-7).

The Ku'ayti, along with the Kahtiri, never entered the Federation which was formed and fostered by the British in the WAP. At the time of the withdrawal of the British in 1967, the Ku'ayti sultanate became a part of the People's Democratic Republic of Yemen. In 1990, with the unity of north and south Yemen, the whole of what had been the EAP became a part of the Yemen Republic [see AL-YAMAN, 3 (b)] with its capital at San'a'.

(1992-94: Smith)

KUCUK 'ALI OGHULLARI, a line of Turkmen derebys [gaz] or local lords who controlled the region round Payas [gaz], which was strategically situated near the head of the Gulf of Alexandria-dretra (and now in the modern Turkish î or province of Hatay), and, for a while, Adana in Cilicia [gaz] for almost a century.

The founder, Khaih Bey Kucuk 'Ali Oghlu, appears ca. 1770 as a bandit chief based on Payas, preying on shipping (including the ships of European powers) in the Gulf and on the land traffic which had to pass through the narrow gap between the Gavur Daği mountains and the sea, leaping dues on the Pilgrimage caravans from Anatolia to Syria and the Hijaz, and even in 1801 capturing and imprisoning for ransom the Dutch consul-general in Aleppo. The efforts of the Porte in Istanbul at humbling him all failed, and it was obliged to come to an accommodation with him and accord to him the dignity of a pasha of three taghs.

When Kucuk 'Ali died in 1807, his equally rapacious son Dede Bey succeeded him, continuing to make a living by preying on shipping in the Gulf. An expedition was sent against him under a rival derehy, Capan Oghlu Amnin Payha of Yozgar, failed to dislodge him, but in 1818 the governor of Adana managed to capture him, and he was sent to Istanbul and executed.

His young son Mustuk (apparently a hypocoristic from Mustafa; to be written as Mustuk? ) took refuge in Marash for nine years, out of the reach of the governors of Adana, but returned to Payas in 1827. During the 1830s he supported the Ottomans' enemy, Ibrahim Pasha, son of Muhammad 'Ali [q.v.], but rallied to the Sultans after the 'Abd al-Karim Egyptian forces in 1840. William Barckhardt Barker, son of a British consul in the Levant, praises Mustuk for his polished manners and generous nature, a sharp contrast to his forebears, and Mustuk did try to discourage brigandage in his region. But the long-term policy of the Sultans at this time was the reduction and ending of the power of all derebys. Mustuk fought off an attack by the governor of Adana in 1844, and it was not until 1863 that the then governor in Adana secured his capture. He was exiled, but the Payas region continued to be disturbed for another two years through the activity of two of his sons.

Bibliography: Barker's account of the family is the main Western source; see his Lores and penates, or, Cilicia and its governors, ed. W.F. Ainsworth, London 1853, 73 ff. Of modern studies, see A.G. KUFIR [see KAFIR]
continuator—considered as apocryphal (e.g. Marābkīz al-dawʾīr al-mutamāsā; al-Mastāʾl al-hanādiṣiyā; K. al-Makhtūhīlī, or else are commentaries on Euclid or determinations of the value of π. The treatises on astronomical topics are much less numerous: on the construction of the astrolabe and of verticals (dawdʾīr al-ṣamūt) on the tympanum of this last, preserved by Abū Naṣr Maḥmūd b. ʿIrāq, al-Būrīnī’s master (cf. J. Samsō, Estudios sobre Abu Naṣr...). A short article... on the possibility of infinite motion in finite time, in Actes du VIII Congrès international d’Histoire des sciences, Florence 1956, 249-9.

KULUZ, the Ottoman Turkish name for the Greek town of Voloş, a port on the northern shore of the Pagaetic Gulf or Gulf of Voloş in east-central Thessaly [see TESALVA] (lat. 39° 22′ N., long. 22° 57′ E.). The name probably stems from Slavonic goloh “seat of administration” and may be associated with the Slav presence in the area during middle Byzantine times.

Situated on the site of ancient Iolos, the area received ca. 1277 refugees from the Byzantine capital Constantinople who opposed the emperor Michael VIII Palaeologus’s attempts at church union with the West, and in the late Byzantine period Voloş was known as a relatively new settlement. Together with neighbouring Demetrias (2 km to the south-west of Voloş) and Kastoria, Voloş was part of a bishopric (see VOLEOS) which had remained in Catalan hands until ca. 1381, when Voloş experienced two Ottoman conquests, firstly between 1393 and 1397/796-800 and then 805/1403, and passed definitively into Turkish hands ca. 826/1423. The conquerors strengthened the fortifications of the castle there in order to fend off an impending Venetian attack, and an Ottoman governor and garrison were installed, together with fresh Muslim settlers from Anatolia, whilst the local Christians moved to the slopes of Mt. Pélion to the north (refs. in A. Savvides, in Thessaliki: Ημερολογία, xviii [1996], 51-2, 59-60).

In the early Ottoman period, the region of the Voloş fortress [but not Demetrias] is mentioned in the surviving testaments of the Turkish governors of Thessaly Turakhān Bey [g.]; 850/1446, ʿOmer Bey (889/1484) and Hasan Bey (937/1531), whilst it was also described in Piri Reʾsī’s [g.] Kitāb-i Behriyye. The first settlements outside the fortress grew up in the late 16th-early 17th centuries, a growth which stimulated local commerce and the transit trade. This was helped by a famed local fair held twice a week and the first works along the shore at the fortress beach, later to become Voloş’s commodious port. In 1665 the fortress was attacked by Francesco Morosini and a Venetian force (P. Coronelli, Memorie storico-giografiche... , Venice 1692, 229), but soon recaptured and refortified by the Ottomans.

During the Greek Revolt of the early 19th century, the rebel Greeks of Pélion failed in May 1821 to capture the strongly-held fortress, although on 8 April 1827 the British naval commander and Philhellene Frank Abney Hastings seized five Turkish vessels in Voloş harbour and forced the Ottoman garrison temporarily to evacuate the fortress (see Tospotos, History, 202 ff.). However, the region remained under Turkish rule till 1881 when, following the Berlin Conference, it passed between 2 and 22 November to the Kingdom of Greece and Turkish forces left the town (the citadel was unfortunately demolished a few years later). It was in this last phase of Ottoman rule that the initial settlements of the modern town of Voloş were established (1833-50), with consulates and commercial installations set up by Greeks, Austrians, British, French and Italians between 1836 and 1870 (see ibid., 240 ff., 250 ff.).

Modern Voloş is now a major commercial and industrial centre (population in 1981: 70,000; in 2003: 83,600) and is the chef-lieu of the prefecture of Magnesia.

AL-KUMMĪ, Ḥasan b. MUHAMMAD b. Ḥasān, the author of a local history of the town of Kum [g.] in northern Persia, fl. in the 4th/10th century. He is said to have compiled his history originally in Arabic at the instigation of his brother, Abu ʿl-Ḵāsimʿ Allī, governor of Kum for the Būyids, in order to gather together and record all the traditions about the arrival of the Arabs in Kum and the town’s subsequent history. He dedicated the book to the famous vizier, the Ṣāḥīb Ibn ʿAbbād [see ibn ʿAbbād]. The Arabic original has not survived, but a Persian translation was made by one Ḥasan b. ʿAbd al-Malik Kummi in 912/1503-4, though this seems to contain much less material than the original Arabic text did (ed. Ḍjalāl al-Ḏīn Tihrānī, Tehran 1313/1994).

KÜRÜS (present-day Şeyhıye Khuruz), the Classical Cyrrhus, capital of the Cyrrhestica, a stronghold in the north of modern Syria on the Sabun-suyu, a right-bank affluent of the Nahr ‘Afrīn. As a Seleucid colony, it took the name of a place in Macedonia and remained a stronghold under the Romans. Three ancient bridges, still visible, allowed crossing of the Sabun-suyu and the ‘Afrīn. Archaeological researches have revealed several monuments, including an amphitheatre. In the necropolis to the southeast of the town is an ancient tomb which mediaeval Islamic tradition attributed to Urâb the Hitite and which includes a cenotaph of Mamlûk times. Kürüs enjoyed a fresh lease of life under the emperor Justinian I, who rebuilt its fortifications. The Muslims took it in 616/1437, and later considered it as one of the marches of the empire, guarding the Antioc and Aleppo roads. Its military role thereafter declined. At the end of the 11th century it came under the
It became the seat of a Latin bishopric, and had also of Gogh Vasil, before being taken by the Franks ca. 1042.

It was taken and destroyed by Nūr al-Dīn b. Zangi in 1150, but ca. 1165-6 ceded to the Armenian prince Mkh. In the 7th/13th centuries, Kūrus, coming within the territories of Aleppo, was ruinous but still gave its name to a district whose agricultural revenues formed an iktd [g.v.] supporting 40 cavalrymen.

KUWAYK, Nahr, the name given by the Arabs to the ancient Chalos river in northern Syria. This stream, whose valley makes a shallow notch in the plateau of the Aleppo region, rises at the foot of the last outliers of the Taurus, to the east of al-Dawla [g.v.] and the territories of Aleppo, was ruinous but still gave its name to a district whose agricultural revenues formed an iktd [g.v.] supporting 40 cavalrymen.

(Anne-Marie Edde)

KUWAYK, Nahr, the name given by the Arabs to the ancient Chalos river in northern Syria. This stream, whose valley makes a shallow notch in the plateau of the Aleppo region, rises at the foot of the last outliers of the Taurus, to the east of al-Rawandān [g.v.] in present-day Turkey. Fed by various springs, notably in the 'Āzaz region, it skirts Aleppo to the west, and to the south of this city receives the waters of the Blessed Spring (al-'Ayn al-Muhābrakā). After a course of some 110 km/70 miles, it peters out in the vicinity of Kīnnasīn [g.v.] in a swampy depression called al-Māmith.

This river, with an average flow of waters which is very feeble, enabled several mills up stream and below stream of Aleppo to turn, and it irrigated gardens to the north and west of the capital. Occasionally there were significant floodings from melting snows or violent rains, but it dried up in summer through absence of rainfall and because the villagers upstream used the little water which it carried for irrigating their fields.

In the mid-14th/10th century, the Hamdānī Sayf al-Dawla [g.v.] diverted the river so that it might flow through the palace he had had built in one of the western suburbs of Aleppo. At the beginning of the 8th/14th century, a canal was dug to carry part of the waters of the Sādġūr into the Kuwayk and thereby increase the latter's flow, but these works were destroyed by an earthquake in 1544, restored in 1644, but definitively abandoned in 1723.

KUZMÂN, Banī, a family of literary men of al-Andalus and connected with the city of Cordova. The name Kuzmân (Span. Guzmán, a personal name of Germanic origin) suggests an Iberian or Romance origin. As well as the most famous member of the family, the author of zajdīs Ibn Kuzmân [g.v.], there are four other interesting members.

1. Abu 'l-Asbagh Ḥisā b. 'Abd al-Malik, poet and littérateur (4th/10th century), appointed by al-Mansūr Ibn Abī 'Āmar [g.v.] tutor of the young Ḥishām II al-Mu'ayyad [g.v.] proclaimed caliph in Cordova in 966/976.

2. Abu Bakr Muḥammad b. 'Abd al-Malik b. 'Ubayd Allāh (d. 508/1114), son of 2., a famous fakīh and poet, and secretary to the vizier of the Aftasid prince Abu Ḥafs 'Umar al-Mutawakkil [g.v.] of Badajoz, a Germanic origin) suggests an Iberian or Romance origin.

3. Abu Marwān 'Abd al-Rahmān (479-593/1086 or 1087-1169), son of 2., a famous fakīh and jurist, and one of the last traditionists of al-Andalus. He functioned as a kādhī.

4. Abu 'l-Husayn 'Ubayd Allāh (ca. 518-93/1124 to 1196-7), son of 3., poet, jurist and kādhī in various districts of the province of Cordova.

Other possible members of the family are mentioned in Levi-Provencal's article, see Bibl.

(I. Ferrando)
the collective description of Arabic sounds). *Lafz* occurs mostly in morphological and syntactic contexts, but always indicates an actual acoustic event or a real utterance, usually at the word or sentence level, and thus often contrasts with implicit or semantic features of speech.

Definitions of speech using the term *lafz* may specify that it excludes elements which are not in the Arabic phoneme inventory [cf. *mufrad al-mufrad*], as well as non-linguistic modes of communication such as gestures and context of situation and even writing, *khat* [q.v.], when necessary; cf. Bakalla, 60). It was also established very early (Sibawayhi, *Kitâb*, ch. 4) that the lexical relationship between form (*lafz*) and meaning (*muflâd* [q.v.]) was of three kinds, viz. (1) identity of form with difference of meaning (homonymy), e.g. *zaqqa* “to find” and “to feel passion”, (2) difference of form with identity of meaning (synonymy), e.g. *dhu'ababa* and *inatlababa* “to go away”, and (3) difference of both form and meaning, e.g. *dhu'ababa* “to go away” and *gafles* “to sit”.

In morphological contexts, *lafz* will typically contrast with *ma'nd*, i.e. opposing the phonological to the semantic properties of an element. For example, a distinction is made between absolute objects (*muflâld* *muflâd*) which are composed of the same radicals as the formal realisation (*lafz*), which are derived from a synonym of their operative form (*gâfles* “I sat down right down”) and those which are derived from a synonym of their operating verb and are thus termed *lafz* “formal” (e.g. *dhalastu* *dhalâd* “I sat down right down”) and those for which there is a nominant from them of their operating verb and are thus termed *ma'nuwâ* “semantic” (e.g. *dhalastu b'sâd* “I sat down with a squatting action”).

At the syntactical level, the opposition is usually between the formal realisation (*lafz*) versus the implied, *mukaddar* [see *takôlan*, where *lafz* is translated “literal”], i.e. the surface realisation is contrasted with some equivalent word or words assumed to underlie the form actually expressed. This is not to be confused with modern notions of deep and surface structure, since the underlying forms are invariably stated as verbal paraphrases of the surface realisations and the question of transformation therefore does not arise. In this connection, it is worth mentioning that there are other, similar oppositions recognised by the grammarians, notably the explicit (*zâhid*) versus the suppressed (*mudman*), for the contrast between overt and implicit elements generally, and the visible (*bârâ") versus the concealed (*mutâfâd*), for the oppositions in particular, to which must be added elision (*hadâf*) and the restoration of elided elements in the shape of “additions”, *zâhidât*, all of which point to a complex understanding of the relationship between the outward verbal features of speech and its inner content.

Understandably, the scrutiny of what was sometimes called the *kallâm* *lafz* “the formal utterance” in the light of its internal implications, the *kallâm* *nâsât* “mental or spiritual utterance”, became a dominant preoccupation of the sciences of rhetoric, exegesis, law, and theology.

(M.G. CARTER)

2. In theology.

Here it refers to the pronunciation of the *Kur'ân*. The term was introduced by Husayn b. 'Ali al-Karâbîsî (d. 245/859 or 248/862 [q.v.]), a disciple of al-Shâfi‘î who, in theology, shared the position of Ibn Kullâb [q.v. in Suppl.]. Reacting against the Mu'tazilî doctrine of *dhalâl* *al-Kur'ân*, the latter had distinguished between *kallâm* *Allah*, God's speech which is eternal, and *kârâ’a*, the recitation of the *Kur'ân* which occurs in time. Al-Karâbîsî replaced *kârâ‘a* by *lafz* (or *nâfî*) which was broader and meant any quoting of the *Kur'ân*, including beyond formal recitation. During the later phase of the *mufrad* [q.v.], his doctrine spread widely, to the Džâzîra (Mawṣûl and Transjordan) and possibly even to Damascus, through Hishâm b. 'Amârâ al-Sulâmi (d. 245/859), who served as *kâhîf* at the Umayyad Mosque. In Bagdâd, however, al-Karâbîsî encountered heavy opposition from some Hanbalîs and his adherents, who denounced his approach as *Djahmî*, i.e. they equated it with the belief in the createdness of the Word of God, or at least banished any mention of it. In Persia, the situation was quite different. Hanbalî radicalism came under attack by al-Bukhârî (in his *K. Khâlîk al-qâf'é*) and Ibn Kutaybah (in his *Nâhîa fi l-‘lafz*) who both virtually shared Karâbîsî's opinion without explicitly referring to him. The so-called Fîh al-‘Abîr II names the createdness of *lafz* as part of the creed. Theologians like Makhûl al-NasâFI and al-Ghazâlî adhered to it, as did even Hanbalîs like Ibn *‘Aqîl* or Abû Ya’la Ibn al-Farâ‘a. This broad acceptance of the general idea was counterbalanced by an avoidance of the term *lafz*; such as; al-Karâbîsî’s authorship was forgotten.

**LAHN** (n.). In music. This is one of the basic terms of secular music in Islamic times, used in Arabic and Persian [see *mufrad*]. In its early terminological sense, *lawn* (pl. *lahûn*, rarely *alîhûn*) denoted a musical mode, comparable to the later terms *naghma* (pl. *naghâm*) and *ma‘dûn* [q.v.]. It was a loan from the Byzantine Greek concept of *échus*, adopted probably in Umayyad Syria. A *Kâlûh al-Lahûn-l-damûnaya* (“Book on the modal system called okêichêos”), wrongly attributed to Ptolemy, was known to Ibn al-Kalbî [q.v.], according to a quotation in Ibn 'Abd Rabbîh’s *al-Bîd al-farîd*, Cairo 1949, vi, 27. *Al-Kindî* [q.v.] equated *lawn* with *tanîn* (= Greek *tûnos*) in the same sense of musical mode. In its more general and more common meaning *lahûn* (pl. *alîhûn*, *lahûn*) stands for melody. Here it corresponds to the Greek term *melos*. The notion of music (*ma‘dûn*) was therefore defined as the “science of the modes” (*ilm al-lahûn*) or as “composition of raiûdes” (*wâţîf al-alîhûn*). In the latter sense, the term was used and defined by many writers on music theory from al-Kindî to al-‘Lâdhîkî.
Al-Fārābī devoted several chapters of his Kitāb al-Musīkī al-kabīr to an exhaustive treatment of melodies. "Reciting the Qur'an with secular melodies" (kārta qaṣīr bi ṭalāḥān) was one of the crucial points in the discussion on decent music in Islamic society. Al-Fārābī devoted several chapters of his Kitāb al-Musīkī al-kabīr ("set to music"). Mulahhan ("composer") and mulahhan ("chanting; composition") have survived throughout the centuries, as have its derivatives mulahma ("set to music").

The principal offices of the Safawid state during the reign of Ismā'īl I (907-30/1501-24), or leading figures in the state. The structure of the Ottoman dynasty, Oxford 1966, 10, 117). Again as in Persia, such tutors were prestigious figures, and could become senior vezirs or leading commanders like Lala Mustafa Pasha (d. 988/1580), tutor to the future Selmī II (see MÜSTAFı PAŞA, LALA). It also made its way to the Muslim India of the Mughals, and in British Indian times, acquired a wider meaning of "child's tutor" in general and also, in northern India, became the title of a clerk or secretary in the local, vernacular languages (see Yule and Burnell, HUMAM-LOQMAN, a glossary of Anglo-Indic words and phrases "London 1903, 501-2").

(C. E. Bosworth)
While its date of publication places it within a decade of the mid-18th century, its fictionality of his narrative stands in marked contrast to the most influential figure of early 18th-century Ottoman miniature painting, active during the reigns of Mustafa II and Ahmed III (q.v.), and which were not too open to attack from the steppe nomads or more northerly forest peoples. M

MA’, 10. Irrigation in Transoxania. The rivers of Inner Asia, extending from Kh’arazm in the west through Transoxania to eastern Turkestan (the later Sinkiang) and northwards to the Semirecye, have all been extensively used for irrigation purposes, in the lands along those rivers and in oasis centres, providing a possibility for agriculture in favoured spots which were not too open to attack from the steppe nomads or more northerly forest peoples. Hence, as elsewhere in the Old World, the maintenance of irrigation works, surface canals and kârîces or subterranean channels (these last to be found as far east as the Tarim basin and the fringes of China proper; see KAN’AT) depended on injections of capital from strong local rulers, on the mass mobilisation of labour for construction and maintenance work, and on vigorous defence policies to protect the settled lands. Such river systems as those of the Oxus, Zarafshân and Syr Darya to the west of the Tien Shan mountains, and those of the Tarim river and its tributaries coming down from the Kun-Lun mountains, to the east of the Tien Shan, must have had irrigation works long
antedating the coming of Islam, even where specific information is lacking and their existence can only be inferred from the sparse archaeological investigations in such regions.

Thus ground surveys and the results of aerial photography have enabled scholars like the late S.P. Tolstov to show how irrigation in Khūzestān depended on a complex system of canals and channels from the lower Syr Darya and extending westwards towards the Caspian (these last, along the old channel of the Uzboi [see Amu Darya]), were investigated in an expedition of 1947; see Tolstov, Auf den Spuren der altorientischen Kultur, East Berlin 1953, 318 ff.

The irrigation systems of what was the pre-Islamic Iranian region of Sogdia [see Al-Soghd] are especially well known from the mediaeval Arabic and Persian geographers and local historians and were the subject of a special monograph by W. Barthold (Kistori oroshe information is lacking and their existence can only be antedating the coming of Islam, even where specific information is lacking and their existence can only be inferred from the sparse archaeological investigations in such regions.

According to the latter, the main irrigation channel through the city was known as the rūd-i zar “golden, or gold-bearing river” (Turkī-i Bukhāra, tr. R.N. Frye, The history of Bukhara, Cambridge, Mass. 1954, 51-2). Al-Mukaddasī, 331-2, and Ibn Hawkal, ii, 484-7, tr. ii, 465-7, describe how locks and sluices along the irrigation system controlled the water flow at times of the river’s spate and inundation; see also Barthold, op. cit., 103-6.

The Arab geographers likewise give detailed information on the situation at Bukhāra, at the western end of the Zarafshān basin, and these can be supplemented by items from the local historian Nāršākhī [q.v.]. According to the latter, the main irrigation channel through the city was known as the rūd-i zar “golden, or gold-bearing river” (Turkī-i Bukhāra, tr. R.N. Frye, The history of Bukhara, Cambridge, Mass. 1954, 51-2). Al-Mukaddasī, 331-2, and Ibn Hawkal, ii, 484-7, tr. ii, 465-7, describe how locks and sluices along the irrigation system controlled the water flow at times of the river’s spate and inundation; see also Barthold, op. cit., 103-6.

There was a continuously-cultivated strip of agricultural land along the left bank of the Oxus from Amūl [q.v.] to Khāzarn, with arīks led off the main channel of the river, some big enough for boats to sail on, until the extensive network of canals in Khāzarn itself was reached (see above). Irrigation canals in the Syr Darya basin began in the Farghāna [q.v.] valley, into which the river’s most voluminous source, the Nahr Djejdjīl (probably the modern Naryn), began; then as now, the Farghāna valley was a land of intense cultivation, and the towns there, such as Akhsikāt and Khudjand [q.v.], derived their water supplies from conduits leading off the irrigation canals (see Le Strange, op. cit., 477 ff.). Further down the Syr Darya basin, irrigation channels were a feature of such provinces as Shāhā [see Taṣkent], Ilbān and Isfīdja [q.v. in Suppl.] until Sayrān and the frontier with the Oghuz steppes were reached.

The Murghāb river in northern Khūzestān (now mainly in Turkmenistan) had numerous canals and dams along its course, controlling the waters which came down from melted snows in the Paropamisus mountains of northern Afghanistan. The situation there has been mentioned in section 6. above, at Vol. V, 868b, but one should add here that we possess especially valuable information for the very complex irrigation system in the Marw oasis from some of the Arab geographers and from the section on the terminology of the divān al-mā’ in al-Khāzarnī’s concise encyclopaedia of the technical terms of the various sciences, the Mafdiḥ al-ulām, composed in the later Sāmānīd period by an author closely connected with the Sāmānīd bureaucracy in Bukhāra; part of this last author’s information on irrigation terminology deals specifically with conditions at Marw (see C.E. Bosworth, Abū ’Abdallāh al-Khwārizmī on the technical terms of the secretary’s art, in JESHO, xii [1969], 151-8). Ibn Hawkal, ii, 436, tr. ii, 421-2, characterises the Marv marvāt or mawṣūl al-mā’ at Marw as a high-ranking amīr who had under him over 10,000 men, each with a specific task to perform, for keeping the irrigation system in repair. Al-Mukaddasī, 330-1, mentions that the amīr’s staff included guards (hurrās) to keep watch over the canal banks and 4,000 divers

control and temporarily recovered its independence under the local king Ghiyārak, and had now to be reconverted by the Arabs [al-Tabarī, ii, 1586; H.A.R. Gibb, The Arab conquests in Central Asia, London 1923, 70-80]. The dam at Waraghsar was obviously an ancient work. Further information on the irrigation system of Samarkand, this time in the Karakhanīd period, is given by the local historian Abū Ḥāfṣ Umar al-Nasāfī (early 6th/12th century) in his Kitāb al-Kind fī torūkh Samarkand; he enumerates the various arīks and gives the total area of irrigated land (Barthold, Turkestan down to the Mongol invasion, London 1968, 89, and on the irrigation system at Samarkand in general, ibid., 83-92).

The Arab geographers likewise give detailed information on the situation at Bukhāra, at the western end of the Zarafshān basin, and these can be supplemented by items from the local historian Nāršākhī [q.v.]. According to the latter, the main irrigation channel through the city was known as the rūd-i zar “golden, or gold-bearing river” (Turkī-i Bukhāra, tr. R.N. Frye, The history of Bukhara, Cambridge, Mass. 1954, 51-2). Al-Mukaddasī, 331-2, and Ibn Hawkal, ii, 484-7, tr. ii, 465-7, describe how locks and sluices along the irrigation system controlled the water flow at times of the river’s spate and inundation; see also Barthold, op. cit., 103-6.

There was a continuously-cultivated strip of agricultural land along the left bank of the Oxus from Amūl [q.v.] to Khāzarn, with arīks led off the main channel of the river, some big enough for boats to sail on, until the extensive network of canals in Khāzarn itself was reached (see above). Bosworth, Abū ’Abdallāh al-Khwārizmī on the technical terms of the secretary’s art, in JESHO, xii [1969], 151-8). Ibn Hawkal, ii, 436, tr. ii, 421-2, characterises the Marv marvāt or mawṣūl al-mā’ at Marw as a high-ranking amīr who had under him over 10,000 men, each with a specific task to perform, for keeping the irrigation system in repair. Al-Mukaddasī, 330-1, mentions that the amīr’s staff included guards (hurrās) to keep watch over the canal banks and 4,000 divers
who watched the channels night and day and had to be ready to turn out for running repairs in all weather conditions; the allocation of water to their various users was determined by a special measure or gauge (miṣāba).

For all these hydraulic systems, the devastations of the Mongols must have had an adverse effect, although agriculture gradually revived and the systems were brought back into repair and use. Šimūr took steps at restoration of the Sogdian irrigation system, especially when he made Samarkand his capital. Under Ozbeg and especially when he made Samarkand his capital. Under the succeeding lines of Ozbeg Turkish khans in Transoxiana and Khârâzim, internal prosperity continued to rest substantially on an agriculture supported by centrally-organised irrigation systems. Hence every canal and rural community dependent on it had its mirâb, the official in charge of the construction and upkeep of the dams and channels. Some of these were comparatively humble local functionaries, but the vital function of the irrigation systems for maintaining the economic health of Khârâzim, in later times the khanate of Khârâzim, internal prosperity con-

In all weather conditions; the allocation of water to its various users was determined by a special measure or gauge (miṣāba).

as the mīrâb (Yu. Bregel [tr.], Fundus al-ṭibbîl. History of Khânzân, Leiden 1999, pp. xviii-xix, xxi). Some of the highest personalities in the state gave personal attention to these matters. Mu'nis describes how the amir ʿAwad Biy ʿInâ s sall 31/1262 supervised the dredging of the Khârwânīn canal (the term for such operations being kâzû, apparently from kâznâk “to dig”) the actual work being done by corvee labour (ḥadâr, bigâr); and the Khân himself, Muhammad Rahîm, came personally in 1225/1810 for the re-opening of the head of this canal (Bregel, op. cit., 162-3, 299).

MĀʾ AL-WARD, rose water (sometimes also found in the single word form al-māʾwar, which suggests that among doctors and apothecaries, this commodity was perceived as something very specific), an essential preparation in Arab pharmacology.

Use of rose water is to be seen in the context of the knowledge professed by the Arabs of the medical and cosmetic properties of the rose and, clearly, their mastery of the technique of distillation. While the treatises evoke numerous varieties of rose, the generic term for which is ʿward (a word originally denoting, in classical Arabic, any flower of shrub or of tree) or indeed the Persian ʿalâ', they are not immune from ambiguity. Thus the red rose is sometimes called ʿward ṣnārâ, sometimes  ḥarābīān, a term reserved by some for the damask rose. The varieties most frequently attested are three in number, if the wild rose is excluded (noted: Rosa canina; white rose (Rosa alba; ʿward alnâ, ṣnārâ); five-leaf rose (Rosa centifolia; ḥarābīān); damask rose (Rosa damascena; ʿward ḥârâbī, ʿward ḥârâbī, ʿward ḥalâdī, ʿward ṣnār). Rose water was extracted from the petals of the last-named, pale red in colour and flowering from the spring to the end of summer. It may be noted that the rose was among the ingredients of various other concoctions such as rose honey (gârlânābâh) or garlic (gârlâb)...

Rose water was thus obtained by the distillation of the damask rose (ʿward ḥârâbî, the nāsâ, referring to the town of Damascus, theoretically the south of Persia or ʿFārābârān), a technique described in detail by Al-Nuwâyri (Nihâyât, xii, 123, 1266-8), with reference to several recipes, on the basis of his usual source, namely the Kûd al-Iṣârâs of al-Tanîmî. But, contrary to what might be supposed, the majority of recipes for rose water blended this flower with other medicinal herbs such as aloes, saffron, musk, camphor or even cloves. This essence could be obtained from the petals (ʿward ṣnārâ) of the fresh flower (ʿward ṣnârâ) or of the dried flower (ʿward yâhâs), when they had been ground and set to macerate in the cuscub (ṣârâ', i.e. lower part of the amelbic; then, by means of the alembic (al-ʿandūb, here the coil) and its heating, the rose water was collected by distillation (takīfīth). The procedure of sublimation (rudimentary distillation, tatīfīth) was also in use, according to Al-Nuwâyri.

As regards the medicinal properties, the sources attest that distilled rose water was used, internally or externally, in the treatment of migraines, insomnia and anxiety, but especially, in eye-washes, to combat ophthalmia (Maimonides, Ṣahrâ, 59; Ibn Sinâ, Kûdânî, i, 290-300). Mediaeval treatises on pharmacology and of ophthalmic medicine lay particular stress on the salutary properties of rose water for a wash for the treatment of numerous conditions of the eye, as well as for their prevention (yanma wârîb ʿl-ṣîm, writes Dâwûd al-Anṭâkî, Tadhkîrâ, i, 339). The emollient and stabilising properties of rose water, often combined, in this case, with egg white, were appreciated after operations for cataract (Ibn Kassân al-ʿAllâtî, Kûd al-Murshîd, 154; Hunayn b. ʿIshâk, K. al-ʿAlîyâ maktabâtī fi ʿl-ṣîm, 158, 160). Use of this essence as an eye-wash is still common today and traditionally-inclined doctors readily prescribe it (H. Ducros, Droguier, 66-7; G. Honda, Herb drugs, 19, 90; J. Bellakhdar, Médecine traditionnelle, 302). Besides the purely medical use of this commodity, a number of texts refer to its benefits in the sphere of cosmetics and aesthetics, especially as a hair rinse and as a cooling agent.

MADHHAB — MADINA

MADHHAB (A., pl. madhdhibi), inf. n. of dh-h-b, meaning "a way, course, mode, or manner, of acting or conduct or the like" (Lane, i, 983b); as a term of religion, philosophy, law, etc. "a doctrine, a tenet, an opinion with regard to a particular case"; and in law specifically, a technical term often translated as "school", "school of law", "school of jurisprudence". One of the four legal systems recognized as orthodox by Sunni Muslims, viz. the Hanafiyya, Malikiyya, Shafi’iyya and Hanbaliyya [see ASHARIYYA; ZAYDIYYA].

Schools of law and historical context: Re-examining the formation of the Hanbali madhhab, in ILS, vii (2000), 37-64 and W.B. Hallaq, From regional to personal schools of law? A revolution, in ILS, viii (2001), 1-26. For new secondary studies on the madhhab since the Bibl. given in ILS, see the important publication of Islamic Law and Society (ILS), i (1994); N. Calder, Studies in early Muslim jurisprudence, Oxford 1993; C. Melchert, The formation of the Sunni schools of law, the "ancient schools of law" and for further bibliography see the entry LAW in The Islamic school of law. The rise of humanism in classical Islam and the West, C. Melchert, in Leiden 1997; Nurit Tsafrir, in the forthcoming [2004] volume Reflections on the study of Islamic art, [see HISBA]), it comprised a Friday mosque, normally located at its centre; it had a market (suk [q.v.]), which was situated near the mosque and organised according to a strict professional specialisation; it was provided with public baths; and it was generally surrounded by rumparts. It is interesting to note that Arab researchers who are interested in the problem have generally adopted such a negative vision.

No further time will be wasted on the conditions under which a revision of this concept took place (the end of the colonial era, a more reasonable appreciation of the Arab cultural context and the "Turkish" period, and the discovery of Ottoman sources). A certain number of orientalists' pre-suppositions have been submitted to an excruciating revision, and a better acquaintance with later ancient cities has tempered any illusion about their supposed perfection (H. Kennedy, From Polis to Medina, in Past and Present [1985]); it was recognised that the variety of historical conditions should be taken into account (J.C.I. Garcia, Habitat medieval et histoire urbaine, in Palais et maisons du Caite, i, Paris 1982, as also the diversity of geographical and cultural conditions prevailing in the Muslim world (O. Grabar, Reflexions on the study of Islamic art, in Magamas, i [1983]). Attention was drawn to the fact that the absence of administration in the Muslim town was not as absolute as had been.
Aleppo. Normally one or more main streets cross it, principal economic, religious and cultural activities. Wholesale trade took place and the centre of it was a period. It is here that big international business and which are generally very specialised and assigned par-

mental characteristic of this system was a marked sep-

ally very stable, probably because it has a very strong

(such as the Kasaba in Cairo). This zone is gener-

others have been traced back to the Arab foundation

familial and the money changers (as 

precious metals (sdgha

which may be described as doubly concentric, an

large markets located in the area near the Kasaba. In Tunis,

in the area near to the large mosque; nearby can be found in particular the markets for

precious metals (sdgha) and the money changers (as noted by L. Massignon,

Enquete sur les corporations d‘ar-
tisans, in RAM, lviii [1924]). In Cairo the 62 cara-

vanserais where the coffee trade took place were

located in the area near the Kašaba. In Tunis, Damascus and Aleppo, the suks for cloth and spices

occupy a prominent place in the area immediately surrounding the mosque. From the centre onwards,

activities spread over an increasingly great distance as their order of importance diminished, and also accord-

ing to the growing incompetence of particular trades.

There could be found on the periphery of the town

those domestic activities that needed space (such as

the straw workers); those linked to the countryside

(grain markets in the large squares, rābba, hawma and

livestock markets); those that were embarrassing and

polluting (ovens of all sorts, abattoirs, tanneries). The

moving of such trades to a more remote location could, moreover, be an indication of urban develop-

ment, as was the case for the transfer of the tan-

neries in Aleppo (1570), Cairo (1600) and Tunis (1770)

(see Raymond, Le déplacement des tanneries, in REMM,

By contrast, the orientalist vision of a fundamen-
tally egalitarian, Muslim society was a factor in impos-
ing a scheme according to which the rich and poor

Nour, Introduction à l’histoire urbaine de la Syrie ottomane,

itself; it is open only toward the centre, where the

local inhabitants undertake their activities and towards

which the network of roads leads in a hierarchically

organised scheme (N. Messiri, The concept of the Hara,

in AI, xv [1979]): this consideration, as well as the

concern for security, justifies the statistical importance

of the cul-de-sacs in this area. There does not seem to

be any way of accounting for this homogeneity of

origin or activity of the inhabitants, except in those

cases where a district was inhabited by a community

of a distinct religious or ethnic minority.

These general characteristics lead to a structure

which may be described as doubly concentric, an

arrangement such as is well known in the field of

economic activities. Big international businesses and

the main activities of craftsmen are located in the

central regions, in the area near to the large mosque; nearby can be found in particular the markets for

precious metals (sdgha) and the money changers (as noted by L. Massignon,

Enquete sur les corporations d‘ar-
tisans, in RAM, lviii [1924]). In Cairo the 62 cara-

vanserais where the coffee trade took place were

located in the area near the Kašaba. In Tunis, Damascus and Aleppo, the suks for cloth and spices

occupy a prominent place in the area immediately surrounding the mosque. From the centre onwards,

activities spread over an increasingly great distance as their order of importance diminished, and also accord-

ing to the growing incompetence of particular trades.

There could be found on the periphery of the town

those domestic activities that needed space (such as

(see Raymond, Le déplacement des tanneries, in REMM,

h-lvi [1990]).

By contrast, the orientalist vision of a fundamen-
tally egalitarian, Muslim society was a factor in impos-
ing a scheme according to which the rich and poor

lived together in the same urban space, using a unique

type of habitat qualified as “Muslim”, although the

house with a central patio may be found in Classical

Antiquity, also, an idea strongly expressed by A. Abdel

Nour, Introduction à l’histoire urbaine de la Syrie ottomane,

Beirut 1982. Reality is quite different and corresponds logically to a strongly unequal socio-economic struc-
ture. Studies on this subject carried out in Cairo (Raymond, Artisans et commerçants, Damascus 1974),
Damascus (C. Establet and J.-P. Pascual, *Familles et fortunes à Damas, Damascus 1994*) and Algiers (T. Shuval, *La ville d'Alger*, Paris 1998) have shown a remarkable inequality in the range of wealth, insofar as this can be measured through the successions registered in the courts: fortunes are in a proportion of 1 : 10,000 in Cairo and 1 : 3,000 in Damascus around 1700 (Establet, Pascual and Raymond, *La mesure de l'inégalité sociale dans la société ottomane*, in JESHÖ, xxxvii [1994]). It is therefore not surprising in these conditions that in the large Arab towns the population would be distributed according to a rather rigorous "classification": the comfortable residences occupied the zone near the centre (where the *ulama* preferentially lived near to the mosque and traders near the *sūk*); then there were the middle-class areas with increasingly poor living conditions, until one reached the often wretched housing for the common people on the periphery and in the suburbs. This roughly concentric arrangement can be clearly deduced from studies on Tunis (J. Revault, *Palais et demeures à Tunis*, Paris 1967-78), Cairo (N. Hanna, *Habitar au Caire*, Cairo 1991) and Aleppo (J.-C. David, *Alep, dégénération et tentatives actuelles de réadaptation*, in BEO, xxviii [1973]).

However, the central patio house only appears to be "unitary", and great differences evidently exist with regard to dimensions, whether there are one or more storeys, interior amenities and decoration between houses with courtyards of the rich, middle-class and poor (for Tunis, see G. Cladel and P. Revault, * Medina, approche typologique*, Tunis 1970). Moreover, examples of "atypical" houses are plentiful. There is the collective accommodation of the caravanserai type, the collective accommodation of the *rabâ‘* type found in Cairo, vertical accommodation (Rwietta, Yemen), middle-class accommodation without a patio, poor community accommodation of the *hawâj* type, and cellular accommodation; mediaeval examples of this have been studied by Scanlon and Kubiak in their excavations of Fustat.

Naturally, no existing town corresponds to this model of a round town, arranged in concentric rings around the centre, with its economic and residential activities classified according to a decreasing order of importance. There are a number of factors (natural, historical, economic and social) that explain the irregularities that are noted. The decentralizing of al-Kahira, in the northeast quarter of ancient Cairo, is justified by natural considerations such as the presence of the Mukaṣṣam Hills, which prohibited expansion towards the east; also by historical reasons, such as the construction of the citadel by Saḥāḥ al-Dīn [q.v.], which favoured expansion towards the south, and the custom of dumping the rubbish from Cairo into the region today called "The Tells", which has restricted any expansion towards the northeast.

A similar analysis could be applied to Tunis, where the geography of the site dictates that expansion should develop only towards the north and the south, since expansion to the east and west is prevented by the two lagoons [q.t.t.s.]. It could be applied also to Aleppo, where for a long time the presence of the river Kuwayk has hindered any development of the city towards the west and the existence of cemeteries prevented expansion to the north and south. Mawāsīl had the appearance of a round town until economic reasons, like the special attraction of the markets because of the commercial potential of the river Tigris, and probably also political reasons (the research into the proximity of the citadel) brought about the displacement of the centre towards the river, far from the great mosque. On the other hand, the locations of the districts for the minorities and for the élite followed a particular logic, which often led to their remoteness from the centre.

There is indeed good reason for emphasising the importance of the segregative factors in the way the "traditional" town is organised. The inequalitarian nature of Muslim society explains this discrimination by the standard of wealth and the difference in living conditions between the centre and the periphery. In Cairo, however, collective rented accommodation, the *rabâ‘* [q.v.], allowed the middle classes to reside near the centre (Raymond, *Le rabâ‘, un habitat collectif au Caire*, in MUSJ, 1 [1948]). Districts for the élite were often located on the periphery, where the powerful could find the space they needed for their houses and a certain isolation from the rest of the population. The vigour with which the "national" and/or religious Muslim minority communities regrouped depended on the degree of their differences with regard to the rest of the population: in Cairo, the Maghribis and the Syrians regrouped less than the Turks; a Kurdish district had been in existence for a very long time in Damascus; while in Antioch, the Alawites were at one and the same time very much united and pushed far from the centre. The non-Muslim minority communities (the People of the Book subject to the status of ḥṣnni, "protected") were generally subjected from the point of view of space to strict segregation, expressing in terms of spatial location the discriminations and disabilities imposed upon them, despite the remarkable tolerance which these communities enjoyed under the Ottomans.

There were in all of the large towns Christian and Jewish districts, the location of which varied according to local conditions. The Jews of Tunis lived in a district (al-*ḥāna*) situated out of the way; those in Cairo were very close to the centre. The relative dispersion of the Copts in Cairo bore witness to the tolerance from which they benefited, but their districts were in the main situated to the west of Khalīfīd, in a region that was occupied by Muslims only at a fairly late date. The evolution of the Christian district of Aleppo is significant from this point of view. There, from the end of the 16th century, the community experienced a remarkable development, and this expansion was marked by an eastwards advance of the Christians in the northern suburb of the town which was progressively occupied by them. The gradual retreat of the Muslims towards the east, a community that was none the less dominant, certainly tends to confirm that the religious groups preferred, for reasons of convenience, a segregated, collective life rather than a confessional mix, even though such a mix could exist in limited zones (Raymond, *Une communauté en expansion. Les chrétiens d’Alep*, in *La ville arabe, Alep*, Damascus 1998).

The traditional Arab cities were therefore strongly structured, an observation that seems self-evident, for one can hardly imagine how an anarchical town without an administration would have been able to continue in existence and even experience a strong expansion in modern times. Investigation into the constitutive elements of this specific urban system, the identification of the para-administrative structures which allowed the conduct of urban affairs, and the recognition of the major role played by the waqf [q.v.] in urban organisation and development (R. Deguilem [ed.], *Le waqf dans l’espace islamique, Damascus 1995*) all lead to more positive conclusions than a discreditable comparison with other urban systems which were judged to have been more perfected.
However, an investigation such as this can be complete only when more can be learned about the origins of this urban system. Research on pre-Islamic towns in the Yemen (J.-F. Breton, *Le site et la ville de Shabwaa*, in *Arabian Cities* [1991]) and in Arabia (A. in al-Anṣaﬁ, *Qayrat al-Fālak*, London 1981) have brought important insights in this field. There is also a need for better information on the time of transition between the ancient period and the beginnings of the Islamic era (see the traces of Umayyad town planning discovered in the ancient sites of Palmyra and Beit Shean) and on the period of the foundation (for Fustat, see R.P. Gayraud, *Istabl ’Antar, in AI, xxv* [1991]).

The other crucial question is that of knowing to what extent the data on urban structure suggested by the examination of the remnants of ancient towns are equally valid for the “classical” Arab town, which we know from texts but which has to be the subject of reconstruction on the ground, since the urban tissue which subsists in the “madinas” of Arab towns dates only from the modern Ottoman period.

This story has remained in our mind, somewhat variably, into the 19th-century editions of the Nights (on the 18th-century manuscripts in which it appears, see the excellent discussion by D. Pinault, *Story-telling techniques in the Arabian Nights*, Leiden 1992, 150-80), is the most elaborate narrative about a city of copper, brass or bronze (on the proper meanings of nuḥḍa and sufr, and their indiscriminate use in non-scientific discourse, see M. Aga-Ogdu, *A brief note on Islamic terminology for bronze and brass*, in *JAOI*, lv (1944), 218-23). Fabulous stories about such a place, set in remote reaches of the Maghrib or al-Andalus, appear already in the 3rd/9th century. In Ibn Hibban’s (d. 238/853) *Kūtih al-Ṭeṭṣik* (ed. J. Aguadé, Madrid 1991, 144-5; authentic in the editor’s view), Mūṣā b. Nuṣayr’s (p. 325) adventures include finding jars in which Solomon imprisoned rebellious demons, and a copper fortress (*madina ‘alāyha bi’t min nuḥḍa* inhabited by *djimm*, which rendered those who enter it unaware of their condition. Al-Maṣ‘ūdī tells us (Marādīq, i, 369 = Ed. Pellat, i, 195-6, § 409) that beyond al-Sūq al-aqṣā (southeastern Morocco) one comes to the River of Sand, then to the Black Castle, and at length to the sandy desert in which the City of Brass (nuḥḍa) and Domes of Lead are found. He also refers to a book in wide circulation dealing with the wondrous things that Mūṣā b. Nuṣayr saw there. In another place (iv, 95 = § 1423) he refers to the same city (here as madinat al-sufr wa-suhv) in the Arabian Nights, Leiden 1992, 150-80), is the most elaborate narrative about a city of copper, brass or bronze (on the proper meanings of *nuḥḍa* and *suhv*), and their indiscriminate use in non-scientific discourse, see M. Aga-Ogdu, *A brief note on Islamic terminology for bronze and brass*, in *JAOI*, lv (1944), 218-23). Fabulous stories about such a place, set in remote reaches of the Maghrib or al-Andalus, appear already in the 3rd/9th century. In Ibn Hibban’s (d. 238/853) *Kūtih al-Ṭeṭṣik* (ed. J. escapes with the cry "O Prophet, I will not relapse!" Later it is explained that such bottles hold the rebel's spirit imprisoned by Solomon. The Nights story adds further Solomonistic motifs to the journey and the City itself (cf. A. Hamori, The art of medieval Arabic literature, Princeton 1974, 149-53), as well as some other new details. The essential innovation is that in the Nights, Mīnā ultimately enters the City, to find it full of lifeless people who look deceptively alive. One of the leaders of the expedition, Tālib b. Sahl, is killed by robots when he tries to despoil the dead queen of her jewels.

The motifs in these narratives have their now inexorably tangled roots in Islamic (and Jewish) legends about Solomon, the Alexander Romance, Iranian legend, and, of course, in marvelling at ancient structures laid in massive desolation. Indeed, the sources show disagreement as to whether the builder of the City was Alexander or Solomon. Bronze or iron walls and palaces are a feature of many texts from Antiquity, and often occur in Islamic legend and poetry (cf. M. Barry, Le pavillon des sept princesses, Paris 2000, 680-4, on Nizāmī's Tale of the red pavilion). The principal source of the mediaeval City of Brass may well be the Iranian legend of the Brazen Hold, a subterranean (but brilliant) place of evil, a深化地 (cf. J. Darmesteter, 1957, 149-53), as well as some other features. The essential innovation is that in the Nights, Mīnā ultimately enters the City, to find it full of dead people who look deceptively alive. One of the leaders of the expedition, Tālib b. Sahl, is killed by robots when he tries to despoil the dead queen of her jewels.

AL-MADDHUBIYYA [see AL-MADDHUB].

NADURA, MADURA, MADURAT, in medieval Islamic times a town, now the city of Madurai, in South India. It lies on the Vaidai river in lat. 9° 55′ N., long. 78° 07′ E. in the region known to the medieval Muslims as Ma’bar and to later European traders as Coromandel. For the historical geography and Islamic history of this coastal province, roughly extending from Cape Comorin northwards to Madras, see MA’BAR.

In 734/1334 Shāfīr Djalāl al-Dīn Aḥsān [q.v.], governor for the Dihlf Sultan Muhammad b. Tughluk [q.v.], denounced his allegiance, and he and some seven of his successors ruled over a short-lived Muslim sultanate before it was overthrown in ca. 779/1377 by the rising Hindu power of Vidjayanagara [q.v.], (see on the Madura sultanate, H.K. Sherwani and F. I. G. Khattak, The coinage of the Sultans for numismatics, E. Hultzsch, Haydarabad 1973, i, 57-73; C.E. Bosworth, The New Islamic dynasties, Edinburgh 1996, 318 no. 166; and for numismatics, E. Hultzsch, The coinage of the Sultans of Madura, in JRAS [1999], 667-85). Thereafter, Madura remained under Hindu control throughout the early 18th century, when the Nawāwbs of Arcot [q.v.] or Ārkāt extended their power over it, provoking Marāthā [q.v.] intervention and then that of the British in favour of the Nawāwbs. In 1801 the administration of the Madura region passed to the British East India Company as part of a treaty with the Nawāwbs of Arcot, and then in 1855, to complete British control.

The modern city of Madurai, a municipality since 1866, is the chef-lieu of a District of the same name. It lies in lat. 9° 20′ N., long. 78° 12′ E. at an elevation of 600 m/1,960 feet in an arid area whose average rainfall is 150 mm per annum. The region lacks running water, hence local people have always depended on pools and reservoirs for water, and the settlement grew up near the “white pool” (al-qubār al-abyd). Archaeological investigations nevertheless show that the area was once well populated, and a large number of what were Greek Orthodox churches and their monasteries have been found. The Roman emperor Trajan in A.D. 106 had built a road passing south of the site of Mafrak. In Umayyad times, there may have been a bātāsī [q.v. in Suppl.] there. The place had a certain importance in Islamic times from its position on the caravan and Pilgrimage route from Damascus to the Hijādž, and the sources explain its name by saying some pilgrims used to separate there from the main road and go their own way, or that friends from Damascus used to accompany pilgrims southwards but return home from Mafrak. But the place only assumed real importance when the Hijādž rail-way [q.v.] was built and a station opened there. After the Italian occupation of Libya, Libyan refugees, described as Maghāribi, settled there, and the city still has a quarter bearing their name. After 1918, it became an Arab Legion base. Economically, the place received an impetus in 1931 when the Iraq Petroleum Company established itself there, built an aircraft landing-ground and brought in labourers to construct a road to Baghdad and pipe lines and generators. A pipe line brought crude oil from Iraq via Mafrak to Haifa and the Mediterranean coast. The population further expanded with the settlement of Bedouin tribesmen, and the discovery of underground water supplies made a growth of industry as well as of population possible. In 1954 the region was promoted administratively from being a mutasarrifīyya to being a muḥāfazā or province. In 1994 the Al al-Bayt University was established in the town’s suburbs, bringing further expansion and development, and in 2003 the town had an estimated population of 67,400.

After a classic-type education in his native region of the Sūs, he left on the Pilgrimage in 1152/1739, en route following the courses of famous teachers, notably at Cairo; he gives details of these stays in his unpublished Rīhla hidjiyāyya. On his return to Morocco, he spent the remainder of his life in his ārām [q.v.] of Wādī Isf in the Sūs.

His main work, the Manākīb or Taḥkīk al-Hudīgī (2 vols. Casablanca 1936-9) groups together alphabetically the names of personalities who lived essentially in the 11th-12th/17th-18th centuries. These comprise above all the scholars and mystics of the Sūs, but also persons from the rest of Morocco, though only rarely from neighbouring lands. The work contains important notices on persons otherwise unknown, increasing its value for the historian. Al-Hudīgī also compiled several commentaries on manuals of hadīth and fikh, on poetry and on grammar; an important number of responses; and a larger-scale magīmīna in which he mentions his masters, in the Maghīb and the Maghīrīk, the licenses to teach which he himself received and which he issued to others, and a few other sparse personal details. Apart from the Manākīb mentioned above, the ensemble of his works, comprising some 20 titles, remains still unpublished. Al-Hudīgī’s intellectual progeny were numerous in the Sūs, but his fame as a Sūfī was equally great amongst his compatriots, with his asceticism and scrupulous orthodoxy impressing his contemporaries; numerous miracles and acts of intercession were attributed to him.

AL-MAHĐĪ LI-DĪN ALLĀH, AL-HUSAYN, Yama‘ī Zaydī Imām. He was born in 1738/1988-9 as one of the younger sons of Imām al-Mansūr bi’llāh [q.v.] and Kāsim b. ‘Ali al-Iyāni. In Safar 401/September-October 1010 he proclaimed his imāmat at Kā’a in al-Bawm and gained the support of tribes of Himyar, Hamdān and
MAHDI LI-DIN ALLAH, AL-HUSAYN — MAHKAMA 557

MAHİR, 'ALI, Egyptian jurist and politician. Born on 9 November 1881 in Cairo, the son of Muhammad Mähr Pasha, he was educated at the Khedivial Secondary School and the School of Law. 'Ali Mähr held several posts in the Egyptian court system in the years before and during World War I, and briefly served as Dean of the School of Law (1923-4).

He began his active political career during the Revolution of 1919 as one of the organisers of civil servant petitions and protest. Made a member of the Wald [q.v.] in November 1919, Mähr broke with the movement in March 1922, gravitating thereafter into the orbit of the Egyptian Palace. In 1922-3 he served on the commission which drafted the Egyptian Constitution of 1923. He sat briefly in the Chamber of Deputies (1925-6) and was a member of the Senate from 1930 to 1952. He held several ministerial posts in non-Wafdist governments in the 1920s and early 1930s.

Mähr’s influence in Egyptian politics was greatest in the later 1930s, when as Royal Chamberlain he helped articulate the strategy of consolidating royal autocracy around the person of the young King Fârûq [q.v. in Supp.]. Mähr twice served as Prime Minister at the close of the interwar era (January-May 1936 and August 1939-June 1940). He was forced out of office by the British in June 1940 because of presumed pro-Axis sentiments and was under house arrest from April 1942 until October 1944. He again headed a pro-Palace government in January-March 1952, after the king’s dismissal of a Wafdist minority. Partially because of his non-party status, Mähr was selected to serve as Prime Minister immediately after the military coup of July 1952. He was dismissed in September 1952 because of his opposition to agrarian reform, and died in Geneva on 24 August 1960.

MAHKAMA. 4. xi Algeria

When the French began their occupation of Algeria in 1830 there existed multiple legal traditions. The predominant Islamic tradition was the Mâlikî one which had taken root in North Africa a thousand years earlier.

In the 10th/11th century, Algeria’s Ottoman rulers had introduced the Hanafi tradition, which prevailed in the heartland of the empire. The Turkish military elite, and their offspring from marriages with local women, the Kâthâlis [see KUL-OGHLI], tended to follow the Hanafi tradition. Appeals, and particularly difficult cases, might be referred to a mäjlis or council of legal scholars.

In areas beyond firm Ottoman control, local traditions persisted. In the Mzâb [q.v.], oasis, some 300 km/250 miles south of Algiers, the Ibâdî legal tradition [see IBADIYYA] was applied. Immigrant Mzâbî merchants in cities along the coast applied this tradition in their own internal matters. In the densely populated, Tamazight-speaking Kabylia mountains, just to the south-east of Algiers, local customary law was applied.

Under French colonial rule, the mix of different
legal traditions was maintained, but Islamic and customary jurisdictions were gradually subordinated to the French courts. Areas of critical concern to the French, penal and commercial law, were annexed outright to the jurisdiction of French courts. Starting in the 1850s, the French sought to introduce their own principles of uniformity and hierarchy to the Muslim court system. In 1854, they instituted a standard, four-member magis as the court of appeal for all Islamic legal matters. The measure aroused opposition from settlers, and in some regions ran counter to traditions of negotiation over the size and composition of the maglis. The maglis was dismantled temporarily in 1859, revived in 1886, and permanently abolished in 1873, leaving French courts as the sole appeal jurisdiction.

In the 1850s and 1860s, the French promoted the reform of Islamic law by establishing a council of Muslim jurists to support change in areas of family law that either ran against humanitarian standards (the marriage of girls before they were capable of bearing children), or that seemed to run counter to scientific reason (the “sleeping baby” doctrine which held that a woman, abandoned for up to five years by her husband, might still produce his legitimate offspring). But as an autonomous institution at the national level, the council aroused the ire of French offspring. But as an autonomous institution at the national level, the council aroused the ire of French settlers, and was soon dismantled. The French introduced an examination system for the selection of judicial personnel, and eventually required that all those entering the judiciary be graduates of one of three government-run provincial madrasas.

The most prominent urban Muslim spokesmen of this period were associated with the judicial system. These include al-Makkī Ilīn Bādis, long-time kāfī of Constantine, and a forceful defender of the autonomy of the Muslim courts in the 1860s, and 'Abd al-Kādir al-Madżdżāwī, who made his career as a teacher in the law schools of Constantine and Algiers. Al-Madżdżāwī was one of the first exponents of Islamic modernism in Algeria.

Though penal matters were early on entrusted to the French courts, colonial authorities concluded that they were not adequate to the task of maintaining order and that a more expeditious and severe form of justice was required. Thus was born in the 1870s the Code de l'Indigénat, a penal code administered by local French authorities. It focused on punishing the least hint of rebellious attitude on the part of Algerian Muslim subjects and on suppressing any action that might be construed as a threat to French economic interests. It was this aspect of French judicial policy, not only oppressive but also humiliating, that drew the most fire from the emerging nationalist movement starting in the 1920s.

In the early 20th century, Algeria-based French jurists with knowledge of Islamic law sought to produce a code of Islamic family law, known after its principal author as the Code Morand. Though the proposed code was published, it was never given official status. This was the result of opposition from powerful rural Muslim leaders, on whom the French leaned more and more for political support in the 1920s.

While the Muslim courts and law schools produced some outstanding figures in the period from the 1850s to 1914, they fell into eclipse after that time. With their jurisdiction restricted, the Muslim courts offered little prospect of reward for ambitious young men. Thus Malek Bennabi entered the court system in the mid-1920s but soon became disaffected. By 1930 he was studying at a technical school in Paris, launching what would be a career as one of Algeria’s most original and prolific Islamic thinkers.

The turmoil of war in 1940-43 weakened French domination of Algeria. Two courses of action were possible for the French. One was to address Muslim grievances, including eliminating the Code de l'Indigénat. The other was severe repression, including the use of arbitrary detention, torture and execution. The period from 1943 to 1954 was one of competition between these tendencies. After the outbreak of revolution in November 1954, the repressive impulse quickly got the upper hand. It was this flouting of civilized legal standards, dramatically revealed by such incidents as the 1961 trial of Djamel Bouslama, that decisively eroded the French public’s will to hold onto Algeria. But this severe repression also contributed to the development of a culture of extra-legal violence in Algeria that would dramatically resurface in the 1990s.

With independence in 1962, the new Algerian government’s immediate concern was to restructure the court system so that it reflected the values of national unity and socialism. Toward this end, all Islamic and customary jurisdictions were absorbed into a unified national court system easily accessible to all citizens. The next task was codification of law, beginning with the internal colonial law, issued in 1966. An Economic Offences Ordinance, eventually incorporated into the code, upheld the socialist ideal of workers’ participation and provided severe penalties to managers of state-run enterprises who let their own interests come before selfless dedication to the state. It also provided for the monopoly of the state in control of foreign trade and arranging contracts for the services of foreign enterprises. The notion that private individuals might serve as intermediaries was anathema in the socialist doctrines that guided these policies.

Even in areas where Islamic law might have appeared to have a clear-cut application, it was subordinated to the practical economic interests of the state, especially when they coincided with popular habit. Thus gambling on the state-run football pool was declared legal, while betting privately on horse races in France was not. Algerians were allowed to consume beer and wine produced by state-run enterprises. By the mid-1970s, the sale of alcohol was restricted by local authorities in those areas where there was strong public opposition.

Algeria had been independent for nearly a decade when the government finally began to deal with legal issues that were mainly cultural in character. As part of a larger campaign of Arabisation [see TA'RĪB] launched by the Boumedienne régime in 1971, it was declared that court proceedings should be conducted in Arabic which, in practice, meant Algerian colloquial Arabic. By this time, the first law students whose training had been in Arabic graduated from the law school in Algiers. But as in many areas of the Algerian system, those with fluency in French, who tended to come from more affluent urban families, continued to have better opportunities. The question of opportunities in the court system for those proficient only in Arabic remained a smouldering issue that erupted in protests on Algerian campuses in 1976 in Constantine, and in 1980 in Algiers. The latter protests helped to launch an organised Islamist movement in Algeria, and resulted in President Chadeli’s seeking to accommodate Arabic student grievances by intensifying the Arabisation of the judicial system.

This point also marks a change in orientation toward the task of codifying family law. Throughout the mid-1970s, the ideology of Algeria had been one of Islamic
socialism, in which the interests of the state were paramount. Islam was given a place of honour, but this was still one subordinate to the state. This ideology was embedded in the National Charter, endorsed in a referendum in 1966. On family matters and the rights of women, the Charter pointed in a progressive direction, endorsing the principle of gender equality.

By the time intensive discussions of a family law code got under way in the early 1980s, the socialist emphasis of the charter was under attack from the emerging Islamist movement. But the debates were also shaped by economic questions, such as the acute shortage of urban housing—which made it costly to ensure the rights of a divorced wife—and the rapid growth in population. The Family Law Code finally passed in 1984 was a mix of conservative interpretations of Islamic law and the priorities of an embattled bureaucratic state facing the challenge of rapid population growth and high unemployment. Women were not protected against being married without their own freely-given consent, nor against being left economically helpless following divorce, nor against their husband deciding unilaterally to bring another wife into the household. Yet at the same time, in an effort to stem rapid population growth, the Code raised the minimum age of marriage to eighteen for women and twenty-one for men.

The late 1980s, rather like the 1940s, saw a relaxation of controls on political expression and the media. An important development in the legal realm was the founding of the Ligue Algérienne des Droits de l'Homme, founded in 1987 and given legal recognition in 1988. With the suppression of the Islamist opposition starting in 1992, many controls were restored and there was a resurgence of extra-legal violence on the part of both Islamic rebels and government forces. In dealing with the challenge of establishing clearly who was responsible for given violent incidents, the courts have often proved ineffective. Yet the glimmer of hope that they may occasionally rise to this challenge has sustained a small, dedicated group of Algerian human rights lawyers.

(A. Christelow)

4. xii. Tunisia

In the mid-19th century, Tunisia had a pluralist legal system. Although the respective spheres of competence and the various interrelations of the system's components were far from being clearly and strictly defined, the broad lines of its structures can be delineated as follows. The law of a religious legal sphere covering matters of personal status and, in most cases, civil law, sc. a *shari'i* jurisdiction for the Muslims (that of kāfīs, Mālikī or Hanafi according to the defendant's rite, sitting as sole judges, plus muḍjālis, plural jurisdictions made up of kāfīs and muḥāfiḍ) and a rabbinical jurisdiction for the Jews. Alongside these was a jurisdiction of the central administration and its local agents, the kāfīs [q.v.], who heard matters involving penal law and, in part, civil law. At the head of this structure was the Bey, the supreme authority according to the double principle of a delegated justice and control over the beylical state. Disputes involving the representatives and subjects of foreign powers were the province of the consular courts [see *mirāz*āt].

In 1857 the Fundamental Pact (*'ahd al-amān*), which proclaimed the equality of all subjects before the law, began a slow process of legal reform. Hence in 1861 there were promulgated at the same time a Constitution and a code of criminal and customary law (*kā'īn al-dinayat wa l-'ahkām al-urfayn*). The Constitution set up a hierarchic schema of new tribunals which were to be created within the entirety of the Regency. A tribunal for commercial cases organised under a code of commercial law had to be set up. However, although this last was actually promulgated on 1 April 1864, it could not be put into effect because of the outbreak of the rebellion in that year, which brought in its train the abrogation of the Constitution and the code of criminal and customary law. The idea of legal reform and codification was taken up again in the 1870s under the reformist Prime Minister Youcef Bedjaoui (1822-90 [q.v.]), but without his efforts being fully accomplished.

In short, the modifications in the legal system attempted before the installation of the Protectorate were either of short duration or only touching upon the formal aspects of the existing legal jurisdictions. There was on one hand a reorganisation of the *shari'i* jurisdiction at Tunis in 1856 and then in the interior of the Regency in 1876. Also, there were measures undertaken, notably between 1876 and 1879, to define more clearly the jurisdictions reserved to the central administration and its local representatives.

The installation of the French Protectorate in 1881 was to bring profound changes in the Tunisian legal system. By the Convention of La Marsa (1883), the Tunisian state undertook to "proceed to administrative, judicial and financial reforms as judged useful by the French government". In practice, French control over the beylical state was to be assured by the bias of the Resident-General as well as by the presence of French officials at all levels of the administration.

In the first place, following the doctrine of "double sovereignty", the protecting power undertook to install for its own nationals a French legal structure (law of 18 April 1883), comprising justices of the peace and courts of first instance; not till 1941 was an appeal court created. Furthermore, the French legal system thus installed was to replace, until 1884, the various consular jurisdictions of the European Powers. With the land law of 1885 there was set up a mixed court for land matters, an original jurisdiction (inspired by the Australian model) aimed at promoting the registration of land and buildings. This court, made up of a French president, with one-half French judges and the other half Tunisian judges, was at the same time to reduce the sphere of the *shari'i* courts to embrace merely cases involving non-registered landed property.

Regarding the reform of justice dependent on the authority of the Tunisian state, apart from the regulation of the jurisdiction dependent on the central administration (the so-called *uçuzâ* or *waqân*, whose competence was extended beyond the criminal law to all civil and commercial cases between Tunisians (except for personal status and matters connected with it), this was not really tackled till 1896, when an office
July 1957, Tunisia in 1959 acquired a Constitution based at one and the same time on French and on Muslim law and which were intended to become the laws applicable by the courts of common law. Codes of obligations and contracts (1906), of civil procedure (1910), of criminal law (1913), as well as for criminal procedure (1921) were successively promulgated in Tunis. Ouzara, Ouzara. It was only much later that the şariʿa courts were remodelled. However, because of the reforms already in operation, their spheres of competence became reduced to cases of personal status and inheritance as well as of the education system of the Zaytuna man [g.v.].

Regarding the code of personal status, largely drawn from Islamic law, the legislating power showed a tendency amongst judges to refer, in certain cases, to non-codified Islamic law. The demands by certain reformist circles seeking a more radical reform of the judicature. This law fixed the Tunisian judicial hierarchy as follows: county courts, courts of first instance, a court for land questions, appeal courts and a supreme appeal court based at Tunis. Furthermore, alongside a High Court for cases of high treason, the 1959 Constitution equally made provision for an administrative court; this was effectively set up in 1974 and considerably reorganised in 1996.

In regard to the law applied by its courts, the Tunisian state undertook, from the time of independence onwards, to set up a new structure of national codifications. From among the legal texts dating from the colonial period, only the codes for obligations and contracts and the criminal code remained essentially in force. It is appropriate to mention that although the first article of the 1959 Tunisian Constitution made Islam the state religion, Islamic law does not appear amongst the formal sources of Tunisian law. Regarding the code of personal status, largely drawn from Islamic law, the legislating power showed a remarkable will for innovation, notably in abolishing polygamy, introducing judicial divorce and authorising adoption. However, an analysis of judicial practice in Tunisia has been able to show that there is a tendency amongst judges to refer, in certain cases, to non-codified Islamic law.

5. The Indo-Pakistan subcontinent After a century and a half of trade, the last few decades of which were characterised by increasing involvement in political intrigue and military adventurism—inspired initially by rivalry with European competitors (most particularly the French, with whom England was twice at war in the mid-18th century)—the East India Company emerged as a major political and military power in the subcontinent in the context of the disintegration of the Mughal empire into a collection of feuding regional powers. After the battle of Buxar (1764), which pitted the Company troops against the remnants of the Mughal army, the Company was in a position to conclude a treaty (farman [q.v.] with the titular head of the Mughal empire, Ṣāḥib al-ʿAẓām II [q.v.], who in 1765 ceded to the Company in perpetuity the divāni (civil and revenue administration) of three eastern provinces—Bengal, Bihar and Orissa—in exchange for an annual tribute of 460,000 (payment of which only continued until 1773). The Company thus became ruler of lands and peoples, ostensibly in the name of the emperor.

The modern period of judicial administration in South Asia commenced with the establishment by...
Warren Hastings (Governor of Bengal, 1772-3; Governor-General of India, 1773-85) of courts serving the indigenous population of these three provinces; and the virtually simultaneous establishment by the Crown of a Supreme Court in Calcutta. Hastings' courts in the mufussil (the territories outside the seat of the Presidency, Ar. mafjussal [q.v. in Suppl.] "separated") were creations of the East India Company. Hastings' plan—frequently revised during his own term, further modified by Lord Cornwallis (Governor-General, 1786-93), and cast by the latter in the Code of 1793—set the pattern for judicial administration in the territories subsequently acquired. Hastings proceeded to establish a Diwan 'Adlat (civil court) and a Fawqādārī 'Adlat (criminal court) in each revenue district or Collectorship (the number of these courts was subsequently increased and their geographical jurisdiction decreased; courts subordinate to the Diwān 'Adlat were also subsequently established). The Collector himself initially presided over the civil court; later judges were appointed from among the Company's covenanted civil servants. Indian Law Officers (Hindu pandits and Muslim maulvis) were appointed to each Diwan 'Adlat to expound the Hindu or Muslim law applicable to the case. The District Kādī and Mufti presided over the Fawqādarī 'Adlat, in which Muslim criminal law continued to be administered. Appeals from the Diwan 'Adlats lay to the Sadr Diwān 'Adlat (chief civil court, initially comprised of the Governor-General and members of his Council), and, after 1781, to the King in Council. Appeals from the Fawqādarī 'Adlats lay to the Sadr Nizāmat 'Adlat (chief criminal court, initially headed by an appointee of the Nizām). The early bifurcation between civil and criminal jurisdiction derived from the terms of the 1765 grant, under which criminal jurisdiction remained with the representative of the Mughal emperor. In 1790 criminal justice was (unilaterally) brought under the direct control of the Company; the Fawqādarī 'Adlats were abolished and replaced by criminal courts, headed by covenanted servants of the Company, assisted by kādīs and muftis. Although some of the rules of Muslim criminal law and evidence were gradually modified by government regulations, it was not until the Penal Code of 1860, the Code of Criminal Procedure, 1861, and the Evidence Act, 1872, that Muslim law in these respects was completely superseded. After 1790 the Sadr Nizāmat 'Adlat was comprised of the Governor-General and members of his Council, assisted by the Chief Kādī and two muftis. In 1801 the Governor-General and his Council members were relieved of judicial responsibilities in both Sadr 'Adlats; the two appellate courts were united in a single Sadr 'Adlat with civil and criminal sides, presided over by judges appointed from the ranks of the Company's covenanted servants.

In the Company settlements themselves, there had been courts established by royal charter since the Mayors' Courts of 1727. (Prior to this, what justice there was in the Company towns and factories was a very rough and ready, and often brutal, affair.) The Mayor's Court was a civil court of record, with compulsory jurisdiction only over Europeans to whom they could apply English law, final appeal lay to the King in Council. (Although not compulsorily subject to the court, indigenous inhabitants might agree to such disposal of the dispute, in which case it would be adjudicated according to English law.) The Mayor's Court in Calcutta (the English town that had grown up around the Company's factory) was replaced by a Supreme Court, established by Royal Charter (1774) and Act of Parliament (1773, as amended in 1781 and 1784). The Supreme Court (after its jurisdiction had been more carefully defined by the latter acts) possessed civil jurisdiction over all British-born subjects and their descendants residing in the Bengal Presidency, and all persons residing in Calcutta, including its Indian inhabitants.

In Madras and Bombay, the Mayors' Courts were superseded in 1798 by Recorders' Courts, which possessed powers similar to those of the Supreme Court in Calcutta (and were subject to similar restrictions). The Recorder's Courts were upgraded to Supreme Courts in 1802 (Madras) and 1824 (Bombay). As these two Presidencies acquired mufussil territories—Bombay following the third Marāthā War (1818) [see Marāthās]; Madras with the annexation of approximately half of Mysore after the defeat of Tipū Sultan [q.v.] in 1799, followed by the annexation of the Carnatic—the establishment of mofussil courts in these territories followed the pattern of Hastings' plan as refined and codified by Cornwallis in 1793.

Bombay was in many ways unique. The island was ceded to the Crown by the Portuguese in 1661 and leased to the Company in 1668 on payment of £10 a year; the rights of the Company over Bombay thus derived from the British Crown, not from the Mughal sovereign, or regional potentate, or military conquest. Further, the island of Bombay had, previous to being handed over to the English, been under Portuguese rule for over a century, and the territory conquered in 1818, was taken over not from Muslim but from Hindu rule; consequently, Muslim law did not enjoy official status in Bombay (the pre-eminence that it did in Bengal and Madras. The Bombay 'Adlat system underwent several changes and refinements until 1827, when all previous Regulations were repealed and replaced with a series of Regulations which came to be termed the Elphinston Code. One of the interesting things contained in Elphinston's Regulations was a Criminal Code for the Presidency, which was only superseded by the Indian Penal Code of 1860.

The dual system of courts—Royal Courts, whose judges were appointed by the Crown, in the Presidency headquarters (Calcutta, Bombay and Madras); and Company Courts, created by the East India Company and staffed by its officers, in the mofussil—persisted until, in the aftermath of the 1857-8 uprising, the Crown assumed all rights that the East India Company had acquired and exercised on Indian soil. One consequence was the integration of the Company and Crown courts and rationalisation of the judicial structure. In each presidency, the Sadr (appellate) Company Court was amalgamated with the Supreme Court to constitute a High Court.

Significantly, under the British—Company and Crown—there were not in South Asia separate religious courts for the religiously-derived personal laws; personal law of both Muslims and Hindus was administered as an integral part of their civil jurisdiction by both the mofussil civil courts and the Supreme Courts and, subsequently, the High Courts. Whether the litigation came before the Supreme Courts or the Company mofussil courts, the indigenous peoples of South Asia were guaranteed the application of their own system of personal law in a wide variety of civil matters. The phraseology of Hastings' formulation of 1772 and the Regulation of 1780 preserved to Muslims in the mofussil "the laws of the Koran" when the litigation concerned "inheritance, marriage, caste, and other religious usages and institutions". (The wording used in the Act defining the jurisdiction of the
Supreme Court was different but of similar import. A Regulation of 1871 added "succession" to the topics concerning which the mafussal courts were to apply the personal law. The Regulation further provided that in the absence of statutory law, and in situations not covered by the earlier Regulation, the mafussal courts were to have recourse to "justice, equity and good conscience", with the result that the personal (Hindu or Muslim) law was often applied in matters other than those specifically enumerated. In essence, "justice, equity and good conscience" was used in numerous situations to render applicable the relevant personal law as the "proper law" of the contract or transaction; reference was to the law which the parties could be presumed to have expected would apply to the transaction. On the other hand, statutes took precedence over, and could and did oust, Islamic law. By the end of the 19th century, applicability of Muslim law was confined essentially to family law, inheritance and certain transfers of property. Even in these areas, the secular law made inroads; e.g. a Muslim father could be compelled by the magistrate to maintain his illegitimate child (a provision repealed in West Pakistan in 1963). The apostate from Islam (see Murtaq) was not deprived of his share as an heir intestate (a provision repealed in 1981); the apostate from Islam (see Murtadd) was not appointed to every civil court, original and appellate. These officers functioned, not as judges, but as resource personnel, to whom specific questions of law were submitted to Muslim Law Officers by judges of the courts (and the barrister-judges could be compelled by the magistrate to maintain his illegitimate child (a provision repealed in Pakistan in 1981); the apostate from Islam (see Murtaq) was not deprived of his share as an heir intestate (a provision repealed in West Pakistan in 1963)). The apostate from Islam (see Murtadd) was not appointed to every civil court, original and appellate. These officers functioned, not as judges, but as resource personnel, to whom specific questions of law were submitted to Muslim Law Officers by judges of the courts (and the barrister-judges could be compelled by the magistrate to maintain his illegitimate child (a provision repealed in West Pakistan in 1963)).

Because the company officials appointed to judicial duties in the mafussal courts (and the barrister-judges of the Supreme Court) were not, at least initially, knowledgeable in the indigenous legal lore, Muslim Law Officers (mawluqis) and Hindu Law Officers (pun-dits) were appointed to every civil court, original and appellate. These officers functioned, not as judges, but as resource personnel, to whom specific questions of law might be referred by the judge during the course of the proceedings before him. In order to displace the monopoly of specialised knowledge possessed by the Law Officers, work was undertaken to make authoritative source material directly available to lawyers and judges in English. The first Muslim text thus treated was the Hidaya, a 12th-century text by Burhan al-Din al-Marghinani (q.v.), translated by Charles Hamilton in 1791. This was followed in 1792 by William Jones' translation of the Shafiyya, together with an abstract of the Sharifyya; and by Neil Baillie's volumes on Muhammadan law of inheritance (1832) and Muhammadan law of sale (1850), the former an abridgement of the Sarhadia and Sharifyya, and the latter based on relevant chapters of the Fatavad-i-Alamgiri (see AL-FATÁWÁ AL-ALAMGIRIYYA). In 1865 appeared Neil Baillie's translation and abridgement of those portions of the Fatavad-i-Alamgiri likely to be relevant to litigation in India. This was followed in 1874 by Baillie's translation of the major Ijma Aliar Sharf-i text, the Sharf-i-Aslām. A collection of the questions submitted to Muslim Law Officers by judges of the Company Courts, together with their responses, was published by William Macnaghten in 1825 as the second part of his Principles and precedents of Muhammadan law. And toward the end of the century, Mahomed Yussof, in his Tagore Law Lectures, 1891-2, translated the portions of the Fatavad-i-Kadi Khan (see KADI KHAN) dealing with marriage and divorce. It was not until 1914 that E.C. Howard's English translation of the Sharf-i text Minhaj us-tahihin, prepared for administrators and judges in Southeast Asia, became available. Textbooks and compilations by Indian scholars and scholars of Indian law also appeared. Ameer Ali's two volume work was first published in 1880 and 1884; Roland Knyvet Wilson's Introduction and Digest in 1894 and 1895, respectively. The first edition of Dinnah Faratiuni Mulla's Principles of Muhammadan law was dated 1906; the first edition of Tyabji's learned tome, 1913. Meanwhile, systematic reporting of legal decisions of the High Courts, Judicial Commissioners' Courts and Chief Courts began in 1876 (under a statute of the previous year). The availability of published decisions enhanced the precedent: a decision on a point of law by the Privy Council was binding on all British Indian Courts; and a decision of the High Court was binding on the subordinate Presidency Courts.

As part of the judicial reorganisation in the 1860s, the posts of Hindu and Muslim Law Officers were abolished; judges themselves, assisted by the lawyers appearing before them, were deemed capable of dealing with questions of Muslim and Hindu law, which continued to be dealt with as integral components of the civil jurisdiction. By the turn of the 20th century, virtually every superior provincial court of a province with a significant Muslim population had a Muslim among its sitting judges; the first two such High Court appointments were those of Justice Mahmood (son of Sir Syed Ahmed Khan [see AHMAD KHAN]) to the Allahabad High Court in 1887, and Ameer Ali (see Ameer Ali) appointed to the Calcutta High Court in 1890. From 1901 a series of distinguished Indian jurists sat on the Judicial Committee of the Privy Council (the ultimate court of appeal prior to independence and the establishment of national Supreme Courts); Ameer Ali, the first (and the only Muslim) Indian Privy Councillor, served from 1909 until his death in 1928.

Extremely significant is the fact that to this date Muslim law remains virtually entirely uncodified; this contrasts not only with the massive codification of Hindu law undertaken by India in the first decade of Independence, but also with the general trend in the Muslim world. (Major exceptions are the Dissolution of Muslim Marriages Act, 1939; the Pakistan Muslim Family Laws Ordinance, 1961; and the Indian Muslim Women [Protection of Rights on Divorce] Act, 1986.) Being uncoded, Muslim law is amenable to interpretation and/or reinterpretation by the court. This occurred during the British period, as in decisions holding that the post-pubescent Sha'fi'i girl could not be contracted in marriage without her permission; and that the pre-pubescent Hanafi girl contracted in marriage as a minor by a guardian other than father or paternal grandfather could extra-judicially renounce the marriage on attainment of puberty. (Incidentally, it was Ameer Ali who had proposed, in his Muhomedan law, the interpretation of Shaf'i and Maliki law that was adopted by the courts in the former instance; and it was the same individual, in his capacity of judge of the Calcutta High Court, who delivered the decision establishing the point in the latter instance.) In the first decades of Independence, the new State of Pakistan appeared committed to a policy of ishtihad, as exemplified by the dramatic decisions, endorsed by the Supreme Court of Pakistan, holding that, within the Hanafi madhhab, wives are legally entitled to recover arrears of maintenance (1975); and that a Muslim woman is entitled to a judicial dissolution of her marriage (in spite of her husband's objection) merely on the ground that she finds the situation intolerable, provided that she is willing to return or forego her mahr (q.v.) and other "benefits" she may have received from her husband (1967). Although the documents of the late 18th century reflect an assumption that "the laws of the Koran" constitute a single entity to which all Muslims owe
allegiance, Muslim law is not a unified entity even at the textual level. The overwhelming proportion of South Asian Muslims are Ḥanafīs Sunnīs, but on the southwestern coast of the subcontinent another Sunni school, the Ḡanīfī, is locally significant. More important than in British India was Shi’ism (brought to the subcontinent by the Persians), which had a considerable following, particularly in Oudh (annexed by the British in 1856 [see Ādāb]). In spite of fact that since the mid-18th century the Nawāb Wāzīr of Oudh had been a Shi’ī, Sunnī law, as the law of the Mughal empire, applied in the territory until 1847, when (three decades after the Oudh dynasty had assumed the title of "King," and nine years prior to the annexation of Oudh by the British) a Shi’ī judge was appointed, and (Īthnā ‘Ashārī) Shi’ī law began to be applied to Shi’ī within the kingdom. Ironically, Shi’ī law was recognised by the Privy Council as the law applicable to Shi’ī in British India six years before it was recognised by the indigenous government of the Oudh Kingdom; and by the Bengal Sub-Sadr ‘Addālat more than three decades before the matter reached the Privy Council. However, given the numerical prominence of the Ḥanafīs, the assumption of the South Asian courts is that a person, if a Muslim, is a Ḥanafī Sunnī; consequently, the term "Muslim law" or "Islamic law" as used in judicial decisions is usually synonymous with "Hanafī Sunnī law". The burden is on the person claiming to be a follower of another Muslim school or sect to plead and establish this fact. Similarly, once it is established that a party is a Shi’ī, the assumption is that he is a member of the major sect, Īthnā ‘Ashārī. Information on the law of the minority Shi’ī sect, the Isma’īls, is much less readily available, although a significant difference that was of some importance during the British period (and overlooked by the Privy Council in an 1890 case) is that the Isma’īls do not discriminate against the childless widow in matters of inheritance in the same way that Īthnā ‘Ashārīs do. It was not until 1969 that Professor A.A.A. Fyzyee published his Compendium of Fatimid Law. The terms "Shi’ī" and "Shi’ī law" as used in South Asian judicial decisions synonymous with "Īthnā ‘Ashārī" and "Īthnā ‘Ashārī law".

Textual Muslim law, of course, does not recognise customs in derogation of the law; but rural agrarian communities, particularly in North India, did. Customary law, applicable to Muslim (and Hindu) agrarian families in various parts of the north-west (particularly the Punjab), the heartland of customary law and a province which was under Sikh, not Muslim, rule before conquered by the British in 1849) was essentially a retraction and continuation of their pre-existing practices in "secular" matters, particularly succession and dealings with property, convertible to Islam (and their descendants); even those Muslim tribes—e.g. Pathans—who claimed to be descended from Muslim invaders had long ago fallen into line with the local practices. At the same time, these local practices were not consistent with Hindu law (and may well have predated the formal statement of Mirakshārī Hindu Law). Most of these people never had observed or been subject to Muslim law (or orthodox Hindu law), knew little if anything about it, were quite happy with the way things had always been managed in regard to succession and property and saw no reason to change—at least until well into the 20th century, when religious revivalists and political leaders trying to define a Muslim constituency and organise a Muslim political movement attempted to convince them to change, and eventually legislation in the new Muslim state forced them to submit to a new legal order.

Also problematic were communities whose ancestors had converted from Hinduism to Islam but retained many of their Hindu practices. Both Hinduism and Islam purport to govern more than an individual's religious devotion; both lay down rules concerning marriage, divorce, and other domestic concerns, as well as more "secular" matters, most importantly dealings with property and inter-generational transmission of property. Individuals and communities who converted to the faith of Islam from Hinduism not infrequently continued Hindu patterns of property holding and transmission; matters which may have struck them as having little to do with religious profession, and matters which the ancient practice managed entirely to their satisfaction. Such a course was undoubtedly facilitated by the fact that Stīls, who were responsible for much conversion to Islam in South Asia, were not particularly concerned with mundane things like worldly property and its inter-generational transmission. Prominent examples of groups which adopted Islam as a religion but continued their former Hindu practices were two commercial groups from western India, the Khođas and the Menons; both were judicially held amenable to Hindu law in regard to matters of inheritance in the mid-19th century. Further, an individual family (perhaps connected with or seeking favour from the Mughal court) might convert for political reasons, while at the same time continuing their previous practices concerning property dealing and succession. Other individuals or groups, most prominently exemplified by the Hindustani Kayasthas, who performed important roles in the Mughal administration, adopted many outward Muslim observances and customs (e.g. of dress, language, literature, and even burial) without converting; they remained Hindus by religion and followed Hindu law (although deprecitated by their co-religionists as "half-Muslims").

Distinct both from those subject to agrarian custom in North India and from groups or families who converted from Hinduism without changing their practices (particularly concerning inheritance and property dealings) to conform to Muslim law were those aristocratic Muslim landowning families who, although unambiguously subject to Muslim law, observed "family customs" designed to keep the landed estate intact and/or control its devolution (e.g. primogeniture, exclusion of female heirs, appointment of an heir).

As the importance of "custom"—or behaviour and practices inconsistent with the religious affiliation of the parties—became more apparent, it was explicitly recognised in statutes governing the subsequently established courts, and in practice by all the courts. The burden of proving a custom in derogation of the (otherwise applicable) personal law was on the person pleading custom. To be accepted as a rule of law, a custom had to be ancient, certain, reasonable, and neither repugnant to morality or public policy nor contrary to any statutory law. It was usually sufficient to establish that the custom had been regularly and consistently observed in the family, tribe or locality for at least fifty years. Once judicially recognised, custom could not be altered by anything short of legislation.

One of the indirect (and doubtless unintended) effects of British policy in India was that anomalous communities and families became more aware of and conscious of their status and often moved to identify
more closely with one or other orthodox tradition. The pressure to identify with one of the two great communities became more intense with the advent of rudimentary democratic institutions and the prospect of eventual self-government in which numbers would count. Both sides launched missionary activities; in addition to seeking fresh converts, the Muslim tabligh movement [see TĀBLĪGH ĪSMA‘ĪL] attempted to complete the conversion process in the case of anomalous communities and to induce groups following practices and customs inconsistent with the true faith to renounce such customs; the Hindu shuddha movement (launched by the reformist Arya Samaj) sought to "reclaim" descendants of former converts to Islam to the true faith of their more ancient ancestors.

In 1937, Muslim-political leaders managed to secure enactment of the Muslim Personal Law (Shariat) Application Act, which substituted Muslim law as the rule of decision in preference to custom previously applicable, either by virtue of regulations specifically recognising custom and usage as the governing rule, or by virtue of the "justice, equity, and good conscience" clause. At the same time, the terms of this very statute demonstrate the importance of custom to a particular class of Muslims: the Muslim families of "science" clause. At the same time, the terms of this act, however, the rural landlords were totally guaranteed and Muslim law largely negated. It is only after the Indian independence that the Muslim League, insisted on being able to retain the control of the inter-generation transmission of family property—a right which "family custom" often guaranteed and Muslim law largely negated. It was at the insistence of this particular class that the Shariat Application Act, 1937, did not compulsorily cover either adoption (i.e. appointment of an heir) or testamentary disposition of property. By a fortuitous circumstance, however, the rural landlords were totally exempt from the terms of the Act as far as their agricultural land was concerned. The Government of India Act, 1919, had come into effect before the Bill which became the Act of 1937 was actually passed. Under the scheme of the Government of India Act, succession to agricultural land was a topic exclusively within the legislative competence of the provinces and the Central Legislature could not deal with it. (The 1937 statute did, of course, cover non-agriculture property and e.g. brought the urban property of the Khudai and Menons under the rule of Muslim law, as far as intestate succession was concerned.)

(West) Pakistan acted shortly after independence totally to negate custom as a rule of law applicable to Muslims, affirming in its stead Muslim law (of the appropriate sect). Several Indian states have passed supplementary legislation amending the 1937 Act to cover succession to agricultural land. The scope for the application of rules of custom to Muslims has considerably decreased in South Asia and has been totally ousted in Pakistan.

The new States of the subcontinent inherited, and very largely retained, the judicial structure as developed during the British period (with obvious exceptions; e.g., the ultimate court of appeal is no longer the Privy Council and High Court judges are not appointed by London), as well as procedural law and the major statutes enacted during the previous era. In every province a High Court sits at the apex of a hierarchy of subordinate civil and criminal courts, with ultimate appeal to the national Supreme Court.

The most important post-Independence administrative development in regard to disputes to which Muslim law is applicable has been the introduction in each of the three countries of South Asia of special Family Courts with exclusive jurisdiction in regard to certain areas of matrimonial and family litigation. Pakistan took the lead with the (West Pakistan) Family Courts Act, 1964; India followed two decades later, 1984; and Bangladesh in 1985. Simplified and less formal procedures, designed to expedite the litigation, govern procedure in the Family Courts particularly in Pakistan and Bangladesh; and the rigorous requirements of the Evidence Act, 1908, have been mitigated in family litigation in India and Bangladesh.

Although the Bangladesh statute itself declared all Munsif’s Courts (civil courts subordinate to the District Court) to be Family Courts and all Munsifs to be Family Court Judges, and Pakistan had within two years appointed judges to function as Family Courts throughout the country, the Indian legislation only mandated Family Courts for urban areas of population one million or more, and implementation has proceeded slowly.

In Pakistan, General Zia-ul-Haq [see ZIYA’ AL-HAKK], having seized power in July 1977 with the promise of elections within 90 days, justified holding power for eleven years (until his mysterious death in 1988) in the name of "Islamisation". His patronage of the Islamists—to whom he increasingly looked as providing some sort of "consistency" and creating the appearance of at least some popular support for his government, and whom he brought into a political prominence they had not previously enjoyed—received a tremendous international boost with the Soviet invasion of Afghanistan (1979) and United States' support of the "mujahideen" opposition. Money and arms poured into the region; thousands of madrasas, many of them training schools for Islamic warriors, sprang up in Pakistan. The Russians withdrew a decade later; the U.S. lost interest; and Afghanistan descended into civil war, which Pakistan thought it could control to its advantage.

The Zia era left his successors with a heavy legacy, including the continuing fall-out of involvement in Afghanistan in the form of weapons, drugs, refugees and Islamic militants. Institutionally, the Zia legacy is represented by the Shariat Courts, created in 1978. These special courts possess jurisdiction to examine the Islamic vires of "any law", and if such law is found contrary to the "Injunctions of Islam, as laid down in the Holy Quran and the Sunnah of the Holy Prophet," to strike it from the statute book. Most recently this jurisdiction has been exercised (23 December 1999) to order that interest in all forms be abolished in Pakistan by June 2001; and (5 January 2000) to strike down many of the reforms achieved four decades previously by the Muslim Family Laws Ordinance 1961. (The Shariat Bench of the Supreme Court, affirming the 1991 decision of the Federal Shariat Court on nībā’ set 30 June 2001 as the deadline for the conversion to a nībā’-free system. On 15 June 2001, the same court extended the deadline by twelve months. The decision of the Federal Shariat Court on the various provisions of the Muslim Family Laws Ordinance has been stayed pending an appeal to the Shariat Bench of the Supreme Court, which may not be heard for some time, and which will probably not fully endorse the position of the Federal Shariat Court. For a concise introduction to and assessment of the nībā’ decision, see the booklet Meaning toward an Islamic Financial Regime in Pakistan by P. Hassan and A. Azfar, available at www.law.harvard.edu/programs/isl/publications.html). In terms of substantive law, Zia’s program of "Islamisation" resulted in the promulgation in 1979 of the four nībā’ ordinances (includ-
ing the draconian Zind Ordinance), introducing into Pakistan law the criminal offences (illicit intercourse, false imputation of unchastity, theft and consumption of alcohol), together with their respective punishments, defined in the qur'a, imposition (1980) of zail and 'nabhi anil munkar pronouncements (even the triple pronouncement) revocable; and denies legal effectiveness to any talak until a period of three months had passed following notification of the talak to a local official, who is to use the intervening time to attempt reconciliation—had no echoes in the neighbour to the south. The Congress party, which ruled India without interruption for its first thirty years (including seventeen years under Jawaharlal Nehru and eleven years under his daughter Indira Gandhi), was committed to secularism and democracy but was also pleased to have the Muslim "vote bank" securely on its side. When Mrs. Gandhi was assassinated in 1984, the Congressmand passed to her son Rajiv Gandhi. It was on his watch (1986) that the (misnamed) Muslim Women (Protection of Rights on Divorce) Act was rushed through Parliament, over objections of his own Congress parliamentarians and by virtue of a three-line whip. The Act of 1986 reversed the (1985) Shab Bano judgment and deprived destitute divorced Muslim women (simply on the basis of their religious identity) of the minimal succour that section 125 of the (secular) Criminal Procedure Code, 1974, afforded to all such women. A harsh blow was struck against secularism (and against women). The dynastic link was broken with Rajiv's assassination in 1991 and—ruderless, faction-ridden, and tainted with scandal—the Congress party lost much of its appeal. The gathering clouds of Hindu activism, demanding an end to a policy of appeasement of minorities and emphatic affirmation of the Hindu-ness of India, broke over the North India city of Ayodhya when in 1992 the 16th-century Babri mosque was destroyed by a mob of Hindu militants, setting off a wave of Hindu-Muslim violence across the country. The Bhartiya Janata Party (BJP), with its "Hinduva" (Hindu-ness) philosophy and agenda, rose to prominence on the rubble of the Babri mosque and emerged as the largest parliamentary party in the national elections of 1996, 1998, and again in 1999. A centre-left coalition (the United Front) managed to bring down the BJP government after only thirteen days in office in 1996, but itself fell seventeen months later. The BJP is the dominant member of the coalition (National Democratic Alliance) which has governed India since 1998. Although the exigencies of coalition require some dilution of the Hindutva program, India under the BJP (1998 to the present) has seen a disconcerting amount of rhetoric and violence directed against religious minorities, Muslim and Christian.

In both countries, pseudo-revisionist historiography has subjected the discipline of scholarship to the service of cultural myth-making and political indoctrination.

Madrasa, amending the blasphemy law, restoring the joint electorate and improving the human rights record—have floundered in the face of opposition from Islamists, and sectarian violence continues unabated.

In India, although the first decade of Independence saw the massive reform and codification of Hindu family law, nothing at all has been done in terms of reforming Muslim law and improving the position of Indian Muslim women. Pakistan's Ordinance of 1961—which, inter alia, requires that prior permission should be obtained for a polygamous marriage; renders all talak pronouncements (even the triple pronouncement) revocable; and denies legal effectiveness to any talak—had a period of three months had passed following notification of the talak to a local official, who is to use the intervening time to attempt reconciliation—had no echoes in the neighbour to the south. The Congress party, which ruled India without interruption for its first thirty years (including seventeen years under Jawaharlal Nehru and eleven years under his daughter Indira Gandhi), was committed to secularism and democracy but was also pleased to have the Muslim "vote bank" securely on its side. law of inheritance according to Aboo Huneefa and his followers (abridgment of the Siradjiyya and Sharifiyya), 1832; idem, Moohummadan law of sale, (tr. of relevant chapters of the Fatwaa-i-Ali-i-Ahlfani), 1860; idem, A digest of Moohummadan law. Part first: The doctrines of the Hanafi code of jurisprudence (tr. and abridgment of those portions of the Fatwaa-i-Ali-i-Ahlfani likely to be relevant to litigation in India), 1865; London 1875 (Reprints of the 2nd ed. are available, but must be used with caution. E.g., when the Premier Book House (Lahore) reprinted Baillie's Part I (the Hanafi Fatwaa-i-Ali-i-Ahlfani and Part II (the Ithna 'Ashari Sharf?i-al-Islam), pages from one were intermixed with the other, see e.g. pp. 73-80 of the 1974 reprint of Baillie I; these pages are from the Baillie II and represent Ithna 'Ashari, not Hanafi; law); A. Rumsey, Al-Shar:iyya on the Moohummadan law of inheritance (repr. of Sir William Jones' 1792 translation of the Siradjiyya and Sharifiyya, with notes), Calcutta 1869, 1890; The Hedaya, tr. Charles Hamilton; ed. Standish Grady, 1870. (More convenient than the 1791 edition because comprising only one volume, reduction largely achieved by tighter, smaller print and the elimination of wide page margins, etc.; however, a few discussions have been omitted, including slavery (independent British India after slavery had been abolished in 1843) and much criminal law (irrelevant in British India after the Penal Code of 1860), but also including apostasy.) Reprints of this edition are readily available but must be used with caution; typographical errors in these reprints include not only numerous (and usually obvious) misspellings of individual words but also the occasional (and not always obvious) omission of a few lines, giving those lines remaining a totally different (and erroneous) meaning. Curiously, the same errors appear in the various reprints, regardless of date and publisher.; N.B.E. Baillie, A digest of Moohummadan law. Part second: The doctrines of the Imameea Code of jurisprudence (tr. essentially of majar Ithna 'Ashari text, the Sharf?i-al-Islam), 1874; London 1887 (Reprints available, but see the entry under “Baillie 1865” for a word of caution.); Mahomed Yusof Khan Bahadur, Fatwaa-i-Kazee Khan (tr. of portions dealing with marriage and divorce), 1881, 2 vols. (Reprint, in which the first two volumes appear as volume I and volume 3 appears as volume 2, available.); E.C. Howard, Mishag et talum. A manual of Muhammadan law according to the school of Shafi'i, tr. into English from the French ed. by L.W.C. Van den Berg, London 1914; A.A.A. Fyzee, Compendium of Fatimahal law, Simla 1969. (This text, edited by Fyzee in 2 vols., was published in Arabic in Cairo in 1951 and 1961.)

7. Singapore, Malaysia and Brunei These three states share a common history of British colonial control. Colonial legal policy was founded on the principle that English law was the law of general application to all subjects. However, where the "religious, racial, and communal" customs of subject populations were concerned, an exception might be made consonant with (English notions of) "equity, justice and good conscience". This principle was established in 1781 in India and carried through into the Malayan possessions. The results for Islam was the development of a hybrid "Anglo-Muhammadan" law which had and still has family law and trusts as its area of jurisdiction. It was not until after the Second World War, and approaching independence, that any real effort was made to establish a separate Islamic court system. Prior to this time, the syariah (shari'a) or the English law version of syariah was a matter for the general courts. The colonial policy legacy remains important both for substantive law and for the structure of the contemporary makhama in each of the three states.

1. Singapore

The first religious court (Syariah Court) was formally established in 1957 under the Muslims Ordinance of that year. At this time, Singapore was still a Crown Colony and the main motive for the court's foundation was to attempt control over the very high divorce rates among Singaporean Muslims. For this reason, its jurisdiction was restricted to marriage, divorce, nullity of marriage, judicial separation, division of property on divorce, and maintenance. While the basic causes of action in these matters remain as in the syariah, the particular form in which they are put in the statute is derived from English law. The syariah has been reformulated. Further provisions in the statute reinforce this position. The language of the court could be English, professional advocates might appear, the laws on evidence were English, powers to compel attendance were the same as those applicable in the secular Magistrates Court, precedent was wholly English and the qualifications and appointment of judges was established by the Governor. Appeals lay to an Appeals Board over which the Governor exercised a general power of revision. Most important, the Ordinance did not exclude the overriding jurisdiction of the secular High Court. In a series of cases from the late 1950s, the High Court did not hesitate to overturn or amend Syariah Court decisions. There were severe criticisms of Syariah
Court procedure, lack of record keeping and misunderstanding of the rules of evidence. While justified, such criticisms could also be seen as somewhat unfair given that the kādis were not formally trained in English law.

The Ordinance was replaced in 1966 by the Administration of Muslim Law Act which repeals and such criticisms could also be seen as somewhat unfair understanding of the rules of evidence. While justified, kādis given that the

tenance. It is essentially a copy of English matrimonial laws of the late 1950s, and thus does not sit at all that well with the version of syariah which the Syariah Court in Singapore is supposed to administer. By copying an English statute, the government of Singapore had also imported all other English legislation on family laws, for example, the laws on maintenance, guardianship, matrimonial property and so on. The Syariah Court has been placed in an impossible position. On the one hand, it is constrained by statute, and on the other it is obliged to apply "Islamic" law. It is the definition of "Islamic" law which is the difficulty. It now means four things: (a) the Anglo-Muslimmanadan laws derived from British Indian precedent and elaborated in the colonial period. Textbooks of these laws remain authorities for the secular courts. (b) The classical textbooks of the Shafi’i school which are the primary reference for the Singaporean kādi. (c) The regulations made under the 1966 Act which are binding on the kādi. (d) The decisions of the kādis reported and followed by later kādis—that is, a precedent. It is this last (d) which it likely to determine the future of the Syariah Court. While the kādis derive their decisions from the classical texts (see (a) above), they also follow the earlier kādis in an organised way through law reporting and analysis of the earlier judgements. In short, there is now a Muslim internal reformulation of syariah within the Syariah Court. While the substance of a rule may be fikh, the legal reasoning as to what it means and its application is English. This should occasion little surprise. Most if not all members of the Appeal Board have an English or English-derived legal education. For them, recourse to a precedent is perfectly normal. The fact that the structure and precedent of the court is English-derived merely reinforces this position. In extreme cases, the syariah presence is confined to quotations from the Qur’an, not infrequently irrelevant. The result is an eclecticism of source of law in both the court and at the Appeal Board level. For example, a survey of recent Appeal Board decisions (1988-95) has shown recourse to (i) English principles of statutory interpretation, (ii) Anglo-Muslimmanadan rules from British India, (iii) citation from the Qur’an, (iv) administrative rules on registration of marriage and divorce, and (v) earlier Syariah Court precedent. There is nothing from fikh as such; the whole complex is English. Even the sāunas cited are not decisive but seem to be put in so as to provide "Islamic" colouring to a method of reasoning which is wholly outside the canons of Muslim jurisprudence. This is not to say that fikh does not play a part, at least at the lower level. It does, but increas

ingly now in a secularised form. At the Appeal Board level, however, the secularised form is dominant.

This state of affairs should come as no surprise. The intention of the Singaporean legislation was and is to control the family law of Muslims. This means that it has to approximate the secular family laws as closely as possible, consonant with the religion of Islam. The colonial legislation showed how this could be done. The Syariah Court, therefore, is limited in its function and jurisdiction and is ultimately answerable to the Supreme Court of Singapore which will apply an Anglo-Syariah law.

ii. Malaysia

This state [see MALAYSIA] is a Federation and under the Constitution (1957 and amendments), Islam is a state matter, not a federal matter. The result is that each of the states in the Federation has its own "Islamic" (or "Muslim") law legislation. However, the Malaysian Constitution also says (Art. 3) that "Islam is the religion of the Federation". Unlike Singapore, therefore, Islam has a constitutional presence at both the federal and state level in Malaysia and this has important implications for both the structure and jurisdiction of the Syariah Courts.

(a) A note of caution is necessary about structure. While all the states of the Federation have a Syariah Court with the same general structure, this does not mean that the courts have precisely the same jurisdiction. Details vary from state to state. To be fully informed, one must look separately at each state enactment. The following description is taken from the Federal Territory Administration of Islamic Law Act, 1993, something of an exemplar Act for Malaysian Islam. Part IV (§§ 40-57) establishes a three-tier system, consisting of Syariah Subordinate Court, High Court and Appeal Court. The Appeal Court is headed by the Chief Syariah Judge who must be a citizen and who has had ten years Syariah Court experience, or "is a person learned in Islamic law". This last qualification is undefined. A quorum for the court is the Chief Judge plus two judges drawn from a panel of seven judges. Decision is by a majority and the Appeal Court is the final court in matters of family law, wakf [q.v.], offences against religion, inheritance and bayt al-māl. The Syariah Subordinate Court has a limited jurisdiction in the same matters. Appeals go to the Syariah High Court and, finally, to the Appeal Court, which also exercises a general supervisory jurisdiction over the lower courts. The Act also provides for the appointment of shariah prosecutors. Persons in proceedings in the Syariah courts may be represented by a Pergam Syaric, an advocate who has a sufficient degree of Islamic knowledge and who is admitted to practice in the Syariah courts. The procedure in all the courts is based on the secular model. It is government policy to standardise the Syariah court system nationwide on the Federal Territory model, but there is still some way to go at the moment.

(b) Islamic jurisdiction. The jurisdiction of the state Syariah Courts is as set out in their respective enactments. From the 1950s it has become increasingly elaborated to the extent that there is now a comprehensive jurisdiction which coexists with the secular court system (High Courts and Court of Appeal [formerly Federal Court]). Concurrent jurisdictions always raise the issue of which is superior, or more exactly, which forum decides the issue. The question only really arose in the 1950s and was not definitively decided in Malaysia until 1988. Before that date, it was the secular courts which had overriding jurisdiction because these courts derived from the Federal Constitution and not, as did the Syariah courts, from state legislation. This was always a matter of resentment in Syariah court circles, and in 1988 a new article, 121 (1A), was introduced into the Federal Constitution; which reads: "The courts referred to [the
secular courts] shall have no jurisdiction in respect of any matters within the jurisdiction of the Syariah courts.

However, this does not really solve the issue; it merely puts it back one stage. It is still the secular courts, here the Court of Appeal of Malaysia, which actually decides whether a course of action is "within the jurisdiction of the Syariah Courts". There are a number of reported cases (1990s; see Bibl.) which demonstrate this; the Syariah courts have an inferior jurisdiction and have no power to determine the limits of that jurisdiction. It is the secular courts that interpret the Constitution just as they are the heirs to Anglo-Muhammadan jurisprudence.

Given the structure of the Syariah courts and the issue of jurisdiction, it is not surprising that the judgments in the courts show an increasing degree of secularisation of fikh. This has taken place in the area of family law, and the decisions are a case study of the fate of the syariah in the contemporary nation state. Fundamental to this is the fate of the classical text books themselves and here one can discern a consistent pattern from the late 1980s. Passages are cited as hukum syariah and then interpreted with reference to Malaysian legislation and, in some cases, Malay custom law (adat). As many classic texts (standard books and hadith collections) get quite new meanings which derive from adat, from legislation, and from earlier Syariah court precedents. These new meanings are now what fikh means; thus the Arabic sources are beginning to be interpreted and distinguished on the basis of English-derived principles.

A second feature of the contemporary Syariah courts is the recourse to "modernist" legal reasoning with occasional but important recourse to Middle East authorities. Thus, from the late 1970s we find references to Syed Sa'li (his Fikh al-Sa'ma) and Ibn Kudâma (the latter's discussion of Abu Dawûd).

These two trends seem now to be almost irreversible. The only surprising feature is the depth of penetration of secular (English) legal reasoning into the substantive fikh rules. There seem to be three reasons for this.

First, while it is true that the syariah in its "pure" form (fikh and hadith) is now commonly cited, it is also true that the form of judicial records is in judicial precedent. Given that this is the form of the law, it is inevitable that the technical rules of English law will apply, and the result will be an Anglo-Syariah. Such has, of course, occurred before in British India and pre-independence British Malaya. The only difference in the present case is the greater quality of fikh in the kadis jurisdiction. Even here, however, a lot of repetition appears. In short, the precedent law is decisive.

Second, the members of the Appeal Board are, almost without exception, trained in English and English-Malay universities and practice at the secular Bar or the judiciary. This, apart from being Muslim, is their primary qualification. When this is combined with the precedent form, it is not surprising that an increasingly secular form of judicial reasoning is apparent. This is not to say that judgements are "un-Islamic": Such would not be true in the substance (result) of a decision. It is certainly arguable, however, in terms of legal reasoning.

Third, the prevailing political climate for Islam in Malaysia is dictated by the Federal Government. It is one which encourages progress, "modernisation", "development" and the like. Whatever the rhetoric, Islam is controlled in all its aspects so far as possible. The religion must accommodate itself to the state and not the other way around. The same principle applies to kadis jurisdiction, and an increasing secularisation of Islam through administration and through the Syariah courts now seems inevitable.

iii. Brunei

The State of Brunei (q.v. in Suppl.) (independent in 1984) describes itself as a "Malay-Islamic-Sultanate" (Melayu-Islam-Bendera). The Sultan is Head of State and Head of Government; he is also the Head of the Religion of Islam which is thus entrenched in the Constitution. Prior to 1955, the laws as to Syariah courts were minimal, though a basic Kadi Court did exist. In 1955 Brunei adopted the Religious Council and Kadis Court Act which was based on the then Kelantan (Malaysia) Enactment. The Brunei Act has been amended and the current version is now cap. 77 of the Revised Laws (1984) with some later amendments.

The Act establishes a Court of Chief Kadi in the capital and subordinate Kadi Courts in outlying districts. The extent of jurisdiction is determined by the Sultan but is in fact specified in detail in the Act. These include family law, uqaf and, in criminal matters, offences against religion. The latter include gambling, consumption of alcohol, sex outside marriage, preaching Islam without permission and the unlawful construction of mosques. Appeals are dealt with in the Chief Kadi's Court and above that by the Judicial Committee, which consists of the State Mufti and two other members appointed by the Sultan. This Committee also has authority to write an opinion on any question of Muslim law for a non-Islamic court if requested. Ultimate authority, however, still lies with the Sultan who, as Head of the Religious Council (one of the Councils of State), makes the final decision.

The language of the Courts is Malay and records are kept in Malay. Advocates may not appear if an appearance is "contrary to the provisions of Muslim law" but may be permitted at the discretion of the Court. Procedure is based on secular court procedure. So far as evidence is concerned, Muslim law is followed only with respect to witnesses. All other matters of evidence are governed by English law as adopted in Brunei. The Courts may summon non-Muslims to give evidence. Matters of arrest and search in relation to criminal activity, especially breach of the peace, are governed by the secular criminal proceedings in the Kadi Courts. The execution of judgements is likewise governed by the Subordinate Courts Act. Generally, in civil matters the practice and procedure of the Magistrates Courts is followed in the Kadi Courts.

In essence, the Brunei Act repeats the Malaysian and Singaporean provisions. This is true for judicial process. However, it is important to realise that the constitutional position of Islam in Brunei and the position of the Sultan provides a unique context for the operation of the Kadi Courts. Unfortunately data on their actual working are not as yet available.

Bibliography: 1. Basic sources. These are the respective editions of the laws of each state. For Malaysia, there are variations from state to state. A useful overview, which notes the variations, is D. Horowitz, The Quran and the Common Law, in American Journal of Comparative Law, iii (1949), 253-93. The other basic sources for Singapore and Malaysia are the Malay Law Journal and Current Law Journal, both in English with Malay summaries and the Jurnal Hukum in Malay. There are no reports for Brunei.

Lubeck, Islam and urban labour in Northern Nigeria. The making of a Muslim working class, Cambridge 1987. (A. Christelow)

MAKSID AL-SHARIFA (A.), literally, “the aims or purposes of the law”. The term is used in works of legal theory (wajah al-fik [q.e.v.]) and refers to the idea that God’s law, the sharusi (q.e.v.), is a system which encompasses aims or purposes. If the system is correctly implemented, these aims will be achieved. From such a perspective, the Sharfa is not merely a collection of inscrutable rul-

ings. One who claims that the Sharfa has makidsid is, therefore, making a statement concerning the rational nature of the Sharfa: that God intends to bring about a certain state of affairs by instituting particu-

lar laws. Most Sunni legal theorists subscribe to the view that the Sharfa has aims, and principal amongst these is the promotion of the “benefit for the believers” (maslith al-ibad). As al-Shatibi (d. 790/1388), prob-

ably the most sophisticated of the classical exponents of the doctrine of makidsid al-sharfa; the makidsid, aims and intentions. They hold no intrinsic value, and if, on occasions, the strict application of the law com-

promises the aims of the Sharfa, then for some suppor-
tors of the doctrine of makidsid, the law can be set aside or modified so that God’s intentions might be fulfilled. This possibility has made an appeal to makidsid al-sharfa particularly popular amongst modern legal reformers in the Muslim word, as it enables them to alter some long-held elements of the law which they consider to be impracticable in a contemporary setting.

The doctrine of makidsid al-sharfa has its roots in early Muslim attempts to rationalise both theology and law. In terms of theology, the ideas of the Mu'tazila [q.e.v.] undoubtedly influenced the emergence of the makidsid doctrine. The Mu'tazila doctrine that God's decrees are subject to, rather than the origin of, the ideas of good and evil (al-taha'in wa 'l-kaabib [q.e.v.]) ultimately resulted in an assertion that God is compelled to act in the interests (perhaps the best interests) of humankind. His law must be of benefit to his creation, for if it was not, his qualities of jus-
tice and goodness would be compromised.

In legal works, a bundle of related doctrines can be seen as precursors to al-Shatibi's elaboration. The development of kalya [q.e.v.] as a legal tool provided the impetus for the doctrine of makidsid al-sharfa: the Shatibi doctrine, when it is applied to a particular situation, or to a novel situation, then the law must, in some sense, be coherent. If it is coherent, then it must express the will of the Lawgiver. It is this underly-
ing assumption (that the intentions of the Lawgiver could be known) that was so vehemently rejected by the Zahirf Ibn Hazm (d. 456/1064 [q.e.v.]).
The Şahîʻî jurist Abû Hamîd al-Ghazâlî (d. 565/1171 [q.v.]), on the other hand, asserted that one way in which the ratio (illa [q.v.]) of a ruling might be known is by comparing the candidate for the role of ʻilla with the general aim (maksâd) of the law to "promote benefit and reduce harm". This means of identifying or verifying the ʻilla (known as mânaṣÂbâ) rested upon the idea that the aims of the law were discernible (through reason or revelation).

The Hanbali Najm al-Dîn al-Tûfî (716/1316 [q.v.]) went further than this, arguing that all rules derived from analogy (barār those not open to rational scrutiny such as the ritual ʻibâdât) are susceptible to change and development if the aims of the Lawgiver are not fulfilled. Discussion over the legitimacy of ʻiṣâbân and ʻistisâldh and the acceptance of these ideas by a jurist. It is theologically prob-

African (Malikî) jurists, such as Muhammad Tahir b. Abu Ishâq al-Shâtîbî (q.v.), the 8th/14th-century makâsîd al-sharfa, should come from the Malikî school, and refers to comments of various kinds accepted that the whole Sharî‘a exists to promote the welfare of the believers. The benefits which are promoted and preserved when the Sharî‘a is instituted are those which are needed (ḥâdi‘) in order to make obedience to the Sharî‘a less demanding; and those which which, whilst not necessary or needed, improve (tasâbî‘ûya) the benefits already enjoyed by the believers. Each ruling in the Sharî‘a can be said to benefit the believers in one of these three areas. For example, it is necessary (dürâra) to human existence to preserve life, and God has instituted (the Sharî‘a) rules concerning punishment and compensation for murder. In order to make the Sharî‘a easier to follow (ḥâdi‘), the law permits sick people to miss prayer. Finally, the benefits to the believers are improved (tasâbî‘ûya) by supererogatory manumission, though community welfare would be maintained if this act was not performed.

Al-Šâhî‘î’s schema, which was innovative within the deeply conservative tradition of Sunni usûl al-fikr, undoubtedly influenced subsequent writings, but it is in the modern period that these ideas have been developed and enhanced, and a genre of makâsîd writing can be said to have emerged. In particular, North African (Mâlikî) jurists, such as Muhammad Tâhir b. ʻAshîr, for example, adds equality and freedom to al-Šâhî‘î’s list of the five elements necessary for human existence to prosper. The modern emergence of a theology reminiscent of Mu’tazîlî doctrine has enabled jurists to consider that the Sharî‘a is more adaptable to change and distinguish between the unchanging aims of the law and mutable particular regulations.

(M.R. GLEAVE)
Tepe no. 2 at Bayram 'Ali near Marw make use of earlier structures, so-called *sawads* (M.E. Masson, *Materiali po archeologii Merv*, in *Trudi YuTAKE*, xiv [1969], 7-12; O.V. Obel'chenko, *Nekropol' drevnego Merv*, in *Izv. AN SSSR*, 95-96). Burials in ossuaries and jars appeared with regular Muslim graves in a 7th-10th century cemetery outside Taraz near Dzhambul (Kazakhstan) (L.L. Rempel, *Nekropol’ drevnego Taraza*, in *Kratkie Soobshcheniya Instituta Material’noy Kul’tury*, ix [1957], 102). The best-known site for these hybrid practices, however, is the “Monumental Cemetery” (Site O) in Siraf [Iran], situated on a spur of land overlooking the city’s west end, which also had its own funerary mosque (D. Whitehouse, *Excavations in Siraf*, in *Iraq*, xii [1974], 23-30). Dating back to the pre-Islamic period, the 100 x 150 m cemetery was dominated by a group of about forty monumental tombs (5 x 5 m to 9.5 x 10 m), built between the 9th and the 10th centuries, with graves grouped around them. Most appear to have been used for the collective disposal of the dead, who were buried inside without coffins and without separating the corpses according to gender. Most bodies were aligned in an orthodox manner north-south, with their heads turned towards the west, i.e. Mecca. The deceased, who appear to have been members of the wealthier society of Siraf, were buried with rings, beads, bracelets and ceramic jugs ([ibid., 25]). Similar cemeteries are known from literary sources to have existed in Paykand, modern Karakul in Turkmenistan (anon., *Hadid al-Islam*, tr. Minorsky, 113) and Yazed (Dja’fari, *Tarikh-i Yazd*, ed. I. Afgah, Tehran 1337 A.S.H./1958, 130).

Cemeteries on *munawar* were often established in ruins or in buildings that were partially torn down for that purpose (Whitehouse, [ibid., 9]; A. McNicol, *Site G, Islamic Cemetery*, in *McNicol and W. Ball* (eds.), *Excavations at Kandahar 1974 and 1975*, Leipzig 1979, 214, 234-6), while growing settlements were laid out around pre-existing cemeteries, respecting and caring for existing tombs (Whitehouse, [ibid., 12]).

Local pre-Islamic cemeteries continued in use, but cemeteries also opened up in greater Iran around tombs ascribed to legendary *gahad* of the Muslim conquest of Iran (Yahät, inv. 418; E. Gohn-Wiener, *Tazma tomb of the twelfth century A.D.*, in *Ars Islamicus*, vi [1939], 88-91; to saints (A.S. Melikian-Chirvani, *Renaissances preliminaires sur une mosaique ghaswehdez*, in *Arts Asiatiques*, xvii, 59-60) or to former rulers (Cohn-Wiener, *De Runen der Seljukischen von Merke und das Maussolien Sultan Sorschah*, in *Festschrift F. Sarre*, Leipzig 1925, 116).

Only scarce documentation exists on remnants of some nomadic cemeteries in the Atrek valley in northeastern Iran and in southwestern Iran dating from the 17th to the 19th centuries. The Turcoman Golden tribe possessed a common burial ground 60 km/40 miles north of Djarqalan, scattered over hills, slopes, and plateaux of the Gökceh mountain, to which the deceased were brought often from far away, after a preliminary burial for some time in the area around seasonal camps (D. Stonach, *Standing stones in the Atrek region*. The *Haiid Natii cemetery*, in *Iraq*, xix [1981], 147-51). In contrast to this, cemeteries of the Lor nomads in Luristan were established along the annual tribal migratory routes and may coincide with old camp sites. Tombs in these cemeteries were marked by pictorial stelae with gender-specific images and inscriptions (D.I. Mortensen, *Women after death*. Aspects of a study on Iranian nomadic cemeteries, in B. Uta [ed.], *Women in Islamic societies*, London 1983, 26-47; idem, *Nomadic cemeteries and tombstones from Luristan, Iran*, in J.-L. Baquè-Grammont and A. Tiber [eds.], *Cemeteries and traditions funeraires dans le monde islamique*, Ankara 1996, ii, 175-85).

In contemporary Iran, modern and efficiently-administered cemeteries have been established, often at some distance from major cities and pilgrimage centres, as more orderly alternatives to older, more scattered burial places. Between the 1970s and late 1980s, the city of Mashhad inaugurated the cemeteries of Bihisht-i Rıdà and Djamâ’-i A’immah 20 miles southwest of the city in the vicinity of an old cemetery named after the tomb of the 9th century Imámzâda Khây’ad Abü `l-Sâlî. Simultaneously, modern extensions to the Timurid shrine of Imam `Ali al-Rıdâ now include underground burial vaults, named al-Kuds and Masjhad-djumârî for civilians and soldiers killed during the Revolution and the Iran–Iraq War. Used as a burial ground since the 1950s and opened officially in 1970, the sprawling Bihisht-i Zahra cemetery (Paradise of [Fatimah the Radiant]) south of Tehran along the highway to Kūm is today the city’s main cemetery. During the late 1970s and early 1980s, Bihisht-i Zahra gained the reputation as a national symbol of the Revolution, as many of those killed during demonstrations against the Shah or in post-Revolutionary factional battles were buried there as martyrs. During the eight years of war with ‘Irak, a vast, separate section was added for soldiers killed in action, whose tombs are typically surmounted by cases that exhibit a portrait photo of the deceased and Islamic and Revolutionary paraphernalia. The impressive visual expression of Bihisht-i Zahra as a cemetery dedicated to the commemoration of martyrs, a fountain that spouts red water, has been copied throughout Iran (Hamid Algar, *al-Hakk Muhaddith*, Shah Muhibb Allah of Allahabad, *Revolutionary factional fighting were buried there as martyrs. Apart from epistolary collections of political and literary significance (like *I’lā-y-i Khurasan, Maktabāt-i Rıdâi Negār*), there are collections of letters written by mystic teachers to their disciples. This epistolary literature, which throws valuable light on the mystic ideology and institutions of the period, may broadly be classified under four categories: (i) sundry correspondence limited mostly to one or two letters dealing with some religious problem, e.g. letters attributed to Shâykh ‘Abd al-Kadir Gilânî, Khây’ad Abü Djin Dähbîyât Kâki, Shâykh Farid Gandj-i Shârak, Shâykh Nizâm al-Djin Awhîyân and others; (ii) collections of letters in the nature of mystical communications without any indication of the addressees, e.g. letters of *Ayn al-Kudâr Hamadânî, Kudâr Hamîd al-Djin Nâwârâ, Sayyid ‘Ali Hamadânî*; (iii) collections of letters bearing on mystical or religious themes addressed to disciples to resolve their difficulties, e.g. the letters of the Imâm al-Gházâlî, Sânî, Râ’î, Yâliyân Mârî, Bû ‘Ali Kaldâr, Anâr Djin Dähjângîn Simmânî, Gisû Daráz, Nûr Kûbî-î Alam, Dja’far Makkî, Shâykh ‘Abd al-Kudâr, Shâykh ‘Abd al-Hâkk Muhaddîth, Shâh Muhbîb Allah of Allahábâd.
Amir Khusraw also received a large number of letters, but these were of personal nature and were not collected, dred letters—Dihll 1302, 310—and his descendants assumed the same significance which maktubdt-i Kadi Shattar [q.v.] and Khayr ad-Dfn Awliya used to write letters on a large scale. 

The available maktub literature throws light on the thought and activities, as also the problems and preferences, of the saints of different periods and different orders. Though some of the letters of the Imam al-Ghazâlî are addressed to waqfs and government officials, they help us in assessing the position of religion in the administration of those days. His communications to the kâdîs, the jurists and theologians throw light on the nature of the religious problems and tensions of the period and have a sermonising tone. The letters of Shaykh Sharaf al-Dîn Yahyâ succeed in boosting the mystics' morale after their setback at the hands of Muḥammad b. Tughluq [q.v.].

As a heavenly group consisting of angels, al-mala’ al-dal’lā consists of the considered superior to the earthly one which consists of the sons of Adam (ibid., i, 289). This is indicated in a tradition of the Prophet stating that whenever a believer mentions God’s name in public (fi mala’), God mentions his name in the public (e.g. Ahmad b. Hanbal, Musnad, ii, 251). A mala’ of angels met the Prophet on his nocturnal journey to heaven (ibid., i, 354), and in fact every human soul is about to pass by a mala’ of angels at the time of death (ibid., iv, 287).

Closely associated with al-mala’ al-dal’lā in its heavenly significance is the expression al-ra’ff al-dal’lā (the “upper company”, cf. Kur’ān IV, 69). It appears in a widely current tradition in which the Prophet, on his deathbed, asks God to place him with al-ra’ff al-dal’lā, and these constitute his last words (e.g. al-Bukhārī, Sahih, vi, 18-19 = kitāb 64, bāb 84). According to one of the interpretations, this expression stands for angels belonging to al-mala’ al-dal’lā (al-Kaṣāllānī, Ishāq al-sā‘ī li-sharḥ Sahīh al-Bukhārī, 10 vols., Cairo 1305/1887, viii, 358).

2. In early Tradition.

In accounts containing episodes from Muhammad’s life, the mala’ of Kuraysh [q.v.] is often mentioned, and the Prophet, on his deathbed, ascribes his death to a better mala’. In most cases, this mala’ is involved in acts of persecution perpetrated against Muhammad. In a typical episode, it is related that the mala’ of Kuraysh once told Muhammad that they were ready to embrace Islam provided he turned away believers of the lower classes (Ahmad b. Hanbal, Musnad, i, 420). The episode is usually recorded in the commentaries on Kur’ān VI, 52, in which the Prophet is instructed not to reject those who call upon their Lord in the morning and in the evening. Occasionally, the mala’ of the Meccans is said to have convened in the Ḥijrā (a sacred enclosure and a meeting place near the Ka’ba [q.v.]) to discuss how to treat Muhammad (ibid., i, 303), and they are also said to have interrogated Muhammad, offering him medical treatment to cure his supposed madness (al-Kurtubi, Ahkām al-Kur’ān, xv, 338). In another instance, specific names of the hostile mala’ of Kuraysh are enumerated, in a tradition in which Muhammad prays to God to punish them for having thrown a camel’s placenta on him when he was prostrating during prayer. This was done to invalidate his prayer by causing him physical impurity (al-Bukhārī, Sahih, iv, 127 = kitāb 58, bāb 21, v, 57 = kitāb 65, *bāb 29*).

According to modern scholars, the word mala’ became a fixed term denoting the elected “senate” of the tribe of Kuraysh in pre-Islamic Mecca (e.g. W. Montgomery Watt, Muhammad at Mecca, Oxford 1953, 8). See also MAKA. 1. It was described as “a kind of urban equivalent of the tribal magis [see MAGILS. 1], consisting of notables and family chiefs elected by assent to their wealth and standing” (B. Lewis, The Arabs in history, repr. London 1983, 31). However, there is no evidence that a process of election to the mala’ ever took place in pre-Islamic Mecca. That mala’ essentially denoted no more than an occasional group of notables is evident from the fact that it is also used with reference to a group of Kuraysh acting in Medina after the Ḥijrā (e.g. al-Bukhārī, Sahih, ii, 133 = kitāb 24, bāb 4; Ahmad b. Hanbal, Musnad, v, 160).

The mala’, i.e. the notables, of the Arab tribes of Medina (of the Banu ‘Ubad[ān]) are also mentioned in the sources, and they are described as being in contact with Muhammad upon his arrival in Medina (al-Bukhārī, Sahih, v, 86 = kitāb 63, bāb 46). A more
typical form of a consultative body in Islamic times was, perhaps, the šaykh [q.v.].

MALAWI, Muslims in.  

Historical background.  

Islam is not a recent phenomenon in the interior East African state of Malawi (the former British protectorate of Nyasaland), since traders from Arabia, the Persian Gulf, India and Indonesia had dealings with the East African Coast since time immemorial and Islam was carried by the interior by such traders. The name Malawi was first used by the Portuguese to denote a variety of distinct ethnic groups. Amongst these, the Marawi established a hegemony over a considerable area, including the Makua on the coast around Mozambique [q.v.]. The penetration of Islam took place from two directions, i.e. along the Rovuma after the Portuguese occupation of Kilwa [q.v.] in 1505, and from Angoche, which, although it declined after 1530, remained an important centre for the spread of Muslim-Swahili influence into the interior.

The political turbulence on the northern parts of the East African coast during the 16th century did not affect the coastal region of the Mozambique channel. The lack of settlements in the beautiful area became conducive to new economic developments, particularly that of ship building at Mozambique and the local production of textiles which had implications for the influence of Islam in Malawi, the one enabling the building of boats to ply on Lake Nyasa, the other as gifts to or for the purchase of slaves, ivory and other goods from the local rulers. In the wake of ever-widening commercial enterprises between the coast and the interior from the end of the 16th century onwards, the Makua and Yao [q.v.] were the main traders, although agents from the coast had already settled in the interior at this time.

During the early part of the 18th century, the struggle between the Portuguese and the 'Umāniyya on the one hand, and the 'Umāniyya and the local population on the other, undermined the place of Islam along the coast and along the trade routes. Mozambique displaced Kilwa as the main centre of relations with Malawi. During the early 1750s, the Portuguese were making common cause with the šaykh-yi of Sanculo and Quitangonha against the Makua, penetrating deep into Makua country. At around this time also, Indian trading interests on the coast, centred on Mozambique, began to penetrate inland; thus in 1727 the Vicerey granted a special license to a number of wealthy Indian Muslims that allowed them to trade with the Makua.

The next development of Islam in Malawi is connected with Sayyid Sa'īd of the Bū Sa‘īd [q.v.] dynasty of 'Umayr (1906-56), who established himself as ruler of the coast in the early part of the 19th century and encouraged trade with the interior by establishing "forts" on the Kilwa-Lake Nyasa route. By 1861 Muslims had settled at the southern end of Lake Malawi and were operating west of the lake in 1863. In the 1870s Islamic influence could be seen in that petty chiefs were being addressed as mwalimu. The first Yao chief to adopt Islam around 1870 was one Makanjila II Banali, who employed a Kur‘ān teacher, and children were taught to read the Kur‘ān and to write Swahili in Arabic script. Chief Mataka I Nyambi of Mwembe dressed like an Arab and built his houses in rectangular form representing a clear coastal influence.

The caravans from the coast usually had with them what has been termed "Muslim teachers", who taught the Kur‘ān, instructing people in Islamic beliefs and practices and encouraging literacy in Arabic and Swahili in Arabic script. They are said to have disseminated commentaries and other literature dealing with the observance of customs connected with marriage, eating and drinking, the mode of killing animals, the efficacy of charms and the making of medicines, and encouraged the building of mosques. They also became involved in the training of young men, particularly the sons and nephews of the chiefs, as wulimu on religious scholars. Some of them were sent to the coast for further training. Through such teachers, Swahili became the language predominantly spoken by Muslims in Malawi. Another spin-off of this work has been the number of Malawi Muslims acting as māns and muezinz in South African mosques.

The anti-slavery campaign from 1873 onwards led to a revival of Islam, since Muslim slave traders who were suffering an economic recession, were as a consequence determined to extend their moral and religious influence. There was a growing self-consciousness and reaction to the colonial and mission presence.

When the British protectorate was established in 1891, the Muslim presence in Malawi can be said to have been represented by such chiefs as Mlozi, a half-caste Arab at the north end of the lake; by Salim b. 'Abd Allāh in the central region, where Nkota Kota had become an important centre; by Makanjila, who was established on the east side of the lake, where in 1891 an Arab said to have come from Aden originally owned a house at Saidi Mwazungu's town in the southern part of Makanjila’s country; and by Mponda at the south end of the lake, where there were twelve madaris each with its own mwalimu.

The Islamic renaissance in Malawi in the early part of the 20th century was linked to the Mājī-Mājī disturbances in German East Africa in 1905-6. The so-called "Meccan Letter" purportedly sent by the head of the Uwaysiyya [q.v.] ṭasīka in Mecca giving instructions to the faithful to prepare for the final apocalyptic battle, played its part in the unrest in Muslim circles in Malawi in 1908. Rumours among the Yao were claiming that the Arabs would come and kill all Europeans and Africans alike who refused to accept the Muslim faith. In Malawi, this was intensified by the appearance over Mua of Halley's Comet in 1910. The hostilities in East Africa connected with the First World War also played their part in deepening the commitment to Islam in Malawi. Letters from the German officer Count Falkenstein to Mwalimu Issa Chikoka at Losewa indicated to him that the Ottoman caliph, Sultan Mehemmed V (1909-18), was the enemy of the British, and called on Mwalimu to lead a djirot against the British during Ramadan. The growth of Islam was also encouraged by the recruitment of Muslims for the Nyasaland Police and the King's African Rifles. The general impact of these trends can partly be seen in the establishment of a Muslim boarding school for boys at Malindi and the proliferation of mosques from 1911 onwards.

During the early years of the Protectorate, Kur‘ān schools offered the only education acceptable to Muslims. In 1918, the Governor recommended the establishment of Muslim schools in parallel to those run by various Christian mission societies. This development was encouraged by the Phelps-Stokes Commission and Ormsby-Gore reports of 1925 and led to the opening of a Muslim school in Liwonde
in 1950. From 1946 Muslims were able to establish their own schools. Independence in 1964 brought major changes in the educational system. Islamic literature in English, particularly from South Africa, became more readily available. This and closer links with Muslims and Muslim institutions in East Africa and the wider Muslim world brought about a deeper awareness of the requirements of the faith. By the late 1950s, some Malawi Muslims were able to attend the teachers' college in Zanzibar.

The nature of Islam...

The Muslim community in Malawi is not homogeneous. The differences are not only ethnic but also due to membership of various tarde. Nearly all people in the Kawinga, Liwonde, Jalasi and Nyambi chiefdoms are Muslims, and a group in the Jalasi chiefship is known as twaliki (Ar. tarite). They represent the Kadiiriya order. The twaliki believe that their devotions should be accompanied by loud singing and chanting of Arabic texts and by vigorous dancing. Another group, the saibati, centred around the Kawinga and Liwonde chiefships, advocate a more orthodox type of Muslim devotion in which a quiet and restrained manner is emphasised (Ar. sudat “quietness, silence”). The salabati represent the stricter orthodoxy of the Shafihiyya order. They are also known as ahd al-umun. These differences undoubtedly reflect the variations in Muslim mystical practice involving both dhikr and audible remembrance of God, and diko, silent remembrance. Beside these differences regarding audible and silent dhikr, the saibati also differ from other groups in their funeral practices, such as eating food before a funeral, singing and dancing and carrying flags on such occasions, as well as the propriety of dancing at the annual visits (zakara, Ar. azhra [g.4]) to the graves. They also differ regarding the legality of eating hippopotamus meat, the building of new mosques where there already are other mosques, and special prayers. The zakara are also connected with the commemoration of the Prophet’s birthday (Swa. masihi) on 12 Rabii I, which takes the form of feasting, sikiri (Ar. diski) and exhortations. The term zyala is also used for the celebration of the anniversary of the founder of the tariqa. The Kadiiriya order, which was predominant until the 1930s, celebrates the birthday of the Prophet, the two main festivals and some other occasions, with sumptuous feasting and night-long sikiri, sometimes referred to as azkara and behan (ahd), etc., as an oath of loyalty to the shaykh.

Muslims of Indian origin fall into various categories. The Sunnis among them follow the Hanafi madhab, whereas the Afghan Sunni Muslims follow the Shafi’i school. Among the Indian Muslims, there are also a number of Shi’a belonging to the Twelve, and the Khodja Isma’ili and Bohorah traditions. The majority of these arrived as traders from 1928 onwards, and some of them set up large commercial establishments.

The only ordinance in Malawi that directly concerns Muslim marriage (nikah [g.4]) is the Asians (Marriage, Divorce and Succession) Ordinance of 1929. Its wording allows for the application of the different systems of law followed by the various sects (firak) and law schools (madhakh). It also includes any local variants that may become customary. Another particularity is that marriage appears in the Marriage Ordinance of 1903 which, contrary to the Shari’a, allows a Christian man to marry a Muslim girl. When it comes to a Muslim woman’s rights in a marriage, particularly in relation to divorce, she has almost identical rights to those of her husband.

The month of fasting, has been observed for many years in Malawi. In 1889-90 Mponda II insisted on a proper observation of Ramadhan, although it seems that the appropriate twaliki prayers were not observed. Muslims speak of kamanga namasani “binding on Ramadhan”, and though proud to observe the restrictions, many turn to ramusolo namasani “to loosen the bonds of Ramadhan” before the end of the month of fasting. The fast reaches its climax in the Id al-Fitr (Bayram) referred to as Ili Balak (Ar. baraka). The Id al-Adha (Kurban), the feast of sacrifice, is known as Ili Bali, a name adopted from the Indian sub-continent, where it is known as Bakara Id (Ar. bakara “cow”, hence “the cow festival”) an indication of an early Indian influence on Islam in Malawi, but also a local emphasis and appreciation of the significance of the festival. Zakati is acknowledged, but is not strictly observed except in connection with the Id al-Fitr.

Noon prayers on Fridays, known locally as jama prayers are held at a central place, originally at the village of the main chief. Women join in the juma prayer, usually in a separate section of the mosque. Muslim headmen wear scarlet headbands around their white skullcaps known as mzuli. This may reflect the practice among Muslim scholars, who wear different colours to signify their status or the religious order to which they belong.

A number of traditional ceremonies have survived and have been given orthodox Islamic names. Thus the term sadaka in Malawi has nothing to do with alms but refers to a funeral feast. It is associated with a special dance, known among the Yao as cindimba and is connected with the brewing of a special beer. It has been partially Islamised through the sikiri (dhikr), which is now perceived purely as a dance. The akba (Ar. alkha) ceremony is observed in some areas.

When a Muslim dies, the shaykh is invited to bless the body and delivers an oration. The body is prepared for burial by having a hole cut in the neck and the intestines squeezed empty. It is then wrapped in long lengths of white cloth and taken to the graveyard on a stretcher, usually the bed on which the person died turned upside down. The prayers and oblations (wakma swacioko) offered to ancestral spirits at the root (zakara) of a shrine tree has also taken on an Islamic air. It is explained by the more zealous Muslims as the gift of food to passers-by in order that God may forgive and bless the spirit of one’s ancestors. Magical charms and talismans proliferated in the pre-Independence years. One of these was the kinisi (amulets; Swa. hirz). Another is the charm called albudari consisting of Qur’anic verses wrapped in leather.

Muslim organisations.

Formal organisations are a fairly recent phenomenon in Malawi, although the Muslim Association of Malawi (MAM) was founded in the 1940s by Asian Muslims. There have been associations concerned with the provision of madrasa education. The wabmua as well as the heads of the taraf owing allegiance to their shaykh, murshid or pir also have their “informal” organisations, some of which co-operate over id celebrations. Some organisations, however, are supra-national, such as the Tandhi Damat [g.4]. Muslims of Asian origin group together according to their particular trading or geographical background and especially the Sant Mennon, Punjabi, Surri and Khatari groups and the various Shi’a communities. They make substantial contributions to the building of local mosques and Kur’an schools. Mosques and madrasis are often named after the person who organised and contributed to their
Muslims expressed an interest in better educational facilities within the context of the Protectorate as early as 1916. A Department of Education was set up in 1926, but not until 1928 were three government schools established to cater primarily for Muslim children; these had to be closed after a few years due to lack of children and parental support. The following year an education ordinance was passed opening the schools to all regardless of religious affiliation.

Children; these had to be closed after a few years due to lack of children and parental support. The following year an education ordinance was passed opening the schools to all regardless of religious affiliation. By 1962 there were, however, 29 schools under Muslim administration and owned by the Muslim community, seven of these grant aided. Today, all schools in the country are under government control through the Ministry of Education, both with respect to policy and standards. Muslim teachers instruct Muslim pupils in the basics of Islam at the times set aside in the timetable for Religious Education. The government has also encouraged schooling in predominantly Muslim areas through support for the building of classrooms and teacher accommodation. Contemporary-style education is pursued in the mornings in schools managed by Muslims. In the afternoon they become madaris, where Kur'an, hadith, fiqh and hukm are taught; but Arabic is not taught. The Yao use their own language, including a fair amount of Swahili expressions; the reformists use Chewa or English, the two official languages of Malawi, employing some Arabic greetings and formulae. The Muslim Students' Association founded in 1982, which represents the reform movement and opposes the twak, and is supported by donations from Saudi Arabia and Kuwait, produced a syllabus in Islamic education for Muslims in primary and secondary schools in 1987. In 1988 Muslims were able to establish the first Islamic institute of higher learning, the Islamic Centre. Some young people have had the opportunity to study at Arabic institutions abroad. Contacts with the Muslim Youth Movement in South Africa from 1977 onwards led to the holding of the Southern Africa Islamic Youth Conference in Blantyre in 1981, and this met again in Malawi in 1987 when the Islamic Medical Assembly, a branch of the Muslim Association of Malawi, was formed. The Muslim Association of Malawi with its headquarters in Blantyre evolved out of a central Board for Muslim Education which was set up in the 1950s to co-ordinate the work and represent the interests of the Muslim community as a whole. The Association has received financial help from Kuwait in the form of a financial director as well as teachers from various parts of the Muslim world. Through its representations, time has been allocated on Radio Malawi for programmes on Islam in Chichewa. The organization has also enabled women to hold regular conferences since 1982. Local publications are limited. Some Muslims read the Muslim Digest and al-Kalam published in South Africa. A pamphlet entitled Taribhu y-salat in Chichewa has been widely distributed. Publications by the International Islamic Federation of Student Organisations with its headquarters in Kuwait, and the writings of Abū 'l-Allā Mawdūdī of Pakistan are also to be found. The only outside links Muslims in Malawi had for long were with Muslims and Islamic institutions on the East African coast. Particularly important were the contacts with the late Huwāysh saheb Saleh al-Farsy (d. 1982), Chief Kādī of Zanzibar and later of Kenya. Through the migrant labour force, contacts were also established with various organizations in South Africa that more recently have sought to help Muslims face the growing challenge presented by the socio-economic situation in Malawi. Contacts with the wider Muslim world began with a visit from representatives of the Dīr al-fikhr from Saudi Arabia in 1965. The African Muslims Committee, a charitable organization based in Kuwait, has made considerable contributions to the Blantyre Islamic Mission which was founded in 1982 and has organised youth camps. The election and re-election of Bakili Muluzi as president of Malawi in 1994 and 1999, reflects the degree Muslims have come to play in the country, and will strengthen and enhance the community's position.

(S. Von Sicard)

MALFUZAT (A.), literally “utterances”, in Sufi parlance denotes the conversations of a mystic teacher.

Though some compilations of Sufi utterances were made earlier in other lands, e.g. the *Hikayat wa-vaghandi-ni shykh Abi Sufi* (Rieu, i, 342b ii) and *Aṣūr al-ta’ahid* (ed. Ahmad Bahnanyar, Tehran 1934) [see also 'Abi l-Khayr B., Abi l-Khayr*], it was Hasan SidjżT of Dilhf who gave it a definite literary form. In 707/1307 he decided to write a summary of what he heard from his spiritual mentor, Shaykh Nizām al-Din Awiyya &q;', and completed it under the rubric, *Fawlid al-ja‘lud* (Lucknow 1302). It marked the beginning of a new type of mystical literature, known as *mal富zat* (sing. *mal富z). A few years later, in 711/1312, Sultan Baha al-Din Walad (Lcknow 1311/1893-4), son of the famous Maulānā Muīn al-Din Rāmād (ms. personal collection), completed a record of his father’s utterances under the title *Fihi-ma-ja‘lud* (ed. ‘Abd al-Majid, *Adl al-tawhid* (Rieu, i, 342b ii) and *Asrdr al-makhdumm*) (lith. Agra 1928). But Baha al-Din prepared this record on the basis of memory, some 39 years after the death of his father, without reference to dates on which specific discussions took place. Hasan SidjżT gave dates of every discourse and referred to the questions and quests of the audience. Baha al-Din perhaps aimed at providing a philosophic basis for the *mal富zat*. Hasan presented through the conversations of his Shaykh the accumulated wisdom of the mystical creed with reference to specific problems of the people. Hasan’s example inspired saints of different mystical orders, and a considerable *mal富z* literature appeared in India from Ucčh to Maner and from Dilhf to Deoghat.

The new genre of mystical literature developed mainly in India, but some collections of Sufi utterances were prepared elsewhere also, e.g. the *Nur al-‘ilm*, utterances of Shaykh Abi Husan Khirkanî (ed. E. Berthels, Leningrad 1929), *Mal富zat-i Nā‘ūm al-Din Kudn* (ms. As. Soc. of Bengal 1259-3), *Mustarid* (discourses of Sayyid ‘Ali Hamadānī, ms. I.O. 1850) and *Anis al-tālîbîn* (conversations of Kh ‘Adja Baha al-Din Nasīr al-Ma’dm, Lahore 1933).

The production of *mal富z* literature in India during the 8th/14th century synchronised with Shaykh Nizām al-Din Awiyya’s decision to convert the mystical movement—hitherto confined to individual spiritual salvation—into a movement for mass spiritual culture (*Sīyār al-‘awld*), Dilhf, 346-7). This led to proliferation of *mashā’il* (lith. South Asia and the adoption of local dialects for the communication of ideas (see ‘Abd al-‘Iṣīk, The Sufis’ work in the early development of Urdu language, Awrangābd 1993). The *mal富z* literature differed from literature produced earlier in the form of mystical treatises which dealt with mystical thought or mystical litanies and hallucinations. The *mal富z* literature was intelligible to people at all levels and had a space-time context. Since the discussions contained in *mal富zat* took place before people belonging to different sections of society and referred to specific problems (see *Khayr al-madj_dlis*, 83, 185, 240, etc.; *Mā’dm al-ma’dm*, 3), this literature has assumed great historiographical significance. It acts as a corrective to the impressions created by the court chroniclers who, nurtured as they were in Persian traditions, restricted the conceptions of history to courts and camps. This literature views the historical landscape from a different angle and fills a gap in historical knowledge by providing a glimpse into the life of the common man, his problems, his hopes and fears. For example, the economic worries of the masses during the time of Fīrāz Shāh Tughluk, and the efforts of the Sufis to reorient mystical thought to meet the situation created by the ideology of Ibn Taymiyya (lith. 1905), can be read in the *Khayr al-madj_dlis*.

*Mal富z* literature continued to be produced in India all through the 12th/18th century. The conversations of Shaykh Ahmad Maghribī of Khatt (Taḥṣīl al-mal富zatīn, I.O. Persian Collection DP 979) give an insight into the economic and cultural efforts that preceded the foundation of the city of Ahmadābd. The utterances of Gūsā Darāz (lith. *Dawām al-kalim* (ed. Hamīd Siddīkī, Kānpur 1356/1937-8), give a lively picture of mystical activity in the South.

In the subsequent centuries appeared the conversations of Shāhū Mūhammad Cīgī (Malfūzat al-hašānāyī, ms. ‘Allgarī), Shāh Kālim Allāh Shāhjāhānbādī (Mafīlūzī-i kārīmī, lith. Ḥaydārābād 1328/1910), Shāh ‘Abd al-Razzāk (Malfūzat, lith. Fīrūzpur 1303-1865), Shāh Kurlān Shāhjānī (Samālūzat al-hašānī, ms. As. Soc. of Bengal 448), Shāhī sās of Burhānpūr (Mafīlūzat, ms. As. Soc. of Bengal 462), ‘Abd al-Rahmān of Lucknow (Anvar al-Rahmān, lith. Lucknow 1287/1870-1), and Shāh ‘Abd al-‘Azīz of Dihlī (Mafīlūzat-i ‘Azīzī, lith. Meerut 1514/1896-7). This literature supplies background information about the intellectual and social crisis in a period of transition. For example, the Anvar al-Rahmān throws invaluable light on the decadent culture of Awadh [q.v.], and the utterances of Shāh ‘Abd al-‘Azīz reveal reaction and response to Western culture. In Najī’ al-sāliḥīn (conversations of Shāh Sulaymān of Taunsa, Lāhor 1285) the socio-religious scenario of the Pandjāb before 1857 is seen in all its details.

In the early decades of the 20th century, Mawlānā Aḥṣaf ‘Abbās of Thana Bawānā made effective use of the mafīlūzī medium in propagating his teachings, but his orations are more in the nature of nawa‘īz (sermons) than mafīlūzī (talk in talk). In short, no study of Sūfism as a popular movement in India is possible without an intensive and critical use of the mafīlūzī literature.

MALKOČ-OGHULLARI, a line of Ottoman raiders from Bosnia who were active from the late 14th to the 17th centuries.

The origin of the name Malkoč is unclear. The suggestions that it derived from the Greek Markos or Serbian Marković are not satisfactory. The Malkoč-oghullari were probably Christian converts to Islam. A Malkoč is apparently first mentioned in the Short chronicle of Ioannina (ca. 1400) in connection with a war between two Epirot lords, perhaps in 1388-9. Murād I supposedly sent Malkoč from Thessaloniki/Sēlānīk [q.v.] to help one of them, in the event, successfully. The first Ottoman chronicler to mention the name, Negīr (d. before 1520), seemingly refers to the same person as commander of 1,000 archers on the right wing of the Ottoman army at the Battle of Kosovo [see koso ws] (June 1389). He may have also participated in the Battle of Nicopòlis (1395). Later, Malkoč appears as the commander (beg) of Stūvā. He was captured by Timūr in 1402 but was subsequently sent as a messenger to Bāyēzdī I.

The family held lands in northern Bosnia at the time of Mehmed II (second reign, 1451-81). They were given land there as march bogs. The most renowned member of the line was Bālī Bega Malkoč-oghlu, who in 1444 fought the Hungarians under John Hunyádī outside Varna but fled the field. In 1462, he commanded the right wing of the army of Mehmed II against Vlad Tepes of Wallachia, and during the next decade was the provincial military chief (sandākī bog) of Smederovo in Serbia, burning the Croatian city of Varazdīn in 1474. In 1475-6, he was the sandākī bog of Bosnia, and in 1478, he led 3,000 raiders (ākūnī [q.v.]) before Stucari/Ishkodra [q.v.] in Albania. The following year he led another large force of raiders into Hungary and Transylvania. He became the governor of Siliśtria in the 1490s, raiding Ak Kirmān in 1496 and in 1498 twice raiding Poland and threatening Krakow. He had three sons, two of whom were killed at Čaǔdrān [q.v.] in 1514, whilst the third became sandākī bog of Kilia near the mouth of the Danube.

Subsequently, in the early 16th century, we hear of Kara ᪦mān Beg Malkoč-oghlu as a leading landholder in Bosnia. The last known member of the dynasty was Yaww ‘Āli Ṭaства, governor of Egypt, who became Grand Vizier in 1603 and died the following year at Belgrade. After this, the family seems to have lost its power and influence.

MAMLÜKS

(iii) ART AND ARCHITECTURE

(a) Architecture

Within the history of Islamic art, the architecture of the Mamluk period (648-922/1250-1517) occupied an intermediary position between what might be termed the early period predating the Mongol invasion and the later imperial arts of the Timūrids, Şafāwīds, Ottomans and Mughals. Unlike its Timūrid counterpart, with which it is partly contemporary, Mamlūk architecture did not substantially impact on the later history of Islamic art once Egypt and Syria had become provinces of the Ottoman Empire. It lingered on in a reduced scale in Ottoman Egypt, until it was revived in modern times as a manifestation of a national style of mosque architecture.

Apart from the prestige accruing from their victories over the Mongols and the Crusaders, the Mamlūks were celebrated as guardians and patrons of orthodox Islam, an image they fostered by sponsoring religious foundations and creating centres of scholarship and Sūfī activities and other philanthropic institutions. The sheer number of mosques, masābars and shrākhs which they established in Cairo proved without parallel in the Muslim world at the time, and is even believed to have exceeded the genuine requirements of the population. All the while remaining careful to cultivate the exclusive character of their ruling aristocracy, one based on their military slave origins, the Mamlūks directed their patronage at the man in the street. Instead of promoting an inward-looking...
court life, their chief concern was to obtain the enduring support of the religious establishment. The Mamlūk sultans ruled their capital in a very direct manner, involving themselves closely in the minutiae of religious and social policy. Sultans and amirs themselves inspected monuments during the construction phase and, as supreme overseers of the awqaf, ensured the maintenance of the buildings of their predecessors.

Mamlūk patronage was essentially religious, and one of its most significant aspects lay in the architecture and in the decorative arts which it helped to foster. Moreover, urban development was a major concern of the Mamlūks and the motivation behind the intense building activity for which they became responsible in Cairo. Since sultans and amirs incorporated their own lavish mausoleums within religious foundations, thereby setting up memorials for themselves in their capital, Cairo as a whole soon became an vast arena for Mamlūk art patronage. Most of the Mamlūk architectural legacy in Cairo was created by such sultans and amirs, and only to a lesser extent by local dignitaries.

Although the Mamlūk ruled over a territory including Egypt, Greater Syria and the Hijāz, Mamlūk architectural identity is mainly discernible in Cairo. Even more decidedly than under other Islamic regimes, the metropolitan style of religious architecture rarely re-occurs outside the capital. The rulers' direct involvement in the building activity of the province of Egypt was confined to infrastructures, fortifications and commercial buildings, leaving the foundation of mosques and colleges to the governors and the local notables. The scarcity of significant royal mosques in the provinces accounts for a discrepancy in religious architectural style between the capital and the outlying regions. Religious architecture in Syria and the Hijāz kept faith on the whole with the predominant regional building tradition, as was the case of the Egyptian province itself, where the cities of Kūf and Alexandria, in spite of their economic importance, retained a provincial type of architecture. Occasional mutual influences between Cairo and Syria were confined to decorative motifs, and not building architecture generally. The builders who erected the imperial mosques in Cairo were rarely employed beyond the confines of the capital. The exception confirming this rule is that of a late-9th/15th century initiative by Sultan Kābīrī, who is reported by chronicles to have sent entire teams of craftsmen from Cairo to Jerusalem, Mecca and Medina. These reports themselves attest the singularity of this initiative. Indeed, waʻaf descriptions of his madrasa in Jerusalem and Medina, as well as the remnants of his mausoleum in Jerusalem, confirm that such patronage remained exceptional.

Moreover, the enormous quantitative discrepancy between Mamlūk architecture in Cairo and in Syrian cities, as well as the supremacy of the metropolitan religious foundations which functioned as the intellectual centres of the Mamlūk state, contributed to the stylistic singularity of Cairo-Mamlūk architecture. With a few exceptions, such as the buildings of Tankiz al-Nāsirī in Jerusalem (Burgoyne 1987, 223-48), urban schemes do not seem to have been a major concern of Mamlūk patrons in Syrian cities.

The evolution of Mamlūk architecture in Cairo shows an increasing tendency to adapt and adjust the layout of the buildings to the urban environment rather than to impose a large-scale or symmetrical architecture on the city. The portal, minaret and mausoleum dome were assigned a location that best responded to the specific aesthetic needs of the site rather than being forced to conform to a preconceived canon. A major factor in the architectural design was the founder's mausoleum dome, which was assured maximum visibility both through its location in the building and an increasingly lofty exterior transitional zone between the drum and dome (Kessler 1972; L. Ali Ibrahim 1975; and see KUBBA). This increased visibility required the builder to adjust both layout and architecture to the site. The patrons' challenge was to balance the status-enhancing placement of the mausoleum to the street with a juxtaposition with the mosque sanctuary. If the latter requirement could not be ensured because of the location, the preference was to place the mausoleum on the street side. In the city centre, royal foundations built round a courtyard were preferably located to the west side of the street so that the south-east, Mecca-oriented sanctuary could be on the street side. This allowed the mausoleum to lie adjacent to the sanctuary and overlook the street at the same time. Like their mosques, Mamlūk and l ikhānī) were built along the axis of the orientation towards Mecca, as were the mausoleums which, with rare exceptions, included a mihrāb (Kessler 1984). Owing to the aforementioned constraints, it often transpired that the orientation of the mausoleum's mihrāb diverged from that of the mausoleum. Unlike in Syria, the minaret in Cairo was to be found not only in Friday mosques but in madrasas, l ikhānī and minor oratories as well.

This interaction with the urban fabric, together with the pre-eminence of the metropolitan religious institutions housing Mamlūk mausoleums, created an architecture exclusively suited to Cairo. Furthermore, the overriding focus of Mamlūk monumental patronage in Cairo was in fact a response to the historical situation. It should be remembered that the history of Mamlūk Cairo begins at the same time as the fall of Bagdad from where Baybars transferred the Aibābī (al- and Ayūbid periods. Furthermore, the inclusion of Syria and territories as far north as Cilicia, the migration of craftsmen escaping the Mongol invasions and others who came from al-Andalus, as well as the contacts with the Ikhānī and with Christian kingdoms, introduced international features into the arts of the 7th-8th/13th-14th centuries.

Like any other architecture, that of the Mamlūks was based on that of its predecessors; and as such it inherited architectural devices and decorative techniques from the Fatimid and Ayūbid periods. Far more monuments were erected than during the Ayūbid era, however, and over a much longer period of time. Already al-Zāhir Baybars waived the Shī‘ī rule applied by his predecessors which allowed only one Friday mosque to each agglomeration. Moreover, the inclusion of Syria and territories as far north as Cilicia, the migration of craftsmen escaping the Mongol invasions and others who came from al-Andalus, as well as the contacts with the Ikhānī and with Christian kingdoms, introduced international features into the arts of the 7th-8th/13th-14th centuries.

A Religious architecture in Cairo

(i) The Bahri period

From Shaykār al-Durr al-Durr to al-Zāhir Baybars. The first building that can be securely attributed to the Mamlūk era is the funerary madrasa of Shaykār al-Durr [q.v.], the widow of the last Ayūbid sultan al-Ṣāliḥ Nadīm al-Dīn Ayyūb, of which only the mausoleum is today extant. It was built in 648/1250 in the cemetery of Sayyida Nafṣa north of Fustāt [q.v.], as part of a complex that included a palace, a hamam, and gardens.
In the same year, the short-lived sultana also added a mausoleum to her husband’s madrasa in the heart of the Fāṭimid al-Kāhirah, thus bringing to the city a tradition of princely funerary architecture which subsequently became a significant feature of Mamlūk Cairo (Creswell 1959, ii, 135f; Behrens-Abouseif 1983). The profile of the mausoleum dome and its stucco decoration remain faithful to the tradition of the Ayyūbīd period.

The madrasa of al-Mu‘izz Aybak, Shādjar al-Durr’s second husband and her successor on the Mamlūk throne, was built in 654/1256-7 in the commercial centre of Fustāṭ (al-Makrīzī, Sulāk, iv, 302); it seems to have been part of an urban project which integrated pre-existing commercial structures. As it is not included in al-Makrīzī’s Khitat, it must have disappeared with the decline of Fustāṭ as al-Kāhirah took over as Egypt’s definitive capital during the 8th/14th century. It was the first and, indeed, only royal Mamlūk foundation within the city of Fustāṭ.

Sultan al-Zahir Baybars I’s [q.v.] first religious foundation—a madrasa next to that of his master al-Salih Naṣṣūm al-Dīn—was built in al-Kāhirah in 660/2-1262-3. The building itself, which was demolished in the last century, is reported to have consisted of four iwāms built around a courtyard to accommodate the four maqābirs of Islamic law. It possessed no mau-soleum. Nineteenth-century drawings and paintings convey some idea of the former exterior. The portal appeared with the decline of Fustāṭ as al-Kāhirah took over as Egypt’s definitive capital during the 8th/14th century. It was the first and, indeed, only royal Mamlūk foundation within the city of Fustāṭ.

When al-Zahir Baybars built his monumental mosque on the site of his polo-ground in the northern outskirts of Husaynīya (665-7/1264-5), it was the first Friday mosque to be founded in the Egyptian capital for some 150 years. The mosque, with its pointed arches and monumental entryways, contains references to the Fāṭimid mosque of al-Hākim. The major innovation and the most spectacular feature of the building was the size of the wooden dome over the mihrāb, which covers the maqābirs of nine boys and is borne by piers. The space between the courtyard and the domed zone is furthermore emphasised by a transept running perpendicular to the arcades of the sanctuary. Creswell maintains that the dome was influ-enced by the Artūkīd mosque of Mayāfūrīkīn [q.v.] built in the 6th/12th century. The building materials for Baybars’ mosque had been seized as spoilia from Crusader monuments during Baybars’ triumphal campaign in Yaffa. The mosque was already falling into ru in during the mediaeval period (Creswell, 1959, ii, 142ff).

The mausoleum is one of the most lavishly deco-rated monuments of mediaeval Cairo, displaying the entire repertoire of techniques of that time: carved and painted wood, stucco, inlaid and carved marble as well as, in the mihrāb, conch-glass mosaic. The hospital, no longer extant, was not visible from the street; it is described in its waqf deed as a lavish construc-tion built in two perpendicular axes around a court-yard (see Herz’s plan, in Creswell 1959, ii, 207). The plan of the mausoleum and the massive shape of the minaret of Kalawun remained unique in Cairene architecture.

In the cemetery of Sayyida Nafisa are the remains of a funerary madrasa attributed to Fāṭima Khātūn (682-3/1284-5), a wife of Kalāwūn. Today only the funerary chamber with the gateway and the first story of the rectangular minaret are extant. A photograph published by E. Dietz (Kunst der islamischen Völker, Munich 1915) shows that this madrasa had arched recesses with the same triple-window composition that occurs on Kalāwūn’s façade. Next to it, Kalāwūn’s son, al-Ashraf Khalīl, a ruler who left no architec-tural work in the city centre, built his own funerary madrasa of which only the mausoleum is extant (687/1288). The three domes of Kalāwūn, his wife and his son Khalīl, have in common a high octago-nal drum with windows set in recessed arches, and an oval profile, whereas the interior treatment of the transitional zones is different in each case (Creswell 1959, ii, 180-1, 214-15; Meinecke 1992, i, 42ff.).

Al-Naṣir Muhammad b. Kalāwūn [q.v.] was the greatest builder of the Bahri Mamlūk sultans. His long reign (693-741/1293-1341), interrupted by two interim pe-rods (694-8/1294-90 and 708-1309) coincided with a period of relative peace and prosperity which was also the most fruitful for architectural achievement. Al-Naṣir encouraged his amīrs to build mosques and palaces not only in the city itself but also in the out-skirts on new land added to Cairo by the receding of the course of the Nile. Al-Naṣir’s second reign was already displaying the versatility characteristic of the architecture of the 8th/14th century (Meinecke-Berg 1977, J.A. Williams 1984; al-Harithy 2000).
In 703/1304, al-Nāṣir Muhammad completed the madrasa next to his father’s during the first interval of his reign by Sultan Lajīn [729/1328-9], which also included the founder’s mausoleum, has a irregular configuration (Karim 2000). The Friday mosque of Almuhbūgū al-Mardānī (739/1340-9), which in principle follows the plan of al-Nāṣir’s mosque in the Citadel with three axial entrances and a large dome above the miḥnāh, has a corner of its sanctuary cut off to follow a bend of the street. At the mosque of Aṣsunkūr (747/1346-7), the façade is not parallel to the kibla wall but instead projects with the minaret out into the street. The minaret, originally with four instead of the usual three stories, could thus announce the mosque from an even greater distance (Behrens-Abouseif 1983, Minarets, 92-3). The heavily damaged interior of the mosque is characterised by cross-vaulted bays carried by piers, indicating Syrian influence (Meinecke 1973).

The funerary mosque (750/1349) of the amīr Shaykhū is also laid out according to an irregular plan. Together with Shaykhū’s great 1 khānkhā 6 built six years later across the street (757/1355), it forms an urban composition embracing the Šāḥība street with two symmetrical minarets and two similar portals. The khānkhā has only the sanctuary with the mihrab or hypostyle plan, while living units occupy the other sides of the courtyard. The enormous dwelling compound behind the prayer hall is the only one of its kind extant in Cairo. The use of the hypostyle sanctuary of traditional mosques in a khānkhā had occurred already at the foundation of the amīr Kawsūn (736/1335), built in the cemetery to the southeast of the Citadel. Today, only a stone minaret and a mausoleum dome stand. A reconstruction, however, shows that it had a double mausoleum on each side of the hypostyle sanctuary with the dwelling units most likely occupying the other sides of the court (Ali Ibrahim 1974).

The idea of building a religious complex on both sides of a street had been applied previously by the Amīr Bāshṭāk (736/1336) with a khānkhā connected to a mosque with a bridge; only a monumental minaret is extant.

The late 8th/14th century period. Despite the political decline under the sons of al-Nāṣir Muḥammad and the deveneration brought about by the Black Death (749/1348), the second half of the 8th/14th century was very productive and creative in terms of an architecture that continued to integrate exotic foreign patterns.

The madrasa of Sarghitmīsh (757/1356) displays the unusual combination of a four-iwān plan with a dome over the main iwān. The mausoleum dome projects boldly onto the street across the courtyard. The two domes are unexpected on the Caerene skyline; bulbous and with a high drum, their profile recalls Timūrid architecture, which, however, they pre-date. The mausoleum dome has a double shell, while that of the prayer hall was rebuilt with only one. Similarly recalling Timūrid dome profiles are the two ribbed onion-shaped mosaic domes of the anonymous mausoleum known as Sultāniyya, which also have a double shell. The building has been assigned to the 750-60s/1350-60s. Despite the similarities, a direct influence from Samarkand can be excluded on chronological grounds, but a common Iranian prototype from Western Persia or Iraq must surely have influenced the Samarkand and the Cairo domes (Meinecke 1976).

It is paradoxical that the mosque of Sultan Ḥasan, the most monumental of Mamluk mosques and even of all mediaeval mosques at that time, was founded in the decade following the deprivations of the Black Death. Although it took from 757/1356 to 764/1362...
to build, its decoration was never completed. The funerary complex which includes a madrasa for the four madhhab is the first Mamluk teaching institution for the funerary complex which includes a madrasa-
khanqah-monumental, multifunctional complex of madrasa-khanqah-mosque (821/1418) possesses a similar layout to that of Faradj. This mosque became a Cairo landmark because of its twin minarets erected on top of the Fatimid tower of the Bab Zuwayla, which bear the only builder's signature to be found in Mamluk architecture. The mosque also had a third minaret at the northeastern entrance.

The reign of Barsbay (825-41/1422-38 [g.v.]) introduced mausoleum domes with carved star patterns. His funerary khanqah (835/1432) in the northern cemetery includes three star-carved mausoleum domes which exemplify the progress made in dealing with the difficult task of adapting a geometrical symmetrical design to a domical surface (Kessler 1976). The unique architecture of this khanqah demonstrates that the cemetry at that time had become an urban environment necessitating other than purely symmetrical layouts. Instead of being built around an inner courtyard, the elements of the complex are juxtaposed along the road. The mosque has a lateral format with the mausoleum chamber juxtaposed to it, occupying the same width and similarly overlooking the road. Further south is the khanqah proper with the living quarters. Other
structures were built on the opposite side of the road, including a one-dome za'ayna.  

Late Circassian (mid-9th/15th century to 923/1517).  

Although the hypostyle courtyard mosque never totally disappeared, in the 9th/15th century, Friday mosques were increasingly built without an open courtyard (e.g. that of Kansawh al-Ghawri, adopting instead the plan of the ka'ba or reception hall current in Cairene residential architecture since pre-Mamluk times. Already, the 8th/14th century had produced small covered mosques with an irregular plan which included iwans around a covered courtyard, the adoption of the ka'ba, however, allowed the building of small covered mosques of a standard configuration. A major factor in the disappearance of the courtyard is the fusion of the functions of the khânkâh with the madrasa and the Friday mosque; at the same time the abandonment of the original residential function of the madrasa and the khânkâh rendered the cells around the courtyard superfluous (Behrens-Abouseif 1985).

The funerary mosque of Kidjmas al-Ishaki (879/1474) on Salfba Street and that of the sabil-maktab of Ya'kub Shâh al-Mihmandar (901/1495-6) in Cairo and that of Kayitbay in the hamam of Jerusalem.  

In the late Mamluk period, the forms of portals, minarets, and domes were standardised, displaying a variety in their carved decoration, however, and reaching the peak of refinement at Sultan Kayitbay's mausoleum (877/1472-4).

Stucco decoration disappears from late Mamluk architecture except for a short-lived revival in the reign of Kayitbay, namely at the Dome of Yashbak, albeit in a very different style. Stone-carving is more extensively used than in the past, and new adorns also mihrab conchs. Groin vaults become fashionable in the late 9th/15th and early 10th/16th century, also characterising portal vaults.  

B. Residential and domestic architecture in Cairo, 1250-1517  

Mamluk residential architecture [see K:\A; RAB] is less well preserved than religious (see Graen et al. 1982). Half-a-dozen ka'tas and the vestiges of four monumental palaces, those of Alîn Aşk, Kaswûn, Başţâh and Tâz, date from the 13th/14th period. These great princely residences were continuously restored and remodelled, making it difficult to assess their original form. Our knowledge of the different types of residential architecture has to rely on the enormous resources of waṣf documents.  

The courtyard of Cairene residences, to which the main entrance leads, is generally surrounded by stables and service rooms. Cairene residential architecture was not "inward-facing" in the sense that it overlooked the courtyard and remained blind to the street. The courtyard was not the centre of the house, as in Syrian or North African constructions, but simply a semi-private space. There was a general preference for giving the main rooms a view over the street or the available scenery, depending on the site. There could be more than one courtyard according to the size of the dâr, and in large mansions a courtyard could fulfil the function of a garden.  

The main reception hall or ka'ba lay on the first floor, occupying the height of several storages where the west side of the street face a monumental mausoleum, as deep as the kîbla ka'ba, situated on the other side of the street and attached to a khânkâh without dwellings and a sabil-mukab with three façades on to the street. A wooden roof covered the street, which widened to the north into a small piazza with a small covered sabil (Behrens-Abouseif 2002).  

Although its layout is comparable to that of Kayitbay, the large funerary khânkâh of the amir Kansawh in the northern cemetery (911-13/1506-7) differs by its substantial proportions that make it one of the most monumental constructions in all Mamluk architecture.  

In the Circassian period, the harmonious juxtaposition of minaret and mausoleum dome continues to characterise the silhouette of funerary foundations. The increasing number of foundations of sultans and amirs in the northern cemetery led to the urbanisation of its architecture that adopted the same street-oriented aesthetic criteria as in the city centre. This period maintained the tradition established in the late 8th/14th century of attaching to the religious foundation a sabil-mukab, a structure consisting in a combination of fountain house with a primary school; the double structure was placed at a corner with the sabil at ground level surmounted by the mukab. During the reign of Kayitbay, free-standing sabil-mukabs were built, a tradition which was taken over in the Ottoman period. The reign of Kayitbay produced the domed sabil recalling funerary architecture, such as the sabil of Yâkîb Shâh al-Mihmandar (901/1495-6) in Cairo and that of Kayitbay in the hamam of Jerusalem.  

In the late Mamluk period, the forms of portals, minarets, and domes were standardised, displaying a variety in their carved decoration, however, and reaching the peak of refinement at Sultan Kayitbay's mausoleum (877/1472-4).

the smaller units or apartments (riwak [q.v.]) were located. In the 9th/15th century, the mak'ad becomes a salient feature of residential architecture. It is a loggia facing north and overlooking the courtyard on the first storey. Its origin seems to be associated with the architecture of 8th/14th century principally suqs. The 9th/15th century presents another category of residences of less monumental, middle-size type of dwellings, such as the house of Zaynab Khâtûn.

The palaces of the Citadel, which had undergone continuous restoration and refurbishment work by all Mamlûk sultans, are no longer extant. The most remarkable were the iwan kabîr and the kay qub built by al-Nâsîr Muhammad and maintained by all subsequent sultans (see Tavil, S., 1982, 41 ff.; Behrens-Abouseif 1985; Rabbi Bit 1995). The first was a basilical construction of gigantic dimensions employing Pharaonic columns. It had a ceramic green dome, as did the Sultan’s mosque nearby.

As is to be expected, the decorative repertoire of residential architecture did not differ particularly from that of religious monuments. The royal palaces of the early Bahrij period, however, did make use of murals depicting figures.

C. Religious architecture in Syria

As mentioned above, Mamlûk architecture of Greater Syria, including Palestine, followed regional schools autonomous from the capital, hence need to be dealt with separately. (The following brief summary is based on Meinecke for Aleppo and Damascus and Burgoyne for Jerusalem.) Whereas Cairene builders emphasised the verticality of their monuments with recessed panels around the windows, their Damascus colleagues stressed the horizontal configuration of their buildings with stepped (âblak) masonry as the essential exterior ornamental device. The use of recesses remained exceptional. In Damascus, the madrasa with the mausoleum of al-Zâhir Baybars built by his son Baraka Khân (676/1277-9) continues Ayyûbid traditions, with its four unequal-sized halls overlooking a courtyard; the prayer hall is connected to the domed funerary chamber. It is entirely decorated in glass mosaic, emulating the mosaics of the Great Mosque of Damascus (Meinecke 1992, i, 37-6). More characteristic, however, was a type of funerary foundations without a courtyard featuring two equal domes placed symmetrically on either side of the entrance, one of them with a mukarnas to be used as a gathering and prayer hall, the other for funerary purposes. The madrasa of Fâridûn al-Aqâjâmî (744/1343-4), that recalls Cairene architecture with its four iwans around a courtyard, was a special case. In the 9th/15th century, madrasas with two axial iwans across a courtyard were constructed; plain Syrian madrasas, unlike the Cairene, were mostly built without a minaret, and Syrian minarets themselves were essentially rectangular, with a stone balcony. Whereas octagonal shafts were also built throughout the Mamlûk period in Aleppo, in Damascus they appear only in the 9th/15th century. The Syrian dome profile remained close to the Syrian minarets themselves were essentially rectangular. The only mukarnas built by a Mamlûk sultan is the Asghafîyya started by Sultan Khâshqâdam [q.v.] and rebuilt under the auspices of Kayîbây by Cairene craftsmen, hence its metropolitan style (Walls 1990).

In Jerusalem, unlike in other Syrian cities, minarets were attached to madrasas and âblakât; six extant ones are attributed to the Mamlûk period.

The city of Tripoli has a number of well preserved handsome Mamlûk monuments founded after Sultan Kayîbây's return from the Crusaders in 688/1289. Throughout the following century, the city witnessed an intense building activity (Salâm-Liéb 1983). Al-Ashraf Khâtûn, the son of Kâlûwân, founded the Great Mosque which was completed by his successor al-Nâsîr Muhammad in 714/1314-15. The architecture of the city is characterised by its masonry domes and vaulted spaces. In mosques and madrasas, the larger dome is often not the one over the mihrâb, but the central dome that covers the courtyard space (Djami of Taynâl, 1336; Madrasa of al-Brûtîs, 1298). The portals display half-domes on elaborate mukarnas combined with carvings and âblak masonry. Syrian madrasas, unlike those in Cairo, often lack living units.

An interesting feature of Mamlûk religious architecture in Syria is the carving of foundation deeds (wakfiyya) on the external wall of the monument.

Bibliography: 1. Source material. For the study of Mamlûk architecture, beside the monuments themselves and their epigraph (see van Berchem), an important number of wakf documents are of prime importance to the study of the buildings in their original form and function as well as their urban context. The significance of al-Makrîzî's Kitâb does not need to be emphasised, as well as Ibn Dûkmâk's K. al-Intisâr li-waṣâil sâd al-imâyr, Bûlûk 1314/1896-7; see S. Deneux, Découvrir le Caire. Paris 1983, which gives a description of Cairo and its monuments in the 11th/17th century in the tradition of al-Makrîzî's Kitâb, includes a valuable account. The Kütet al-ta'âsîfîyya of 'Ali Mûbârak (1888) continues, in the tradition of al-Makrîzî, the enumeration and description of Cairo’s monuments down to his own time, often including information from wakf documents.

A comprehensive collection of plans of Mamlûk monuments in Egypt and Syria is to be found in the first volume of Meinecke’s Mamlûkische Architektur (1992); the second volume lists all monuments known from the sources or from physical evidence to have been constructed in the Mamlûk period.
workshops were in the first place set up to serve the imperial arts of the Muslim world as far as the decimal princely style. The Mamluk rulers were renowned as great book-lovers; the libraries which they sponsored were primarily part and parcel of their principal titles combined with blazons. During this period chinoiserie floral patterns were integrated into the Mamluk floral repertoire, along with the occasional Chinese dragon or bird motif. Among the objects produced were candlesticks, incense-burners, and courtly themes (hunting and musicians) combined with blazons. During this period chinoiserie floral patterns were integrated into the Mamluk floral repertoire, along with the occasional Chinese dragon or bird motif. Among the objects produced were candlesticks, incense-burners, Kurrān boxes with Qur’ānic inscriptions, trays and tray bases, pen-boxes, ewers, bowls and basins. The shapes tended to vary little; Islamic metalworkers in general were more interested in surfaces than in creating new forms. The Mamluks also produced various types of suspended lighting implements unparalleled in the Muslim world, most of which are in the Islamic Museum in Cairo. There is a group of large open-work polycandelons (tannūrs) in cast bronze. Among them those bearing names of Amīr Kawān, Sultan Hasan and Sultan Kānsaw al-Ghawrī are remarkable. There are also polycandelons of pierced sheet-brass of the 9th/15th century. Composite lamps made of sheet-brass consisted of a tray, into which the glass lamps were inserted, surmounted by a spherical shade. The shade is densely pierced so as to form a translucent background against which inscriptions naming a sultan or an amīr stand out. Another group of lamps made of pierced sheet-brass was made in the shape of a truncated hexagonal pyramid, the base being the tray; it was produced throughout the entire Mamluk period. Some metal lamps are signed but none has the Kurrānic Verse of the Light which is so current on glass mosque lamps. Very few metal art objects are known to have been produced between the last quarter of the 8th/14th century and the late 860-early 870s/1460s. With the revival of the production of metalware, a variety of new and disparate styles appear, without the monumental titular inscriptions characteristic of their Bahri predecessors. One group consists of dishes, bowls, basins, and lunch boxes made of tinned copper, and engraved with a series of interlocking bands forming cartouches and medallions filled with alternating inscriptions, knotted motifs and tight scrolls; the inscriptions are mostly benedictory verses, though princely names occasionally occur. This group, which lacks the calligraphic aesthetics of the earlier period, is indebted to Western Persian metalwork. Another group consists of bowls with a rounded profile; their surface is plain except for a triple engraved band near the rim with inscriptions of a somewhat vernacular style with poetry and homilies. This group, too, harks back to some very similar Persian prototypes from 8th/14th century Shīrāz. A group of spherical hand-warmer, lidded bowls and ewers with predominantly knotted and braided motives are attributed to late Mamluk Syria. Some of the vessels combine a Mamluk decoration with a European vessel, which indicate that objects were sent from Europe, mainly Italy, so as to be decorated in Egypt or Syria. The group formerly known as Veneto-Saracenic and wrongly attributed to a Muslim workshop in Venice, has been now convincingly attributed to a late Mamluk production (J. Allan 1986). The group differs strongly from mainstream Mamluk metalware; their decoration is minutely engraved with unmatched refinement, recalling some Timurid jugs, with new forms of scrolls and floral patterns against which silver-inlaid curved lines interlock to form neo-arabesques or lobed cartouches. The most famous of these vessels, many of which seem to possess European bodies, are signed by Mu’allim Mahmūd al-Kurdi, one of about half-a-dozen identified craftsmen.
There is also a group of high-quality, luxurious basins with shallow facetted forms mentioning the name of Sultan Kayitbay. The facets and the relief patterns also point to Persian influence. A magnificient piece in Istanbul is inlaid with silver and gold. J. Bloom, A Mamluk basin in the L.A. Mayer Memorial Institute, in Jerusalem Museum Bull, of the Fac. of Oriental Studies, Cairo XXIX (1995), 1-21; K. Ward, The “bap- tistère de St Louis”, a Mamluk basin made for export to Europe, in Ch. Burnett and A. Contadini (eds.), Islam and the Italian Renaissance, London 1999, 112-23.

B. Ceramics

Mamluk pottery can be divided into seven decorative and technical categories: sgrafito, slip-painted, underglaze-painted, overglaze-painted lustre, celadon imitations, unglazed moulded and unglaed painted ware.

The Mamluks both imported and also imitated Chinese celadon ware, and it is this imitation product, comprising a buff body with copper or red glaze in Chinese-inspired forms, that forms the largest group of wares unearthed at Fustat. Sgraffito forms the most characteristic group of Mamluk pottery. It is made of a coarse red clay, the design being scratched through the slip to reveal red lines from underneath a brownish or greyish glaze. The forms are related to those of overglaze-painted, underglaze-painted, celadon Chinese-inspired forms, that forms the largest group comprising a buff body with copper or red glaze in blue, green and turquoise under a transparent glaze. Their presentations were also found. As mentioned above, craftsmen from Tabriz worked in 9th/15th century Cairo in the production of ceramic for architectural decoration.

In the 9th/15th century, a new style of underglaze-painted ceramic was developed, imitating the Chinese Ming blue-and-white wares imported in large quantities to the Mamluk lands. The vessels of this period very often bear craftsmen’s signatures, which show that the same workshop could turn out a variety of styles. Some nishas of craftsmen (al-farmuz, al-tawri) point to a Persian connection. In the early 9th/15th century, ceramic revetment was used in Syria and in Egypt in the form of underglaze-painted tiles decorated similarly to contemporary vessels. The Mosque of Qhars al-Din al-Tawrzi in Damascus (826/1424) contains a tile-clad mihrab signed by Qhaybi al-Tawrzi, which also produced vessels and tiles in Cairo. Epigraphic blazons of supreme workmanship, inscribed with the name of Sultan Kayitbay set in a tympanum with blue-and-white floral decoration patterns, used to decorate a building of this sultan. The drum of al-Ghawr’s mausoleum dome, itself once covered with blue tiles, also presents a blue-black and white underglaze-painted inscription along its drum (Prost 1916, 114). The mausoleum of the amir Sulayman dated 951/1544 is adorned with a similar inscription on its drum; the tympanums of its exterior door and windows include ceramic tiles with underglaze painted epigraphic and floral patterns.

Although lustre-painted ware is generally attributed to Syria, wasters found at Fustat confirm the existence of Egyptian production (A. Yusuf 2000). Mamluk lustre-painted ware which was exported to Europe is characterised by its beautiful golden lustre in blue, turquoise and brownish red.

Alexandria by Pierre de Lusignan of Cyprus in 1365—the quality and extent of enamelled decoration. Certain produced in the 770s/1370s show a marked decline in the fact that the few objects known to have been pro-
duced had repercussions on its glass production and explain what kind of glass was produced there. The sack of
Damascus in 803/1401 is usually considered the rea-

However, Alexandria could have been another centre of production, a weaf document of Sultan al-Nasir Muhammad (published by Muhammad Amin in his edition of Ibn Habib’s Tadhkirat al-nabih, ii, Cairo 1982, 432) refers to a glass factory in Alexandria belonging to the sultan’s weaf for his religious com-
plex at Siryūk. Unfortunately, it does not specify what kind of glass was produced there. The sack of Alexandria by Pierre de Lusignan of Cyprus in 1365 had a catastrophic effect on its economy. It may have had repercussions on its glass production and explain the fact that the few objects known to have been pro-
duced in the 770s/1370s show a marked decline in the quality and extent of enamelled decoration. Certain objects, such as beakers made for export, are not doc-
umented after the 770s/1370s. A short revival took place under Sultan Barquq, to whom about forty enamelled and gilded lamps are attributed. One should not exclude the presence of more than one centre of production. An enamelled lamp mentioning the name of Sultan Kayqubad (Wiet 1937), entirely different in style and techniques, testifies to endeavours during the artistic revival that took place under the auspices of this sultan.

Mamluk glassmakers used a variety of shapes, sometimes in highly unusual large sizes, such as mosque lamps, goblets, bowls, flasks, bottles and vases, some of which are reminiscent of metalware. The glass was white or tinted, and never of perfect clarity. An outstanding group of enamelled and gilded vessels was those made of deep-blue glass, such as the famous Cavour vase (Newby 1998). The colours of the enamel—blue, red, yellow, green, brown, white and black—were applied as a vitreous paste, along with the gold, which fused with the surface upon firing.

As in metalwork, figural representations on secular objects were used until the 8th/14th century when they were replaced by epigraphy and blazons. The patterns, drawn with hair-thin lines, are extremely intricate. The mosque lamps made for Cairene religious buildings are among the most spectacular spec-
imens of Mamluk glass; they bear a verse from the Sūra of Light (xxv, 35) around the neck; whenever a patron’s name is inscribed, it appears on the belly.

The Mamluks also produced marvered and colour-

Glass Like metalwork, Mamluk enamelled and gilded glass continued the tradition of the Ayyūbids, using the same techniques and forms. After the craft reached its apogee, the production eventually came abruptly to an end in the late 8th/14th century. Although scholars have assigned the production of enamelled and gilded glass to Syria, where the technique was born, more recent research attributes a more pro-
ponderant role in this craft to Egypt, in light of the fact that the bulk of the consumption was there and that most of the objects concerned have been found in that region (Scanlon 1998). Timur’s sack of Damascus in 803/1401 is usually considered the rea-

In conclusion, it may be said that the methods of making Mamluk glass were comparable to those used in Europe, with the same techniques and forms. After the craft reached its apogee, the production eventually came abruptly to an end in the late 8th/14th century. Although scholars have assigned the production of enamelled and gilded glass to Syria, where the technique was born, more recent research attributes a more pro-
ponderant role in this craft to Egypt, in light of the fact that the bulk of the consumption was there and that most of the objects concerned have been found in that region (Scanlon 1998). Timur’s sack of Damascus in 803/1401 is usually considered the reason for the abrupt end of this craft in Syria. How-

D. Art of the book Although little remains from the previous Fatimid and Ayyūbid periods, for the Mamluks we have a wealth of material, both religious and secular, indica-
tive of extensive book production and patronage. In fact, Mamluk book production is comparable in volume and quality with that of major contemporary centres such as Ibn Khudid Tabriz and Timurid Harāt. Many illustrated and illuminated examples survive, and we also have several original bindings.
Despite the evident connections between Kur'āns and secular books in terms of illumination and binding, for the sake of clarity they are best approached separately. As James (1992, 150) has pointed out, the particularly fine and grand Kur'āns that survive, the best dating from the 14th century and the first decade of the 15th, were made under the patronage of a sultan who then endowed them as waqf to a particular religious foundation or mosque, where they were generally reserved for ceremonial use. They are mostly in single volume form; few multi-volume Kur'āns withstand the intensive everyday use to which they were generally exposed.

One of the earliest outstanding Mamlūk Kur'āns that we possess is, however, in seven volumes (London, B.L., Add. 22,406-22,413). It dates from 705/1305-6 (Lings and Safadi 1976, nos. 66-9; James 1988, no. 1) and was copied for Sultan Baybars by Ibn al-Wāhiṣid, an outstanding calligrapher of the early 8th/14th century (al-Safādi, Wāfi, no. 1104, and Ibn Hajar al-Asqalānī, al-Durar al-Kadima, Haydarābād 1340-50/1929-32, no. 3740). The illumination was the work of three artists, Muhammad b. Muḥammad; the famous Muhammad b. ʿAbd Allāh al-Bakr, known as Sandal, who lived in Cairo at the beginning of the 8th/14th century; and his pupil Aydughdī b. ʿAbd Allāh al-Badri, through whom Sandal’s style maintained its influence until the 1330s. (see James 1988, ch. 3 for other works by these illuminators and for a discussion of the question of the Kāhānid influence; for Sandal, see Safādi, no. 4843). Although there are evident differences between their individual styles, the general consistency of design indicates that one artist, almost certainly Sandal, had overall control. As is general in Mamlūk Kur'āns, the illumination is concentrated in the frontispieces, opening pages of text and the final colophon page. Marginal ornaments in the main body of the text consist of the words ʾkaμa and ʿaqwāra in gold Kūfic over a piece of arabesque scroll. But one may also argue that illumination is projected onto the text itself, for in contrast to the normal use of naṣli in this period, its large ʿubahūn unusually written in gold letters outlined in black, makes it visually special and rich.

Another Kur'ān signed by Ṣandal as the illuminator (Dublin, Chester Beatty Library, Is 1479; see Arberry 1967, no. 59; James 1980, no. 25; James 1988, no. 3), and datable to between 704-10/1305-10, has a similar type of illumination, but with the striking addition of the use of relief. On the two carpet-like opening pages, the geometric figures of the decoration are given an impression of three-dimensionality by the fact that alternating pentagons are in relief. The equally innovatory carpet-like design consists of a central block with a geometrical formation interrupted by borders surrounded on three sides by a thick band, from which protrude thin spikes almost like the fringes of a carpet. It also occurs in combination with relief in other examples such as that dated 735/1334 and copied in Cairo by Ṣayyid al-Murattabī (Cairo, Dār al-Kutub, Kur'ān ms. 81; see Aïl 1981, no. 3, also James 1988, nos. 15-19). Both scribe and illuminator, he was responsible for a new type of Kur'ān, introduced by ca. 720/1320, which is characterised by a larger format with illumination of high quality, and in which the preferred script is muḥakkak.

From the 1330s to the 1360s, Damascus, too, was an important centre of manuscript production (for a discussion of illustrated secular manuscripts from Damascus, see below). It seems, moreover, to have been stylistically innovative, and a distinctive feature in Kur'āns of this period may have originated there (James 1992, 172-5) is the star polygon style, where the page is dominated by a large central starburst made up of symmetrically enmeshed small polygons. One such Kur'ān (London, Khalili Collection, Qu'807; see James 1992, no. 43), datable to ca. 730-40/1330-40, has a colophon (fol. 296b) stating that the scribe worked on it in the Umayyad Mosque, and there is a stylistically related Arabic translation of the Four Gospels, copied in 741/1340 for a Damascene cleric (Cairo, Coptic Museum, Ms. 90; see Simaika Pasha 1939, pls. XVIII-XX). Like several other Christian manuscripts of the period, it was illuminated in the manner of contemporary Islamic manuscripts, so that it also has other features in common with the Khalili Kur'ān, and there are another two such manuscripts with similar illumination that are also known to have been produced in Damascus, one, a Gospel in Arabic, now in Istanbul (Topkapı Sarayı Library, Ahmet III, 3519; see Leroy 1967), the other, the Epistles and Acts of the Apostles in Arabic, in St. Petersburg (Academy of Sciences, D-226; see Khalidov, in Petrosyan (ed.) 1994, no. 23). The latter was commissioned by a certain “Jakomo,” thought to have been an Italian Consul to Syria, and was copied by the monk Thomas (Ti[m]a al-mutarabābiḥ), known as Ibn al-Ṣāfī, in 742/1341 (for a list of eight manuscripts with some evidence of provenance from Damascus, see Condlini 1995, n. 8). To be noted also, from the 8th/14th century, is the diffusion of Mamlūk styles of illumination and binding from Damascus to Anatolia (see Tamndi 1991 and 2000). There are also some superbly illuminated later Mamlūk manuscripts in the star polygon style from Cairo, datable to the reign of Sultan Sha'bān II (r. 764-78/1363-76). During the latter part of his reign, however, between 770/1369 and 778/1376, an entirely new style of painting was introduced in Cairo by Ibrāhīm al-Ḥamīdī. Its most important departure was the abandonment of the preceding norm of infinite recursivity in geometric patterning, so that there could now be large blocks incorporating irregular figures. But he was also innovative with regard both to his subtle use of colour reversal and to the wider range of his palette, which was much more like that of Irāk and Persia in the first half of the 8th/14th century (Cairo, Dār al-Kutub, Kur'ān ms. 9, 10 and 15; see James 1988, nos. 31, 32, 34 and 35). This style was to be followed until the early 9th/15th century.

Abundant evidence for the arts of the book is also provided by the numerous illustrated and/or illuminated secular manuscripts that survive. They represent various literary genres, some continuing earlier traditions, as, for example, scientific manuscripts and the great literary cycles of the Makāmāt and Khālid wa-Dimna, others reflecting the particular interests of certain strata of Mamlūk society, as witnessed, for example, by the revival of the Furiṣiyya genre.

The illustrated manuscripts show a variety of pictorial sources. Several contain what may be termed “classical” elements that link them to 7th/13th century styles as exhibited, for example, in Syro-Irākī and Mamlūk manuscripts in the Bibliothèque Nationale (Arabe 6094) dated 619/1222, and thus ultimately to Byzantine models of portraying the human figure and dress. Although incomplete, the al-Harīrī Makāmāt in the British Library (Add. 7293), dated Rabi’ II 723/April 1523 allows us to see the prolongation of
this style into the Mamluk period. (For both manuscripts see Grabar 1984, no. 2, pp. 8-9 and no. 9, pp. 14-15 respectively.)

Equally noteworthy is their frequent combination with Saldjuk origin which provide links with North Dţazzır 7th/13th-century manuscripts. They affect especially the human face, which is typically round, with narrow eyes, small mouth, small nose and long hair, often with a curl in front of the ear (for lists of manuscripts with "classical" and Saldjuk influences, see Contadini 1988-9, no. 29, 40). An early Mamluk example showing strong Saldjuk influence is Ibn Buťlan رشحت دل عبادоб ('Abd al-Rahman al-Isfahâni (Ar. 898; see Grabar 1984, no. 7, 13). The pictorial repertoire also includes features of Il-Khânid origin as, for example, in a particularly striking early 8th/14th-century al-Kazwînî 'Aqâ'îb al-makhliktât, where they are combined in a masterly fashion with "classical" elements (see Carboni and Contadini 1990; for Mamlûk/Il-Khânid relationships, see Rogers 1972). But it is essentially the integration of "classical" and Saldjuk features that characterises Mamluk style, whereas the Il-Khânid element, consisting of landscape features such as large lotus flowers, recessed planes to provide depth, and the use of free brush strokes (e.g. for leaves), normally affected specific features without resulting in a similar stylistic fusion.

There were doubtless several centres of production of illustrated manuscripts, but very few colophons identify a place. However, we can at least be certain about Damascus and Cairo. Damascus again comes to the fore at the beginning of the 8th/14th century, as demonstrated by a Makâmât in the British Library (Or. 9718), which contains the name of the scribe and illuminator (fol. 53a), Ghâzî b. 'Abd al-Rahmân al-Dimashkî, who lived and worked there and died in 709/1310 (see Mayer 1942; Grabar 1984, no. 7, p. 13. For al-Dimashkî, see Ibn Ḥudâr al-Askânî 1929-32, vol. ii, p. 134).

A provenance from Damascus can also be argued for a further four illustrated manuscripts dated between 734/1334 and 755/1354 on the basis of stylistic affinity, allied to documentary evidence concerning the compiler of one of them, the Ibn Baĥrîshu' جعفر الوسيط al-Kazwînî, in San Lorenzo del Escorial dated 755/1354 (Ar. 898; see Contadini 1988-9, with bibl.). Their illustrations have very similar characteristics, not all, however, shared by other Mamlûk manuscripts, such as the solid gold background of their miniatures and the frame consisting of one or more blue lines with decorative additions. At the same time, they conform to Mamlûk norms by containing pronounced Saldjuk features and, if in differing degrees, Il-Khânid ones. Further, the illumination in all four is very similar, when not identical, to that of the Khalîl Kur'ân and the two Christian manuscripts mentioned above which also come from Damascus. This style of illumination will survive in Damascus until well into the 9th/15th century, as demonstrated by a copy of Fâhihât al-khulafâ' wa-mufdikat al-uráfîn (St. Petersburg, Academy of Sciences, C-651; see Khalidov, in Petrukhin et al. 1994, no. 32) by the Damascus Abû 'Abd Allah Ahmad b. Muhammad b. 'Arâbahâb, copied by Isâ'îlî b. ʿAbd al-Rahmân al-Ifahâni in Rabî' I 852/June 1448 under the author's supervision.

For Cairo, on the other hand, we lack direct evidence for production, although it is clear that those manuscripts that have a more "classical", conservative style might have been produced there rather than in the more innovative Damascus.

The little that survives of late Mamlûk painting exhibits a rather striking stylistic blend which also absorbs Dţazîrî, Turkmen and Ottoman influences, especially with regard to the depiction of landscape and costume. Representative examples are the late 8th/14th-century Kâfîf al-sâbrîr by Ibn Ghânîm al-Makkî (Istanbul, Suleymaniye Library, Kara Ismaîl 565; see Ettinghausen 1962, pp. 158-9), the mid-9th/15th-century Kâfîb al-Zardaka (Istanbul, University Library, inv. no. 4689; see Bittel 1996, 138), the Iskandar-nâmâ of Ahmedî datable to 872/1467-8 (Istanbul, Univ. Library, T6044; see Aul 1984) and the early 10th/16th-century Shâh-nâmâ (Istanbul, Topkapî Sarayî Library, Hazine 1319; see Zajczkowski 1965 and Atasoy 1966-8) made for Sultan Kânsaww al-Qawwârî (r. 906-22/1501-16).

(iii) Bindings

Numerous Mamlûk bindings have survived, consisting predominantly of leather with blind tooling, although often features are highlighted in gold.

There are resemblances between Mamlûk and Ottoman bindings of the 8th/14th and early 9th/15th centuries (Raby and Tanindji 1993, 7-11 and ch. 1), while at the same time 8th/14th-century examples may resemble contemporary Persian bindings, as is shown by two Kur'âns in the Chester Beatty Library in Dublin, one of ca. 746/1345, Is 1465, see James 1980, no. 33 made in Cairo, the other (dated 738/1338, Is 1470, see James 1980, no. 49) in Mâr'âqa. Both have bindings in light brown leather with a pointed star in the centre of an empty field with a scalloped decoration at its outer border, the whole decorated with blind tooling. In other examples, the central ornament is an oval medallion, and in either case related designs appear in the four corners of the field.

This type of composition was to remain important, but more examples survive of a second type in which the whole field is covered. There are examples with arabesque or floral designs, but more frequently we find strapwork forming polygonal compartments which often contained tooled knotwork motifs, with the strapwork sometimes radiating out from a central star which echoes the star polygon style of illumination.

Bindings were sometimes lined with silk, but more often the doublures were decorated with block-pressed leather. During the period of Sultan Kâyîbî (b. 872/901/1468-96), we witness an age of experimentation which includes the use of filigree for both inner and, especially, outer covers. This seems to reflect influence from Persia, where, in the 9th/15th century, filigree was already the norm. The use of filigree, together with other Mamlûk features of layout of design, were in turn to influence Italian bookbinders of the late 15th century (Holson 1989, ch. 3).

Throughout the Mamluk period, the Islamic book was manufactured in a variety of styles and settings. The earliest extant illustrated manuscripts, such as al-Qazwini's *The Wonders of Creation*, were produced in the 12th century. Later, during the 13th century, the Mamluk period saw a significant increase in the production of illustrated manuscripts. These manuscripts were produced not only in Syria but also in other parts of the Islamic world, including Egypt and Persia.

During the Mamluk period, the process of evolution of the Islamic book was reflected in the development of the book's physical form and its content. The book's layout, script, and illustration styles evolved over time, influenced by the artistic traditions of the region and the patronage of the Mamluk sultans. The Mamluk period also saw the development of new printing techniques, such as woodblock printing, which allowed for the mass production of books.

(Anna Contadini)

(iv) NUMISMATICS

While the coinage of the Mamluks was manufactured from the usual metals: gold, silver and copper, with the traditional Islamic denominational names: dinâr, dirham and fals [q.v.], it belonged to a distinctive currency family of its own which underwent a process of evolution unlike that of any other coinage series. Its 267-year history can be divided into three distinct periods that overlap one another to a greater or lesser extent.

The first period was little more than a continuation of the late Ayyûbid style of gold dinars and silver dirhams as struck by al-Salih Ayyûb. The field legend was inscribed in a circle with the mint and date formula, and it is often difficult to place and date early Bahri Mamluk dinars and dirhams. The Bahri Mamluk-book style of its own which underwent a process of evolution unlike that of any other coinage series. Its 267-year history can be divided into three distinct periods that overlap one another to a greater or lesser extent.

The Bahri Mamluk-style dinár was struck from 658/1260 until 687/1427 and the dirham from 658 until the early 800s/1400s. Both coins were beset by distinctive currency family of its own which underwent a process of evolution unlike that of any other coinage series. Its 267-year history can be divided into three distinct periods that overlap one another to a greater or lesser extent.

The second coinage type was initiated by al-Zahir Baybars, the real founder of the Bahri Mamlûk state. While the legends on his dinârs continued to be placed in a circle within a surrounding marginal legend, their calligraphy was carried out in a thinner and more refined script than previously. At the same time that the dies became wider in diameter, the flans upon which they were struck became thinner and more irregular in shape, so that large portions of the marginal legends are usually missing from the struck coins. Because these legends carried the mint and date formula, it is often difficult to place and date early Bahri Mamlûk dinârs. With the passage of time, marginal legends became smaller and less legible until they shrank away altogether and their inscriptions were incorporated into the field legends. The Bahri Mamlûk dinârs lost its original square in circle design and became a simple field legend inscribed in a circle with the mint and date around the edge in discontinuous words.

The Bahri Mamlûk-style dinâr was struck from 658/1260 until 830/1427 and the dirham from 658 until the early 800s/1400s. Both coins were beset by distinctive currency family of its own which underwent a process of evolution unlike that of any other coinage series. Its 267-year history can be divided into three distinct periods that overlap one another to a greater or lesser extent.
highly irregular weights and careless manufacture. The gold is usually regarded as no more than stamped ingots of totally random weights. The purity of the metal, however, was guaranteed by the sultan's stamp which ensured the high standard of its fineness as a trade commodity. The dirham, while less irregular in weight, was by now a simulacrum of the attractive coinages of the preceding centuries. It was manufactured from silver approximately two-thirds fine then often struck cold on irregular flans. The variety usually regarded as a full dirham weighed around three grams, but there was a second type, regarded as a fractional dirham, whose flans were cut from bars with a chisel and then stamped with dies twice or more the size of the flans so that only one or two words of the legends were visible on their surface. Another method of manufacturing flans for fractional dirhams was to pour the molten metal over a cone of charcoal immersed in a bowl of water. The spattered droplets of base silver would then be stamped and placed in circulation.

Since Mamluk gold had virtually ceased to be used in regular trade and silver was too rare to be a reliable standard of exchange, the Bahri Mamluk state was forced to rely on the copper fals as its principal coinage metal. Copper was struck from the reign of Iskandar Mihrit until the late fourteenth century with mixed weights and designs, but later, during the second reign of al-Nasir Hasan in 759/1358, the fals took on the status of an official coinage metal as the copper or trade dirham, probably due to the economic hardship caused by the Black Death in Egypt in the previous decade. As a result, enormous quantities were put into circulation, a perfect illustration of Gresham's Law, because silver became virtually unobtainable. Although these falsi "dirhams" were theoretically struck at the familiar weight of one mithkāl apiece, their metallic value was purely nominal. The mints were therefore under no compulsion to maintain their theoretical weight or to put any concerted effort into maintaining the quality of their manufacture. Thus it was that by the turn of the 8th/14th century the commercial classes of Egypt and Syria had lost all trust in their native currency and had turned, for lack of better, to the use of foreign coinages.

In the second half of the 7th/13th century, the trading states of Italy were able to introduce and maintain stable gold coinages which became the standard commercial currencies of the Mediterranean and beyond. The first of these were the Florentine and Genoese florins which appeared in 1252 (A.H. 650), followed by the Venetian ducat in 1284 (A.H. 683). All three weighed slightly over 3.50 gr, with roughly the same diameter, and were thus easily exchanged against one another. The plentiful supply of these coins and their dependable value, much like the use of the U.S. dollar in financially-troubled countries today, made them the currency of choice in Levantine trade.

The pressure for currency reform grew to the point where the Burdji Mamluk ruler Faradż ordered his ustādhdh, Sayf ad-Dīn Ilhāghā b. 'Abd Allāh al-Sālimī al-Zāhūrī, to strike new dinārs to the traditional monetary mithkāl standard alongside the stamped ingot gold. According to al-Makrīzī, this reform was initiated in A.H. 803, but the Sālimī dinārs are known only from 804 and a few from 805. While the principal coin weighed the usual 4.25 gr, multiples of two and three dinārs and fractions of half and quarters are known. This misdirected reform attempt failed utterly and left only a small handful of pieces to testify to its existence.

Faradż made a second attempt at reform in 810, although al-Makrīzī records 811, introducing the new sequin, ducat or florin-style Nāṣirī dinār. These coins, weighing 3.50 gr, were the Islamic equivalent of the Venetian ducat and were intended to supplant it in local trade. They, too, were issued concurrently with the ingot-style dinārs between 810 and 815 in the name of al-Nāṣir Faradż, the ephemeral ruler, the caliph al-Muṣṭaʿīn in 815 and al-Muʿayyad Shaykh in 815 and 816.

The rulers and the mints were clearly in a quandary over how they could keep the Mamluk gold coinage both Islamic in character and competitive in value with the ducat and could restore the silver dirham in its weight and alloy to become a reliable coinage for daily purposes. The silver reform began in 815/1412 and continued for at least the next seven years. The new coinage was struck on the dirham standard weighing 2.70 gr, with a half of 1.35 gr and a quarter of 0.67 gr. It imitated a well-known Ayyūbīd design used on the Damascus coinage of al-Ādīl Abī Bakr I, a by-word for excellence from the distant past. Then, in about 820, al-Muʿayyad Shaykh followed up his reform silver with another attempt at a mithkāl-weight gold coinage. Two dinārs are known dated 821 and 829 and a single half-dinār from 823. This attempt at silver reform, however, was soon abandoned by contemporary historians. Al-Muʿayyad Shaykh was succeeded after his death in 824/1421 by three ephemeral rulers until al-Āṣirf Barsbāy came to the throne in 825/1422. No gold of his is published dated between 825 and 829. The last ingot-style dinārs to be recorded are rare issues of his dated 829 and 830. The former year, however, witnessed the re-introduction of the 3.50 gr ducat-style coinage, a reform which brought the Mamluk lands into what became in effect an eastern Mediterranean monetary union. The new Mamluk dinār, as struck by al-Āṣirf Barsbāy, was known colloquially as the agrafti, a name which followed it wherever the denomination went, to the Ak Köyunlu, ‘Othmānīlīs and Şafawīs in the East and to the Maghribī states in North Africa.

Because the new coin was of reasonably standard weight and alloy, prices could be established by numbers of actual coins rather than by weight of metal. In this connection, it is interesting to note that many Umayyids and ‘Abbasīd dinārs originally struck on the monetary mithkāl standard have been found clipped down to the weight of the agrafti in order to enable them to pass current in trade. This convenience was also available to those who paid in silver, the most popular coin being the half-dirham or muʿayyidī, later known as the medin, a denomination which, like the agrafti, remained in use in ‘Othmānīlī lands until the early decades of the 12th/19th century.

The legends on the Mamluk coinage are divided into the religious and the secular. The religious are drawn from the Holy Qurān, the principal text being the declaration of faith, or kalima: "There is no god but God" followed by the Divine Commission "Muḥammad is the Messenger of God", sūra XLVIII, 29, and then the words of prophetic witness in whole or in part: "He sent him with the guidance and [the] faith of the truth, so that he may proclaim it above every faith even if the polytheists dislike (it)", IX, 33 or LXI, 9. This text is frequently supplemented by a phrase from III, 122, which, because of its regular use, could be characterised as the Mamluk "symbol" or motto: "For victory comes but from God". Occasionally another phrase from XI, 88, was used: "And my success [in my task] can only come from
God”. While the kalima is only found on the obverse, the supplementary phrases appear above either the obverse or reverse fields, or on both.

The reverses on the gold and silver coinage carry the royal protocol. In the first Bahri Mamluk period, the ruler’s name was simply inserted in the exceptional case of Shajjar al-Durr, Malikat al-Muslimin. This was usually followed by a labak, e.g. Nūr al-Dīn, the ruler’s name and that of his father, if of royal parentage. Rulers also placed the name of their spiritual overlord, the Abbasid caliph al-Musta‘īsī bi’llāh, on the obverse field, but after his overthrow in 656/1258 his name was removed from the legends.

The establishment of the Abbasid caliphate in Cairo by al-Zahir Baybars in 659/1261 reinforced the legitimacy of the Mamluk state by relocating and naturalising the font of honour in the Islamic world and making the caliph an officer in the Mamluk court.

The first caliph, al-Mustansir, repaid the offer of refuge by granting Baybars the double title of al-Sultān al-Malik and the honorific Kāsim Amīr al-Mu‘minīn “Partner of the Prince of the Believers”. After al-Mustansir’s early death, Baybars briefly recognised his successor al-Hakim on the Syrian coinage, but thereafter the coinage was passed on. The title Kāsim Amīr al-Mu‘minīn was also included in the royal protocols of Kālawūn, Kitbughā, Baybars II and the early coinage of Muhammad I after which it, too, ceased to be used.

The early Bahri rulers of non-regal parentage proclaimed themselves as former royal Mamluks, Baybars and Kālawūn used the nisba al-Sāliḥī (after al-Sāliḥ Ayyūb) on their coins, while Kitbughā, Lādhīn and Baybars II placed al-Mansūrī (after al-Mansūr) Kālawūn on theirs. The use of the nisba was discontinued on the accession of al-Nāṣir Muhammad I b. Kālawūn because all subsequent Bahri rulers were either his sons, grandsons or great-grandsons.

Thus the protocol of the penultimate Bahri ruler reads: al-Sultān al-Malik al-Mansūr “‘Allā” al-Dīn wa l-Dīn “‘Arif b. al-Malik al-Aṣghar Shabīb b. Husayn b. Muhammad ‘azza nasruhu. The succeeding Burdjl Mamluk rulers included their royal paternity wherever possible, but as the great majority succeeded through the consensus of the amirs or by coup d’état, the inclusion of a kanya in the royal protocol was used as a substitute for royal paternity. Thus: al-Sultān al-Malik al-Aṣghar Abu ‘l-Nāṣir Barsbāy ‘azza nasruhu or al-Sultān al-Malik Abī Salīl Khushkadam ‘azza nasruhu. Note that the protocol is followed by the pious invocation ‘azza nasruhu “may his victory be glorious” or, occasionally, ‘ājdallā ‘Allāh mukhaba—“may God perpetuate his kingly rule”. Many other Islamic dynasties made free use of these invocations to honour their rulers.

The Mamluks operated mints in both their Egyptian and Syrian possessions. Cairo, al-Qāhirah, struck coin for all rulers except for a few rebels or usurpers whose power base lay in Syria. Its principal responsibility was to coin gold and silver, while copper production only became important during the silver shortage from 759 to the end of Barkūk’s first reign in 791. The second Egyptian mint was Alexandria, al-Islāndariyya, which mainly struck gold between 659 and 693 and then again from 752 until 921. During the latter period it also participated in the ruinous production of copper dirhams.

The main Syrian mint (the second in the state) was located in Damasc, Dimashq. As might be expected, its silver and copper is very well known because silver was the more popular coinage metal in Syria, although gold is frequently found. The next in importance is Aleppo, Halab, well known for its silver and copper, with occasional gold issues. The other Syrian mints are Hamā, Hamāt, Tripoli, Tārābulus, and the recently identified Lunakia, al-Ladhiqiyā. The first two produced sporadic issues of silver, but mostly copper, while the third is known for only two silver pieces struck in the name of Muḥammad I.

All the mints were occasionally given the epithet al-mahārasa “the guarded”, while the frontier port is sometimes found on gold from Alexandria. Aleppo is also known as Madinat Halab on some of its ingot-sized gold. Because of defects in the manufacturing process, off-centre striking, weak strikes, dies too large for the flans, plus the inevitable wear and tear of heavy circulation, a very large proportion of Mamluk coins are difficult to attribute precisely and often many specimens are needed from various sources to make out the details of an individual issue.

While many of the Mamluk sultans were no more than ephemeral rulers whose presence made little or no impact on the state other than having their names recited in the kalima and inscribed on their sikkā, certain powerful rulers were acknowledged as overlords on the coinage of neighbouring states. Steven Albers has recorded these issues as follows: Bahri Mamluks, al-Nāṣir Muḥammad I: Beys of Hānīd, Antalya; local beys, ‘Alī’iyā (Alanya), Sīlihke and Bazardjik; Ėretnī, Kaysariyya and other very rare Anatolian types; al-Nāṣir Ḥasan: Artūkīd, Ānim (Diyābātīk); al-Aṣghar Shabīb II: Karamānīd, Konya and Burdjl Mamluks: al-Zāhir Barbūk: Artūkīd, Ānim, Mardin; al-Aṣghar Shabīb, Karamānīd, al-Ālī’ī, Konya, Lāranda, Beys of Alanya, ‘Alī’iyā and other rare Anatolian types, al-Aṣghar Ayūnī, Muḥāṣṣibī, Ėretnī, Zāhirī Khushkadam, Aḵ Koynūzu, Ėranjīnān and Ānim. These issues should be regarded as evidence of political submission for local use rather than as tribute payments to be sent to Cairo. One well-known flow of tribute, however, is recorded from the reign of al-Nāṣir Muḥammad I. In 722-3/1322-3 the Mamluks captured Sīs [sp.], the capital of Ėlisikan Armenia, seized its treasury and then imposed an annual tribute of 1,200,000 trams which was collected for many years thereafter. Balog observes that this treasure served to succour the chronically deficient Mamluk silver currency. Part was probably melted down and restruck, part put into circulation directly (made possible because the Mamluk dirham had no fixed weight standard itself) and part overstruck by dies bearing al-Nāṣir Muḥammad’s name. Examples of these overstruck trams of Oshin (1308-20) and Levon IV (1320-42) are regularly found in silver hoards of the period.

The calligraphy and ornamentation seen on Mamluk coins vary in quality from the superb dinars of al-Aṣghar Khalīl to the crude late Bahri dinars of al-Kāhirah and al-Islāndariyya. The die-sinkers generally employed various styles of nasārī script ranging from the well executed and highly legible to the hastily inscribed, virtually scribbled. For the later Bahri period it is easy to distinguish at a glance which coins came from Egyptian mints and which from Syria. The latter show the die-sinkers to be genuinely artistic craftsmen, while those of Egypt had only mediocre abilities.

This disparity in calligraphic standards probably does not appear during the Burdjl period so that it is often difficult to tell the difference between Egyptian and Syrian issues. It is interesting to note that on the half-dirhams issued by the later Burdjl rulers from the mint of Halab the kalima is inscribed in Turkoman Kufic. Turkish influence is also evident in the style of the many small knots of felicity, scrolls and flowerets
that ornament the dies alongside seemingly random diacritical points and monumental shaddas over the word Allah.

Much has been made by numismatists of the “heraldry” [see NAME] found on Mamlük coins. However, heraldry in the European sense is totally foreign to Arab Islamic culture, although Turkish tribal tamghas, part of the folk culture of Central Asia, made their artistic influence and utility felt at a time when most people were illiterate. Traditionally, representations of animate objects on Islamic coins had been banned from the gold and silver coinage and restricted to the copper fulus. The first major exception to this was when Chuyah al-Din Kayskhusraw II, the Saldık Sultan of Rüm, placed the lion and sun, depicting the “sun in Leo”, on the silver dirhams he had struck in Konya and Siwās between 638 and 641/1240-4. While this depiction of royal power was hastily removed after his defeat by the Mongols, it may have been the precedent seized upon by al-Zahir Baybars when he placed his badge of a prowling lion or leopard on his gold, silver and copper coinage. His son al-Saʿd Baraka Khān continued to use it during his brief reign, 676-8/1277-9, but after that the placing of a lion of gold and silver coinage was discontinued. Moreover, none was used on the long series of copper “dirhams” struck in Egypt in the second half of the 8th/14th century. A rich variety of animate and inanimate designs, the choice of which was probably left to the local die-sinker, were placed on the copper fulus struck for local use to make it impossible for silver-washed copper to pass as silver dirhams. This anti-counterfeiting measure was also used by many other dynasties, including that of the Othmanlis. While many designs may be associated with an individual Mamlük ruler, and may also have been employed on metalwork made for his use, the fulus were generally too insignificant for any consistency to be applied to their designs.

In conclusion, the evidence furnished by the Mamlük coinage may be said to provide an accurate reflection of the political and economic challenges faced by late medieval Egypt and Syria during the time of the Black Death, uncertain political leadership and the growing European economic influence in the east. Bibliography: Mamlük numismatics has been well served by the masterly study by P. Balog, The coinage of the Mamlük Sultans of Egypt and Syria, ANS Numismatic Studies no. 12, New York 1964, with exhaustive source notes and supplemented by many additional articles by him and others since then. For a valuable modern summary, see the section Mamluk in S. Album’s Checklist of Islamic coins, “Santa Rosa, Calif. 1998, 51-3.” (R. Darley-Doran)

MANSÚRÁT (A.), the term for the letters, responas and edicts of Muhammad (Abd ad-din) b. ‘Abd Allah (d. 1885), the Sudanese Mahdī [see AL-MADHIDIYĀ]. These individual documents were transcribed by his followers in numerous manuscript collections, three of which are described in P.M. Holt, Three Mahdist letter-books, in BSOAS, xviii [1956], 227-38. An authorised text was lithographed in Omdurman (Umm Durman) during the Mahdiya in four volumes: the first consists of general and doctrinal pieces, including Muhammad Abd ad-din’s justification of his claim to be the Mahdī; the second (al-ānqāf) contains his letters and proclamations summoning various individuals and groups to join the Mahdiya (cf. Holt, The Sudanese Mahdīs and the outside world, in BSOAS, xxi [1958], 276-90); the third (al-akhīrāt) gives his rulings on matters of law and custom; the fourth (al-ādāb) comprises his sermons. Photographic reproductions of these volumes were published in Khartoum in 1963 under the auspices of the Sudanese Ministry of the Interior. The editor (not there named) was Dr. Muhammad Ibrāhīm al-Abā Salīm, who has also produced an invaluable guide to the documents and their sources as al-Muṣāhāt li‘l-wathīq al-Mahdī, Khartoum 1969, and a selection of these and later Mahdist documents in Ṭanāfīrat al-Mahdīyya, n.p. [Beirut] 1969. He has now published a complete edition of the Mahdi’s writings, al-Amār al-kāmilah li‘l-Imām al-Mahdī, 7 vols. Khartoum 1990-4.

Bibliography: Given in the article.

AL-MAR'A

6. In Southeast Asia.

The Muslim peoples of Southeast Asia are found in the modern states of Indonesia, Malaysia (and in these two states they comprise the majority), Thailand (in the five southern provinces, culturally very close to the neighbouring region of the northern Malay Peninsula) and in the Philippines (Mindanao). Islamisation of these populations has been ongoing since the 15th century and continues in the 21st century (total population estimated at 220 million). Travelers to the region from the earliest times have remarked on the prominence of women in commerce, agriculture and spiritual life. Bilateral kinship systems are still the norm for most societies in the region, with some notable exceptions such as the matrilineal Mindangkabau of West Sumatra, also found throughout Indonesia and in Negeri Sembilan on the Malay Peninsula. Although Islam assumes a patriarchal descent system, the traditionally high status of women in Southeast Asian societies means that women continue to play a public role in many areas of social and, especially, economic life, which contrasts with the situation in many other Muslim cultures. In some cases, this has also led to local and particular interpretations and applications of the Sharīʿa, especially in matters of inheritance.

Before the 20th century, the traditional power structure of the region was based on small fiefdoms led by charismatic rulers and local chiefs. The fiefdoms in turn were oriented towards centres of influence (e.g. Sriwijaya, Melaka, Mahapahit, Aceh and Ayuthia), which shaped the cultural and religious forms of their satellites. The elites followed the prevailing aesthetic and religious fashions while the populace maintained older traditions. Thus, when Islam was accepted by the leaders of centres of power such as Melaka and Aceh, it was added to a spiritual armoury already consisting of a broad mix of animist and ancestor cults, and also of Hindu and Buddhist beliefs, in all of which women played important roles. There was an eclectic expression of Islam with a special appreciation of Sufism and less concern with scriptural prescription. In this context, the traditional role of women as important figures in spiritual matters continued. This came under threat, however, in the early and mid-19th century when Southeast Asian pilgrims were influenced by Wahhabī concerns and attempted to institute “reforms” in their local areas (see b, below).

(a) Status of women before the 19th century.

The status of women was such that at the courts of the Muslim kingdoms of Aceh (nominally estimated at 594,000 in northern Sumatra) and Patani (now in southern Thailand), four queens ruled for extended periods during the 17th century. Female rule in Aceh ended late in the 17th century when a female ruler was succeeded by a male. The last female ruler was obtained a fatwā from Mecca stating that women could not be rulers. It has been usual...

to regard the period of female rule as indicating a weakened monarchy vis-à-vis male chiefs. However, because it seems that the queens served as mediators to regard the period of female rule as indicating a fitness to maintain harmony. In both Aceh and Patani, the period of female rule was characterised by commercial prosperity and an increase in revenues from foreign trade; this has been attributed to the cooperation rather than rivalry between the queen and local merchants. This alternative model of female rule did not develop, and in the latter part of the 17th century the queens were followed by males. It was not until recent times that the issue of a woman as head of state again became a possibility with the success of Megawati Sukarnoputri as a political leader (see d, below).

In Java there are no records of female rulers, but several Sultans maintained large corps of women trained to bear arms and serve as palace bodyguards and sentries. More important was the contribution of women intellectuals in advice to rulers (as in India). For example, in the early 18th century, the grandmother of a teenage ruler of the Central Javanese kingdom of Mataram prepared three impressive texts for the guidance of the young sultan. Known as Ratul Pakubuwana (died 1732), she is celebrated for her Muslim piety and knowledge of Sufism. Her manuscripts retell stories of the great Muslim warriors and heroes to emphasise the benefits of becoming a pious and ascetic Sufi ruler. In the mid-18th century, there are references to other aristocratic Javanese women composing manuscripts also inspired by Islamic literature. Women of the court, in both Java and the Malay areas of the archipelago, were actively engaged in writing and collecting manuscripts from at least this period until the demise of the courts in the early 20th century.

Records from this period indicate that non-elite women (rather than men) organised domestic commercial activity, such as the buying and selling of local produce in the markets, with both dominating transactions with foreigners. However, it is clear that some elite women used their own wealth to provide the capital for overseas trade conducted on their behalf by men.

(b) Status of women in the 19th century

As with the earlier period, the historical record is incomplete and focussed on elite rather than non-elite women. However, it is possible to gain an impression of their status from descriptions of several notable women. In the early 19th century, for example, in the Malay-Bugis kingdom of Lingga-Riau (which encompassed Johor, Pahang and Singapore), one of the Sultan’s wives was given an island, its appanages and revenues to remain in her family in perpetuity. In the mid-1820s, this woman was able to supply the capital for her brother to undertake a trading voyage to raise money for the Hajj. It was not apparently the custom at this time for women to cover their heads in public but, by the 1850s, the male rulers of this kingdom, and that of their kin, encouraged women to wear a veil when in public. This concern that women cover their heads was accompanied by similar requirements for men to dress modestly, and was a trend apparent also in other areas of Muslim Southeast Asia where returning pilgrims spread Wahhabi teachings.

If the elite women of this Riau-Lingga kingdom are in any way representative of the position of women in other Malay courts (and there is no reason not to extrapolate from their experience), then it is clear that they had the opportunity to learn and write and that they were concerned to apply Muslim teachings in their daily lives and to influence others to do the same, especially when raising children. Of particular interest is a compendium of charms beneficial for marital relations composed in 1908, just five years before the Dutch abolished the Riau-Lingga kingdom. Its author was a commoner, known as Khadijah Terong (1885-1955), who incorporated Kur’anic verses into the charms in a manner which indicates her familiarity with and knowledge of more than just the basic tenets of Islam (see Mukherjee, in Empowered women, 1997). Khadijah’s charms are designed to provide satisfaction and pleasure for both husband and wife, so ensuring that each is content in the marriage. The didactic writings of the women of Riau-Lingga may be described as forerunners of the “Guides for women” (Panduan wanita) which became popular in the 1980s and are still being produced and are selling well in Muslim bookshops in Indonesia and Malaysia.

Elite women were tutored in their own residences and were almost self-sufficient within their domains, although if they chose to travel (usually by sea) they were free to do so if accompanied by appropriate attendants or their husband. Non-elite women did not have the same degree of leisure nor the means to travel. Their access to intensive education, under the guidance of expert teachers, was also restricted, but the large number of local Kur’anic schools in southern Thailand, the northern Malay Peninsula and Java and Madura (late 19th century Dutch figures estimated there were 15,000 of these schools with about 230,000 pupils) suggest that girls as well as boys attended for basic religious instruction.

(c) Status of women in the 20th century

At the turn of the century, resistance to direct colonial rule was prolonged and violent in some areas. In this context, there are several notable examples of women joining or leading men in holy wars. In the late 19th century resistance to the Dutch control of Aceh (northern Sumatra), an area renowned for its late 19th century resistance to the Dutch control of Aceh (northern Sumatra), an area renowned for its devotion to Islam, a widow, Cut Nyak Dien, took over the leadership of a band of guerrilla fighters after her husband was killed by the Dutch in 1899. She continued to resist until captured in 1905. She died in exile in 1906 and is now an Indonesian national hero, whose struggle for Islam and her homeland has been celebrated in a very popular 1960s Indonesian film.

The adoption of new technologies such as printing, and improved communications, enabled greater contact between the heartlands of Islam and Southeast Asia. Of particular significance to women was the spread of modernist teachings, especially those of Muhammad ‘Abduh (1849-1905), which were disseminated in a weekly publication, al-Imam (published in Singapore, 1906-8), which was clearly inspired by
for the rights of Malay women within Islam in terms reminiscent of the heroine of Farida Hanom. She was an influential figure in Malaya, and in the early 1950s led the women’s wing of the UMNO (United Malays National Organisation). No one has been more encouraged to establish new schools (madrasah) based on Egyptian models where Islamic doctrine, Arabic, English, and secular subjects such as mathematics and geography, were taught to both girls and boys. It was considered especially important that young women receive a “modern” education (including secular knowledge as well as religion), because as future mothers they bore the prime responsibility for the “correct” upbringing of the next generation.

In 1913 a number of co-educational schools offering both religious and secular subjects were established in Java by the Jam’iyyat al-Islah wa ‘l-Irkshad, an organisation led by the reformist Sudanese teacher, Shaykh Ahmad Surkati, who founded the establishment of new schools in 1918 and 1920. By 1922 there were 15 Diniyah schools in Java and Sumatra which attracted young women from as far afield as the Malay Peninsula and Java. Graduates spread the message of reformist Islam and urban modernity through their work as teachers and journalists and as modern-minded mothers. Further impetus for the education of women came from the writings of Sayyid Shaykh b. Ahmad al-Haḍī (1867-1934), a šari‘i law firm, religious teacher, author and successful publisher who settled finally in Penang. He was an enthusiastic supporter of the ideas of Muhammad ‘Abdul and Rashid Ridā who translated many of their writings into Malay for publication in al-Imām. He went on to use fiction to promote progressive interpretations of Islam, and in 1925 and 1926 published the two-volume best-seller Faridah Hanom. The eponymous heroine is an aristocratic Muslim woman living in Cairo, educated in both Islam and western teachings, and an admirer of ‘Abdul, who is written into the text. The popularity of the books, which were reprinted innumerable times up to the 1970s, ensured that the heroine’s message of applying God’s gift of intelligence to the understanding of Islamic teachings, linked with a dedication to improving contemporary social conditions, had wide exposure. The story of Faridah Hanom ends with a description of how the heroine uses her wealth to found schools for young women, and notes that from these schools came women who went on to lead the struggle for women’s emancipation, citing real women such as Hūdā Sha‘rāwī (q.v. in Suppl.), who founded L’Union Féministe Égyptienne. Sayyid Shaykh al-Haḍī invested the profits from the success of this book in his printing business, and from it funded the publication of works of non-fiction. One of these, Kitāb Al-Amām Perempuan (“The world of women”), 1930, continued the themes of Faridah Hanom and argued forcefully that the most pressing matter for Muslims was the education of women so that the whole community would benefit.

In peninsula Malaya, Hajjah Zainon Suleiman (1908-1989) responded to Sayyid Shaykh’s calls and worked actively for the education of Malay women. She was supervisor of one of the leading girls’ schools for nearly 20 years and in 1950 founded the first Malay women’s association, the Johor Women Teacher’s Union, and a magazine for its members. The magazine, Bulan Melayu, became an influential publication for women and provided a forum for women writers to express their views on contemporary issues. Ibu Zain (as she was known) was an important advocate of women’s organisations in Malaysia. The most recently formed group, Puteri Islam (Sisters in Islam), was officially established in 1991 by a small group of professional women (lawyers and academics) to re-examine the sources of Islam for a better understanding of women’s status in Islam. Through high-profile activities in the press and media and through seminars and workshops, members of Sisters in Islam have had considerable impact on public perceptions of women’s status in Malaysia. Their interpretations of the Kūrān and Hadīth have aroused critical reactions from conservative religious scholars, and the resulting public debates have highlighted issues such as the role of Islamic law in a modern nation state. In Indonesia (then the Netherlands East Indies) one of the earliest Islamic women’s organisations, Aisyiyah, was established in 1917 by members of Muhammadiyah, a reformist movement which began in Java in 1912 and spread quite rapidly through the Indies. By 1938, Aisyiyah had set up over 1,700 schools (from primary to secondary levels) as well as teacher training colleges, health centres and orphanages. Members were encouraged to guide other women in their Islamic duties and to spread knowledge of Islam to diverse classes of women so as to increase their awareness of religious duties, rights and responsibilities.

The Muslimah Nahdatul Ulama, the women’s branch of Nahdatul Ulama, the Islamic mass movement in Indonesia (with a current following of over 30 million), was established in 1946. Like Aisyiyah, its members have been working to improve education and health care for women and they helped establish the “Advisory Council for Marriage and Divorce” (Badan Penasihat Perkawinan dan Penyelesaian Perceraian) which assists women who have to take marital disputes to court. Although the Nahdatul Ulama movement has been characterised as less progressive than Muhammadiyah, during the 1980s, under the leadership of Abdurrahman Wahid, greater attention was given to social issues, including the status of women. One illustration is the work of the Association for Social and Pesantren Development (Perkumpulan Pengembangan Pesantren dan Masyarakat) whose work includes a successful education program for traditional religious teachers (both men and women) about women’s reproductive rights.

In Indonesia, Malaysia, Singapore, the Philippines and Thailand, the post-colonial state has accommodated the šari‘i but restricted its formal application to matters of personal law [see MARA]. In South-East Asia, the issue of polygamy has highlighted the differences between modernising and conservative elements in Southeast Asian Muslim communities, and has focussed on the absolute difference between revealed and secular authority. One example is the 1974 Indonesian Marriage Law, which was introduced in Cairo’s al-Manar. Widely read all over the Indonesian archipelago and through the Malay Peninsula, al-Manar’s articles urged Muslims in the region to improve their knowledge of Islam and to pay greater attention to education. In this context, the establishment of new schools was encouraged and the deep culture of the region. For example, for a woman was elected to the central board of PAS. There are at least four other Muslim women’s organisations in Malaysia, each of which is engaged in welfare work among Muslim women, including marriage counselling, assistance for domestic violence victims and fund raising for charities. The most recently formed group, Puteri Islam (Sisters in Islam), was officially established in 1991 by a small group of professional women (lawyers and academics) to re-examine the sources of Islam for a better understanding of women’s status in Islam. Through high-profile activities in the press and media and through seminars and workshops, members of Sisters in Islam have had considerable impact on public perceptions of women’s status in Malaysia. Their interpretations of the Kūrān and Hadīth have aroused critical reactions from conservative religious scholars, and the resulting public debates have highlighted issues such as the role of Islamic law in a modern nation state. In Indonesia (then the Netherlands East Indies) one of the earliest Islamic women’s organisations, Aisyiyah, was established in 1917 by members of Muhammadiyah, a reformist movement which began in Java in 1912 and spread quite rapidly through the Indies. By 1938, Aisyiyah had set up over 1,700 schools (from primary to secondary levels) as well as teacher training colleges, health centres and orphanages. Members were encouraged to guide other women in their Islamic duties and to spread knowledge of Islam to diverse classes of women so as to increase their awareness of religious duties, rights and responsibilities. The Muslimah Nahdatul Ulama, the women’s branch of Nahdatul Ulama, the Islamic mass movement in Indonesia (with a current following of over 30 million), was established in 1946. Like Aisyiyah, its members have been working to improve education and health care for women and they helped establish the “Advisory Council for Marriage and Divorce” (Badan Penasihat Perkawinan dan Penyelesaian Perceraian) which assists women who have to take marital disputes to court. Although the Nahdatul Ulama movement has been characterised as less progressive than Muhammadiyah, during the 1980s, under the leadership of Abdurrahman Wahid, greater attention was given to social issues, including the status of women. One illustration is the work of the Association for Social and Pesantren Development (Perkumpulan Pengembangan Pesantren dan Masyarakat) whose work includes a successful education program for traditional religious teachers (both men and women) about women’s reproductive rights.

In Indonesia, Malaysia, Singapore, the Philippines and Thailand, the post-colonial state has accommodated the šari‘i but restricted its formal application to matters of personal law [see MARA]. In South-East Asia, the issue of polygamy has highlighted the differences between modernising and conservative elements in Southeast Asian Muslim communities, and has focussed on the absolute difference between revealed and secular authority. One example is the 1974 Indonesian Marriage Law, which was introduced in
response to continued pressure from women’s organisations and was to provide some security for women, particularly regarding divorce and polygamy. It was perceived by some Muslims as a strategy for secular (state) authority to displace Islamic jurisdiction and was therefore opposed by others who wanted to enact an amended statute permitting polygamous marriages and unilateral divorce, with Syariah courts retaining authority to make judgements in these areas (see Butt 1999). However, the jurisdiction of Syariah courts has been steadily eroded by the Indonesian government, so that although polygamy has not officially been forbidden, it is extremely difficult to practise.

In Malaysia, the Federal Government introduced the Islamic Family Law Act in 1984 and set minimum ages for marriage and restrictions on polygamy and divorce. Although similar laws were enacted in each of the constituent states of Malaysia by 1991, Islamic authorities at the local levels have tried to undermine some of its provisions, particularly those concerning polygamy. When this occurs, and aggrieved women bring it to the attention of national activist groups (such as Sisters in Islam), there is widespread public debate and increasing pressure on traditional religious teachers to adapt to contemporary conditions.

In matters of inheritance, Muslims theoretically follow the Syaria but detailed interviews with women in Indonesia and Malaysia indicate that many parents circumvent the provision of greater portions for male heirs by distributing some property to female heirs before death. This has been seen as maintaining the parity of sons and daughters as expressed in traditional (pre-Islamic) kinship systems.

The rise of the middle classes in the Muslim populations of Southeast Asia, with an increase in higher education and greater participation in the global cash economy, has caused some women in this group to seek to reaffirm their identity as Muslims. Participating fully in the public life of their nations, many of these women wish to understand Islam better and follow all the classical texts of Islam which some Indonesian scholars put forward. In 2001, Abdul Rahman Wahid lost the confidence of the Indonesian parliament and Megawati replaced him becoming the fifth president of the Republic of Indonesia. Political expediency overwhelmed the objections of a minority of ulamā’. The debate over female leadership, however, is a useful point on which to conclude this survey of Muslim women in Southeast Asia because it exemplifies some of the features of Islam which are characteristic of the region. First, that it is not unusual for women to play prominent roles in public life; second, that women’s leadership is seen as being distinctly different in style from that of males; third, that the religious arguments concerning the possibility of a female head of state have revealed the division between traditional (conservative) approaches to Islamic law and more modern (liberal) interpretations; and finally, that specialist knowledge of Islam throughout Southeast Asia is still dominated by men.

MARID (A.), rebel or revolutionary, someone practising marid or tamarid, resistance to the established order, from the root m - r - d to be resistant.

The word marid is strongly polysemic; it includes both the idea of audacity and revolt, and also extreme pride and insolence (al-lāti al-thārid, according to LA). Also present in the root is the idea of youth, with amrad meaning “young, beardless youth” (see Ibn al-‘Adīm, Ḣizba, ed. S. Dahhān, Damascus 1951, i, 260, concerning beardless ghillān, concomitant with the idea of a leafless tree (qāfghara mardīs), and sometimes with that of a young slave boy, the equivalent of ghillān [gu], with additionally, the connotations of violence, insolence, rebelliousness and, equally, of pedantry and homosexuality, as frequently found amongst young soldiers.

It should be noted that the central meaning of marid’s revolt is semantically associated with that of the rebellion of djinn and demons (qayītān), as LI directly indicates. It follows that, in classical Arabic, the term marid has negative connotations and that, in the unconscious collective mind, it goes back to the revolt of djinn against God and rebels likewise to that of a member of the community against the ruling power, considered as a fatal source of trouble and instability. In Modern Standard Arabic it retains these two concepts, since it means, first, rebel, insurgent, refractory person, and second, demon or evil-working spirit. Other roots are more frequently used by medi-aeval arab historians to describe rebellion. Thus qaghaba “to wander away from the road, excite people against each other, kick up a row”, and tadd “to rebel (to be connected with ḥād “to strike with a stick”), go against other people”, whence al-lāti “the rebel”, the name given to the Orontes river. The Sunnis, from the time of the establishment of the ‘Abbāsid to the 1970s (the execution in jail of ‘Abd al-Nāṣir [q.v.] by ‘Abd al-Nāṣir’s army, taken at Siffm in Suppl.) was to give rise to the first, Sunni Islamic doctrine justifying the use of violence and killing, not only against a power which was self-styled Muslim and Sunni but not respecting the Islamic law, but also against every individual, Sunni Muslim or of any belief or absence of belief, of either sex, child and adult, not joining in the revolt), were considering that challenging the ruling sovereign Muslim power, whether just or unjust, legitimate or having seized power for itself, was risking committing an offence against Islam and that a vacuum of power was worse than a corrupt ruling power [see AL­MAWĀRĪ, IBN TAMIMYYA].

In practice the hijra of A.D. 622 enabled the Prophet Muhammad to institutionalise Islam by creating at Yathrib/Medina the umma [q.e.], a society which involved personal commitment to the revealed Law, a concept opposed to those of nasab and nisba [q.e.].

The fragility of the umma at the outset led to condemnation of any rebel who put in jeopardy the unity of Islam by disobedience, provocation or revolt. In appealing to ancient family, tribal, ethnic or territorial solidarities, the rebel thereby pushed the community back to the chaotic time of the Dāhilyya [q.e.]. This is why, when Muhammad died and the tribes thought themselves freed from this voluntary solidarity by which they had been united with the person of the Prophet, ‘Abd Bakr suppressed the ṭālīda [q.e. in Suppl.]; from this time onwards, the Medinan concept of voluntary adhesion to Islam only functioned in that unique instance. The new convert, like all Muslims, including the child born of a Muslim father, saw himself constrained—before his birth, as at Mecca—and
until his death, by his nasab of “Muslim” to profess Islam as long as he lived.

The traditional history of the first century of Islam is marked by a series of violent episodes, extending from the ridda in Abū Bakr’s time to the murder of ‘Abd al-Malik. The Almoravids and Almohads, who came to the north and south against a corrupt and luxurious north and aiming at bringing regimes considered as lax back to the strict way of the Islamic law.

For the urban revolts, which have been well studied, see ABHAI, ‘AYNAR, SAFARIDS; ZUNID; etc.

Bibliography: See, in addition to the articles cited above, various contributions in M.A. al-Bakhtî and R. Schick (eds.), Bilād al-Shām during the Abbasid period. Proc. of the Fifth International Conference on the History of Bilād al-Shām, 1410/1990, Amman 1991. M. Chokri, Zandīga et zandīgūl il-Kum, au second siècle de l’hégire, Damascus 1993, has clearly shown how the “AbūĪsād ruling power marshalled moral, political and social argumentation everyday at rebellion against the dynasty’s official moral basis. See also the good bibl. in M. Bonner, Aristocratic violence and holy war, New Haven 1996. (TH. BANQUTS)
Ibn al-Nadîm quotes a reliable informant (âbih) who had seen Mariqonites books and who reported that their script resembled that of the Manicheans (ibid., 19). These “numerous” Mariqonites in Khurâsân do not seem to be mentioned in any other source.

Muslim writers on alien religions offer some data about the beliefs of the Mariqonites. Some of this is manifestly taken from the standard Christian sources, e.g. when al-Mâsîdî (Tanbih, 127) states, accurately enough, that the Mariqonites taught “two principles, good and evil, and justice (read al-âlîd with Ms. L) is a third (principle) between the two”; these three are clearly the good god, evil matter, and the just god. Ibn al-Mâlîhînî (al-Mutamâd, 586-9) has two conflicting accounts of the doctrines of the Mariqonites. The second of these is credited explicitly to Abû Tâsî al-Warrâk, whose version was evidently used (directly or indirectly) by most of the other Muslim theologians who mention Mariqonites (see Vajda’s article, in Bibl.). This version claims that Marcion taught two polar principles, “light and darkness”, plus a “third essence” who “mixed the light and darkness and mangled them by way of creating a balance between them”. But this is pure fantasy, extrapolated from some vague notion that either Marcionism is like Manichaeism, or is entirely different. This latter is totally different. This Marcionite community in the Islamic world, presumably in connection with court etiquette. Harûn al-Rashîd (d. 193/809 [q.v.]) even divided his court singers into classes (al-Milâl wa ’l-nihâl, Shahrastânî, ed. Badrân, 643-5), and of apparent anarchy, and that therefore it was invented terms, adopted from al-Masûdî, al-Thâlûtî, and others, for the purpose of social standing and rank, both in his translations from Pahlavi Persian and in his original works, in which one can discern a measure of continuity with certain Sassânid values which pre-date the Islamic period. One should remember, as background, that the Sassánid sovereigns divided their population into a number of categories (A. Christiansen, L’Empire des Sassanides, 190 ff., 93 ff.; idem, L’Iran sous les Sassanides, 97 ff., relying on Ps.-Djahîz, al-Masûdî, al-Thâlûtî and other sources); neither the subjects of despised trades belonging to the lower ones, nor their descendants, would ever be permitted to serve at the royal court (Ps.-Djahîz, K. al-Tâjî, [1914], 23-27; concerning the authorship and date of the latter source, see G. Schoeder, in ZDMG, cxxx [1908], 217-25, and VÖHD, B/2, Wiesbaden 1980, 156-9; R. Brunschvicg, in Stud. Isl. xvi [1962], 49 n. 1, hesitated to accept some details in this information reported by later Muslim historiographers). Thus the Shu’ubîyya (q.v.), a cultural movement that stressed the contribution of the non-Arabic heritage (and often minimised the importance of certain Arab traditions that can be traced back to the culture of the desert), took great pride in the fact and others, for the purpose of such boasting about this Persian distinction between social classes was to emphasise the fact that the early Persians lived a life of uncontrolledness and of apparent anarchy, and that therefore it was the Persians to whom one had to turn in order to learn the concepts of government and etiquette (Sadân, An admirable and ridiculous hero, Some notes on the Bedouin, in Poetics Today, xi [1989], 474, 487 ff., with references to Goldzïber, Gibb, al-Durâfî, al-Laythî, Montroe, Talhîf and others). In Muslim society, in particular that of the ‘Abbâsîd empire, the term marûsî was used mainly in connection with cour, etiquette. Harûn al-Rashid (d. 193/809 [q.v.]) even divided his court singers into
three martaba; in this case, the categories reflect not only the quality of the singing but also friendship, sympathy and taste for various singing abilities (al-Raghib al-Ibial, Kitab al-surur, B.N. Paris ms. 3302, fol. 162b; not identical to the part edited by al-Djundj; see also al-Shayzarf, Al-Makhtaj al-maslah, Zarqa, Jordan 1987, 464-6, 578-9).

When approaching the ruler, one was expected to stop at a distance determined by one’s martaba, and there await for a sign (the verb is aswad, to notify by a gesture) from the sovereign, permitting him to sit down. The participants at the ruler’s audience were expected not to behave in a manner unfitting to their rank. The boon-companion, nadim [q.v.], had the most difficult task of deciding when an audience with the ruler was public or official and when it was a private party (which included drinking as well) in which the rules of etiquette (adab) were not to be strictly applied, although even then one was supposed to try not to exceed one’s manzila or martaba (ibid. and al-Ghuzuli, Matbat al-badur, Cairo 2000, 165) and the minimal rules implied by it. The hadib, who was the palace chamberlain and responsible for the system of granting and refusing entrance to the palace, also had the job of ascertaining that everyone sat according to the martabt al-Djaghy, al-Hajibh, in Kaufr (ibid, Cairo 1964-5, ii, 39).

Exceptionally, some people may in fact have wished to sit with those of a lower rank, since the people attending the audience with the sovereign sat in a circle (maglis, halka), and those who were near him were higher in rank but could not always see him well and might in fact have been sitting just opposite him. We rarely find a courtier or a guest who would prefer to sit opposite, out of modesty, or in order to see more clearly his host (al-Raghib al-Ibial, Madhabat al-adab, ii, 706, describes the exception; al-Makhtaj, Khiyat, e.g. i, 386-7, 389), whereas i, 390, mentions the term martaba, describes the rule: no courtier would yield his place to an inferior person; i, 443, presents, however, the irregular behaviour of a courtier who “used to take a seat at the edge of the circle of guests [during the royal meal], in order to see the caliph better and not according to the rank this courtier deserved”). It is in fact well known that the Fatimids were particularly insistent on maintaining the appropriate distance between the ruler and the other ranks: at festivals only representatives of the four Islamic schools of law were permitted to come into the presence of the caliph and greet him. In fact, they only came up to the threshold of the hall or pavilion in which the caliph was at the time, and usually it was only the caliph’s secretary who responded by uttering a greeting formula in the ruler’s name, and not the caliph in person.

However, it must be emphasised that M. Canard’s comparison (see Bibl.) of the etiquette of the Fatimid and Byzantine courts was written at a time when the rules of behaviour at the court of the Sasanids and the division of their society into classes, sadly it was not fully respected, as it should have been, in his days. Perhaps this indicates that the ‘Abbasids did not blindly imitate the Sasanid manners but only followed them as a certain social tradition.

Since the concept of rank also determined the seating order, it should come as no surprise that the word martaba ended up designating a cushion, a kind of low and soft seat. The reason for this is that cushions were the normal seats used at meetings (only the ruler himself would occasionally sit on a genuine throne, and the vizier would at times sit on a simpler chair, kast). One finds this kind of martaba cushion in texts closer to the spoken language, such as stories of the Arabian nights variety and, even more so, in documents from the Cairo Geniza (in the dowry lists of young brides, see Sadan, Martaba, in Bibl.). It would appear that these mattress-seats were arranged by day for sitting (on the arrangement of cushions in book shops and reading rooms, see also idem, Mabillet, in Bibl.; idem, Nouveaux matelas, in REI, xlv [1977], 51-6) and by night for sleeping, a quite economical and efficient system for the common people.

In addition, the rules of etiquette of the Sasanid era (in addition to references given in the article: F. Gabrieli, Etichetta, in RSO, xi [1928], 292-305; M. Canard, Le cerimonial fatimite et le cerimonial byzantin, in Byzantion, xxii [1951], 355-420; Ch. Pellat (tr.), Le Livre de la couronne attribué à Gâhid, Paris 1954; D. Sourdel, Questions de ceremonial 'abbâside, in REI, xxviii [1960], 121-48; see especially Sadan, A propos de martaba, in REI, xlii [1975], 51-69; idem, Le mobilier au Proche orient méditerranéen, Leiden 1976, 15, 16, 52-56, 90, 117, 118; idem, Adab, régles de conduite, in REI, lxv [1980], 283-300). [J. SADAN]

AL-MARUF WA 'L-MUNKAR [see AL-SAHRI 'AN AL-MUNKAR, in Suppl.]

MA'RUF BALKHI. Abû 'Abd Allah Muhammad b. Hasan, early poet in New Persian, of whom almost nothing is known but who must have flourished in the middle decades of the 9th/10th century, since old verses of his survive that were allegedly dedicated to the Sâmitâm Amir 'Abd al-Malik (I) b. Nûh (I) (543-50/954-61), and he may have been at the court of the Saffârid ruler of Sistan, Khâlif b. Ahmad (532-93/963-1003). Fragments amounting to some 45 verses, mainly love poetry and satires, have been collected by G. Lazard, Les premiers poètes persans (IX-X siècles), Tehran-Paris 1964, i, 31, tr. 129-33, Persian text ii, 132-8.
MA'RUF BALKHI — MARUNIYYA

According to al-Ma'sūdī (d. 345/956), the sect first emerged into existence as a Monothelite Christian communion during the reign of the Roman emperor Maurice (582-602), its Monothelite origin (contested by Maronite historians since the late 15th century) being also affirmed by al-Kāṭib 'Abd al-Dhāfiḥī (d. 415/1024) and the Crusader historian William of Tyre (d. 1185). The first known base of the community was the monastic establishment of Dayr Mārūn (or Dār Mārūn), on the Orontes river, east of the town of Hamā, which had already fallen to ruins by al-Ma'sūdī's time. This establishment allegedly carried the name of the Syrian hermit Mārūn (Arabic Mārūn) of Cyrus (d. 433), who is claimed by the Maronite church as its patron, although he is also revered by the Syrian Melchite (Chalcedonian Orthodox) church as a saint.

While the Maronites have traditionally used Syriac for their liturgy, they appear to have been Arab rather than Aramaic-Arab in ethnic origin; their ecclesiastical and secular literature, as known directly or from reference from as early as the 10th century A.D., is entirely in Arabic. Their ethnic difference from other Syrian Christians, who were either Aramaeans or Aramaic-Arab, might explain in part why they came to be organised as a separate church. The claim of the community to be descended from the Mardaites [see MARDAYMA], first advanced by the patriarch Istifan al-Dawāyhi (1668-1704 [q.v.]), is historically incredible.

The Maronites signalled their break from the Syrian Melchite see of Antioch when they began electing patriarchs of their own in ca. 685. In that same year, the conclusion of a peace accord between the Byzantine emperor Justinian II and the Umayad caliph 'Abd al-Malik, who seems to have enabled the Byzantines to regain control over the affairs of the Antiochenese see. The Monothelite doctrine having been condemned by the Sixth Ecumenical Council (680) as a pernicious heresy, Justinian II, it appears, was bent on eradicating what remained of it in Syria.

According to Maronite tradition, the first Maronite patriarch, Yuhanna Mārūn, had barely assumed office when Byzantine persecution forced him to flee the Orontes valley and seek refuge in the rugged reaches of the northern Lebanon, where the Maronite patriarchate has remained ever since. When the Byzantines reoccupied Antioch and the adjacent parts of northern Syria, from 969, the Syrian population of the Orontes valley was still largely, if not entirely, Maronite. This Byzantine reoccupation, however, was not to last until ca. 1070, by which time the Maronites of the Orontes valley had been mostly, if not entirely, replaced by Melchites, presumably as a result of Byzantine persecution; the only notable Maronite community outside Mount Lebanon survived in the city of Aleppo, which the Byzantines had failed to occupy.

When the Crusader forces, having seized Antioch (1098), proceeded to advance southwards to Jerusalem in 1099, Maronite warriors met them outside Tripoli to offer their service as guides and auxiliaries. The first contacts between the Maronite patriarchate and the Roman Catholic Church followed, ending more than four centuries of Maronite ecclesiastical isolation. It was not before ca. 1180, however, that a body of leading Maronite clerics, meeting with the Latin Patriarch of Antioch, formally agreed to unite with the Roman Catholic Church, and also to abandon the Monothelite doctrine in favour of Roman orthodoxy. To cement this union, Pope Innocent III (1198-1216), invited the Maronite Patriarch Jeremiah of 'Armišāṭ (Irmiyah al-'Armišāṭ) to Rome in 1215, ostensibly to participate in the Lateran Council of that year.

Meanwhile, a split had occurred in the Maronite church, in the course of which the party opposed to the union waged armed attacks against those in its favour. This split reached its climax in 1282-3, when, for a brief while, each side had its own Patriarch. Shortly after, however, the Mamluks of Egypt, who were already in occupation of the Syrian interior, put an end to the Crusader County of Tripoli (1289); then Acre was conquered (1291) and the last Crusaders expelled from Syria (1291). Finding itself once more in isolation, the Maronite church was able to regain its unity under Patriarchs favouring the union with Rome. However, Maronite relations with the Papacy remained casual, because of the difficulty of maintaining regular contact between the two sides once the Crusaders had gone.

The Maronites suffered sporadic persecution under the rule of the Bahśli Mamluks (1291-1382), at which time some Maronites emigrated from Mount Lebanon to live under Crusader protection in Cyprus, where a few thousand Maronites remain to this day. With the replacement of the Bahśli Mamluks regime, the fortunes of the community took a turn for the better. Starting from the reign of Barkūk (1392-9, 1390-9 [q.v.], the first of the Bahśli sultans, special favours were accorded to the Maronite mukaddamīn (sing. mukaddam "chief") of the district of Dabbat Bahārī (the mountain hinterland of Tripoli), enabling them to manage the affairs of their district much as they pleased. Subsequently, in 1444, the seat of the Maronite patriarchate, which had never been fixed before, was established in the monastery of Kannūnīn, in Dabbat Bahārī, where it remained until the 19th century.

The interest of the Roman Papacy in the Maronite Church had meanwhile been heightened following the failure of the Council of Florence (1439-44) to end the schism between the Roman Catholic and Byzantine Orthodox communions. Unable to attend this council in person, the Maronite Patriarch John of Jāf (Yuhannā al-Dādjī) had sent a Franciscan missionary to represent him there, with a message indicating his fervent commitment to Roman Catholicism and requesting papal confirmation of his patriarchal title. (Since then, all Maronite Patriarchs, though elected by bishops of their own church, have been confirmed in office by the Popes; by implication, they came to derive their Apostolic authority from the Roman See.) Subsequently, the Franciscan mission in the Holy Land (Terra Sancta), which had an important base in Beirut, was entrusted with the maintenance of Maronite relations with Rome; and, starting from 1456, the Popes began to address the heads of the Maronite Church as Patriarchs of Antioch (a title which they might have traditionally claimed). Following the Catholic Counter-Reformation, the Capuchin and Jesuit fathers were charged by the Roman see to replace the Franciscans as religious mentors to the Maronites.
In 1585, Pope Gregory XIII (1572-85) established the Maronite College (Collegium Maronitarum) in Rome to train aspirants to Maronite church office in Roman Catholic orthodoxy and church discipline; and starting from 1605, graduates of this institution began to occupy the supreme church office. By the 17th century, the first major reform of the Maronite Church had been undertaken, under Jesuit sponsorship, by the Synod of Kamübiin (1596). Maronite church practice was brought closer to the Roman Catholic norm by the Synod of Luwayza (1736) (the trend has been continuing ever since). Meanwhile, the first Maronite monastic order following the Roman Catholic model has been largely Arabicised.

Starting from the early 17th century, the Maronites of the northern Lebanon entered into close political association with their Druze neighbours in the southern parts. A large-scale migration of Maronites to the Druze country followed, continuing through the 18th century to the early 19th, whereby the Maronites, in time, came to form the majority of the population of the Druze districts. Having the advantage over the Druze in numbers, and backed by the Roman Catholic European powers, especially by France, the Maronites began to entertain ambitions of dominating the whole of Mount Lebanon, thereby challenging Druze leaderships in their own home districts. Intermittent clashes between the two sides, starting from 1840, culminated in a massacre of Maronites and other Christians of the Druze regions in 1860, and other Christians of the Druze regions in 1860, and about 100,000 were left homeless.

Intermittent clashes between the two sides, starting from 1840, culminated in a massacre of Maronites and other Christians of the Druze regions in 1860, in which an estimated 15,000 were killed or died of destitution, and about 100,000 were left homeless. Intervention by the European powers, spearheaded by France, restored peace to the mountains, and in 1861, the Ottoman government was prevailed upon to grant Mount Lebanon the privileged status of a mutasarriyya administered by an Ottoman Catholic Christian mutasarrif or governor, who was appointed directly by the central government in Istanbul and assisted by a locally-elected administrative council. The decades that followed witnessed an Arabic literary revival in Beirut and Mount Lebanon, in which Maronite participation was particularly prominent.

Following the First World War, France, in 1920, was accorded the mandate over the territory of present-day Syria and Lebanon. The French thereupon expanded the territory of the Lebanese mutasarrifyya, largely in response to Maronite ambitions, to form the State of Greater Lebanon, which became the Lebanese Republic in 1926, with the Maronites politically at the helm. In Lebanon, the Presidency of the Republic, the Army Command and a number of other key positions continue to be the preserve of the Maronites.

Since the 1880s, increasing numbers of Maronites have emigrated from Lebanon to North and South America, Australia, and other parts of the world. The community in Lebanon is estimated today at one million out of a total Lebanese population of about five million, the estimate of the Maronite population outside Lebanon being at least double that number.

MASHHAD

2. History and development since 1914.

In the course of the 20th century, Mashhad has become a regional metropolis (2,155,700 inhabitants in 2004), the capital of the vast province of Khorāsān, and well integrated into the economic and public life of Iran. At the same time, it has kept its character as a goal of pilgrimage, dominated by the economic and political authority of the Astānā-yi kūds-i rāzī, the administration of the Shrine waṭf, probably the most important in the Muslim world.

In 1914, despite its religious importance, Mashhad was a marginal town in regard to the rest of the country. The population of some 70,000 was ethnically very diverse, with Azeris, Hazāras, Bukhārīs, Marwāls, Berberīs, Azerbaijani, and several thousand Jews who had been forcibly converted to Islam, called ‘Arab al-Islām (Patai). About a hundred Europeans, mostly Russians, and as many again Indian subjects of the British crown, lived near their respective consulates. Trade with Russia was twice as important as that with Tehran, since the only modern road was that connecting Mashhad with ‘Ashkābād, opened in 1892 (Bhairat, 14). Like most of the towns of Iran, it kept its traditional character for the first decades of the 20th century. The only modern street, lit by electricity since 1902, was the Bālā khvāyābād leading from the entrance of the town on the western side to the Shrine and to the modest pilgrims' bazaar, since Mashhad never had a proper bazaar and the shops, just as the 37 caravanserais housing pilgrims, were dispersed throughout the town.

Riḍā Shāh [q.v.] and the Pahlavi dynasty showed a great interest in Mashhad and the Shrine of the Imām Riḍā. The ruler personally assumed the office of mutawwāli of the Astānā-yi kūds, and members of the royal family regularly made the pilgrimage to the town, where a palace was built at Bākī Malikbābūd, trusted servants were appointed as governors of Khorāsān and executive directors of the Shrine. A new town was laid out, with rectilinear streets, houses in the Russian style with two storeys and large windows; and businesses and offices were developed to the west of the holy city, which kept its houses of sun-dried brick, its alleys and the musafir-khanās or hostels and the caravanserais for pilgrims. In 1935 Mashhad was linked with Tehran by a modern road, an aerial connection in 1928 (regular service in 1946), an oil pipeline in 1953 and a railway in 1957 (Bhairat). At the end of the 1960s, there was a fresh wave of expansion. The Ferdowsi University was opened in 1966, modern hospitals, amongst the best in Iran, were built, food and textile (carpets) industries were developed, whilst sources of natural gas at Sārākhs enabled the burgeoning city to be supplied with gas. An urban plan was successfully put into operation, since over half of the built-up area and 80% of the land available for building belonged to the Shrine. A French study centre, the SCET Iran, was given the task of making an inventory of the Shrine's properties and of modernising its administration in order to increase its revenues (Hakami, Hourcade). To the west, at Akhčā, vast hotels for students, troops and officials of the Shrine were constructed. To the east, urbanisation swallowed up the small towns of Gulghār, Sakhtimān and Turuk, but was limited by the extensive agricultural holdings of the Shrine and by military lands.

After the oil boom of 1974, Muhammad Riḍā...
MASHHAD

Šâhî [q.v.] decided to make Mashhad the most important and most modern pilgrimage centre of the Muslim world. Under the direction of the governor, M. Waliyîn, the reconstruction of the old town began in 1973 with the destruction of the bazaar, caravanserais, and traditional-type hotels near the Shrine and the avenue (falâke) which surrounded it. The only part left standing was a section of the carpet bazaar. The Bâzâr-i Rîdî, a simple, modern gallery meant for the pilgrims' purchases, was opened in 1977 near the avenue which surrounded it. The only place Mashhad as the seventh of the great sanctuaries of Islam: the riots of 1963 against the White Revolution, the transfer of the capital from Tehran to Mashhad, high-class residences) and, above all, the increased scale, making the Imam Rîdî's tomb the greatest religious architectural complex in the world, still in the course of renovation and development on a grandiose scale, making the Shrine one of the most active of the local religious leaders.

As the second city of Iran in terms of population (3.3% per annum) of the great cities of Iran, after Tehran itself. This development came very rapid after 1979 because of the influx of Afghan refugees in the northeast of the city. This new Afghan quarter evokes the traditional relations of Mashhad with the Harat region towards the northeast along the Wakfilabad Avenue (new university campus, high-class residences) and, above all, to the north, the agricultural lands towards the Kîrâân road, where mass housing and industrial zones reach as far as the ancient Tûs, where Ferdowsî's tomb is to be found. From 1956 to 1996, Mashhad has had the greatest population growth (5.3% per annum) of the great cities of Iran, after Tehran itself. This development came very rapid after 1979 because of the influx of Afghan refugees in a new quarter to the northeast of the city. This new Afghan quarter evokes the traditional relations of Mashhad with the Harat region and Central Asia, reinforced by the re-opening of the frontier with Turkmenistan in 1991 at Badjgiran and, above all, after the opening on 15 May 1996 of the new railway linking Mashhad, via Sarakhs, with the rail network of the former USSR. This opening towards the east of a town and a region long isolated from Tehran takes place, however, hand-in-hand with the strengthening of political, administrative and economic relations with the capital. The revolt of 1921 by Col. Muhammad Taqî Khân Fiswân was one of the last manifestations of former isolation. Consequently, the population of Mashhad has participated actively in the crises and the political and social debates in Iran; the riots of 1963 against the White Revolution, and active participation in the Islamic Revolution (the thinker 'Ali Şârî'î was a professor at the University of Mashhad, and Sayyid 'Ali Khânînâ'î, who in 1899 became the Spiritual Guide of the Islamic Republic, was one of the most active of the local religious leaders).

As the second city of Iran in terms of population since 1975, Mashhad, now a modern city, remains the regional capital of eastern Iran, even though the province of Khurâsân, of which it is the capital, has been since 2002 divided into three different provinces. The passage through it of over ten million pilgrims each year accentuates more than ever before the religious and economic activity of this regional metropolis, which now has the second-most important airport in Iran and the most important hotel complex (more than 25,000 beds in hotels and, above all, more than 25,000 beds in hotels and, above all, musâfîr-khânâ'î), well ahead of Isfahan.

3. The Shrine, and Mashhad as a centre of Shî'î learning and piety.

The location in Mashhad of the Shrine of the eighth Imam 'Alî al-Rîdî [q.v.] has made Mashhad into the leading place of pilgrimage within Persia, the process whereby it has been accentuated by the fact that, for some four centuries, with one break of a few decades, the Shi'i shrines of 'Irâk were in the hands of the Sunnis of Turkmen, the powerful enemies and rivals of the Safavids and their successors [see further, 'Atâbi, in Suppl.], Shi'i 'ulamâ' place Mashhad as the seventh of the great sanctuaries of the Muslim world, after Mecca, Medina, and 'Atâbi, in Suppl.], but some Shi'i 'ulamâ' would rank it next after Karbalâ' (see G.N. Curzon, Persia and the Persian question, London 1892, i, 150 n. 2).

The Haram containing the Shrine seems to be essentially the creation of the last six or seven centuries, its development receiving a powerful impetus when the Safavids turned Persia into a Shi'i state in the 10th/16th century. Previously, it had been easier for non-Muslims to visit the Shrine, since the Spanish ambassador Clavijo, in route for Timîr's court at Samarkand, was able in 1404 to visit it. Thereafter, it was not till the first half of the 19th century that the British traveller J.B. Fraser was able, by dint of a feigned conversion to Islam, to enter the Shrine in 1822 long enough to make a drawing of the courtyard there (see Fatema Soudavar Farmanfarmaian, James Baillie Fraser in Mashhad, or, the Pilgrimage of a Scotsman to the Shrine of the Imam Rîdî, in JBIPS, xxxiv [1996], 101-15). Various other European travellers followed in the later 19th century (details in Curzon, op. cit., i, 149 n. 1). But the rise of the Mashhad shrine began well before the advent of the Safavids, and especially after the sack of nearby Tûs by the Timûrid prince Miran Şâh b. Timûr in 791/1389 dealt Tûs a death-blow and brought the Sanâbîr shrine into prominence as the nucleus of the later Mashhad [see 76]. Already,
Ibn Battûta had gone on from Tûs to “the town of Maqãhâd al-Riḍâ”, which he describes as large and flourishing (Ribbi, iii, 77-8, Eng. tr. Gibb, iii, 582), and Timûrdin rulers such as Šâh Kûgh and his wife Dâjwâr Šâhîd were great benefactors in the first half of the 9th/15th century; but members of the new dynasty of the Safawîds vied with each other in enriching and enlarging the Shrine. Šâh Tâhãmîs I erected a minaret covered with gold in the northern part of the Sahn-i kûhna which, with the Sahn-i mûsâ, bounds the Shrine on its northern and eastern sides, and he adorned the dome of the tomb with sheets of gold and put a golden pillar on top of it (this was to be carried off by the Shîbânsîds when in 907/1500 they invaded Khurâsân and sacked Maqãhâd). “Abbas I laid out the main thoroughfare of the city, the Khâzîbîn, running from northwest to southeast and dividing the city into two roughly equal halves; the Shrine area divided this street into an upper (bâlû) and a lower (pâlû) part. “Abbas II devoted his attention mainly to the decoration of the Sahn-i kûhna. Saiûf I, the later Sulâymân I, restored the dome of the Imam’s tomb. But there were benefactions during these times from outside potentates also, not only from the South Indian Shîs (Kûsh-Shâhî ruler Sulûhn-Kûft Khâb al-Mulûk in 918/1512 but also by the Sunnî Mughal emperor Akbar, who made a pilgrimage to Maqãhâd in 1503/1595. Although likewise a Sunnî, Nâdîr Shâh Afgân was the greatest benefactor of the city and the Shrine in the 12th/18th century, devoting a great part of the plunder brought back from India to their embellishment. Before his accession to the throne, he had in 1142/1730 built a minaret covered with gold in the upper part of the Sahn-i kûhna as a counterpart to that of Tâhãmîs I on the north side of this. He now thoroughly restored the southern half of the Sahn, and decorated the southern gateway richly and covered it with sheets of gold, so that it acquired the historic name of “Nâdîr’s Golden Gate”; in the centre of this court he placed his famous octagonal hall built by Djawhâr Shâhî, a kind of palace enviable in a not inconsiderable revenue to the Shrine. See also AKBARA, 4, in Suppl.

As with the lands adjacent to al-Nadjaf and Karbala’, the holiness of the Shrine and its environs made it very attractive for burials, and several large cemeteries lay round it, such as the Makbâra-yi katîgâh (“killing ground cemetery”) to its north. Since there was so much demand for places—not merely from Persians but also from Shîs from the Indian subcontinent, Afgânîstân and Central Asia—the same ground had to be used over and over again for burials. The fees for such burials—graves with proximity to the Shrine itself being the most expensive—brought in a not considerable revenue to the Shrine. See also AKBARA, 4, in Suppl.

The Shrine area forms the so-called Bast, thus designated from the rights of asylum and sanctuary traditionally operating there for e.g. debtors, and for a limited period, criminals (see Curzon, op. cit., i, 155, and BAST). Nâdîr’s Golden Gateway leads southwards to the area of the Imam’s shrine itself and its ancillary buildings, what is strictly speaking the Haram-i nakaddas. The almost square shrine has the actual holiness of the Shrine and its environs prescribed fashion was entitled to call himself a Maqãhâd.

For the Shrine, its administration and development in the 20th century, see 2. above.

Bibliography. Given in the article, and see that in the EI art. Maqãhâd. (M. STRICK).
have taught whilst "perambulating" (Greek, *peripatein*) with his students. While in the Greek sources the designation is restricted to Aristotle's personal disciples, the Arab equivalent is used for the Hellenistic tradition of his philosophy in general. As a term of doxography, it occurs in the *Fıkhr* of Ibn al-Nadīm (247, 16), and in the 5th/11th century *Subh al-hikma* (from the school of Abū Sulaymān al-Sīdjistānī), where the term is explained historically. According to this, following the precept of Plato to train both body and soul, "Aristotle and Xenocrates used to teach philosophy to their pupils while walking to and fro", and so they were called the Peripatetics of the Academy (*al-mashārīqīyyūn*), similarly al-Kītīf, *Ta’rīkh al-hukmā*, 26, in a classification of the various ways to designate schools of philosophy where both Platonists and Aristotelians are subsumed under this name; and likewise in al-Shahrastānī (*Mīlāt*, 253, 296).

In the introduction to his work on the philosophy of the "Easterners" (*al-mashārīqīyyūn*), Ibn Sīnā, while acknowledging the merit of Aristotle, blames those who "are infatuated with the Peripatetics (*al-mashārīqī* and *al-Shahrastānī*) that no one else was ever guided by God" (see Gutas, *Avestana*, 45), announcing the evolution of his philosophy beyond the basis laid by Aristotle, which was henceforth called the First Teacher (*al-maṣūli al-aṭwal; see e.g. Ibn Sīnā, *al-Shīrīf* al-Ihāmiyyīd, ed. Anawati et al., 392). The term "Peripatetics" is now used in explicit delimitation or criticism of Aristotle and his commentators (such as Alexander of Aphrodisias) against Ibn Sīnā's own doctrine (see *Nāṣif al-Dīn al-Tūsī*, Ṣūrūḥ al-falāsifa wa’l-ḥukmā, Tehran 1959; 1982, ii, 416, l. 10; iii, 174, l. 5, etc.) or other schools of thought.

In the subsequent development, however, it was the philosophy of Ibn Sīnā and his extensive following which, again from another standpoint, was designated as *mashārīqīyya*. It was not his principal critic al-Ghazālī, but Ibn Rushd [*i.e.* in his *Taḥfīz al-Taḥfīz* (ed. Bouyges, 178, l. 6), who pointed out *mā ṣūrūḥ bihi Abū Ḥamid al-ʾal-mashārīqī*—using the "Peripatetics" synonymously with *al-Shahrastānī* (ibid., l. 8); and see ed. Bouyges, index, 605, § 139). Shihāb al-Dīn Yahyā al-Suhrawardī, in his turn, designates Avicennan concepts and doctrines as those of the *mashārīqī* (*Opera*, ii, 13 and *passim*) in contrast to his own mystical philosophy. It is this general use of the term which appears in later doxography, blurring the difference between the Aristotelian and Platonist schools of Greek philosophy vis-à-vis the following of *iṣḥākī* mysticism [*see ISHRAK; ISHRAKIYYUN*]. In this sense, the 10th/16th century Iranian philosopher Sadr al-Dīn al-Shīrāzī [*q.v.*] is praised by his biographer for uniting *al-mashārīqīyya*, *al-iṣḥākīyya* and Islam (Muḥsin al-ʾArūnī, *Ašafr al-Shīrīf*, Damascus and Beirut 1953-63, ix, 325).

**MAṬAR, ILYĀS DĪN** (1857-1910), Syro-Lebanese historian, medical doctor, pharmacist, lawyer and teacher. He was born into an Arab Orthodox middle-class family in the town of Ḥāshābīyya, in present-day south Lebanon. The Druze-Maronite civil war, which erupted in 1860 and spread from Mount Lebanon to other parts of Syria, forced his family to move to the safety of the city of Beirut. His father, who was a prosperous merchant and a local notable of his community, managed to escape what became known as "The massacre of Ḥāshābīyya" under the protection of the prominent Druze leader, Saʿīd Dājunbūlat.

Ilīyās Maṭar received his primary education at his confession's school, Les Trois Docteurs. He then entered the Catholic Patriarchal School, where he learned Arabic, French, Greek and other subjects. His studies widened in scope when he enrolled at the newly-established Syrian Protestant College (*SPC*), later renamed the American University in Beirut. There he studied chemistry, botany and pharmacy. During those formative years he was taught by a number of competent teachers, whose names were to become associated with the emergence of "the modern Arab renaissance" [*see NAHDA*] in the 19th century. These included Salīm Taqīd (1849-92), founder of the celebrated Egyptian newspaper *al-ʾAbrīm*; Nāṣif al-ʾAzīzīdī (1800-71), the accomplished Arabic scholar; and his fellow-townsmen Fāris Nimr (1856-1952 [*q.v.*]) who taught Maṭar chemistry.

It seems that it was upon Nimr's suggestion that Maṭar decided to write a general history of his country, Syria. This was published in 1874 under the title, *al-ʾUkšūd al-durūmiyya fī taʾrīkh al-mamlaka al-ʾṣūrīyya*. It constituted the first historical work written on Syria as a well-defined entity by a native Arab historian. Its importance lies in the manner it deals with Maṭar's country as one single cultural and territorial unit. Thus Syria ceases to be a collection of Ottoman administrative units, and becomes a fatherland (*watan*) extending from the Taurus mountains in the north and the Sinai Peninsula in the south, and from the Euphrates in the east and the Mediterranean in the west. This fatherland is then shown to be endowed with an Arab national identity and an inherent capacity to acquire the new achievements of European civilisation. However, Syrian patriotism figures in this respect as an integral part of the wider movement of Ottomanism.

Maṭar's book is dedicated to the well-known Ottoman historian and archaeologist Nasr al-Dīn al-Ḥukhūk (*Taʾrikh al-mamluks al-ṣūrīyya*, ed. al-Ḥukhūk’s pupil, Saʿīd Dājunbūlat), whom he met during his visit to Istanbul in 1874. This visit was undertaken in order to obtain his degree in pharmacy and secure the authorisation of the Ottoman Ministry of Education to publish his history. After this date, Maṭar became *Djēwdet*’s protégé, acting as his son’s tutor, assistant and adviser. It was also upon *Djēwdet’s* encouragement that Maṭar qualified as a medical doctor and became a practising lawyer. He taught both medicine and law in Istanbul, while co-editing at the same time a legal journal, *al-Ḥukūk*.

Maṭar is credited with the authorship of over thirty books, both in Arabic and Ottoman Turkish. Apart from his pioneering historical text, his output includes works on a wide variety of subjects, such as jurisprudence, public health and education.

Owing to his affliction with a fatal disease, he returned to Beirut in 1909. He died the following year (March 1910) and was buried in his family’s cemetery. (YOUSSEF M. CHOUEIRI) **MAṬARAM**, the name of a area in central Java where two kingdoms have developed.
The first kingdom bearing this name was founded by Sanjaya, who is recorded to have erected a linga in "Kunjarakunya". The inscription commemorating this event, written in Sanskrit in A.D. 792, was found in the Mataram capital of Madura where he founded the Kota Gedhe, later its capital, and his successor Daksa (910-19?) is credited with the erection of the monumental Lara Djonggrang complex near Prambanan, consisting of 190 temples, the main one being dedicated to Shiva. King Sindok (929-47), however, moved the capital to the upper valley of the Brantas river in east Java, thus founding a new dynasty and ending the history of this first kingdom of Mataram.

2. The Islamic kingdom of Mataram was founded by the Panembahan Senopati Ingala (d. 1601). His father, Kyai Gedhe Pamanahan, is famed for his killing Arya Penanggung of Janggung, the powerful and frightening enemy of Adityavija (Jaka Tingkhir), ruler of the second Islamic (Sih) kingdom of Java, Pajang (r. 1549-87). As a reward, he was given the central area of the ancient kingdom of Mataram where he founded the Kota Gedhe, later under his son to become the capital. After his death in 1584, his son was awarded the title of Senopati ("general") by the king, but Senopati soon fought against Demak and other principalities and eventually attacked the king's troops. After the king's death, he rejected Pajang's supremacy, and he added to his magic powers through meditation and asceticism and a visit to the divine Queen of the Southern Sea, Nyai Lara Kidul, thus undermining the central cosmic position of his capital—and himself as ruler—between the volcano Mount Merapi to the north and the Sea in the south. With the support of two from among the "nine holy men" (wali songo) who are said to have brought Islam to the interior of Java, Sunan Giri and Sunan Kali Jaga, he made Islam the religion of his kingdom, which by now included most of the interior of central and east Java, but not the important sea ports on the north coast, from Surabaya in the east to Cirebon (Cheribon) and Banten in the west. Senopati's grandson Agung (r. 1613-46), the greatest ruler and warrior king of the dynasty, which now, according to the panegyric chronicle of Mataram Bhadad Taniha Jasa, claimed divine descent from the ruling family of Majapahit, the last Hindu kingdom in Java (until 1527), took the title of susuhunan in 1524, and in 1641 the title of sultan was added, legitimised by a special delegation from Mecca. He succeeded in subduing the northern seaports; even Surabaya surrendered in 1626, while its dependency Sukadana in southwestern Kalimantan had already been captured earlier. Even Palembang [q.v.] was captured after 1636.

Thus Mataram developed as a maritime power as well. An attack on Batavia, then the stronghold of the Dutch Vereenigde Oostindische Compagnie (VOC) ended with a defeat. On his death, the island of Java was divided between the remnants of Batavia and that of Banten, to the west of Batavia, refused to acknowledge Mataram's suzerainty. His wars had entailed an enormous loss of human lives and destruction of agriculture. Court literature, however, developed and presented a combination of Sufi tradition and traditional Javanesse cosmological mythology. His successor, his son Susuhunan Amengku Rat I (r. 1646-77) turned away from professing Islam, starting his increasingly tyrannical reign of continuous warfare and killing with the murder of about 6,000 Islamic teachers together with their families. Rebellions flared up, the biggest one led by Raden Trunajaya (1649-80) from Madura, who was also supported by many religious (Islamic) teachers who encouraged him to fight against the cruel king and his ally, the "Christian" VOC. The popular hope for the imminent arrival of a Messianic ratu adil ("just king") spread widely. The susuhunan's son Amengku Rat II (r. 1677-1703) defeated his father's enemies and personally stoned Trunajaya to death, but his reign in turn was marked by continued warfare, the loss of large parts of the kingdom, and continous court intrigues weakened the position of the susuhunan continuously. The court, which in 1746 had been moved to the new capital Surakarta [q.v.], rose again in rebellion when the susuhunan agreed in a unilateral decision to the demand of the VOC to cede the ports on the north coast to Dutch administration. Thus began the Third Javanesian War of Succession (1746-57), led by the rebellious brother of Pangeran Pakubuwana II, Pangeran Mangkubumi, who, in his headquarters in Jogya, was declared Susuhunan Pakubuwana in 1749 (r. 1749-92); in 1755 he adopted the title Sultan—"for the first time after Sultan Agung—Hamengkubuwana I (r. 1746) which has been maintained until the present Sultan Hamengkubuwana X (since 1986), and made Jogjakarta [q.v. in Suppl.] his capital. Before his death, Pakubuwana II, however, had transferred sovereignty over his kingdom to the VOC, who agreed that the crown prince should become Pakubuwana III (r. 1749-88). This initiated the partition of Mataram into two major principalities, Surakarta and Jogjakarta.

The last major rebel in the court of Surakarta,
Pakubuwana III's cousin Mas Said, surrendered in 1757, and henceforth ruled, as Pangeran Adipati Mangkunegara I (r. 1757-95), over an area taken from Surakarta and inhabited by 4,000 households. During the temporary British occupation of the Dutch possessions (1811-16), the brother of Pakubuwana III (r. 1810-11; 1812-14), Natakurama, was rewarded by the British with an appanage of 4,000 households and the title Pakuan Pakualam I (r. 1813-29), playing now a similar role in Yogyakarta territory as the Mangkunegara in Surakarta territory.

Ever-increasing colonial exploitation caused a general social and economic decline, and general unrest was growing. Hamengkubuwana's eldest son, Pangeran Dipanegara (1708-1855), avoiding the court and studying Islamic textbooks and Javanese wisdom with Islamic teachers, associated himself more and more with popular discontent, until finally the last great war in colonial times in Java, the Java War (1825-30), broke out. At its end, half of the population of Yogyakarta had died, and Dipanegara was exiled, first to Menado and then to Makassar.

From the two major and two minor principalities in the territory of Mataram, only the sultanate of Yogyakarta in the heartland of Mataram could maintain some limited degree of self-government, due to the merits of the late Sultan Hamengkubuwana IX (r. 1939-86) during the early years of independent Indonesia and his co-operation with the Pakuamen VIII in modernising the administration of his territory, which is acknowledged in the Republic as the Daerah Istimewa Yogyakarta ("special district of Yogyakarta"), Sultan Hamengkubuwana X (1986-90) being again its governor (since 1999).

MATBAKH

6. EARLY ARABIC PRESSES IN THE NETHERLANDS AND ENGLAND

The principal centre of Arabic printing in Protestant Europe was originally Leiden, where the scholar-printer Franciscus Raphelengius cut an Arabic fount and printed specimens in his Specimen characterum Araborum officinarum Plantiniana Raphelengii (1595). The characters were modelled on the Medicean fount but were of inferior elegance. After being used for the posthumous printing of his Arabic-Latin lexicon (1613) and other works, the Raphelengian equipment was bought by the pioneer English Arabist William Bedwell (1563-1632), who left it to the University of Cambridge, intending that it should be used to print his own Arabic-Latin lexicon. His wishes remained unfulfilled, and no use seems to have been made of the fount since the earliest extant Arabic printing at Cambridge (1668) differs from the Raphelengian type. In the meantime, the great Arabist Thomas van Erpe (Erpenius), Professor of Arabic at Leiden (1612-24), had established his own press there, from which he published his own works. The Medicean Press again provided the model for the typeface. About this time oriental (and specifically Arabic) studies were encouraged at Oxford by Archbishop William Laud as chancellor of the university (1630-41). Laud established the chair of Arabic for Edward Pococke in 1636, and in the following year his agent bought printing equipment for Arabic and other oriental types from stock in Leiden. This provided the fount for inter alia Pococke's Specimen historiae Arabum (1648, 1650), and it continued to be used into the eighteenth century. A third Arabic fount was that used in London for the printing of the Polyglot Bible of 1655-57 and its great supplementary work, the Lexicon Hebrepotamicum; this was modelled on the Medicean fount at Cambridge. Unlike the Raphelengian and Oxford founs, this was modelled on the characters of the Savarian Press, which had been set up by Savary de Brèves, the French ambassador at Rome (1608-14), when the Medicean Press there went out of production. Savary brought the press back to France, where it was acquired by the Imprimerie Royale and used in the production of the Parisian Polyglot (1645).

MATBAKH

The Persian word for kitchen, اشگاهخانه, was not in general used before the 19th century, though the terms اش "soup" and اشغ "cook" do occur in earlier texts. Before the Kâdîr period, the Arabic اشگبخک was the common term for kitchen (Elahi, 790-91, with various types of yoghurt and کشک) and other dairy products, and ways of preparing meat, all point to Central Asian origins. Conversely, olives and olive oil, so abundant in the Mediterranean and Ottoman Turkish cuisine, are virtually absent in Persian cooking (except in the Caspian province); Persians traditionally cooked with animal fat (except for Jews, who used sesame oil). The important place of rice in Persian cooking similarly suggests Asian origins, in this case Southeast Asia and India (Bazin and Bromberger, 148; Fragner 1994a, 54-5).

Legend ascribes the art of cooking to Ahiram (the Zoroastrian spirit of evil) who is said to have taught
a mythical King Zahāḵ to prepare the flesh of animals (Firdawsi, Shāh-nāma, 1988, i, 48-51, cited in Ghanoomparvar, 191). It is mainly Greek texts that offer some information on royal banquets, but otherwise we know little about food and ways of preparing it during the Sasanid period, because borrowings from Lydia and Assyria seem plausible (Schmitt; Gunter, 13-21). The situation for the Sasanid period is a little better, with information and recipes being available on the high cuisine of the court, including ingredients such as various types of hot and cold meat, stuffed vine leaves and sweet date puree (Amuzgar; Gunter, 44). The first five centuries of Islamic rule are again rather poorly documented. The available information, mostly from Muslim travellers and the occasional literary source, points to a heavy reliance on bread and cereals, an important role for (roasted) meat, including game, especially for nomads and soldiers, and the use of condiments such as pickled vegetables (turshī), sour grapes (ghūrā), dried lemons and walnuts, which would remain essential to Persian cooking (Kasāʾī). It is only in the Mongol period that the current Persian cuisine became heavily influenced by Eastern traditions and took its current shape. Ragḥīd al-Dīn, who first entered Mongol employ as a head cook in the household of the khán and who later employed a Chinese cook in his own household, may have been instrumental in the transmission of Chinese cuisine to Iran (Allen, 73-4).

The first period for which we have abundant information on eating and cooking practices is that of the Safawids. European observers were struck at the frugality of eating habits. Chardin, iv, 28-9, 47, was among those who noted how Persians skipped breakfast except for a cup of coffee and only ate two proper meals a day. Food was cooked in earthenware or copper pots coated with tin (Olearius, 595). In areas where wood was scarce, such as the central plateau, cooked food was eaten at most only once a day, in the late afternoon, and instead of cooking, people in urban areas would get their pilaw and the main ingredients on which food was consumed (Olearius, 596). Meat included mutton and goat. Chicken and pigeon were also part of the menu of those who could afford it. Beef was rarely eaten. Chardin's observation, iv, 48-9, that beef, tough and dry, was only eaten by the poor in winter is echoed for the 19th century by Polak, i, 112, and Wills, 299. Even today, Persians do not favour beef, except those living in the Caspian provinces (Bromberger, 1994, 191). Nor did game enjoy much popular appeal in Safawid times, despite the enthusiasm for hunting on the part of the elite, in part because of the difficulty of abiding by the Islamic law of hunting of the poor on a regular basis. Its use was associated with certain groups, such as the hajj, who loved it as well as dark meat and fish. Turkey flesh seems to have caught on very slowly after its introduction from Europe into the New World via Europe (Tavernier, i, 712). Olearius, 596, claimed in the 1630s that turkey was not among the birds eaten, though under Shāh 'Abbas I a Venetian merchant had once brought a few to Isfahān. A generation later, Tavernier wrote that the Armenians had brought turkeys and ways of raising them to Persia, adding that the meat was only for the court (i, 712). Some sources claim that horseflesh was the most esteemed type of meat (Chronicle, i, 155). The prediction that Persians did not eat horseflesh at the court of Tūmīr (Clavijo, 106, 224) and the fact that the Māḥmūd-nāma-i Būkāhī, 318, calls it the most delicious meat, point to a Central Asian origin of the taste. Polak, i, 115, suggested regional variation by saying that Persians did not eat horseflesh with the exception of the people from Shīrāz and the Ozbek, who considered it a delicacy. Fish, not an ingredient of the nomadic diet, was naturally more confined to the Caspian coast and the Persian Gulf littoral, though trout from the Caspian region was also served at royal banquets (Tavernier, i, 545).

The information that has come to us from Safawid times mostly concerns the food of the rich and eating practices at the royal court, as described by Western visitors who enjoyed the hospitality of the shāh and administrative officials. They offer information on the royal kitchen as well as on the types of food consumed at the court.

The royal kitchen prepared food only once a day for the royal household but twice a day for the shāh himself and his direct entourage. The daily food outlay for the shāh amounted to two sheep, four lambs, and thirty chickens for his midday meal and half as much for his supper, not counting small poultry, game and fish (Chardin, v, 350-1).

The royal kitchen was supervised by the tāzmān-būdshī, an official who was subordinate to the nāẓūr al-haydūdī, the steward of the royal household. The tāzmān-būdshī was responsible for the quantity and quality of the meat served at the court, preceded the procession of the meat dishes all the way from the kitchen to the royal quarters, and also acted as the royal taster (the mihār "chamberlain" would taste all royal food a second time) (Minorsky, 137; Olearius, 672; Richard, ii, 15, 274; Chardin, v, 349-50, 378; Kaeppelin, 279-80). Another important official was the saḥraūr-būdshī, who was in charge of arranging the floor cloth (sūbrū) on which food was consumed (Olearius, 672; Richard, ii, 15, 274; Chardin, v, 351). Other officials working in the royal food and drink department were the kasāʾī-būdshī or sulākāshī-būdshī "the butcher", the hasūqūr-būdshī, who supervised the poultry yard and the scullery, the sabzī-būdshī, who was responsible for green salads, the turgāšī-būdshī, who supervised the preparation of pickled vegetables, the halwātī-būdshī, or confectioner, the shahrāštī-būdshī, or supervisor of the sherbets and syrups, the ābdār-būdshī, who was in charge of drinks, and the kāhūštī-būdshī, who headed up the shahāštūr's official bakery (Allsen, 1991, 406-11; Minorsky, 67, 94, 97, 98; Chardin, v, 352-53).

Meat was often eaten in the form of kababs, which Fryer, iii, 146, described as "roastmeat on skewers, cut in little round pieces no bigger than a sixpence, and ginger and garlic put between each". The same author, i, 147, notes that it was most often made into a pilaw, "their standing dish".

Rice had become an important ingredient in elite cookery after the Mongol domination of the country, gradually edging out pasta and groats (bulghūr) (Frager 1987, 789). Though it is not clear whether rice was grown in Persia before the advent of Islam, it has been part of the Persian diet since Sasanid times (Balland and Bromberger, 184; Bazargan, 161). At least since early Safawid times, Persians have eaten rice in various ways, either as chawāl or as pilaw. Unlike the situation in parts of China and India, where rice is a staple and a basic nutrient, in Persia rice has always been a prestige food and a luxury item not eaten by the poor on a regular basis. Its preparation has always been time-consuming. Cooking is the same, involving a laborious process of soaking and steaming, resulting
in rice that does not stick together, but the main
difference is that chilaw consists of rice and clarified
butter and sumac, which, served with kabab, a raw
onion or herbs, has become in modern times a
favourite restaurant meal. Pilaw, on the other hand,
is rice mixed with a variety of ingredients (for cook-
ing and types of pilaws, see Ballard and Bromberger,
154; and Bazargan, 161). Fryer, iii, 147, describes
the making of pilaw as follows: "To make pullow, the
meat is first boiled to rags, and the broth or liquor
being strained, it is left to drain, while they boil the
rice in the same; which being tender, and the aque-
ous parts evaporating, the juice and gravy incorpo-
rates with the rice, which is boiled almost dry; then
they put the meat again with spice, and at last as
much butter as is necessary, so that it becomes not
too greasy or offensive, either to the sight or taste;
and it is then boiled enough when it is fit to be
made into goblets, not slably, but each corn of rice
is swelled and filled, not burst into pulp." Rice with
lamb was the most common form of pilaw, but it
was also prepared in numerous other ways, with
spinach or cabbage, with roasted or boiled meat, with
almonds and raisins, with onion and garlic, and it
was served in various colours, depending on the con-
diment, which could be currant, pomegranate or
saffron (Olereius, 595-6; Kaempfer, 278). Chardin,
iii, 185-6, noted five or six different pilaws during a
meal served by Shâh Sulaymân for a Russian envoy,
with garlic crust, lamb, chicken, eggs stuffed with
meat, and with fish. He also gave more than twenty
as the total number of pilaw varieties (iv, 54). Twenty-
five kinds of pilaw are mentioned in a Persian source
from the Safavid period (Jâhânbîyan, 371; see Afsâh,
1378, 98).
Then as now, meals were consumed synchronically;
unlike French cuisine, there was no time sequence to
the order of the eating food and courses are not
divided (Spoonier, 253; Chehabi, 47). Kaempfer, 278,
describing a royal banquet, noted, however, that con-
fection and sweetmeats tended to precede the main
course (see also Lettres dîflantes et curieuses, 115). All
Europeans commented on the silence observed during
meals, their short duration, and the fact that nothing
was drunk until afterwards. They also noted that no
silverware was used, except for a large wooden spoon
that was used for eating soup and drinking the vari-
ous juices that were served as part of the meal (Della
Valle, i, 641; Olereius, 596; Kaempfer, 281; Lettres
dîflantes et curieuses, 119). While ordinary Persians ate
from porcelain or earthenware, at the court gold dishes
were abundantly used as well (Herbert, 262; Kaempfer,
262; Kroebl, 30). Kaempfer, 153, estimated the total
value of the royal dishware at 10 million gold ducats. Afgâr
and turghi (pickled vegetables) served as condi-
ments (Kaempfer, 278). Kaempfer, 262, describes the
desserts served on the occasion of an audience: can-
died fruit, fresh fruit, various kinds of cake and sweet-
meats. Jam, murabbcf, was very popular and came in
many varieties (Afgâr 1991, 417). Sugar was used
in great quantities in the ubiquitous confectionery.
According to De Bruyn, the Dutch East India Com-
pany annually brought 12,000 packs at 150 pounds
each to Isfâhân (De Bruyn, 178).
Common people ordinarily consumed bread, veg-
etables and fruit. Bread has always been the staple
for the overwhelming majority of the population, and
its central role in the diet is reflected in popular
expressions and folklore (Kastî, 112). The Caspian
region, where bread has been spurned as unhealthy
until modern times, is an exception (Orosei, 171).
Types of bread used in Safavid times were remark-
ably similar to the ones eaten today; such as bawârz, a
thin unleavened bread that doubled as a spoon and
a napkin, and sangâl, long bread baked on pebbles
(Chardin, iv, 50). Olereius 596, however noted that dates
were preserved in syrup mixed with buttermilk was
seen as a precious food. He called the cheese dry,
blue and hard, as being worst on the Gulf coast and
best in Mazandaran (Herbert, 260, 262). Butter came
from the tails of sheep. Nothing like restaurants existed.
However, given the prohibitive cost of burning wood,
many people ate at the ubiquitous public food stalls,
dukkân-i tabbâkhâ, where simple hot rice dishes were
prepared (Iskandar Beg Munjî, 188; Chardin, iv, 57).
Persia had since early medieval times been a cross-
roads for vegetables and fruits, serving as a source of
diffusion or an east-west conduit for such plants and
crops as sugar cane, lemons and sour oranges, spinach
and eggplant (Watson, 26, 44-5, 62, 71). In the Safavid
period, the movement was generally in the opposite
direction. Europeans introduced parsley, asparagus,
artichokes and cauliflowers into Persia, and these
were cultivated in the vegetable gardens of Shâhrukh
and Isfâhân (Ange de St. Joseph, 102-3; Tavernier,
i, 422).
The first cookbooks—as opposed to texts in which
food is described for its medicinal use—also date back
to the Safavid period (see Afsâh 1360). Of the two
that have come down to us, one, called Kârnâmâ dar
bâb-i tabbâkhâ va saântâ an, dates from the time of
Shâh Ismâ’il I (early 16th century) and was written as
a gift to a nobleman. The second, Maddât al-khâtûs,
Risâla dar tâm-i tabbâkhâ, was probably written for Shâh
Abbâs by his chief cook, Ñur Allâh, who may have
been a descendant of Muhammad ‘Ali Bawarcî, and
was perhaps even commissioned by the ruler. It is
likely that both were composed for colleagues in the
profession rather than as collections of recipes to serve
as guidelines for the cooking of common people
(Fragner 1984, 329; German tr. of the pilaw dishes
in Nur Allah’s Maddât al- khâtûs, in ibd., 943-60). For
the Kâdiri period, we have the informative Safâr-i
atfûma, a compendium of cooking and eating practices
written for Nâsur al-Dîn Shâh’s personal physician,
the Frenchman Tholozan, by the royal cook.
The menu in Kâdirî times does not seem to have
differed greatly from that in the Safavid period. Persian
sources as well as foreign observers still note the bread
and the cheese, the chilaw and pilaw, the âgh and
the ah-i gushî, the various legumes, such as beans,
cucumbers, aubergines (egg plant), in addition to car-
rots, turnips, radishes and cabbages, as well as condi-
ments in the form of turghi, and the prodigious quanta-
ties of fruit (Wills, 170-1; Nâdir Mirzâ, 307-10,
and see the references to food in Bâsf al-Mulk,
Rznâmâ, intro. by Afsâh, pp. XL-LII). Confectionery,
too, continued to be an indispensable part of the
Persian diet (Wilson, 249-56). A new feature was that
food items originating in the New World, such as
tomatoes and potatoes, began to make modest inroads
into the country’s kitchens. Potatoes, which were appar-
ently introduced into Persia in the 18th century, were
long called âgh-i Malûm “plums of Malcolm”, after
the British envoy Sir John Malcolm, who is commonly
but probably erroneously thought to have brought
potatoes to Persia (Par-i Dâwîd, Hamaizd-nâmâ, 176;
Binning, ii, 87-8). Though potatoes were cultivated in
Persia, Muslim Persians in the early 19th century did
not particularly care for them, and they mostly served
the Armenian population and European residents

Rich and poor naturally continued to eat differently both with regard to table manners as to ingredients. Beginning with the court, members of the elite began to adopt western cutlery in the late Kâdgâr period, and the habit of sitting at the table in arm chairs was introduced in the early 20th century as well (Chehabî, 55-6). The rich used imported sugar while the poor made do with syrup and honey (Polak, ii, 154). The rich consumed different kinds of pilaw and khrîsh, stews, with lamb meat, fowl or fish. The muddling classes did not ordinarily eat pilaw and khrîsh only once or twice a week, but mostly had to satisfy themselves with abî-î gûst (a stew on the basis of mutton stock, which seems to have become the staple of the poor in the course of the 19th century; see Elb art. Ab-gûst). The poor ate mostly bread (and in times of scarcity, even acorn bread; A. Wilson, 63). Cheese and fruit, could afford abî-î gûst only occasionally, and in the winter months rarely were in a position to eat any meat. They served pilaw and khrîsh only during holidays and festivals. All ate large quantities of fruit, which was cheap (Darâbî, 247-8; Polak, i, 121; Kucânî, 18; Mustawfî, i, 284). Fish was a staple in the Caspian provinces, and dried salted fish was also consumed inland. Fresh-water fish was little esteemed. On the Persian Gulf coast, prawn, artichokes and salmon or river fish were prepared on a regular basis (Khosrowkhavar, 149-52), yet the peasants and the urban poor in the arid and semi-arid interior, while rice is consumed by every-
MATBAKH — MAWAKIB

The legendary city of Qom, in St. Ir., ii (1975), 243-53; Bromberger, ‘Identité alimentaire et alterité culturelle dans le nord de l’Iran’, in Iran: des pretensions imperiales a la culture de la cuisine’, in A. C. Gunter, ed. Afshar, 2 vols., Tehran 1350/1971; Fītimad al-Saltana, Cihil ... beneath it and a round black turban, girt with the golden Arab sword, and mounted on the royal steed (faras).

Then he returned and entered Cairo by Bab al-Nasr. (mawkib ḥd’il).

Then he returned and entered Cairo by Bab al-Nasr. (mawkib ḥd’il).

IN THE MAMLUK SULTANATE

IN THE MAMLUK SULTANATE

In the early Mamluk sultanate, maweek designates specifically the royal ride which formed an item in the sultan’s installation ceremonies. The term is explicitly used by Ibn Taghribirdi (Naṣīf, vii, 41) on the accession of al-Mansūr ‘Abī b. Aybak: “He rode on Thursday, 2 Rabi’ II [655/19 April 1257] with the insignia of the sultanate from the Citadel to Kubbat al-Naṣr in an awec-inspiring procession (mawkeb ḥd’il). Then he returned and entered Cairo by Bāb al-Naṣr. The amirs dismounted and marched before him. ... Then al-Mansūr went up to the Citadel and took his seat in the palace of the sultanate.” On the insignia of the sultanate in the Citadel to the throne-room, as described by al-Kalkashandf, see al-Kalkashandf, (izl al-Dīn al-Hillf, Amīr ibn al-Malik al-Nasir Muhammad b. Kalawun) up to Bab al-Naṣr. They entered Cairo, with which had been magnificently decorated, on foot bearing the ghādghiyya. The amirs busied themselves with the raising of the [royal] parasols (?). He passed through the city with his amirs, riding at his side. Robes of satin, watered silk and gold were spread before him until he returned to his Citadel (al-Raʿī al-zāhir, ed. Khūwāyirī, 204). After the time of al-Naṣir Muhammad b. Kālūwān in 693/1294 (cf. Naṣīf, vii, 47). Ibn ‘Abd al-Zāhir gives an interesting account of the royal ride of al-Saʿīd Baraka Kāhān, when appointed joint sultan with his father, al-Zāhir Baybars, on 13 Shawwāl 662/8 August 1264: “He [Baybars] caused his son, al-Malik al-Saʿīd, to ride with him. ... and the sultan reattends at his ghādshiya. The amirs dismounted and marched before him. ... Then al-Mansūr went up to the Citadel and took his seat in the palace of the sultanate.” On the insignia of the sultanate from the Citadel to the throne-room, as described by al-Kalkashandf, see al-Kalkashandf, Subh, iv, 6-9. Similar accounts in more or less detail, and not always using the term mawkeb, are given in connection with the accession of several sultans down to al-Naṣir Muhammad b. Kālūwān in 693/1294 (cf. Naṣīf, vii, 47). Ibn ‘Abd al-Zāhir gives an interesting account of the royal ride of al-Saʿīd Baraka Kāhan, when appointed joint sultan with his father, al-Zāhir Baybars, on 13 Shawwal 662/8 August 1264: “He [Baybars] caused his son, al-Malik al-Saʿīd, to ride with him. ... and the sultan re-...

MAWAKIB — MAWLID

al-nawbd). He would proceed with the amirs in front and the ghadiiya before him, while the qawwas chanting and the royal flutes played, surrounded by the halberdiers, until he had crossed from Bab al-Nasir Muhammad in 742/1342:

"The sultan held another court (mawkib al-a£im) and bestowed robes on all the amirs, ... in a great procession (mawkib 'azim) with those amirs who were in his company."

The term mawkib was also used for other state appearances of the sultan in which there was a procession, such as his attendance at congregational prayer on Fridays and the two Feasts, at polo in al-Maydân al-Akbar, at the cutting of the dam, and on royal progresses. Al-Kalkashandi (Subh, iv, 46-9) does not use the term consistently on each of these occasions, but it appears to apply to all of them. Uniquely Egyptian were the proceedings at the cutting of the dam at the height of the Nile-flood in Cairo. The sultan, when notified by the master of the Nilometer [see nûks] that the flood was at its height, rode at once in modest state (without full insignia and with a reduced escort) to the Nilometer, where he held a banquet for the amirs and Mamluks. A vessel of sal-iron was given to the master of the Nilometer, who swam across the well and perfumed the column and then the sides of the well. The sultan’s barge was brought alongside, and the sultan swam in the river, surrounded by the barges of the amirs. Followed by the boats of the spectators, the amirs’ barges and the sultan’s great barge entered the mouth of the canal of Cairo, with the craft manoeuvring and cannons firing. The sultan sailed in his small barge to the dam, which was cut in his presence, and he then rode back to the Citadel.

(P.M. Holt)

MAWKIF (A.), a term of Sûfi mysticism, referring to the intermediate moment between two "spiritual stations" (mâdâm), represented as a halting (awkâf) and described as a state of supor and of the loss of reference points acquired since the preceding stage. The mawkif is a dynamic psychological state, in which the connection between the mystic and God becomes overturned, and sometimes suspended (annihilation in God, the so-called fana [see BAKA' WA-RAX]). The best example of the course of such an experience is given in the work of al-Niffârî (d. ca. 566/976-7 [q.v.]), his K. al-Mawâkif wa l-maâhkabât, ed. and Eng. tr. A.J. Arberry, London 1955, Fr. tr. M. Kâîbal, Le Livre des stations, Paris 1989; see also P. Nwyia, Textes inédits de Niffârî, in Trois ouvrages inédits de mystiques musulmans, Beirut 1973; idem, Exégèse coranique et langage mystique, Beirut 1970, 348-407. The term continued to be employed in classical Sûfism (e.g. by Ibn al-'Arabî, Fûtâhî, Cairo 1329/1911, 392-3, who refers explicitly to al-Niffârî).

MAWLID

3. In the Maghrib.

Unlike the use of the term mawlid in other regions, e.g. in Egypt and the Sudan, where it also includes the celebration of the birthdays of various saints (see 1., in Vol. VI, 895), in the Maghrib the term mawlid is restricted to the birthday of the Prophet Muhammad.

In this part of the world, alongside the 'id al-fitr and the 'id al-’adhâ [q.v.], the mawlid is among the most important festivals of the year.

The oldest known mawlid celebrations in the Maghrib were held in the court of al-Nasir Ahmad b. al-Nasir Muhammad in 742/1342: this festival was introduced into this city by an 'ulamâ named Abu l-Abbâs al-’Azafi (d. 633/1236 [q.v.]) in order to call a halt to the participation of the people in Christian festivals and to strengthen the Muslim identity of Sabta in a period of Christian successes during the Reconquest, both at land and at sea.

After his son Abu l-Kâsim al-’Azafi had seized power in Sabta in 647/1250, he officially introduced the mawlid and propagated the festival throughout the rest of the Maghrib. Through this celebration of the mawlid, Abu l-Kâsim al-’Azafi was able to display his religious enthusiasm, and as the result of his largesse during the festivities he increased his popularity with the people. Moreover, during the mawlid celebration the hierarchical relationships among the various groups within the realm were confirmed and the loyalty to the ruler expressed in specially-composed songs.

Since then, in a similar way the celebration of the mawlid has always played a role at an official level in legitimising the power of various dynasties which have ruled over parts of the Maghrib: the Hafsids (Eastern Maghrib); the ‘Abd al-Wadîds (Central Maghrib); and the Marinids, the Wattâsids, the Sa’dids and the ‘Alâwîs (Morocco) [q.v.]. Today, the celebration of the mawlid plays a role in the consolidation of the power of the ‘Alawid king of Morocco, who traces his descent, together with the concomitant prestige, to the Prophet Muhammad himself.

In addition to the state-sponsored celebrations at the courts and elsewhere, the mawlid has always been and still is immensely popular among the people, not only among the Arabised sections of the population but also among the Berbers. The way in which the popular mawlid is celebrated displays an enormous variety, both in duration and in ritual, changing from one place to the other. Common elements in all celebrations are the taking of a holiday, the cheerful atmosphere, illuminated parades on the eve of the mawlid, festive meals, sweets, special dresses, the exchange of gifts, music, dance and, under the influence of Sûfi brotherhoods, visits to shrines of saints and singing of mystical chants.

At times, these popular celebrations have given, and still give, rise to protests by the ‘ulamâ', who do not consider these permissible from the point of view of the religious law because of the nature of the activities which take place during the celebrations, many of which are regarded as unlawful. The oldest discussions about this originate from the time of Abu l-Abbâs al-’Azafi, but the debate reappears with regular intervals. In the first decades of the 20th century, under the influence of Salâfi ideas from Egypt [see SALAF, 1], there were various attempts to exclude certain practices from the mawlid celebration. In very recent times, inspired by Wahhâbi ideas, the mawlid has again come under severe criticism. Despite these protests against the celebration of the festival, as a major manifestation of popular religion, the mawlid is as vital as ever.

**MAWSÛ'A.**

3. In Turkish.

The fascination which the Ottomans entertained for compendia of facts and the ordering of knowledge can be traced to their origins outside Anatolia. Although not strictly speaking an encyclopaedic work, the *Diwan baghîr al-turk* written by Mahmûd al-Kâshgîrî in the second half of the 5th/11th century and providing a dictionary in Arabic or early Turkish, partakes also of the nature of a thesaurus, with information on the early Turks, including their onomastic, their folklore, proverbs, poetry, etc. [see *AL-KÂSHGÎRÎ*.]

As one would expect, the earliest examples of encyclopaedias in the Ottoman world were written in Arabic. It is clear that these types of encyclopaedic reference works appeared for the first time this period. Rûkûn al-Dîn Ahmed made a translation of al-Kâzîmînî's *Aqîdî 'l-makbîkât* from Arabic into Turkish and presented it to the Sultan. It is most likely that the concept of the earth as an orb was introduced into Turkish scientific literature through the work of translating encyclopaedic works from Arabic into Turkish, this being an important step in the development of reference tools for the use of Ottoman scholars.

As early as the reign of Mehmed I (816-24/1413-21), the first translations of encyclopaedic works appeared. For example, this period, Rûkûn al-Dîn Ahmed made a translation of al-Kâzîmînî's *Aqîdî 'l-makbîkât* from Arabic into Turkish and presented it to the Sultan. It is most likely that the concept of the earth as an orb was introduced into Turkish scientific literature through the work of translating encyclopaedic works from Arabic into Turkish, this being an important step in the development of reference tools for the use of Ottoman scholars.

Rûkûn al-Dîn Ahmed made a translation of al-Kâzîmînî's *Aqîdî 'l-makbîkât* from Arabic into Turkish and presented it to the Sultan. It is most likely that the concept of the earth as an orb was introduced into Turkish scientific literature through the work of translating encyclopaedic works from Arabic into Turkish, this being an important step in the development of reference tools for the use of Ottoman scholars.

The first original encyclopaedic works in the Ottoman empire can be dated to the 9th/15th century. There are also compilations of this work prepared in the same format. Another distinguished example of the bibliographic compendium is *Hâddîjî Khâli'a* (Kâthî Şîlebi) *Kadî al-zûnân*. He started compiling it in 1042/1633 and took about twenty years to complete it. It contains bibliographic information on ca. 14,500 books and biographical information on ca. 10,000 authors.

Erzûrûmî İbrahim Hâddîjî 'sîrînî-nâme is the last example of the classical encyclopaedic works, reflecting the author's interest in Islamic mysticism. The work consists of selected topics chosen from arithmetic, geometry, astronomy, mineralogy, botany, zoology, anatomy, geography and physics.

After promising beginnings in compiling compendia of knowledge, the movement seems to have petered out, perhaps a victim of its own success; it was perhaps felt that there was no need to be filled by expanding or adding to these compendia. It is thus not surprising that the next stage of Ottoman compilation of encyclopaedias should be the introduction of European-styled encyclopaedias which surveyed European science. The first of these were introduced during the Tanzîmînî (q.v.) period in the mid-19th century. Titles of these works reflect the lexicographic approach and understanding of their compilers, so that the word *kâmîs* "dictionary" was generally used in their titles. The first examples, are unfortunately incomplete. The first encyclopaedic work was planned by Alî Su'âtî (q.v.) who escaped to France in 1867 because of his opposition to the ruling regime in the Ottoman empire. He attempted to publish this first encyclopaedic work as an appendix to his newspaper *Ulûm* in 1870, entitled *Kâmîs al-ulûm* ve 'l-mêrîfît, it was published in fascicles and only five of these appeared, since it fell victim to the siege of Paris by the Prussian Army. In this encyclopaedia subjects were arranged in alphabetical order, contained illustrations, and each fascicle comprised sixteen pages. Other major, equally incomplete, attempts are, in chronological order: *Kârî* by Ahmed Nâzîm and Mehmed Rûghiî, both of them officers in the Ottoman Army, in 1888, of which only one sample fascicle appeared; *Makîzên al-ulûm*, another general subject encyclopedia, by Mehmed Tâhir and Serîk Orpîyan, of which only one volume appeared in 1898; and a specialised subject encyclopedia on mathematics and astronomy, *Kâmîsî ri'âdîâyât*, prepared by Sâlih Dheki (Zekî), a mathematician, in 1897, of which again only one volume appeared.

The *Makîzên al-mêrîfît* was prepared by Emr Allâh Efendi, who was the first philosophy lecturer at the Dar al-Fûnûn in Istanbul, in 1900. Only one volume
appeared, but it had importance as the first comprehensive general encyclopaedic work in Turkish, and its title was subsequently adopted as the Ottoman term for a general encyclopaedia. After Emir Allah Efendi’s appointment as the Minister of Education, a commission was set up under his chairmanship and consisting of 132 specialists. The aim was the preparation of his encyclopaedic work for the second time in 1910. The title of this new encyclopaedia accordingly became Yeni muhtəşəl al-mədərf, but this attempt was also short-lived, and only one volume appeared.

The first complete work in the genre was, in fact, the Layhə-i tərəvəzə ve dəyəmə fləfrəyə “Historical and geographical dictionary”, prepared by Yaghikjijsıāde Ahmed Rıf‘at in seven volumes in 1882–3. Although its title suggests that it was limited to historical and geographical matters, it in reality covered subjects such as new inventions, machinery, as well as the natural sciences physics, chemistry and botany.

The ḫəmμəs al-‘alām of the linguist Ƣemırl Şems el-Din Şəmî [g.v.] was compiled between 1888-98 as a historical and geographical encyclopaedic dictionary in six volumes. Şəmî relied on oriental and western sources for his work, and it remains a valuable reference source for historical research today, since the work contains not only historical and geographical terms and words used in the Ottoman language but also biographies of historical personalities and their works as well as the names, histories, and ethnic complexion of locations within the empire. It was issued fortnightly in fascicles, and its publication was completed in eleven years.

A similar work, the Memalik-i əqlənəmərin tərəvəzə ve dəyəmə ləyət “Dictionary of the history and geography of the Ottoman Empire”, was prepared by ‘Alî Dəvəd, and published in 1893-9 in four volumes. It comprised two sections, the first, in three volumes, was devoted to the natural, historical, and economic aspects of the Ottoman provinces and their localities, while the second section, the fourth volume, contained biographical information on Ottoman statesmen and poets.

All these efforts were personal and self-motivated, and no financial or academic support was provided from any public or private institution. Within the same period, another initiative directed by a commission was launched in 1913 under ‘Alî Rəşəd, ‘Alî Şeydil, Məhəmməd ˙Izət and L. Füllət, the Məmüəder də ələrət al-mədərf “Illustrated circle of knowledge”, but only two volumes were issued 1913-17. The harsh social, economic and political conditions of the last decades of the Ottoman empire were certainly a contributing factor to the lack of success in completing these potentially promising works in the 19th and early 20th centuries.

Two notable biographical works appeared, however, towards the end of the 19th and the beginning of the 20th centuries. A national biography, the Sığ diminish’a ‘Olcənmə i “Ottoman register”, was prepared by Məhəmməd əbləreyyə [g.v.] in four volumes and published in 1886-9; it contained approximately 20,000 biographies of civil servants and statesmen. A bio-bibliographical compendium of Ottomans began to appear in 1914, the “Ottoman authors”, compiled by Bursall Məhəmməd Tələh, listed 1,600 books and gave the biographies of their authors. Its aim was to record the scientific and literary taste of the Ottomans for the new generation, and its subsequent was that it became one of the main sources for encyclopaedias published later.

After the establishment of the Republic in 1923, the government encouraged the publication of new books, especially for children, to alleviate the problem of illiteracy. The French word for encyclopaedia was used for the first time in Turkish as anısklopedi, with the publication of the Cod Iraq anısklopedisi “Children’s encyclopaedia” in 1927. Four volumes appeared up to 1928, and after the change of alphabet in November 1928 the publication of this work was suspended until 1937. This encyclopaedia has a significance in Turkish encyclopaedia publication, being the last work begun in Arabic script before the change of alphabet, the first encyclopaedia work completely in the Latin script being that prepared on the initiative of a daily newspaper, Cumhuriyet, and published between 1932-6 in ten volumes. This publication was based on Compton’s illustrated encyclopaedia and American educator, and additional entries related to Turkey were written by specialists.

Several special-subject encyclopaedias have appeared in the Republican period. One of the most important of these is Resad Ekrem Koçu’s Istanbul Anısklopedisi, which began in 1946 and ceased publication in 1975 on the death of the author. The significance of this incomplete work in eleven volumes is that the historian Koçu prepared it single-handed as a work limited to the city of Istanbul. Given the supreme importance of Constantinople/Istanbul in the history of the eastern Mediterranean world, further encyclopaedic works were prepared upon the death of Koçu. The Istanbul kütül ve sanat anısklopedisi “Encyclopaedia of the culture and art of Istanbul” was prepared by specialists and published by a daily newspaper, Tercuman, in 1962; unfortunately, it was never completed. The other encyclopaedia, Jaddar buğusu Istanbul anısklopedisi “Encyclopaedia of Istanbul from yesterday till today”, was published by the Ministry of Culture and the Historical Foundation in eight volumes in 1993-4; although not as detailed as Koçu’s work, it gives general information on almost every subject in 10,000 articles.

From the 1940s onward, the Ministry of National Education (Masruf Vekaleti) decided to initiate the publication of encyclopaedic works as well as its publications and translations of classical works. The first was the Islam Anısklopedisi begun in 1940. A committee was set up, and the encyclopaedia was based on the original Encyclopaedia of Islam published in Leiden in 1913-36 [see maWSO³’A. 4]. However, amendments were carried out and in some cases, expansions were made in articles which were only briefly covered in the Leiden edition. The work was completed in 1968 in thirteen volumes, of which two volumes have two parts.

Meanwhile, a decision was made by the same Ministry to prepare a general, national encyclopaedia in 1943. The first four volumes were issued under the title of İswini anısklopedisi, the name of the President of Turkey at the time [see ismet inonu, in Suppl.], altered to Türk anısklopedisi in 1951. The encyclopaedia consists of thirty-three volumes, and publication was completed in 1966. This work has a significant place in the history of official publications in the Turkish Republic. Since it was published over a span of forty-three years, it reflects the political approaches and the use of Turkish language by the various governments in power through the period, and it further illustrates how the publications of government agencies can be affected by the political ideology of these governments. The Ministry of National Education also commissioned Celal Esat Arseven and Məhəmməd Zəki Pəkəl in 1943 and in 1946, respectively, to publish
the Sanat ansklopedisi “Encyclopaedia of the Arts” in five volumes and Osmanlı tarih deyimleri ve terimleri sözlüğü “Dictionary of Historical Phrases and Terms” in three volumes.

From that period until the 1960s, no new projects for a general encyclopaedia were initiated with the exception of the Hayat ansklopedisi “Encyclopedia of life,” begun by a private publisher in 1961 and by 1963 completed in six volumes. In a very short period, 100,000 copies were sold, indicating the need for a general encyclopaedia by an increasingly literate society.

The Meydan Larousse büyük lagat ve ansklopedisi is the largest Turkish encyclopaedic work initiated by a private publisher, with publication beginning in 1969. It is an encyclopaedia as well as a dictionary, being a translation of the Grand Larousse encyclopédique published in 1960-4 in ten volumes. Some subjects and entries related solely to French language and culture were omitted, and subjects related to Turkish and Islamic culture inserted. The encyclopaedia was issued in fascicles and was completed in 1973 in twelve volumes, with two supplementary volumes issued in 1974 and 1985, respectively. The publication of Meydan Larousse was a turning-point in the history of commercial publication of encyclopaedias in Turkey, and as a result of the enthusiasm with which the Meydan Larousse was greeted by the public, other publishers have seen the commercial opportunities offered by publishing encyclopaedias.

Hence during these years, a handful of publishers began to specialise in such reference works. The major publishers today are Anadolu Yaymcihk, Gelşim, Gösrel and İletişim, who publish not only general encyclopaedic works but also encyclopaedias on specialised subjects, such as Yurt ansklopedisi “Encyclopedia of the Homeland”, which gives information on the history, economic and social conditions of the cities of Turkey in alphabetical order; Türk ve dünya tarihi ansklopedisi, a biographical reference source; Gelşim genel kültür ansklopedisi, a general encyclopaedia; Anadolu weydişk ansklopedisi, an encyclopaedic publication on Anatolian civilisations; and Cumhuriyet dönemi Türkiye ansklopedisi, which covers the development of various fields in the Republican period such as the constitution, archaeology, the press, energy, mining, librarianship, etc. Anı Britannica ansklopedisi is a translation and adaptation of the Encyclopaedia Britannica, published in 1988 by Anadolu Yaymcihk. The publisher has also published yearbooks in order to update the necessary information. The second Turkish edition was initiated in 2000 and it is still in progress. Finally, Türkiye diyanet ve hukuk islam ansklopedisi, an Encyclopaedia of Islam, is being prepared and financially supported by the Turkish Religious Foundation. The publication started in 1988 and twenty-two volumes, covering the letters A-V, have already appeared. The encyclopaedia contains not only subjects related to Islam but also wider aspects relating to the Islamic community throughout the world. Most of the Islamic subjects are very detailed, and the articles have comprehensive bibliographies.

5. In Urdu.

Here there does not seem to be any significant tradition of any antiquity, leaving aside modern Urdu translations of such reference works as Chamber’s Encyclopaedia, the Encyclopaedia Britannica and, of course, the Urdu Encyclopaedia of Islam, which draws on material from the Western Encyclopaedia of Islam, published in Leiden.

MEHMED TĀHIR, BURSAI (1861-1925), Ottoman biographer and bibliographer.

Mehmed Tahir was born in Bursa in northwestern Turkey on 22 November 1861, the son of Rifat Bey, clerk to the city council, and grandson of Usküdarlı Seyyid Mehmed Tahir Pasha, formerly a commander in sultan ‘Abd ul-Medjid’s imperial guard. He studied at the Bursa military academy from 1875 and at the elite Harbiye (War) academy in Istanbul from 1880. Graduating in 1883 he spent the next twenty years teaching geography, history and rhetoric at military schools in Manastır (and one year in Uskub) in Macedonia, as part of the Ottoman Third Army. In 1904 he became director of the military high school in Selânik (Salonica). Whilst at the Harbiye academy he had become a member of the Melâm order of dervishes, by whom he was profoundly influenced in his teaching, publications and political outlook. In Manastır he first conceived the notion of collecting bio-bibliographical data on poets and learned men, and in 1897 published his first work Türklerin ‘âlam ve fonunun kâhidümleri “The Turkish contribution to arts and sciences” (1853). In 1316/1899 he also published a full-length bibliographical study of the Arab mystic Ibn al-‘Arabî.

Mehmed Tahir was dismissed from his teaching post in December 1906 for his Şâfi‘i involvement and his membership of the Ottoman Freedom Society (‘Othmanî hüriyet cemiyeti). From 1908 to 1911 he served as deputy for Bursa in the first representative assembly of the Second Constitutional period, and subsequently served in the Ministry of Charitable Endowments (Eskî milîyetler) on a committee to inspect the holdings of institutional libraries. In 1915 he became director of the Topkapı Sarayı library. The date of Mehmed Tahir’s death is uncertain, but was probably 1925. He was buried in Istanbul.

Mehmed Tahir’s principal work is ‘Othmanî milîyetlerî, a three-volume bio-bibliographical compendium published between 1915 and 1923, listing 1691 Ottoman authors and their works. Despite many lacunae and acknowledged errors, ‘Othmanî milîyetleri was unique in its comprehensive scope and immediately became a standard reference work. Aside from the works already mentioned, Mehmed Tahir also compiled over twenty lesser biographical works, either of particular individuals (e.g. Kâtûb Çelebi) or of groups of Ottoman sheikhs and ‘ulama.

Bibliography: For a full bibliography, see the detailed article by Omer Faruk Akun, in Türkiye Diyanet Vakfi İslam Ansklopedisi, vi (1992), 452-61, on which the above is based. (CHRISTINE WOODHEAD)

MEZISTRE, MIZISTRE, the Turkish name for Greek Mystras, Latin Mistras, a famous Byzantine necropolis on a hill slope west of modern Sparos in Laconia in the Peloponnese [see MORA], which was a major centre of late mediaeval Greek civilisation and capital of the “Despotate of the Morea” till the Ottoman conquest. It has numerous Byzantine and Frankish monuments from the 13th-15th centuries, and was immortalised, albeit inaccurately, in Goethe’s Faust. The name has been connected with the shape of the conical-hill on which it stands.

The Frankish castle of 1249 was built by William II de Villehardouin of the Achaia Principality, but passed to the Byzantines in 1262. The ravages of Franks and Turkmen from Western Anatolia (see
saved through the intercession of the local metropolit. But in autumn 1770 a Turco-Albanian force returned and sacked and burnt much of the town, not sparing even the metropolitan who had intervened to save their city. After the Russians took the fortress in 1786, Pavlos and the GreekEnuma decided that the building of modern Mystras. With the outbreak of the Greek Revolt (1821), Mezistre surrendered to the powerful local Mainostoldi clans of Mavromichalos and Giarrakos and the Turkish garrison was allowed to flee to Tri-polita, but it was once again plundered and burned by Ibrahim Pasha's army in 1825, as vividly described by C. Swan in his Voyages in the Eastern Mediterranean, London 1826. These ravages signalled the town's aban-donment, since—except for a few families—the exa-perated inhabitants descended to the settlement of Neo-Mystras and thence to modern Sparta, inaugu-rated in 1834 by a decree of King Otto I and built by 1837-8.

MIHMĀN [P.], literally "guest", the equivalent of Ar. ḏīyf [q.v. for this sense]. The Persian word occurs in various compounds, such as miḥmāndīr and miḥmān-ḵāna. In Šafāvid Persia, the miḥmāndīrs were officials appointed to receive and to provide hospitality for guests, including foreign ambassadors and envoys, with a court head official, the miḥmāndīr-ḵātīr, supervising these lesser persons. In Kāḏār times, the miḥmāndīrs seem to have been appointed ad hoc. See the references to the accounts of European travellers in Šafāvid Persia (Chardin, Kaempfer, Sanson) in the anonymous Taḏhkīrat al-mulūk, ed. and tr. V. Minorsky, London 1943, comm. 110 n. 2.

The institution of the miḥmān-ḵāna in its more modern form goes back to Nāṣīr al-Dīn Shāh Kāḏār after his first visit to Europe in 1873 (cf. Sir Denis Wright, The Persians amongst the English, London 1985, 135). He had the laudable intention of providing rest houses along the routes to the capital Tehrān, from such entry points to his kingdom as Enzeli on the Caspian coast, which would provide travellers with something better than the traditional caravanserais or ḵāns [q.v.] and the ʿapar-ḵāns [see a description of these last in Kūrāsān given by the Hon. G.N. Curzon, Persia and the Persian question, London 1892, i, 249 ff., and cf. the remarks on the ʿapar system in general in Sir Richard Burton's handbook for travellers in Asia Minor, Transcaucasia, Persia, etc., London 1895, 285-6] and which would possess in some degree the amenities of a western-type hotel. Western travellers in Persia during the later 19th century found the concept good, but its execution left much to be desired. E.G. Browne commented that the miḥmān-ḵāna "has all the worse defects of a European hotel without its luxury"; he contrasted the insolence and rapacity of the servers there with the hospitality he had received in humble peasant homes, and the "new-fangled and extortionate" nature of the venerable and commodious caravansārāy (A year amongst the Persians, London 1893, 85-8, 177-8). It was not until after the First World War that European-type hotels began to spread from the capital Tehrān into the provinces.

MILJANĀ [see MILJĀNA].

MĪR TAḴĪ MĪR [see MĪR MUḤAMMAD TAḴĪ].

MIṬRAḎĪ

The ascension of the Prophet of Islam is, for Persian literature, an account, kisā-i miʿrāḏ, one drawn from a long tradition, haḏīth-i miʿrāḏ and an account that takes an autonomous form, miʿrāḏ-nāmā. This account thus has a history. The progressive organisation of the narrative elements constituting the whole is derived from the context (Kurʿān, tradition and exegesis) not from its original milieu (Iranian and, furthermore, millennial).

The celestial journey was a familiar theme throughout the Near Eastern world. Having exclusive regard to the Iranian cultural domain, Zarathustra, according to the Avesta, had asked for immortality and this was granted: he did not die but departed, alive and intact, into the beyond through "assumption" (aḏiṯ; Kellens 1999). From this point onward, according to another source, he spent ten years "in the best existence", guided by Vohu Mano "while maintaining contact with Ahūra Mazda". Then, strengthened, he descended again to join his kinsmen (Mole 1967). As for the soul of the virtuous deceased, the Avesta describes the four stages through which it passes, guided by the same benevolent genie, before reaching the throne of Ahūra Mazda (Duchesne-Guillemin 1962). The tale in Middle Persian of the magian Ardā Virāz, who used methods of a shamanic nature to make a journey to Heaven, was well known in its time. The magian visited Heaven and Hell, bringing back valuable instances of mārān. At Medina the practice of the cult (Gignoux 1984). Also celebrated was the visit of the angel which began the prophetic voca- tion of the founder of Manicheism (Ibn al-Nadim, al-Fihrist, tr. B. Dodge, ii, 774-5). As regards the Iranian calendar from the start of the Islamic era, al-Birūnī (al-Āṯār, 216) relates that on Nawrūz [q.v.], the festival of the first day of the year, the ascension to Heaven of the great king of ancient times, Djamāḥīṭ, was celebrated. On his throne and in a kind of apothes- isis, he went there to defeat death and the demons.

When Persian prose emerged, in the 4th/10th century, Kurʿānīc exegesis had already travelled a consider- able distance in constructing the account of the ascension of the Prophet. It was also at this time that the commemoration of this ascension began, in Jerusalem (see AL-KUDS, at Vol. V, 329). The original translation into Persian of the commentary on the Kurʿān (al-Tafsīr) by ʿAlā-ibn-Ṭabarī, on the initiative of the Samānīd Mansūr b. Nūr (d. 437/1045) [q.v.], is one of the greatest monuments of early Persian literature. Gathered here is the best of what exegesis had hitherto elabo- rated, on the basis of ḥadīṯ which focused the reading of notable passages of the Kurʿān on the "night journey" (isrāʾ) (Kurʿān, XVII, 1) and on the two visions of the Prophet (Kurʿān, LIII, 1-18 and LXXXI, 19-25). It may be noted that the mīrāḏ is involved here three times. The account is first developed broadly at the end of the commentary on Sūra II (Persian Tafsīr, i, 182-98), while with Sūra XVI, that of the "night journey", the commentary offers at the end of the sūra only a summary (Persian Tafsīr, iv, 909-18). Through this style of repetition it can be understood what at that time constituted the nucleus of the story of the ascension. On arriving in the Seventh Heaven, Gabriel invites the Prophet to speak before God. The dialogue is contained in the verses 285-6 which conclude Sūra II. Then, for greater precision, Gabriel will say, in the account which follows Sūra XVI, that the object of the journey is "that you address your prayers to God" (Persian Tafsīr, iv, 910). Thus at its birth, Persian prose was located at the end of a process of exegesis which had made from Kurʿānīc verses which did not require it, an account of the ascent to Heaven, of dialogue with God and of red- descent, which had long been part of the religious and cultural ambience of the Near East.

But for a third time, at the end of the translation of Sūra LIII (Persian Tafsīr, vii, 1766-8) there is a further instance of mārān. In the context of the translation of the story of the arrows, the Arabs were competing at archery. The Prophet was then transported to Heaven, after which God told him that he had been closer to Him "than the distance of two bow-shots". This was the interpretation of the two well-known Kurʿānīc verses which did not require it, an account of the ascent to Heaven, of dialogue with God and of red- descent, which had long been part of the religious and cultural ambience of the Near East.
The 5th/11th century saw a capital development in the story of the mi'raj, or the Prophet's nocturnal ascent to the Heavens, in Persian literature. This is a decisive period of evolution of the mi'raj story in Persian literature. In prose, the account of the ascension was developed within commentaries on the Qur'an. Rashid al-Din 'Umar b. Muhammad al-Nasafi (462-538/1070-1143) wrote a short prose account of the Prophet's ascent, which was, for the first time, taken from Qur'an, XVII, 1, for example, is already a form of commentary; he interprets Kur'an, LIII, 8-9, as denoting the proximity of Gabriel with the Prophet. A brief account of the mi'raj follows Kur'an, LIII, 8-11 (Tafsir, ii, 998-9), a short and powerful text which lends itself to serious consideration.

In the first half of the following century, Rasyid al-Din Abu 'l-Fadl Ahmad al-Maybudi was the author of a large commentary on the Kur'an, begun in 506/1112. He was not a scholar, but he revised a composition of al-Ansari the eminent Sufi master of Harat, d. 481/1089 [see AL-ANSARI AL-HARAVI] which he called Pir-i ta'rikat. His account of the mi'raj was, understandably, inspired by Sufism, which was a novelty. He developed this story in its place, at the beginning of Sura XVII (Tafsir, 478-500). It is not certain that he knew al-Surabadf's account; he places objections to the miracle of ascension and the responses at the start of the text, or changes the dispositions of the inhabitants of the Heavens. His true originality is his way of addressing "the station of proximity" (makam-i kurba), describing in technical terms known in Sufism the ecstasy of the Prophet before God.

Henceforward, no reader of the Kur'an could miss the account of the mi'raj nor ignore its implications regarding the personality of the Prophet and Islam, the ultimate destiny of men and their spiritual path. In his turn, a Shafi of Rayy, Abu '1-Futuh al-Razi, preacher and jurist, composed a major commentary on the Kur'an, completed shortly before his death (552/1157). He took such care in the writing of his account of the Prophet's ascension to the point of turning it into a major classic, with the quality of his Persian and the organisation of the story (Rawd al-djinan, vi, 254-73), establishing the essentials for future generations.

But before him, Sana[p.194] had for the first time introduced the theme of the mi'raj into Persian poetry. He gave to this account new weight when he composed at 33 years of age in 506/1112 (if he was born in 473/1080) the title of "Journey of the devotees towards the Place of Return" (saryr al-bidhā tāb ilā 'r-mudādā), intentionally combining in this title two words taken from Kur'an, XVII, 1, and from Kur'an, XXV, 85, thus indicating that this journey is a mi'raj (de Bruijn, 619).

the genre had matured and was growing stale. On  
the other hand, the perception of the  
mi'ndîj, the  
image of unification. Nizâmî, in his turn, composed  
five accounts of ascension as introductions to his five  
mahânâsîd. The most successful was the one that he  
wrote, some years after 'Atâr, for the  
Haft paykar  
“The seven princesses” (ed. Thravayîyân 1998, 64-8),  
which shows excellent knowledge of the traditional  
tale and an incomparable spiritual and poetic sense  
(Fouchécour 1989).  

The many Persian poets who were inspired, over  
the course of several centuries, by the  
mi'ndîj gûndîj, the  
“Five treasures” of Nizâmî, composed accounts of the  
mi'ndîj in their turn. But with the 6th/12th century,  
the genre had matured and was growing stale. On  
the other hand, the perception of the  
mi'ndîj of the Prophet “as a prototype of the experience of the  
mystic rising from Heaven to Heaven in his lifetime”  
(Corbin, En Islam transen, iii, 1972, 346) formed  
the basis of numerous treatises on the fringes of literature  
and the science of religions. On these fringes,  
there remains a vast area of study which has been  
little explored, concerning the themes essential to the  
mi'ndîj, such as the Opening of the Chest, the Celestial  
Mount, the Night of the Rescript (gâb-i bârût), the  
Angel-Holy Spirit, the Tree of the Frontier, the Sails  
of Light, the shape of the Stars, the dwellings of  
Paradise, etc. And if “the nocturnal ascension is the  
nucleus of the religious vocation of Muhammad”  
(Massignon), the account of it cannot be irrelevant to  
the essentials of Islam.

MIRZA SHAIF WAHID TABRIZI (b. 1794 Gandja, d. 1852 Tablisi). Azerbaijani poet. Born into a family from Tabriz, at ten years old he lost his father, who was a stonemason, but with the assistance of his relatives he attended a traditional school where he learned literary Persian as well as Arabic. His knowledge of Persian literature introduced him to the works of renowned Persian poets such as Hafiz and Niẓāmī. Because of his anti-clerical views, he was expelled from school and began to earn his living both as an accountant and a teacher in calligraphy. His position as accountant brought him the title of Mirzâ. As a teacher of calligraphy, he taught the young Mirzâ Fath 'Alî Akhundzâda [q.v.] and persuaded him to end his religious studies. In 1840, the persecutions that he endured from local clerics compelled him to leave Gandja and settle in Tablisi. There, Akhundzada assisted him in securing a teaching position in Persian and Azerbaijani languages. In Tablisi he published the first Azeri Turkish language guidebook, Kâtib-i turki, and formed a cultural society known as Divân-i hikmat, where learned figures of the city occasionally gathered to debate literary, philosophical and social themes. Amongst those who attended these conventions was Friedrich Bodenstedt (1819-92), a German traveller who was interested in oriental studies. While following Mirzâ Shâfi’î’s courses on Persian and Azeri Turkish, Bodenstedt collected the original manuscripts of Mirzâ Shâfi’î’s poems, both in Persian and in Azeri Turkish. Bodenstedt translated these verses into German and published them in Berlin. The eventual translation of this book into almost all European languages soon made Mirzâ Shâfi’î a renowned Azerbaijani poet outside of the Caucasus. In 1846 Mirzâ Shâfi’î left Tablisi for Gandja and continued his teaching career. But ca. 1850 he returned to Tablisi and taught in a local Gymnasium until his death. Little remains of Mirzâ Shâfi’î’s works, and it was not until the Soviet period that four of his ghazals and a few lines of his poems in Persian and Azerbaijani were found and published. The German translation of his poetry has been surrounded by some controversy. While some scholars recognize Mirzâ Shâfi’î as a lyricist with an inclination towards oriental mysticism, others claim that Mirzâ Shâfi’î’s understanding of poetry did not go beyond the common knowledge of the learned in the East. Bodenstedt himself was not consistent in his appreciation of Mirzâ Shâfi’î’s literary status. While in his earlier writings he had acknowledged Mirzâ Shâfi’î as the original poet of the German translations, he later decreased Mirzâ Shâfi’î’s role to being merely that of a source of inspiration for his own poetry. The history of Cairo over the 19th and 20th centuries is primarily one of status, from being the important capital of an Ottoman province, it became the capital of independent Egypt. During the two centuries under consideration, the city experienced first of all a long period of stagnation; then, from the early 1870s, a strong political will brought an unprecedented development which pointed the way to the modern city. Some years later, the financial situation of Egypt put a brake on urban growth, which then entered upon a period of slow consolidation until the end of the First World War. The years 1920-30 are marked by a new departure, whose determinants are not so much political as migratory. After independence, and up to the end of the 1970s, Cairo became the city of superlatives, with municipal services expanding in all spheres. Then, the slowing down of the migratory movement, whose effects were felt from the beginning of the 1980s, allowed the municipal authorities to resume their policies. Hence the last two decades of the 20th century were devoted to replacing equipment and public services. At the end of the century, Cairo stretched out at the same time into the desert zones and also into the agricultural lands along the outskirts as far as some 30 km/18 miles from its historic core. The city’s history during these two centuries is also one of the progressive slipping away of its centre. At the present time, the places making up the centre are spread out around several focuses without nevertheless the older centres, the ancient city as much as the quarters developed at the end of the 19th century, being abandoned. A difficult start, 1800-68. In 1798 General Bonaparte established his headquarters at Cairo, at a time when the city had 263,000 inhabitants. The French plans for the improvement of the road system were ambitious, but the results were scanty. The re-establishment of Ottoman authority a few years later was unfavourable for the city, whose population declined. However, Cairo experienced some changes which were to be determining factors for later works. At the outset, the governor of Egypt Muhammad ‘Ali Pasha [q.v.] embarked upon the first act of the discontinuous development of the urban agglomeration: the building of a palace some 12 km/7 miles north of the city. Nearer to the centre, the strengthening of the embankments for containing the floodwaters of the Nile allowed the laying out of vast gardens and the construction of palaces between the fringes of the old structure of the city and the river banks. In regard to urban administration, Muhammad ‘Ali took up again the structures of power from the previous century but put in place a new dividing out of the administrative which served as the base for the geographical extension of local public services. Heavy industry, whose development the Pasha embarked upon vigorously, was
Some 30 km/18 miles from Cairo, a new quarter was founded—around 1864—containing barracks, a palace and a school—a new quarter to the north of the city, sc. ‘Abbāsīyya. The first constructions for piping water began during this period but it was long before results were seen. Finally, in the framework of an agreement with the British, a railway was built between Alexandria and Suez via Cairo, with the Cairo railway station opening in 1856. At this time, the city’s population was almost the same as it was a half-century previously.

A filly to urbanisation, 1869-75. The succession of Ismā‘īl Pāsha [g.e.] at the beginning of the 1860s formed a turning-point. Taking as a pretext the need to receive fittingly European dignitaries for the opening of the Suez Canal at the end of 1869, he developed an immense project of extending the city westwards. Paris was the model, but Ismā‘īl retained only the general picture of the French model rather than the exact procedure; nevertheless, the permanent markets and properties strongly resisted the project. In order to promote the new quarters, the Khedive had set up at this time some public buildings erected there and enormous buildings to be let out in flats, and he gave other stretches of land gratis to those who contracted to build there quickly. After several checks, the beginning of the 1870s was marked by a resumption of works. At that time, Ismā‘īl opened up for urban development the zones farthest away from the centre as far as the left bank of the Nile, and he founded the spa town of Hulwān [g.e.] some 30 km/15 miles to the south. More than 200 ha (the equivalent of one-fifth of the urbanised zone by ca. 1865) were offered to the land market over a few years. This development was interrupted as rapidly as it had been started up; in the mid-1870s, Egypt’s bankruptcy dealt a brutul blow to the works. During this time, Cairo became the place of privileged exile for Syro-Lebanese intellectuals who formed the nucleus of the Nahda [g.e.] or Arab cultural awakening and who contributed considerably to the development of cultural life and the formation of the first press devoted to conveying an opinion. It was also a high-point of the national movement whose activities were to lead to the British occupation of the country at the end of 1882.

Slowing down and consolidation, 1875-1918. This period was first of all one devoted to the servicing of the public debt. The greater part of resources was pledged to developing agricultural production for export. Cairo was in practice left to its own devices by the administration. After fifteen years of consolidating the quarters founded by Ismā‘īl, new works were begun. But the municipal services were now deprived of all means of state intervention; urban development was left to the initiative of private companies, utilising capital which for the most part emanated from outside the country. It was above all in the sphere of transport that these companies provided for the city’s future.

The first suburban railway dates from 1888, whilst the tramway system dates from a decade later. At this time, Cairo comprised 570,000 persons on the right bank of the Nile. In the wake of this process and the intense speculation which followed, numerous quarters were founded. In 1906, a Belgian tramway company obtained an authorisation to create a new city, in the desert a few kilometres to the northeast; Helopolis (‘Ayn Shams [g.e.]) was thus born. But not all private capital was invested in land speculation. Industrial production also enjoyed a substantial development; this brought about the impoverishment of an important part of the population which was regrouped in a very dense and crowded precarious habitat, in quarters sometimes established in insalubrious areas. Two worlds and two cities were thus established check-by-jowl, often in close proximity.

The period of growth, 1918-50. After the First World War, the slowing down of agricultural development and improvements in public health brought about an excess of population in the countryside, causing an acceleration of migration to the great cities. Cairo now became a great safety-valve for this rural population growth, with its population jumping from 791,000 in 1917 to 2,320,000 in 1947. During these thirty years, the city went through numerous changes. The construction sector, private as well as public, was very dynamic. The campus of the University at Dīzah (Gizeh), the building for the Mixed Courts, the Parliament building, etc., all date from this period. Intervention by the public authorities in matters of urban development is less conclusive. Despite the first general development plan dating from the later 1920s, the works undertaken were largely those done from necessity. They affected mainly the structure of the old city, and if the public road system was improved, this was more a response to traffic problems than a project looking to the future. At the end of the 1940s, the first social housing appeared in Cairo. The period was also marked by a strong patriotic feeling expressed, in particular, in an abundant artistic and cultural production. Its exportation to the lands of both the Maghrib and the Mashriq made Cairo the cultural capital of the Arab world.

The period of bursting activity, 1950-80. After the Free Officers’ coup d’état of July 1952, the rulers of Egypt adopted new approaches for the development of Cairo. Great projects multiplied, including expressways along the banks of the Nile, additional bridges, etc. The first master plan for the Cairo agglomeration, prepared in 1956, was soon out of date: the population predicted for the year 2000—5.5 millions—was reached in 1956, was soon out of date: the population predicted for the year 2000—5.5 millions—was reached. However, on the basis of this plan, the state built large quantities of low-cost housing. But the problem of the living environment was not thereby solved, and it led to an intolerable increased density of the old quarters, whose service infrastructure was now revealed as inadequate. From 1950 onwards, the city spread out in all directions, but above all on the left bank, which now saw an unprecedented development. It became covered with new, planned quarters, with a fairly low density, of thousands of villas and small dwellings. The city also developed in favour of the dividing-out of agricultural lands on the outskirts near to the developing urban area, pushing into zones not prepared for building and improvements in public health brought about an excess of population in the countryside, causing an acceleration of migration to the great cities. Cairo now became a great safety-valve for this rural population growth, with its population jumping from 791,000 in 1917 to 2,320,000 in 1947. During these thirty years, the city went through numerous changes. The construction sector, private as well as public, was very dynamic. The campus of the University at Dīzah (Gizeh), the building for the Mixed Courts, the Parliament building, etc., all date from this period. Intervention by the public authorities in matters of urban development is less conclusive. Despite the first general development plan dating from the later 1920s, the works undertaken were largely those done from necessity. They affected mainly the structure of the old city, and if the public road system was improved, this was more a response to traffic problems than a project looking to the future. At the end of the 1940s, the first social housing appeared in Cairo. The period was also marked by a strong patriotic feeling expressed, in particular, in an abundant artistic and cultural production. Its exportation to the lands of both the Maghrib and the Mashriq made Cairo the cultural capital of the Arab world.

The period of overflowing development, 1980-2000. At the beginning of the 1980s, demographers predicted the worst possible case for Cairo. The publication of the 1986 census put a stop to these suggestions: it showed that the population growth was less and less the result of migration. This change gave rise to a lowering of the density of the ancient urban structure which, as a counterpart, became increasingly occupied by the sector of semi-artisanal production.
It also provided an adequate respite for the public services, allowing the preparation of a new master plan at the beginning of the 1980s and the inauguration of several great projects of re-developing public services; the city became an immense construction site. Between Cairo and Alexandria, the first new town, Mokattam al-Saudat, saw the light. These constructions, large enough to accommodate three government ministries, were never to be occupied.

Despite the state’s almost total withdrawal from the sphere of housing, the construction sector remains dynamic. Although the critical situation is obvious, with half the population of the agglomeration living in poverty in 1986, there has been a massive surge of house building for the middle classes. Areas of empty housing units, the result of pure speculation, reached several hundred thousands of units by the mid-1990s.

At the turn of the millennium, the urban agglomeration held ca. 12 million persons. The plan for establishing new towns has been scaled down, the results of these being much inferior to what was envisaged. The idea of balancing living units and industrial or artisanal units in these places is one check to their growth; they function at the price of the daily movement across the city of thousands of employees. If, with regard to population, Cairo is far behind the greatest cities of the world (fifteenth in 1990), it is one of the most dense, with ca. 250 persons per hectare. As a reaction to the inconveniences brought into being by this situation, a new form of development in the desert zone—houses or small properties grouped in an enclosure—appeared towards the end of the 1990s. It has caused a very rapid growth in the surface area of the agglomeration. In favour of these extensions, the groups of population become more homogeneous, but the distances between those living in security and the rest continue to deepen.

Great Britain’s post-1882 occupation of Egypt was a classic case of indirect colonial domination. Formally, Egypt remained a province of the Ottoman Empire ruled by a Khedive [see qibā‘i] selected from the family of Muhammad ’Ali (Muhammad Tawfik 1882-92; his son ’Abbās Hilmi II [q.v.] 1892-1914). A bureaucratic apparatus staffed by Egyptians and members of the polygot elite that had emerged over the course of the 19th century administered the day-to-day affairs of the country. They did so, however, under British supervision and in accord with British directives. A British military garrison was the ultimate guarantor of British control. The key British official in Egypt was its Consul-General. British policy and the course of Egyptian development were shaped particularly by the first Consul-General Sir Evelyn Baring, later Lord Cromer (1883-1907); Cromer’s successors Sir Eldon Gorst (1907-11) and Sir Herbert Kitchener (1911-14) had shorter tenures and less impact. At lower levels, British advisers were gradually appointed to different Egyptian ministries and British nationals employed in the Khedivial bureaucracy.

Under this ‘veiled protectorate’ from 1882 to 1914, Egypt experienced considerable economic growth but little structural change. Financial stabilisation, agricultural expansion and the maintenance of security were the main concerns of Egypt’s British overlords. Egypt’s financial situation was stabilised through the reduction of government expenditures and a new international agreement for debt repayment; the construction of new irrigation works contributed to a doubling of the total value of Egypt’s agricultural output between 1886-7 and 1912-13; and the rough edges of Khedivial administration were smoothed under British supervision (e.g. the abolition of compulsory peasant labour on public works projects). On the other hand, little was done to encourage the development of an industrial base under the British. Egypt’s social structure changed little between 1882 and 1914. The landed elite which had emerged earlier in the century consolidated its position and expanded its holdings after 1882, and the European/Levantine population which had become prominent in trade and banking under Muhammad ’Ali’s successors continued to dominate the commercial and financial sectors of the economy.

Under the compliant Khedive Muhammad Tawfik, there was little overt opposition to British domination. ’Abbās Hilmi II was more assertive, providing financial support for opposition newspapers and encouraging the formation of nationalist secret societies among Egyptian youth. Nationalist sentiment and activism became more pronounced in the decade prior to World War I. The catalyst was the Dinghāway incident of 1906, when an altercation between a hunting party of British soldiers and Egyptian peasants near the Delta village of Dinghāway resulted in one soldier dying and led to the arrest, trial by military tribunal, and subsequent execution, imprisonment, and public whipping of the peasants involved. Dinghāway is credited with galvanising Egyptian opposition to the British occupation. Several political parties were formed in 1907, the most important being the firmly anti-occupation al-Hizb al-watani led by the lawyer Muḥammad Kāmil [q.v.] and the more gradualist Hizb al-‘umma, whose chief spokesman was the journalist Ahmad Luḥf al-‘Ayyād [see Luḥf al-‘Ayyād]. Despite a higher level of Egyptian opposition to occupation thereafter, Great Britain’s position in Egypt was not significantly eroded before 1914.

Major change occurred during and after World War I. The entry of the Ottoman Empire into the
war in late 1914 had immediate repercussions for Egypt. In December 1914 Great Britain severed the Ottoman connection by declaring a British Protectorate over Egypt. Simultaneously, it deposed the pro-Ottoman Khedive 'Abbas Hilmi II, appointing his uncle Husayn Kāmil [q.v.] as titular ruler with the new title of Sultan. The latter was succeeded by his brother Ahmad Fu'ād [see FU'AD AL-ANWALL] in 1917.

The war itself generated massive pressures as well as new expectations within Egypt. Forced sales of grain and animals to British forces operating in the area; the use of Egyptian labourers to construct military facilities; wartime inflation; the behaviour of British and Imperial troops temporarily garrisoned in the country; not least Allied rhetoric pegging self-determination for submerged peoples after the war; all these contributed to Egyptian discontent with the new Protectorate. On 13 November 1918 a delegation of Egyptian notables led by the lawyer-judge Sa'd Zaghlūl [q.v.] visited the High Commissioner, Sir Reginald Wingate, to request Egyptian representation at the Paris Peace Conference. Over the winter of 1918-19 Zaghlūl and associates organised a broadly-based nationalist front, the Wafd [q.v.] or “delegation”, committed to working for Egyptian independence. When in March 1919 the British arrested Zaghlūl and two of his colleagues, Egypt exploded in protest. Daily demonstrations and work stoppages brought normal life to a standstill in Egyptian cities; the countryside witnessed attacks on British personnel and communications facilities.

The Revolution of 1919 set in motion a process of political change which eventually brought Egypt formal independence. The turbulence of 1919 inaugurated a brace of key oppositions between the British government and different Egyptian notables (sometimes the Wafd, sometimes ministers supported by the Sultan, Fu'ād) aimed at defining a new Anglo-Egyptian relationship. After three years of futile discussions, in February 1922 the British issued a unilateral declaration of Egyptian independence. It was ringed with qualifiers, however, the British reserving the four areas, those of Imperial communications, the defence of Egypt, the status of foreign minorities and the Sudan, as matters of British concern. But at last Egypt had independence—of a sort.

From 1922 to 1952, Egypt was a technically independent parliamentary monarchy. Sultan Fu'ād became King Fu'ād in 1922 and reigned until his death in 1936; he was succeeded by his son Fārūk [q.v. in Suppl.] from 1936 to 1952. A constitution establishing a parliamentary system of government, but reserving significant powers for the monarch, was drafted in 1923. An electoral law of the same year provided for a Chamber of Deputies elected by male suffrage and a partially-elected, partially-appointed Chamber of Notables. Egypt’s first parliamentary elections in December 1923-January 1924 saw the Wafd emerge triumphant.

The dynamics of the parliamentary monarchy have often been described as a triangular struggle among the King, the British and the Wafd. The Wafd, the nation’s premier popular movement at least through the interwar period, won every relatively free parliamentary election yet held ministerial office for only somewhat over eight of the 28-plus years from 1924 to 1952. Egypt was more often governed by “minority” parties of non-Wafdist or Wafdist dissidents ruling with the covert or overt backing of the King. British influence rested primarily on the continued presence of British troops in Egypt, and was exercised through the British High Commissioner (from 1936, the British Ambassador) meeting regularly with Egyptian Prime Ministers and rendering advice which the latter disregarded at the risk of incurring British opposition to their continued tenure in office. From its inception, the Egyptian parliamentary order was a flawed system characterised by the domination of politics by an elite, electoral corruption and frequent turnover in office, and—at least until after World War II—by a neglect of socio-economic adjustment or reform on the part of the country’s politically dominant upper class. On the other hand, the period of the parliamentary monarchy was also one of political pluralism, of considerable freedom of expression, and of cultural efflorescence, as a galaxy of prominent intellectuals engaged in spirited debate on the relative merits of Egypt’s inherited Arabo-Islamic culture versus patterns of social and political life modelled on those of the West.

The shortcomings of the parliamentary monarchy became more pronounced over time. The 1920s were years of economic prosperity and relative political optimism. The 1930s were a darker era marked by economic depression and extended periods of overt royal autocracy. A Wafdist interlude in office in the mid-1930s witnessed the main political development of the decade, the conclusion of the Anglo-Egyptian Treaty of Alliance in 1936 which regularised but did not totally eliminate the British military presence in Egypt. The years of the Second World War from 1939 to 1945 saw more overt British interference in the country’s political life. Of particular importance was the “incident” of 4 February 1942, when British tanks surrounded the Egyptian Palace and threatened King Fu’ād with forced abdication unless he complied with a British ultimatum to install the by-then more pro-British Wafd in office. The incident served to discredit both the Wafd, now seen as willing to accept British support in its quest for public office, and the King who had bowed to British power. The postwar years were ones of great political turmoil. Labour troubles and peasant unrest perturbed urban and rural Egypt respectively; anti-British demonstrations and agitation over the Arab-Jewish clash in neighbouring Palestine added to the turbulence of the later 1940s; deep-seated animosity between the supporters of rival political tendencies produced a wave of political violence, including the assassination of two prime ministers and of the charismatic leader of the anti-parliamentary Muslim Brotherhood [al-Islāmiyyun al-Muslimūn [q.v.]], Ḥasan al-Bannā’ [q.v.], between 1945 and 1949; and in late 1951 to early 1952, the Wafd, once again in office, terminated the Anglo-Egyptian Treaty of Alliance and mounted a guerrilla campaign to pressure the British out of their remaining military base in the Suez Canal zone. The culmination of postwar unrest came on “Black Saturday”, 26 January 1952, when huge crowds, angered by a British massacre of Egyptian police in the city of Ismā‘īliyya on the previous day, surged through Cairo, and organised bands of insurrectees undertook the systematic torching of commercial, primarily Western-owned, establishments in the city. The conventional narrative of 20th-century Egyptian history portrays the parliamentary monarchy as politically discredited and morally exhausted by 1952.

D. 9. Republican Egypt 1952 to the present.

On 22-3 July 1952, a military coup effectively brought the era of the parliamentary monarchy to an end. The seizure of power was carried out by a clandestine movement within the army, the "Free Officers" (*al-dabbâh al-ghurâr*); the key figure in the movement was Colonel Djamal 'Abd al-Nâşîr [*q.v.* in *Suppl.*]. From July 1952 onwards, executive decisions were made by a committee of leading Free Officers, the Revolutionary Command Council (RCC).

A new political order emerged only gradually. On 26 July 1952 the sylharite King Fârîk [*q.v.* in *Suppl.*] was hustled into exile. At first a civilian ministry held formal power. By September, General Muhammad Nagîb [*q.v.*], an associate but not a core member of the Free Officers, was appointed Prime Minister. Existing political parties were banned in January 1953. On 18 June 1953 the monarchy was formally abolished and Egypt declared a Republic; Muhammad Nagîb became its first president. The crucial phase in the consolidation of the military regime came in early 1954, when President Nagîb, supported by remnants of the old political order, mounted a challenge to continued RCC rule. In a month-long crisis marked by street clashes between partisans of the two camps, 'Abd al-Nâşîr and the RCC outmanoeuvred Nagîb and his supporters. By the end of 1954, after an abortive assassination attempt on 'Abd al-Nâşîr by members of the Muslim Brotherhood (al-Ikhwan al-Muslimân [*q.v.*]) provided the occasion for a crackdown on the Brotherhood, the military group gained supreme in Egypt. A new constitution promulgated in January 1956 established a presidential form of government for Egypt. The constitution was ratified by popular referendum in June 1956; at the same time, Djamal 'Abd al-Nâşîr's nomination as President was overwhelmingly approved.

There was occasional formal but little substantive change in Egypt's political structure from 1956 to 1970. 'Abd al-Nâşîr remained President until his death in September 1970. This period was characterised by Egypt and Syria in the United Arab Republic (UAR) which in early 1958 necessitated a new provisional constitution and the expansion of the National Assembly to include Syrian representatives; but real authority remained in the hands of 'Abd al-Nâşîr. Syria's secession from the UAR in September 1961 prompted further adjustments. A Charter of National Action of 1962 now specified a socialist agenda for the United Arab Republic, as Egypt continued to be known until 1971. Another provisional constitution was promulgated in 1964, to remain in effect until 1971.

The years from 1952 to 1970 witnessed major changes in Egypt's economic policy, social structure, and international orientation. A policy of agrarian reform was inaugurated in 1952 and extended thereafter. By 1970, something over 800,000 faddûns of agricultural land, roughly one-eighth of the cultivated area, had been taken from large landlords and redistributed to some 340,000 peasant families. The foreign interests which had controlled much of the commercial sector of the economy were abruptly dispossessed as a consequence of the international crises of the late 1950s, their holdings now coming under state ownership. The heights of the domestically-owned urban economy also came under state control in the early 1960s, when Arab Socialism became the slogan of the UAR and the government nationalised much domestically-owned business and industry. The resulting economic structure was one of a privately-owned but state-directed agricultural sector and a huge state-owned public sector controlling most large-scale enterprises in the commercial and industrial sectors of the urban economy.

The social policies of the 'Abd al-Nâşîr years were distinctly populist. The new revolutionary régime made major efforts to bring the benefits of modernity to the mass of Egyptians. Educational facilities were rapidly expanded; health care was extended to the countryside through a network of rural health clinics; new laws relating to hours of work, minimum pay, and social security entitlements attempted to improve the standard of living of Egypt's labouring population.

Externally, the 'Abd al-Nâşîr years witnessed dramatic shifts. A negotiated Anglo-Egyptian agreement of 1954 arranged for the withdrawal of the last British troops from Egyptian soil in 1956. The mid-1950s
witnessed major transformations in Egypt's international position. Egypt broke with the Western powers and turned to the Soviet bloc for military and economic assistance; simultaneously, it assumed a leadership role in both the Arab nationalist movement and the Afro-Asian bloc of non-aligned nations. Successful resistance to armed attack by Israel, Great Britain, and France in the Suez Crisis of late 1956 consolidated Djamal 'Abd al-Násir's position as a major figure in world affairs. Thereafter he was unquestionably the leading personality in inter-Arab politics (leading to Syria's request for unity with Egypt in the UAR in 1958), as well as one of the most influential spokesmen in African and non-aligned politics. 'Abd al-Násir's regional dominance and international prominence eroded over the course of the 1960s. Syria's secession from the UAR in 1961 was a huge setback; inconclusive involvement in a prolonged civil war in Yemen from 1962 onwards drained the resources and prestige of the UAR; military defeat by Israel and the loss of the Sinai Peninsula in June 1967 irrevocably damaged 'Abd al-Násir's aura as an Arab champion. Suffering from an unresolved military confrontation with Israel and a stagnant economy, the later 1960s were difficult years for Egypt/the UAR. The massive outpouring of Egyptian grief upon his death in September 1970 notwithstanding, Djamal 'Abd al-Násir left a difficult legacy for his successor.

The Vice-President Anwar al-Sadat [q.v.] assumed the presidency of the UAR upon 'Abd al-Násir's death. A popular referendum in October 1970 ratified Sadat's accession. A veteran member of the Free Officers movement, at first Sadat governed under 'Abd al-Násir's shadow. Rivalry with other members of 'Abd al-Násir's entourage and public discontent with the ongoing situation of no war–no peace with Israel marked the early 1970s. Sadat consolidated his personal position only in October 1973, when a combined Egyptian-Syrian attack upon Israeli positions in the territories Israel had occupied in June 1967 created a new strategic situation in the region. From late 1973 onwards Sadat was his own man, free to move Egypt in new directions.

He did so with a vengeance. Change was most pronounced in international relations. Sadat signalled over the 1970s, a phenomenon which eventually cost Sadat his life. On 6 October 1981 Anwar al-Sadat was assassinated by a group of Islamist militants. The Vice-President Husni Mubarak ascended to the presidency. A referendum in October 1981 ratified his accession; subsequent referenda in 1987, 1993, and 1999 extended Mubarak's term in office.

By and large, the hallmark of the Mubarak presidency has been continuity. Under Mubarak, Egypt has maintained its generally pro-Western stance, its strategic alliance with and material reliance upon the United States, and its peace with Israel. Sadat's economic approach was different than the formal socialist orientation of the 1960s was jettisoned as new legislation gave incentives to foreign investors and to greater scope to private capital. Socially, the era of the Opening was one of an accentuation of class cleavages between Egypt's more affluent upper and middle classes, who were the main beneficiaries of the country's more open economic system, and the mass of Egyptians suffering from accelerating inflation and a decline in social benefits. This deepening social schism forms part of the context for the growth of Islamist activism and militancy in Egypt over the 1970s, a phenomenon which eventually cost Sadat his life.

Economic growth improved over that of the 1980s. The micro performance was more troubling. The rate of unemployment remained high; wages formed a decreasing share of GDP and the reduction of state subsidies affected particularly the standard of living of poorer Egyptians.

More relaxed political atmosphere prevailed in Mubarak's early years in power. The scope for political expression decreased thereafter. Greater political protest and violence in the later 1980s in turn led to more governmental repression of opposition voices and groups. Faced with a low-level Islamist insurgency in Egypt's sprawling shanty-towns and in the economically depressed countryside of Upper Egypt in the early and mid-1990s, the government asserted greater and greater control over political opinion and activism. Emergency laws first enacted in 1981 were renewed through the decade; Islamist violence was met with massive state repression and the brutalisation of families and communities suspected of harbouring militants; non-violent critics of the regime have been subjected to government harassment and muzzling; and the parliamentary elections of 1990 were boycotted by opposition groups in protest against electoral restrictions, and those of 1995 were marked by the systematic repression of the opposition as well as by unprecedented electoral violence and blatant fraud. Egypt at the close of the 1990s may have turned an economic corner, at least in terms of national economic indicators if not of popular well-being; its political situation, on the other hand, appeared to be one of increasing governmental authoritarianism and the
progressive alienation of its leadership from the bulk of the population.

Accounts of Egypt's international relations under 'Abd al-Nâṣir include Muhammad Abd el-Wahab Sayed-Ahmed, Nasser and American foreign pol-

MIZADJ [...].
heat (ba'ara ghazziga) which a man has at birth, goes on decreasing when that person reaches the end of his life. They considered as proof of this the cold that old persons feel and that the physician can observe at the time of palpation, not to mention the coldness of a corpse after death. The corollary of the mizdaj is the theory of humours, which the Greek and then the Arabic physicians developed. Even today, such ideas remain strongly connected in the popular imagination, since we speak of a person having a sanguine, a phlegmatic or a choleric temperament. The 19th century was for Islam a period of revival. (a) The early period. For this, see MOZAMBIQUE, Vol. VII. (b) The 19th and earlier 20th centuries. The 19th century was for Islam a period of revival and djihād aided by the opening up of shipping across the Indian Ocean and the trade routes into Central Africa. Already at the beginning of the 19th century it was estimated that there were 15,000 Muslims in the Cape Delgado region and some 20,000 in the coastal hinterland of Mozambique Island. According to oral tradition, one Musa Momadi from Angoche, as a young man accompanied a relative who was a sharīf and a ḥadīthi on an extended dawa expedition into the interior. His relative was concerned with converting the people he came across, including the Yao [q.v.] who by this time had migrated as far as the Shire valley. In light of this sort of occurrence, it is not surprising to find the governor of Mozambique commenting on the extraordinary advance and infiltration of Islam in the interior in 1852. On Musa’s return in the mid-1850s the records indicate that he led the defence of Angoche. By 1877 he controlled an area which covered most of the coast from Mozambique Island to Licungo River and stretching 100 miles inland. His successors repulsed Portuguese attacks until 1910. As in other parts of the coast, the diffusion was primarily undertaken by people of mixed Arab and African blood. It was Portuguese policy to supply mistsicos and wagge with goods so as to procure slaves. This came to an end with the anti-slavery proclamation of 26 May 1877. The successful penetration is indicated by the fact that by the 1870s, women in their mid-twenties are recorded as having Muslim names. In addition to the Makua, the Yao and the Machemba had accepted Islam. In the interior beyond Mogabo, the Muila chief and elders observed the Islamic practices, as did Muriko, Causassio and minor chiefs like Cattur in the Luambara valley. To the north of them, Mataka represented an important centre of Islam. The Arab chief of Matibane was licensed to deal in slaves by the ex-governor Vasco Guedes de Carvalho e Menezes. Tavares, writing to the Overseas Ministry in Lisbon on 8 November 1862, mentions that the slave trade is in the hands of Arabs whose religion permits them to buy slaves. Likewise, Andrade Corvo writing to the Duke of Saldanha, the Portuguese Minister in London, on 11 March 1876 comments that, “It is easy for the Muslims to make religious proselytes among the finest and most energetic of the aboriginal races and in this way they get active and not very scrupulous agents to provide them with slaves.” Chief Matapwiri living near Kalanji was reported as selling slaves in 1886. Indian Muslims played their part, particularly in Angoche, where a Swahili dynasty was in power well into the 20th century. The slave trade in this region was primarily from Surat in western India, supplying the Persian and Arab markets. At this stage, Islamic doctrine was not observed in a pure form but was mixed with local traditions. It would seem that by the 1880s most major Yao chiefs had embraced Islam. Their settlements were centres for the spreading of Islam through the Kuru‘an schools. Coutinho records meeting Yao caravan leaders at Quelimane who claimed to be Muslims and who carried the Kuru‘an carefully wrapped in a fold of their clothes. Coastal Muslims, however, ridiculed the Yao who claimed to be Muslims, saying that they were ni ngunyakan. The growing Muslim presence is documented in a report from 1893 which shows that Muslims were active along the Licungo River and Maganja de Costa north of Quelimane. The reasons for the growing Islamisation were varied and complex, but had to do with closer associations with Muslim trading partners on the coast, and the increased prestige of Islam through the influence of the Bā Su‘id [q.v.] dynasty and its representatives along the coast. The South African influence on the development during the latter part of the 19th century can be seen in the establishment of a madrasa in Lourenço Marques by Abū Bakr Effendi (d. 1880), a Kurdisch scholar sent to the Cape in 1862. At the beginning of the 20th century there were 15 mosques and 10 Kuru‘an schools in the Angoche region. All the mosques were said to be able to write their own language in Arabic script. The Portuguese, in seeking to subordinate the north, considered that Muslims and local Africans making converts not only caused a decline in Muslim tradition, but had to do with closer associations with Muslim trading partners on the coast, and the increased prestige of Islam through the influence of the Bā Su‘id [q.v.] dynasty and its representatives along the coast. Arune's death in 1929 the *tanka* split was by leadership rivalries leading in 1934 to the formation of the Kadiriyya Bagdadî branch, and further splits followed over the next decades. Developments which facilitated the growth of Islam during the second decade of the 20th century included the construction of the railroad from Lumbo, on the mainland opposite Mozambique Island, which began in 1913; the advance of Indian Muslim merchants beyond the coast; and towards the end of World War I, the presence of a considerable number of Muslims in the British forces engaged in the war in German East Africa with Von Lettow-Vorbeck's forces. As a result, the *tanka* established branches in the principal settlements such as Nampula and Cabo Delgado. Mosques were constructed for the men and *zandika* (enclosed space) for women. As in the rest of the East African coast, Muslims from different parts of the Muslim world arrived bringing a variety of cultural and sectarian backgrounds. This has had its repercussions into the present, so that Muslims in different parts of Mozambique have tended to be and are isolated from one another.

Indian Muslims had their own mosques which were well built and ornate. They had cemeteries for their own exclusive use and brought and supported their own imams from India. They observed the ordinances of the Kur'ân and the *Shari'a* strictly. They avoided what was *harâm*, fulfilled the requirements of ablutions and frequented the mosque assiduously. The African and mestizo Muslims had their own mosques which were like thatched huts, hence indistinguishable from other huts. Their observance of Islam was less rigorous. Their attendances at mosques were less frequent and their prayers and recitations less perfect because of their ignorance of Arabic and the absence of any of the required texts. All male Muslims, whether Indian or African, practiced circumcision. They wore the *malaia*, also referred to as *cabaia*, and the *roflo* or a turban.

The statistics available indicate that there were around 66,000 Muslims in Mozambique in the mid-1950s. By then it was estimated that there were 1,356 Oriental and under Indians. At the end of the 20th century, estimates of Muslims in Mozambique vary between 10 and 16% in a population of 19 millions. Muslims in Mozambique consist of *mohikes*, those from the Indian sub-continent, as well as *moors* who have an Arab or Turkish origin, and the Swahili. They looked to Zanzibar as the centre of Sunni Islam and source of Islamic publications; they viewed the Bû Sa'îdî Sultan as their protector, remembering his name during Friday *qâqha*, even though he was theologically an Ikhâdí. The leader of the Kadiriyya Sadate between 1929 and 1963 referred to himself as the Sultan's representative to Mozambique.

Historically, Islamic revivalist movements have opposed colonial rule in northern Mozambique. In the 1920s, some Muslim leaders protested against the abuses of forced labour, low wages and land appropriation in the Quelimane area. From the 1930s onwards, Muslim Africans and various Indians organized themselves into interest groups which carried out political action under the cover of social, mutual aid, cultural and athletic activities. The situation became even more acute from 1942, when Mozambique became *Portugal Ultramar*. Forced labour, arbitrary taxation, the obligation to plant cash crops and the lack of social improvement, produced a serious discontent among the Africans which led to the awakening of a national consciousness.

By the 1960s, the isolation of Muslims in Mozambique was breaking down. Muslims were seeking education in Tanzania and Arabia. Islamic publications from Cairo and Mumbai were available and Muslims went on education in Arabia. People were listening to Cairo radio and were becoming aware of their religious roots. Arab and Islamic records and tapes from Egypt were circulating. African nationalism, linked to Arab anti-Portuguese propaganda, was gaining ground among the Muslims. It seems possible that clandestine Islamic associations were being established as early as the 1950s.

Given the total absence of liberty to form political organisations under the Portuguese, African Mozambicans living abroad in Tanzania, Zimbabwe and Malawi came together in a common front and formed the Frente de Libertação de Moçambique (FRELIMO) in 1962. An armed struggle began in 1964, but not until after the 1974 coup d'état in Portugal did Mozambique gain its independence (1975). During this period, a colonial policy was designed to win the support of the Muslim community against the forces of FRELIMO, which the colonial authorities thought had alienated the Muslims because of its Marxist tendencies. The policy was to work through the Muslim religious leadership, i.e. the *pânák*, which they considered a conservative, local force against more radical, internationally organised expressions of Islam bent on political subversion. The Portuguese authorities, capitalising on the new situation that arose after the abolition of the Sultanate of Zanzibar in 1963, utilised the new links between the Muslim leadership in Northern Mozambique with the Comoros and invited the Mufifi there to settle disputes between the *pânák*. They also embarked on publishing an official, Portuguese-language version of abstracts of al-Bukhârî's *Saîth*. In view of the fact that the liberation struggle was predominantly centred on the north, it is not surprising that the Muslims of Indian origin who lived in the southern part of the colony and adhered to the Hanafi legal tradition, with their orientation to Durban and Karachi, did not play an important role.

Nevertheless, the Muslim presence and growing Islamic influence can be seen by the fact that FRELIMO's representative in Cairo was a Muslim by the name of Shaffrudin Muhammad Khan, and an office was also opened in Algiers. Islam's influence received a boost when various Arab countries offered to train the "freedom fighters", and some 130 of them were sent to Algeria. FRELIMO established international relations with the Arab League and the Organisation of the Islamic Conference. There is no mention in FRELIMO's educational programme of Kur'ân schools, but traditional institutions like the *poro*/*sande* institutions were acknowledged, and it is possible that, to some extent, Muslim influence may have been spread through these. The Indian Muslim communities which represent non-Sunnî groups such as the Ithnâ'î Ashârî, Ismâ'îlî Khodjas and Bohorâs ran small-scale commercial ventures, bush trading centres and small shops in towns. As closed communities, they had hardly any contact with Africans, Europeans or other Indian groups. Some Asian students attended universities or professional courses at technical schools in Portugal.

(c) Independence and after.

After independence in 1975, the Muslim leadership which had co-operated with the colonial authorities was disgraced. Some Muslim associations were banned in 1976, while those which had had restrictions
imposed on them during the colonial period gained some freedom; but the civil war which erupted soon after independence and lasted until 1992 between FRELIMO as a Marxist-Leninist party and the Resistência Nacional Moçambicana (RENAMO), which sought to bring democracy to Mozambique, did not serve the Muslims well. By 1980 Mozambican Muslim students in exile in Dar es Salaam denounced the repression of Islam by the new government. Until 1982 the régime showed hostility to organised religion in general. There was considerable harassment of Muslims, including throwing pigs into mosques. Virtually all religious communities lost property through nationalisation. Religious associations were forbidden and attempts made to prevent religious activities anywhere but in mosques. Attitudes began to change after the establishment of RENAMO. FRELIMO found that its treatment of Muslims provided reasons for both Saudi Arabia and 'Umnūn to send supplies to RENAMO. South Africa and the Comoro Islands also served as conduits for supplying RENAMO in 1983-9. That situation made any allies, including the religious communities, acceptable. Thus in 1983 FRELIMO officially recognised the new national Council of Muslims Mozambique (CISLAMO). There seems to have been an enthusiastic attitude to religion in RENAMO circles. Their bases exhibited this in the form of mosques and churches. With the accession of Chissano in 1987, FRELIMO began a gradual restoration of social legitimacy to religious bodies of all kinds. In that year, Mozambique hosted the fifth Southern Africa Islamic Youth Conference. By mid-1988, confiscated properties were being returned. The situation improved further when article 19 of the 1975 constitution was changed in 1990 to state that "The state shall respect the activities of religious denominations in order to promote a climate of social understanding and tolerance and to strengthen national unity."

The elections of 1994 returned FRELIMO to power. In further attempts to gain the support of Muslims, FRELIMO recognised the Islamic holy days of 'Id al-'Adha and 'Id al-Fitr as national holidays in 1996. But in the 1999 elections it is revealing that, out of FRELIMO's 117 deputies, only one seems to be a Muslim, whereas out of RENAMO's 117, 12 were Muslims.

By the end of the 1990s, Mozambique had become a member of the Organisation of the Islamic Conference (OIC), thus securing economic benefits. Tensions between the Súfi leaders of the majority of Muslims in the north and the more radical reformers based in the south have led the former to split off from CISLAMO to form the Congress Islámico.

had mocked that city and how the Isfahanis had in some way held Khākān responsible for the attack, an accusation which he rejects energetically. The commentators identified this “demon” with ‘Amr b. ‘Abd al-Malik But this is perhaps merely a fanciful elaboration.

Mudjir’s *divān* contains several highly artificial poems (e.g. one in which he uses only the letters that do not take diacritical points) and a fair number in Arabic or with alternating Arabic and Persian verses. A critical edition was prepared by M. Abadī, Tehran 1350/AB 1972. "Philology: de Blos, Persian literature, v, 425-8 (with further references); A.L.F.A. Berlaert, *La qasid en honneur d’Isfahān de Xāyān*, in *Pand-o sokhan*. Mélanges offerts à Charles-Henri de Foucauche, Tehran 1995, 53-63.

**Mudjir al-Dīn Baylākanī — al-Mufaddal b. Salama**

Al-Mufaddal’s *al-Fadhl ādab* (for partial prints and the two editions, see *Mathāl*. iii. 4) has in fact a rubric in Mudjir’s *divān* poking fun at the people of Isfahān. Abu ‘l-Radžād Kummāt (Tārīkh al-Wuzūrd, ed. M.T. Danish-pazhūh, Tehran 1985, 200-1), a nearly contemporary source, cites one verse from this quatrains and then a verse with which the “people of Isfahān” replied to Mudjir’s attack (and which in later sources is ascribed to Sharaf al-Dīn Shufurwa, see *Mathāl*. l.ii. 12). The transmission of al-Fāhīr may in part be traced back to Ibn al-Anbārī as well; he seems to have recognised that al-Mufaddal had entered new “lexical” territory, which was then the motive for his composing the more comprehensive *al-Zāhir* (see *Mathāl*. l.ii. 5). Al-Mufaddal was less of a philologist than a collector and an entertainer at court and in the city of Baghdad. Pointers towards this include his critique (cf. Fāhrist, 43, 62, 63, 74, 82) of the Kitāb al-‘Ayn of the great al-Khalīf b. Ahmad, bearing the title: *al-Radd [var. al-Iṣṭidāk] ‘ala l-‘Ayn* (see also *Fakhrist*). This evidently did not convince the philologists and lexico-logists, who felt called upon to contradict him, even a later century (for relevant passages, see Sezgin, vii, 140). Al-Mufaddal had a preference in his work for what was novel, strange and contemporary. This can be seen in his renditions of the aetiological stories that go with the *māḥāl* (māḥāwarāt), the clever Jew (no. 223), and such things as greeting for-merly were lost (no. 441) and animal calls (no. 442). As the technical term “abridgement”, indicates, it might possibly have the same name by al-Farra (see *Mathāl*. lii. 3, 5). Al-Mufaddal is the best known of the great al-Khalīf b. Ahmad, bearing the *Ayn wa-ỉṣlāh* (for partial prints and the two editions, see *Mathāl*. lii. 3, 40. His best-known work is his much-used, unsystematic collection of proverbs (*māḥāl*; see *Mathāl*. li. 4), containing 521 items:

1. *al-Fāhīr* (for partial prints and the two editions, see *Mathāl*. lii. 4). The peculiarity of *al-Fāhīr* is the fact that, in addition to 200 proverbs, all of which can be found in the better-known, extensive collection of al-Maydānī [see *Mathāl*. lii. 12], it contains 321 turns of phrases (māḥāwarāt, such as greeting formulas, beneficences, curses, animal calls (no. 441) and similar things, not a few of them connected with the *māḥāl*, see *Mathāl*. lii. 4).
used for evading the spirit of the law whilst technically satisfying its letter [see ṣita].

Thus the mahallī is found in gambling, racing for stakes, e.g., with horses or pigeons, and archery contests being a participant who does not contribute to the stakes; see F. Rosenthal, Gambling in Islam, Leiden 1975, 53, 98-106, and kamīr, as in N. V. 1096. But mahallī is also found in marriage and divorce law, as the person instructed, usually for payment, to marry a woman who has been three times divorced and cannot therefore remarry her original husband until a fourth, dummy marriage has been gone through and duly consummated. After this tabīḥ she can legally remarry her old husband. Such an intervention was generally allowed by the Hanafis but disputed by the Malikis and Shafis, whilst the Hanbils Ibn Taymiyya denounced it as illegal in a treatise of his on divorce (cf. Brockelmann, II, 127, S II, 124) [see ṣālah I. 7].

The person acting as a mahallī in marriage and divorce is not surprisingly a figure of contempt and obloquy in Islamic literature.

**MUHAMMAD III b. HASAN**

In British usage from the later 18th century but probably of doubtful legality or in fact prohibited; it thus forms part of the mechanisms and procedures subsumed under ṣiya, legal devices, often said to be a "man of straw", in order to authenticate or make permissible some legal process otherwise of doubtful legality or in fact prohibited.
ambassador to Alamut where he conducted diplomatic negotiations with Muhammad III on behalf of the Khârazm-Shâh. In Muhammad III's time, relations between Alamut and the neighbouring Caspian provinces deteriorated. On the other hand, peace was maintained between the Mongols and the perennial enemy, the people of Kazwîn. Muhammad III had personally developed a close association with a Şûfi qâdhî of Kazwîn, Djanâl al-Dîn Gîlî (d. 651/1253), and regularly sent him an annual grant of 500 dînârs. It seems that it was also in Muhammad III's time that the Nizarî Ismâ'îli dîwâna was introduced to the Indian subcontinent by dîvîs dispatched originally to Sind. Nizarî fortunes in Persia were rapidly reversed after the collapse of the Khârazm-Shâh empire. The Nizarîns now directly confronted their most dangerous enemy, the Mongols, who were then making new efforts to conquer all of Persia. Following his abortive effort, in collaboration with the 'Abbasids, in 635/1238 to forge an alliance with the kings of France and England against the Mongols, Muhammad III made one last peace overture to the new Great Khân Guyûk in 644/1246. However, the Nizarî emissaries to Mongolia were dismissed with contempt by Guyûk Hencertopuli, and Nizarî-Mongol relations deteriorated beyond repair. By 651/1253, under Guyûk's successor Mongke [q.v.], the Mongols had destroyed numerous Nizarî towns and strongholds in Kühistan and Kûmîs. As the Mongols were incessantly conducting military campaigns against the Nizarî territories in Persia, 'Alâ al-Dîn Muhammad III was found murdered in Shìrkûh, the last lord of Alamut. By 651/1253, under Gûyûk's successor Mongke [q.v.], the Mongols had destroyed numerous Nizarî towns and strongholds in Kühistan and Kûmîs. As the Mongols were incessantly conducting military campaigns against the Nizarî territories in Persia, 'Alâ al-Dîn Muhammad III was found murdered in Shìrkûh, the last lord of Alamut. By 651/1253, under Gûyûk's successor Mongke [q.v.], the Mongols had destroyed numerous Nizarî towns and strongholds in Kühistan and Kûmîs. Ibn 'Abd al-Karīm was born in the 1880s into the large Berber tribe (kaḥila) Banū Wāryāghal in the Moroccan Rif (q.v.), son of a kāḍī who had close relations with the Spanish in Melīla (q.v.) and Alhucemas Island. He studied at the Karawīyīn in Fāṣa (q.v.), and was influenced by the Salafīyya (q.v.).

After a rising against the Spanish in July 1921, he founded a government based on principles of modernisation and Salafi reform. In February 1923 various Riff tribes gave him bayya as imām; he sometimes called himself amīr al-muṣīra (q.v.), more to signify the religious nature of his movement than to claim universal leadership. His forces defeated the Spanish in 1924 and invaded the French Zone in 1925. After a joint invasion of the Rif in the autumn of 1925, Spanish and French armies crushed his state in May 1926.

Ibn 'Abd al-Karīm was exiled to Reunion until, in 1947, he escaped to Egypt on his way to France. He became the titular leader of the umbrella Committee for the Liberation of North Africa. After Moroccan independence (1956) he refused to return, saying that the American bases prevented Morocco from being truly independent. He died in Cairo in 1963.

MUHAMMAD b. 'ARAFĀ (d. 1976), ephemeral Sultan of Morocco 1953-5.

Muḥammad b. 'Arāfa was the product of the Franco-Moroccan crisis of the early 1950s when sultan Muḥammad b. Yūsuf (after 1956, Muḥammad V) (d. 1961) defied the Protectorate authorities and openly supported the nationalists’ demand for independence. In March 1952 the sultan addressed a letter to the President of the French Republic demanding the abrogation of the protectorate treaty of 1912. The French not only rejected the sultan’s demand but started contemplating plans for his removal. A scheme for a dynastic change by which the Idrīsid 'Abd al-Hāy al-Kattānī would be made sultan was quickly abandoned in favour of a more realistic alternative, that of finding a candidate for the throne from within the ‘Alawīd house.

The idea of a new ‘Alawīd sultan who would be more co-operative, if not in effect a French puppet, was judged to be more acceptable in view of the wide popularity that had built up round the ‘Alawīd dynasty since the early 1950s. Upon the instructions of Augustin Guillaumou, the French Resident General, Thāmī al-Glawī, patha of Marrakesh, and ‘Abd al-Hāy al-Kattānī toured the country to gather signatures for a petition demanding the removal of the sultan Muḥammad V. The new candidate for the throne was found in the person of Muḥammad b. ‘Arāfa, a retiring per-son from the ‘Alawīd family. On 20 August 1953 the legal sultan was deposed and sent into exile in the French colony of Madagascar.

The enthronement of the new sultan was immediately met by a sweeping wave of opposition to the French occupation. The overwhelming majority of the Moroccan people as “the sultan of the French” and they therefore refused to give him allegiance. Mosque ināmān abstained from mentioning his name in the Friday sermon, and when they did this under French pressure, people simply deserted the mosques. His proclamation had for its immediate consequences the radicalisation of the nationalist movement and the outbreak of armed resistance to the French in many parts of the country. After two attempts on the sultan’s life and the deterioration of security throughout the country, the French realised the seriousness of the situation. Internationally, the French action had been widely condemned, particularly by Spain which, as a co-partner in the protectorate system, felt deeply offended by the French unilateral move. The Spanish authorities maintained allegiance to Muḥammad V, and at the United Nations the French government had also to face wide hostility to its Moroccan policy from the Arab and the Afro-Asian bloc.

For the Moroccan nationalist movement led by the Istiklāl party [see ʿIZR, i, at Vol. III, 525], the return of the deposed sultan and the removal of Ibn ‘Arāfa became the most pressing demands and a rallying cry for all political tendencies. When the French finally decided to allow Ibn Yūsuf to return from exile, they had, in fact, accepted the principle of Morocco’s independence. Ibn ‘Arāfa announced his abdication on 1 October 1955, and on 2 March 1956 the protectorate regime formally came to an end. Muḥammad b. ‘Arāfa went into exile in France and died at Nice on 18 July 1976.

MUHAMMAD b. ISMĀ’IL AL-MAYMŪN, the seventh inām of the Ḳismā’īyya (q.v.).

The eldest son of Ismā’īl b. Dāʿīr al-Sādirī, Muḥammad was born around 120/738; and on the death of his grandfather, the inām Dāʿīr al-Sādirī, in 148/765 he was recognised as inām by a faction of the Ḳismā’ī Shiʿis, who were later designated as the Mubārakīyya. These Shiʿis, comprising one of the earliest Ismā’īlī groups, affirmed the death of Muḥammad’s father Ismā’īl in the lifetime of the inām al-Sādirī. They further held that al-Sādirī had personally designated his grandson Muḥammad on Ismā’īl’s death. Muḥammad b. Ismā’īl carried the epithet of al-Maymūn, the “fortunate one”, and his followers were also originally referred to as the Maymūnīyya, another designation of the nascent Ḳismā’īyya. Soon after 149/766, Muḥammad b. Ismā’īl permanently left Medina, the residence of the Alids, for the east and went into hiding; hence his additional epithet of al-Makṭūm, the “hidden one”. Subsequently, he maintained his contacts with the Mubārakīyya (Maymūnīyya), centred in Kūfah, Muḥammad b. Ismā’īl evidently spent his final years in Khūzistān, where he had some following, and died not long after 179/795-6 in the reign of the caliph Ḥārūn ar-Raṣīd.

Until the schism of 286/899 in the early Ismā’īlī
MUHAMMAD AL-MAYMUN — MUHAMMAD 'ABD ALLAH

movement, the bulk of the Isma'iliyya acknowledged Muhammad b. Isma'il as their seventh and final Imam; and as such, they denied his death and awaited his imminent return as the Mahdi or Ka'im. In accordance with their cyclical view of the religious history of mankind the hitherto hidden esoteric truths of the Isma'ilis were revealed. Muhammad b. Isma'il was the seventh and final Imam and allowed for more than one Imamate in the era of Islam. The latter, the "dawr [q.v.]," meant the final era or age of pure spiritual knowledge before the physical world ended; he was thus considered as the Mahdi. Isma'il himself was no longer expected to return as the Mahdi. While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,} While still an undergraduate student, he was privileged to have close acquaintance with Sir Sayyid,}{years after completing his great anthology al-Durr al-farid, of which an almost complete, beautifully written, autograph has been preserved and published in a facsimile edition. After an extensive introduction on stylistics and literary criticism, the main part of the work lists single lines of poetry, mostly of the gnomic and quotable kind. They are arranged strictly alphabetically, not according to rhyme-word, but, unusually and usefully, by their beginnings. The core of the book contains some 18,000 lines, a very large number, which is, however, easily outnumbered by the lines provided by the compiler in the margin, often giving the context or parallels of quoted lines. Biographical notes and philological Commentary are also included. The poet's date from all periods, many of them well known but also including lesser-known or obscure poets. Bibliography: Muḥammad Ibn Sayf al-Dīn Aydamur, al-Durr al-farīd wa-bayt al-qādīl/The priceless pearl a poetic verse [sic], ed. [in facsimile] F. Sezgin, in collab. with M. Amawi, A. Jokhosha and E. Neubauer, 5 vols. Sayyid, under whose personal attention 'Abd Allah learnt writing for newspapers on various educational and social themes. It was, he stated, Sir Sayyid’s guidance which inspired him actively to participate in the community’s welfare work.

After graduation with a law degree and at the expressed desire of Sir Sayyid, 'Abd Allah settled down in 'Aligarh and began his career as a lawyer. In 1902 he was married to Wahid Dughan Begam (from an established Muslim family of Dilih), with whom he had four daughters and a son.

A few of his childhood experiences of witnessing cruelty and injustice to women left deep impressions on him which were to lead him later in life to a whole-hearted involvement in social welfare work for women, especially in education. He intensely believed that, with education, women’s lot could alone be improved. With the then existing atmosphere in 'Aligarh, he became more and more concerned with the education of Muslim women.

During the 1896 session of the Muhammad Educational Conference, a section was established for women’s education; but because of Sir Sayyid’s involvement in other tasks, no practical steps were taken to attain any specific objectives toward education of Muslim women. In the 1900, the Conference, held at Dilih, Shaykh Muhammad 'Abd Allah, together with several of his friends, proposed to revive the section on women’s education, which was enthusiastically approved: thereafter year after year he kept on propagating the necessity of providing adequate education to Muslim women in India. For this purpose he began publishing a monthly periodical Khatun, the first issue of which came out in 1904 and continued to be published for the next ten years. Also in the year 1904 he was permitted by the Conference session at Lucknow to open a normal (up to eighth grade) school for Muslim girls at 'Aligarh. After three years of hard work he succeeded in establishing the proposed normal school. The modest beginning of this school in 1907 in 'Aligarh attracted the attention of the government of the United Provinces (now known as Uttar Pradesh), which granted a sufficient sum for the purpose of buying land and constructing building for the school in 1908. The school at that initial stage had no boarding facilities for girls from outside the town. The increasing popularity of this pioneer institution for Muslim girls’ education throughout the subcontinent meant that there was a need of residential facilities for girls from other nearby areas who wanted to join. In 1911 help came again from the U.P. government; Lady Porter, wife of the Lieutenant-Governor of the United Provinces, laid the foundation stone of the hostel adjacent to the school building. The school which had a modest beginning in 1907 had grown by 1936 into a renowned degree college leading up to B.A. classes. In that year it was affiliated to the Aligarh Muslim University.

Until 1947, education in all classes of the college and its affiliated primary and secondary schools was conducted under the strict rules of Islamic seclusion. The hostel followed also tradition both in observing purdah and in religious obligations. In 1947, however, after the independence of the country and promulgation of a secular constitution, the basic structure of Islamic-oriented Western education remained untouched in all the affiliated institutions of the Muslim University (Muslim Girls’ College included). The exclusion of women students and obligatory religious observances were eliminated.

The attachment of Shaykh Muhammad 'Abd Allah to the Muslim Girls’ College was so deep that he built his spacious residential house close to the buildings of the College, and from the 1940s onwards, donated a large part of this house as the hostel for postgraduate girl students. His strong attachment to the girls’ education and welfare was reciprocated by the affectionate title of “Papa Miyan” with which he came to be known by his friends.

In recognition of his pioneer work for Muslim women’s education the British Government awarded him the title of “Khan Bahadur”, and Aligarh Muslim University honoured him with the award of honorary degree of Doctor of Laws. Towards the end of his life, in 1964 the post-Independence national government of India expressed its appreciation for his services by awarding him the title “Padam Bhushan”. He died on 9 April 1965 at the age of 91, and was buried in the garden of his residential house, adjacent to the buildings of the Muslim Girls’ College.

MUHAMMAD 'AKIF PASHTA [see MUHAMMAD NAXIRUDDIN PASHTA].

MUHAMMAD AL-DJAWAD [see MUHAMMAD B. 'ALI AL-RIDA].

MUHAMMAD HĀKIM MIRZĀ, Mughal prince and half-brother of the emperor Akbar [q.v.], b. 960/1553, d. 993/1585.

In 973/1566 he was governor of Kābul and eastern Afghanistan for Akbar, but when temporarily forced out of his capital by the Timurids of Badakhshān, he retreated towards India, where a group of dissident Ozbeg nobles proclaimed him emperor at Djuwpur and incited him to invade India. He besieged Lahore with his forces, but had to retreat to Kābul. For over a decade, he posed a threat on Akbar’s northwestern frontier, offering a legitimate alternative to Akbar’s rule. A fresh revolt of Mughal and Afghan nobles broke out in 987-8/1579-80, in the wake of Akbar’s maddar or decree proclaiming himself supreme arbiter of religious affairs and claiming authority as caliph, and Muhammad Hākīm was again proclaimed counter-emperor. Akbar sent his chief minister Tōdar Mal [q.v.] to suppress the rebels in Bihār, and himself marched against Kābul, entering the town in Radjab 999/December 1581. He pardoned Muhammad Hākīm and reinstated him, but it was not until Muhammad Hākīm’s death in Sha'ban 999/August 1585 that all threats from Kābul were ended and the region brought under direct imperial rule.

MUHAMMAD SĀLIH KANBO LĀHAWRĪ, Indo-Muslim historian and stylist whose exact dates of both birth and death are unknown but who flourished in the 11th/17th century under the Mughal emperors Shāh Ḥaţān and Awrangzīb [q.v.]. He may have been the younger brother of the historian and litterateur Taqāt Allah Kanbo (d. 1082/1671 [q.v.]), if Muhammad Sālih’s reference to this last person, his master and patron, as biqār-i kalān “elder brother” is to be taken literally.

Virtually nothing is known of his life, but he was
a government official in Lahore, where his tomb still exists and where in 1079/1668-9 he built a small mosque. He is famed for his detailed history of Shah Džahán and his reign, the Amál-i Sdlih, completed in 1070/1659-60, but with later additions (many ms.; ed. Ghulam Yazdani; Biol. Indica, 3 vol, Calcutta 1912-39, and also an ingdi collection, the Bahá'í sukkān, still in manuscript.

MUHAMMAD-SHAHI NIZÁRIYYA [see ISMÁ'IL-LIYYA]

MUHAMMAD TÁPAR [see MUHAMMAD B. MALIK-GHÁN]

MUHAMMAD 'UTHMÁN DJALÁL (1829-16) January 1909, thus in Brockelmann, S II, 725), Egyptian translator and adapter of European drama into Arabic. He played a crucial role in the transfer of the cultural milieu of European dramatic forms into an indigenous Egyptian language and format. After a traditional secondary education, he was sent to Kif'á al-Tahtawí's [see KIFÁ BEY AL-TAHTAWÍ] famous translation school, the Madrasat al-alsun, and became thereafter one of the foremost of its graduate translators (both literary and colloquial). Alongside his achievements as a translator he also had a civil service career, firstly in the Khedive's office, then as a judge in the Mixed Courts, and later as a government minister. Various dates are given for his death, ranging from 1894 to 1909 (cf. Brockelmann, II, 627-8, S II, 725).

Moving from the practicities of administrative manuals to the more complex stylistic issues of literary genres, Djalal began his literary translation career with the Fables of La Fontaine, which he rendered into Arabic verse and published in 1858 (al-Túyín al-yuwaqiq fi 'l-anájil wa 'l-mawsiiq). In 1872 he issued his famous translation of Bernardin de St. Pierre's Paul et Virginie (as al-Amán wá 'l-minná fi hadith Khábl wá-Ward Dínná), using the lofty style of sauq (rhyming prose) and "arabising" and "islamicising" many of the discourse elements of the original French text. He thereafter turned his attention to the dramatic genre, translating four comedies of Moliere into colloquial Cairene Arabic poetry (using the form of sadf) and once again cleverly transferring the cultural context from a European to an Egyptian milieu. The four plays in question (published as a group in 1889) were: Táttuf (al-Sháykh Málih), Les femmes savantes (al-Nid' al-ulímat), L'école des maris (Madrasat al-ażwāj), and L'école des femmes (Madrasat al-xazgáj).

From comedy, he moved on to the French tragedy, translating (once more into colloquial Cairene dialect) a set of plays by Racine and Corneille: Eléazar, l'Hyppixie, and Alexandre le Grand by the former (as al-Ruáyát al-mufdi fí 'l-irán al-tarángój) and El Cid by the latter. His one excursion into dramatic writing on his own part, al-Ákhdáđámína wa 'l-mukhadramína ("Servants and agents"), 1904), was, like his translated plays, composed in colloquial verse.

In the lengthy and complex process of indigenous imported literary genres during the 19th century, Djalal's role as a translator was a central one. That his translated works of European plays were subsequently assimilated into Egyptian society can be convincingly demonstrated by the fact that al-Sháykh Málih, his Egyptianised Táttuf and most masterful adaptation, has been revived on the Cairo stage in recent times (e.g. 1963, 1971) to tremendous popular acclaim.

(R.M.A. Allen)

MUHAMMAD ZAMÁN MIRZÁ, perennially rebellious Mughal prince and brother-in-law of the emperor Humáyún [q.v.].

On Humáyún's accession in 937/1530, he allied with Bahádur Sháh of Gudjarat, provoking an invasion by Humáyún of Gudjarat via Máláwá. Muhammad Zamán was pardoned, but in 941/1534 rebelled again, this time in Bihár, but had to escape to Gudjarat once more. From here he provoked a second occupation of Gudjarat by the Mughal emperor (941-2/1535-6). Muhammad Zamán escaped; he tried to claim the throne of Gudjarat for himself on Bahádur Sháh's death in 943/1537 but failed in the attempt, submitting at last to Humáyún.

MUHDATHUN (ٌ), the "Modernists", i.e., in classical Arabic literary history, those poets that came after the ancient poets (called kadama', minatkad-dimán or ava'il) of the pre-Islamic and early Islamic periods. The term is first applied to some poets of the two "dynasties" (muqqadramína 'l-daslatáriyín), who flourished in the middle and second half of the 2nd/8th century [see MUHKADRAM]. No formal end of the period of the Muhdathún movement is recognised, but mostly the term applies to poets of the first few centuries of the "Absháb al-Ímán period. For poets from later times, one finds occasionally the term still used, or, more commonly, expressions such as ahí al-áyir and muhdá'im "contemporary [poets]".

Critics were aware of the differences between the poetry of the pre-Islamic (díjáhí) poets and that of their successors, the muhkádramína (straddling the Dághiyía and Islam), the Islámiyyín and the Umayyad poets. However, the changes in style, themes and motifs that arose from the mid-2nd-8th century—in the wake of the fundamental social and intellectual changes that took place in that period (such as the role of the muwáwilí [see Muwála] and the impact of Greek and Persian civilisation)—were considered so fundamental that the dichotomy between "old" (kadám) and "modern" is dominant in traditional literary criticism. The distinction is important, too, in Arabic linguistics, since there was a general consensus among the grammarians and lexicographers that only early (pre-muhdathí) poetry could serve as attestation for the codification of the "pure" (fushá) language; as Ibn Djamín, quoted by Ibn Ráshid ('Umama, Cairo 1953, ii, 236), put it: "Modern poets [he uses the term muwáwilí, on which see below] may be cited as authorities (yustashhadu bihim) on motifs (ma'm), just as ancient poets may be cited as authorities on words (or expressions, or...
It is a commonplace of traditional criticism to contrast the "purity" and solidarity of the old style with the refinement and rhetoricisation of the new. The old poet built a house, the modern poet embellished and decorated it (e.g. *Umdu", i, 92); the former is like a singer singing fine melodies with a coarse voice, the latter sings inferior melodies with a sweet voice (Ibn Waki", quoted in *Umdu", i, 92). Modern verse is like a fragrant herb that smells deliciously but briefly, early poetry is like musk or ambergris, increasing in fragrance the more one rubs it (Ibn al-Arabi", quoted in *al-Marzuq", 384). The *Muhdathun* are credited with introducing *bad"* (q.v.) consciously, a term referring to various rhetorical and poetic artifices and embellishments. "Muslim b. al-Walid was the first to use *bad* on a large scale, after Bashshar had first used it...; then came Abi Tammam, who used it excessively and immoderately" (quoted by Ibn al-Mutazz, *Tabakat*, 235). Obviously, the contrast between old and new has been exaggerated and simplified: by no means all early poetry is stylistically rough and unadorned, some of it, notably Umayyad *rajaz* (q.v.), is highly rhetoricised. Conversely, much of "modern" poetry is unadorned and highly accessible, and its image is to some extent distorted because in literary criticism and theory it was mainly the rhetorical and embellished style that received attention. However, on the whole it is true that the most characteristic innovation of the *Muhdathun* lies precisely in the development of refined rhetorical techniques, a novel use of metaphor (cf. the distinction between the "old" and the "new" metaphor as pointed out by W. Heinrichs, *The hand of the Northwind*, Wiesbaden 1977), and of increasingly complex imagery and "conceits", on which see e.g. B. Reinert, *Der Concetto-Stil in den islamischen Literaturen*, in Heinrichs (ed.), *Neues Handbuch der Literaturwissenschaft*. V. Orientalisches Mittelalter, Wiesbaden 1990, 366-408.

It is difficult to generalise about "modern poetry", extremely varied as it is. Much of the ancient, Bedouin vocabulary and diction is abandoned, yet the so-called neo-classicist style of Abi Tammam and others indulges, at least in their formal *kiftan* and other set-pieces, in archaic words and expressions. There were some prosodical innovations: a few new metres were created and truncated forms of existing metres became popular, yet all the old metres survived. Many oddities of grammar and prosody that were condemned in old and Bedouin poetry as poetic licences (*daruwa*) were deemed faults in new or urban poetry (e.g. Ibn Rashid, *Umdu", ii, 269; Ibn Dhanani, *Mudasi", Cairo 1952, i, 323f).

The *Muhdathun* critics themselves were aware that the originality and novelty of "modern" poetry were not as great as was sometimes claimed. Ibn al-Mutazz (q.v.) wrote his seminal treatise on rhetorical figures and tropes, *al-Balid* (q.v.), in order to demonstrate that these figures and tropes can be found already in early poetry and prose (Kur'an and *Hadith*), thus he provided
a legitimisation of badi' while at the same time denouncing some of its excesses, notably Abu Tammam’s idiosyncratic techniques of metaphor, antithesis and paronomasia. The two brothers called al-Khalidiyyan [q.v.], in their Kitab al-Khalid wa-l-nagh, trace many motifs and themes current in modern poetry to their early predecessors, in order to prove the superiority of the latter; it was written in response to those who preferred the moderns.

The poetry of the Muhdathun certainly was not, and could not have been, a wholly new start. The early poets were canonised by consensus and could not be ignored by the later ones. Modern poets had to choose between slavishly imitating them, which became increasingly insipid and inappropriate for urban poets, or reacting against them (e.g. by means of parody and in the “anti-nasib” theme, common in Abu Nuwas [see nástb. d. ‘Abbasid period]), or by transforming the early themes and motifs, by blending or subtly changing them, while transforming diction and style by means of rhetorical refinement. An important characteristic of modern poetry is the pervading presence of shorter and monothematic poems, with themes that in early poetry usually formed part of the polythematic ode or kasida [q.v.]; the khamriyya [q.v.] or bacchic poem, the tedjaya [g.v.] or hunting poem, the zubayya [g.v.] or ascetic, anti-worldly poem, the “portal” poem (called nawaerya [g.v.], zabiriyya, raseediyya or rabiyya), the epideictic epigram (wasf), the gnomic epigram (khina), the obscene or scatological poem (mujjuq [g.v.]) and several others. Here, too, there are precedents in early poetry, although it is not always possible to determine whether an early short poem was conceived as an independent epigram or is a fragment of an incompletely transmitted poem.

In any case, the kasida retained its position as the most prestigious form. As before, one was not considered a great poet unless one could boast of the production of a substantial number of odes. It has been argued (M.M. Badawi, From primary to secondary Qasidas, in YAL, xi [1980], 1-31 and see his chapter ‘Abbasid poetry and its antecedents, in J. Ashitani et al. (eds.), CHAL, Abbasid belles-lettres, Cambridge 1990, 140-66) that the early Islamic and early Islamic poets brought about a more radical change in poetry than the muhdath “revolution”, a change seen in the shift from the tribal and ritualistic kasida to the mostly panegyric ode modelled on the old type but being more strictly literary, and in the shift from oral to literate transmission. Important developments, too, took place in love-poetry in pre-muhdath times (see CMAZAL. i. In Arabic poetry, and several more recent articles by René Jacob and others). It is true that most of the changes of the period of the first Muhdathun were prepared by the early Islamic and Umayyad poets, yet on the whole the traditional distinction between them and the newer school is justified and the original contributions of such innovators as Bashshār, Abu Nuwas, Abu l-‘Arīf, Abu Tammām and Ibn al-Rūmī cannot be denied. The new sensibility has been linked with the “discovery” of the individual, as a result of social and political changes, such as the dwindling of the old aristocracy, the individualistic egalitarianism espoused by Islam, and high social mobility (see Th. Bauer, Liebe und Liebesdichtung in der arabischen Welt des 9. und 10. Jahrhunderts, Wiesbaden 1998).

Among the characteristics of the kasida among the Muhdathun is a greater concern for coherence and unity, or at least an avoidance of abrupt transitions. Even though such thematic jumps, such as from nāstīb to the panegyric section, are still found, most poets devoted care to some kind of connecting motif (takhallus [g.v.]). And whereas early poems seem to end more or less fortuitously, often in mid-air as it were, the Muhdathun often conclude with a proper peroration, ending with epistles appropriate to an envoy, such as a didactic passage or a blessing.

After the first few generations of Muhdathun poetry had become so artful, its techniques had developed to such an extent that it seemed to the following generations that it was difficult to come up with novel things: the poet and critic Ibn Tahāsāb (d. 322/934), in his ‘Iyār al-ghil (Riyād 1985, 13) speaks of the “trial” (mīna) of the poets in his days who try to please exacting patrons by means of their rhetorical subtleties and witticisms, while abandoning the truthfulness allegedly found in early poetry.

If there ever was a true querelle des ancêts et modernes in Arabie literary history, it was mostly fought in moderate terms, the majority of critics professing their respect for the ancients, even though many pointed out the superior techniques of the moderns. Thus al-Hātimī (d. 388/998) notes that the latter excelled in tāḥallus “because of the bright minds and subtle thoughts”, surpassing the primitive methods of pre-Islamic and early Islamic poets (Hikmat al-muhdādara, Baghdād 1979, 215-16). Dhay al-Din Ibn Aḥiẓār (d. 637/1239 [g.v.]) calls Abu Tammām, al-Buhtūrī and al-Mutanabbi “the al-Lāt, al-Uzzā and Manāt [g.v.] of poetry” (al-Maṭyāl al-sā’īr, Cairo 1962, iii, 226) and pronounces them superior to all others, ancient and modern (iii, 274). The Andalusian anthropologist Ibn Basām (d. 543/1147 [g.v.]) explains why he only includes recent poets, speaks scathingly of ancient poetry (al-Ḫidāla, Beirut 1975-8, 1/1, 13-14). “Every thing that is recited over and over again is boring; the ear rejects ‘O abode of Mayya . . .’”, he goes on to quote irreverently the opening words of several of the Mu'allakhāt [g.v.], perhaps the most “canonical” of all Arabic poems. At the other extreme stands e.g. Ibn Khaldūn (g.v.), arch-conservative for once, who quotes with apparent approval the opinion that the rhymes of al-Mutanabbi and al-Ma‘arri [g.v.] cannot be considered true poetry, because they did not follow (ancient) Arab poetic methods (Mu'allakāt, Cairo 1962, 1296, tr. F. Rosenthal, Princeton 1967, iii, 382). However, in the controversies such as arose on account of the style and motifs of Abu Tammām or al-Mutanabbi, it is usually not a matter of old vs. new.

book of badd). For a useful survey of medieval critical opinions, see Ibn Rashid, 'Umda, i, 90-3 (fi 'l-kudamah wa 'l-muddathun), 100-1 (section on famous poets), ii, 263-45 (section on "modern motifs"); al-mu'dar al-muddathun.

(G.J.H. VAN GELDER)

MUHBIB AL-DIN AL-KHATIB, SUNNI ARAB journalist, publisher and editor, an influential life, can be described as a peculiar blend of Salafi and Arab nationalist positions (see Hurvitz, in Bib. I). From 1916 onwards, he served the "Arab Revolt", first as a member of the editorial staff of al-Khilas in Mecca, and later (summer 1919 to summer 1920) as chief editor of the Hashimite official newspaper in Damascus, al-A'mama. However, a few days after the battle of Maysalun [24 July 1920 (q.v.)] and the subsequent French occupation of Damascus, he left Syria for Egypt.

Having finally settled in Cairo, Muhibb al-Din al-Khatib in the following years rose to some prominence, in Egypt and far beyond, as owner of a printing and publishing house serving the causes of 'aribah [q.v.] and Sunni Islam, called al-Matba'a al-Salafiyya wa-Muhtabatuhd. Further more, he gained recognition as founder and main author of two important journals, al-Zahir (1924-9) and al-Fath (1926-48), and also as editor of mediaeval as well as modern Arabic texts.

Even before the fall of the Hashimite rule in the Hijaz (1925), he had declared his support for Ibn Su'lud [see 'ABD AL-'AZIZ, in Suppl.] and subsequently became an eloquent defender of Saudi-Wahhabis politics and religious practice [see WAHABISMA]. In this connection, he came forward as one of the most influential Sunni polemics in modern times against the Shi'a in general and their role in Islamic history in particular. As a result, he opposed all attempts at an ecumenical rapprochement between the two sides [see TAKRIR]. Even as chief editor of Maqalat al-Azhar (1952-9) he maintained this view (see Brunner, esp. 195-208). He is also remembered as one of the modern authors who tried to restore the image of the Umayyads in the mind of the Sunni Arab public (Ende, 91-110). He died in Cairo on 30 December 1969.

MU'INSIZ (a., t.), from Ar. mu'tan "supporter, helper" and Tkish. sz "without", a term connected with the introduction of the conscription system into the Ottoman Empire in the 19th century to indicate someone who has nobody to look after his family and other dependents if he is drafted, i.e. is a breadwinner. The decision as to who was regarded as sole breadwinner in a family depended on the age, sex and physical and mental condition of those left behind and on their degree of dependence to the potential mu'insiz. Mu'insiz were exempted from regular military service, but served as reservists: as reddif and mustahfiz (see REDIF). Once one was registered as a regular soldier, becoming a mu'insiz was rarely possible, even if personal circumstances had changed.

Although mu'insiz, as reservists, had only limited military obligations in times of peace, during times of mobilisation and war they were called up to the colours. In such cases, their families were left without breadwinners. To prevent these soldiers from worrying about their families and to obviate subsequent problems with morale and even desertion, the Ottoman state provided a separation allowance, the Mu'insiz, 'Aile Mu'tasz. First applied during the Crimean War, the allowance and the terms under which it was assigned remained rather vague until the second decade of the 20th century. The First World War forced the Ottoman authorities to become more specific. Articles 49-55 of the Mukellefyyet-i Askeriyye Kânun-u Müavenetli of May 1914 and its revised version of July-August 1915 dealt with the separation allowance. A bill for a separate, thirty-one article law on the allowance was discussed in the Şer'ii-i Devlet [see 'ABD AL-'AZIZ; DÜSTÖR, ii, TURKEY] in October 1915, but did not reach the Mejlis-i Wüdân (Council of Ministers) and the Parliament until the end of 1918.

(NICOLE A.N.M. VAN OS)

MU'AKWIIYAT (a.), a medical term, originally denoting stimulants but gradually taking on the meaning of aphrodisiacs—probably as a form of euphemism—a meaning which it has retained into the present day. It will be noted, however, that in the Kânun fi 'l-tibbî of Ibn Sina [q.v.] the term mu'akwiyah is already in recurrent use in the section devoted to impotence (ii, 539-41). This is explained by the fact that aphrodisiacs were intended to restore to the deficient man all his vigour and all his strength and to excite his sexual desire (or that of the woman, evoked
in some texts, although it is the male to whom most attention is given), whence this blurring of meanings. Medieval Arabic medical texts used, for these preparations, numerous words and expressions: mar'at, mukawwi'at al-mar'a li al-ajimd, marharri, marharri al-khad, marharri, mukawwi'at al-ajimd, marharri al-khad, marharri. All these names refer to the notion of stimulating erection, exciting carnal desire and facilitating the sexual act.

In a society where virility remained a major factor, where guaranteeing the succession was an imperative for princes and where the presence of numerous concubines was still an element of social prestige in khlassa circles—not to mention Kur'anic verses calling for the "ploughing" of wives—it was to be expected that physicians should take an interest in aphrodisiacs and that texts of erology as a literary genre should proliferate. Thus it is worth noting the significant fact that the last recipe given in the famous formulary of al-Khūn al-Attar is that of an aphrodisiac (mar'at al-sakankur, in Minhadī, 169). This medical literature is associated with the related tradition of works of erotology (tabl al-būth), the existence of which is noted, from the 4th/10th century onward, by Ibn al-Nadlm in a section of his Fihrist entitled Asma' al-tabl al-multaṣafa fi 'l-būth al-faṣāri wa 'l-hard wa 'l-rāmā wa 'l-ajimd (436). He clearly points out the suggestive function of these works ('ālā tawā'il al-būth al-muṣabbik), most of which are undoubtedly of Indian origin. Consequently, there existed a science associated with sexuality, linking empirical observations, theoretical material inspired by the predominant medical doctrines, and psychological considerations. It is thus that the Shaykh al-Nafāzawī refers to six causes of sexual desire: intensity of desire, abundance of sperm, encounter with desirable individuals, physical beauty [of the object of desire], fortifying nourishment and petting. He supplements this list with reference to eight factors predisposing the male to coitus (tabl al-būth): good health, absence of anxieties, happiness, relaxation, good diet, material well-being, variation of position and changing of partners (al-Rawd al-dīrī, 143). Sexual problems described by doctors therefore included, besides physical malfunctions, inhibitions and psychological neuroses. Obviously, the form of treatment depended on the precise definitions of these psychosomatic disorders. Medical treatises also describe impotence ('advāj, nukṣān al-būth) and functional problems related to erection (intishdr, in ṣa), generally known by the term istikhād al-khādīb, paralyses, slackening of the penis—but also female frigidity and anorgasm, which seem to be indicated by the expressions band al-rāmah or salībat al-rāmah, respectively: drying up of the uterus, sclerosis of its tissues (Ka'mn, ii, 536-9).

The therapies applied in the treatment of these disorders thus rely on a wide variety of remedies ranging from potions to massages, ointments to auto-suggestion. Medications may be either simple or compound. Looking first at what could accurately be called auto-suggestion: for the physician, this consists, in recommending that his patient read pornographic works on the multiple postures and forms of intercourse (tabl al-tabl al-mulṣafa fi ʾnās al-dīvrā al-dīvrā wa-nakhfīl al-dījma wa-'inās al-dīvrā al-dāru ṣa'īf, or even texts on erotic anecdotes (al-khājīm al-nakhfīl, in ṣa), that regrettably appear under such names as such these are for the most part warning and stimulating items such as ginger, cinnamon, sandalwood, musk, camphor and asafetida, combined with honey which remains a sovereign remedy. Types of compound aphrodisiacs are confections (mar'at) and electuaries (djūwarṣīm) which the invalid takes daily; oils (dubn) and pomades (marham), prescribed for external use and applied to the vagina, the penis, the pelvic region and the loins; and douches for female use (hūkma tukāwar ʾl-mar'a li ʾl-dīhr, Akhūdī al-Kānīnī, 144).

One of the ingredients most often cited in the Egyptian skink (sukarān). Scinax affinis Emmaev, a variety of lizard which when dried and salted was credited—and is credited still in the traditional pharmacopoeia—with remarkable aphrodisiac qualities (Minhadī, 169), to such an extent that Dāwūd al-ʿAntākī warns that this remedy can lead to death from excess of erection (Tadhkira, 194). The success of this animal seems to be explained by its phallic appearance, just as today, for the same reasons, the horn of the rhinoceros is credited, in Chinese medicine, with highly aphrodisiac qualities. This form of mind projection is featured, in one manner or another, in the choice of certain other components utilised in the preparation of aphrodisiacs: bull's penis, "fox's testicles" (knā') al-edhīl, Satyrion, Orchis hircina L) and testicles of the cock or the ram. It should be noted that, in traditional Arab medicine, use is still made, according to the theory of affinities, of the pulverised testicles of calf or bull, as well as the official skin (Bakkāhdar, 98). In conclusion, account should be taken of the extent to which, in the medieval Arab medical tradition, coitus is seen as an activity particularly beneficial to man on the psychological and physiological level, and the degree of importance attached by physicians to the physiological aspect.

MŪṢĀ AL-ṢADR: SAYYID IMĀMĪ SHI’I CLERIC AND POLITICAL LEADER IN LEBANON (1928-78). Born in Kum [q.v.] into a family of religious scholars with roots in southern Lebanon and ‘Irk, he studied in the madrasa of his home town and at the University of Tehran where he read (secular) law. From 1954 to 1959, he pursued his studies in Najaf [q.v.], his principal teachers being Sayyid Mūḥsin al-Hakim (d. 1970) and Sayyid Abu ‘l-Kāsim al-Khūfī (d. 1992). From Najaf he began establishing personal contacts with the Lebanese branch of his family, and in particular with his uncle, the influential scholar Sayyid ‘Abd al-Husayn Shāraf al-Dīn [q.v.]. Before the latter’s death on 30 December 1957, he had apparently expressed the wish that Mūṣā al-Ṣadr should succeed him as leader of the Imāmī Shi’ī community of Tyre [see sīr]. In late 1959, Sayyid Mūṣā al-Ṣadr took up residence...
in Tyre. In the following years he gained influence both locally and further afield as teacher and preacher and also as a spokesman (called Imām) for the Shī‘i‘īs of Lebanon [see also MUTAWALLI], who felt socially and politically neglected by the government in Beirut. In the face of considerable resistance on the part of the old feudal leadership as well as from certain members of the Shī‘ī clergy, he finally succeeded in setting up a Higher Shī‘ī Council (al-Madżlis al-Islāmī al-Shī‘ī‘ī al-Al‘A‘) by resolution of the National Assembly in December 1967. In May 1969 Mūsā al-Šadr was elected president of this council, the first body to represent the Shī‘a of Lebanon.

In March 1974 he launched a mass movement called Ḥasanat al-malā‘īmān, which was soon known to have formed a military wing called Aṣṣad al-muṣā‘āwāna al-bahraynīyā (AMAL). In late August 1978, more than three years after the outbreak of the civil war in Lebanon, Mūsā al-Šadr suddenly disappeared while on a visit to Libya. The circumstances of this affair remain mysterious, but after a few years he was presumed dead even by the majority of his followers. Both AMAL and its rival, Hīdž Allāh, claim to be the heirs to his spiritual and political legacy.

There is a national level recitation competition held every two years in Indonesia. It is popularly known as “MTQ” (for musābāhah tāwilat Kur‘ān). Local, regional and provincial eliminations determine the selection of the final contestants, who represent all of Indonesia’s provinces in a colourful and festive complex of events lasting about ten days. The Indonesian approach to the Kur‘ān recitation musābāka conceives it to be a “national discipline” that affords Indonesia’s Muslims a chance to strengthen their religious life while enhancing their pride as citizens of the Republic. Although recitation is at the core of the event, there are also Kur‘ānic quiz shows for youth, who appear on provincial teams; an elaborate daw‘a (Islamic “missions”) exhibit with displays of publications and programmes; a parade through the streets of the host city; colourful opening and closing ceremonies with processions, special music, dance and recitation; and Islamic fashion shows. There is considerable national media coverage, as the MTQ is attended by the president, government ministers, the diplomatic corps, and distinguished Muslim leaders from Indonesia and abroad. Each MTQ is held in a different city, thus producing something like a royal progress about the country over the years.

Although recitation is governed by long-established ādāb, as far as the conduct of particular musābātak is concerned, one needs to refer to specific cases. For example, the state television service in Surabaya, East Java, has sponsored a provincial musābāka that features groups of timed recitation selections (a standard procedure) interspersed with popular musical interludes performed by Muslim “seminarians” on guitars and other instruments (cf. Roman Catholic “rock” masses). In the Indonesian national-level tournament, the reciters are divided into categories of boys, girls, women, men and handicapped (usually blind). There are separate categories for those who read the Kur‘ānic passages from a mushaf and those who recite from memory. Judges evaluate the performances according to established criteria in ādāb (deportment, etiquette), tażṣīd (technical rules and procedures of recitation), and naghmāt (musical modes and melodies). Prizes and trophies are awarded to winning individuals and provincial teams, whose return home is marked by special festivities.

**Bibliography:** There is not much scholarly literature on Kur‘ānic recitation competitions, although specific events are covered in the popular media. For Indonesia, see Khadijatus Shalihah, Perkembangan seni baca al-Qur‘ān dan Qura‘at Tijāz di Indonesia (“Developments in the art of reading the Kur‘ān and the Seven Readings in Indonesia”), Jakarta 1983, 84-97; a more popular descriptive article is F.M. Denny, The Great Indonesian Qur‘an-chanting tournament, in: The World and I (June 1986), 216-23, based on field work. The musābāka idea is motivated largely by a concern for maintaining and strengthening Kur‘ānic literacy, especially in non-Arabic speaking countries. For ways in which Indonesians approach this, see Denny, Qur‘ān recitation training in Indonesia: a survey of contexts and handbooks, in: A. Rippin (ed.), Approaches to the history of the interpretation of the Qur‘ān, Oxford 1988, 288-306. (F.M. Denny)

MUSAFIR (A.), literally, “traveller”. For the genre of travel account literature, see RIHÁ. For the rest houses and caravanserais set up for travellers, see ČÁN, MANZIL, and MISHÁN, in Suppl. For the commercial caravans of which travellers also usually formed part, see ČÁRÁN. For the Pilgrimage caravans, see ŠAMÍ, III and AMIR AL-MASJID. For the highways along which travellers passed, see SÍRÁ‘.
2. In Swahili literature.

The word ndiria is not well known in Swahili except in scholarly circles. The Swahili word ngano (common also in other Bantu languages) is in use for all invented tales including fables, as opposed to hadithi, which originally referred to Islamic legends about the Prophet Muhammad and the characters he uses to discuss with the Sūhābā, while seated in the mosque at Medina after prayers. Today, such hadithi contain some of the most fantastic adventure tales, including the exploits of ‘Ali against the àsīmā and qayyīfīn. Next to Arabian tales, such as Maḏǧūn and Lālā, there are tales of Persian origin circulating on the Swahili coast, such as those of Sendibad (＝ Sindbad) or Farhād and Shīrīn. India is richly represented as a supplier of motifs for the Swahili storytellers. Fables from the Panātanāta, such as that of the monkey and the crocodile (who has become a shark in the Swahili version) are well known in Swahili, although they may even go back to Sanskrit literature, such as the Tale of the Three Magic Objects from the Vaiṭalpanvamīśātkā, or the Tale of Moses (i.e. the Prophet Mūsā) and the two Angels, ultimately based on the Sanskrit Kalāhānasūritaṃga.

Swahili scholars are very well read in Arabic traditional literature, especially the Kīyās al-anbīyā (= q.v.), Creation and cosmology (‘abd al-samawād), the Sūr, Maḏḏūṭ, Mīrāţ, and the fabulous tales of al-Iṣkandar and Nābī Sulaymān.

Finally, there is the vast African heritage of narration, which includes fables for children including the Aesop-type tales, as well as bloodcurdling stories about ghosts and monsters of every description; purely religious nature with Mu‘āwīya’s poems, such as those of Sendibad (= Sindbad) or Farhad and Cīdīn, as well as those of Sendibad (= Sindbad) or Farhad and Cīdīn, against the Aīl and exchanged verses of a politico-religious nature with Mu‘āwīya’s poets, notably Ka‘b b. Ḍu‘yayl. However, he left ‘Ali’s side after the latter had him flogged for drinking wine during Ramādān, and he went over to Mu‘āwīya’s army, eventually dying at Lāhjī in Yemen.

AL-NADJĪSHĪ. Kays b. ‘Amr al-Hārithī, Arab poet of the 1st/7th century, probably called by this epithet because of his dark skin inherited from his Ethiopian mother, d. 49/669.

Born in Naḍīrān, he and his clan became converts to Islam at Medina in 10/632. His bellicose nature led him to compose virulent satires against ‘Abd al-Rahmān b. Ḥasan b. Ṭabībī, who replied with the aid of his father. On the advice of al-Ḫutay’a and Ḥasan [q.v.], the caliph ‘Umar had al-Nadīshī imprisoned for his invectives against the B. ‘Adīlān and their poet Ibn Mūkhlī [q.v.]. At the battle of Sīfīn, he joined ‘Ali and exchanged verses of a politico-religious nature with Mu‘āwīya’s poets, notably Ka‘b b. Ḍu‘ayl. However, he left ‘Ali’s side after the latter had him flogged for drinking wine during Ramādān, and he went over to Mu‘āwīya’s army, eventually dying at Lāhjī in Yemen.

AL-NADJĪSHĪ’s poetic oeuvre does not seem to have been gathered together in a dīwān by the early philologists, although Ibn al-Nadīm, Fihrist, ed. Cairo, 157, mentions a kitāb al-Nadīshī attributed to al-Madā’inī. Modern authors, such as Schultes, Cheikhò and al-Nu‘aymī have endeavoured to piece together his surviving verses, and T. al-Ashieldī, S. Gharbāt and S. Bakkārī have tried to reconstitute the dīwān, based on some 50 sources, in Annales de l’Université de Tunis, xxi (1982), 105-201, comprising 333 verses in 64 pieces of unequal length from one to 43 verses. His themes are the usual main poetic ones: satire, praise, faţbī, elegy and erotic poetry, with his poetry reflecting the main phases of his life and times. Following al-‘Āmilī, A‘īdūn al-Shī‘a, xliii. 368-9, he may be considered as one of the main pro-‘Alī poets of the period before 50/670, with his eulogies of ‘Ali and his supporters and insults against Mu‘āwīya and his partisans at the time of Sīfīn forming over half of his surviving verses.

(TA’EE EL ACHECHE)
with sufficient means must support their parents if they are indigent. The Şehit and Imam Ştīrī hold that this obligation exists with regard to all ascendants. The Ḥanafīs extend it to all blood relatives with forbidden degrees (dawāsir raḥim maḥram).

Ownership

The owner of a slave has the duty to maintain him or her. If he fails to do so, the judge may sell the slave without the master’s consent.

Marriage

The husband’s duty to maintain his wife is regarded as a consideration for her being under her husband’s control (mabḥūsa). As a consequence, her right to maintenance arises only after the consummation of her marriage, when cohabitation begins, and does not depend on her indigence. According to most schools, the level of maintenance depends on the status of both spouses. A wife is always entitled to be housed alone, preferably at some distance from her co-wives, and not to be forced to share her accommodation with her husband’s relatives. If it is in accordance with the status of both spouses, the wife must be provided with a domestic servant.

The wife’s right to maintenance ends with the termination of the marriage by her husband’s divorce or by repudiation. Since marriage persists after a revocable repudiation (tašlīk [q.v.]; nafī) until the expiry of the waiting period (idda [q.v.]), the wife is entitled to maintenance during this period. Although after an irrevocable (bā’过多) repudiation the marriage comes to an end, the husband must provide for his former wife during the ensuing waiting period if she is pregnant. If she is not, opinions vary.

The husband’s obligation is suspended if his wife is disobedient (nashīţa). This is the case if she refuses to move to the marital home or leaves it without her husband’s consent or a lawful reason. Her right to maintenance, however, is not affected if her behaviour is justified, e.g. if the home provided by her husband does not meet the legal requirements (maskan ša’iī) or if he has exceeded the bounds of proper marital chastisement. All schools but the Hanafis (who argue that such circumstances are practically impossible to prove) regard the wife’s refusal to have sexual intercourse with her husband as disobedience entitling the suspension of maintenance.

Whereas most schools regard maintenance as an ordinary debt whose arrears are due and payable, the Ḥanafīs and the Ştīrīs regard the husband’s failure to provide maintenance as a ground for divorce for the wife. Since the Ḥanafīs doctrine on these two issues was prejudicial to women, the views of the other schools have now been introduced by legislation in many Ḥanafī countries.

For nafkā in the sense of expenditure, see Rize 3.

mentaire entre époux en droit musulman hanafite, Paris 1971. (R. Peters)

Nafkā al-Munkar

Al-Naḥy ‘an al-Munkar (A), “forbidding wrong”, in full al-umma bi ‘l-maṣfīr wa-l-nahy ‘an al-munkar, “commanding right and forbidding wrong”. The term is used to refer to the exercise of legitimate authority, either by holders of public office or by individual Muslims who are legally competent (muqallid), with the purpose of encouraging or enforcing adherence to the requirements of the Šatīrīs. This article deals mainly with the duty of individual Muslims in this regard; technically, this is usually considered to be a collective obligation (fard kifīya) [see FARD 4.1.]

1. Terminology

The term is taken from the Kur’ān, where forbidding wrong is generally held to be imposed as a duty in III, 104: “Let there be one community of you, calling to good, and commanding right and forbidding wrong: those are the prosperers.” Other verses making clear reference to forbidding wrong are III, 110, 114; VII, 157; IX, 71, 112; XXII, 41; XXXI, 17. However, there is little indication in the Kur’ān of the concrete character of the duty.

The most-cited Sunni tradition uses a somewhat different wording. In the frame-story, a man reproves the Umayyad governor of Medina (the future caliph Marwān I [q.v.]) for infringing the swām in the course of leading a ritual prayer. The Companion Abū Sa‘īd al-Ḫudrī (d. 74/693) approves the man’s action, and quotes the Prophet as saying: “Whoever of you sees a wrong (munkar), let him put it right (fa-l-yughayyir-hu) with his hand; if he cannot, then with his tongue; if he cannot, then with [or in] his heart” (Muslim, Sāhib, ed. M.F. ‘Abd al-Bākī, Cairo 1955-6, 60, no. 49). From this tradition is derived the term taṣḥīḥ al-munkar “righting wrong”, while a variant text supports the term inkār al-munkar “manifesting” (disapproval) of wrong.

The Muslim scholars take it for granted that al-nahy ‘an al-munkar, taṣḥīḥ al-munkar and inkār al-munkar all refer to the same duty. They occasionally make distinctions between al-umma bi ‘l-maṣfīr and al-nahy ‘an al-munkar, but normally assume that a single duty is involved. Al-Ghazālī (d. 505/1111 [q.v.]), devised a new terminology for the duty of individuals based on the root k-r-b; thus the duty itself is bišāb, one who performs it is muḥaṣṣīb, etc. (Ṭuḥā’ ‘l-ulm al-dīn, Cairo 1967-8, ii, 398). Hereafter the duty is referred to in this article as “forbidding wrong”.

2. Forbidding wrong by holders of public office

The sources speak of the exercise of authority by the legitimate ruler of the community as forbidding wrong. This usage is especially common in Imamī, Zaydī and Bāṭī texts, where forbidding wrong is closely linked to the imamate (e.g. ‘Alī b. Ibrāhīm al-Ḵūmī, Tāfṣīr, ed. T.M. al-Djazā’irī, Nadjaf 1386-7/1966-8, i, 306; ‘Alī b. Muhammad al-ʿĀlāwī, Ṣaḥāf al-Ḥādī ilā ‘l-Haqq Ṭahī ibn al-Ḥusayn, ed. S. Zakārī, Beirut 1972, 29; al-Bīṣaywī, Ḥāmī, Kuwait 1984, iv, 192). But such language is also found in Sunni sources (e.g. al-Mas‘ūdī, Marāṣī, §3,111, on the caliph Muḥammad b. al-Ṣafā, [q.v.]). Holders of subordinate offices may also be described as forbidding wrong, especially the officially-appointed muḥaṣṣīb (e.g. al-Mawardi, al-ʿĀkām al-ṣulṭāniyya, ed. A.M. al-Baḥḍāwī, Kuwait 1989, 315) [see HIRBA]. Despite the fact that such dictum is widespread, it is not usually an object of scholastic reflection. Where scholars writing on the role of the muḥaṣṣīb pause to analyse the duty of forbidding wrong, they
tend to borrow what they say from discussions of the duty of the individual (as in the chapter on the muta'ābih in Khundžī, Solīk al-mulākā, ed. M.A. Muwahhīd, Tehran 1362/1983, 175-99, which includes much material going back to al-Qhazālī). Opinion is divided on the question whether the wording of the use of violence in forbidding wrong.

3. Forbidding wrong by individuals in principle.

There is an extensive scholastic literature on this subject. Much material may be found in sources of the following types: Qur'ān commentaries under the relevant Qur'ānic verses; commentaries on Prophetic traditions under the relevant traditions; the handbooks of doctrine (usūl al-dīn) of some but not all theological schools; works on substantive law among the Imāms, Zaydis and Ibāḍīs (but not the Sunnis); and occasional monographs devoted to forbidding wrong.

In terms of wealth of concrete detail, the richest body of material on the duty is a collection of responsa of Ahmad b. Hanbāl (d. 241/855 [q.v.]; Abū Bakr al-Khālīlī, al-āmīn bi tawāfīr 3, n. 4, ed. 'A.A. Aţā, Cairo 1975). In conceptual terms, the most sophisticated discussions stem from the Mu'tazila (q.v.) and their Zaydi and Imāmi heirs; by contrast, the Aš'ārīyya and Māturīdīyya (q.v.) have less to say. By far the most influential account of the duty is the substantial and very clear analysis that al-Qhazālī included in his Iḥyā' (II, 391-455, forming the ninth book of the second quarter, rbt, of the work). The influence of this treatment extended to all Sunni schools, and also to the Imāms, Zaydis and Ibāḍīs.

The central theme in formal discussions of the duty is often the set of conditions under which someone is obligated to confront a wrong. In the account of the Zaydi Mu'tazīlī Mānkālī (d. 425/1034), a pupil of Mā.imreadī (d. 415/1025), these conditions are in outline as follows: (1) knowledge of law: the prospective performer of the duty must know that what he forbids is indeed wrong; (2) knowledge of fact: he must know, or have good reason to believe, that the wrong in question is in the making (ḥikāya); (3) absence of worse side-effects: he must know that his action will not lead to a greater evil; (4) efficacy: he must know, or have good reason to believe, that his speaking out will be efficacious; (5) absence of danger: he must know, or have good reason to believe, that his action will not lead to harm to his person or property (Ma'mūdī, Tābī'ī Sharḥ Sharī'at al-Usūl al-khamās, edited by 'A. Uthmān as the Sharī'at al-Uṣūl al-khamās of 'Abd al-Dā'ābī b. Ahmad, Cairo 1963, 142-3). Other scholars are likely to discuss these issues in somewhat different ways, and to disagree on details. Occasionally a scholar will reject a condition outright, but this is rare; a case in point is the Sharī'ī al-Nawawī (d. 676/1277), who holds the uncommon view that one should proceed irrespective of the prospects of success, thus rejecting the fourth condition (cf. Sharī'at al-Usūl, Beirut 1987, i, 382); he is followed in this by a good number of later Sharī'īs and some non-Sharī'īs.

The means by which the duty is to be performed are generally presented in an escalatory sequence (e.g. Mānkālī, Tābī'ī, 144, 744-5; al-Qhazālī, Iḥyā', ii, 429-5; contrast the wording of the Prophetic tradition cited above). Thus one should speak politely to the offender before rebuking him harshly, and only proceed to physical action if words are of no avail. The major disagreement concerns the use of violence in forbidding wrong: can it be used by individuals, and if so, can it reach the point of recourse to arms? The use of arms finds favour among the Mu'tazīlīs, Zaydis and Ibāḍīs, and is sanctioned by some Sunnis; but many Sunnis reject it, as do the Imāms.

This is not the only issue on which tension arises between more activist and more quietist approaches to forbidding wrong. Thus there is a major disagreement in connection with the fifth condition. While it is generally accepted that danger voids the obligation (at least if the degree of prospective harm is significant), it is disputed whether, or in what circumstances, it may still be virtuous to proceed. Thus according to Mānkindī, such action would be virtuous only if it secured the greater glory of the faith (Qazāt al-dīn, see Tāfī'ī, 143), whereas the Ḥanafī Mu'tazīlī 'Abd al-Husayn al-Baṣrī (d. 436/1046 [q.v. in Suppl.]), likewise a pupil of 'Abd al-Dā'ābī, held that no such distinction could be made, the greater glory of the faith being at issue in all such cases (cf. al-Himṣī, al-Munkādī al-tuḥyīl, Kumm 1414/1991-4, i, 219). By contrast, Imāmī authorities condemn such action (e.g. Murtuḍī, Ḥābīḥa, ed. A. al-Ḥusaynī, Kumm 1411/1990-1, 557-8).

A closely related question is whether it is virtuous to rebuke rulers harshly for their misdeeds. Al-Qhazālī, representing a widespread view, was strongly in favour of this, and included in his discussion of the duty a substantial number of relevant anecdotes (Iḥyā', ii, 437-5). Ibn Ḥanbāl, by contrast, discouraged such activity (Ibn Abī Ya'lab, Tābāhkāt al-Ḥanābilā, ed. M.H. al-Fikī, Cairo 1952, i, 47), and the Hanbalī Ibn al-Dawwār (d. 957/1062) followed suit in his recension of al-Qhazālī's Iḥyā' (see Ahmad b. Kudāma al-Māṃsidī, Māḥṣūs al-Munkādī al-kašīdān, Damascus 1339, 130). Likewise Muhāsin al-Faydī (d. 1691/1680), in his Imāmī recension of the Iḥyā', disallows rudeness to rulers, and impugns the motives of the heroes of al-Qhazālī's anecdotes (al-Munkādī al-baydā'ī fi ḥabībī al-Iḥyā', ed. A.A. al-Ḥāfīṣī, Tehran 1339-42, 139/60-3, iv, 112-13).

A final question of this kind, for those who accept recourse to arms, is whether forbidding wrong can take the form of rebellion against unjust rule. Such rebellion is usually condemned among the Sunnis, although Ibn Ḥazm (d. 436/1046) is a striking exception (Fisāl, Cairo 1317-21, iv, 175-6). Thus Abū Hanīfa (d. 150/767-8) is quoted as rejecting rebellion on the ground that its costs would exceed its benefits (Abū Hanīfa, al-Fīkī al-ābās, ed. M.Z. al-Kawthārī, Cairo 1368, 44). But rebellion under the aegis of forbidding wrong finds approval among, for example, the Ibāḍīs (cf. P. Crone and F. Zimmermann, The epistle of Sulīm ibn Dhakūn, Oxford 2001, 140, §127 of the Arabic text), here continuing a Khārijīte tradition, and the Zaydis (e.g. Muhammad b. Sulaymān al-Kūfī, Muṣaffah, San'ā' 1993, 14).

One major concern (on which the systematic discussions in Mu'tazīlī and related sources are surprisingly silent) is privacy: how far do its requirements override the duty of forbidding wrong? The basic idea is that for forbidding wrong to be in place, the wrong must in some way be public knowledge; a hidden sin, according to a Prophetic tradition, harms only the sinner (Ibn Abī '1-Dunya, Rūbūbī, ed. M.K.R. Nīsīs, Beirut 1996, 43, no. 40). Moreover, steps that would make hidden wrongs manifest are strongly discouraged. The Qur'ānic prohibition of spying (XLIX, 12) is widely quoted (e.g. Abū Ya'lab Ibn al-Ḥarrārī, al-Mumaddī fi ʿusūl al-dīn, ed. W.Z. Haddad, Beirut 1974, §355), as are versions of a Prophetic tradition that makes it a duty not to disclose shameful aspects of
the lives of outwardly respectable Muslims (also quoted by Abū Yāšt; cf. Muslim, Sahih, 1996, no. 2,380). The problematic cases arise in the grey area between public and private. Thus if one passes someone in the street who has a suspicious bulge under his cloak—suggesting that he is carrying a bottle of alcoholic liquor or a musical instrument—should one confront him (cf. Abū Yāšt Ibn al-Farrāʾ, al-Akhbār al-sulṭāniyya, ed. M.H. al-Fikrī, Cairo 1966, 232-7)?

4. Forbidding wrong by individuals in practice.

Some of the more concrete prescriptive literature also sheds light on the practice of the duty. Thus the responsa of Ibn Ḥanbāl illustrate the kinds of wrong regularly confronted by individual Muslims in 3rd/9th century Baghdād. The most frequent are making music and drinking alcoholic liquor, followed by sexual misconduct (cf. al-Ḵhallaḏ, al-Amr biʾl-maʿrūf, no. 57); a variety of other wrongs appear from time to time, such as faulty prayer, chess-playing and the display of images. The mix seems to have been much the same at other times and places.

Biographical and historical sources preserve a considerable amount of scattered anecdotal material regarding the actual performance of the duty. On the whole, this material is richer for the earlier centuries than for later periods.

One respect in which the anecdotal material differs significantly from the prescriptive material is that it is much less ambivalent about confrontations involving danger. Thus many approving stories are told of pious Muslims who rebuked unjust rulers without regard for the consequences. An example is the reproof administered by Shuʿayb b. Ḥarb (d. 196/811-12) to the caliph Harun al-Rashīd (cf. al-Khāṭīb al-Baghdāḏī, Taʾnkh Baghdad, no. 57); a responsa of Ibn Ḥanbal illustrate the kinds of wrong regularly confronted by individual Muslims in 3rd/9th century Baghdād (d. 295/907-8) [see AL-NURI] concerns himself with a cargo of wine belonging to the caliph, the boatman calls him a "meddlesome Sufi" (al-Ḫamādānī, al-Amr biʾl-maʿrūf waʾl-nahy an al-munqar, Tehran 1390/1970, 43). But more quietist trends are also at work. Thus in Egypt, Hasan al-Bānā (d. 1368/1949) [see AL-BANNA] was against forbidding wrong "with the band" (Abd al-Khāṭīb al-Ḫuṣaynī, Kitab al-dīwān al-ʿilmīyya Ḥasan al-Bānā, Cairo 1952, 73), and Sayyid Ḥūṣayn al-Ṣāḥib (d. 1386/1966 [q.e.]) considered the duty to be in abeyance in the absence of an Islamic state (Fi ṣūl al-ʿAkdaʾ, Beirut 1973-4, 494). Khalīl al-Sabti, a mainstream Suʿūdī scholar, does not share such views, but bypasses the more subversive statements of al-Ḡazzālī (al-Amr biʾl-maʿrūf, 316ff.).

There has also been an unprecedented emphasis on the desirability of achieving greater organisation for the purpose of forbidding wrong (see e.g. Muhammad Ahmad al-Ǧumārī, al-Muntalak, Beirut 1974, 144-54, for a Sunnī view, and Ḥusayn al-Ḵurṣānī, Amr biʾl-maʿrūf waʾl-nahy an al-munqar, Tehran 1990, 63, for an Imāmī view). In some Islamic countries, this has led to the creation of new organs of the state entrusted with the performance of the duty (but not to the revival of the traditional office of the official muhtasib). Thus in Suʿūdī Arabia, a system of "committees (hayāt) for commanding right and forbidding wrong" emerged in the aftermath of the Suʿūdī conquest of the Hijāz in 1343-4/1924-5, initially as a device to contain the zeal of the Wahhabi Ikhwān (q.e.) against the misdeeds of the Hijāzīs and pilgrims (cf. Ḥāfīẓ Wabba, Ḏaṯrat al-ʿArab fiʾl-ṣiṣ al-ṭirān, Cairo 1961, 309-12). In Iran, following the Islamic Revolution of 1399/1979, a plurality of organs of the state acquired responsibility for forbidding wrong and in Afghanistan, a single organisation was established (the "Committee for the Duty of the Taliban") which conquered Kābul in 1417/1996.

5. Modern developments.

Discussion of forbidding wrong has played a significant part in the modern history of Islamic thought and practice, with Imāmī scholars tending to be more innovative than Sunnī ones.

One question that has naturally received increased attention is the role of women in forbidding wrong. In pre-modern times, a few authorities explicitly excluded women from performing the duty, a few (notably al-Ḡazzālī and some Baghdādī) explicitly included them, but most said nothing either way (for al-Ḡazzālī’s view, see Ḥūṣayn, ii, 398). Modern authors, by contrast, often include women, even if they limit their role (e.g. Khalīl b. Ṣafī al-Ṣabti, al-Amr biʾl-maʿrūf waʾl-nahy an al-munqar, London 1995, 171-2, a conservative Sunnī view; Ahmad Ṭawfīq Ṣabīṭārī, Tahayya; amr baḥ maʿrūf waʾl-nahy an al-mūnakar, Tehran 1350/1971, 208, a radical Imāmī view).

There has been a widespread trend towards greater political activism, most consistently among the Imāmīs. Thus the view that it is wrong to proceed in the face of danger was qualified or rejected not just by Ḵumaynī (d. 1409/1989 [q.e. in Suppl.]) (Ṭabarī al-ʿawṣa, Beirut 1981, i, 472-6), but by numerous scholars of his and later generations. On the Sunnī side, one example among many of a strongly activist figure is the Algerian Allī b. Ḥadīḍ; thus in a talk distributed on cassettes, he quotes with enthusiasm a passage in which al-Ḡazzālī sanctioned the recruitment of armed bands in the cause of forbidding wrong (ḥiyāʾ, ii, 425). But more quietist trends are also at work. Thus in Egypt, Hasan al-Bānā (d. 1368/1949) [see AL-BANNA] was against forbidding wrong "with the band" (Abd al-Khāṭīb al-Ḵuṣaynī, Kitab al-dīwān al-ʿilmīyya Ḥasan al-Bānā, Cairo 1952, 73), and Sayyid Ḥūṣayn al-Ṣāḥib (d. 1386/1966 [q.e.]) considered the duty to be in abeyance in the absence of an Islamic state (Fi ṣūl al-ʿAkdaʾ, Beirut 1973-4, 494). Khalīl al-Sabti, a mainstream Suʿūdī scholar, does not share such views, but bypasses the more subversive statements of al-Ḡazzālī (al-Amr biʾl-maʿrūf, 316ff.).
written by Kudāma b. Dja’far (d. ca. 337/948 [q.v.], and see below) in the first half of the 4th/10th century. The title should probably still be understood in the original metaphorical sense, “The Assaying of Poetry.” Since Kudāma is very much aware of his innovative approach, the era preceding him may be called the pre-systematic period. This does not imply that all works after him were systematic, only that a new “school” of poetry started to gain popularity, that of the “Moderns” [see MUHDATHUN, iv, 70-2], and, on the other, a new “school” of poetry started to gain popularity, that of the “Moderns” [see MUHDATHUN, iv, 70-2].

In addition, there are works of a directly pertinent nature, namely al-Djahiz (d. 255/868-9 [q.v.]), K. al-Bayḍu wa ‘l-tabam; K. al-Waṣṣāx, and above all Abu ‘l-Faradj al-Isbahānī (d. 356/967 [q.v]). He “straightens out” what is “crooked” in his poems by dividing poetry into four categories: e.g. (a) and (d) put together result in sayings like “the best verse is one whose beginning makes one anticipate its end.”

Most of the critical terms and ideas mentioned so far refer to the homogeneous “timeless” body of ancient Arabic poetry, which means that the notion of literary history is absent from them. When this body was not allowed to fade into oblivion, as had been the fate of Arabic poetry in the centuries before our earliest specimens, but was collected into a corpus of classical models, a historical dimension was introduced and things gradually began to change also for criticism. The Umayyad poet al-Farazdak (d. ca. 112/730 [q.v.]) dedicates one of his poems to an enumeration of his literary forebears, twenty in all. To characterize his relationship to them, he uses the expressions waḥabu ‘l-‘aṣba‘i’dī ʿl-. . . ilā madaw “they gave the poems to me, when they passed away” and waḥabu ‘l-‘Ibārīdī “I inherited” (three times). He even mentions a book that he has of the poetry of the pre-Islamic poets, among others, of ‘Abd b. al-Malik whether he could compose and recite some poetry on the spot, and answered: “I am not drinking wine (lā ‘aṭṭahb), and I am not in an excited mood (lā āṭṭahb), poetry happens only due to one of these three” (see Gaudefroy-Demombynes, op. cit., 18).

Saying that the critical terms of the literary art, such as baḥṭa‘a, ḥaḥtha, and baḥṣān, who were included in the previous century are no more taken for granted in the later period, is not accurate. These belong in the present context only inasmuch as they are normative, as they often are. They are often attributed to “a Byzantine” poet also to a “Greek” or “Persian” (see a collection, including later definitions, in al-Husayn, Ṣuhr al-ṣiḥḥ, 149-168). Combinations of these types also occur; e.g. (a) and (d) put together expressions like “the best verse is one whose beginning makes one anticipate its end.”

He even mentions a book that he has of the poetry of the pre-Islamic poets, among others, of ‘Abd b. al-Malik whether he could compose and recite some poetry on the spot, and answered: “I am not drinking wine (lā ‘aṭṭahb), and I am not in an excited mood (lā āṭṭahb), poetry happens only due to one of these three” (see Gaudefroy-Demombynes, op. cit., 18).
Afterwards there came the transmitters and added to who discusses these matters at the beginning of his they have forged (i.e. separately, without adding it to battles and poems were [in fact] few. So they wanted the collection that is not included in the transmission falsely attributed old genuine (part), i.e. that part of of al-TusI’s main authority, al-Mufaddal al-Dabb¶ (d. 1673 [q.v.]), but which other transmitters attribute to Imru’ al-Kays. Ibn Sallam al-Djumali, who discusses these matters at the beginning of his book on the classes of poets, accuses the great transmitter Hammad al-Rawyya of habitually and intentionally misattributing poetry (wa-kana yanhalu ghfr wa-rajudt ghayrah yawzanahu ghuya ghfrin [Tabakbt, 48]). What is worse, he also accuses him of adding to the poems he transmits (wa-ya^idu fi l-`aghhr [bid]), But, as he states in another place (Tabakbt, 46-7), it is not only transmitters who are guilty of forgeries but also those tribes who in early Islamic times found the transmission of poetry and the narration of their wanted to amend the situation. Ibn Sallam’s passage is of sufficient interest to warrant translation in full: “When the Arabs [after the conquests] returned to the transmission of poetry and the narration of their battles and glorious deeds, some tribes found the poetry of their poets and the current narration of their battles to be scant. And there were people whose battles and poems were [in fact] few. So they wanted to catch up with those who did have battles and poems and [to do so] they composed poems attributing them to the poets (kala’a `ala alsnati ghurar/khi.m) Afterwards there came the transmitters and added to the poems that had been composed. To the experts (ahl al-ti”)n) the additions of the transmitters and what they have forged (i.e. separately, without adding it to an existing poem) pose no problem, nor does what the muwallis [q.v.] have forged. However, [the experts] have been confounded, if a man from among the desert dwellers and belonging to the lineage of poets, or even a man who does not belong to their prog- eny, composes [spurious] poems. That can be some- what difficult.” This is followed by a story relating how a grandson of the poet Mutammim b. Nuwayra extended the latter’s dicin imitating his style (yahnidh tala kalama”). The kind of critique that is necessary to recognize spurious poetry cannot, in Ibn Sallam’s opin- ion, clearly be expressed in words (Tabakbt, 5-7, with parallels from other craft and arts); it is a matter of intuition comparable to the art of physiognomy, and the famous transmitter Khalaf al-Al’Abb§ er is called “the best physiognomist of all, when it comes to a line of poetry” (kana `afasa l-nisi bi-bayt ghfr [Tabakbt, 23]). There is a famous anecdote, probably first attested by Ibn Sallam (Tabakbt, 7), which compares this ability with that of the money-changer who recognises a bad coin: “Someone said to Khalaf: If I hear a poem that I deem good, I do not care what you and your ilk say about it.” He replied: “If you accept a dirham and consider it good and the money-changer tells you it is bad, does your good opinion of it help you at all?” “It seems evident from this and the other references mentioned above, that the metaphorical applica- tion to the term nakd originated in the context of distinguishing genuine from spurious, rather than good from bad poetry, although the dividing line between the two pairs can be rather fuzzy. (It should be mentioned m passant that, along with misattribu- tion, scholarly forgery and tribal forgery, Ibn Sallam recognizes also a fourth category of spurious poetry [Tabakbt, 7-8]: poems that are invented and attributed to legendary figures of the past; Ibn Sallam takes Ibn Ishak’s word and describes Ibn Sallam’s attitude to such material in his Sra and refuses to call it ghfr, since it is only “words put together and held together by rhymes” [ka`aini mu’alllaw ma’kuid bi-kawdf”).

Criticism of poetry among the philologists At the same time, nakd in the sense of literary criticism is represented by various approaches. The philol- ogists who felt responsible for the integrity of ancient poetry also paid some attention to the question of its aesthetic quality. The evidence for this is partly implicit in the selections they made to produce the famous anthologies such as the Ma’salakat, the Mufaddaliyyat [q.v.] and the Asma’iyat [see al-ASMA]. Most of the explicit evidence is anecdotal and in the form described above, but gradually certain critical yardsticks start being developed. Most of the early works on poetry and poets (al-`ghfr wa l-`aghdr) and similar titles, mainly known from Ibn al-Nadlm’s Fihrist are unfortunately lost. The first extant kibar al-`ghfr wa l-`aghdr, that of Ibn Kutayba, contains a remarkable introduction that delineates a number of basic critical ideas: (1) Poetry consists of wording (la`iz) and meaning (mu`a.d), both or either of which may be good or bad. (2) Poets are either “natural” (mathluth “poete de genie”) or “pains-taking” (mutakallim “poete d’étude”), (for the French rend- ition, see M. Guadet-Demombynes, op. cit, 15); the latter spend much time polishing their poems, a fact that shows in the final outcome. (3) In a pas- sage much quoted in Western studies, he describes— and prescribes—the “movements” of the ancient ode (having in mind, however, the tripartite structure char- acteristic of the Umayyad rather than the pre-Islamic kasida and describing it as a quadripartite sequence of themes: 1. sorrow at the vestiges of the encamp- ment; 2. memory of the former beloved; 3. camel ride through the desert; and 4. praise of the addressee); he also disallows replacing the desert ambience by a sedentary one (no ruined buildings instead of the rem- nants of the encampment, no roses and myrtles for the thorny shrubs of the desert). On the other hand, he includes poets up to the early decades of the 8th century in his book and emphasises that the birth- date of a poet should not be held against him, as some of the philologists who considered only ancient poetry to be true poetry were inclined to do. Since Ibn Kutayba is not explicit about any awareness of the “Moderns” and their production, see M. Gaudefroy-Demombynes, op. cit. 15); the latter spend much time polishing their poems, a fact that shows in the final outcome. (3) In a pas- sage much quoted in Western studies, he describes— and prescribes—the “movements” of the ancient ode (having in mind, however, the tripartite structure char- acteristic of the Umayyad rather than the pre-Islamic kasida and describing it as a quadripartite sequence of themes: 1. sorrow at the vestiges of the encamp- ment; 2. memory of the former beloved; 3. camel ride through the desert; and 4. praise of the addressee); he also disallows replacing the desert ambience by a sedentary one (no ruined buildings instead of the rem- nants of the encampment, no roses and myrtles for the thorny shrubs of the desert). On the other hand, he includes poets up to the early decades of the 8th century in his book and emphasises that the birth- date of a poet should not be held against him, as some of the philologists who considered only ancient poetry to be true poetry were inclined to do. Since Ibn Kutayba is not explicit about any awareness of the “Moderns” and their production, see M. Gaudefroy-Demombynes, op. cit. 15); the latter spend much time polishing their poems, a fact that shows in the final outcome. (3) In a pas- sage much quoted in Western studies, he describes— and prescribes—the “movements” of the ancient ode (having in mind, however, the tripartite structure char- acteristic of the Umayyad rather than the pre-Islamic kasida and describing it as a quadripartite sequence of themes: 1. sorrow at the vestiges of the encamp- ment; 2. memory of the former beloved; 3. camel ride through the desert; and 4. praise of the addressee); he also disallows replacing the desert ambience by a sedentary one (no ruined buildings instead of the rem- nants of the encampment, no roses and myrtles for the thorny shrubs of the desert). Since Ibn Kutayba is not explicit about any awareness of the “Moderns” and their production, see M. Gaudefroy-Demombynes, op. cit. 15); the latter spend much time polishing their poems, a fact that shows in the final outcome. (3) In a pas-
the profile of the fahl contains certain traits that are not in doubt: he must have a prolific output and cannot be a mukill; he must not compose only short poems; his descriptions (nafš) must stand out; he must be free of plagiarisms, which means he must not be a mukill; his descriptions (naṣaḥ) must be free from error and related to the language in which one word is the same. It is not a necessity, it is noteworthy that, with the secretaries who used it to add elegant concretes and allusions to their ornate epistles (on the theory and techniques of hall, see A. Sanni in Bhl). The close symbiosis between secretaries and poets was fertile ground for the development of literary criticism. We have a fair number of reports about gatherings in which questions of poetry and poetics were discussed, and we have some of the literature that sprang from these discussions. As already indicated, the book that made the term nakd al-shīr current was written by Kudama b. Dja'far. He was a middle-level administrator in the caliphal chanceries, originally Christian and with a known interest in Greek philosophy, especially logic. This clearly had its effect on the very systematic presentation in his book: a definition of poetry (“meter rhymed speech referring to a meaning”) [Nakd, 2] yields the four elements “metrical rhyme, wording, meaning,” which are then evaluated in isolation and in combination with each other (he finds that only the combinative scoring of wording/metre, meaning/metre and meaning/rhyme are meaningful subjects for evaluation [Nakd, 9]). In accordance with this, the book falls into two major parts, one on naʿāb “bad qualities,” the other on qaʾīb “good qualities.” It is worth noting that the vast majority of Kudama’s examples are from early poetry, although there is a sprinkling of “modern” poets as well, up to Abū Tammān (d. ca. 232/845 [g.v.]). The difference between “Ancients” and “Moderns” is, of course, known to him (Nakd, 17, 1.7), but it does not inform the structure of his book.

His contemporary Ibn Tabātabā (d. 322/934) produced an entirely different book in his Iḥās al-shīr. “The criterion of poetry”. Unfortunately, the little we know about his life does not tell us if he was a secretary in his hometown of Iṣfahān, but he certainly was a respectable poet. His book does not show a systematic arrangement; it is more like a collection of loosely connected but highly perceptive essays. He is almost painfully aware of the burden of tradition that the “Moderns” feel (his𝑣-i ʿān ʿan al-Shīr nād), and in that (a) the poetic language moves away from reality, turning to inbreeding and the construction of ever more intricate conceits, (b) the craving of the public for innovation puts pressure on the poet to oblige and, consequently, (c) the poetry becomes ever more “artificial”. Though this can only be considered a strong tendency, not a necessity, it is noteworthy that, in the section on poems that are without “artificiality” and prose-like in their easy flow, Ibn Tabātabā quotes twenty-four examples, twenty-two of which are “ancient”. Of the remaining two, one is by Abū al-Malik al-Harīthi, who is said by Ibn al-Muʿtazz (d. 296/908 [g.v.]) to be a poet in the Bedouin vein, while the other is the well-known mubāḥaṭ Marwān b.
Abi Haša (d. ca. 182/797 [q.v.]), who was rather conservative in his poetic ways (Tabakät, 276-80). In another passage he indicates the way out for "modern" poets: he should take (akhdh, iştıdra) a poetic idea from a predecessor and improve on it (interestingly, he does not use the term sanja, as others often do (Yakut, 125, 126).

However different Kudama and Ibn Tabatabā may be in their presentations, they resemble each other in their basic goal: to identify the good and the bad in poetry, whether it reside in wording, meaning, rhyme or metre. Both have a preference for longish quotations to make their point (Ibn Tabatabā more so than Kudama), an unusual phenomenon in the literature of naqd al-šī'ā. This is tied in with the question: do both works belong to the same "genre" of meta-discourse, i.e. do they give rules on how to compose poetry (a "poetics" in the strict sense) or on how to evaluate it (a theory of criticism)? Ibn Tabatabā uses language that tells the would-be poet what to do, while Kudama does not.

Ibn Tabatabā is said to have greatly admired the poetry of Ibn al-Mu'azz, an admiration that was reciprocated (Yakut, 126, 144-5), and Ibn Tabatabā is in turn mentioned in the latter's Tabakät al-shuʿbā' al-muhdathin. Ibn al-Mu'azz was indeed a poet of the first magnitude but, as a member of the caliphal house, he was also in constant contact with high-level secretaries and was himself an accomplished prose stylist (see e.g. his Fīrūz al-lamāliḥī fi tabāqāt al-sūrān, ed. Dūrūd Kanāzī and Fāhda Abū Khadra, Damascus 1410/1989, and his Kitāb al-Adāb, ed. Saḥīḥ Rāzfīd, Baghdaḏ 1392/1972). He wrote the third important early work in the area of naqd al-šī'ā, the Kitāb al-Bādi ("The Book of the Novelty"). The term bādi', "novel, original" was already current at the time as a somewhat fuzzy technical term denoting a poetic idea (akhdh, iştıdra); the term iştıdra ("novel, original") was used by Ibn Tabatabā to refer to non-metaphoric examples. Ibn al-Mu'azz's uncertainty may reflect the vagaries of this intermediary stage.

The Kitāb al-Bādi', originally composed as a legitimation of the "novel" features of "modern" poetry, effectively launched the term bādi' as a collective noun referring to "rhetorical figures", which found its scholastic culmination in the discipline called "ilm al-bādi'". While Ibn al-Mu'azz was the controversy around the poet Abu Tammān, who used the term to refer to non-metaphoric examples. Ibn al-Mu'azz's uncertainty may reflect the vagaries of this intermediary stage.

The controversy around Abu Tammān

One of the triggers for the composition of the Kitāb al-Bādi', had been the controversy around the poet Abu Tammān, who was considered an addict of bādi' and the prototype of the sun'a poet (manārit), who uses rhetorical figures to add a new point or even a new level to a line of poetry. Ibn al-Mu'azz himself wrote a short treatise on the merits and defects of Abu Tammān's poetry (Risāla fī maḥāsin šī' Abī Tammān wa maḍāhī, preserved by al-Marzubānī, al-Mawṣūl 277f.), in which he mostly critiques single lines and mentions several times that he is not the first to voice that particular criticism. But the first large-scale critical appraisal is that of al-Ḥasan b. Bīghr al-Āmidī (d. 371/981), who contrasts the "artful" (manārit) Abū
Tammâm with his counterpart (and disciple!), the “natural” (matbû’ī) poet al-Buhturi (d. 284/897 [q.v.]); the fitting title of the book is “The Weighing of the poetry of Abu Tammâm and al-Buhturi” (al-Muważzâna bayn gârî Abû Tammâm wa 'l-Buhturi, see Bîkî). Al-‘Amîdî was a secretary, both in Basra and Baghdad, and he was also an accomplished poet and a trained grammarian (Yâkit, Isgâd, ed. Rîf‘î, iii, 75-93). This was clearly a good basis for his main claim to fame, his works on literary criticism. One might say that he set the field as a field, because he subjected a number of the existing nûkû works to a critical review. Unfortunately, we have only the titles of these works: “Mistakes to be found in the ‘Criterion of poetry’ by Ibn Tâbîbî” (K. Mî fi 'r âdî bî [Ibn Tâbîzâbâr min al-khâl], “Disclosure of the error of Kudâma b. Dî‘âfî in his ‘Assigning of Poetry,’” (K. Tâbîn ghalât Kudâma, b. Dî‘âfî fi Kîbû Nakal al-ghîr), and “Refutation of Ibn ‘Amâm’s in his faulting of Abû Tammâm” (K. al-Bâdî âlî 'l-Bîn 'Amâm fînî Khattâ fihi Abî Tammâm) (for the last mentioned, Abu T’-Abdîs ‘Amrîdî, b. Ubayd Allâh Ibn ‘Amâm al-Thâkîfî, d. ca. 314/926), see Yâkit, Isgâd, ed. Rîf‘î, iii, 232-42).

In addition, he wrote the following works in the critical genre, of which again we have only the evocative titles (omitting the ubiquitous Khâtîb):

Unstrung the string” (Nâthf al-ma‘zûm), i.e., turning poetry into prose, see above;

That the ideas of two poets do not agree by chance” (Fi anna ‘l-ghîr ‘aynna l-‘atâfìkhuma); the phenomenon noted here by al-‘Amîdî is also known as ma‘nâ ‘rā‘în al-‘aṣrîn, and is one of the ways to explain identical or similar lines, short of plagirism;

“The difference between the individual and the shared with regard to the motifs of poetry” (Fakk mà hâm al-khâys sa ‘r-muqâfîrîn min mu‘tânî al-ghîr), the distinction between attributable motifs and those in the public domain, an important issue in the discussion of plagiarism (see Sarîka, in Suppl.); 

“Preference of the poetry of Imrû al-Kays over [that of the other] pre-Islamic poets” (Tâjîfî yâhî bîr al-Kays a‘lî l-‘aṣrîn fî l-Qârîrîyîn); and “The motifs in the poetry of al-Buhturi” (Mânîtî sîrîl al-Buhturi). His main preserved work, the “Weighing,” is the first serious attempt at critical application. Before entering into the actual comparison between the two poets, al-‘Amîdî collects and discusses what the adherents of either poet have already amassed in the way of critical opinions. But he first takes the opportunity to characterise the two poets as the two opposites on the ma‘nâ–matbû’i scale: al-Buhturi is Bedouin in his poetry, natural, in accordance with the “ancients”; he does not leave the well-known “mainstay of poetry” (mu‘tânî al-ghîr), he shuns knotted syntax and forced expressions and uncouth words. Abu Tammâm, on the other hand, is strenuously abstract, a master of conceits who forces words and meanings, and his poetry does not resemble the poems of the “Ancients”.

Interestingly, he also describes the typical adherents of the two poets. In al-Buhturi’s case they are: the secretaries, the Bedouins, the “natural” poets, and the people of eloquence, while Abu Tammâm has attracted the “people who are after conceits” (al-âlîl mu‘tânî), the masters of poetic language (al-mânîtî sîrî), and those who incline to sophistication and speech philosophical (al-tadî lk wa-falsîfî al-kalâm) (Muważzâna, i, 6). Al-‘Amîdî also remarks that the admirers of Abu ‘Abbâd, who in his view was, consequently, “written in a bitter spirit” and raised some eyebrows (Ouyang, Literary criticism, 150). It was clearly vengeful nit-picking, considering the fact that Ibn ‘Abbâd later wrote a little collection with the title “Current proverbial lines from the poetry of al-Mutanabbi” (al-Mutanabbi wa-syîrîh as-yâ‘afî), Al-Hatîmî subsequently wrote this up under the title “The scalp-cleaving treatise concerning the plagiarisms of Abu ‘1-Tayyib al-Mutanabbi and his corrupt poetry” (Risâla fi ‘r-kâfî ‘an masâ’il sîrî al-Mutanabbi wa-syîrîh), was, consequently, “written in a bitter spirit” and raised some eyebrows (Ouyang, Literary criticism, 150).
the treatise does contain a number of interesting discussions of critical topics on the part of al-Ḥātimī. He was after all the author of a general book on poetics, the “Ornament of apt quotation, on the craft of poetry” (Hīfāṣ, al-maḥāfara fī sīlaḥ al-dhari). This work is mainly compilatory but brings a number of different angles to bear on literary criticism: figures of speech, best verses on specific themes and topics, a large section on plagiarism and related topics, and—for the first time in nakūd—a treatment of maṣūfa in poetry; the latter is, however, not very successful, as al-Ḥātimī uses the term in its wide application as we know it from Ibn Kūtayba, and not in the later sense of “figurative speech”, which ‘Abd al-Ḳāhir al-Djurdjānī (see below) introduced into the literary field (cf. Heinrichs, Contacts between scriptural hermeneutics and literary theory in Islam. The case of Maṣūfa, in JGAW, vii [1991-2], 253-84). Another attack on al-Mutanabbi was launched by the Egyptian poet Ibn Wāţi’l al-Tunṣī (d. 393/1003) in “Dealing fairly with the litter and the lifting, rather than the divulgation of the plagiarisms of Abu ʿl-Tayyib al-Mutanabbi” (al-Munṣif li ʿl-ṣārık wa ʿl-masrūk fī izhār sarākīṯ Abī ʿl-Tayyib al-Mutanabbi). In an introductory section he discusses the figures of speech, basing himself on Ibn al-Mujarrad, and often against, al-Mutanabbi, there are also the transitional figure in this respect is the famous poet al-Wasṭa, who was also an expert philologist and an ardent admirer of al-Mutanabbi. He composed two commentaries on his works: al-Maṣūfa for Dīya al-Dīn, and (without naming him) al-Ḥātimī. The author who tried to right the wrongs committed against al-Mutanabbi was al-Ḳādi al-Djurdjānī (d. 392/1002) in his “Mediation between al-Mutanabbi and his adversaries” (al-Waṣīfah baṣm al-Mutanabbi wa-khūṣūmih). The author belonged to the entourage of Ibn Abīdāl for a while and was later appointed chief ʿKāfī of al-Rayy; he was also a recognised poet. His book is the apex of applied literary criticism: fair to say that the discourse of the scribe is much more interesting in al-Djurdjānī than in his predecessors. His approach is very systematic, starting with ʿArabī patterns and different types of forced style (Sirr, 379-91), but he apparently did not treat this topic systematically in a separate book. However, his student Ibn Sinān al-Ḳhāṣfī (d. 466/1074) did so in his Sirr al-faḏrā (see Bīh), in which Abu ʿl-ʿAlī is quoted quite frequently. Ibn Sinān wrote poetry, but he was probably first and foremost a statesman (not a successful one, since as governor of the fort of ʿArāz he paid with his life for his temerity in seducing from his Mirdāṣid overlord in Aleppo). He says quite clearly that the discourse of the scribe is much more important than that of the poet (Sirr, 280): Poetry is a superfluity that can be dispensed with (al-ḥīṣra faḏla ʿl-yastaghnd ʿl-amūm). His book is thus more generally interesting in the general problems of literary criticism: figures of speech, basing himself on Ibn al-Mujarrad, and (without naming him) al-Ḥātimī. Alongside the books and treatises written about, and often against, al-Mutanabbi, there are also the commentaries on his Diwān to consider, as they do at times go beyond the mere explanation of a line and offer evaluative comments. Moreover there is some disagreement among the commentators, which also may have critical implications. The earliest commentaries, the two written by al-Mutanabbi’s friend, the grammarian Ibn Djinīf (d. 392/1002 [q.v.]), contain a number of interpretations and justifications that were considered incorrect by other critics, such as al-Wāḥīd (Abū Tālīb Sa’d b. Muhammad al-Azdī al-Baghdādī, d. 385/995), Abu ʿl-Ṣādīq al-ʿArūḍī (d. 416/1025) and Ibn Fūrāḏā (Muḥammad b. Ahmad, d. after 437/1045) (on criticism of Ibn Djinīf, and especially al-Wāḥīd, see I. ʿAbbās, Taʿrīḵh, 279-95; for examples see also Heinrichs, Obscurity in Classical Arabic poetry, in Mediterranea, xix [1996, for 1993], 239-59). They sometimes attacked Ibn Djinīf rather violently, and often not without reason: he was after all, in spite of his enthusiasm for al-Mutanabbi, a grammatical and expert on ancient poetry. One of Ibn Fūrāḏā’s “counter-commentaries” has been published (see Bīh). He is also quoted about one hundred times in the commentaries of al-Wāḥīd (d. 468/1075), often together with al-ʿArūḍī and here and there with other scholars, offering fascinating insights into their interpretations of the ancient poetry. The debate about al-Mutanabbi did not entirely cease after this first flurry of activity in the 4th/10th and 5th/11th centuries. Even much later, books were still composed about him, but they tend to be derivative, such as Yusuf al-Badīʿ (d. 1073/1662), al-Suhb al-Manṣūbī an ḥayḍhāṣat al-Mutanabbi, ed. Muṣṭafā al-Salṣābī et alī, Cairo 1963. A notable exception is the critical comparison between al-Mutanabbi and Abu Tāmām by the Andalusian author Ibn Labbāl (Abu ʿl-Ḥasan ʿAlī b. Ahmad al-Ṣaḥīfī, d. 582/1186), al-Ṣaḥīfī al-Mutanabbi wa-Manṣūbī wa-Naṣīrī, ed. M. Ibn Sharifī in idem, Abu Tāmām wa-Abū ʿl-Tayyib fi adab al-Maghārība, Beirut 1985, 197-222.

Further systematical research: al-Ḳhāṣfī and ‘Abd al-Ḳāhir al-Djurdjānī Later poets do not appear to have become the focus of critical attention on such a grand scale. But one unique work should at least be mentioned here: a rather original literary-critical treatment of the poetry of Imruʾ al-Kays by Naṣīr al-Dīn al-Fūʿād (d. 716/1316 [q.v.]) with the title “Tables laden with date-curd, on the finer points of Imruʾ al-Kays” (Mawdīd al-hays fi jāfuʿad ʿImrū ʿl-Kāys, ed. Muṣṭafā ʿUlayyān, Ammān 1414/1994). However, in general, the nakūd literature returned to general treatments of the whole field. A transitional figure in this respect is the famous poet and aesthete, Abu ʿl-ʿAlī al-Maṣīrī (d. 449/1058 [q.v.]), who was also an expert philologist and an ardent admirer of al-Mutanabbi. He composed two commentaries on the poetry of Imruʾ al-Kays, al-Maṣīrī wa-Imruʾ al-Kāys, in ms. Istanbul, Süleymanīye, Hamidiye 1148, for the Arabic text and translation of its introduction, see P. Smoor, Kings and Bedouins in the palace of Aleppo as reflected in Maṣīrī’s works, Manchester 1985, 223-4). His other works are strewed with a number of critical ideas (see ‘Abbās, Taʿrīḵh, 379-91), but he apparently did not treat this topic systematically in a separate book. However, his student Ibn Sinān al-Ḳhāṣfī (d. 466/1074) did so in his Sirr al-faḏrā (see Bīh), in which Abu ʿl-ʿAlī is quoted quite frequently. Ibn Sinān wrote poetry, but he was probably first and foremost a statesman (not a successful one, since as governor of the fort of ʿArāz he paid with his life for his temerity in seducing from his Mirdāṣid overlord in Aleppo). He says quite clearly that the discourse of the scribe is much more important than that of the poet (Sirr, 280): Poetry is a superfluity that can be dispensed with (al-ḥīṣra faḏla ʿl-yastaghnd ʿl-amūm). His book is thus more generally interesting in the general problems of literary criticism: figures of speech, basing himself on Ibn al-Mujarrad, and (without naming him) al-Ḥātimī. The same attitude can also be found already earlier in al-Marzūkī’s (d. 421/1030 [q.v.]) important introduction to his commentary on the Hamīṣa of Abu Tāmām. One of the topics discussed there is the notion of ʿumād al-ḥīr “the mainstay of poetry”. Taking this term from al-ʿArūḍī and al-Ḳādi al-Djurdjānī, who used to characterise the ancient poets and the “natural” ones among the “modern” poets as following the ʿumād al-ḥīr, al-Marzūkī draws up a list of qualities that defines the notion, seven in all, namely, elevated appropriate meaning, firm wording, accurate description, apposite simile, coherence and...
choice of pleasant metre, affinity between donor and receptor of a metaphor, and close fit between wording and meaning. This is a veritable manifesto of anti-mannerist poetising: it clearly tries to curb the more outrageous innovations of the Mu'tazzrans.

A comparison of al-Khafajī's work with the Islamic world was the greatest genius of Arabic literary theory, 'Abd al-Kahir al-Djurjānī (d. 471/1078 or 474/1081 [q.v. in Suppl.]). He was a grammarian and minor poet, but not a scribe. He never travelled beyond the latter focuses on Kur'ānic discourse. Both are highly original and proved to be historically most important. The Asrār concentrate on imagery, i.e. the essence and the function of simile, simile-based metaphor, analogy and analogy-based metaphor. Al-Djurjānī was the first, and in a way maybe the last, to identify a major constituent of maš'ūdātān poetic language, the takhyīlī ([q.v.], “phantastic re-interpretation of facts”, in the guise of mock analogies and a number of other techniques, often based on metaphors taken literally. This allowed him to distinguish between “rational” (al-`udh) and “phantasmagorical” (takhyīlī) motifs and to sing the praises of the latter of the as something other than verbal alchemy; he still supports, nonetheless, the greater “ethical” value of the “rational” motifs, since takhyīl entails a poetic lie (and thus does not occur in the Kur`ān). While this work should thus clearly be reckoned a part of the nakd al-shi'ī enterprise (this judgement is corroborated by the many perceptive interpretations of poetic prooftexts included in it), his book on the inimitability of the Kur`ān, though replete with valuable observations on poetry, focuses on nazm [q.v., section 2, in Suppl.]. “Syntactic ordering to achieve a certain meaning.” Nazm is the only criterion by which the iḍīqāz can be proven, since it applies to every text, and thus to every āya, while other textual phenomena that might be evaluated, as e.g. metaphors, occur only sporadically. Even metaphor itself is conditioned by nazm, i.e. the context determines the metaphoricalness of the expression at hand.

The influence of the Kur'ānic discourse

Despite the overlap between the two books of al-Djurjānī, the Diwdn belongs to a different strand of tradition. The Kur'ānic discourse of the Diwdn had, of course, its forerunners, which need not detain us here, except inasmuch as they may have had an influence on nakd al-shīr. There are, actually, at least two Kur'ānic discourses that have some bearing on nakd al-shīr. One appears as part of the works on legal theory; it often forms a section called baydān (“clarity”) and deals with linguistic questions of hermeneutics, as it is a compilation, though not exclusively, but without acknowledgment, by Abu Hilāl. The Kur'ānic discourse of the Diwdn gives the impression of “phantastic re-interpretation to achieve a certain meaning.” Nazm is the only criterion by which the iḍīqāz can be proven, since it applies to every text, and thus to every āya, while other textual phenomena that might be evaluated, as e.g. metaphors, occur only sporadically. Even metaphor itself is conditioned by nazm, i.e. the context determines the metaphoricalness of the expression at hand.

At about the same time, there was a flourishing of poetry and literary criticism in Zirid Kayrawān, which may also be considered the beginning of serious critical activities in the Muslim West. Much Eastern material was made accessible by the excellent anthologies of al-Husri (d. 413/1022 [q.v.]), in particular his “Flowers of maxims and fruits of keen minds” (Zahr al-ḥadiqat wa-maḥān an al-ḥadiqat, ed. ‘Alī Muḥammad al-Bagjāwī, Cairo 1372/1953; and “Collection of jewels among jocoseness and rarities” (Qamāt al-ghawthīr bi l-ḥadiqat wa-maḥān an l-naqād, ed. al-Bagjāwī, Cairo 1372/1953). Both of them contain many passages in which the author either reports or presents critical viewpoints. Al-Husri was the mentor of Ibn Rashīq (d. 456/1063 or 463/1071 [q.v.]), who quotes al-Rummannī. It was `Abd al-Kahir al-Djurjānī who in two books (see above) cleaned up the terminological mess resulting from the interaction of the poetic and the Kur'ānic discourses. But before him there was one more interesting interface between the discourses, in al-Bākīllānī’s (d. 403/1013 [q.v.]) Fī al-kurān. Three parts of this book are especially pertinent here (these parts were translated by G.E. von Grunebaum, Tenth-century documents: (a) an extensive section on iḍīqāz “rhetorical figures”, which, however, according to him are not relevant for proving the iḍīqāz, since they are attainable by man through training and experience; (b) a critique of the Mushaf of Ḥasan (rāsā, q.v., i.e. the context determines the metaphoricalness of the expression at hand. This book might be called the first encyclopedia of literary theory, as it is a compilation, though not devoid of original ideas, from most of the earlier literature on rhetoric (ḥabīb), nakd al-shīr and iḍīqāz. Since these different strands of literary theory at times used the same term in different meanings (e.g. istadrā as “loan metaphor” in nakd, “substitution metaphor” or even “figurative speech in general” in Kur'ānic discourse), certain contradictions in the materials collected by Abu Hilal remain. This lack of homogeneity also besets other authors, such as Ibn Rashīq (d. 456/1063 or 463/1071 [q.v.]), who quotes al-Rummannī.

The Muslim West
a collection of notes on various topics of literary criticism, including very sublimo instances of intertextuality (see especially the chapter on takhlīl, Kūndā, d. 95-106, “piecing together” a line of poetry from two or more existing lines, a method skilfully used by Ibn ‘l-‘Abd al-Mu‘āammad al-Makdāma [q.v.] that his evaluation of earlier poets is preserved in a large number of poets is followed by a second part, in which general guidelines for the critic are developed, in part on the basis of a critical, and moralistic, reading of verses from the Mu‘alāka and other poems by Imrā’ al-Kays [q.v.]. Particularly noteworthy is the literary genre of the makāma [q.v.] that Ibn Sharaf has chosen for his presentation: he attributes the critical opinions in his work to one Abu ‘l-Rayyān and he says unmistakably in his introduction that he “invented” (ikhthālatu) the narratives included in his work.

At about the same time, al-Andalus also entered the scene with important commentaries disregarding how the works that introduced Eastern techniques and ideas into al-Andalus, like the adab encyclopaedia “The unique necklace”, al-Bīd al-fardī of Ibn ‘Abd Rabbūṭ [d. 326/940 [q.v.]] and the “Dictations”, al-Amālī, of al-Kāfī [d. 356/967 [q.v.]]. The eminent poet Ibn Shuhayd (d. 426/1035 [q.v.]), needled by adverse criticism of his poetry, wrote an imaginative and imaginary report, full of wit and haughtiness, about his visit to the country of the jinn and his discussions with the familiar spirits of famous poets and prose writers, with literary critics among the jinn, and, finally, with two animals, a mule and a goose, who turn out to be the familiar spirits of two contemporaries. Much of the story revolves around the question of talent and training as prerequisites for successful poetic activity; the translator, James Monroe (see Bibh.), discovered a Neo-Platonic blueprint underlying the author’s theory of “creativity”.

Ibn Shuhayd’s friend, Ibn Hāzīm (d. 456/1064 [q.v.]), should be briefly mentioned here, because he is the logical work “Bringing close to the definition of logic” (al-Takhrīb ilā ḥadd al-mantiq) leads over to the philosophical poetics in the next paragraph, although it is still very much “Arabic” in its contents. Two ideas stand out in his presentation. One is the notion that the essence of poetry is that it consists of false statements. This is not a new statement, being both part of the Greek tradition known to the Arab world (see below on Ibn al-Banna’) as well as the indigenous one, where the adage ayyama (var. khaṣra) ‘yā‘ārī ʿaqlabatuh “the best poetry is the most untruthful one” is often quoted. However, the exclusivist view maintained by Ibn Hāzīm is rare (on the various non-formal definitions of prose and poetry, see Heinrichs, Dichterische Rede). The other unusual notion is his tripartite typology of poets: to the usual types characterised by tabh “natural talent” or sinda’a “artfulness” he adds a third one, distinguished by barda’a “virtuosity”. From this description his type appears as a synthesis of tabh and sinda’a; barda’a is the ability to make intricate conceits appear natural (on this and related topics, see G. Schoeler, Eine Grundprobleme der autokratischen und der aristotelischen arabischen Literaturtheorie [AKM, Band xii, 4], Wiesbaden 1975, 33-56, and his additions in ZDMG, cxvi [1976], 79*). Philosophical poetics and the Maghribī “school”

A short aside on philosophical, or logical, poetics is appropriate here. Aristotle’s Rhetoric and Poetics were translated from Synrac into Arabic. The former exists in a nākī kalim, an “old” pre-Humayn translation, the latter in the translation of Abī Bīrāḥīn Manatī (d. 328/940 [see Matta B. Yūnus]) and, in the commentaries, also in a revision by Abī Bīrāḥīn’s disciple Yabīha b. Ḍait (d. 363/974 [q.v.]). These translations remained for a very long time the domain of the logicians, because since the days of the Neo-Platonic Alexandrian commentators the Rhetoric and the Poetics had become part of the Organon, the logical writings of Aristotle. We have summaries and commentaries on these two texts by a number of important philosophers, al-Fārābī, Ibn Sīnā and Ibn Rūḥād [q.v.] among them, and many short characterisations of them in general expositions of logic. The basic notions of Arabic logical poetics are takhlīl “image-creation in the listener’s mind” and muḥdāth “image-creation from reality”, the latter going back to the Aristotelian mimesis but here reinterpreted as “imagination” (for further details, see Takhlīl). Probably due to the compartmentalisation of knowledge into Arabic and Ancient disciplines, the indigenous theorists of poetry did not show any interest in the logical approach, except in the Muslim West. While in the East Ibn Bishr Matta (d. 328/940 [q.v.]), in his translation of his work “Bringing close to the definition of logic”, the polemical format of this work precludes a systematic introduction of technical terms; but the central terms of philosophical poetics, takhlīl, muḥdāth and ayyāna ʿaqrīyya, are employed (see Tanbihāt, 125, 134 and 135, respectively), and muḥdāth is used in the sense of “imaging” by means of similes or metaphors.

The most important among “philosophising” critics is Ḥāżim al-Karšāḏanī (d. 604/1205 [q.v.]), who used the two basic notions of the logical approach, takhlīl and muḥdāth (the latter further reinterpreted as “image-creation by both descriptive and figurative processes”), in order to give a foundation to the hitherto more analytical and taxonomic indigenous approaches in the theory of poetry (for the details of his theory, see Minhāj, 62-129, translated in W. Heinrichs, Arabische Dichtung und griechische Poetik, 173-262).

His younger contemporary al-Sījdāmī (d. after 704/1304 [q.v.], in his “Novel method in classifying the modes of figures of speech” (al-Manzā’ al-baḥtī fi tajyīn al-lakūb al-baḥtī), like Ḥāżim quotes al-Fārābī and Ibn Sīnā verbatim but understands takhlīl in the narrower sense of “imagery”, including takhlīl “simile”, istārā “loan metaphor”, mumāṣṭala “analogy” and madā‘aj (see Manza’, 218-61, 406-7; note that takhlīl here is used as a synonym of muḥdāth, due to a pas pro toto application of either term for the entire activity of the poet of shaping images from reality and creating corresponding images in the listener). It is noteworthy that madā‘aj in al-Sījdāmī equals the Djurdjanian takhlīl (see above) (on this strange use of the term, see Suʿād al-Māni’, Maḥfūz muṣṭalḥ “al-madā‘aj” ina ‘l-Sījdāmīsī fi al-ḥakīkāt bi-muṣṭalḥ “al-takhlīl”, in Abūdāh al-Yammāk, xxvii [1420/1999], 89-137).
The last of the “philosophizing” Maghribi critics, who is known to us through his own work, is Ibn al-Banna’ (d. 721/1321 [q.v.]); there are a few others, about whose views we know little (see M. Ibn Shaddad, ‘Ibtidā’īnīn, Ibn ‘Amira, ‘Abd al-Haqq, 32). Ibn al-Banna’ gives a short overview on the various truth values of the logical disciplines (burhān, ḍajdat, khatāha, ṣirī, muqālata) and defines poetry as “address by means of false, image-evoking (mukhayyila) statements based on image-making (muḥdkaṭa), which result in the excitement (istifadh) [of the listener] by those fanciful (tauswahmati)” (see Rasd, 81, and cf. 103). By stressing the falseness of the poetic statements he diverges from Ḥazm and al-Ṣūjīnīnī, who declare “true” and “false” as immaterial in poetry; Ibn al-Banna’ resumes another tradition, which also has Greek roots and later Arab adherents (see above).

Much of the literature devoted to the criticism of poetry ultimately feeds into scholastic rhetoric (‘ītim al-balāgha), on which see BALAGHA, BAYAN, AL-MA‘ĀNĪ WA-L-BAYAN, AL-SAKKĀRĪ AND AL-KHĀṬĪB AL-KAZWĪNI. But the main goal of rhetoric is as a tool to understand the fiṭḥa al-kur‘ān [q.v.]. The whole literature based on the third chapter of al-Sakkākī’s Miftāḥ al-‘ulum will thus not be treated here. The same is also true for the later works outside the al-Sakkākī tradition.

The main topics of nakan

The historical outline presented so far should be complemented by a short topical outline of the basic themes of nakan al-šīr. (1) Poetry vs. prose. The most popular definition of poetry is the formal one proposed by Kudāma, Nakd, 2: kand al-mawzan muqaffa’ yadhdhul ‘alā ma‘ṣura “metrical rhyme utterance incorporating a meaning”. This would include didactic versification [see NAKD] and thus cannot be considered satisfactory. Some authors have, therefore, tried to establish an essential difference between poetry and prose (cf. Heinrichs, Dichterische Rede). Three approaches can be distinguished:

(a) The first is based on the idea that reality can be expressed in different ways. Al-Zandjānī (d. 650/1252 [q.v. in Suppl.]) in his “Yardstick for students of the disciplines concerning poetry” (Miftāḥ al-nażzārī fi ‘ulām al-ṣa‘ārāt) utilizes the threefold system of denotation (dalallā, i.e. muḥtakha “congruence”, “house” denotes a house), tadammun “implication”, “house” denotes a ceiling and iṭtizām “concomitance”, “ceiling” denotes a wall) and says that muḥtakha is the “original denotation” (dalallā wa‘l-ṣinayya) and is used in the rational sciences (“ulām ‘akhyarah), while tadammun and iṭtizām are “rational denotations” (dalallāt ‘akhy-yātāt, i.e. one has to think about their meaning) (Miftāḥ, ed. al-Aṣghar, 5-7). Of these, ʿīṭizām is the kind of denotation that matters in “eloquence” (balāgha), because the “concomitants” (tawzīzām) are numerous and there are many ways, good and bad, in which a certain idea can be conveyed. Two points need emphasis here. (i) Although this book is devoted to poetry, in this passage he speaks about “eloquence”, which, of course, extends to ornate prose as well; and (ii) the opposite of eloquent speech is scientific texts. Al-Zandjānī’s approach may thus be somewhat askew when it comes to defining poetry. (Asmus notes, we might mention that al-Sakkākī uses the same theory of denotation but applies it only to imagery, bаяn, see Miftāḥ al-‘ulum, ed. Na‘im Zarzur, Beirut 1403/1983, 329-30.) There is a certain similarity between al-Zandjānī and Ḥazm al-Ḵaṭṭāḏgānī in this respect. The latter defines poetry, with the help of terms from the Aristotle-Pārābārī tradition, as a speech that “imitates” (muḥtakha) the object by describing its accidents and then “generates representational images” (iṭṭizām) of the object in the mind of the listener/reader.

Scientific propositions, on the other hand, consist in naming the essence of things and creating understanding (īṯān) (Minḥāḏ, 98-9, 118-20). Again we have a dichotomy of poetic and scientific speech.

(b) The second attempt at defining poetry is based on the idea of “untruth” (kaḏḏīb). The adage ʿulās ‘ulā ‘iḏābub “the best poetry is the most untruthful one”, sometimes said to be of Greek origin, has been interpreted as referring to (overblown) hyperbole (ghulūt) (Kudāma, Nakd, 24-7) and to al-Djurjānī’s “phantastic re-interpretation” (iṭṭizām, see above), thus to “distortions” of reality (or of the mirror quality of language) in the course of increasing mannerism. Most critics did not conclude that all poetry was untrue, but at least two explicitly did so: the philologist Ibn Fāris (d. 395/1494 [q.v.]) in al-Sāḥibī fī ḥik al-lughah (ed. al-Sayyid Ahmad Ṣaḵr, Cairo 1977, 466) and Ibn Ḥazm (see above).

(c) The third approach contrasts the “obscurity” (ghurūn) of poetry with the “clarity” (sawdāf) of literary prose. This was done in ʿIṣṭafad ʿulām al-Ṣāliḥ by Hāḍir al-Ṣāḥib (d. 834/1919) in an epistle, in which he says that, due to the shortness and rigidity of the verse and the constraints of rhyme and metre, poems could not avoid being “obscure” (A. Arazī, ʿUṣūr ʿalīṣ b. ʿIṣṭafad ʿulām al-Ṣāliḥ sur les genres littéraires, in M. Sharon (ed.), Studies in Islamic history and civilization in honour of Professor David Ayalon, Jerusalem and Leiden 1986). Later critics have usually not agreed, saying that the balāgha of both poetry and ornate prose required clarity (cf., e.g., Gantarmo, Prose, 195).

Since the mid-ʿAḥbāʾī period, when the idea had taken hold that the knāda and the risāla were identical but for formal differences, the terminology of the poetry-critics was to a large extent applied to ornate prose as well. But there are also some relatively early sets of terms that were developed by the state scribes for the description of the epistolary style. Kudāma b. Ḍafār, in the introduction to his work on synonymous words and phrases, “Gems of words” (Mafāṭih al-ʿulūm), 3-8 lists and exemplifies fourteen features that make for the highest degree of eloquence (balāgha) in ornate prose. His fellow-kāṭeb al-Khāṭārāzī (2nd half of 4th/10th cent. [q.v.]), in his “Keys of the sciences” (Mafāṭih al-ʿulūm), has a chapter on “the conventions of the epistolographers” (muweṣṣelāt kuttāb al-raʿādāʿ), which clearly harks back to Kudāma’s list but also goes beyond it by adding a paragraph on defects (Mafāṭih, 72-8). Al-Khāṭārāzī is particularly instructive, because his encyclopaedia also contains a chapter on nakd al-šīr (Mafāṭih, 94-7); a comparison of the two lists shows surprisingly little overlap in terminology and only slightly more when the figures themselves are considered. A third list was compiled later by al-Yazdīdī (dates unknown) in the introduction to his “Perfection of eloquence” (Kāmil al-balāgha, 19-32), a selection of epistles by Kūḏūm b. Wusgūrūj (d. 403/1012 [q.v.]), in his “Keys of the sciences” (Mafāṭih al-ʿulūm), has a chapter on “the conventions of the epistolographers” (muweṣṣelāt kuttāb al-raʿādāʿ), which clearly harks back to Kudāma’s list but also goes beyond it by adding a paragraph on defects (Mafāṭih, 72-8). Al-Khāṭārāzī is particularly instructive, because his encyclopaedia also contains a chapter on nakd al-šīr (Mafāṭih, 94-7); a comparison of the two lists shows surprisingly little overlap in terminology and only slightly more when the figures themselves are considered. A third list was compiled later by al-Yazdādī (dates unknown) in the introduction to his “Perfection of eloquence” (Kāmil al-balāgha, 19-32), a selection of epistles by Kūḏūm b. Wusgūrūj (d. 403/1012 [q.v.]). The author says that he isolated, from the epistles themselves, such figures as Kudāma had not yet identified (Kāmil, 19); it is likely but not certain that he is referring to Ḍawwār al-ʿalīṣ rather than to Nakd al-šīr. All of this shows that, between the final confluence of terminologies, we have to assume separate traditions of poetic, rhetorical (epistolary) and Kurʿānic (see above) technical vocabulary.

For a critique of a piece of eloquent prose—not a very common event—one may point to al-Kāḏī Ṭāyād’s (d. 544/1150 [see ʿrāʾī]) exhaustive interpretation of
the hadith Umm Zar' (on this text, see F. Rosenthal, Muslim social values and literary criticism—reflections on the Hadith of Umm Zar', in Oriens, xxiv (1994), 31-56). This includes a chapter on bayan that deals with the literary aspects of the hadith (Baghvat al-nil'd h-mā hadamam hadith Umm Zar' min al-anwa'a, ed. Salih al-Din b. Ahmad al-Idlibi et alii, al-Muhammadiyya 1395/1975, 186-214).

(2) Truth vs. falsehood. Ibn Raqīq states that most of poetry isAWSF description ('Umda, ii, 294), thus true. As mentioned, some critics have maintained the opposite (Ibn Hazm, Ibn Faris, see above); this has to be seen against the background of the mannerist trends in “modern” poetry—with their irreal hyperboles (ghfal), substratum-less metaphors (istārta/fadhlityra), and phantastic re-interpretations (takbir of al-Djurjānī). Critics often became a little nervous when confronted with “falsehoods” (kadhib) of this type, but the poets were not deterred. The idea of poetry being per se “untrue” is also highlighted by Abu l-'Alā al-Ma'ārri’s assertion that the sceptical poetry in his Lajmiyyāt is not poetry, because it is true (ed., 'A. Zaid, Cairo 1891, 9, 42).

Explicit fiction is not of common occurrence in Arabic literature, and certainly not in poetry. There are, however, platonic exceptions (e.g. Ibn Tabarān) coupled with semantically independent (ikhtildk imkdm) or figurative elements (ikhtildk, itself acquires several meanings: (a) the meaning of a specific verse (especially when it is difficult to gauge)—this is dealt with in early philological ma'ānī works, such as al-Ushānndānī (d. 256/870), Mu'ān al-dhīr (ed. 'Izz al-Dīn al-Tanikī, Damascus 1969); (b) the motif expressed in a line, i.e. a popular poetic commonplace; these were collected, together with their most famous realisations, in motif catalogues, such as Ibn Kutaybā, K. al-Ma'ānī al-kathīr (Bâdarbâ) and Ibn 'Abī Mūsâ, Dhīq al-ma'āni (Cairo 1352 [1933-34], al-Raghib al-Iṣfahānī (d. 502/1106 [q.v.]), Magdīna al-balbūqa (ed. 'Umar 'Abd al-Rahmān al-Sarīś, 2 vols., Am'mān 1406/1986) and the anonymous Maqma't al-ma'ānī (ed. 'Abd al-Sālim Hārūn, Beirut 1992), as well as in catalogues of similes, such as Ibn Abī 'Avin, K. al-Taghlībī (ed. 'Abd Mu'īd Khān, London 1950) and Ibn al-Kattānī, K. al-Taghlībī min aflā'ār abīl-anāklaus (ed. İhsan 'Ablbäs, Beirut 1967); and (c) the specific meaning, which results from the application of rhetoric and imagery to a known motif, thereby refashioning it as a conceit (conceit)—these are the ma'ānī that the admirers of Abū Tammām, al-'Amīdī al-hal al-ma'ānī (see above), cherish and which Ibn Raqīq calls the ma'ānī al-'anqā (‘Umda, i, 133). An example would be Abū Tammānī’s notorious line: tā ikhtildk mā 'l-ma'ānl fa-annānī 'alābī' kād-i 'sā'ddhu mā 'lā bādā? “Do not pour for me the water of blame, for I am a man in love, I have come to find the water of my weeping sweet” (Dīwān, ed. Muhammad 'Abduh 'Azzām, 4 vols. Cairo 1964-5, i, 22). Here the simple idea “Do not blame me, for I am in love and like weeping” has been transformed into a conceit, by “applying” to it (i) a loan metaphor (“the water of blame”) and (ii) a mūkābala (the contrast of the two waters). It is clear from these literally ever more meaningful uses of the term ma'ānī that lafz become inextricably bound together; this ma'ānī-lafz conglomerate came especially to the fore in discussions of the historical development of motifs, i.e. discussions of borrowings, imitations, and plagiarisms. ‘Abd al-Khālī al-Djurjānī realised the inefficiency of the rigid dichotomy “wording/meaning” and introduced the term yūra “form, structure” which he puts in the middle between the lafz as “linguistic material” (a'fārāk al-ḥarāf “the sounds of the letters”) and the ma'ānī as “themetic material” (gharāf “intention”); one could say that the yūra forms both the linguistic and the themetic material and thus creates a structured lafz and a structured ma'ānī that are completely congruent. (5) Originality vs. plagiarism. On the whole gamut of possibilities between ikhtildk “original invention” and sarīka crude “plagiarism”, see SARĪK, in Suppl. Influence on other literatures

Arabic literary criticism and poetics have had an
influence on two linguistic-cultural domains outside of it. One is Persian literary theory. The first work in this field was Rādūyfī’s [in Arabic script] “Interpreter of eloquence” (Tafṣīl al-kāfī fī al-baḥša, ed. Ahmad Atiq, Istanbul 1949), written between 482/1089 and 507/1114 (see also Ahmad Atiq, ed., The Arabic literary theory of the 10th/16th century: The Alchemy of glory. The dialectic of mediaval dialect poetry, ed. S.A. Bonebakker, Leiden 1982). This work is based on an Arabic precursor, namely al-Marghinānī’s (middle of the 5th/11th century) “Beauties of poetry and prose” (al-Makhâsîb fī l-nuẓr wa l-nâlī), ed. van Gelder, Two Arabic treatises on stylistics, Istanbul 1987, 61-66).

The other cultural domain open to Arabic influence was the Jewish community, primarily in al-Andalus but also elsewhere, who had adopted Arabic prosody, or an adaptation thereof, for the composition of Hebrew poetry. This drew their attention also to the critical literature of the Arabs; this in turn confronted them with the notion of ʿidāq al-Kurān and motivated them to discover rhetorical and figurative use of language in their own Scripture. The most important author here is Moḥammad b. ʿEzra (d. after 529/1135), who wrote two relevant works in Judaeo-Arabic: the K. al-Muhdâra wa l-mudhakara (Jerusalem 2001), dealing mainly with scriptural issues. Recently, some early copies of this work and of Moḥammad b. ʿEzra’s K. al-Muhdâra seem to have been written in Hebrew script, as can be seen from mistakes attributable to misreadings of Arabic letters. This may point to the early period is Amjad Trabulsi, The Alchemy of glory. The dialectic of mediaval dialect poetry, see ZAQL (toward the end).

NAKL

1. In the central Islamic lands and North Africa. Add to the articles mentioned there the following article.

In the caliphal lands.

The emergence of Islam is known to have coincided with the disappearance of wheeled carts or wagons [see ibid] in many parts of the Middle East, although the extinction of such transport cannot be conclusively proved. In fact, wheeled vehicles were in existence in the Middle East for many centuries after the rise of Islam, although they were rarely used.

The wheel was replaced by the camel in the Middle East during the era of the caliphat. Camels [see ibid] were a means of everyday transport which was eminently suitable for long-distance overland journey across deserts and valleys in Arabia, Syria, Egypt or North Africa, or Anatolia or in Central Asia along the Silk Road, being used for transport of goods or passengers or pilgrims in large caravans. Caravan trade and caravan cities existed in the Middle East since the pre-Islamic period, when the Arabs of Mecca used to go on seasonal caravan journeys for commerce to Yemen in the winter and to Syria in the summer (cf. "W.P. HERNEICH"))
Kur'an, CVI, 1-2). The nomadic peoples of Arabia, Syria and Persia were the camel-breeders who appreciated the value of their animals as the "ships of the land" (al-sa'afan al-barrayyad; they knew that the skins of water-bags (kurh) and the cisterns (marjan, cap doves) of protein and they could sell them in exchange for gold (cf. al-Tha'alibi, Thimâr al-kulub, 284). At the beginning of Islam in the 7th century A.D. many individuals owned camels which they could use as a means of transport or as a source of milk or as a commodity for trade, but by the 8th century A.D., camel-owners or professional camel-drivers emerged as a group of transport workers who used to hire out the camel(s) to travellers or traders (al-Walbâbi, The northern Hijaz, 395). The camel (see GÄMMâL, in Suppl.) contributed much to the transport of pilgrims from all the parts of the Middle East to Mecca and Medina. The Egyptian and North African pilgrims as well as traders started their caravan journey from Fustât (Old Cairo) through Kulzum to Nûn (Akaba) and Yanbu', thence to Mecca or Medina. The Anatolian and Syrian pilgrims assembled at Damascus and travelled through Amman and Tabik to Medina and Mecca. Similarly, the pilgrims from Persia, Central Asia and Iraq started their journey from Baghdad and travelled through Kûfa and the Arabian desert to Mecca or Medina, or they took the alternative route from Baghdad to Wâsi't, Basra, the Arabian desert and Mecca. Arab settlements grew up along the pilgrim routes and there were brisk seasonal trade during the pilgrimage season. Caravanserais were built throughout the Middle East to cater for travellers and traders and their mounts. Camels and horses were also used to transport arms and warriors to the battle front during the early Islamic conquests and the Umayyad period.

Among other means of transport, donkeys were the most popular among the tribesmen and the peasantry. Mules (Ar. baghîl [q.v.], pl. baghâlî) were also used as a means of transport especially in the hilly or mountainous terrains of Syria, Anatolia and Persia. Muleteers (Ar. mukâri [q.v.], baghâlî, or hinnârs) emerged as a distinct group of transport workers during the 'Abbasid period (A.D. 750-1258). They could transport merchants or ordinary travellers from Baghdad along the Khurâsân trunk road to Nîshâpur or beyond (cf. al-Kâzîmî, Alghâr al-bâlîd, 224-5) or transport pilgrims in a caravan of 50 donkeys from Kûfa to Mecca (al-Dâjjîh, K. al-Bâkkâlā, 18). Mules were not popular animals in mediaeval Arab society, and al-Dâjjîh wrote a treatise on mules entitled Kîdâb al-Bâghâlî. He voiced the public opinion of his time when he recorded the popular argument against the mules by saying that the Prophets rode on camels and donkeys but never on mules (cf. Basîl al-Dâjjîh, ii, 326), but he refuted the popular prejudice against them by citing the evidence that the Prophet Muhammad rode on a mule, as did the early caliphs like 'Uthmân and 'Alî and the Umayyad caliph Hâshâm b. 'Abd al-Malik. Moreover, al-Dâjjîh cited the fact that pilgrims from Syria went from Damascus to Mecca in a caravan of sixty mules during the reign of caliph 'Abd al-Malik (cf. Kîdâb al-Bâghâlî, 251). The horse was a means of speedy transport which was owned mainly by the wealthy, for the price of an Arabian horse with a pedigree was very high. This last was also introduced into eastern Turkey and Persia as a means of transport. Horses were used for postal service by the Umayyad and 'Abbasid caliphs for the dispatch of royal mail and military intelligence from various provinces to the capital city [see BARîD]. The
Abraham, says a Shali, the believers are requested to adhere [q.v.], sandals of the Prophet Muhammad.

Islamic tradition provides detailed descriptions of the Prophet's sandals. According to most of the earliest traditions, each sandal had two leather thongs (kibdl, zimdm, shis, tawil) and the middle part of the sole was narrow, with hollows (qarn) cut on each side. The sole consisted of two layers sewed or patched together (makhsufa).

Sometimes the sole of Muhammad's sandal was said to have consisted of only one layer, not two, and this was said to have been the style that the Arabs considered superior to the style of kings (al-Makkari, i, 463). The fashion of cutting hollows on both sides of the middle part of the sole was preserved mainly among Sh'i Is, to whom sole without hollows represented a deplorable deviation from the Prophetic model (al-Kulimi, vi, 463). Moreover, sandals without such hol- lows were considered Jewish by style (al-Tabrisi, Makirim al-akkhlik, ed. Muhammad al-Husayn al-Alam, Beirut 1972, p. 123; al-Kulimi, vi, 463-4). The habit of tying the gird of the sandal (and not simply fold- ing it through the loop, as was reported concerning Muhammad's sandal) was considered among Sh'i Is as a fashion set by Satan (al-Tabrisi, 123).

The supposedly original sandal or sandals of the Prophet were preserved by believers of later generations. Beginning with the generation of the Companions, the most prevalent is the tradition about the Basran Anas b. Mâlik [q.v.], who is said to have exhibited to the believers the sandal with its two thongs (e.g. Ibn Sa'd, i, 478; Abu '1-Shaykh, Akhldk al-nabi, no. 390).
He was reportedly the official keeper of Muhammad's sandals (Ibn Sa'd, i, 482), but according to other traditions, the Kufan Companion 'Abd Allah b. Mas'ud [see IBN MA'SUD, 'ABD ALLAH] was in charge of them (e.g. al-Bukhari, Sahih, 9 vols., Cairo 1956, v, 31, 35 [kitab 62, bab 20, 27]).

'Ali's son, Muhammad b. al-Hashimiyah [q.v.] was also able to show the relic (Ibn Sa'd, i, 478). The Meccan Higham b. Urwa (d. 146/763) claimed that he had seen the sandal and gave its description (Ibn Sa'd, i, 478).

As for the later history of the sandals, some reports relate that the descendants of the Syrian Companion Shaddad b. Aws (d. 46/663), who lived in Jerusalem, preserved them. He reportedly left them to his son Muhammad, but the latter's sister got hold of one of them. This was passed on to her children. When the 'Abbâsid caliph al-Mahdi visited Jerusalem, the sandal held by the sister's descendants was presented to him for a handsome reward. He summoned her brother Muhammad b. Shaddad, by then a sick old man, and requested the other sandal, but Muhammad refused to part with it and the caliph consented (Ibn Manzûr, Maqâla tarîk al-Dimashqi li-Ibn 'Asâkir, 29 vols., Damascus 1984-8, x, 278-9). A sandal of the Prophet was also claimed to have been in the possession of Isma'il b. Ibrahim al-Makhzumi who obtained it from his grandmother Umm Kulthum, the daughter of Abu Bakr. She had received it from her sister 'A'ila (al-Mâjkari, 175-6).

The last station of the 'original' sandal seems to have been the Ashraf madrasa at Damascus. It was placed there by the Ayyubid of Egypt al-Malik al-Mu'izz b. al-Shâhâdah, whose descendants claimed to have held them. This was passed on to her children. When the leadership of the Rabla tribes reached the Namir, the sandal held by the Rabla, following a vow she made when little al-Abbâs went lost.

Before Islam the Namir (like the Taghlib) were semi-legendary groups. Another sandal of the Prophet was kept elsewhere in Damascus, and during Tûmar Lang's take-over of Damascus in 803/1400, both relics disappeared (Ibn Hadjâr al-'Askâlânî, al-Sa'âba, ed. 'Ali Muhammad al-Bidjâwi, 8 vols., Cairo 1970, iii, 173; Sîbîb b. Abd Allah b. 'Amir al-Dahyân, Nîr al-nibrâs lâlâ sîrat Ibn Sayyid al-Nâsû, ms. BL. Or. 8276, fol. 306b; al-Mâjkari, 513-24; Gottingen, Hildesheim, Meinecke, Ahdâr al-nâba, 2, 1960).

The Prophet's sandals served as a model according to which shoemakers designed sandals for pious believers. A sandal of the Prophet, as seen at the house of Fâtima, daughter of 'Ubayd Allah b. 'Abbâs, was copied by a shoemaker who applied its two-thong style to sandals ordered by the eminent Bayzân scholar 'Abd Allah b. Awn (d. 150/767). However, when the latter came to collect them, he found that Ibn Sîrîn (d. 110/728 [q.v.]) had already bought the sandals for himself (Ibn Hadjâr, Maqâla, ii, no. 2232; cf. Ibn Sa'd, i, 479).

Drawings (mîkâtâl, timkâtâl) representing the supposedly original sandal were in circulation among scholars, especially in the Maghrib, where access to the sandal itself was more difficult than in the Maghrib (al-Mâjkari, 167-8). Such representations were also used by shoemakers for sandals ordered by pious believers (al-'Tabrîsî, 122; al-Mâjkari, 175-6). The representations became an object of veneration in their own right and were believed to provide one with safety in journeys, victory in battles, etc. Therapeutic powers were attributed to them and they were often hung up in houses for protection against the evil eye (al-Zârîkînî, v, 48; al-Mâjkari, 693-70; Goldzieder, op. cit., ii, 363). Some samples of them can be seen in al-Mâjkari's Fadhl al-mutâl fî madâl al-tâlî, where numerous kaštads in praise of them are also recorded.

Closely associated with the veneration of the Prophet's sandals is that of his footprints [see KADAM SHARIF].

Bibliography: Given in the article.

AL-NAMIR b. KÂSİT, BANû, a tribe of the Rabî'a b. Nîzâr group [see RABÎ'Â AND MUQAR; NÎZAR B. MÂ'ADD]. It must be noted that not every Namiri mentioned in the sources belonged to the Namir b. Kâsit, since tribal groups called al-Namir were also found among the Azd, the Kûdâ'a and the Iyad. The fortunes of the Namir were closely linked to those of their relatives, the Taghibî [q.v.]. When the Taghibî migrated to the eastern part of the Euphrates [q.v.] or the Diyâr Rabi'a [q.v.] in the second half of the 6th century A.D., they were joined by part of the Namir. However, there were still Namiris in Arabia after that time, more specifically in Yamâma and Bahrayn. Some tribe members settled in al-Andalus. Most Namiris remained Christian for at least two centuries after the advent of Islam.

The semi-legendary leader of the Namir, 'Amir al-Dâhîyân, would sit in judgement in the early part of the forenoon, hence his nickname al-Dâhîyân, or "the one exposing himself to the sun". Ibn al-Kalbi reported that the leadership of the Rabî'a shifted among the Rabî'a tribes. Leadership meant command in the battlefield, arbitration, the right to appoint the banner-carrier and entitlement to one-fourth of the spoils. When the leadership of the Rabî'a reached the Namir, it was held by 'Amir al-Dâhîyân. After a long term in this role he was killed by a man of the 'Abd al-Kays [q.v.]. Having received half the ransom for him, the Namir murdered the 'Abd al-Kays hostages whom they held as a guarantee for the delivery of the other half. In the interregnum war that followed, the Namir joined forces with the rest of the Rabî'a against the 'Abd al-Kays. Ibn al-Kalbi's account is quoted in a small genealogical treatise, al-Anbâh 'alâ kabîrîl al-mawâ, by Ibn 'Abd al-Barr [q.v., himself a Namiri. Namiri partisanship on Ibn 'Abd al-Barr's part is evident with regard to the origin of the Prophet's Companion Suhayb b. Sinân, the most important individual in the genealogy of the Namir. However, the Namir, disputed by some, was for Ibn 'Abd al-Barr beyond doubt, and in his Companion dictionary he emphasised that there was no dispute over it. But the claim that Suhayb was of Arab stock stands in sharp contrast to a famous saying attributed to Muhammad, namely, that he himself was the first Arab to enter Paradise, while Suhayb was the first Byzantine, Salûmân al-Fārisî the first Persian and Bûlûb al-Râshî the first Ethiopian.

While Suhayb is invariably mentioned in the genealogies of the Namir, Humrân b. Abân, a prominent figure in early Islamic history, is only mentioned in some. Humrân, who was captured during the conquests in 'Ayn al-Tamr [q.v.], is supposed to have been Suhayb's relative. But it is doubtful that Humrân, said to have been of Jewish origin, was an Arab, since the claim of Arab descent originated with his offspring (usûd sîrat nabiît li 'l-Namir b. Kâsit). Family sources were likewise behind the claim that Suhayb was an Arab, not a Jewish.

The Namir boasted of a pre-Islamic link with the Kuraysh: the mother of the Prophet's uncle, al-'Abbâs b. 'Abd al-Muttalib [q.v.], was one of them. She is supposed to have been the first Arab woman to provide a covering for the Ka'ba, following a vow she made when little al-'Abbâs went lost.

Before Islam the Namir (like the Taghibî) were
within the sphere of influence of the Sasanids and the Lakhmids [q.v.] of al-Hira. Ma‘a al-Sam‘a, the mother of the Lakhmid king al-Mundhir III (d. 505-54), who was of the Namir, was taken captive in a raid carried out by al-Mundhir’s father; the fact that al-Mundhir had a half-brother among the Namir did not go unmentioned by the genealogists. One of the Arab units that fought on the Sasanid side in the battle of Dhū Kār (ca. 605) included warriors from the Taglibh and the Namir. In the ridda [q.v.], there were Namaris among the troops who came from the Djazira with Sad‘āb [q.v.], the false prophetess of the Tamīm [q.v.]. A whole subdivision of the Namir, the Aws Manāt b. al-Namir b. Kāsit, was wiped out (wabri) during the ridda by Khalid b. al-Walid. In ‘Ayn al-Tamr during the conquests a Namir led a large force made up of Christians from the Namir, the Taglibh, the Iyād, and others, which was defeated by Khalid. Later during the conquests Christians of the Namir fought alongside the Mutḥanna b. Ḥarīsha against the Sasanids in the battle of al-Buwayb (near al-Hira).

Some Namaris who converted to Islam during the conquests settled in Kufa together with members of the Taglibh and the Namir. In the early 7th/13th century, the fortress of Nandana, the name of a hilly tract and a tract of mediaeval India and Indo-Muslim times, it lies in a fold of the Salt Range, to the west of Multan and capturing an immense booty there (al-Utbī, al-Ta‘ī ḥiyk al-Yamnī, with comm. of al-Manṣūrī, ii, 146-53 (calling the place Nardin); Gardizi, Ḷyn al-šāhārī, ed. Nāẓim, ed. Nāẓim, 72; M. Nāẓim, The life and times of Sultān Mahmūd of Ghazna, Cambridge 93, 91-3). Thereafter, the Ghaznavids tried to retain control of Nandana as a foothold or entry point to the plains of northwestern India, as Abu ʿl-Faḍl Bayhaḵī, Tārīḵ-i Muʿābd, ed. Ghānī and Fayyād, 149, describes it.

In the early 7th/13th century, the fortress of Nandana, in what was then in Islamic sources called the Dūjā hills, was held by a former commander of the Ghurids, Kamar al-Dīn Karmanī (in the surmise of Boyle, to be equated with Nāṣir al-Dīn Kūbāda, the ruler in Multān and Sind). Gūḡīz Kūh, in his pursuit of the Khwārazm Shāh Djalāl al-Dīn Mingburnu, sent an army under Torbey Toḵšīn which sacked Nandana in 618/1221, and then went on to attack Mutlaq (Dūjjāndi), Tabakšt-i Nāṣirī, tr. Raverty, i, 534-5; Ḫwawmīn-Būye, i, 141-2). Nandana was later temporarily captured by the Dūhi Sultān Iltumnīsh [q.v.], whose son and eventual successor Mahmūd Shāh in 614-5/1217 ravaged the region in revenge for the local Rāna having guided a Mongol raid (Dūjjāndi, i, 677-9). It does not, however, seem thereafter to have played a significant role in history.

The place is still marked by ruins of a fortress and a Hindu temple near the modern Cao Saydan Shah (lat. 32° 43' N., long. 73° 17' E.), in the Jhelum District gazetteers, xviii, Lahore 1904, 46-7; Imperial gazetteers of India, xviii, 349.

NATHR (Ar.), prose. The word is a noun denoting activity, derived from a verb meaning “to disperse, disseminate”; its opposite is nazm, from a verb meaning “to join, set out in order”, which is used to designate poetry. For Arab theorists, prose can be distinguished from poetry as the genre of literature which is not subjected to the order and constraints imposed by rhyme and metre. Such a formal definition is due to the fact that the prose they made the object of their attention was either the artistic prose of chancery documents, rasā‘īl [pl. of risāla [q.v.], or the prose of the addresses or sermons, khatā, [pl of khatā [q.v.]]. Whatever level of literary elaboration or rhetorical device required, they are all the same for the genres of prose and poetry, and are collectively referred to under the general term rasā‘īl or maqāl.[q.v.].

In a striking manner, this fact is shown, inter alia, by the procedures known as ḥall al-nasām and nazm al-moṭāhir, setting a passage of prose into verse or verse into prose, in which the maqāl [q.v.], the image of an idea expressed in the smallest unit of discourse, whether verse or colon, is launched in poetry or prose respectively. This procedure has been discussed since the 4th/10th century and was presented as a subtle form of plagiarism by theorists like Abū Hilal al-Ma‘ṣūrī, in his K. al-Sinā‘at, ed. A. M. Bīdawī and A. Ibrāhīm, Cairo 1957, 198. The author al-Tha‘lībī (d. 429/1037), one of whose works was Nāṭīr al-nazn wa-hall al-‘ad, and later on Dīyā‘ al-Dīn Ibn al-‘Ādīr (d. 637/1239) in his al-Muğal al-sa‘īr, ed. A. al-Ḥaḍī and B. Taḥānī, 4 vols., Cairo 1959, i, 126-7, considered that rendering a verse into prose in a risāla was a way of achieving a higher level of literary expression. However, the formal point of view, which presumes a substantial literary equivalence between poetry and prose, did not exhaust the attention of the theorists to this problem. For example, they would raise the question of the superiority of one of the genres over the other, often basing their judgement more on sociological than on literary considerations; such considerations were the function of the chancery clerk or secretary (khāṭāb [q.v.], mutarrasīl) and the poet, or the importance of the subjects they
were dealing with, or the attitude adopted by the two genres towards religion and morals. Some authors (e.g. Ibn Khaldūn, Makaddimah, fajr 46), moreover, note that the essence of poetry does not reside in prosodic form but in the images that are expressed by this form.

The origins of prose

We can find examples of prose dating from the pre-Islamic period, such as proverbia (mutajjal [g.v.]), the prophecies of soothsayers (saqf [g.v.] al-sahbān) and sermons. Many formal characteristics of these documents, of which the authenticity in the literal meaning of that word can, of course, be debated, are the same as those of poetry: conciseness, allusive language and independent, paratactic clauses. These oral examples of prose can be connected with the remnants of prose of the same genre from the time of the Prophet and the very beginning of Islam. It was the arrival of Islam that saw one of the ancient literary genres, the khutba, the address or sermon, acquire new traits and gradually gain great popularity; for the importance of the orator in the pre-Islamic period see further KHATIB.

While from the point of view of style these documents maintain the solidity and simplicity of pre-Islamic prose, far removed from the embellishments which these genres would later present, one is no longer faced with detached aphorisms (as in the case of the famous sermons of Kuss b. Sā‘īda [g.v.] of the Lyād, al-Dhahib, Beşār, i, 308-9), but with contents that need to be communicated and thus articulated in a logical manner, the contents being of a religious nature as well as pertinent to the organisation of the new community. The new conditions were not without consequences on the level to which the prose could be elaborated. Similarly, the collections of hadith [g.v.] take the form of short disjointed statements, often in the form of direct speech, and only a small number of fragments composed in literary prose remain from this period (cf. W. Fischer, Ein Stück vorklassischer, arabischer Künstprosa in der Umm ben Hadid Legende, in Festchrift W. Eides, Wiesbaden 1967, 318-27; he points out the similarities in this text with poetry).

Among the examples of prose from this period, the letters as well as other documents emanating from the Prophet and the first caliphs should be included. These documents from older sources have been collected by M. Hamidullah in Documents sur la diplomatie musulmane à l'époque des califes orthodoxes, Paris 1935; also an Arabic edition, Maqāmil al-wafa’ik al-ṣiyyasaya fī ‘l-adh al-nabawī wa ’l-khāfija al-nāṣiha, Cairo 1941.

The problem of their authenticity has been, of course, raised and the criterion most often used is that of linguistic usage (op. cit., 4-5, in the French edition; B. Reichel-Baumgartner, Parameter des Ideolōks des Propheten Muhammad auf Grundlage des Sabhī von al- Baḥṭīrī, in WĀK, lxviii [1988], 121-59). Problems of authenticity as well as of the transmission of ancient texts are examined by G.H.A. Juynboll, On the origin of Arabic prose: reflections on authenticity, in Studies on the first centuries of Islamic society, Carbondale, Ill. 1982; and R.B. Serjeant, The Caliph ‘Umar’s letters to Abī Mūsā al- Ḥishārī and Mu‘āwiyah, in JSS, xxix [1984], 65-79.

The influence of the Kur'ān on the evolution of prose

Without any doubt, the Kur’ān is the primary example of a complex text in Arab literature that has not been composed in verse. The language that is used is one elaborated as a poetic koine, the only one capable of communicating such a message. In form, especially in the more ancient suras, it is close to poetic style. In the Muslim tradition, however, Scripture is distinguished from poetry as it is from prose, for literary as well as religious reasons; the deliberations of Muslim scholars about the form of the sacred text have taken on the form of the dogma of tafṣīr [g.v.], the “stylistic uniqueness” of the Kur’ān.

Classical texts on poetry use the same criteria for analysis in order to show that the divide between the Kur’ān and literary discourse was uncrossable (see e.g. Pāţāq al-Kur’ān of al-Bakīllānī, d. 403/1013 [g.v.]; G.E. von Grunebaum, A tenth-century document of Arabic literary theory and criticism, Chicago 1950). On the other hand there are some treatises drawn up to show that the decorative style of poetry could be found also in the Kur’ān (Ibn Abī ‘l-Iṣa‘a‘, d. 654/1256, Badī‘ al-Kur’ān, ed. H. Sharaf, Cairo 1957). In short, the Kur’ān plays an integral part in Arabic literary discourse, but it reaches a certain level of style which removes it far away from any other type of discourse. In modern times, one typical example of this attitude is that of Tāhā Husayn, who does not look at the Kur’ān when dealing with poetry and prose, for “it is neither poetry nor prose” (Mīn hadīth al-qur‘ān wa l-nahj, Cairo 1936, 25).

It can therefore be concluded that, although the influence of the Kur’ān on the evolution of Arabic prose is immense from the point of view of religious content, the political and cultural effect its message has brought with it, and the status that has been imparted to the language in which it was transmitted, its influence on style is much more subtle to define. Treatises such as Ḥuṣn al-tawassul ilā sinā‘at al-tarāsul of Shihāb al-Dīn al-Halabī (d. 725/1325), ed. A. Youn, Baghdad 1980, insist that the strongest way for an argument to be confirmed is that citations from the Kur’ān must be inserted into a letter or into an official document, on condition that neither form nor basis is modified (72-3). Perhaps the earliest evidence for this exhortation to the kāhib, secretary, to get to know and use quotations from the Kur’ān as part of his professional training dates from the Rūṣālat al-‘Adhārī of Ibn al-Ṣāhibānī (d. 298/910, ed. M. Ḍibārā, Cairo 1931, under the name of Ibn al-Mudābārī, 7; see Sanū‘, op. cit., 6).

There is a more liberal attitude towards the text of the Kur’ān when it is approached from the viewpoint of ma‘ānī [g.v.], “the fact of wishing to equalise”. From the point of view of literary sentiment, and disregarding religious aspects, one could say that ma‘ānī is to the Kur’ān what seifs is to poetry: there exists a threshold of literary propriety beyond which one should not tread without incurring blame, to be respected even more in the case of the Kur’ān. As stated by W. Marçais, “from very early on it appeared futile and even sacrilegious to want
to imitate it" (see Les origines de la prose litteraire arabe, in Rev. Afr., lviii [1927], 15-28).

But at the outset, literary prose shows evidence of a different attitude. Systematic studies conducted by W. al-Kāḍī show that two prose writers adopted a more liberal attitude to the sacred text (Bīyār b. Abī Kāthīr al-Balawat, nāmīdāt al-nāṭṣ al-fanm al-mubākkr wa'l-kāfūr, ed. I.M. al-Saffār, Bagdād 1975, see Sanni, op. cit., 5-7); passages from the Qurʾān could be paraphrased to adapt them to the new syntax, and paraprases and citations could even be combined; a quotation could be extended with phrases composed in the same rhythm.

On the other hand theorists recommended to the prose writers the ikhbās of the Kurʾān, inserting a passage which is not an explicit quotation (for this see for example the presentation of Ibn al-ʾAbīh, al-Muḥaddith al-wādī, i, 44). It is widely used as a literary device by kuttāb and orators; al-Ṭabāʾilī devotes a whole chapter in his Kitāb al-lwān al-kałow, ed. I.M. al-Saffār, Bagdād 1975, see Sanni, op. cit., 5-7; the work has recently been described by Cl. Gilliot in Arabica, xlvii [2000], 488-500. Of course, in contrast to poetry, the insertion of a fragment from the Kurʾān could be identified immediately (Husn al-tawassul, 323) and within these limits did not appear to be taken as a tentative muʿāraḍa. Other studies, such as those undertaken by W. al-Kāḍī, are very much a desideratum; cf. recently K. Zakharia, Les références coraniques dans les Maqamat al-Dhahiri, in Arabicu, xxiv [1987], 275-86; U. Marzolph, The Qurʾān and Popular literature, in Arabicu, xlvii [2000], 478-87.

Classical prose

The turbulent times of the Umayyad period found expression in the art of oratory. As it developed in this period, it represents the transition from oral to written Arabic prose. Al-Dhārijī (K. al-Baydān wa-l-thāriba, see i. 44) classified kuttāb alongside poetry and noted the use of sajj as characteristic. A recent study has investigated the same characteristic, that which is to be found in this work and has uncovered a technique not only in the especially careful structure but also in the presence of recurring phraseology which the author is able to assemble at will; see M. Hāfi, Rhétorique et ṣuḥba dans le Kuttāb al-baydān wa-l-thāriba de Gāzīb, thesis, Université de Lumière-Lyon II 1994, 369; also I. Ḥāfi, Fann al-khāfiṣa wa-tatawūrān ind al-arab, Beirut n.d.

However, Arabic prose of the classical period acquires its character from the written genre of the ṣuḥba as found in the Umayyad kuttāb: ʿAbd al-Hamīd (d. 123/745 [q.v.]) and his contemporary Ibn al-Mukaffaʾ (d. 139/756 [q.v.]) (see J.D. Latham, Ibn al-Muqaffaʾ and early Abbasid prose, in Camb. hist. of Ar. lit., opp. cit., 1983, 154-64; or the introduction to the work already mentioned of al-Ṭabāʾilī, Nafṭ al-nazm).

At the beginning of the Abbasid period, a high peak in style was reached here by al-Dhārijī (q.v.), who had an inestimable influence on later Arabic prose and who contributed to the enunciation of a technical terminology for the baldgha. Al-Dhārijī was a Muʿtaṣīb, and his belief can be seen in the dialectical skill of which he seeks to give proof in a number of his treatises, where he expounds arguments to praise and to condemn the same thing or the same idea (J. Gericke, Un genre littéraire arabe: al-Muḥāsin wa l-Mashār, Paris 1977). But al-Dhārijī was not the first, for there is preserved a fragment from Sahl b. Ḥarīr (d. 215/830 [q.v.]), in which he argues for glass to be given pre-eminence over gold (Ibn Nubāta, Sahl al-sujūn, ṣanāʾ risālat Ibn Zaydūn, Cairo 1957, 139).

Besides this, ʿAbd al-Hamīd, in his treatises addressed to the kuttāb lists among the qualities necessary for the accomplishment of their duties a knowledge of ancient poetry, including its vocabulary and its themes; he himself proved his ability in a risāla describing a hunting expedition which has echoes of pre-Islamic verse on the same theme; more details on ʿAbd al-
Hamid are to be found in e.g. H. Schöning, Das Sendschreiben des Abul-Mahmūd b. Yahyā (gest. 132/750) an den Kronprinzen Abūl-Mahmūd b. Marwān II, Stuttgart 1985, and al-Kādījī, Early Islamic state letters: the question of authenticity, in A. Cameron and L.I. Conrad (eds.), The Early Islamic State Letters, 1, Princeton 1992, 215-75, which examines the transmission of these epistles.

The later development of prose

The way style evolved is the most obvious feature in the history of this prose, especially from the formal point of view in the use of richer and more laboured ornamentation (baddī [g.v.]) and sajjī. Such a style figures primarily but not exclusively in documents emanating from the kātibī, and it has been studied because, as has been seen, what interested the theorists was the kātibī (the prose of the literary secretaries [g.v.]). The fragments we have of Sahīl b. Hārūn already display a style involving rhythmic scan-}

In each segment the syntactic structure is the same, as also to a certain degree is the morphological structure, by the selection of the patterns of nouns and verbs. This concerns the phrase its typical rhythm, without any insistence on assonance or rhyme. Beeston (op. cit., 185) underscores the difference between this elaborated style and the simplicity of the primitive sajjī. Al-Dīhījī makes very moderate use of the style; his arguments are developed in a full and diffuse manner; sometimes he uses the same syntactic device but without seeking any symmetry. In those parts of his work which are not a collection of akhbār, Ibn Kūṭayba likes to make use of the style here described, in the well-constructed introduction to Adāb al-kātīb, for example; some elegant examples of this style are to be found in Abū Ḥayyān al-Tawḥīdī (d. 414/1023 [g.v.]), or Ibn Hazm (d. 456/1064 [g.v.]) from al-Andalus.

Frequently, different registers of style can be found in the same author; e.g. Ibn al-Mukaffa' uses a simple and unconstrued style in Kitāb waḍ-Dirma [g.v.], in contradistinction to the laboured style which he adopts for his original work and which was to influence later prose. Miskawayh (d. 421/1030 [g.v.]) has a sober, concise style of prose in his Tażdīrib al-umān, but more expansive in al-Husaynī wa l-λaḥṣāxī.

Prose which does not keep to the rules of sajjī is called al-nāthīr al-mursal, and it is in this style that the majority of works in classical prose have been written; in them the use of sajjī and the other stylistic conventions, if they exist at all, is often restricted to the author's opening prologue. Such is the case in e.g. Abū l-Faraj al-Iṣfahānī (d. 365/972-3 [g.v.]), Kitāb al-Aghānī, where the introduction explains the purpose of the book without any literary embellishment; or Abū Ǧaʿfar al-Ṭabarī (d. 310/923 [g.v.]), Tażdīrib al-Rasūl wa l-ʾmīlāk, who commences his book with a praise to God in sajjī.

Prose that relates a series of events, which is strictly concerned with facts, whether they be historical or scientific, and that uses in general short, juxtaposed phrases must be distinguished from prose whose purpose is argument or exhortation. This latter type of prose, whether or not it uses parallelism, displays a syntax consisting of complex phrases and a number of parentheses. A remarkable example of such prose is the style of the famous writer of verse Abū al-Kāhir al-Djurjānī (d. 471/1078 [g.v. in Suppl.]).
Evidently there was a technical vocabulary for each science (see e.g. L. Masson, *Essai sur l'origine du lexique technique de la mystique musulmane*, Paris 1959; C.E. Bosworth, *Abū 'Abdallāh al-Khūzaymī on the technical terms of the *Rehlat* in JESHO, xii (1969), 113-64; A.M. Goichon, *Lexicographie de la langue philosophique d'Ibn Ṣīnā*, Paris 1938). There also existed stylistic conventions of form, like the fictitious dialogue, through which argument in theological texts was conducted; the earliest examples of this technique seem to date from the a period before the Mu'tazila, and have been investigated by J. van Ess, *Disputationenpraxis in der islamischen Theologie, in REI*, xu (1977); idem, *Early development of kālim, in Studies on the first century*, 105-23; idem, *The logical structure of Islamic theology, in von Grunebaum (ed.), Logic in classical Islamic culture, Wiesbaden 1970*, 21-50. In this last study, the author makes a close investigation of the method and the terminology in the theological argumentation based on Aristotelian logic, and he shows how al-Ghazālī, once he had adopted this method as the only one capable of demonstrating religious truth, in order to get it accepted preserved the terminology of *w[iy] al-fikḥ* [*q.v.*]. This manner of argumentation goes beyond the field of theology and was followed, for example, in the grammar of al-Ṭāhir b. ʿĪsā al-Rummānī (d. 384/994 [*q.v.*]) in his commentary on the *Kitāb al-Siyāsah* of Ibn Zaydun (d. 463/1070) *Risālah Hazliyya* [*q.v.*]; on the one hand to bridge the gap between the "lack of fiction", which one can see in classical Arabic literature, and modern literary fiction, and on the other hand to examine the forms of awareness that the "reporter" of a khabar could have in composing in reality a work of literature. Further studies include those to be found in Leder, *op. cit.*, see *Sīr Ayālā, Fann al-khabar fi masāḥat al-kiyāsah, in Fussūl, ii (1982)*, 11-18; Leder, *Features of the novel in early history, in Cameron and Conrad (eds.), *The literary use of the Khabar: a basic form of historical setting, in Cameron and Conrad (eds.), *The literary use of the Khabar: a basic form of historical writing, in Cameron and Conrad (eds.), *The lit*

NAY (p., in Tišh, ney), a rim-blown flute made of reed (arundo donax L.). The name, meaning basically “reed”, is known from Pahlavi, in which it was a loanword from Aramaic qn(‘) (cf. Assyrian qanu, qanu‘u, qnh). (cf. Assyrian qanu, qanu‘u, qnh). The name, meaning basically “reed”, is known from Pahlavi, in which it was a loanword from Aramaic qn(‘) (cf. Assyrian qanu, qanu‘u, qnh). However in early Arabic sources, such as the Kitâb al-`Aţhâni, the term nay most probably denoted not a flute but a double-reed woodwind instrument of the mizmûr [q.v.] family. The mizmûr, because of its colour, was also called nay siyâh “black nay” in contrast to the nay safîd “white nay”, i.e. the flute.

The rim-blown flute has been known since the 3rd millennium B.C. in Ancient Egypt as well as in Mesopotamia. For Ancient Egypt, written and iconographic testimonies of flute players are frequent. While the Sumerian flutes found at Ur are metal fragments, the Egyptian ones are of reed. The ancient Egyptian flutes that are preserved in the Egyptian Museum of Cairo were played and recorded by Mahmûd lffât in 1991. Some of them produced a pentatonic scale, others a heptatonic one.

After its peak in Antiquity, the rim-blown flute survived as a folk instrument until Šûfî movements in Islam gave it a new and prominent place in religious music (see below). The folk flutes do not conform to the norms of the classical instrument. They may be made of wood, reed or metal and have many local names, as e.g. the Palestinian and Syrian al-fâhâbî (similar to the human voice. According to a legend from God. The famous Mulânaza al-Djâlî al-Dîn Rûmî (604-72/1207-73 [q.v.]), the nay voices the Prophet’s secret revelations which no other human being has ever heard. Before this, ‘All had told the secrets to a well at the edge of which reeds grew.

In Šûfî music, the nay is the most prominent melodic instrument of all. The Šâfîs hear the sound of the nay as the crying of the reed after it is cut. It is like the crying of the soul because of its separation from God. The famous Mulânaza al-Djâlî al-Dîn Rûmî (604-72/1207-73 [q.v.]), the nay voices the Prophet’s secret revelations which no other human being has ever heard. Before this, ‘All had told the secrets to a well at the edge of which reeds grew.

The sound of the nay is regarded as particularly similar to the human voice. According to a legend in the Maţâfar al-‘alâ‘îb, ascribed to Farîd al-Dîn Ābu’l-ma‘āle (ca. 515-618/1119-1221 [q.v.]), the nay voices the Prophet’s secret revelations which no other human being has ever heard. Before this, ‘All had told the secrets to a well at the edge of which reeds grew.”

Impressed by the modern European flute, several attempts have been made to technically improve and modernize the nay. Until now, none of these attempts has been widely accepted. According to its construction and characteristics, it is one of the most essential instrument, which demands high skill of its players and plays an important role even in modern music.

The nay has been the favoured wind instrument of court and court music from around the 8th/9th century onwards. As a court music instrument, the nay is frequently represented in Persian miniature paintings. It is played solo or in mixed ensembles, but normally not with other nays. Turkish ensembles, however, sometimes have many nays playing together. The dances of the Mevlevi dervishes, for example, are accompanied by drums and nays only. When playing with a singer, the nay is especially used for short melodic formulas (lâţâma, pl. lâţâlim) and improvisations (takšîm, pl. takšâlim).

The sound of the nay is regarded as particularly similar to the human voice. According to a legend in the Maţâfar al-‘alâ‘îb, ascribed to Farîd al-Dîn Ābu’l-ma‘âle (ca. 515-618/1119-1221 [q.v.]), the nay voices the Prophet’s secret revelations which no other human being has ever heard. Before this, ‘All had told the secrets to a well at the edge of which reeds grew.

Nouvel essai d'inventaire de l'œuvre Gdhigienne, Arabica, xxxi [1984], 117ff., no. 191, to a ms. copy of this which is unfortunately lost (Ch. Pellat's reference in did not believe that the composition of the Kur'an sarfa notion of his teacher al-Nazzam who [q.v], (al-Intisdr, is proof for the prophethood of Muhammad—God ing the argument for the well-orderedness work preserved in the Escorial library is erroneous, particularly, it is evidently the backbone of the con- position" (note that Hilyat al-muhdara, Baghdad 1979, i, 426). Yet Abu between c as merely i contains all the elements of the cception of as "stylistic inimitability of the dj_dz Abbasid times al-Burhdn, Ishak b. Ibrahim b. Wahb, tentionally bad poetry, or didactive verse (see e.g. Ziyad al-Zu Das Verhdltnis von Poesie und Prosa and employ the terms (on this debate, see 

NAY — NAZM

1. In metrical speech. Literally meaning "stringing (pearls, beads, etc.)," in early 'Abbasid times nazzm acquired the meaning of "versifying", "versification", and became almost synonymous with "poetry," shir [q.v.], especially when contrasted with prose, nathr, literally "scattering". The comparison of a poem to a necklace, or verses to pearls, is apt in view of the relative independence of the individual verses, held together on the string of the uniform metre and rhyme. The image has pre-'Abbasid origins, and although the noun nazzm was not used in the sense of "verse" until later (and Kudama b. Dhifar [q.v.]) still does not do so in his poetics, at least the related verb had already been used, when the 1st/7th century poet al-Nadjashi said Sa-anazima min 'urri 'l-kulami fi'dalatim "I shall string/ compose an ode of noble speech" (al-Huizi, Nusfii' al-munafizan, 1979, i, 126). Yet Abū Nuwās [q.v.] could still speak, in an ode addressed to al-Amin, of "my scattering (nathr) pearls on you" (Dhuṭi, ed. Wagner, i, 241). The many discussions on the relative merits of prose and poetry regularly employ the terms nazzm and nathr (on this debate, see e.g. Ziyad al-Zuḫi, Das Verhältniss von Poesie und Prosa in der arabischen Literatur-theorie des Mittelalters, Berlin 1987). Not rarely, however, a distinction is made between šīr as "true" poetry and nazzm as merely versifying, i.e. either prosodically correct but intentionally had no poetry, or didactic verse (see e.g. Ishāk b. ʻIlūh b. Wahb, al-Burhdn, Cairo 1969, 130; Ibn Khalūn, The Muraddinah, tr. F. Rosenthal, Princeton 1967, iii, 381-2).

G.J.H. VAN GELDER

2. In Kur'ānic studies. Here, the arrangement of pearls on a string is used metaphorically to indicate "ordering of words-am-meanings", i.e. "composition" (note that tatīf is sometimes used synonymously with nazzm), or, more freely, the "style" of the Kur'an. In this sense it is closely connected with the discussions of the dogma of ʾīdgāz al-Kurān [q.v.]; more particularly, it is evidently the backbone of the conception of ʾīdgāz as "stylistic inimitability" of the Kur'an. The first known work devoted to this notion is the K. fī ʾ-ḥayyāṯīdī l-ʾīdīn al-Kurān wa-sulāmatihī min al-ṣīḥāṭa wa-l-nawshirāt of al-Dajīz (d. 255/668-9 [q.v.]), which is unfortunately lost (Ch. Pellat's reference in did not believe that the composition of the Kur'an sarfa notion of his teacher al-Nazzam who [q.v.], described it as follows: "No book is known concerning the argument for the well-orderedness (nazzm) and the wondrous composition of the Kur'an, and that it is proof for the prophethood of Muhammad—God bless him except the book of al-Dajīz" (al-Intisār, ed. A. N. Nader [Beirut 1957], 111). This description contains all the elements of the ʾīdgāz concept, as generally adopted later. Al-Dajīz radically breaks with the ṣarfā notion of his teacher al-Nazzām [q.v.], who did not believe that the composition of the Kur'an was stylistically unattainable and who thought that Muhammad's pagan contemporaries, challenged to produce something like a sūrah, were "turned away" by God from carrying out this task.

Claude Audebert has compiled a list of works on nazzm up to the time of al-Khaṭṭābī, eight in all (al-Khaṭṭābī, 59-61). The most explicit title—and moody we have we have, one given to the Mu'taṣallī al-Waṣī'ī (d. 306/918 or 307/919) book: K. ēdgāz al-Kurān fī-nazzmī wa-taṭārīf (ibid., 59). It states the connection between ʾīdgāz and nazzm and the near-synonymy of nazzm and taṭārīf. It is remarkable that the authors of these works are partly mutakkallimīn and partly traditionists. Al-Khaṭṭābī (d. 386/996 or 388/998 [q.v.]), in his treatise Bayān ēdgāz al-Kurān, postulates a triad of ele- ments that make up "speech" (ṣalām), namely, laṣfīn ħamīšān wa-sam-mūn bi-hā' ir-rihān taḥtun nazzm "words as carriers, meaning subsisting in them, and a connection that orders both of them" (ed. M. Khalaf Allāh and M.Z. Šālām, 24 l. 11; tr. Audebert, al-Khaṭṭābī, 120, cf. also 87). The third element is usually called nazzm; al-Khaṭṭābī not infrequently also uses the plural nazzūm to refer to the syntactic-stylistic "structures" or "molds" (this plural is not in the diction- naries). In all three elements the Kur'an is the superior text, as the following extract from the preface of the treatise states: The works of nazzm are several times metaphorically characterised (the various "types of ordering" [nāẓūn al-nazzm] are a "bridle on the words and a rein on the meanings" [nāẓūn al-ālāf wa-'l-nāzūn al-mādhīn; cf. ed., 33; tr. 128], but not defined and explicitly discussed. A large part of al-Khaṭṭābī's Bayān is devoted to linguistic-stylistic criticisms (i.e. criticisms of the nazzm of Kur'ānic passages by others, followed by the author's refutation (al-Khaṭṭābī, 97-102).

Al-Bākallāhī (d. 403/1013 [q.v.]), in his ēdgāz al- Kurān, lists the excellent nazzm of the Kur'an as the third reason for its inimitability (after [1] prophesys- passes, and [2] the illiteracy of the Prophet, which proves Divine instruction about creation, etc.). He enumerates ten aspects of this nazzm: (1) The Kur'an is sui generis as a literary genre (35). (2) The Arabs had not produced any eloquent text of such enormous length (36). (3) The Kur'an is homogeneously eloquent in all its subgenres such as narrat-ives, anecdotes, arguments, etc., whereas a poet may excel in panegyrics but not in invective, or vice versa (36-8). (4) The smooth transition from one topic to the next in the Kur'an is unrivalled (38). (5) Not only man is unable to produce anything similar to it, but so are the jinn (38-41). (6) All stylistic and rhetorical possibilities occur in the Kur'an (42). (7) Expressing new ideas, rather than well-worn ones, with beautiful words is the highest level of language mastership (bā'āra'; this the Kur'an does when it speaks about legal and religious matters (42). (8) When a Kur'ānic phrase is quoted, it stands out in its new textual surrounding through its beauty (42-4). (9) The "mysterious letters" at the beginning of twenty-eight sūras show an amazingly regular selection of phonemes, when measured against the various groups of phonemes that the grammarians have established (44-6). (10) The style of the Kur'an is easy though impossible to imitate (bā'āra' ilā 'l-akhirīn yakānim māna'dha l-āfījā ilā kābīl . . . wa-lawwa mu'ta'shībi muntaha l-mālāgā; it is equally distant from lexical unorthodoxy (qūthāb) and unusual- ness (gkarī [q.v.], on the one hand, and from affected artfulness (al-sarā' al-mutakkallisāt), on the other (46). The list clearly shows that al-Bākallāhī is not interested in the micro-analysis of what constitutes nazzm,
nor does he establish, as al-Khattabi does, the strict correlation between nazm and the other two elements of speech, "words" and "meaning". He focuses more on the overall linguistic-literary quality of the Kur'an text.

Abd al-Khâbir al-Djurdjanî (d. 471/1078 or 474/1081 [q.v. in Suppl.]), in his Đàlâ'il al-îfâqah ("Proofs for the Inimitability"), comes again closer to al-Khatthâbi, who may be called his precursor in matters of nazm. But al-Djurdjanî surpasses him by far. Over hundreds of pages he subjects Kur'anic phrases, or syntactic phenomena in general, to the most painstaking semantic analysis and thus manages to fill the notion of nazm with real content. He defines it as kawûdhi ma'âni 'înshâ'at ("minding the meanings of syntactic relations"). The syntactic-semantic phenomena discussed include alâ 'alâ word order (tâdâlim wa-a'la-khâlîn), ellipsis (hâdîf), syntactic and asyndetic coordination (wasâl wa-fasâl), and the various functions of the sentence-initial particle innâ (see also Weisweiler, in Bbl). The "ordering" (nazm) creates a specific shape/form (fârâa) for a general gharad ("intention") in the mind and, parallel to it, in the language: the meaning (ma'âni) and the expression/wording (la'fâ) of a proposition (koldâm) thus become mirror images. The inherited but, according to al-Djurdjanî, misunderstood dichotomy la'fâ-ma'âni is thus reinterpreted: the wording (la'fâ) is no longer a "garment" for a "naked" ma'âni. The two are inseparable, no "meaning" can be expressed by two "wordings" equally well; the two "wordings" would express two different "meanings".

K. Abu Deeb (Poetic imagery, 24-64) and, more recently, N. Kermani (Gott ist schön, 253-84, esp. 264 and n. 144) have argued that, with many of his deep-cutting analyses, al-Djurdjanî is a precursor of modern linguistic approaches the perceived "incoherence" is considered to be rather one of the strengths of the Holy Book (see Kermani, Gott ist schön, 281).

[NISIM B. YAKUB]
genre as practiced by al-Madā‘īnī (d. 225/840), Ibn Abī ‘l-Dunyā (d. 281/894) and al-Muḥassīn al-Tanūḥī (d. 384/994), and have a religious, perhaps Jewish, origin. Nissim Ibn Shahīn’s stories do not have a secular character like most of al-Tanūḥī’s stories, but are embedded in a religious context. Some stories such as “The perfidious wife” and “The story of Kīdor” found their way into other mediaeval belletristic collections.

(A. Schippers)

NIZĀM ‘ASKĀRĪ (A.), military organisation, the system of military rule in modern Islamic lands (for a consideration of military organisation before ca. 1000, see qayyūm; bāb; itīdād).

1. In the modern Arab world
2. In modern Iran
3. In the late Ottoman Empire and the Turkish Republic
4. In Pakistan

1. In the modern Arab world.

The frequent appearance of military regimes in the Arab sector of the Muslim world during the second part of the 20th century owes less to a tradition of Arab military conquest and diffusion of Islam than to the style of power exercised by the Ottoman Sultans—with it occupied in executive power. It permeated all the fields of political activity including the parties, exercised a tight control over the population using the force authorised by emergency laws and with recourse to the mukhābārat, the intelligence and police services. Arab republics and monarchies were thus transformed into “military societies” (Abdelmalek 1962).

II

The analysis of Arab military regimes has given rise to three distinct interpretations of their nature and effect on the state and the society of the countries concerned. The first credited the dominant participation of officers in the government with the qualities of order, efficiency and honesty as well as technical and organisational capacities. The army was seen as the best agency for the purpose of ensuring the development of the country, educating society and being the bearer of modern values and practices, since the generation of officers trained since independence belonged to a “new middle class” with modernising tendencies (Halpern 1962, 278); their nationalist sensibility, whether Arab (kawmi) or patriotic (wastani), manifested through various anti-colonial and revolutionary ideologies, gave them the legitimacy to impose on society a modernisation “from above” (industrialisation, agrarian reform) inspired by the Kemālist model (Allush 1968).

After the Arab defeat of 1967 and in view of the poor economic performance of Egypt and of Syria under military rule, then that of Algeria in the 1980s, a second analysis has prevailed. It described nizām ‘askārī as “praetorian”, and considered the army an agency for the maintenance of order in the service of an authoritarian and barely representative political power, pursuing its corporatist interests rather than a social project (Perlmutter 1974).

Until the turn of the 1990s, oil revenues and the priority given to the war effort assured the perpetuation of the nizām ‘askārī. Subsequently, Arab armies had a tendency to return to their military function while a number of officers became economic entrepreneurs benefiting from the inflāt. The nizām ‘askārī progressively gave way to civilian governments, still under military control. A third analysis then placed the accent on the simultaneously policing and predatory nature of these regimes (R. Owen, State, power and politics in the making of the modern Middle East, London 1992).

(a) Egypt

Although it was not historically the first, the prototype of nizām ‘askārī in the Arab regions of the modern Muslim world was that of the dubāt al-ahbār, the Free Officers who on 23 July 1952 overthrew the Egyptian dynasty which had itself been founded by an officer of the Ottoman army, Muhammad ʿAli [p.x.]. This group of some three hun-
dred officers (T. Aclimandos, *Les militaires égyptiens. Esprit de corps et révolution, in Peuples méditerranéens* / *Mediterranean Peoples, xli-xlii [1988], 87-104*), graduates of the Military Academy after 1936 (the date of its opening to indigenous Egyptians), had particularly resented the indifference of the monarchical regime during the war of 1948-9. Their nine leaders, constituted into a *Maghīṣ kiyddat al-thawra* (Revolu-
tionary Command Council), installed military personnel in the higher ranks of the executive on a permanent basis. Originally, the RCC united personalities of diver-
tense tendencies, Ṣārī al-Fâtât, al-Ikhŷān al-Mulûsûmîn [q.v.] and Communists, who held in common the nationalist and socialist objectives summarised in the *Falsafat al-thawra* of Dâmid ʿAbd al-Nâsîr [q.v. in Suppl.]. In the competition for power, the leftists of the RCC led by Yûsûf al-Sîdîk, and the liberals led by Khâlid Muḥyî ʿl-Dîn, were ousted in March 1953 and March 1954 respectively. The rupture with the Muslim Brotherhood took place on 12 January 1954. Whether socialist pan-Arabist as in the 1960s, or patriotic liberal as in the 1980s, Egyptian power hence-
forward depended on the alliance between the mili-
tary institution and the bureaucracy of state.

The executive was the prerogative of generals: presi-
dency of the Republic was taken by Muḥam-
mad Ṣâdāt, on 18 June 1952, and after his ousting
on 14 November 1954, by Nâsîr until his death on
28 September 1970, by Anwâr al-Ṣâdāt (assassinated 5 October 1981) and by Ḥusnî Mubârâk, who began
his fourth presidential period of power on 26
September 1999. In the government, one-fifth of the
ministerial posts (in particular Defence, Military
Production and the Interior) were occupied by senior
officers under Nâṣīr, and 7.5% under Ṣâdāt (M. Cooper, *The democratization of the Egyptian cabinet*, in *IJMES*, xiv [1982], 209). More than 80% of the posts of provincial governors belonged to them. Of the five
categories “allied to the régime”—workers, peasants,
intellectuals, nationalist capitalists and army—only the latter was authorised to organise itself, whereas the political parties were abolished on 16 January 1953
and replaced by a single party. After the defeat of
1967 and until the expulsion of the Soviet advisers in January 1972, a policy of raising the standard of recruit-
ment and of strategic co-operation with the USSR
made the institution the best endowed financially and
the most advanced in technological terms in the coun-
country (with the acquisition of the Mig-27), barely trou-
bled by internal conspiracies in October 1972, April
1974 (attempted uprising at the Military Academy by
the radical Islamist movement *al-Takjir wa ʿl-Hijra* [q.v.] and October 1981 (assassination of Ṣâdāt during a
military parade).

According to the National Charter (al-Mīthkāl al-
waṣaf) of 1962, the Egyptian military régime pre-
seemed itself initially as revolutionary. It initiated
economic and social reforms—the first agrarian reforms in September 1952 limiting property to 300 acres per
family, Egyptianisation of British and French assets (nationalisation of the Suez Canal, 26 July 1956),
nationalisation of heavy industry and textiles—and
launched major works of infrastructure such as the
Aswan Dam. However, the failures of economic poli-
cies combined with demographic growth of more than
3.5% per annum, and were dynamic, whilst the army numbered fewer than
5,000 men at Independence, recruited among the ethnic and religious minorities, and staffed by
French officers (N. Bou-Nacklie, *The Special Troops: reli-
gious and ethnic recruitment, 1916-1946*, in *IJMES*, xxv [1993], 649-640). However, thirteen coups d’état fol-
lowed the independence of the country and, after the seizure of power by Colonel Ḥusnî al-Zaʾīm [q.v.] on
30 March 1949, the army remained a dominant politi-
cal actor, except during the period of the United Arab

The first three military régimes in Syria were the
result of an inkiṣlîb, an uprising of officers discontented with the political direction of the country, in particu-
lar the treatment reserved for the armed forces and the circumstances of the defeat in Palestine. The
Colonels Ḥusnî al-Zaʾīm, Ṣâmîn al-Hîmâwî (14 August-
19 December 1949) and Adîb al-Šîshâkîl (exiled 25
February 1954) were motivated more by personal
ambition than by a political project. Like Zaʾîm, Šîshâkîl launched important constitutional reforms from
25 September 1950 and 10 July 1953, including the
reform of penal, civil and commercial codes as well as a first agrarian reform (30 July 1952). He granted
the right to vote to literate women, and abolished the
special treatment of Bedouin and the system of *awākîf*
[see ward]. The accession of Ža‘īm to the presidency of the Republic on 25 June 1949, and that of Shishakli on 10 July 1953, marked the apogee of authoritarian regimes characterised by the banning of political parties (replaced by Shishakli with the dawākul al-tahrīr al-dawla, 25 August 1952) and tight control of public life by an oppressive police force. The niẓām ‘askari was characterised also by a Syrian patriotism bordering on chauvinism in reaction to the “struggle for Syria”—real or imagined threats posed to the independence of the country by neighbouring states. Returning to the shadows, the Syrian army nevertheless did not cease from intervention in the political arena during the parliamentary period of 1954-8. Seventeen senior officers made their way to Cairo on 12 January 1958 to demand from Marshall ‘Amar and from Nāṣir the creation of the United Arab Republic. The army subsequently gave its support to the parliamentary restoration of September 1961, implemented under the leadership of Colonel Ŭbīd al-Karīm Našawī, who intervened again to “rectify” the policy directions of the government in March 1962 (M. Colombe, La République arabe syrienne à la lumière du coup d’état du 26 mars 1962, in Orient, 1st trim. [1962]).

The military Committee of between four and fourteen senior officers in the Regional Command of the Ba‘th Party from the time of the Ba‘th National Guard to take power on 13 November 1963 perpetrated by Nasirist and Ba‘thist officers led by the army maintained order through repression. The old social classes and the revolutionary tendency and the representation of minority communities gradually gained the upper hand, ending with the installation of a clandestine dictatorship under Colonel Sa‘ād al-Dīn al-Djāfd, assistant general secretary of the Ba‘th Party from the time of the disbandment of the civil wing of the Party on 23 February 1966. Nationalisations in industry and commerce (1965), international isolation and provocations on the Israeli front, favouring popular war, characterised revolutionary Syria under this regime weakened by the disaster of the war of June 1967. Excluding his rivals by a display of force within the Regional Command of the Ba‘th Party on 13 November 1970, General Hāfiz al-Asad turned the Syrian military regime in the direction of a more liberal economy through two infitāḥs, in 1971-4 and from 1986 onwards. The legislative elections of 1990, and Law 10 of 1991 on investments, marked the entry of a new entrepreneurial bourgeoisie into the coalition of power and the increased participation of senior officers in the world of business. But this economic liberalisation was not accompanied by political liberation, despite the creation of a Progressive National Front of six parties, including the Communist Party and the Arab Socialist Union around the Ba‘th (7 March 1972), The Constitution of 12 March 1973 installed a presidential régime. The state of emergency declared in 1963 remained in force. The army has maintained tight control of local life and internal security through its networks of mukhabārat, and in 1978-81 there was a massive crackdown on Islamists (H.G. Lobmeyer, Opposition and Widerstand in Syrien, Hamburg 1993, 204-536). Finally, to succeed his father as Head of State on 17 July 2000, Bashshar al-Asad was obliged to re-invent himself in some haste as a military figure.

(c) ‘Irāk

The modern ‘Irāk state, where the elites surrounding King Fāṣal (Di‘ā’ir al-As‘karī, Yāsīn al-Ḥāfinjī, Ḏalîmī al-Mīdāfī and Nūrī al-Salātī) were in the main former officers of the Ottoman army, was born in the violent suppression of the anti-British uprising in November 1920 (P.-L. Luizard, La formation d’Irak contemporain, Paris 1981). Even though ‘Irāk [g.v.] has not lived continuously under niẓām ‘askari, the army has remained the primary political force in the country, appointing and deposing governments, and controlling ethnic and social groups through violence (H. Batatu, The old social classes and the revolutionary movements of Iraq, Princeton 1978, 319-61). The suppression of the Assyrian revolt in June 1933, then that of the tribal uprisings in 1935-6 under the command of General Bakr Sidīkī gave the latter the incentive to launch the first coup d’état inspired by Kemalism in the modern Arab world on 24 October 1936. His assassination on 11 August 1937 at the instigation of four national officers (“the Gold Square”), led by Sa‘ād al-Dīn Sābbāh, was the prelude to the seizure of power by them and the inauguration of a regime independent of the British, of which the public figurehead was Raḥīd al-Ghiyānī (5 April-9 October 1941). From the creation of the state until the fall of the monarchy on 14 July 1958, the dominant personality of authority remained that of General Nūrī al-Salātī who had been prime minister for a total of 11 years and 9 months. While the monarchy neglected the institutionalisation of the state and the development of the country, governments supported by the army maintained order through repression. After the revolution of July 1958 and the fall of the monarchy, General Ťūd al-Karīm Kāsim [g.v.] quickly ousted the nine members of the Commanding Council of Free Officers, in particular Colonel Ťūd al-Salām ‘Arif, to impose himself as single leader (ťūd Ža‘īm [g.v.] al-aš-wad). His first government (27 July 1958) comprised five military figures out of sixteen members (Batatu 1978, 812) and the second (10 February 1959), six out of fourteen (Batatu 1978, 843). He authorised political parties, promulgated agrarian reforms (30 September 1958), inaugurated a state planification scheme (1959), partially nationalised the Iraq Petroleum Company (1961) and adopted measures to assist the disadvantaged urban classes. The régime of Kāsim was destabilised and its military character re/enforced by confrontations between Communist and Nationalist Arabs in Mawsil and Kirkuk (March-July 1959) and by the revival of the Kurdish revolt (September 1961). The military coup of 8 February 1963 perpetrated by Nāṣirīst and Ba‘thist officers led to a repetition of the same scenario: Ťūd al-Salām ‘Arif ousted the National Council of the Revolution and dismantled the Ba‘thist National Guard to take for himself presidency of the Republic and supreme command of the armed forces (18 November 1963). He imposed the Arab Socialist Union as the sole party on 14 July 1964. Under the régime of his brother, Colonel Ťūd al-Rahmān ‘Arif (13 April 1966-17 July 1968): a series of military governments ensued, their domination dependent on the use of force and the maintenance of martial law, while nationalised institu-
tions were placed under the supervision of retired officers (M. Khadduri, *Republic of Iraq: a study in Iraqi politics since the revolution of 1958*, London 1969, 280-9).

After the two coups which ensured the accession of the Ba’th Party to power (17 and 30 July 1968), the Revolutionary Command Council (R.C.C.), composed of five officers and led by General Hasan al-Bakr, carried out purges in the army to turn it into a mujāḥid al-‘aḏāb-dī, an instrument of the Party alongside the militāj, al-‘aḏāb-dī, under the direction of the Military Bureau. The admission of ten civilians to the R.C.C. in November 1969 did nothing to alleviate the security-orientated character of the régime, which became a dictatorship after the accession of the (self-proclaimed) “General” Sāddām Ḥusayn, to the presidency of the R.C.C. and supreme authority over the state and the armed forces in July 1979. The state of civil war against the Kurds and the Shī‘īs, and external war against Iran (1980-88) and then against Kuwait and the international coalition (1990-1), favoured a privatisation of public wealth which worked in particular to the benefit of military cadres (Isam al-Khafaji, *War as a vehicle for the rise and demise of a state-controlled society. The case of Britsh Iraq*, in Heydemann 2000, 272-5).

(Sudan)

The “Free Officers” of Sudan (q.v.) who organised the overthrow of civil power two years after the independence of the country (1958) were strongly influenced by their Egyptian alter ego. The junta led by General Ibrāhīm Aḥammad until 1964 included radical officers close to the Sudanese Communist Party; in 1964 the rift between Aḥammad and this powerful ally brought to an end the first Sudanese nāṣīm lāsārī. After half a decade of civilian government, General Ḍja’far al-Numayrī in his turn imposed fifteen years of military dictatorship after a brief attempt at cooperating with civilians in the context of the Commanding Council of the Revolution, dissolved in October 1971. The Communist opposition was firmly suppressed on 22 July 1971 and the Arab Socialist Union became the sole authorised party, while the ministries of Defense, the Interior, Foreign Affairs, Information and Culture (al-‘aḏāb al-‘awāṣī) remained in the hands of the military. Numayrī’s régime formally recognised the right of the southern provinces to autonomy on 9 June 1969 and imposed radical nationalisation measures (Sequestration Act, May 1970). The second Sudanese civil war, provoked by the Islamising decrees of September 1983, accelerated the downfall of Numayrī in 1985, introducing a brief period of pluralism. The coalition between military figures and Islamists which characterised military régimes in Sudan returned to power following the coup d’état of General ‘Umar al-Baḥṣīr on 30 June 1989. The National Salvation Revolutionary Command Council was based on a single party, the National Congress of Ḥasan al-Turābī. He imposed strict application of the Shari‘a, banned parties and independent syndicates, organised popular local Islamist committees, and the Popular Defense Forces, an Islamist militia waging war against civilians in the south. Under pressure from humanitarian organisations and oil companies whose revenues were financing the war in the south, military leaders dissociated themselves from the Islamists from 1997 onward. Baḥṣīr re-established the state of emergency in 1998 to implement the institutional changes demanded for the survival of the régime and, on 12 December 1999, he suspended the parliament which was dominated by the Islamists of Turābī, arrested in February 2001.

(e) Yemen

The influence of the Egyptian Free Officers was felt as far away as Yemen [see AL-YAMAS] where a group of Nāṣīrī officers led by Colonel ‘Abd Allāh Sallāl proclaimed the United Arab Republic on 26 September 1962 and received reinforcements of 24,000 Egyptian soldiers commanded by Marshal ‘Abd al-Hakīm ‘Amm—a contingent doubled over the next four years for the purpose of fighting a destructive Saudi-Egyptian war which lasted until the decision to withdraw, taken by Nāṣir at the Khārtūm Summit in November 1967. Significant efforts in the fields of education and health were made by the new régime, which was characterised by the imposition of a heavy bureaucracy before its demise on 14 June 1970. Military leaders, populists and developmentalists returned to the forefront of the stage with Colonel Ibrāhīm al-Ṣamaddī (June 1974), and Colonel Ahmad al-Ghāshīmī (11 October 1977), both of them assassinated, then Colonel ‘Ali ‘Abd Allāh Khālīl, on 24 June 1978. The latter gradually handed over government to civilians (adoption of a constitution in October 1980, first legislative elections in July 1985) and guided the process of reunification with the Democratic and Popular Republic of Yemen: a constitutional referendum in September 1994 legitimising political pluralism, exclusion of armed forces from membership of parties (F. Djalīlī, *Al-Yaman: al-thawratūn al-dīmūkrdtiyya al-watāmin al-watāmin, 1962-94*, Beirut 1999, 272-97). As Marshal and President of the Republic of Yemen since 24 May 1990, Khālīl continues to control the state, supported by the Supreme Council of National Defense and by members of his entourage, occupying key posts in the security and armed forces.

2. In modern Iran.

The period of military rule in Iran may be said to have been inaugurated by the coup d’état of 21 February 1921, and to have endured until the overthrow of Pahlavi rule in 1979. However, although the régime that resulted from the coup of 1921, and the Pahlavi dynasty it had established, on the army, there was no direct military rule, nor was there a military dictator in the straightforward sense.

The Pahlavi régime was one that owed its existence to military coups, in 1921 and in 1953, both Rıdı Şah and his son, Muhammad Rıdı Şah [q.v.], having been brought to power by the army. The army played a key role in the construction of the Pahlavi state, dominating both urban and rural opposition, and till 1979 remained, together with the various security forces, the main institution sustaining the régime internally.

Although the military occupied a pivotal position in Pahlavi Iran, it remained subordinate to the rule of the shahs. Both Rıdı Şah and Muhammad Rıdı Şah were successful in dominating the military and in developing a monarchical system of government quite different from that found in conventional military régimes. Rıdı Şah originally rose to power as an army officer, but in transforming his personal ascendancy into the form of a monarchy he distanced himself from other senior commanders and made a challenge from any one of them more difficult. Rıdı Şah having established the dynasty, his son succeeded him and increased further the distance between the military and the throne, making it difficult for any army officer to challenge his authority without undermining the very structure of the régime (F. Hallday, *Iran, dictatorship and development*, London 1979, 51-2). Yet although both Pahlavi rulers secured and maintained their theoretical and actual control of the army, each also essentially relied on it to guarantee its régime.

In 1921 Rıdı Şah arrived at the centre of political power using as an instrument a small Cossack force. He immediately embarked on the task of constructing a strong, modern, national army, organised and equipped on European lines, and based his rise to supremacy on the support of this army (Bəkər Akgılı, *Rıdı Şah və Kİİ görkəm-və tatbiq-i Şahh, 1306-1320, Tehran 1377*). He reorganised the system of military education inside Iran and began sending officers to France for training. He began a massive programme of arms purchases in Europe, including large numbers of tanks and aircraft. In 1925 he forced a conscription bill through the Madjlis and the army mushroomed, rising from 42,000 men in 1930 to 127,000 men in 1941, with a total mobilisable force of 400,000. In the early 1920s, the army already accounted for approximately 40% of budget expenditure; between 1930 and 1941 spending on the army nearly quadrupled, and massive sums from oil revenues were allocated directly for weapons purchases. Rıdı Şah used this army to form a centralised state in Iran for the first time in the modern period. However, in the years 1921-5, although the army became dominant, it co-existed with a number of other political players and institutions. The cabinet was largely civilian in character, the constitution, although increasingly disregarded in practice, was not suspended, political parties functioned, elections were held, the Madjlis passed legislation, and the Kâdîjâr shah remained nominally commander-in-chief of the army.

Although the military did not rule directly in the early Pahlavi period, Rıdı Şah used the army both to intervene directly in the political process and also to manipulate, in a more subtle way, the political life of the country. His direct intervention began, of course, with the coup d’état itself, and continued with episodes such as the repeated cowing of the Madjlis by the threat of military force, in 1922 and more seriously after the failure of the republican movement in 1924. As well as openly intimidating the Madjlis at certain key moments, the military, with its increasing control over elections, had by 1926 fatally compromised the independence of that body. The army also sponsored and orchestrated political movements and prepared the ground for constitutional change. Furthermore, Rıdı Şah, having come to dominate the cabinet, reducing it largely to an appendage to his own position, systematically promoted the military at the expense of the civil authorities throughout the country. In fact, the army came to dominate the civil authorities throughout Iran, sometimes via the establishment of formal military government, sometimes through informal and unregulated mechanisms of pressure and control. Each military conquest of a recalcitrant area or population was invariably accompanied by the establishment of military government and there was considerable pressure from within the army to ensure that any new political system, whatever it was, was established in its own hands. Military government was especially important as a tool of tribal subjugation and control, army officers regularly replacing deposed tribal chiefs. Even when a provincial civil régime was officially in existence, the local military authorities encroached upon its sphere, appropriating its authority and many of its functions. The declaration of martial law and the establishment of military government was a frequent occurrence in both the capital and the provinces and gave the military authorities an opportunity to tighten their control over all aspects of civilian life, especially political dissent. The two periods of martial law in the capital, 1921-2 and 1924-6, were crucial to Rıdı Şah’s rise to supreme power. The role of the army was also positively enhanced by its transformation into a focus of nationalism and a pioneer of social progress, military personnel leading the way in clothing reform, the abolition of titles, rudimentary town planning, linguistic reform, etc. (Stephanie Cronin, *The army and the creation of the Pahlavi state in Iran, 1910-1926*, London and New York 1997, 182-221).

In the early Pahlavi period, the new Iranian army, although of questionable conventional military capability, was extremely successful in advancing the political ambitions of its chief and in safeguarding and extending his power. By far the most important function of the new army was to ensure the survival of the régime or, more narrowly interpreted, of Rıdı Şah’s personal position. This involved, first, the army’s establishment of internal security throughout the country, and, second, the military authorities’ enforcement of the subordination of all civilian political elements to their own dominance.

In making himself monarch, Rıdı Şah profoundly altered the balance between the military and the centre of power. However, by 1926 the relationship between state and society in Iran had already been radically transformed, with the new, centralised army playing a crucial role. Furthermore, the weight of the army vis-à-vis civilian state institutions, the government, the Madjlis, provincial civil governors, etc. had increased in a dramatic and wholly novel way. Although in becoming Şah, Rıdı Kâhân transformed what had been an incipient military dictatorship into a dynastic
despotism, nonetheless the régime over which he presided was firmly marked by its military origins and continued to exhibit many features typical of military rule. Although institutions such as the Madjlis and a civilian government would continue to exist, their role was, after 1945, purely decorative and ornamental. Independent political activity would not resume until after the abdication of the Shah in 1941.

Riād Šāh had risen to power as a career officer and he remained, even after ascending the throne, deeply involved in the day-to-day running of the army. His son, however, although he had attended Tehran military academy and frequently appeared on official occasions in military uniform, in reality lacked the connection with the army and with the upper echelons of the officer corps that his father had possessed.

In the 1940s the new Šāh, checked by a variety of social and political forces, was not able to utilise the army as his father had done. Between 1941 and 1953 the army receded into the background, reemerging only after the coup which overthrew Musaddik [q.v.]. Immediately after the coup, the Shah placed its leaders in key positions, General Fadl Allah Zahidī became prime minister, General Taymūr Bakhtiyar military governor of Tehran and General 'Abd Allāh Hidāyat chief of the general staff. But, most importantly, the Šāh also began to work towards restoring monarchical control of the army, and in 1955 dismissed Zāhidī, who left the country. The Shah then began the serious rebuilding of the army while, at the same time, with the reorganisation and reinforcement of the gendarmerie and the police, the army's overt role in maintaining public order was reduced (MJ. Sheikh-ol-Islami, in Ebr, art. Army. V. Publaci period, at ii, 540). From 1963 to 1978, the army remained garrisoned near towns and was sent into tribal areas on a number of small-scale campaigns. But the régime only resorted once to military force to crush urban civil unrest, sc. in June 1963 in Tehran and a number of other towns.

Although its public order duties were reduced, during the 1960s and 1970s the army became increasingly prominent in national life through its involvement in projects initiated under the White Revolution. Many high school and college conscripts served in the Literacy Corps, the Health Corps, and the Construction and Agricultural Development Corps, with such duties as building roads, schools, improving preventive medicine and teaching rudimentary reading and writing. In addition to these activities, which were largely carried out in rural areas, the military performed a host of other functions. In the administration of justice, the military courts had authority over a wide range of offences, including treason, armed robbery, hoarding, profiteering and trafficking in narcotics. The judgements were swift and the penalties harsh (Sheikh-ol-Islami, loc. cit.). The army gathered political intelligence and cooperated with SAVAK, the state security agency. Indeed, many of the SAVAK senior personnel came from the army. Many army officers also served in the Imperial Inspectorate, investigating inefficiency and corruption in the civil bureaucracy.

Although Riād Šāh had always used the army as a bulwark of his régime, he had been equally careful to protect either military factions or individual senior officers, from engaging in independent political activity or developing political ambitions of their own. During the 1930s, he had harboured a particular fear or assassination, believing that, were he to die while the Crown Prince was still young, the new dynasty would be threatened either from an overt challenge from the army or covertly, through the establishment of a régime exercised by one or more of the most powerful generals (Cronin, The politics of radicalism within the Iranian army: the Jahansuz group of 1939, in Iranian Studies, xxxii/1 [1999], 5-25). Muhammad Rıdā Şah like his father, also feared the consequences of the military's involvement in politics. During the 1940s, while the new shah remained weak, the army became deeply politicised, visible political factions emerged, and certain generals began to establish their own followings (Halliday, op. cit., 67). After 1953, however, and particularly after 1955, the Shah worked consistently to depoliticise the army and to isolate the most powerful senior officers.

Muhammad Rıdā Şah employed various mechanisms to control his officer corps. The armed forces were highly compartmentalised. The chief of staff had little authority over the other chiefs, who all reported to the Shah directly (W. Sullivan, Mission to Iran, New York 1981, 74-5). Each branch was literally headed by the Shah and without the Shah, the armed forces as a whole were structurally immobilised. The three services were not in fact allowed to communicate except via the Shah's own staff. No general could visit Tehran or meet with another general without the Shah's specific permission. The Shah was reported to check all promotions above the rank of major, and personally vetted all entrants in the air force training school. He frequently moved senior commanders to ensure that they did not form power bases and used a personal secret police, the Imperial Organisation, as well as conventional military intelligence, to carry out surveillance of the officer corps. Occasionally, he purged officers suspected of disloyalty under the guise of waging anti-corruption campaigns (Halliday, op. cit., 68-9).

As the political crisis of 1978 unfolded, the Šāh again fell back on the army, employing martial law and military government in the capital and a number of provincial cities. By the autumn, a number of generals were advocating direct military intervention. However, the army did not act, the Shah's system of personal control still paralysing the high command, and the Šāh himself apparently feared that a military coup might prove to be simply another way of terminating his reign (Sepehr Zabih, The Iranian military in revolution and war, London and New York 1988, 13). By early 1979, after the Šāh's departure, the army was palpably disintegrating. Ten days after Ayātallāh Khumāynnī's return, the Supreme Council of the Armed Forces issued the Declaration of Neutrality of the Armed Forces concerning the conflict between Khumāynnī and Dr Shāhpūr Bakhtiyār's government (Zabih, 78).

In the late Ottoman Empire and the Turkish Republic. Although the ruling élite in the pre-Tanzimat Ottoman Empire was referred to as military ('azbeh'), it was in fact composed of both civilian and military elements. In the classical Ottoman Empire, this élite had three major branches: the 'azīm (men of the sword), the šiyr (q.v. i.e. the 'şimād') and the kalemiyye, later referred to as mülkīyye (men of the pen, bureaucrats). In their explanations based on the idea of "circle of justice", the political thinkers of the classical Ottoman state likewise underscored the importance of statesmen and men of the sword, attributing
the utmost importance to these two categories for the survival of the state (‘Alî Kinalizâde, Aḥīlak-ı ‘Alî’s, iii, Bûlak 1833, 49; Na‘îma, Ǧârîh, Istanbul 1281/1866 i, 40). Despite the existence of these distinct categories within the ruling elite, and the various special rights of the military class (e.g. the Yeniceri Aghâli and the Grand Admiral could judge certain cases between Janissaries), the army's formal role was not recognized and could provoke verdicts, see Tâsîkî ‘Abd al-Rehmand Pasha kânûnname-i, in ‘Oğlunânn kânûnname-i, in Millî Tebbîyetler Mektebî, i/3 [1915], 524-5, 536-7), the boundaries between these two branches were somewhat fluid, more than so in a modern state.

For example, many Grand Admirals later became Grand Viziers (in 1037/1628 the Yeniceri Aghâli Khusrow Pasha became Grand Vizier); local governors enjoyed decision-making authority on military matters in their domains; and duties such as law enforcement and fire fighting were generally viewed as the military's responsibility (in Istanbul, Janissaries carried out these duties). Since the military played the most important role in succession and dethronement, it is difficult to speak of a civilian administration free of military intervention in the pre-reform Ottoman Empire. Nevertheless, while the power of the military fluctuated over this long period, it was always at the center of political decision-making.

Late 18th and early 19th century Ottoman attempts at modernisation and Westernisation (see Niẓâm-i Ǧerî) had two important effects on the role of the military. First, since the reforms aimed at imitating a superior Western military organisation and techniques, the Ottoman military was the first institution to be reorganised. The reforms of the early 19th century (the DJEDID had two important effects on the role of the military.

During the pre-Tanzimat era, the military element also played a leading role in major political events, often leading to drastic changes in the political shape of the empire. Thus the military element played a very important role in the deposition of ‘Abd ul-‘Azîz in 1876. The 1908 revolution was initiated by a paramilitary committee, the Committee of Union and Progress (see İttihad ve Terâki Ǧezîyetî) and various army units in Macedonia. The 1909 constitution (see İttihad ve Ǧezîyetî) was carried out by troops led by alevîs (officers who had not attended military colleges); the military rebellion led by the Khalâşkân Ǧâfîtân (“Saviour Officers”) in Macedonia and Albania in 1912 paved the way for the forming of the first government opposing the Committee of Union and Progress Committee since 1908. Finally, the Committee regained power in January 1913 through the Sublime Porte Raid led by Enver Bey (Paşa) and other military leaders who were members of it. Although ‘Abd ul-Ḥamîd II had kept the military establishment under strict control until the Young Turk Revolution of 1908, from this date onwards the military gained ground in the administration of the empire, though most of its power did not stem from legal adjustments but rather from the fact that many important figures within the Committee were officers. With the establishment of the authoritarian rule of the Committee in June 1913, the military share in the administration of the empire increased further, despite a temporary law of 11 October 1912 barring officers from participating in any political activity (Diistûr, 2nd Series, iv, 650-1). Another temporary law, issued on the same day, disqualified military personnel from voting (ibid., 651-2); because of this, Ottoman and, later, Turkish officers did not vote in elections until 1961.) A para-military intelligence service called the Special Organisation acted under the command of Enver Paşa, reporting directly to him and working almost independently of the civilian administration. Yet despite the growing military grip on the administration, and despite the fact that military law was in effect in the Ottoman capital during most of the decade from 1908 to 1918, no fully military régime was ever established in the Ottoman Empire.

The Ottoman military establishment led the Turkish resistance against the peace terms imposed upon the Ottoman government, and organised the armed struggle against the invasion of the Turkish heartland. Many leaders of the Anadolu ve Rûmî Muâsirî-i Ǧeîlî’s and later of the Ankara government, were...
military figures including Mustafa Kemal (Atatürk) [q.v.]. The latter led the armies and the Turkish (Grand) National Assembly while he was the speaker of this assembly, controlling all three branches of power. Despite this fact, the movement never turned into a fully military regime. Following the success of the Turkish War of Independence in 1922 and the establishment of the Turkish Republic in 1923, Mustafa Kemal instituted one of the most important principles of the new regime, according to which the army should play no part in politics. A law of 29 December 1923 required all army officers to resign from active duty if they wished to run for parliament. A law of 3 March 1924, abolished the Ministry of War and established the Office of the Commander-in-Chief, attached to the Ministry of Defence. Under the command of Marshall Fevzi Çakmak [see ÇAKMAK, MUSTAFA FEVZI], who held the position from 1921 to 1944, the Turkish army remained loyal to the new republican régime, many founders of which were former military leaders, and to its principles. Even after Çakmak's retirement, the military did not show any interest in politics until the end of the single-party system in 1946. The first free elections in 1950 and the victory of army officers caused many military leaders to rethink their role in Turkish politics and to reassess the loyalty of the political leaders to the tenets of the republican régime. Increasing political tension, clashes between law enforcement personnel and college students, and the Democrat Party government's strong measures against the opposition prompted a group of officers to form a revolutionary organisation and inaugurate a coup on 27 May 1960. This coup was not staged within the chain of command, in fact, the Commander-in-Chief and many high-ranking officers who had remained loyal to the Democrat Party government were arrested and expelled from the army. In a similar fashion, the Chamber of Deputies was dissolved, and the president, prime minister, cabinet members and leading figures of the Democrat Party were arrested and later tried by a special court. The leaders of the coup based their action on the 34th article of the Armed Forces Regulations, which charges the military with "defending and protecting the Turkish Republic and Turkish homeland". A special committee of law professors issued a document the day after the coup legitimising the revolutionary officers' action. Under the direction of General Cemal Gürsel, the Commander of the Land Forces and the highest-ranking officer to join the revolutionaries, an executive committee of thirty-six officers of various ranks, named the National Union Committee, was formed and assumed the power of issuing laws on 12 June 1960. Despite the formation of a government composed of civil and military leaders under Gürsel, the National Union Committee remained the most powerful institution in the country. On 13 November, a schism within the National Union Committee resulted in the elimination of fourteen of its members who had been promoting the idea of a prolonged military régime and more active participation in government. On 13 December, the committee issued a law for the establishment of a new government, and this would be composed of the members of the National Union Committee and of an Assembly of Representatives, members of which would be elected by various institutions, such as political parties, provincial administrations, the legal bars, and press and guild organisations. The new assembly was convened on 6 January 1961 and worked until 4 September. In the meantime, a new constitution was ratified by a referendum of 9 July. This constitution broadened individual liberties, and at the same time limited the power of the government. This was done by establishing new legal and bureaucratic bodies such as the Constitutional Court and the National Security Council, and by granting autonomy to various institutions such as the universities and the Turkish Radio administration. New elections for the Chamber of Deputies and the newly-established Senate were held on 15 October 1961, and the members of the National Union Committee became "natural" members of the Senate for life. As one of its last decisive actions, the National Union Committee discussed the death sentences pronounced by the special court against the leaders of the Democrat Party on 15 September 1961. By a vote of 13 to 9, the committee approved four death sentences out of sixteen, and three former ministers were hanged on 16 September 1961. The next day, Adnan Menderes [q.v.], former prime minister, was executed. Despite the new elections and the formation of a new civilian government, the military continued to make its power felt in political life for two more years. New revolutionary organisations within the army, attempted to dissolve the parliament even before its opening. Despite the agreement of right-wing parties on Ali Fuad Başgil as the next president, under heavy military pressure the deputies and senators elected the leader of the coup, Gürsel, to this post, and the military played a significant role in the formation of a new government under İsmet İnönü [q.v. in Suppl.]. On two occasions, 22 February 1962, and 21 May 1963, a group of officers led by Colonel Talat Aydemir attempted to stage a coup to establish a military régime. Both attempts were foiled by Prime Minister İnönü with the support of loyal forces. Following the first attempt, the leaders of the venture were only forced to retire; their second attempt led to the trial and hanging of Col. Talat Aydemir and Lt.-Col. Fethi Gürcan. Military intervention in politics gradually receded after the second coup attempt in 1963, and normal political activity resumed. But in 1971, the military was prompted to intervene by increasing left-wing political activity, and tension between the right-wing Justice Party government and civil-military bureaucratic institutions. There had been various military groups promoting the idea of the establishment of a military régime. One of these groups was also supported by renowned left-wing intellectuals, and promoted the idea of a régime of the Arab Ba'th type; it attempted a stillborn coup on 9 March 1971. Three days later, on 12 March, the military establishment presented an ultimatum to the President and the Speakers of the Chamber of Deputies and the Senate, accusing the Parliament and the government of not adhering to the Kemalist reforms, causing social and economic disorder and inviting anarchy. The military commanders threatened the Parliament and the government that they would take power unless a new Kemalist government was immediately established. Süleyman Demirel, the prime minister, tendered his resignation and a new non-party government was established with the approval of the military. Up to the elections held on 14 October 1973, civilian governments under military control administered Turkey and made radical changes in the constitution, limiting many of the liberties granted in 1961. During this period, the major socialist party in Turkey, the Turkish Labour Party, was dissolved, along with the National
Order Party, the major Islamist one; new state courts with extraordinary powers were established, and many left-wing and Islamist politicians and activists were tried.

Following the 1973 elections, the army returned to its barracks and normal political activity resumed until 12 September 1980. However, increasing clashes between left-wing and right-wing groups, which resulted in the killing of approximately 5,000 people between 1977 and 1980, once again prompted the military to intervene. This time, a regime under a National Security Council composed of General Kenan Evren, Commander-in-Chief; three generals in command of the Land, Air and Gendarmerie forces; and the Admiral in charge of the Navy, ruled the country. Biilend Ulusu, and a "House of Representatives" vice-president and parliament and which pruned what had been the governing party and the major political parties were dissolved, their leaders being virtually hand-picked by the National Security Council; this continued until elections were held on 6 November 1983. In the meantime, thousands of left-wing and right-wing activists were arrested and tried, and all political parties were dissolved, their leaders being arrested or sent to military bases. A provisional article (no. 4) of the new constitution banned leaders of what had been the government and the major opposition party in the legislature at the time of the coup from any political activity for ten years, and deputies and senators belonging to these parties were excluded for five years. The 1982 constitution, which created a hybrid system of government involving the president and parliament and which pruned the liberties granted by the former constitution, was put into effect through a referendum. In accordance with a provisional article of the constitution, its ratification also conferred the presidency on the leader of the coup. General Kenan Evren, and made the other members of the National Security Council members of the Presidential Council for seven years. This constitution also remodelled the National Security Council by giving a 5 to 4 majority for the military members of this ten-person body under an impartial president (Article 118).

The importance of the National Security Council function in policy-making after 1983, and especially after 1996, and its role in imposing terms on a government led by the Islamist Prime Minister Necmettin Erbakan on 28 February 1997, have generally been interpreted as to mark a new period of military dominance in Turkish politics.

4. **In Pakistan.**

The pre-eminence of the Pakistani military within the country's political set-up, either through direct coups or by simply controlling the economic and external policies, has led to a growing academic debate on several inter-related issues. On the one hand, one notices an unbroken continuity of the British imperial tradition, as is evident through the recruitment, training and other organisational matters, while, simultaneously, the armed forces have taken upon themselves an extra-professional role justified in the name of national interests and ideology. Within the armed forces, it is the army, and not the navy or air force, which has frequently assumed such a flagship role. To its admirers, the army is the only stable institution that can keep the pluralistic country together, whereas to its detractors, the army is in league with secret agencies and a de facto state within a state. Certainly, the army is the steel frame of the country's administration, and its leadership reflects a national-wide representation whereas the lower echelons—jawans—are mainly recruited from the Northwestern Punjab and eastern districts of the Frontier Province (NWFP).

The Pakistani armed forces have retained the regi-mental character, with the gradual addition of newer and diverse corps and training facilities. The intro-duction of aircraft, gunships, tanks, mountain regi-ments, missiles and nuclear capabilities has collectively turned the Pakistani armed forces into a complex and quite a significant establishment. For decades, Pakis-tan's top military leadership has maintained close professional contacts with its U.S. and British coun-terparts, and while benefiting from huge budgetary allocations, they have established themselves as the most important politico-economic pressure group. Pakistan has been spending most of its revenues and foreign loans on the upkeep of a half-million strong military establishment, several cantonments and bases, besides a huge recurring expense on pensions, semi-private foundations and infrastructures to look after the welfare of the serving or retired officials.

Due to Pakistan's strategic and equally difficult location with a hostile neighbour separating the erstwhile two wings, and because of disputes such as that over Kashmir, her security perceptions have always cen-tred around a "credible level and proportion of deter-rence" to an Indian threat. In the 1950s and during the 1980s, the alliances with the United States led to a major inflow of military aid, which further strengthened the defence establishment. Growing intolerant of the political processes and, especially, of the criticism from the eastern wing, the generals decided to take over the country's leadership in 1958. Earlier on, their influence on national policies had been indirect; now they directly controlled the domestic and foreign poli-cies. The first martial law led by General Ayub Khan was initially well received, but subsequently led to greater socio-ideological cleavages. A mass movement to dislodge General Khan led to the imposition of another martial law under General Yahya Khan, who promised unfettered elections in the country. However, following the split vote between East and West Pakistan in 1970, the junta refused to transfer power to the elected majority party—the Awami League—headed by Zulfikar Ali Bhutto, and instead unleashed a massive military operation in East Pakistan. The local insur-gency, aided by India, resulted in the surrender of Pakistani troops at Dhaka in December 1971, and Bangladesh became an independent state. In the 1970s, Zulfikar Ali Bhutto, the elected Prime Minister, tried to reinvigorate the Pakistani military establishment, in addition to sponsoring Pakistan's nuclear programme. Despite his deep desire to rein in the generals, he was finally overthrown by General Zia-ul-Haq [see ziA AL-HAQ] in July 1977, then who ruled the country for the next eleven years. His death in an air crash led to the re-emergence of party-based politics, but the vital decisions were still being made by the Chief of Army Staff. The elected politicians Benazir Bhutto and Nawaz Sharif, in their own ways, tried to minimise the armed forces' interventionism, but to no avail. On 12 October 1999, Sharif was overthrown in another military coup, which brought in General Pervez Musharraf as the new Chief of the Army. The new military rule stopped short of calling itself mar-tial law, though Musharraf elevated himself to the presidency in July 2001. The relationship with India has remained very tense, and the Western countries also initially shunned the new military regime until the United States acquired vital Pakistani support and
bases against Osama bin Laden and his Al-Qaeda organisation in Afghanistan.

Pakistan's army has not only ruled the country for almost three decades but it has also decided on vital policy matters. The development of the nuclear programme, support for specific groups in Afghanistan, the nature and extent of relationship with India, and active assistance for Kashmiris in their war against India, have all figured quite significantly in the recent past. The army has been engaged in the formulation and suspension of Pakistani constitutions, and has occasionally engaged itself in the formation and dissolution of numerous political alliances. Its various professional, political and other civilian roles make it the most crucial actor in the running of the country, whilst the security agencies such as the Military Intelligence (MI) and the Inter-Services Intelligence (ISI) implement such policies. The senior officials make up an elite class in which ethnic loyalties are considered unimportant. General Musharraf would like to revert to the old modernist postulation of the Ayub Khan-Yahya Khan era, i.e. away from Zia's Islamisation, but, given the conservative nature of khaki bureaucracy, the army may never undertake such radical steps. The relationship with India; the fragile nature of the country's economy, with defence accounting for a huge expenditure; the role in creating or denying political processes; and the extra-professionalism required, especially since the fall of Dhaka, are some of the main areas of debate and contestation amongst the supporters and the critics of the military elite.

The army, through its information efforts, has been able to convince many Pakistanis in the upper Indus region of its own invincibility and its professional credentials, whereas lower Pakistan remains highly critical of the military's dictatorial role.

Bibliography:

(Otto von M. SALIS)
1963, the Oren Ka'le excavations were abandoned also. Vol. II of the report (see Bakh) is mostly devoted to sites in the surrounding area, a project of Vol. III on work at Oren Ka'le in 1956-8 evidently never appeared. The excavation material is now in the reserves of the State Historical and Museum-Reserve of Baku.

More contentious is the site's identification with the Late Antique fortress of P'aytakaran, for the earliest remains at Oren Ka'le, as attested by a copper coin of the Byzantine Emperor Anastasius (A.D. 491-518), are 6th century. But the only possible site for P'aytakaran lies close to the modern village of Taxakend some 8 km/5 miles to the south-east, where Late Antique stone column bases for a palace or temple, together with a small hoard of denarii of Augustus, were brought to light. Oren Ka'le was therefore a new foundation, connected with the Sassanian Empress Kavaddi (A.D. 488-534) and her fortifying of the Kur-Araxes steppes, though P'aytakaran continues to figure in the Armenian historians' accounts of Heraclius's campaign in the Caucasus.

Under the Umayyads, Bayjakjan was an important city of the province of Arminiya (see Bakh) and was a notorious centre of Kharidjism, which persisted there under the Fatimids. Though sacked by the Mongols late in 1221, it had recovered sufficiently by the 1260s-1270s, and, though P'aytakaran continues to figure in the Armenian historians' accounts of the Mongol invasion of 1221. Other Kashan products, notably mma'i and underglaze wares, do not seem to have been recorded.

The earlier locally manufactured glazed wares were mostly varieties of polychrome-stained splash- and drip-ware, characteristic of 'Abbasid Mesopotamia and Persia, though one fragment with a mounted huntsman was an imitation of opaque-glazed figural wares with polychrome decoration characteristic of the province of 12th-century Nishapur. In the 12th-13th centuries the pottery seems to show a change also in orientation, to the Caucasus, Anatolia and northern Syria, with many versions of polychrome-stained sgrafitto and champlêvé wares. Particularly noteworthy are champlêvé wares, one signed 'Amal Khattdb, with bold strapwork and panels of delicate scrolling arabesque, deriving from fine engraved Khurasan metalwork of ca. 1200; and a group of figural sgrafitto with animals clambering in foliage, so-called "Aghkand" wares, which are, however, known from many sites, including Dmanisi and Urbnisi in Georgia. As at Gandja, these may have been imports.

One important group of glazed wares, virtually exclusive to Bayjakjan, is red-bodied and underglaze-decorated, heavily potted but with exceptionally fine decoration scratched in a black manganese slip. They may be local versions of silicon-enriched 12th-century Kashan "frit" wares painted in black slip under a colourless or a turquoise glaze, but here their repertoire makes use of Persian verse inscriptions, comparable in choice and execution to those on pre-Mongol Kashan lustre wares, and elaborate knot patterns on grounds of fine scrolfs. Several pieces were also signed 'Amal Khattdb. Among signatures on other pottery types from Oren Ka'le, the most interesting is from an unglazed storage jar, with a cachet inscribed in a fair hand and a signature, "Amal Ibn 'Ali b. 'Azi b. 'Aziz al-Fakhkhar ("the potter"). Its phraseology is clear, if difficult to parallel, but errors in the transcription of the distich suggest that the signature, too, may contain mistakes.

Kiln furniture was abundant, including cocks, though most of the pottery recorded was fired without them. Most of the later glazed wares bore stamped designs on their bases, though, oddly, these were absent from the more highly decorated pieces and practically none of them are inscriptions. Similar stamps on wares of different groups show that the potters, like the decorator Khattdb, did not specialise; they could have been bank marks, to identify the work of a craftsman in a large workshop who was paid by the piece.

Imported wares included silicon-enriched lustre pottery (but not tiles) of most of the documented late 12th- to early 13th-century Kashan types. Some of them, however, are characteristic of the 1260s-1270s, suggesting that the site may have continued to flourish under the Il-Khanids and that the types of pottery discussed above may therefore have later terminated than the Mongol invasion of 1221. Other Kashan products, notably mma'i and underglaze wares, do not seem to have been recorded.

stamped or incised ornament, sometimes with craftsmen's signatures; jug and bowls, often with moulded decoration; and spherocoic vessels, with a characteristically yellowish-grey body and engraved, stamped or applied decoration. Of particular importance was a group of red-bodied storage vessels, perhaps nine jars from a cremation feature of beheaded animals, birds and fishes, and even crosses, recalling the impressions of cylinder-seals and, like these, applied with a cylinder. Such wares, with local peculiarities, are also known from Ani, Gandja, Dvin, Garnit and Mingećawar.

J.M. Rogers

ÖZAL, Turgut, modern Turkish statesman (1927-93). He was born in 1927 in the province of Malatya in south-eastern Turkey. After graduating as an electrical engineer in 1950, he served in a number of important technical and economic posts between 1967 and 1980, initiating a programme of liberalising economic reforms in January 1980. Following the coup d’état led by General Kenan Evren on 12 September of that year, Ozal continued these policies when confessional allegiances crystallised, fundamentally altering the political landscape of the country.

TURGUT, modern Turkish statesman (1927-93). He was born in 1927 in the province of Malatya in south-eastern Turkey. After graduating as an electrical engineer in 1950, he served in a number of important technical and economic posts between 1967 and 1980, initiating a programme of liberalising economic reforms in January 1980. Following the coup d’état led by General Kenan Evren on 12 September of that year, Ozal continued these policies when confessional allegiances crystallised, fundamentally altering the political landscape of the country.

Thus became Prime Minister in the following month, increasing his party’s majority in the next elections, held in November 1987. As premier, his main achievement was to free the economy from government constraints, producing high economic growth and an impressive increase in foreign trade; his main failures were the continuation of high inflation, and increasing allegations of corruption and impunity in his government during the late 1980s. When General Evren retired from the presidency in October 1989, Ozal was elected to succeed him; however, his party lost its parliamentary majority in the general elections of October 1991, thus reducing his real political power. As President, Ozal played a major role in foreign policy determination, controversially directing Turkey’s support for the coalition powers in the Gulf crisis of 1990-1. His sudden death from a heart attack in April 1993 removed a towering figure in Turkish politics, distinguished by his attachment to economic and political liberalism, as well as the integration of moderate Islam into the country’s political life.

PIRPANTHI [see AFGHAN, ii].

PASHTO [see AFGHAN, ii].

PIRPANTHI [from Pers. pīr + pān th “way of the spiritual master”), the name given in what is now Western India and in Pakistan to Hindus who follow Muslim pīrs, whether living or dead, these being generally Sufis or Isma’īlīs. To be precise, the term Pirpanthi is applied more strictly to two specific groups: (1) the disciples of Imam Shāh [gaz.], a dissident Isma’īlī who was one of the sons of the Imam pīr Ḥasan Kabīr al-Dīn, whose tomb is situated near Ahmadābād [gaz.] in Gujarat; and (2) more rarely, to the Hindu disciples of Śīf masters, Muslims or occasionally Hindus, originating from Sindh, Panjāb or Rājasthān, such as Ramdēv Pir (or Ramā Pir), Pithoro Pir, Paḷho Pir, etc., with whom we are not concerned here.

The existence of the Pirpanths attests the importance of interpenetration of Islam and Hinduism in this part of the subcontinent. Rather than speaking of a syncretism, it would be more sensible to speak of a charismatic consensus at which these sects arrived. Sprung from the Mathā Kabi caste of agricultural labourers, the Pirpanths were also known by the name of Mōmnaṭs (or Mōmnas). Established within Gujarāt [gaz.] proper, but spilling out into Khāndesh and Kaṅṭh [gaz.], they are divided into several sub-sects according to whether they venerate Imām Shāh himself or one of his descendants or representatives. In the period from the late 19th century onwards, when confessional allegiances crystallised, fundamentalist Hindu organisations like the Ayā Samāṭi convinced a great number of them to revert to “orthodox” Hinduism. They generally assumed the name of Pāṭel, and continued to venerate Imām Shāh, whom they considered as the guru who spoke in the name of the tenth avatar of Viṣṇu, Nikānṭi.

PRESTER JOHN, the name of a mysterious potentate, said to be a Nestorian Christian and inimical to Islam, whom the Christians of medieval Europe placed beyond the Islamic lands in Inner or Far Asia.

The name Presbyter Johannes first occurs in the chronicle, called Historia de duabus castellibus, of the German prelate Otto, Bishop of Freising, in which he describes, on the authority of a letter in 1145 with the Latin Bishop Hugh of Dijāhala (= ancient Byblos, in Lebanon), how Prester John was a monarch, of the lineage of the Magi of the Gospels, living in the Far East (in extremo oriente) beyond Persia and Armenia. He had attacked the Samāṣāt brothers, kings of the Persians and Medes, had defeated them and had advanced to the Tigris in the hope of aiding the Church in Jerusalem, but had then been forced to
turn back. The passage seems almost certainly to con-
tain an allusion to the defeat of the Salduk sultan
Sandjar (q.v.) (= the kings Samiariatos/Saniariatos, here
made plural) and his Karakhanid allies by the Western
Liao, known to the Muslims as the Kara Khitaş (q.v.)
at the battle of the Katwân Steppes in Transoxania
in 536/1141 (the remainder of Otto’s story about
Prester John’s advance across Persia into Mesopotamia
being unhistorical).
However, this does not necessarily mean that the
later, elaborate stories of Prester John, which con-
tained connections with the Indian Ocean coastlands
and, above all, with Ethiopia, all had their origins in
this battle. It is not impossible that stories of Prester
John were known before the news of Sandjar’s defeat
percolated through to the Crusader principalities in
the Levant, providing a convenient peg on which to
hang the stories. In the opinion of the late Prof. C.F.
Beckingham, such stories were probably connected
with the legend of the shrine of St. Thomas in South
Asia and Tön mint as its centre piece a magical “mount of bless-
ing” that conveys some of the sultan’s mystical power.
Attitudes toward the practice of fasting are influ-
enced by Javanese ascetic practices that are followed
for a variety of reasons year round. As a result of
this, children as young as four years old start to prac-
tice abstinence for Ramadan. In general, the fast is
broken in restrained manner with many Muslims lim-
iting their first meal to a small snack and a glass of
sweet juice.
Although Ramadân is a time of promoting unity
among Muslims, differences between Reformist and
Traditionalist Muslims are played out with fervour.
This starts with the issue of identifying when the fast
begins and ends, and is visible during Ramadân in
different practices concerning the tarawîh prayers and
the ‘Id al-Fitr gatherings.
Celebrations for the ‘Id last up to one month, and
serve to renew harmony and unity. People travel all
over the country (madâkî) in order to visit relatives and
to ask forgiveness for wrongs committed during the
past year. Neighbourhoods, businesses and schools
organise special halal bi ‘l-halal parties.

Bibliography: There are innumerable numbers
of books about puasa in the Indonesian language.
Many leading preachers and scholars of Islam have
published their Ramadân sermons and reflections,
such as Humka, Puasa tarawîh dan Iftâl Fitr, Jakarta
1995; M. Ouraish Shihab, Satar bersama, Bandung
1997. (Nelly van Doorn-Harder)
Radjā' was further famed for his piety and knowledge of the religious sciences, and was high in the councils of 'Abd al-Malik and his son al-Walid I, accompanying the latter on his Pilgrimage of 90/709 or 91/710, when he came into the caliph's cousin 'Umar b. 'Abd al-Aziz, governor of Medina, a relationship to be of significance later.

During the short caliphate of Sulayman b. 'Abd al-Malik (96-971/715-17), some sources make him head of Sulayman's diwan al-khatam or chancellor. He clearly lent his religious backing to the caliphs, and his role thus marks a stage in the acceptance of marākūl in the sphere of legal and religious authority hitherto jealously guarded by the Abbasid family. Yet a temporary re-routing of the succession was now evident to the caliphate of 'Abd al-Malik's brother 'Abd al-Aziz (in fact, it had been the wish of the founder of the Marwanid line, Marwan I b. 'Abd al-Malik, and secured adhesion to this arrangement in the caliphate).

What happened when Sulayman was on his deathbed at Dabik, north of Aleppo, is related in the History of al-Tabarī (xxiv, The empire in transition, Albany 1989 [with an isndāl going back to 'Abd al-Aziz], and a slightly longer one in Ibn Sa'd, ed. Zakkar, Damascus 1966, ii, 773-802; Ibn Kutayba, ed. Schulz, Berlin 1966, ii, 770-792; Ibn Khallikan, ed. Abūsūr, Beirut 1979, ii, 526-7). For a full list of the sources mentioning him, see Gottschalk, 329-31. According to Eissener, 222 n. 290, in the Indian Union. It is bounded by the Pakistan provinces of Sind and Punjab on the west and northwest, and by the Indian states of Pandjāb, Haryana and Uttar Pradesh on the east, southeast and south, and Gujrat on the south. As an area of 342,567 sq. miles, it is the second largest state in the Indian Union (after Madhya Pradesh), but because of its climate and habitat, has a less dense population than any other state. The population (1986 estimate) was 37,000,000. The state capital is at Jaipur, formerly the centre of a princely state [see प्रजापुर], and the state is divided into 26 Districts.

1. Geography and habitat.

The topography of Radjāstān is dominated by the range of Aravalli Hills, which run in a transverse fashion across the state from northeast to southwest, culminating in Mount Abu (1,722 m/5,650 feet) at the southwestern end and ending just over the border of Gujrat State. The three-fifths of the state lying to the northwest are largely sandy, with the Great Indian or Thar Desert in the far west but with more fertile and habitable lands as one goes eastwards. The two-fifths lying to the southeast of the Aravalli Hills are diversified in character and more fertile, with the Districts of Kota and Bundi forming a tableland. In the south is the hilly tract of Mewār [q.v., centred on Udaipur [see उदयपुर]]. On the state's northeastern edge, the plains around Bharatpur form part of the Jumna/Yamuna basin. The only large perennial river is the Chambal, which flows northeastwards into the Jumna.

Radjāstān is predominantly an agricultural and pastoralist state. Despite a low and erratic rainfall, with a subsequent need for irrigation, nearly all types of crops are grown, including various cereals, rice and vegetables. Despite the arid or semi-arid nature of more than half the state's area, there is a large livestock population in comparison with the rest of India, including camels and draught animals, and Radjāstān is the largest producer of wool in the Union.

2. Ethnology.

There are aboriginal tribes in various parts of the state, especially to the east and southeast of the Aravalī Hills, including Bhils, and various tribes of Radjāput stock, such as the Meōs [q.v., a part of whom was nominally converted to Islam in the 8th/9th century]. Radjāputs form the most significant element in Radjāstān's polity, and have around Bharatpur formed part of the Jumna/Yamuna basin. The only large perennial river is the Chambal, which flows northeastwards into the Jumna.
was a Pathān chief, and the Dījāt [q.v.] states of Dholpur and Bharatpur in the northeast. The Rādjāpūṭ claim to be the descendants of the Kshatriyas of Vedic times, and take great pride in their ancestry and their warlike traditions (Sk. rājagṛha = "king's son"). But such claims are based on fictitious genealogies, and the Rāḍḍeļ must be considered ethnically, as there is little evidence that the gotra of Kshatriyas of Vedic times and the gotra of the Rāḍḍeļ have ever been distinct ethnically, except in some Tāmils.

The Rajputs claim to be the descendents of the Kshatriyas by modern Hindi.

3. Languages and literature.

The dialects of Rāḍḍeļ belong to the Western Hindi group of New Indo-Aryan, with the Aravalli Hills marking the main internal divide between the north-western and the south-eastern dialects. Predictably closer in many respects to Brajī (and to standard Hindi), the south-eastern dialects are Dījāpūṛī (Dhūndhāṛī) and its southern neighbours Mēvarī and Hāravī, in turn flanked to the east by Mēvāṛī and to the south by Māwī. Possibly also reflected in the Romani of the European gypsies, earlier migrations from this region are certainly responsible for the close resemblances between south-eastern Rāḍḍeļ and the speech of several nomadic groups, including Lāmmāṇī in central India and the Godgīr (Gudjāṛī) spoken by the Muslim Gudjāṛ herders of Kāzmīr and the adjacent areas of northern Pākistān. The Māwāṛī dialects spoken in the desert areas of north-western Rāḍḍeļ are collectively distinguished by such features as the distinction of implosives from explosives in the voiced series d d b or the retention of an organic passive in -īḍ, both with close parallels in Sindhi [q.v.] and Sīrāṣkī [see Lāmmāṇā], as well as individual shibboleths like the possessive marker rū.

Following a period of several centuries during which Old Gudjāṛī (confusingly termed "Old Western Rāḍḍeļ" by Tātisorī) was the common literary language of both Gudjāṛī and Rāḍḍeļ, Old Māwāṛī emerged as an independent literary language around the middle of the 15th century, when it is attested in the semi-popular poetic treatments of romantic themes found in the Vīsaladāvārāṇā and the Dholā-Loṭā ṛā ḍāḥā. In the hands of the Chāraṇa, the hereditary bards of the ruling Rāḍḍeļ [q.v.], Old Māwāṛī was developed as a specialised literary medium for heroic poetry with the incorporation of numerous Sanskritisms and special poetic forms. This bardic language is known as Dingal, as opposed to "Pingal", the literary Brajīhāṛī cultivated for other types of poetry in the period down until the later 19th century when both were replaced as literary standards by modern Hindi.

In its celebration of the chivalric ideals of the Rāḍḍeļ and of their resistance to the Muslims, the heroic literature of Rāḍḍeļ is of great cultural importance. It finds its first classic statement in the Old Gudjāṛī Kānθādāḍ-e-prabandha (1456) by Padmaṇāḥ, which celebrates the victories achieved over the Dīhī Sultan 'Alā al-Dīn Khāḷfī [q.v.] and his generals by Kānθādāḍ-e, the Rāḍḍeļ ruler of Dījālūr, until his final defeat (dated ca. 1312) is followed by his queens performing collective ritual self-immolations (vadhāṇā). In addition to panegyrics and elegies (maṇḍī), Dingal literature includes many similar treatments of such historical episodes, beginning with the mixed prose-verse Aḥāl Kāṭhā ṛā vadhāṇā based on the resistance mounted by its eponymous Rāḍḍeļ hero to the invasion in 1423 of Sultan Hūṣhācg Hūṣīrī of Māṇḍū [q.v.]. For stylistic as well as linguistic reasons, however, Dingal literature has attracted less interest from modern scholars than the more approachable prose chronicles of the Rāḍḍeļ states dating from the early 17th century which were written in Middle Māwāṛī, and whose most celebrated exemplar is the Rāḍẖī by Naynāsī, minister to Djaswānt Sing of Māwāṛī (d. 1670).

4. History.

Archaeological researches in western Rāḍḍeļ show that people were living there in the 3rd and 2nd millennia B.C. who were close to the Harappan and post-Harappan cultures of the Indus valley. Late rulers of the whole or parts of the state included the Bactrian Greeks, Sakas, Gupṭas, and White Huns, until from the 7th century A.D. onwards, various Rāḍḍeļ dynasties arose, including the Gudjāṛa-Prathāhrās, who fended off the Arab colonists in Sind; but for the most part, these Rāḍḍeļ princely lines were involved in internecine warfare, which was to facilitate Muslim probes into the region. The last of the Cāṭhāmāṇa or Cāwāḥān line, Pritihvīrāja III, was defeated and killed by the Gūhrīd sultan Mu'izz al-Dīn Muḥammad b. Sām [q.v.] in the second battle of Tarāshīn in 988/1192. The capital Ajmer [q.v.] was briefly restored by the Gūhrīd to Pritihvīrāja's young son after the latter had accepted the Sultan's suzerainty over his lands. Only the strategic fortress of Raṅthambhor in eastern Rāḍḍeļ was occupied permanently, with a garrison under Kiwām al-Mulk
Rukn al-Din Hamza. In 591/1195 the Rādjūṭāns rebelled against Muslim control under the leadership of the chief Harirādja and Dījārādīn who occupied Adjmer [q.v.]; threatened Ranthambhor and fomented dissension in the region towards Dīhlī, where Kutb al-Dīn Aybak [q.v.], resided as Mu'izz al-Dīn's viceregent. Aybak restored the situation and regained Adjmer.

Nāgar [q.v.] in the region of Dījōdpūr [q.v.] seems to have been occupied at this time. Thangar, capital of the territory of Bāyanā in this eastern part, was besieged and captured by Mu'izz al-Dīn in 592/1196 and then entrusted to Malik Bāhā al-Dīn Toghril, who later transferred his capital to a newly-founded town, Sulṭān Kōt, that later became known, from the name of the province, as Bāyanā. Thus with the exception of the chief of Dījār to western Rādjāsthan, most of the region had been nominally at least subdued. In the last years of the 6th/12th century, Khuẖādīja Mu'īn al-Dīn Hasan Siḏjī, [d. 633/1236 [see ĠISHTI]], founder of what was to become one of the most influential Sūfl ordain India, the Ġiṣṭiyā [q.v.], came to reside at the Calhāmānī capital Adjmer, and his heirs were to become one of the most celebrated rulers, for both Muslims and Hindus, in the subcontinent. His disciple Shakhī Hamīd al-Dīn Suvālī Nāgarwādī [d. 679/1279] was sent by Mu'īn al-Dīn to Nāgarwādī, which likewise became an important Ġiṣṭī centre.

The relaxation of power in the Dīhlī Sultanate [q.v.] on the death in 633/1236 of Ġutmūhsī [q.v.] gave an opportunity for the Rādjūṭ princes to reassert their power. A revolt in eastern Rādjāsthan forced his daughter Sultan Rādjiyyā [q.v.] to withdraw the Muslim garrison from Ranthambhor, and except for the districts around Adjmer and Nāgarwādī, the whole region reverted to Rādjūṭ rule, allowing powerful lords like those of Ranthambhor and Cītur to come to existence; for the rest of the century no Muslim ruler was able to contemplate a reconquest. This only came in the reign of 'Alī al-Dīn Muhammad Khāḷdāji (695-715/1296-1316), who aimed to secure at least eastern Rādjāsthan in order to open a line of communication towards Māwā and Gudjarāt, which he coveted. An army was sent in 700/1301 to besiege the powerful and prestigious ruler of Ranthambhor, Rāṭā Hammīrī Dēva, a descendant of Prīthvīvādīağī. This attempt failed ignominiously, and only after the Sultan had to come from Dīhlī in person with re-inforcements did Ranthambhor fall after a year's struggle. It was then placed under the general Uḥūgh Kōhān, and in 701/1302 the Sultan invested the fortress of Cītur, then ruled by another noted prince, Ramāsinīmān of the Gubhāla clan of Māwā and the grandson of Dījārādīn, and captured it in the next year, annexing the territory of Cītur to the Dīhlī Sultanate and placing it under the governorship of the crown prince, Khōjīr Kōhān. Thereafter, the chiefs of smaller principalities either submitted or were overthrown by military force. Thus in 711/1311 the commander Malik Kāmāl al-Dīn Gūrg defeated Rāṭā Kāraṇ Ďēva and seized his principality of Dījālōr, and after this, lesser chiefs in Dījālōr, Ġiṣṭī, etc. likewise submitted and acknowledged Khuẖādīja's suzerainty.

Thus towards the end of the 14th century, Rādjāsthan was controlled by the Dīhlī Sultanate and their governors from such centres as Adjmēr, Ranthambhor, Nāgarwādī and Dījālōr. However, the invasion of northern India and sack of Dīhlī by Tīmjūr [q.v.] in 801/1398 eventually led to the end of the Tughrēlkī Sultanate and heralded a period of weakness for the Sultanate, with various Muslim powers arising in the province.

It was also the opportunity for a re-assertion of power by the Rādjūṭ princes, with the Rānā of Cītur organizing a confederacy of chiefs and with the Rādjūṭ of Mēwār driving the Muslims from Adjmēr, held by them till 859/1455, when the latter's power was recaptured, with the rulers of Mēwār now holding it for almost eighty years. It was also an opportunity for Sultan Muzaffar Šah [I] of Gudjarāt [q.v.], now independent of Dīhlī, to send his younger brother Šams al-Dīn Kōhān Dandānī against Nāgarwādī, at which his descendants established a local dynasty that endured till Dāwlat Kōhān Nāgarwādī was killed ca. 932/1525-6 by Rāṭā Māldevā of Dījōdpūr. Dījālōr was ruled by a Nūhīān Aghānī chief and his descendants until it was conquered by Māldevā after 932/1525, but the latter's power was then overthrown by the Dīhlī Sultan Šīr Šāh Sūr [r. 947-52/1540-5 [q.v.]], who also attacked the Rānā of Dījōdpūr in his principality of Mārwar in 949/1542-3. Previous to this, Mēwār had been built up into one of the most powerful principalities of northern India under its energetic ruler Rānā Sangrām Šingh or Sāngā (r. 1509-28), who led successful campaigns against the Sultans of Māwā and Gudjarāt. He went on to acquire imperial ambitions, defeating the Dīhlī Sultan Iltutmīsh Lōḍī [see Lōḍī] in 929/1525 and made overtures to the Mughal adventurer Bābūr [q.v.] for a concerted attack on the Lōḍīs. He soon realised, however, that Bābūr would be a powerful rival for power and turned against him; but in 932/1527 Bābūr secured a decisive victory over Sāngā at Khānāuḍā. This was a turning point in the history of northern India, for after this the Rādjūṭ princes remained essentially on the defensive in their territories against the rising power of the Sūrs and then the Mughals.

Šīr Šāh Šīrūn'ī, the biographer 'Abbās Sarwānī mentions the territories acquired by him in Rādjāsthan as the mukāli Nāgarwādī u Adjmēr u Dījōdpūr, and he also speaks of the desert regions of the west as the zamān-i rīgasīn. Šīr Šāh now divided the whole region into extensive sālıns [q.v. in Suppl.], each under a fāṣlādīr with his commander Šhawās Kōhān as amin or overall governor. The emperor Akbar's policy in Rādjāsthan was based on conquest and assimilation. The captures of Cītur and Ranthambhor made him master of the greater part of the region, with the exception of Mēwār, not completely subdued until Dījhāṅgūrī's reign, when Rānā Āmār Singh submitted at Uḍavīlīr in 1023/1614. The emperor took Rādjūṭī wives, and both his son Dījhāṅgūrī and the latter's son Šīr Šīh Dīkahān were born of Rādjūṭī mothers. Rādjūṭī troops, typically dismounting from their small horses to fight, formed contingents in the Mughal army under Akbar. Rādjūṭī was organised into the sībā [q.v.] of Adjmēr under a sāhīdār [q.v.], with seven component sālıns: Adjmēr, Cītur, Ranthambhor, Sīrohi, Nāgarwādī, Dījōdpūr and Bīkānēr. The districts of Ālwar and Bharatpūr, which are now within modern Rādjāsthan State, were included in the sībā of Agra.

The reversing of Akbar's conciliatory policies under Awrangzīb [q.v.] left the emperor faced with such powerful enemies as the Rādjūṭīs in northern India and the Mārāṭhās [q.v.] in the northwestern Deccan. The new policy of Akbar, which affected the emperor's relationship with the Rādjūṭī nobility, who formed a highly influential element in the Mughal state apparatus; the highest-ranked noble in the empire was Mirzā Rādja Dīsīn Kaẖwāhā of Dījāpur, and in 1090/1679 all Rādjūṭīs in the state service were excused the newly-imposed dfizya, though the mass of Rādjūṭī subjects were not. Nevertheless, the
role of the Radjāput nobles now began to be curtailed by what seems to have been a deliberate policy on Awrangzib’s part. His attempt to interfere in the succession to the throne in Mārvār and to impose a Radjāput candidate of his choice there led to a major Radjāput revolt in 1695-97/1677-80 at Mārvār and the Marāthār. Since the Radjāputs had no field artillery, the Mughal army suppressed this, and occupied Udāypūr, but guerrilla warfare against the Mughals continued for a generation in the hills.

Bharatpur was taken over by a Dījāt chief on Awrangzib’s death and the Radjāputs were able to retake Ağmēr in 1133/1721; but internal dissensions prevented the Radjāputs from making headway against the Marāthās, within whose confederation they now came. Ağmēr was captured in 1169/1756; the power of the Radjāput chiefs reduced to a low ebb, and the land suffered from Pindārī and Pālān plundering and oppressive levies. It may be noted that it is in the 18th century that the term Radjāputāna is found, so that a historian like Khāfī Khān uses the expressions mulk-i Radjāputān and also Radjāputyar; it was essentially under British paramountcy in the 19th century that the designation Radjāputāna became usual.

With the defeat of the Marāthās by British forces in 1817-18, before the end of 1818, the group of princely states of Alwar and Bharatpur. When the British Indian province. The chief commissioner of the Marathas, within whose confederation they now in 1956 set up a Boundary Commission for the re-

RĀFI AL-DARADJĀT b. Rāfī al-Sha’ān b. Shāh ‘Alam I, Shams al-Dīn, great-grandson of the great Mughal emperor Awrangzīb [q.v.] and one of the ephemeral emperors in the last decades of independent Mughal rule, reigning for some four months in the spring of 1131/1719.

Rāfī al-Daradjāt’s death in 1118/1707, the main power in the empire was that of the Bāhrā Sayyids [q.v. in Suppl.], who in 1124/1712 raised to the throne Farrukh-siyar b. ‘Azm al-Sha’ān Muhammad ‘Azm [q.v.] but deposed him in Rāfī I 1119/1719 and substituted for him Rāfī al-Daradjāt; but in June, the latter died of tuberculous, to be succeeded by yet another puppet of the Bāhrā Sayyids, Shāh Dāḥīn b. Rāfī al-Sha’ān.

AL-ROME, MUHAMMAD B. AHMAD ABD BAKR IBN AL-NABULUSI, a traditionist originally from Nābulsī [q.v.], who was the ša’il of Ramla and who used often to make retreat with his disciples in the Aukwāh Baniyās (“the huts of Baniyās”) at the foot of Mount Hermon in the Syrian Djawālān.

He publicly opposed the Fātimid occupation of Syria. Taken from Damascus and sent in a cage to Egypt, on the orders of the caliph al-Mu’izz [q.v.] he was flayed alive in 363/973 at the Manẓār, the belvedere on the road connecting Fustāṭ with Cairo (the relevant Arabic texts and details of his biography in Th. Bianquis, Ibn al-Nabulusī, un martyr sunnite au service des Fatimides, in Actes du XXIe Congrès international des orientalistes, Paris 1975, i, 39-47).

He exercised a more important influence on the historians of Damascus and Baghdād who tended towards the ahī al-khâti than on those of Aṣghārī-
RAMY AL-DÎJMÂR (a.), literally, "the throwing of pebbles", a practice which probably goes back to early Arabia and whose most celebrated survival is in the ritual throwing of stones in the valley of Minâ by the pilgrims returning from 'Arafât in the course of the Meccan Pilgrimage [see al-gidák; mágâ; mígâ]. This practice, however, cannot be said to have had any divinatory significance, but among suggestions regarding its origins is the one that it could have been a gesture of solidarity with a dead person, on whose tomb stones are placed. See the discussion in T. Fahd, La divination arabe, Leiden 1966, 188 ff.

Bibliography: Given in the article. (Ed.)

RA'Y (a.), a verbal noun of ra'd, the common Arabic verb for seeing with the eye, has among its various closely related meanings that of opinion (i.e. a seeing of the heart) on questions of Islamic law not within the literal scope of the revealed texts (mas). Of the Kur'ân and hadith. Although sometimes used for an opinion on a specific question of law (for which hadîth is most common), ra'y is more often used for the body of such opinions held by a particular jurist (i.e. the ra'y of Abû Hamîl) and for the reasoning used to derive such opinions. It is also found in the sense of a seeing of the heart, the rite does not seem to have had any such legal reasoning. Discrimination among these and other possible meanings of the term is not always easy (cf. Ch. Pellat, Ibn al-Waghaâ (mort vers 1470/75), "conseilleur du califé, Paris 1976, 82) and ra'y never achieved the status of a fully technical legal term. Although the legal usage of ra'y is the most important historically, ra'y was also used for adherence to a body of theological doctrine (i.e. ra'y al-Dâmâsâi'â), and its narrowest recorded sense appears to be that of adherence to the doctrine of the Khârijîs (on the use of ra'y for the holding of specific theological dogmas, such as freewill, see al-Shâri'î al-Murtânî, al-Qârî 'Ît 'usîr al-Qârî 'Îtî, ed. Abu 'l-Kâsim Gardji, Tehran 1376/1956, ii, 673, where, however, the examples are all of the verb ra'â and the context is polemical). In all of the above senses, the singular ra'y is far more common than the plural ârâ'. As a process of deriving law ra'y does not constitute any single method for reaching but is one of the tools of such methods as kiyâs, isti'âdâh, and istiqlâl [q.v.], severally or together, although its use specifically in relation to kiyâs is the most frequent (e.g. yakitsâna bi ra'yi'îm). Consequently, identifying the precise forms of reasoning labelled as ra'î by one or another early jurist or school of jurists requires specific examination of their legal arguments (J. Schacht, The origins of Muhammadan jurisprudence, Oxford 1950, 98-132, 269-328, still of fundamental importance). Insofar as ra'y does not include the process of authenticating hadîth or interpreting texts, it constitutes only part of the scope of istiqlâl [q.v.] as generally understood, although the expression istiqlâh al-ra'î (the exercise of ra'y) figures prominently in the hadîth (e.g. the hadîth of Mu'âdh b. Dâhal, on which see al-Muhârâkî, Tahfât al-âwâdâth, Beirut 1422/2001, iv, 637-9) and in the polemics concerning ra'î.

There is general agreement among both Sunni and Shi'ites writers that there was some recourse to ra'î on the part of certain Companions (yâhêba [q.v.] of the Prophet, methods as kiyâs, isti'âdîh, and istiqlâl [q.v.], the part of certain Successors (tâbi'în) (i.e. 'Abî al-Barr, Dâmu' bașyn al-'îm was-fâtîhî, ed. al-Zuhayrî, al-Dammâm 1414/1994, ii, 858-9). This early ra'î was accorded some measure of authority, at least by the mainstream of Muslims, and...
A critical development in the history of Islamic law occurred during the late Umayyad and early ‘Abbasid periods with a dramatic growth in the scope and intensity of ra'y (cf. Ibn Taymiyya, Magāраст al-ṣafwāt, ed. al-Djazzār and al-Bāz, al-Riyadh 1419/1998, xx, 175 which names Rā‘īt ‘alā wa-Ibn Humrūz (so read) in Medina, ‘Uthmān b. Ṭabī‘ (so read) in Baṣra, and Abū Ḥanīfā as the leading figures at the beginning of the ‘Abbasid dynasty, cf. I. Goldzihēr, Muslim studies, tr. C. R. Barber and S. M. Stern, London 1971, 78-85 [on foreign influence], 201-2). The proponents of this new version of ra'y became known as the ahl al-ra'y (q.v.). The ahl al-ra'y were met with opposition from a number of the quarters: the scholars of the tradition (the ahl al-hadith, Ibn Katayba, K. Muhājīf al-hadithi, Cairo 1326, 62-71; ‘Alī Wālī Allāh al-Dīhlawī, Ḥudūqāt Allāh al-balīgha, ed. Damiriyā, al-Riyadh 1420/1999, i, 453-62 [explaining the dispute],) certain Muʿtazilī theologians, and large segments of the Shī‘ī community. Although opposition to ra'y in these various groups was in its origin based on different considerations, anti-ra'y arguments developed by one group could come to be adopted by the others (Ibn Maṣyūm, al-Darājdīt al-rāʃīf, Naṣīḥāf 1382/1962, 26). The Muʿtazilī opponents of ra'y were particularly influential in propagating a epistemologically sophisticated anti-ra'y position that came to influence the opposition among the traditionalists and Shi‘īs.

The opposition to ra'ī from among the traditionalists is extensively preserved in hadith collections, above all that of al-Dārīmī (d. 255/868), the writings of Ibn Saʿūd (d. 603/1207), his son ʿAbd al-Azīz (d. 636/1238), and others with the ahl al-hadith. The ahl al-ra'y were regarded by their traditionist opponents as undermining the authority of the sunna as having supported their cause with arguments that the traditionists had dedicated their efforts to render the law balanced by traditions were able to make some inroads among the ahl al-ra'y and ahl al-hadith could not always be clearly drawn. Many writers, for example, include Mālik with the ahl al-hadhith, others with the ahl al-ra'y (Ibn Katayba, al-Mawāredd, ed. Bashshār al-Umrāni, Beirut 1394/1973), and Abu Ḥanīfā and the ahl al-ra'y as having supported their position that came to influence the opposition among the ahl al-hadith. The ahl al-ra'y were able to gain substantial successes in their competition with the ahl al-hadith and to attract talented students of hadith to their camp (Ibn Saʿūd, vi, 270: Zuhār b. al-Hudhayl). In such cases the sources speak of ra'y gaining mastery of the individual, and his eventual identification with ra'y. The most obvious examples of such an identification are the Medinan Rā‘īt ‘alā Ibn Farīrīkh (d. 136/753), known as Rā‘īt ‘al-Ra'y, and the Banū Ḥarām followers of al-Yaḥyā (d. 245/859), known as al-Hālī al-Ra'y. Often, however, ra'y was adopted but not in its most aggressive form, and the line dividing the ahl al-ra'y and ahl al-hadith could not always be clearly drawn. Many writers, for example, include Mālik with the ahl al-hadhith, others with the ahl al-ra'y (Ibn Katayba, al-Mawāredd, ed. Bashshār al-Umrāni, Beirut 1422/2001, xv, 543-86). The many instances in which Abū Ḥanīfā was regarded as having adopted the sunna were collected (see Ibn Abī Shāyba, al-Khāṭīb al-Musannaf, Bombay 1403/1983, xiv, 149-262). Even Abū Ḥanīfā himself, however, did not lack entirely for admirers among the ahl al-hadith, and one of these, 'Abd Allāh Ibn al-Mubārak (d. 181/797 [q.v.]), approved of ra'y for the purpose of interpreting hadith.

Al-Shā‘ī was regarded by some leading representatives of the ahl al-hadith as having supported their cause with arguments that the ahl al-ra'y could not
dismiss, and Ahmad b. Hanbal not only encouraged traditionists to study al-Shāfi‘ī’s al-Risāla ( Ibn Abī Hātim, 61-3) but himself made a careful study of al-Shāfi‘ī’s legal works and was thus exposed to a moderate version of ra‘y. The very development of the discipline of legal theory (wā’il al-fikr [q.v.]) ushered in by Ibn Hazm on the part of al-Shafist legal scholars points to the epistemological foundations of the various methods of legal reasoning falling within ra‘y and to a revaluation of ra‘y in all its forms. The question was now raised, for example, of whether the Prophet himself had ever had recourse to ra‘y, albeit infallibly, as suggested in the hadith (Abū Dāwūd, al-Sunnah, ed. al-Kūhālī, Beirut 1416/1996, ii, 509; cf. Kurān, IV, 105: bi-‘ma arāna Allāh, a question to which al-Shafistī was unable to give a definitive answer, cf. al-Baysāri, Manzūf al-Sunnah wa Tafsīr, ed. Ahmad Šafrī, Cairo, n.d., i, 7-8).

al-Shafistī himself favoured the limitation of ra‘y to kiyās to the exclusion of istihsān (Schacht, Origins, 120-8), and others in his wake reconciled the traditions for and against ra‘y by identifying the ra‘y that was acceptable with ra‘y that was grounded in the revealed texts, that is, kiyās. Nonetheless the Hanafis and Mālikis continued to support a broader notion of ra‘y and interpret the concept of ra‘y in the hadith to refer to ra‘y in the sense of theological heresy ( Ibn ‘Abd al-Barr, Dā‘īr bi-man fā‘l, ii, 1052-4) or to offer accounts of istihsān, for example, that brought it within the scope of kiyās.

More radical forms of legal theory emerged, however, which imposed a standard of certainty for Islamic law in all its elements. Among the proponents of this elevated standard was the Baṣrī Muṣṭafā al-Nazzām (d. 220/835 and 230/845 [q.v.]) whose attack on probable reasoning in all forms including kiyās did not spare the Companions who resorted to ra‘y (van Ess, Das Ketūb an-Nāk al-Nazzām und seine Rezeption im Kettūb al-Futūh des Gāzī, Göttingen 1972). Among the Baghdādī Muṣṭafāzīs who took a similar position was Dja‘īr b. al-Mubāshshīr (d. 234/848-9), who unlike al-Nazzām sought to justify recourse to ra‘y on the part of the Companions by way of compromise of a dispute or theoretical inquiry without practical consequences (‘Abd al-Dāhāb, al-Hamadhānī, al-Maghīrī, ed. Amīn al-Kīhlī, Cairo 1962, xvii, 298).

The Zahirī school of law, inaugurated by Dāwūd b. ‘Alī al-Iṣlāhī (d. 270/883 [see Dāwūd b. Kha‘lāf]) came from the ranks of the al-hadith, and Dāwūd, like Ahmad b. Hanbal, was a fervent admirer of al-Shafistī (I. Goldziher, Tha Zāhirī, tr. W. B. Hen, Leiden 1971). Dāwūd’s son Muhammad (d. 297/910) impelled the Zahirīs in a more independent direction and was unimpressed in his critique of al-Shafistī (D. Stewart, Muhammad b. Dā‘ī al-Zāhirī’s manual of jurisprudence, al-Wusūl ilā ma‘rifat al-‘usūl, in B.G. Weiss, Studies in Islamic legal theory, Leiden 2002, 129-30). Each in somewhat different fashion propounded a version of Islamic law that excluded all forms of probable reasoning and both were in a position to draw upon their Muṭāzilī contemporaries (cf. al-Sarāḥšī, Usūl al-fikr, ed. Abu ‘l-Waṣīf al-‘Aghānī, Cairo 1937, ii, 119). In the apparent absence of surviving writings by these early Zahirīs, it is the extensive works of the Andalūsī Zahirī Ibn Hazm that lent light on the Zahirī contribu-

tion to the anti-ra‘y movement and exhibit the lingering influence of the Muṭāzilī theorists. According to Ibn Hazm, ra‘y was already a feature of the period of the Companions before the appearance of analogy in the following generation (Muṣḥaḥkhas ihtil al-kiyās wa ‘l-ra‘y wa ‘l-istihsān wa ‘l-takālī wa ‘l-ta‘līl, ed. Sa‘īd al-Afghānī, Beirut 1379/1969, 4-5). He understands ra‘y to involve the enunciation of legal opinion on the basis of sheer expediency and he regards the process as equivalent to istihsān, and istihbāt (derivation) (al-Iṣlāh fi usūl al-‘usūl, ed. Ahmad Muḥammad Şākir, Cairo 1947, vi, 16). He vigorously rejects the effort on the part of al-Shafistī to isolate his day to day decisions from the rest of the law as a form of ra‘y, in fact as identical to acceptable ra‘y. There is no acceptable form of ra‘y. The Companions’ recourse to ra‘y was misconceived, but in their case never amounted to an endorsement of ra‘y as God’s law (al-‘usūl). They saw it rather as providing a rule they individually might follow out of pious precaution, or they offered their ra‘y by way of compromise to settle a dispute. Insofar as any sound Prophetic traditions mandate recourse to iqṭīḥād al-ra‘y, what must be meant is exhaustive seeking for the applicable revealed texts.

Opposition to the movement of al-hal al-ra‘y was also found among the Twelver and Ismā‘īlī Shī‘īs, and resort to ra‘y (also irīsā’), kiyās, and iqṭīḥād is condemned in numerous Shī‘ī hadith, sometimes in terms familiar from the Sunnī hadīth. Prominent in this con-

nection are the hadīth going back to the Imam Dja‘īr al-Sādīk, who is portrayed as meeting with Abī Hanīfah, whose pretensions to legal understanding he quickly shows to be groundless (i.e. al-Majdūjī, Būhār al-anwār, Tehran n.d., ii, 291-4, cf. Kāfī al-Nu‘mān, Dā‘īm in al-Islām, ed. Faydí, Cairo 1379/1960, ii, 266). Of particular interest is a purported letter from Dja‘īr to the proponents of ra‘y and kiyās in which the Imām argues that if resort to ra‘y were permitted, there would have been no point in God’s sending of the prophets. He could have left humans to direct their own affairs (al-Barkū, al-Muhātim, ed. Mahdī al-Radā‘ī, Kum 1413, i, 331-2). The same Imām is also found warning his followers against turning to ra‘y when they are unable to find answers to their questions in the revealed texts, an injunction that is not always followed (Hasseine Modarresī Tabātābā‘ī, An introduction to Shi‘ī law, London 1984, 30-1).

The anti-ra‘y position was defended in the dog-

matic writings of the Ismā‘īlī Kūtānī-Nu‘mānīs [q.v.]. b. Muḥammad (d. 363/974), whose polemics against ra‘y were bolstered by arguments from Muḥammad b. Dāwūd al-Zāhirī (K. Ḥagālī usūl al-ma‘ṣūkhūkh, ed. S.T. Lohbandwalla, Simla 1972, 202). A line of Twelver Shī‘ī scholars, al-Shāykh al-Mufīd (d. 413/1022) and his students al-Shāfī‘ī al-Mu‘tadjad (d. 436/1044) and Muḥammad b. al-Ḥasan al-Tūfī (d. 460/1067 [q.v.], writing under Muṭāzilī influence, maintained their community’s rejection of ra‘y. Even after the 7th/13th century when Twelver Shī‘ī jurists came to recognize the validity of iqṭīḥād, they continued to exclude ra‘y and kiyās from their sources of law.

The competition between the proponents of ra‘y and their various opponents ended in a clear victory for the al-hal al-ra‘y. Islamic law as it can be found in the enormous literature of the Sunnī schools is largely the product of ra‘y; the books of fikr are the books of ra‘y. It was this version of Sunnī law that formed a model for the elaboration of law in other circles, even those opposed to ra‘y. In this sense al-Shafistī was fully justified when he stated that “all are depen-

dant on the ‘Irāqī in fikr” ( Ibn Abī Hātim, 210, var. “in ra‘y”). At another level, however, the deep di-

vision within Sunnism between al-hal al-ra‘y and al-

hadith was never entirely bridged but continued to manifest itself to one degree or another within the
Sunni schools of law (al-Khaṭṭābī, Maʿālim al-sunna, ed. Muhammad Rāghib al-Tabbakh, Aleppo 1351/1932, i, 2-8 [on reconciling ahl al-hadīth and ahl al-raʾy]). Not only an Ibn Taymiyya (d. 728/1327 [q.v.]) (Maṣūmatit al-fūtūhā, sūrah, xix, 151) could take offence at the statement of the Shaikhī Aḥlāfīr al-Quwaynī (d. 1170/1755?) that nine-tenths of the law depended on pure raʾy of scholars. The Companions (al-ʿAzīz al-Dīn, al-Dīb, Cairo 1400, ii, 768). Raʾy was never entirely repudiated as a source of law, and many centuries after the Central Asian Ḥanafī Abu l-ʿUṣair al-Bazdawī (d. 670/1271) claimed that far from aṣḥāb al-raʾy being a label of opprobrium (reading suhba) for the Ḥanafīs as some thought—it was in fact "one of the most beautiful names as indicating their special connection with knowledge of the heart" (Khitāb fi-nurṭīf al-hadīḍ al-Qādīyā, ed. M. Bernard and E. Claumont, Cairo 2003, 4)—Hanafīs and their allies felt called upon to address the label (Murtada al-Zabīdī, al-Burhān, ed. M. Bernand and E. Chaumont, Leiden n.d., vi). Raʾy was never entirely repudiated as a source of law, and many centuries after the Central Asian Ḥanafī Abu l-ʿUṣair al-Bazdawī (d. 670/1271) claimed that far from aṣḥāb al-raʾy being a label of opprobrium (reading suhba) for the Ḥanafīs as some thought—it was in fact "one of the most beautiful names as indicating their special connection with knowledge of the heart" (Khitāb fi-nurṭīf al-hadīḍ al-Qādīyā, ed. These movements such as the Muslim Brotherhood [see Al-Brîyân Al-Muṣlimûn] of Egypt and Djamâ‘at Islâmî of Pakistan and those influenced by their ideological frameworks called for the transformation of the existing political, legal, social and economic institutions of Muslim societies to one more in line with "Islamic" norms and principles. One such institution that was targeted for transformation was what they considered to be ribâ (that is, interest)-based banking and finance in Muslim societies.

Ribâ in its fikî sense is associated with a range of contracts, from loans (kâfîr) to debts (dâni) to sales (ba‘y). However, in the mid-to late-20th century, in the Islamic finance literature, ribâ came to be discussed mainly in the context of interest in financial transactions, and interpreted as interest. This close association between ribâ and interest is generally accepted today among many Muslims. In his discussion on ribâ, Khurshid Ahmad, a prominent advocate of Islamic finance in Pakistan, emphasized how ribâ is to be understood today, and argued that Islam forbids "any premium or excess, small, moderate or large, contractually agreed upon at the time of lending money or loanable funds". (Ahmad, Elimination of Ribâ, 42). However, for some Muslims, ribâ should not be interpreted simply as interest. For them, only some forms of interest may be ribâ, and not others.

Muhammed 'Abduh (d. 1905) and Rashid Rida (d. 1935) were among the first to address the question of interest on deposits. While uncomfortable with the idea, they were prepared to concede it if a mu‘ālātāb (commenda) scheme could be devised to legitimate the interest. (Mallat, The debate on Ribâ, 74). The Egyptian authority on Islamic law, 'Abd al-Razzâk Sarâri (d. 1971), saw the main intent of the Kur‘ân’s prohibition of ribâ. Interest on capital, in his view, could be justified on the basis of "need" (ḥādīya), but to prevent misuse and exploitation the state should limit interest rates and control methods of payment. (Sâdîq al-bakk, iii, 241-4). The contemporary Syrian thinker Douali argued that the Kur‘ân prohibited interest on "consumption loans" specifically, presumably because of its concern for people who may have borrowed just to meet their basic needs. Following this line of thinking, some have argued that there is no ribâ in interest paid or received by corporate bodies such as companies and governments, and others that Islam prohibits "usury" not "interest". There is also the idea that ribâ should be equated with real interest, not nominal interest. Several scholars of the mid- to late-20th century also interpreted ribâ from a "moral" perspective, away from the literalism that dominates much of the thinking on ribâ. Muhammad Asad (d. 1992), a modern commentator on the Kur‘ân, maintained that ribâ involved "an exploitation of the economically weak by the strong and resourceful" (The message, 633). Faizur Rahman (d. 1988), the Pakistani-American academic, argued that the râzn e-‘ilz of the prohibition of ribâ was injustice (zuh), as was stated in the Kur‘ân (II, 279), and that "well-meaning Muslims with very virtuous consciences sincerely believe that the Kur‘ân has banned all bank interest for all times in woeful disregard of what ribâ was historically, why the Kur‘ân denounced it as a gross and cruel form of exploitation and banned it" (Islam: challenges, 326).

Despite the appeal of these views, the neo-revivalists and their followers and sympathisers, who increasingly represent mainstream Muslim opinion today, have continued to reject any reinterpretation of ribâ to accommodate bank interest. Mawdūdî (d. 1979), the founder of Djamâ‘at Islâmî of Pakistan, for example, asserted that there was no question that ribâ was interest. The Council of Islamic Ideology of Pakistan (Consolidated recommendations, 7), which in the 1980s developed a blueprint for the transformation of the Pakistani financial system into an Islamic one, claimed that there was "complete unanimity among all schools of thought in Islam that the term ribâ stands for interest in all its types and forms".

In the 1970s, the oil-producing Gulf states found themselves with massive cash surpluses to invest, which shifted the debate on ribâ from the theoretical to the practical. One of the strategies adopted by these states was to develop financial institutions on an interest-free (that is, ribâ-free, or Islamic) basis. Examples include the Islamic Development Bank based in Saudi Arabia, the Faisal Islamic Banks based in the Middle East, Kuwait Finance House and the Dubai Islamic Bank. Shari‘a advisers guided the design of contracts and products and the drawing up of principles for productive ventures, in which capital could be combined with the skill of entrepreneurs to lead to socially beneficial incremental returns. The system created is understood in Islamic finance today as Profit and Loss Sharing (PLS), in which both provider and user of the funds share in the outcome of the venture, whether positive or negative, and no interest is paid or received (Saeed, Islamic banking, 51-75). Contracts developed cover mu‘ālātāb (commenda), mu‘ākātāb (partnership), iqāra (leasing), istisna‘ (manufacturing or "made-to-order") and murābaha (mark-up finance based on sale of goods). Driven by these new strategies, Islamic banking and finance grew strongly in the 1980s and 1990s.

With the 21st century, the role of Islamic (that is, ribâ-free) financial institutions in Muslim communities has become even more significant, with institutions ranging from village banks to major international development banks, to insurance (takāfîl) companies, to investment funds—all in competition with conventional interest-based institutions but often in co-operation with them as well. Several Muslim majority states such as Malaysia, Kuwait and Egypt, for instance, have dual banking and finance systems (one based on interest, the other based on Islamic principles). Even interest-based banks (including major international banks) now offer Islamic products or Islamic windows to their Muslim clientele, and to interested non-Muslims.

The drive to develop modern, ribâ-free banking, finance and insurance was accompanied by some serious difficulties and also pragmatic shifts in the understanding of ribâ. Because of competition, Islamic financial institutions felt they had to provide their Muslim clients with "competitive" products, which at times meant interest-based products under different contractual arrangements and labels. These pragmatic adjustments tended to make the Islamic finance, at times, less distinguishable from interest-based finance in the eyes of their critics. What follows are some examples where critics argue that there are pragmatic shifts in the understanding of ribâ by the proponents of Islamic finance.

First, Islamic bankers and their Shari‘a advisers came to see ribâ, interpreted as interest, as a legal rather than an economic concept. For them, ribâ occurred mainly in the context of contractual obligations on borrowers to pay an inma‘a in a loan transaction (Nienhaus, Islamic economics, 44). Islamic law prohibited any positive return to the provider of capital in a purely financial transaction, such as where an entrepreneur
received funds from a bank for utilisation at the entrepreneur’s discretion. This was governed by the requirements of the contract of loan (k rid). If the contract changed, e.g. from loan to sale (bay'), a return, even if in reality it might appear little different from fixed interest, was permissible. An example of his is that mark-up in mara baha, which from a legal point of view is not a purely financial transaction and therefore a positive return ( = mark-up) is considered permissible.

Second, practical realities also meant that Islamic banks needed to compensate themselves if customers defaulted on contractual obligations, for example by failing to pay a debt on time. Thus, in such cases, a “fine” (compensation equivalent to the “opportunity cost” of the capital) became the practice, not without criticism, however. On the other hand, there are depositors who do not want to put their funds at risk in a PLS account but prefer to keep them in a non-PLS account to avoid any risk, primarily for safety-keeping purposes. While such depositors are not entitled to any profits, in practice in order to retain these deposits, Islamic banks have begun to offer “rewards” to such depositors saying that as long as no contractual obligations were involved, they had the discretion to offer incentives (Saeed, Islamic banking: 112).

Third, a question currently being debated is whether “profit” can be pre-determined in PLS contracts. In Islamic law, as well as in the literature on Islamic finance, the concept of legitimate profit is closely associated with the uncertainty of a positive return in a PLS venture or a sale transaction. One view, albeit a minority one, is that there is nothing wrong in determining profit in advance as long as this is done by the two parties by choice and consent. While this position is not accepted in the mainstream Islamic finance, it is possible that this position may become more acceptable at least in practice as more emphasis is put on developing investment products with less risk and more predictable returns.

Fourth, a further question is whether it is permissible to invest in a business which engages in an activity prohibited by Islamic law, for instance, in interest-based dealings. Since most publicly-listed companies in developed countries rely heavily on interest-based finance, paying and receiving of interest is normal. This is problematic from an Islamic finance perspective even if the businesses produce b idli (permissible) goods or services. The debate has produced two camps, one declaring that investment in such companies is unambiguously prohibited and unlawful for Muslims according to fik h'. In the other camp, the proponents of permissibility, relying on concepts such as “necessity”, “public interest”, “general need”, and analogy (k a di), have attempted to find a legal justification, a pragmatic position that recognises that such investment is a modern global phenomenon and difficult for Muslims to avoid. The pragmatists have accepted permissibility of investment in such companies with certain conditions and introduced concepts such as “cleansing” of interest profit from prohibited elements, i.e. the estimated interest component of the company.

Many Muslims who are interested in genuine n b h -free finance argue that, the pragmatist arguments have largely rendered Islamic banking and finance over to an interest-based system except in name. The trend to develop more and more products that are similar to those offered by the interest-based system would only blur any distinction that may exist between the Islamic and interest-based systems. Despite these reservations, “Islamic” banking and finance appear to be becoming increasingly acceptable among Muslims and their use consistently increasing, however pragmatic it may be.

the rebels “by means of messengers and letters”. Many Muslims were killed by the rebels and the Muslim representatives were driven out.

The reconstruction of the course of events beyond the general outline is complicated by the many contradictory accounts which are often of apologetic or polemical nature. Obviously, this problematic chapter informing who preserved the accounts for posterity, contradictory accounts which are often of apologetic or vindicating an opponent.

When 'Abd al-Bakr ascended the throne, he defied threats from several nomadic tribes to attack Medina by dispatching to Syria an expedition force under Usama b. Zayd. Some must have considered this move reckless, hence the claim that it was in fulfillment of a wish made by the dying Prophet. Yet the threat posed by the nomads must not be exaggerated. First, a nomadic takeover of a settlement was most unusual, although the risk of a raid for plunder was no doubt real. Second, the tribes living in the immediate vicinity of Medina remained unmoved. They included, among others, the Ash'ajah or part of them, the Aslam, the Dhuhayna [see ar-Raj'ah] and the Muzayna [q.v.]. These tribes were not major players in Arabian politics, but their combined military weight should not be underestimated. They provided Medina with an inner circle of defence, continuing their pre-Islamic links with its tribes. Indeed, 'Abd al-Bakr managed to organize the Muslim army in Dhul Qa'a and send Khalid b. al-Walid [q.v.] of the Kurashi clan of Makhzum [q.v.] to Nadjdi even before Usama b. Zayd's return. Yet on the whole the situation looked bleak. The sedentary false prophet Musaylima and the nomadic one Tula'yah were amassing power. The latter was also followed by the Tayyi [q.v.]. Most of the Ghatafan [q.v.] apostatised, as did parts of the Sulaym [q.v.], while the Hawazin remained undecided with the exception of the Thaqif who remained steadfast. Also, the 'Aduz /'Aqaba, Hadźmán “the rear part of the Hadźmán”, that is, the Nash b. Mu'awiyah, Qubayd b. Mu'awiyah and Sa'd b. Bakr, did not rebel, and the same is true of Dhadhala Kays, that is, the Fahm and 'Adwân tribes.

The only battle which preceded the return of Usama's force took place east of Medina against tribes of the Ghatafan group, namely, the 'Abs and Dhuhayn (more precisely, the former and the Murra subdivision of the latter). Following their defeat, the 'Abs and Dhuhayn killed the Muslims living in their midst, and their example was followed by other tribes. Tula'yah al-Asadi lost the battle of Buzayli [q.v.], having been deserted by his non-Asadi allies. First the Tayyi left unimpeded, having created the impression that their own tribe was threatened by the Muslims (whom they subsequently joined). Then the Ghatafan under 'Uyayna b. Hisn [q.v.] of the Fazāra [q.v.] defection.

The most important events of the īrida involved the Tamīm, the largest nomadic tribe in Arabia, and the sedentary Hanifa who lived in Yamāmah. Many of the Tamīm (perhaps even most of them) yielded to Muslim control during Muhammad's lifetime. For example, the Sa'd b. Zayd Manāt, the most numerous subdivision of the Tamīm, had two tax-collectors appointed by Muhammad: al-Zubair b. Bardh b. Abuf and Kays b. 'Asim [q.v.]. Typically, the latter was waiting to see what the former would do with the camels which he had collected for Medina, in order to do the opposite. Indeed, Tamīm's subdivisions, not to mention the Tamīm as a whole, did not form a unified group and the same could be said of every single tribe, be it nomadic or sedentary. Two events dominate the accounts on the īrida of the Tamīm. First, the affair of the false prophetess Sād, above all her infamous encounter with Musaylima. Now Musaylima required of his men strict asceticism, and this was the occasion for Musaylima to display his religious zeal. The other tribes were probably meant to call his ascetic image into question. Second, the killing of Mālik b. Nuwawra [q.v.] and the ensuing criticism concerning Khalīd b. al-Walīd's conduct.

The sedentary Hanifa who were unified (with the exception of the Suḥaym subdivision) under Musaylima were Medina's staunchest enemies. After an initial defeat, the Muslims pushed the Ḥanafīs to “the orchard of death” [hadīlat al-mawt] in 'Akraba [q.v.], not far from Musaylima's home town al-Haddār (modern al-Hudhaydī). The historical traditions of the Kuraysh and the Ansār preserved lists of the members of these groups who were killed in the battlefield, but one looks in vain for the names of the many nomads who died there. The fortresses of the Hanīfā remained intact and the Hanīfī Muqdtiḍā's b. Murārā who had been taken captive at an earlier stage in the fighting and negotiated with Khalīd on behalf of the Hanifī tricked the latter by disguising the children, women and old people who remained in the fortresses as Muslims, thus improving the terms of his tribe's capitulation. But the ruse may have been invented in order to protect Khalīd's policy because the negotiated treaty—fortified by his marriage to Muqdtiḍā's daughter—caused the Muslims great losses.

The story of al-Aswād in the Yemen which is full of intrigue involves a struggle between the Persian Ābnā'ī [see ar-Raš'āt] [II] and several Arab tribes for the control of 'Aqaba [q.v.]. During this power struggle Medina remained in the background; when the Ābnā'ī managed to regain control of 'Aqaba, 'Abd al-Bakr recognised them, precisely as the Prophet had done in his time. The Ābnā'ī were then challenged by Kays b. al-Makhdūm who took 'Aqaba, but they managed to drive him out shortly afterwards.

The road to the Yemen was secured by a Muslim expedition force which brought the rebellious 'Āmar b. Mu'ād al-Dhālib and Kays b. al-Makhdūm back to the Muslim camp, and the Yemen as a whole could now be pacified. Then the Muslims turned to deal with the rebellion in Hadramawt. Here the dominant tribe Kinda [q.v.] yielded to superior forces, one under al-Muhājir b. Ābū Ṣumayya (of the Makhzum) arriving from the Yemen, and another under 'Irāmīma b. Ābī Qā'āly (also of the Makhzum) arriving from the land of Maḥra [q.v.]. The kingy family from the prestigious subdivision of Kinda, 'Āmar b. Mu'ā'īya, was destroyed in a surprise night attack. Members from this subdivision and from the Ḥarīth b. Mu'ā'īya subdivision later surrendered in al-Nudjayy [q.v.]. Following the war against the Kinda, al-Ṣawāṣ'āt [q.v.] b. Kays of the Ḥarīth subdivision rose to prominence. This shift in the leadership was atypical, since tribal leaders usually survived the īrida. For example, 'Uyayna b. Hisn is said to have been the only Arab who received one miqāt or a quarter of the captured booty in the Dāhilīyya and one khums or a fifth of the booty in the Islamic war.

The war in Hadramawt was preceded by fighting in the southeastern corner of Arabia where Dhul 'l-Tādī Lākīt b. Mālik al-Adzī pushed the sons of the Dijdlānā [q.v.], and see ar-Raš'āt and Suḥar] who were 'Abd al-Bakr's allies to the mountains and to the sea-side of Suḥar. Tribal forces sent by Medina to aid
its allies besieged Lakht in Dahā and were joined by other tribal forces under ‘Ikrima b. Abī Dhahl. The Muslims were also supported by troops from the Nādiya [cf. AL-KHURT] and the ‘Abd al-Kays [q.v.]. ‘Ikrima continued his march to the land of Mahra with his tribal units and subincorporation of the Azd called Rāsib and the Sa’d b. Zayd Manāt of Tamīm are specifically mentioned). Among the Mahra there was internal strife, and the weaker party allied itself with the Muslims [in other words, it converted to Islam]. After the stronger party was subdued, the leader of the stronger party was killed, and his army also included warriors from the Mahra.

Shortly after the Prophet’s demise, his governor in Bahrayn, al-Mundhir b. Sawa [q.v.], marched against the rebels with the Arabs and Persians who joined him. Among others also died. The Kays b. Tha’laba of the Bakr b. Wa’il [q.v.] “and the whole of the Rabī’a” rebelled under al-Hutam, who was one of the Kays, while al-Djarud, a Kays, who declared the Nakf [q.v.] with his army also included warriors from the Mahra. Al-Hutam controlled al-Ḳatif [q.v.], Hadjar [see AL-HASA], Dārīn (modern Tāurrīt) and al-Ḳatt [q.v.], while the Muslims had been besieged in their stronghold, Djiwāṭah, until they were rescued by al-‘Alā. The rebels were defeated on the mainland and fled to the island of Dārīn which the Muslims took after having miraculously crossed the sea.

The ridda can be seen as a prelude to the wider conquests. The Kurashī generals gained precious experience in mobilising large multi-tribal armies over long distances. They benefited from the close acquaintance of the Kuraysh with tribal politics throughout Arabia. A crucial role was played by Khālid b. al-Walid whose mother was a nomad. Indeed, the Bedouin way of life was not alien to him: he is said to have consumed a lizard, while Muhammad who was watching loathed it. Already in the conquest of Mecca (8/630), Khālid was leading a troop of nomads (referred to as Muslimāt al-ʿamr), and in the battle of Hunayn [q.v.] shortly afterwards he led the nomadic Sulaym at the vanguard of the Muslim army.

The ridda changed for ever the relationship between the central government and the strong tribes of Arabia. The latter were trying to abolish whatever ascendency the Muslim state had achieved during the lifetime of Muḥammad, but were overpowered by large expedition forces mobilised by able Muslim generals. The battlefield successes of the Muslims secured for them the cooperation of tribes living between Medina and the territories of the rebellious tribes. Medina re-established its prestige and dealt the severest forms of punishment to those who had killed Muslims earlier in the fighting.

New realities were created on the ground. Khālid’s treaty with the Ḥanīfa prescribed that he receive one orchard and one field of his choice in every village included in the treaty. The villages in the Yamama area which were not included in the treaty bore the full consequences of the defeat. The inhabitants of the Mar’aṭ village were enslaved and a tribal group of the Tamīm, the Imru ’l-Kays b. Zayd Manāt b. Tamīm, settled there. Musaylima’s home town of al-Haddār was not part of the treaty. Khālid enslaved its people and settled there the Banu ’l-‘Ardaj, i.e., the Banu ’l-Ḥarrīb b. Ka’b b. Sa’d b. Zayd Manāt b. Tamīm. These changes demonstrate how local groups of the Tamīm benefited from their co-operation with Khālid in Yamama. Other villages not included in the treaty were al-Siyūb, al-Ḍayā, al-‘Arika, al-Ṣabābī, Faygān, al-Kurayya [one of the central villages of Yamama], al-Jabāh, al-Ḳalāym, al-Kirs, Makhrafa and al-Maṣṭān. In addition, the al-Magdiyya village was inhabited by the Hizān of the ‘Arbera [q.v.] and by people of mixed descent (akhlāq min al-mawṣal), including musawīl of the Kuraysh and others who settled there after the ridda, since it had not been included in Khālid’s treaty.

The new balance of power between the central government and the tribes is reflected in the takeover by the state of tribal protected grazing grounds [see himā]. The thousands of camels and other beasts taken as booty in the last years of Muḥammad’s life, in addition to those collected from the nomads in taxes, needed large grazing grounds. In addition, several influential Kurāṣḥ, such as the future caliph ‘Uṯmān b. ‘Affān and also al-Zubayr b. al-‘Awām and ‘Abd al-Ḳalām b. ‘Awf, were competing with the state because they were themselves owners of large herds. ‘Abd al-Ḳalām left to his inheritors 1,000 camels, in addition to 3,000 ewes and 100 horses. The ewes and the horses were grazing in al-Nakf [see AL-ḲATIĪB] (often wrongly erroneously al-Bakī). It was Muḥammad who declared the Naki’, some 120 km/75 miles south of Medina a state himā “for the horses of the Muslims”, probably at the expense of the Sulaym, and put in charge of it a member of the Muzayra. Moreover, Muḥammad reportedly abolished the tribal grazing grounds by declaring that the only legitimate himā belonged to God and His messenger, in other words to the state. Previously, the tribes feared the takeover of their land and water resources by other tribes, but now the powerful state and certain individuals coveted the same resources. The size of the state himās grew constantly under the caliphs. A telling example of this is linked to the above-mentioned battle against the ‘Abs and Dhūḥayn which took place in al-Abraḵ in the area of al-Rabadha [q.v.] some 200 km/125 miles east of Medina. Abī Bakr actually conquered Dhūḥayn’s territory (ghalaba bābi Dhūḥayn al-‘alā ʿilāḥ al-dār) and expelled (nabd) its owners. He made al-Abraḵ a himā for the horses of the Muslims [in other words, he made it state property] and permitted everybody to graze in the rest of al-Rabadha at the expense of the Tha’laba b. Sa’d b. Dhūḥayn. Later he declared the whole of al-Rabadha himā for the camels collected as taxes (sadaqat al-muslimin). One report attributes the expulsion of the Tha’laba from al-Rabadha to ‘Umār b. al-Ḳhattāb, while another has it that the state himā in al-Rabadha was created by Muḥammad, in which case Abī Bakr was merely restating and strengthening state authority there.

**M. Lecker**

**RIMÂYYA** [see KAWS]

**ROHTAK**, the name of a region and a town of northwestern India, now in the Harîyana State of the Indian Union. The region is not mentioned in the earliest Indo-Muslim sources, but from the Sultanate period onwards, its history was often linked with that of nearby Dîhil, to its southeast. In the 18th century, it was fought over by commanders of the moribund Mughals and the militant Sikhs. According to a report by Sayh Ibn al-'Adîjami quoted in Ibn Hâdîjar's *Durut*, their friendship ended when Ibn Dâbîr married, though Ibn Dâbîr composed a marthiya on al-Ru'aynî when he died.

**RÜH ALLAH** [see NAS. I. B.]

**RUKHÂM** (A.), in modern Arabic usage, the usual word for marble in general, whereas marmar, which clearly derives from the Greek marmar, usually refers to white marble or alabaster. Historically, however, rûkham and marmar were often used interchangeably to refer to a wide variety of hard stones, including marble, granite and diorite. Where the two terms were distinguished, it usually had to do with commerce; marmar was white, whereas rûkham could assume various shades and hues.

Geographically, the use of marble in the Islamic world was largely restricted to those regions whose predominant building material was stone rather than brick or adobe. Generally speaking, places to the west and northwest of the Euphrates river—including Anatolia, Greater Syria, and Egypt, in addition to the Iberian peninsula and the Indian subcontinent—used stone and marble in their architectural monuments. Elsewhere, brick with a stucco or tile revetment predominated.

Marble in the Islamic world was obtained from two main sources: ancient buildings and quarries. Historically, the use of salvaged marble far outweighed that of freshly-quarried marble, which was only quarried by the later Islamic dynasties, especially the Ottomans and the Mughals. Exceptions did exist, such as the robust marble capitals in Madinat al-Zahâr in 4th/10th century al-Andalus and the exquisite columns and capitals in the Alhambra Palace in the 8th/14th one. But on the whole, marble in early and medi- neval Islamic monuments was taken from ancient, Christian, or even earlier Islamic buildings. Historically, the use of marble in Islamic architec-

The exception with an outstanding series of Ghaznavid marble dadoes and carvings dating to the 5th-6th/11th-12th centuries, the architectural use of marble goes into an extended decline after the 6th/12th century, a revival centred in Aleppo during the time of the Ayyubids. Polychrome marble ornament in the form of marble frames, which most likely also existed at the Dome of the Rock (K.A.C. Creswell, A short account of early Muslim architecture, revised and supplemented by J.W. Allan, Cairo 1989).

In India, marble was rather sparingly used in Mughal architecture, often as a highlight to the predominant red sandstone. This attractive juxtaposition continues in early Mughal mosques and mausoleums, reaching an apogee in the tomb of Humayun in Delhi. At first, white marble was reserved for sultans' tombs, such as the spectacular tomb in Fathpur Sikri [g.v.], of Akbar Salim Chishti (1573-7), which also boasts some of the earliest and finest openwork marble screens, commonly known as jalis. But by the 11th/17th century, various monuments were being sheathed in white marble inlaid with polychrome stones, including the Mosque of the 'Imād al-Dawla (1051-6/1622-7), and of the Šāh Mahall (1041-53/1632-43 [g.v.]), both at Agra [g.v.] (Edds Koch, Mughal architecture, Munich 1991).

RÜŞHANI, DEDE UMAR. Turkish adherent of the Ša'b order of the Khalwatiyya [g.v.] and poet in both Persian and Turkish. He was born at an unspecified date at Güzel Hisar in Aydınlı, western Anatolia, being connected paternally with the ruling family of the Aydınlı Oghulları [see Aydınlı-oghulları], and died at Tabriz in Azerbaijan in 892/1487.

Dede 'Umar was the khalifa of Sayyid Yahyä Shirwanī, the pir-i dār or second founder of the Khalwati order, and as head of the Rüshāni branch of the order engaged in missionary work in northern Azerbaijan. He came to enjoy the patronage of the Aq Qoyunlu ruler Uzun Hasan [q.v.], whose wife built a zāviya for him in the capital Tabriz, and he lived there up to his death, being buried in the zāviya. His murādīs included the Turkish mystical poet from Diyār Bakr, İbrahim Gulshânî (d. 940/1533-34 [g.v.]), who founded his own order of the Gulshāniyya, and the Azeri Turk Muhammed Demirdaşı Muhammadî (d. 929/1524), founder of the Cairo order of the Demirdaşıyya [g.v. in Suppl.]. Dede 'Umar's dīwān included three Persian mathnawīs, in one of which, the Nāynāma, the influence of Djalâl al-Dīn Rūmî [g.v.], is especially clear, and poems in Turkish; one volume of the dīwān has been published as Əşfar-i şak (Istanbul 1315/1897-8).

Al Su'd, in Suppl., but after his death in 1340/1922-3 internal dissensions among the Idrisiya led to a Su'di protectorate. The Imam of Yemen maintained a claim to the Idrisid territories, but the Treaty of al-Ta'if (1353/1934) determined that they belong to the Sa'da protectorate. The Imam of Yemen maintained a claim to the areas from the Shukayk in the north to Wadi Asir in the south. The central part extends from Umm al-Khashab (kurd) was one of the urban settlements that was among the most densely populated of the region.

In 1328/1910 had reduced Turkish power in Asir with the support of the Italians, but had failed to hold the title. In this revolt he was one of the active leaders of the Banu Asad b. Khuzayma. If not of Mecca, and sent to al-Hadjjadj at Wasit, who more than a decade after the revolt, he was arrested by Khalid b. Sa'd al-Rahman b. al-Kufi, sent to al-Hadjjadj at Wasit, who more than a decade after the revolt, he was arrested. Sa'd was then 49 or 57 years old. Sa'd was then 49 or 57 years old. Sa'd was then 49 or 57 years old.

In 1215/1800 Sabya was drawn into Arabian politics when an inhabitant brought the Wahhabis into the Tihama (Serjeant and Lewcock, 87a), and even more so when Ahmad b. Idris (d. 1253/1837) took the title of the Sulaymanfs family. In the 4th/10th century Sabya, and a number of other places and wadis, was ruled by the Hamdaun family, i.e. the Banu Hakam b. Sa'd al-Ashraf of the Kahtan [q.v.], with the Banu `Abd al-Dhaqan as the ruling family (al-Hamdani, 120.5). In the 7th/13th century, Sa'da, which was part of Yemen (Yakut, Buldan, Ukaylf, New York 1983).

In 1243/1827-8 from persecution for heresy by the government positions. He functioned as secretary for the Banu `Abd Allah b. al-Hasan b. al-Hasan b. Muhammad b. `Ali the biographical traditions which say that he studied the Hadith. They underline Sa'id's piety and condemn al-Hadjjadj's death sentence. Whether Sa'id belonged to the Kufan Murjija's [q.v.] or not is a controversial issue. A few traditions say that he had good relations with and sympathy for members of the 'Alid family.

In his days the population of the Sabya area was estimated locally at some 25,000 souls. In Kufa. There he had a circle of students but also held office in the Tihama (Serjeant and Lewcock, 87a), and even more so when Ahmad b. Idris (d. 1253/1837) took the title of the Sulaymanfs family. In the 4th/10th century Sabya, and a number of other places and wadis, was ruled by the Hamdaun family, i.e. the Banu Hakam b. Sa'd al-Ashraf of the Kahtan [q.v.], with the Banu `Abd al-Dhaqan as the ruling family (al-Hamdani, 120.5). In the 7th/13th century, Sa'da, which was part of Yemen (Yakut, Buldan, Ukaylf, New York 1983).

Sa'd was then 49 or 57 years old. Sa'd was then 49 or 57 years old. Sa'd was then 49 or 57 years old.

The town does not seem to have played any role in early and mediaeval Islam. As in Kufa. Sabya, Damad and Djayzan, the central part extends from Umm al-Khashab (kurd) was one of the urban settlements that was among the most densely populated of the region.

In 1344/1925-6 his son Ali the biographical traditions which say that he studied the Hadith. They underline Sa'id's piety and condemn al-Hadjjadj's death sentence. Whether Sa'id belonged to the Kufan Murjija's [q.v.] or not is a controversial issue. A few traditions say that he had good relations with and sympathy for members of the 'Alid family.

Sa‘īd’s teachings in the fields of fiqh and tafsir were much sought after during the 2nd/8th century and played an important role in the development of fiqh before the advent of the classical schools. Many traditions on his teachings have been collected in the two Musannaf of ‘Abd al-Razzāk and of Ibn Abī Shayba, as well as in ‘Abd al-Razzāk’s and al-Tabārī’s Tafsir (see H. Berg, in al-Tabārī’s Kitab al-Mihan, Beirut vi, 256-67; Tabārī, ii, 1076, 1087, 1261-5). In the same traditions one can find a list of traditions in the “six books” and some a listing of traditions in the offikh and tafsir offikh of Sa‘īd’s teachings in the fields of fiqh and tafsir were much sought after during the 2nd/8th century and played an important role in the development of fiqh before the advent of the classical schools. Many traditions on his teachings have been collected in the two Musannaf of ‘Abd al-Razzāk and of Ibn Abī Shayba, as well as in ‘Abd al-Razzāk’s and al-Tabārī’s Tafsir (see H. Berg, in al-Tabārī’s Kitab al-Mihan, Beirut vi, 256-67; Tabārī, ii, 1076, 1087, 1261-5). In the same traditions one can find a list of traditions in the “six books” and some a listing of traditions in the fields of fiqh and tafsir. The peculiarities of Sa‘īd’s scholarship correspond to what is known from his Umar (20%), and most of Ibn Abī Shayba (70%) and Ibn Abd al-Razzak and going back to some traditions of Sa‘īd b. Dhibayr transmitted by other informants of ‘Abd al-Razzāk and going back exclusively to Ibn Abī Shayba may be suspected of being falsely ascribed to Sa‘īd. More Ibn Abī Shayba exegetical traditions allegedly going back to Sa‘īd may be found in al-Tabārī’s Tafsir (see H. Berg, The development of exegesis in early Islam, Richmond, Surrey 2000, ch. 5).

phates at Boucraa. Since the coast is full of fish, thanks to the Canaries current, fishing has become extensive and is an important activity through the creation of the ports of Tarfaya, Port Laayoune and Boudjerd. The capital of al-Sakiya al-Hamra and the whole of the Western Sahara, Laayoune, has today 150,000 inhabitants, with another 35,000 at Smara.

(Ch. Cote)

Sakk (Ar.), pl. sikāk, a technical term of early Islamic financial, commercial and legal usage, appearing in Persian, through a standard sound change, as čak, meaning "document, contract of sale, etc.", which has been suggested—for want of any other etymology—as the origin of Eng. "cheque", Fr. "chèque", Ger. "Scheck," see E. Littmann, Morgenländische Wörter im Deutschen, Tubingen 1924.

The term's range of applications is wide, see Lane, Lexicon, 1709. In legal contexts, it has a similar meaning to Sidney [see Sidney, 17], i.e., a signed and sealed record of a judge's decision. In financial contexts, it often means "a written order for payment of a salary, allowance, pension, etc.", "a financial draft or assignment". Thus in Kudama b. Djatara's [q.v] section on the 'Abbasid dīwān of military affairs contained in his Kitāb al-Kharadj (early 4th/10th century), a soldier displays at the pay session a certificate of assignment of pay (sakāk) from the dīwān (W. Hoenerbach, Zur Herrschaftsverwaltung der 'Abbasiden, Studie über Abulfarag Qudāma: Diwān al-gaš, in Id., xxix [1950], 281). See for further references on the term's usage in mediaeval Islam, C. E. Bosworth, Abū 'Abdalldh al-Khwarazmf on the technical terms of the secretary's art. A contribution to the administrative history of mediaeval Islam, in JESHO, xii (1969), 125-60.

(Ch. E. Bosworth)

Salāt-i ma'kūsa (Ar., p.), literally, "the act of Muslim worship performed upside-down", one of the extreme ascetic practices found among extravagant members of the dervish orders, such as in mediaeval Muslim India among the Čistiyya [q.v.], where it formed part of the forty days' retreat or seclusion (kihlāna, arbē'tīyya, cīlā) undertaken to heighten spiritual awareness [see Mahla]. This practice was one of those done in tortured or difficult circumstances, in this case hanging on the end of a rope over the mouth of a well; see Čistiyya, at Vol. II, 53b, and mss. v. Islam, at Vol. III, 432b. (Ed.)

Sallām al-Tardjuman, early traveller in Central Asia, who has left an account of his alleged journey to the barrier of Yadjudj wa-Mādjudj [q.v.].

In 227/842 the caliph al-Wāthik [r. 227-32/842-7 [q.v.]) reportedly saw in a dream that Dhu 'l-Karnāyn's barrier had been breached. Sallām al-Tardjuman ("the interpreter"), "who spoke thirty languages" and who, according to Ibn Rusta, 149, was used to translate Turkish documents for the caliph, received the order to make inquiries about the barrier and to report about it. The account of his journey is given by Ibn Khurradadhbih (d. between 272/885 and 300/912 [q.v.]), Ar. text in BGA, vi, 162-70; Eng. tr. Wilson, The Wall, 382-7; Fr. tr. Barbier de Meynard, Le livre des routes, 124-31 and Miquel, Geographie, ii, 498-507; Dutch tr. De Goeje, De muur, 104-9). He writes that Sallām told him the story of his journey and afterwards dictated to him the account he had drawn up for the caliph.

The dream is perhaps to be explained in relation to unrest caused by the Turks in Central Asia, e.g. by the movements of the Kijgiz [q.v.] around Lake Baykal in 226-7/841. Another reason for the mission may have been al-Wāthik's wish to put an end to what Barbier de Meynard [op. cit., 25] calls "ridiculous interpretations" current about "the people of the Cave" (Kūr'ān, XVIII, 9-26; see ḥijāb al-kaḥfa) and about Yadjudj and Madjudj with whom the Turks were identified. Ibn Khurradadhbih, 106-7, relates that al-Wāthik already had sent the famous mathematician and astronomer Abū Dja'far Muhammad b. Mūsā al-Khāraẓmī (d. 232/847 [q.v.]) to the land of Rūm in order to investigate the story of the men of Ṧakām [see ḥijāb al-kaḥfa]. As Sallām would do later, al-Khāraẓmī informed Ibn Khurradadhbih personally
about his journey. Al-Mukaddasī, 362, relates that al-Wāḥīdī had sent the same al-Khādāzīmī to the Tārkhan [g.v.], the king of the Khazar.

Sallām's journey, which probably brought him to the Tarīm Basin, took two years and four months. Leaving Sāmānī's in the summer of 227/842, he first travelled south to Yūtīfī, where he had deduced Wāḥīdī’s letter to Ishaq b. Ismā‘īl, the governor of Armenia [see AL-KARK; KARS; AL-KEREG]. The journey then went on to “the lord of al-Sarīr”, the present-day Avarāstān, a district in the middle Koy-su valley in southern Dāghistān [g.v.], then ruled by a Christian prince who bore the title of Filān-Shāh. Sallām went on to the king of the Alans [see AL-LĀN], an Iranian people in the northern Caucasus, who held the Bāb al-Lān [g.v.] or Darīal Pass, known to classical authors as “the Caspian Gates”. Sallām does not mention the Bāb al-Abwāb [g.v.] near Derbend, the real Caspian Gate.

Via the Filān-Shāh, he went on to the Tārkhan of the Khazar, who resided at Aṭīl [g.v.] near modern Askarhan. While travelling back and forth in the Caucasus, Sallām must have convinced himself that Dhu ‘l-Karnāyūn’s barrier was not to be looked for in those regions. From Aṭīl he probably travelled in an easterly direction to Ikku, which is identical with modern Ha-mi; cf. in Ibn Khurradadhbih’s text. De Goeje (164 n. 4; cf. 126 n. 4 and De muur, 109) remarks that the vocalisation of Ikku is a conjecture, but his identifying this town with Lwg seems quite plausible. During the Tang dynasty (618-907), and thus at the time of Sallām’s arrival, Ha-mi was known as I-chou, which was then under the rule of the Yüghur (cf. Encyclopaedia Britannica, s.v. Ha-mi; see also KOMUL, in Suppl.). If Sallām indeed came to this town (see below), he may have travelled north of the Aral Sea. Al-Idrīṣī, who used the now lost work of al-Djayhānī (g.v. in Suppl.), adds (Opus geographicum, 935) that Sallām travelled for twenty-seven days along the borders of the land of the Bashdjirt (Bashkurt) [g.v.], a Turkish people living in the southern Ural. He may have crossed the Dzungarian Basin and passed the Gate of that name in the northern spur of the T’en Shan mountain system, on the border of modern Kazakhstān and China. But “the black, standing land” (ard saudā; munātít al-rāʾītā) which he mentions ( Ibn Khurradadhbih, 163) may also point to the neighbourhood of Lake Balkhash [g.v.], the evil smell being perhaps caused by asafoetida (De Goeje, De muur, 110). Sallām may then have followed the Ili river [g.v.] upstream. The “ruined towns” (mudun khardāb) which he then reached are perhaps the ruins of Pei-ting (or Chin-man), the site of the ancient capital of the region. He may then have passed modern Urumchi, Guchan and Barkul (see map). If he took the southern route via Turfan, he may have seen the ruins of the famous Silk Route, the ancient tracks, 270; von Le Coq, Atlas, ch. X; Hermann, Atlas, map 24). It may have been one of these impressive towers, fully 4.5 m at the base and standing to a height of over 9 metres (illustration no. 73), which inspired Sallām for his fantastic description of Dhu ‘l-Karnayn’s barrier (see the drawing in Migeal, Geographic, ii, 505). This inspiration, based on the Kurān, was perhaps influenced by the descriptions of Alexander’s Gate, found e.g. in the Syriac Alexander Song of Jacob of Sarāḏīd (see Reinink, Das Syrische Alexanderbuch, 19) and the early Islamic poets.

According to Sallām, the barrier was a double-winged iron gate, 27 m high, over which was an iron dust from the crack to show to al-Wathik. The people of the fortress told him that they had seen some individuals of Yadjudj and Māḏḏūжд on the top of the mountain, their size being one span and a half. A “dark wind” had blown them back. On top of the right wing was an inscription in iron letters “in the primordial language” (al-lisīm al-awwal), namely, “Kurān, XVIII, 93, 96). Nearby, Sallām found two enormous fortresses, in one of which were the iron cauldrons and ladles used to form the bricks. Relics of them were stuck together with rust. The governor of the fortresses rode out every Monday and Thursday (according to al-Idrīṣī, every Friday). One of his men knocked on the lock of the barrier and heard a noise as from a wasps’ nest. He was then assured that Yadjudj and Māḏḏūжд had done no harm to the barrier, since they realised that it was under constant guard. The governor assured Sallām that the only damage the barrier had suffered was a crack as thin as a thread. Sallām scraped half a dirham of iron dust from the crack to show to al-Wāḥīdī. The people of the fortresses told him that they once had seen some individuals of Yadjudj and Māḏḏūжд on the top of the mountain, their size being one span and a half. A “dark wind” had blown them back. On top of the right wing was an inscription in iron letters “in the primordial language” (al-lisīm al-awwal), namely, “Kurān, XVIII, 98: “But when the promise of my Lord shall come to pass, He will flatten it; and the Lord shall come to pass, He will flatten it; and the evil smell being perhaps caused by asafoetida (De Goeje, De muur, 110). Sallām may then have followed the Ili river [g.v.] upstream. The “ruined towns” (mudun khardāb) which he then reached are perhaps the ruins of Pei-ting (or Chin-man), the site of the ancient capital of the region. He may then have passed modern Urumchi, Guchan and Barkul (see map). If he took the southern route via Turfan, he may have seen the ruins of the famous Silk Route, the ancient tracks, 270; von Le Coq, Atlas, ch. X; Hermann, Atlas, map 24). It may have been one of these impressive towers, fully 4.5 m at the base and standing to a height of over 9 metres (illustration no. 73), which inspired Sallām for his fantastic description of Dhu ‘l-Karnayn’s barrier (see the drawing in Migeal, Geographic, ii, 505). This inspiration, based on the Kurān, was perhaps influenced by the descriptions of Alexander’s Gate, found e.g. in the Syriac Alexander Song of Jacob of Sarāḏīd (see Reinink, Das Syrische Alexanderbuch, 19) and the early Islamic poets.

According to Sallām, the barrier was a double-winged iron gate, 27 m high, over which was an iron dust from the crack to show to al-Wathik. The people of the fortress told him that they once had seen some individuals of Yadjudj and Māḏḏūжд on the top of the mountain, their size being one span and a half. A “dark wind” had blown them back. On top of the right wing was an inscription in iron letters “in the primordial language” (al-lisīm al-awwal), namely, “Kurān, XVIII, 93, 96). Nearby, Sallām found two enormous fortresses, in one of which were the iron cauldrons and ladles used to form the bricks. Relics of them were stuck together with rust. The governor of the fortresses rode out every Monday and Thursday (according to al-Idrīṣī, every Friday). One of his men knocked on the lock of the barrier and heard a noise as from a wasps’ nest. The governor assured Sallām that the only damage the barrier had suffered was a crack as thin as a thread. Sallām scraped half a dirham of iron dust from the crack to show to al-Wāḥīdī. The people of the fortresses told him that they once had seen some individuals of Yadjudj and Māḏḏūжд on the top of the mountain, their size being one span and a half. A “dark wind” had blown them back. On top of the right wing was an inscription in iron letters “in the primordial language” (al-lisīm al-awwal), namely, “Kurān, XVIII, 98: “But when the promise of my Lord shall come to pass, He will flatten it; and the Lord shall come to pass, He will flatten it; and the
confused (taqūfī) and exaggerated (tazgeytd) it is. Al-
Birūnī (al-Afghār, 41) doubts Sallām’s credibility because he cannot believe that there were Muslims who spoke
Arabic and Persian but did not know about the caliph.

Neither is in agreement with the Western scholars
who have dealt with Sallām’s report. For Barbier
de Meynard (op. cit., 23), Sallām’s journey at least had “a beginning”, and he states that he does not see in it, as Sprenger did, an “impudent mystifica-
tion”. De Goeje does not leave any doubt about his view: “We have found the origin of the legend about
the wall of Gog and Magog, as it appears in Pseudo-
Callisthenes and the Kurān, in the Great Chinese
Wall with the Jade Gate (Tu-mo), and we have restored Sallām’s travel account as the report of a
real journey” (De moor, 116). Anderson (Alexander’s gate, 95) argues that Sallām certainly did not go to the
Chinese Wall. For Wilson (The Wall, 611), Sallām’s
story is nothing but a legend, while Miller (Mapps arabiae, iv, 93-5) holds that the place described by
Sallām is the breach in the Altai mountains made by
the river Irtish [q.v.].

Miquel finds in the account a “cotoiement d’un certain vraisemblable avec
un legendaire certain” and adds “on mesure, a cet
exemple, la place du merveilleux [sic...]. W. de Groot
states: “On the Western side of the Tarim Basin and saw part of the—by then already ruined—
western extension of the Great Wall. These Turks were
certain sections of the Great Wall. These Turks were
called Ongut ("wall") and their function was heredi-
tary (cf. Histoire des Mongols, tr. Desmazens, 47;

sary volume (Asia Major, 1) London 1922, 575-612.

(E. VAN DONZEL)

SALMĀN AL-FĀRSĪ is Salamān Pāk, a semi-
legendary figure of early Islam, Companion of the Prophet and the person regarded in
later tradition as the proto-convert to Islam from the Persian nation.

According to one tradition, the most complete
version of which goes back to Muhammad b. Ishāk, he was the son of a dīghmān of the Persian village of Diqāy
(or Dāyān; cf. Yākūt, ii, 170) near Ḥafṣān. According to
other stories, he belonged to the vicinity of Rām-
hurmuz and his Persian name was Māḥbēh (Māyēh)
or Rūzēb (cf. Justi, Iran. Namenbuch, 217, 277). Attracted by Christianity while still a boy, he left his
father’s house to follow a Christian monk and,
changing his teachers several times, arrived in Syria; from there he went right down to the Wādi ‘l-Kura in western Arabia seeking the Prophet who
was to restore the religion of Brahmān, the imminence
of whose coming had been predicted to him by his
last teacher on his deathbed. Betrayed by Kalbī
Bedouin, who were acting as his guides through the
desert, and sold as a slave to a Jew, he had occa-
sion to go to Yathrib where, soon after his arrival,
the bāmmā of Muhammad took place. Recognising in
the latter the marks of the prophet which the monk
had described to him, Salāmān became a Muslim and
purchased his liberty from his Jewish master, after
being miraculously aided by Muhammad himself to
raise the sum necessary to pay his ransom.

The name of Salāmān is associated with the siege
of Medina by the Meccans, for it was he who on
this occasion advised the digging of the ditch (khandāk)
by means of which the Muslims defended themselves
from the enemy. But, as Horovitz (see Bibl.), has shown,
the earliest accounts of the yamm al-khandāk make
no mention of Salāmān’s intervention, the story of
which was probably invented in order to attribute to a
Persian the introduction of a system of defence the
name of which is of Persian origin. The other refer-
ces to the career of Salāmān (his part in the con-
quest of ‘Irāk and of Fārs, his governorship of al-
Madā’in, etc.) are equally devoid of authority and
almost all date from the historian Sayf b. ‘Umar, the
bias of whose work is well known. Indeed, the fame

(E. VAN DONZEL)

of Salmān is almost entirely due to his Persian nationality: he is the prototype of the converted Persians, who played such a part in the development of Islam; as such, he has become the national hero of Muslim Persia and one of the favourite personages of the Shi'i ḥiyāya [g.v.] (see Goldziher, Mah. Studien, i, 117, 136, 153, 212). What explains the majority of the traditions relative to Salmān is the fact that the Prophet foretells to him that the Persians will form the better part of the Muslim community; he declares him a member of his own family (abi al-bayt), etc. In reality, the historical personality of Salmān is of the vaguest, and it is with difficulty that one can even admit that his legend is based on the actual fact of the conversion of a Median slave of Persian origin.

The figure of Salmān has had an extraordinary development. Not only does he appear as one of the founders of Sufism along with the Asbāb al-Suffah (K. al-Lamr, ed. Nicholson, 131-5) but the alleged site of his tomb very early became a centre of worship (at least in 4th/10th century) (cf. al-Ya'qūbī, Buldān, 321); it is still pointed out in the vicinity of the ancient al-Madʿāʾin, at the place called after him Salmān Pāk ("Salmān the Pure") near the former Asbānūr suburb. His sepulchral mosque, which was seen in its older form by Pietro della Valle in 1617, was renovated by Sultan Muḥammad IV [g.v.] and further restored in 1322/1904-5 (Herzfeld-Sarre, Ashdab al-Suffah (K. al-Batwī wa 'l-taʾrikh, ii, 262, n. 1). It is the object of numerous pilgrimages, especially on the part of Ṣ̄̄ḥiʿā, who do not fail to visit it when returning from Karbahāʾ. Other traditions locate the tomb of Salmān in the vicinity of Ṣ̄̄fāhān, where there is evidence of his cult in the 7th/13th century (Yākūt, ii, 170), and elsewhere, e.g. Lydā.

Salmān plays a remarkable part in the development of the futuwwa [g.v.] and the workmen's corporations. He is venerated as a patron of barbers, whence comes the tradition, unknown in ancient collections of traditions, which makes him the Prophet's barber. He is also one of the principal links in the mystic chain (stitla) in various dervish orders.

Among the extremist Ṣ̄̄ḥiʿī sects, he is placed immediately after 'Alī in the series of divine emanations. The Nuṣayriyya [g.v.] make him the third member of the trinity formed by the three mystic letters: 'Ayn ("Alī"), M (Muḥammad) and S (Salmān), of which he forms the gate (bab) (cf. R. Dussaud, Histoire et religion des Nosairis, Paris 1900, 62).

The death of Salmān is placed in 35/655-6 or 36/656-7, a statement which has no value except to indicate that the historical tradition had no note of his activity after the accession of 'Alī (end of 35/656). Like many other individuals, said to have embraced Islam after long experiences of other religions, he is credited with an extraordinary longevity: 200, 300 and even 553 years (Goldziher, Abhandl. zur arab. Philologie, ii, p. LXVI).

sustain when confronted by the this-worldly reality of contemporary Muslim history, which fulfilled the Jewish longing for a polity, or dawla, a central concept in Samawah’s polemical attack against Judaism (Husain).

Unlike his father, Samawah suggests longevity, Samawah died in 570/1175 at a relatively young age (Ibn Abī Usaybā’i, ‘Uṣūn al-anbāt’).

(R. Firestone)

**SANAD** (A), pl. *asnād*, lit. “support, stay, rest”, but in Islamic administrative usage coming to mean an administrative, financial or legal document on which reliance can formally be placed (masnūd), hence an authenticated document. From the same root *s-n-d* is derived the technical term of Islamic tradition, *sanad* (q.v. and *hadith*), literally the act of making something rest upon something else.

The Turkish form of *sanad*, i.e. *sened*, was used in Ottoman practice for a document with e.g. a seal attached, thereby authenticating it and supporting it with official proof; see Pakalm, iii, 173-4. In Indo-Iranian and *hadith*, literary term of Islamic tradition, *masnud* (sanad), the weight) of gold for gold or silver for silver are termed *sanad* attached, thereby authenticating it and supporting it with official proof; see Pakalm, iii, 173-4. In Indo-Islamic and *hadith*, literary term of Islamic tradition, *masnud* (sanad), the rate of exchange of gold for silver, or silver for silver, on the other hand, may be determined by the parties as they see fit, and even unascertained quantities (*qayyūf*) of these metals may be exchanged (cf. Mālik, al-Musattar, ed. ‘Abd al-Bākī, Cairo n.d., iii, 393 [except coins]; al-Bāḍjī, al-Muntakbī, Cairo 1322/1914 iv, 277-8, cf. al-Shaybānī, K. al-Hudūjī, ed. al-Kilāmī, Haydarābād 1387/1968, ii, 571-2). The regulation of exchanges of gold and silver was introduced in the year 762/1 in the course of the division of the spoils of the conquest of Khaybar (q.v.) (Caetani, Annali, ii/1, 38-9).

The legal rules governing these exchanges derive from the prohibition of *ribā* (q.v.) as expounded in the *hadith*, general principles of contract law, and certain monetary conceptions.

The validity of *sarf* contracts requires that performance on both sides be due at once (muḥāfaza, hulūl); neither party may be granted a term in which to make delivery, which would constitute *ribā al-nasī‘*. In fact, virtually all jurists require that delivery on both sides (*takādil*) take place during the contractual session (*muḥājila*) (but see al-Suyūṭī, al-Tanqīḥ al-rā‘ī‘, ed. al-Khuṭābī, Kumm 1404/1985, ii, 97; al-Sharī‘, al-Mīrā‘ī, al-taṣawwuf fi ‘l-’Ilm, al-Kuwayt n.d., 147-8), which may, however, be protracted. To the extent otherwise available, the parties have the benefit of the right to rescind the executory contract while in their session (*ṣawā‘ al-muḥājila*).

The Mālikīs are stricter in this regard, insisting on prompt, if not immediate, mutual delivery, even a short delay making the exchange reprehensible (mukārik) (al-Hattāb, Mawākīl al-djālīl, Tarabulus, Libya n.d., iii, 302-3, cf. Ibn Hazm, al-Abhūnūt, ed. Shākir, Beirut n.d., viii, 493). Thus while others prohibit the parties from reserving to themselves a right of rescission (*ṣawā‘ al-djālīl*), Mālikī jurists go further and exclude delivery by assignment (*hulūl*) and the giving of either personal or real security for delivery, all of which are deemed repugnant to the required promptness of performance (Ibn Dzu‘ayy, Kawwānīn al-akhdām al-shar‘iyā, Cairo 1975, 262-3; Ibn Djalāh, al-Ta‘fī‘, ed. al-Dāhmīnī, Beirut 1408/1987, ii, 154, cf. the Hanafī al-Ankīrāwī, Fatawā, Bulāk 1281/1864-5, iii, 304). For the same reason, according to the Mālikīs, the *sarf* transaction is invalid if both parties borrow the gold or silver in order to make delivery (al-sarf idāh al-djālam) (Sahnūn, al-Mudawwana, Cairo 1323/1905, repr. Beirut n.d., iii, 396; al-Dārīfī, al-Shāb al-sharī‘ī, ed. Wāṣfī, Cairo 1972, iii, 50 gloss).

There is disagreement as to whether the requirement of mutual delivery is satisfied by a set-off of debts (lāṭirah al-dāmmayn). The Mālikīs regard the set-off as a valid *sarf* if both debts are presently due, the Hanafīs and Zaydis as being void if one of the debts is not due. The Shāfī‘is and Hanbalis, on the other hand, do not consider such a transaction a valid *sarf* (Ibn Ruṣūd, Biladrat al-mudjāhādī, Cairo n.d., ii, 174; Ibn Kudāmā, al-Muṣnī‘, ed. al-Turkī and al-Hulw, Cairo 1408/1989, vii, 106; al-Sūkhī, x, 101; Ibn al-Murtadā, iii, 389).

Where there has been only partial performance of the contract the Mālikīs treat the entire contract as
void (al-Mudawwana, iii, 392; Ibn 'Abd al-Barr, al-Kāf, ed. al-Murtada, al-Riyadh 1400/1980-1, ii, 634, cf. al-Muntakā, iv, 264). The other schools, following the principle of the severability of contracts (tafrik al-sāfak), uphold the sāf to the extent it has been executed (al-Nawawi, al-Mudāmī, Cairo n.d., ix, 461, cf. al-Shāfi‘i, al-Imn, Cairo n.d., iii, 26; al-Mardawi, al-‘Anfī, ed. al-Fikr, Beirut n.d., v, 45; al-Suyūtī, ii, 98; Ibn al-Murtada, iii, 387-8). Some jurists hold the view that the parties’ failure to take delivery under the sāf contract not only voids the contract but amounts to a sin, unless they take the trouble to repudiate the contract before separating (al-‘Aqīm, ix, 460-1, cf. al-Bahrānī, al-Haddīš & al-‘Adnārā, ed. al-Ifrāwīnī, Beirut 1405/1985, s.v., 277).

The requirement that mutual delivery take place upon contracting makes it possible for either party to prevent the enforcement of an executory sāf contract by terminating the contractual session without taking delivery (al-Muntakā, iv, 264, cf. al-Shāhānī, al-Amārī, Haydarābād 1360, 15-16). Furthermore, given the widespread circulation of different m tintages and sub-standard coins in the mediaeval period, the jurists had to determine how far subsequent adjustments in the interest of a dissatisfied party were consistent with the principle of the severability of contracts (tasābi).

The prohibition of rība requires that exchanges of gold for silver or silver involve equal quantities of the metals, any inequality constituting rība al-fadl, although some early authorities, most notably Ibn ‘Abbās (d. 68/687), have reported to have rejected the doctrine of rība al-fadl, at least for a time (e.g. al-Ṭahāwī, Shāhī ṣa‘īd al-‘Adnārā, ed. al-Nadījārī, Cairo n.d., iv, 63-71, al-Subkī, x, 23-3). Thus to have permitted the exchange of unequal quantities of gold for gold and silver for silver—auch unequal exchanges being termed sāf in the hadith (al-Nasafi, Tahātī al-talāb, Beirut n.d., 114; al-Nawawī, Shāhī ṣa‘īd al-Muṣlimī, Cairo n.d., xii, 23-4), a sense familiar to early lexicography, see Ibn Sīdā, al-Muḥayṣṣas, Beirut n.d., ii, 30 (quoting al-Khāli‘ī b. Ahmad [g.]). The requirement of strict equality (tasābi) applies to all such exchanges, which means that the form of the metals, whether raw ore (laḥ), ingots (māṣ), or manufactured articles (māṣ, māṣ, māṣ), has no bearing on the equality to be measured by weight (zawāṣ), in the time of the Prophet, without regard to the market value (kimā) of the objects (e.g. al-Bahātī, iii, 262-3). The reasonableness and hence the validity of an exchange of exactly similar coins have been questioned (Ibn Nadjījārī, al-Bahr al-rūākī, ed. Cairo, vi, 193, cf. N.J. Coulson, A history of Islamic law, Edinburgh 1964, 42).

While campaigning in Syria, Mu‘āwiyah (d. 60/680) reported to have exchanged manufactured articles taken as booty for their value in the same metal, for which he was rebuked by other Companions, including the Caliph ‘Umar (al-Zurkhnī, Shāhī al-Muṣawwī, Beirut n.d., iii, 278-9; al-Muntakā, iv, 261-2), and this practice is said to have continued in Syria until ‘Umar b. ‘Abd al-Azīz (d. 101/720) put an end to it (al-Subkī, x, 79). Nonetheless, the opinion that the value added by labour should be reflected in the rate of exchange continued to find support. This teaching is attributed to Dāwūd al-Zahīrī (d. 270/884) (al-Shāfī‘ī, Risāla fī muṣawwī al-imām Dāwūd al-Zahīrī, Damascus 1339, 21, cf. al-MuḥallĪ, viii, 493), and it is reported of both al-Shāfī‘ī (Ibn al-Murtada, iii, 387, cf. al-Shayārī, Nihāyat al-ratba fī talāb al-‘ibda, ed. al-Arīnī, Beirut 1969, 75) and Ahmad b. Hanbal (Ibn Kudāmā, vi, 60) that they prohibited equal exchanges by weight of whole for broken coins because of the discrepancy in value. The most prominent later proponent of this doctrine was the Hanbali Ibn Taymiyya (d. 728/1328), according to whom manufactured articles of gold or silver are outside the scope of the law of sāf, which is intended to promote monetary stability (al-Bahr al-rūākī ed. Ibn ‘Ibī‘īr, al-‘Adnārā, ed. al-Fikr, Cairo n.d., 127; Ibn Kāyim al-Dīwāniyya, Flīla al-muṣawwī, ed. Sa‘d, Cairo 1388/1968, ii, 154-63; al-Ḥayyānī, al-Rawd al-nadīlī, Beirut n.d., iii, 229-31; Ibn al-‘Ālīsī, Dārūt al-‘aynānī, Cairo 1400/1980, 628-44).

The attribution to Mālik of the view that coinage might be exchanged for its value in the same metal was vigorously denied by his followers (Ibn Kudāmā, vi, 60; al-Subkī, x, 79-83, cf. J. Schacht, The origins of Muhammadan jurisprudence, Oxford 1950, 67). Many Mālikis did, however, support the opinion expressed by Mālik that a traveller in dire need of coins might pay for them with the same metal in such a quantity as to cover the cost of minting (al-Kabās, i, 822, cf. al-Khīrī, v, 43 [no longer applicable according to Aṣbāb, d. 204/819]; al-Muntakā, iv, 259; al-Mawwāk, al-Ṭāgī wa l-Tabbī, on the margin of Mawākib ar-dājdī, iv, 318 [only if life is in jeopardy]). Furthermore, the Mālikis permit the exchange of up to six pieces of gold for silver, or silver for gold, or for an equal number of pieces made of the same metal even when the latter are up to one-sixth greater in weight. Such an exchange, termed muḥādāla, must be in the nature of an accommodation (marāfī) to the party with the underweight (nāsī), coins, and, according to some, must be expressly characterised by the parties as a muḥādāla, not a sale (al-Muntakā, iv, 259-60; al-Tasārī, al-Bahārī shāhī al-ḥāfa, Cairo, 1370/1951, ii, 27-9).

A further set of problems is posed when one or more objects, termed ādāmīna by Twelver Shi‘īs (al-Ṣaḥḥī al-Aswāl, al-Lam al-ma‘āmkhaya, ed. Khalanjār, Kumm 1396/1976, iii, 441 and ģirāta by Zāydis (al-Ṣan‘ānī, Minhāt al-ṣaḥīfār, San‘ā‘ 1405/1985, iii, 1388), including objects subject to the laws of rība, are introduced into the exchange of the same metals, for example one dirham and a measure of dates as consideration for two dirhams (māṣalat mudd) (cf. al-Muṣawwī, ed. Cairo n.d., iii, 26; al-Murtada, iii, 387; Ibn Kudāmā, vi, 92-4; Ibn Radjāb, al-Kawā‘id, ed. Sa‘d, Cairo 1392/1972, 267-70; al-Muḥallī, viii, 494-6). The Hanafīs, Twelver Shi‘īs and Zāydis recognise the validity of such a transaction, by analysing it as a sāf of one dirham for another and a sale of the dates for the other dirham. The sāf contract meets the test for equality. Such transactions are valid when the gold or silver on the one side exceeds that on the other, so that the excess can be referred to the added object (tartīb al-‘adāmī), (Ibn al-Murtada, iii, 338-40). The Mālikis, Shāfī‘īs and Hanbalis, on the other hand, regard this transaction as invalid, seeing in it the sale of a combination of things, with unascertained value, for two dirhams (cf. Kitāb al-Haddījī, ii, 574-5; al-Ṭahāwī, iv, 72-3 [critical]). More pertinently perhaps, such a sale can be used to circumvent the prohibition of rība al-fadl, since an object of merely nominal value can be introduced to validate what is essentially an unequal sāf contract, and so should be prohibited as a preventive measure (sadd al-dharr) (cf. al-Muṣawwī, ed. Cairo n.d., iv, 277). To obviate this result, some jurists, including the Zāydi Imām al-Ḥādi (d. 298/911) (Kitāb al-ḥāka, San‘ā‘ 1410/1990, ii, 73; al-Kāsim b. Muhammad, al-Fisām bi-hābl Allāh al-matin, ed. al-Faḍlī, San‘ā‘ 1404/1984, iv, 109 and)
reportedly, Sufyan al-Thawrî (d. 161/778) (al-Mawwâk, iv, 301), insisted that the object introduced should correspond in value to the excess (fadl) on the other side, and the Hanafîs al-Shaybânî is supposed to have regarded an unequal exchange of this sort as valid on the other (fadl) being deemed ancillary to the sale (al-mawâk, iv, 301; Manâhîh al-jâlî, iv, 318-21), whereas the Hanbâlis validate similar transactions by applying them as made up of two distinct contracts, sarf and sale (al-Bâhûtî, iii, 260-1).

The exchange of a dirham and a dinár for a dirham and a dinár (al-Khîrshî, v, 36-7 gloss) is also invalid according to the Mâlikîs, Shâfî'îs and Hanbâlis, not to speak of the exchange of two dirhams and a dinár for one dirham and two dinârs. The Hanafîs, Twelver Shî'îs and Zaydîs uphold the validity of these transactions, in the latter case by referring the silver coins on each side to the gold on the other, so that there is no requirement of equality (on the use of this principle as an evasive device, cf. al-Abî, Kâtîf al-ramîz, Kûmûb 1408/1989, i, 500-1).

The Mâlikîs' aversion to mixed transactions goes beyond that of the Shâfî'îs and Hanbâlis, for they prohibit an exchange in which, for example, gold and silver transactions, in the latter case by referring the silver coins on each side to the gold on the other, so that there is no requirement of equality (on the use of this principle as an evasive device, cf. al-Abî, Kâtîf al-ramîz, Kûmûb 1408/1989, i, 500-1).

The problems posed by the sale of objects with gold or silver ornamentation and by debased gold and silver coins are dealt with according to the rules for mixed transactions (but see Ibn Ruqâd, Fatâtâvî, ed. al-Ta'lîfî, Beirut 1407/1987, i, 210; Bidâtât al-mudâjâtâh, i, 175 [approving Aqâhîbâd's rejection of this doctrine]; al-Bâghawî, Sharâr al-sunnâ, ed. al-Ârâ'îtî, Beirut 1403/1983, viii, 67 [no basis for it]). Here, too, however, the Mâlikîs recognise exceptions on the ground of hardship for transactions with a purchase price of no more than one dirham and transactions, however large, in which the sarf component involves the exchange of less than one dinár for dirhams. In either of these cases, where no more than two dirhams are due as change for a payment in dinârs, the sarf is treated as ancillary to the sale, and delivery of the coins need not take place at the time of the contract (Hâshîyat al-Dâsîkî 'âdâl al-sharî' al-kabîr, Cairo n.d., iii, 32-3).

The Hanafîs, Twelver Shî'îs and Zaydîs permit exchanges of objects with gold or silver ornamentation or debased coins for a greater quantity of the same precious metal, although for the Hanafîs, coins which are predominantly gold or silver are deemed equivalent to coins of pure metal. Where such objects or coins are exchanged for each other, the jurists of these schools cross-reference the precious metal on each side to the other component (cf. al-Muhallâ, vii, 498-501). For the purpose of upholding its validity, the transaction is analysed as consisting of two ordinary sales. The sarf requirement of mutual delivery, however, continues to apply (Fath al-kâdrî, vi, 275). This analysis would permit the unequal exchange of debased coins for each other, a consequence that the Central Asian Hanafîs, from fear that it would open the door to râhâ, are reported to have refused to draw with respect to the greatly debased silver coins that served as their primary currency (Fath al-kâdrî, vi, 275; cf. Kâdîkhân, Fâtâtâvî, on the margin of al-Fâtâtâvî al-hîdâyî, i, 252; Dâwûd b. Yûsuf al-Kâfîrî, al-Fâtâtâvî al-qâtîhîyâî, Bûlût 1325, 141-2; on gîhirti dirhams, see al-Kirmîî, al-Nâtîfî al-arâ'îyya, Beirut n.d., 150-1).

The restrictiveness of the laws of sarf engendered evasive devices, hiya [q.], sometimes included as part of the exposition of the subject, even when labelled reprehensible (cf. al-Nawâwî, Râdat al-tâlîbin, ed. 705

SARF

**SARĪK**, the name of a Türkmen [q.v.] tribe in Central Asia. Ethonyms derived from colour names are frequent in Türkic languages. Gaghatu and Uzbek have sarık, sarık “yellow, yellowish, pale, blonde” where other historical and modern Türkic languages have sarı or sarı (Laude-Cirtautas, 64-8). The genealogy of the Sarık is connected to the Salur [q.v.], tribal group, including the Salur proper, the Ėsrarı, Teke and Yomut. In his work on the historical legends of the Turkmen, the Şagıura-yı Türk kimie, Abu l-Ghāzi Bahādur Khánum of Kháwa [q.v.] links the descent of the Sarık and the Teke to Toy Tutuğ, a son of the Salur (ed. Kargi Olmez, fol. 102a, ll. 4-5). The Sarık are reported to have lived—along with other Türkmen tribes—between the Mançıghāš [q.v.] peninsula and the Balkhā [q.v.] mountains. According to Abu l-Ghāzi Bahādur Khánum (references in Bregel 1981), in the 16th century, the Teke, Yomut and Sarık together paid a tax of 8,000 sheep to their Uzbek overlord, about half of what larger tribes like the Cowdur or Ėsrarı paid at the time, or one-quarter of the tax of the Salur tribe proper. In the first Soviet census (1926), the Sarık numbered 34,000 or 4% of the whole number of Türkmen (Bregel 1981, 137). Sarık were also in the 18th century to be found in Tajikistan, Afghanistan and Iran, but at the end of the 20th century, reliable figures are not available. In the 17th century, the Salur confederation broke up and the Salur and Ėsrarı left western Türkmenistan. Their place was taken by three junior tribes, the Teke, Yomut and Sarık (Bregel 1981, 18). In the 18th cen...
tury, the Sariq nomadised between Khwarazm and the Marw oasis. Around 1800, they gradually became the dominant Turkmen tribal group among the population in and around the oasis, engaging in agriculture as well as in nomadic pastoralism (Wood 1998, 6-7, 70-5). Wood (1998) investigated the history of the Sariq of Marw (a large part of the Sariq tribal group) drawing on Western—including Russian—travel and political literature as well as on Persian, Bukharian and, in particular, Khivian sources as the chronicles of the court historian Ágháí. By 1822, Khíva succeeded in suppressing Bukhárian rule in the Marw area, keeping it until 1842 as an outpost in its frequent campaigns against Persia. At that time, the Sariq began a prolonged struggle for independence from Khíva which ended in 1855, both sides exhausted from the annual campaigns. The period of relative stability had proved profitable for the agriculture and caravan trade of the Sariq, while the Khíván khan had been able to draw revenues from them and use them as auxiliaries and border patrols. From 1857, under Persian pressure, the numerically superior Teke of Saráqis moved into the Marw oasis and forced out the Sariq who, replacing the Salur of Yolotan and Pandjíh [q.v.] on the middle course of the Murgháb river, remained there into the 20th century.

**SARIQ**

**SARIKA**

In literary criticism, “plagiarism”. What thorough minds consider “laudable theft”, etc., in the legal sense of the word is implied, as Islamic law does not recognise intellectual property. A modern book on intellectual theft stresses the moral turpitude involved, but does not invoke any Shari'a norms or punishments (‘Abd al-Mannán, Saríkát al-islimiyya). The victim of plagiarism could only have recourse to public opinion or approach a man of power (istfá’). The term often used for this is musála (see e.g. Al-Thálíb, Yàtima, ii, 119, 5), a post-classical word possibly derived from silt, a variant—by metathesis—of istfá. For an interesting plagiarism feud, see Al-Sarí al-Raffa’i. Even contemporary authorities admitted that it was very difficult to establish the truth in the case of poems recurring in various dawáns. Al-Thálíb, quoting two poems that he found both in a collection of Al-Sarí al-Raffa’i’s poetry in the latter’s own handwriting as well as in the dawán of the Khádéli brothers in the hand of Abí ‘Udmán al-Khádéli, admits: “I do not know if I should attribute this situation to a confluence of minds (tawdrúd [al-khádéliyayn]) or to plagiarism (masúlátu) (Yàtima, ii, 110, 5). The first possibility flows from the Muslim virtue of hujúr al-sârí which enjoins people always to think best about others. But with poems consisting of five lines each, the idea of tawdrúd strains credulity (while, with one or two lines, it would not be impossible in an environment of mannerist poetising). Another way of explaining duplication of poems is, of course, uncertainty of attribution on the part of redactors.

**Borrowing**

While crude plagiarism may have exercised the literary public, a situation of truly literary interest arose only with the introduction of skillful changes into the borrowed verse. Critical literature developed along two lines: (1) general classifications and taxonomies of sárka, and (2) the collection and—to a lesser extent—critical evaluation of the sárkát of individual poets.

**Classification**

The sárka classifications are contained in a number of books on literary theory, sometimes also in the introductions to sárka collections of individual poets. They tend to be highly inhomogeneous in the early
literature. The earliest example is al-Hātimī’s (d. 385/997 [q.v.]) in his Ḥiyyat al-muhāfarrāFI sinā‘at al-dhīr (see Bibli.). His terminology seems to be tentative, partly based on earlier traditions that he quotes with their chains of authorities, but without establishing a clear system. As a consequence, there is much overlap between the terms and a certain opacity prevails (see S.A. Bonebakker’s painstaking articles on al-Hātimī in the Bibli., Ibn Rasḥīd (d. 456/1063 or later [q.v.]) is aware of this inadequacy of al-Hātimī’s taxonomy, but he makes him extensively all the same, with certain alternations and re-interpretations (see von Grunebaum, Concept, 238-40; note that the author did not yet have the text of al-Hātimī’s Ḥiyya).

Ibn Wāḥīd al-Th瀱īṣ (d. 393/1003) and Abū Hilāl al-‘Aṣkārī (d. 395/1005 [q.v.]) introduced the idea that one had to distinguish between good and bad “plagiarism”. The former did so in the introduction to his attack on al-Mutanabbī’s (Ma‘ṣūf, 9-21, 22-39; the latter in the first encyclopaedic work on literary theory, the “Book of the Two Arts” (Sīnā‘at, 196-237, cf. Kanazi, Studies, 112-22). This approach takes into account the fact that mannerist poetry is in constant intertextual dialogue with past poetry (on the term “mannerism” in this context, see S. Sperl, Mannerism in Arabic poetry (Cambridge 1989); as a result, bor- rowing motifs and developing and improving them becomes a way of life.

Ibn Abī Tāhir Tayfūr (d. 280/893 [q.v.]) expressed this idea as follows: “The discourse of the Arabs hangs together, the later instances taking from the former. The original and newly invented of it (al-mutakallīF minhu wa-l-mukhtara) is rare, if you go through it and check it. Even the cautious and watchful man, who is gifted in eloquence and poetry, whether ancient or modern, will not be safe that his discourse take [something] from the discourse of someone else, even if he does his utmost in being cautious. . . . How much more so with the affected constructor of conceits (al-mutakallīF al-mutasa‘ī) who is intentionally seeking for them” (apud al-Hātimī, Ḥiyya, ii, 28). The last sentence is the description of the mannerist poet, who cannot but have recourse to the existing poetry.

After a number of further attempts to instil some order into the traditionally transmitted terms, the taxonomy of plagiarism became homogenised and solidified in the scholastic ‘ilm al-balāgha “science of eloquence” (see Bala‘igha), starting with al-Khāṭīb al-Kaḏwīnī (d. 739/1338 [q.v.]), in his Tādhkīr al-Miftāh. From the various endeavours of the theorists, some common notions emerge:

(a) The focus of the discussion is overwhelmingly the single line, which is, of course, the most common approach in literary criticism and theory.

(b) There is discussion about what is, and what is not, subject to a verdict of plagiary. Universally-known or well-worn motifs are in the public domain. Newly-invented motifs that are attributable to individual poets form the other extreme. These are rare and, according to Ḥāẓim al-Kaḏḏājānī, “infertile”, because later poets would hardly dare to take them up again (al-mu‘ātdF l-‘alim, see Minhājī, 191, 14). Of greatest interest is the group of motifs in between the two extremes, those that have been treated, developed and improved upon (or, possibly, ruined) by a series of poets. Here a charge of plagiarism can only be avoided if the later poet introduces changes that confer a certain novelty on the borrowed motif. There are various ways of doing this: (1) by changing the context, by (a) inserting the motif into a different genre (e.g. from praise into love poetry), or (b) combining it with another motif of the same kind (see below); or (2) by changing the wording. If, by doing the latter, he improves on the rendition of the motif or adds a rhetorical twist to it, he can lay greater claim to it than the original poet. According to Ḥāzim, there are four relationships between a poet and his motif: “invention” (iḥdā‘a), “partnership” (ṣarīka), which is either “equal participation” (iḥdā‘a), when there is no quality difference between the earlier and later poet, or “falling short” (iḥtīfā‘a), if the later poet is not up to par), and finally “plagiarism” (ṣarīka) (Minhājī, 192-4).

(c) Part of the taxonomy of plagiarism is based on the laż-ḥudūd dichotomy: does the alleged plagiariser take only the motif or also its wording? Taking both with only minimal changes of the wording is the worst kind of sarīka.

(d) Plagiarism can only take place if the later poet consciously borrows from the earlier. Otherwise, identical or similar lines of poetry are due to a “confluence of two minds” (tawdrud al-khdtīrayn): the two poets found the line independently of each other (see above).

(e) An identical line could also be explained as a quotation lażmīn, lit. “incorporation”). If it is not a very well-known line, the poet has to mark it as a quo- tation in order that it not be taken as plagiarism. (2) Critical assessment of individual poets

The other branch of literature devoted to sarīka consists of collections of plagiarisms of individual poets, either in separate works or forming part of critical studies dealing with one or more poets. The most famous “modern” poets have all been made targets of such critiques: Abū Nuwās, Abū Tammām and especially al-Mutanabbī (at least six separate books have come down to us). There is usually very little in the way of naming and discussing their cases; the critics rather confine themselves instead to elucidating the original (mostly by a “modern” poet) and the alleged plagiarism. They usually have a lenient approach, including many “laudable plagiarisms”. They often manage to find several originals, either because the “plagiariser” has effected a combination of two “stolen” motifs or because there is some doubt as to the correct pedigree (the “originals” are sometimes not quite relevant, belonging, as it were, to a larger and later poet is not up to par), and finally “plagiarism” (ṣarīka) (Minhājī, 192-4).

The most sophisticated cases are those in which the “plagiariser” welds two different motifs together. An example would be the following (from al-‘Arīfī, Ibnīn, 31-2; the author starts with the pedigree verses and ends with the “plagiarising” verses by al-Mutanabbī):

al-Būhārī: Malā‘ta aṣḥābā ‘l-wasā‘a balāghan fa-tradda yahṣūdu fīka man lam yahṣūd
al-‘Arīfī: Kat‘a‘a aṣḥābā ‘l-wasā‘a wa-lam yahṣūd

al-Mutanabbī: Kat‘a‘tahum hasadan arshām ma bīhām fa-takatta hasadan li-man lā yahṣūd

Here we have two motifs and their confluence in al-Mutanabbī: Motif no. 1: People envy [in you] some-
one who does not have envy [because you are the best anyway, or because envy is an evil character trait that you do not have]; motif no. 2: The praised one in the first hemistich with further ado. The second hemistich is an elaboration on it (again with nāshāt).

(c) al-Mutanabbi: The entrails are gone, but the tearing apart is still there. Motif no. 2 is in the first hemistich (with an addition, namely, that this envy shows the enviers what [evil] is in them). Motif no. 2 recurs in the second hemistich, inextricably bound together with motif no. 1.

al-Mutanabbi achieves a logical confluence of the two motifs, and in addition a pleasant balance between the two hemistichs: root q-t-s followed by hasūdan, followed by a contrast between “them” and “him”.

This technique of knitting together two independent motifs seems to be subsumed under the term tanfīk. Ibn Rashīk deals with it in one chapter of his Kurddat al-dhahab (ed. Mūṣa, 95-106). He says that al-Mutanabbi and Abu 'l-'Ala' al-Ma'arrī are the outstanding masters of this procedure. (Note that the Thālībī's use of tanfīk in his K.-Taqīfī li 'l-tanfīk, ed. Hilāl Nādji and Zuhayr Zāhīd, Beirut 1417/1996, seems to differ from Ibn Rashīk's, coming closer to murāt al-nāzīr “harmony of images”.)

SARÐKÄR (q.v.), lit. "head of affairs," a term used in Mughal Indian administration and also in the succeeding British Indian administration of the subcontinent.

1. In the structure of Mughal provincial government, as elaborated under the Emperor Akbar (q.v.) in 989/1580, there was a hierarchy of the riba (q.v.) or province, under the sâhidār (q.v.). (also called sâhâsâdâr, nâzâm and pâshî-hi râbî), the sarâr, or district, under the fâdîqâl (q.v.), who combined both administrative and military functions, corresponding to the two separate officials of British India, the District Magistrate and the Superintendent of Police; and the pargana (q.v.) or mahâll, i.e. subdistrict, headed by various officials with specific functions, such as the kâdî for the administration of justice and the kânîngo and tâdhîrî concerned with revenue collection. Thus in Akbar's time, Abu 'l-Fadl 'Allam enumerated within the province of Awadh (Oudh) 5 sarârs and 30 parganas (see PARGANA and MUGHAL, 3).

2. As a term in the historical geography of more recent India, sarâr appears Anglicised as "the [Northern] Circars", specifically for the coastal territory north of Madras and the Coromandel Coast in peninsular South India, in part to the south of the delta of the Godâvârî river but mostly to its north (hence now in the northeastern tip of Andhra Pradesh State in the Indian Union). This territory was ceded by the British East Indian Company in 1765 by the Mughal ruler in Dâhir, Shâh 'Abd Allâh II, but claimed by the Nizâm of Haydârabâd, leading to a treaty of 1766 whereby the Nizâm gave up his claim in return for the provision of a force of British troops to be at his disposal [see further, HYDÂDARÂBÂD, at Vol. III, 320b-322a].

3. In informal Anglo-Indian usage, the sarâr (local pronunciation, Sîr-kâr, often written "Sircar") meant the state or the government, and this continued to be the usage all through British Indian times. It may be noted that the term now popularly and almost ubiquitously used to denote the British domination in India, its government and administration, sc. "the Raj" (in Hindi and the modern Indo-Aryan languages, râj is a regular derivative of râgha "kingship, rule," cognate with rāgā "ruler"), is a neologism of the post-1947 period, probably from the later 1950s, when what had been "the Raj" had in fact for several years ceased to be.

Saran, The provincial government of the Mughals, Allahabad 1941; S.R. Sharma, Mughal government and administration, Bombay 1951; information from Prof. Christopher Shackle. (C.E. Bosworth)

SARRAF (Ar.), lit. "money-changer," such persons often functioning as bankers in pre-modern Iran. In fîkh (q.v.), sarf is a contract of sale (bâqî (q.v.)). It applies to currency exchange, originally of gold (dînâr) to silver (dirhams) and vice-versa. The Hadîth provides basic rules for currency exchange, such as that the transaction should be on the spot (yad bi-yad) [see RîA]. Among the famous hadîth relating to sarf is "Gold for silver is ribâ except hand-to-hand" (Mâlik, Muwattâ, sarf). Money-changing was an activity apparently engaged in by the earliest Muslims. This was related to their involvement in commerce, including as the Prophet himself [see râdghûn; RÂDGHU]. However, several hadîth warn of the dangers of ribâ in currency exchange if parties do not follow the rules of sarf. Thus moneychanging as a profession was not held in high esteem by the fîkahâl. The popular view was that non-Muslims (particularly Jews and Christians) were better suited to it than Muslims, who were constrained by the prohibition on ribâ (for money-changing and banking in the mediaeval Arab world, see GAMARAH and SARF, in Suppl.).

In the Ottoman Empire, sarâfs were more than money-changers; they were also moneylenders and brokers, and pawnbrokers. In time, many sarâfs became large financiers with well-recognised international connections, and played a significant role in the economy and politics of the empire. They were based mainly in the capital, Istanbul, but also operated in provincial capitals. Greeks, Jews, Armenians and Muslims were involved in the profession.

With the Ottoman conquest of Constantinople in 857/1453, the Italian predominance in finance in that city ended, to be replaced by that of Ottoman non-Muslim subjects, particularly Greeks. Mehemmed II (r. 848-50/1444-6 and 855-86/1451-81) favoured Greeks who played an active role in Ottoman finance, taxation through tax-farming (e.g. administration of customs zones and mines) and politics during his reign. From the mid-16th century, Jewish bankers (sarafs) and taxfarmers challenged Greek dominance in both finance and long-distance trade. Because of the activities of the Inquisition in Catholic countries in that century, under the protection of the Ottoman Sultans, several wealthy Marrano Jewish families came to settle in Istanbul. Many were to be involved in large-scale banking operations, international trade, and investment in tax farms. Financial expertise and close links to the Sultan and ruling elite gave them considerable power. Well-known Jewish names of this period include Dona Gracia Mendes, Don Joseph Nasi and Alvaro Mendes. Later, the role of the Jews declined, and Armenians became prominent as sarâfs, with some of their members rising to prominence; for example, Mustafâ III (1171-87/1757-74) appointed a member of the Armenian Duzuoglu family as manager of the imperial mint. The ability of the Duzuoglu family to mobilise credit for the state, domestically and abroad, enabled them to retain control of the day-to-day activities of the mint until the 1820s (Parnik, Monetary history, 202).

Until the 10th/16th century especially, the sarafs functioned in a context of expanding trade both within and without the empire. Facilitated by networks, their business was enhanced by increased credit or bartering as a result of the limited supply of gold and silver coins. They used several financial instruments, e.g. the havale (Ar. havâla; q.v.) was an assignment of a fund from a distant source of revenue by a written order. It was used in both state and private finances to avoid the dangers and delays inherent in the transport of cash (Isaak and Quaataf, An economic and social history, 208). Letters of credit were also widely used, particularly from the mid-11th/17th century, by merchants and for government payment. The increase in trade also meant more opportunities for currency exchange, which was abetted by the problem of a universally acceptable currency, the fluctu-
From the 11th/17th to the 19th centuries, the state continued to need and encourage the activities of the sarrāfs, tax-farming being one. Until the late 10th/16th century, the empire’s financial situation had been strong, with the major part of taxation being collected locally and mostly in kind by the sipāhis under the timār system. These funds were used locally. The timār system then began to be abandoned in favour of tax-farming [see MÜLTEZİM], and tax units (mukāber) began to be auctioned off at Istanbul. Sarrāfs based on Istanbul were thus able to purchase tax-farming privileges or to lend money to purchasers. Sarrāfs also became direct lenders to the treasury and were considered the most dependable source of liquid funds. As the empire sank further into fiscal decline after the 1760s, it relied on the sarrāfs to use their connections with European organisations to arrange short-term direct loans to the state. The sarrāfs also became personal financiers to the sultans and many leading Ottoman bureaucrats. It is estimated that, e.g. in 1860, the short-term debts of various government offices to private banking firms (sarrāfs) alone amounted to 250 million francs (Kasaba, The Ottoman empire, 80). By the mid-19th century, the power of sarrāfs as well as of tax-farmers and merchants equalled and perhaps surpassed the power of the bureaucratic elite.

Not all sarrāfs prospered. Of the hundreds, especially in the capital, which combined petty exchange with other small-scale money lending, relatively few became extremely rich, particularly through their dealings with the central or provincial authorities. Towards the end of the 11th/17th century, the sarrāfs of Istanbul organised around a guild and began to move their business to the Istanbul suburb of Galata [see GALATA, in Suppl.], later to be known as “Galata bankers”. Consolidation was also taking place. For instance, in the early 1840s, eighty members of the guild of sarrāfs were accredited by the government; by the mid-1850s, the number was down to 18. The sarrāf families included the Baltazzis, the Rallis, Zarafts, the Rodocoachis and Duzuqouls. These families played prominent roles in most of the major private and public banks that were established in the second half of the 19th century, starting with the Istanbul Bankasi (Bank of Istanbul) in 1845 (Kasaba, The Ottoman empire, 76).

The stereotypical view of sarrāfs is that they were on the whole non-Muslims. However, Muslims appear to have been involved in all aspects of sarrāf business, including tax-farming, currency exchange, money lending and international trade. A sample of 534 tax farms in the 10th/16th and 11th/17th centuries shows that around 60% of tax farmers were Muslims (Cizakca, Comparative evolution, 154-7). Research into the 10th/16th and 11th/17th century court records of specific regions (primarily Anatolia) of the Ottoman Empire also challenges the view that Muslims were not involved in money-lending or in the traditionally problematic area of interest. While there is debate among historians as to any marked difference between the Arab and “Turkish” parts of the Empire in regard to the acceptability of lending at interest, there is evidence that such transactions were carried out by Muslims in Anatolia on a relatively large scale, and that the practice was supported by the highest religious authorities of the time and approved by the 'ālims (judges) who were responsible for implementing the Şeriat-i 'ālim and other religious authorities, declared the permissibility not only of the cash waqf but also of interest charged on loans advanced therefrom (see Mandaville, Usurious piety). However, towards the end of the 19th century, the Muslim role in sarrāf business was radically curtailed by the increasing importance of non-Muslim sarrāf families and the emergence of banks, established largely by Europeans and by Armenian and Greek sarrāfs.

(ABDULLAH SAİED)

SÂ'TT AL-HUŞRİ Ottoman official, educator, Arab Minister and theorist of Arab nationalism, d. 1968.

He was born in San'ā', Yemen in 1880 to an Arab family of Aleppo. Both his father and mother were of prominent Aleppo mercantile families. His father, Muhammad Hilal al-Huşrî (b. 1840), served as an Ottoman judge after his graduation from al-Azhar University, becoming at the time of his son’s birth Director of the Court of Criminal Appeals in the Yemeni capital. Owing to the pattern of his father’s shifting appointments in accordance with Ottoman practice, Sâtî accompanied his family to a number of countries. Receiving his early education at home, Sâ’t learnt Ottoman Turkish, Arabic and French. At the age of thirteen, he began his formal education at the College of Mülkiyye Mektebi in Istanbul, studying mathematics, history, botany, French and chemistry. Graduating with distinction in 1900, he chose to serve as a natural science teacher in a secondary school in the Balkans. During this period, he began to develop a lifelong interest in the question of nationalism and the rights of national communities. Shortly before the eruption of the Young Turk revolution in 1908, he came into contact with members of the Committee of Union and Progress [see İTŢİHAD VE TERAKKI PJEM]. He also assumed in the same period the post of district governor in Kosovo and Florina.

After the revolution, al-Huşrî returned to Istanbul with the determination to propagate and implement his belief in a modern education system, coupled with his desire to articulate a secular notion of Ottomanism. This he did by founding new journals, publishing new school textbooks on various scientific subjects and taking part in public debates relating to contemporary issues. Furthermore, between 1909 and 1912 he assumed the directorship of the Teachers’ Training College in Istanbul, restructuring and modernising in the process its entire curricula and management. He also visited a number of European countries to acquaint himself with the latest methods of pedagogy. By the end of his directorship, al-Huşrî had become one of the most influential educators throughout the Ottoman Empire.

His most distinctive intellectual contribution in the Ottoman period of his life was five lectures he delivered...
in Istanbul in 1913 on the significance of patriotism. In these lectures, entitled Vatan ʿin, he called for building a new Ottoman community based on the idea of the fatherland as an object of love. Moreover, these lectures formed the basis of his Arab nationalist theory in the wake of his decision to leave the Ottoman capital in 1918 and join the newly formed government of Amir Faysal in Damascus.

In his Arab phase, al-Ḥusrī resumed his interrupted career by acting as Director General of Education, and then Minister of Education in the Syrian government until its liquidation by the French in 1920. After a short sojourn in Italy and Egypt, he once again joined Faysal, the new king of British-mandated ‘Irak, and became Director General of Education from 1923 to 1927. He used this opportunity to create a new system of instruction geared towards the inculcation of Arab nationalism, coupled with his insistence on high standards and rigorous methods of promotion. Meeting resistance or obstruction in the course of his duties, he resigned his post and devoted himself to lecturing at the Teachers’ College and publishing a new journal on education. In 1935 he assumed the deanship of the Law College and was appointed the first director of Antiquities between 1936 and 1941. Following the second British occupation of ‘Irak in 1941, al-Ḥusrī was, along with other non-ʿIrakī Arab nationalists, deported to Syria and stripped of his ‘Irakī citizenship. In 1944 he was invited by the Syrian government to modernise and overhaul its system of education. The foundation of the Arab League in 1945 afforded al-Ḥusrī the opportunity to develop his system of instruction geared towards the inculcation of Arab nationalism, coupled with his insistence on high standards and rigorous methods of promotion. Meeting resistance or obstruction in the course of his duties, he resigned his post and devoted himself to lecturing at the Teachers’ College and publishing a new journal on education. In 1935 he assumed the deanship of the Law College and was appointed the first director of Antiquities between 1936 and 1941. Following the second British occupation of ‘Irak in 1941, al-Ḥusrī was, along with other non-ʿIrakī Arab nationalists, deported to Syria and stripped of his ‘Irakī citizenship. In 1944 he was invited by the Syrian government to modernise and overhaul its system of education. The foundation of the Arab League in 1945 afforded al-Ḥusrī the opportunity to develop its cultural and educational policies. After acting as a cultural adviser, he was appointed the first director of the Institute of Higher Arab Studies in 1953.

After his retirement in 1957, al-Ḥusrī wrote and published a number of studies on pan-Arabist subjects, including his memoirs, which dealt with his ‘Irakī period. He died in 1968.

**ṢATĪ AL-ḤUSRĪ** (a.), “concealment”, a term used in a variety of senses particularly by the Ismāʿīlīyya [q.v.]. The Ismāʿīlīs originally used it in reference to a period in their early history, called dawr al-ṣatī, stretching from soon after the death of Imam Daʾar al-Ṣādiq in 148/765 to the establishment of the Fāṭimid state in 297/909. The Ismāʿīlīs’ term, recognised as the kāʾīm or mahdī by the majority of the early Ismāʿīlīs, was hidden (māstūr) during this period of concealment; in his absence, he was represented by ḥudjīdīn (see Daʾar b. Mansūr al-Yaman, *Khābāt al-kadhīf*, ed. R. Strothmann, London 1952, 98-9; al-Sahrāstānī, 146). Later, the Ismāʿīlīs of the Fāṭimid period, who allowed for continuity in their imāmāt, recognised a series of three such “hidden imāms” (al-dīnima al-māstūrātān) between Muhammad b. Ismāʿīl b. Daʾar, their seventh imām, and ‘Abd Allāh al-Mahdī, founder of the Fāṭimid dynasty (see H.F. al-Hamdānī, *On the genealogy of Fāṭimid caliphs*, Cairo 1958, text 11-14).

In the aftermath of the Nizārī-Mustaʿlī schism of 487/1094 in Ismāʿīlism, the early Nizārī Ismāʿīlīs experienced another period of satī, when their imāms, descendants of Nizār b. al-Mustansir (d. 488/1095 [q.v.]), remained hidden for several decades. The inaccessible Nizārī imāms were now once again represented by ḥudjīdīs, starting with Ḥasanān-ibn-Šabbih [q.v.], who also ruled over the Nizārī state from Almūt [q.v.]. The period of satī in early Nizārī history ended with the declaration of the kāʾīmāt at Almūt in 559/1164 and the resulting open emergence of the Nizārī imāmāt. Subsequently, the term satī acquired a new meaning for the Nizārīs. As explained by Naṣīr al-Dīn al-Ṭūsī, the Nizārīs had by the late Almūt period formulated what may be called a new doctrine of satī. In this context, satī no longer referred to the physical concealment of the imām; instead, it referred to a time when spiritual reality or religious truths (ḥokāʾīk) were hidden in the batin of religion, requiring the observance of takfīyā in any necessary form, including the adoption of the Sunnī ḥanīfī as demanded earlier by the sixth lord of Almūt, Djiḥal al-Dīn Ḥasan (607-18/1210-21).

The Mustaʿlī Ismāʿīlīs, who survived only in the ʿĪyāfī period after the downfall of the Fāṭimid dynasty, have experienced a period of satī, in the original Ismāʿīlī sense of the term, since their twentieth imām, al-ʿAmīr bi-ʾĀlkām Allāh [q.v.], was murdered in 524/1130. It is the belief of the ʿĪyāfī Ismāʿīlīs that all their imāms, starting with al-ʿAmīr’s son al-Ṭayyīb who disappeared in infancy, have remained hidden to the present day. In their absence, ḥukm mutālākh, or supreme ḥukm, have led the affairs of the ʿĪyāfīyya [q.v.].

Satī found expression also in the Ismāʿīlīs’ cyclical conception of religious history of humankind. The Ismāʿīlīs believed from early on that this hierarchy was comprised of seven eras or dawrs, all except the last one being eras of satī, because the inner, immutable truths of religions or the ḥokāʾīk remained undisclosed. In this scheme, only in the seventh and final eschatological era initiated by the kāʾīm before the end of the physical world, would the ḥokāʾīk be fully revealed to humankind. This final age, designated as the dawr al-kakhf or the era of manifestation, would be an age of pure spiritual knowledge where there would no longer be any distinction between the gahār and batin dimensions of religion, and between religious laws and their inner meanings. On the basis of astronomical calculations, the ʿĪyāfīs of Yaman introduced further innovations into this cyclical scheme. They conceived of a grand aeon (kaʿwār al-dāmār) composed of countless cycles, each one divided into seven eras. This grand aeon would progress through successive cycles of concealment (ṣatī) and manifestation (kakhf), and it would be finally concluded by the Great Resurrection (*khāmāt al-kiyāmat*) proclaimed by the final kāʾīm.

(F. Dafyarty)

šawāljaḏān (a.), said to be an Aramaisised form of Pers. šawāγān “polar stick” [see šawāγān]. The intrusive š i this difficult, but D.N. MacKenzie, *A concise dictionary of Pahlavi*, London 1971, 22, has *kāτuš* šāγān (“of doubtful transcription”). At all events, the curve of a polar stick makes it a suitable figurative expression, either as a simile [see ṭaγāmun] or as a metaphor [see ṭi‘āra], in classical Arabic, Persian and Turkish literatures, for the curving eyebrows and locks or tresses of hair of a beautiful girl; see Annemarie Schimmel, *The two-colored brocade. The imagery of Persian poetry*, Chapel Hill N.C. and London 1992, 284-5. (C.E. Bosworth)

šēbdan (r., from Pers. šagān “servant in charge of dogs, or keeper of the sultan’s hounds”). In Ottoman Turkish, it was often spelled šagān, and also written as šagān or šeşmen, following popular pronunciation), a term of Ottoman palace and military organisation.

In the Ottoman Empire, the term had three general uses which evolved over time: first used for the guardsians of the sultan’s hunting dogs, it was then applied to members of various salaried infantry units within the Janissaries, surviving until the corps itself was abolished in 1826, and finally, as the name of groups of infantry auxiliaries or militias. Officially prohibited as a military term in the latter use at the beginning of the 18th century, it was briefly revived again in the 19th. In present-day provincial Turkish, šeşmen refers to an armed ceremonial escort in national dress.

The first use of the term šagān occurs in a ważf deed of the late 8th/14th century. Hunting and dogs were an integral part of the early Ottoman court, especially of that of Bayezid I [q.v.], who is credited with greatly expanding the number of šagāns. Servants for the hunting parties were probably recruited from war captives or as part of the military levy (deşterme [q.v.]). Early records indicate that villagers sought protection from recruitment, or from other obligations to šagāns, indicating the burden which hunting could impose on the populace. Murād I [q.v.], explicitly recognised the service of his šagāns and falconers in his will, emancipating them at his death. Šagān figures prominently in Ottoman miniature painting. Sulaymān I [q.v.] himself was portrayed as a great hunter, and surrounded by dogs and their keepers (see *şariyya*; viii. Painting, Pl. X, for an example).

In the 9th/15th century, the evolution of courtly retinue to fighting units became more marked, and it is at this point that šagāns became part of the Janissaries. In 855/1451, Mehmed II added 7,000 šagāns to the Janissaries, with a separate commander, the šagān bağlī, who joined the ranks of the high officials of the empire (Chalcondyles, ed. Bonn 1848, bk. vii, 377). Other officers of the šagāns included a kethiidsa and a kāhīn. After the middle of the 16th/16th century, the šagān bağlī was subordinated to second-in-command after the ağa, and generally remained in Istanbul when the ağa left on campaign. The šagāns formed the 65th orta of the Janissaries, and were divided into two sections: a small cavalry orta of 40-70 men, most of whom were sons of Janissary officers, and 34 bölük (companies of infantry), known as the šagān bölükleri. Hunting traditions survived in the 33rd bölük, called the ważf (hunter) bölük, which accompanied the sultan on hunting parties but not on campaigns; sons of Janissaries and statesmen alike made up its rolls.

A second general use of the term was for provincial auxiliary mercenary or militia troops, like the levend [q.v.], who served the official appointees to the provinces, the paşas, nīr-i mirāns, bölgêhêri or sandıkêh begleri [q.v.]. Initially the entourage of the governor (paşa), his private retinue and army (kâfî halkî), şagān also came to be applied to troops called to campaign, and paid out of the central treasury (nīr-i şagāns, nīr-i levend). Provincial officers were the recruiters of the şagān-levend style of troops, and by the end of the 18th century, they were each required to mobilise 1,000-2,000 cavalry or infantry for campaigns. The essential characteristic of such auxiliary units was that they carried firearms, were recruited for short periods, and were drawn from the countryside, often from among the landless and lawless [see bârûd, iv]. Their first significant appearance in that military capacity was during the Ottoman-Habsburg War of 1593-1606, when a few hundred were noted among the troops in Hungary. They were recruited as other auxiliary troops, into companies or standards (şeyrân), the latter generally numbering 50 or 100 men. Their use was increased in the latter 11th/17th century, as both Janissary and sipâhîs [q.v.] proved inadequate for facing the better-armed Habsburgs.

The demobilisation of such troops led to countryside unrest, as they often stayed together as armed bands, and participated in uprisings such as the Djeâlî rebellions [see ṭi‘ār, in Suppl.] or revolts of their provincial masters. The central government endeavoured unsuccessfully to eliminate the designation şagān around 1700, but military necessity dictated its continuance, although the term nīr-i levend was the preferred usage for such troops by the mid-18th century.

Such mercenary or militia troops could be found in all the territories of the empire, as armies of provincial officials, as the fighting units described above, or as guards of towns, where they were often in conflict with local Janissaries. They included Christian recruits, Albanians, Serbs, and Croatians, especially in the Principalities, where they were called şegmen, and could be found in the fighting forces of Moldavia and Wallachia well into the 18th century. In general, however, Muslims were the primary recruits, and Albanians and Bosnians the most prized for their military prowess.

The term şagān was revived in military usage in 1808, when Muṣṭafâ Paşa Bayrakdâr [q.v.] tried to continue the reforms of Selîm III [q.v.] by renaming the detested nīr-i şelid [q.v.], troops şagān-i şelid, and incorporating them as the eighth şagān of the Janissaries. The new troops allied with the Janissaries, however, and were instrumental in Muṣṭafâ’s own downfall that same year. The term şagān disappeared when Muḥammad II [q.v.] eliminated the corps in 1826.

SEMENDIRE, the Ottoman Turkish form of the Serbian town of Smederovo, older form Semendria. Lying on the Danube downstream from Belgrade [q.v.] (lat. 44° 40' N., long. 20° 56' E.), it was in pre-modern times a fortified town and, under the Ottomans, the chief-locus of a sandjak of the same name. Since the break-up of Yugoslavia, it has come within the Serbian Republic.

A first conquest under Murad II (842/1443) did not lead to permanent incorporation into the Ottoman Empire, since due to the crisis of 847/1444 the sultan thought it necessary to preserve the Serbian despotate as a buffer state between his own lands and those of the king of Hungary (Halil Inalcik and Mevlut Qguz (eds.), Gazavat-i Sultan Murad b. Mehemmed Han, Ankara 1978, 31-5, 102-3). According to Theodore Spandunes, it was George Kantakuzenos, named Sachatia, a brother of the Byzantine princess Irene, consort of the Despot of Serbia George Brankovic, who came from the Morea to Serbia and built the fortified town of Smederovo. In 858/1454, this was one of the major centres of the Serbian despotate, with fortifications solid enough to withstand an Ottoman attack. In 860/1454, a Hungarian attempt to take the town was also beaten back by the same George Kantakuzenos (Th. Spandunes, On the origin of the Ottoman Emperors, tr. and ed. D. Nicol, Cambridge 1997, 29, 35; Memoiren eines Janitscharen oder Türkische Chronik, tr. Renate Lachmann, with comm. by eadem, C.-P. Haase and G. Prinzing, Graz 1975, 117, 210, this being the text supposedly written by Constantine of Ostrovica, an ex-Janissary or Janissary auxiliary; Th. Stavridis, The Sultan of Vezirs: the life and times of the Ottoman Grand Vezir Mahmud Paşa Angeloglu (1453-1474), Leiden 2001, 82-95).

After the death of George Brankovic and that of his son Lazar two years later, Smederovo was inherited by the latter's son-in-law, the Bosnian king Stepan Tomasevic, who in 863-4/1459 surrendered the city to Mehmed Paşa, then beylerbey of Rumeli. Born a member of the Byzantino-Serbian aristocratic family of the Angelovic, Mehmed Paşa had been commissioned to take over the region in the name of Sultan Mehmed II. Pope Pius II viewed the Ottoman conquest of the Serbian despotate and the concomitant acquisition of Smederovo as a calamity all but equivalent to the end of the Byzantine Empire. Most possessions of the Serbian despotate within the kingdom of Hungary were confiscated by the local ruler as a measure of retaliation for the surrender of Smederovo (F. Babinger, Mehmed der Eroberer und seine Zeit, Weltstürmer einer Zeitenwende, Munich 1953, 174-5).

These events had been preceded, in 862/early 1458, by an attempt on the part of Michael Angelovic, Mehmed Paşa's (probably elder) brother, a member of the regency council that took over after the death of Lazar, to make himself despot with the backing of the Ottoman sultan and take power in Smederovo. He had gained the support of Serbian nobles who were worried about a possible subjection to the Pope, in case the Hungarian party should gain the upper hand. However, the takeover failed, and Michael Angelovic was arrested by members of the pro-Hungarian party in the regency council and sent to Dubrovnik, where—probably at Hungarian behest—he was held captive by a local patrician (C. Jirecek, Geschichte der Serben, Gotha 1918, ii, 207-15). If this version of events is the true one, Michael Angelovic thus cannot have negotiated the surrender of Smederovo to his brother on the Ottoman side (Stavridis, op. cit., 102; most Ottoman chronicles, however, take the agreement between brothers for granted; see for example Âlîbâbâcâzası târîkî, ed. Âli Bey, Istanbul 1392/1914, 152. On a divergent version of these campaigns, compare The History of Mehmed the Conqueror by Türsun Beg, comments and tr. by Hâil Inalcik and R. Murphey, Minneapolis and Chicago 1978, 40-5; Türsun Beg claims that the outer fortress of Smederovo was conquered by force of arms, and only the inner citadel ultimately surrendered). Subsequently, King Matthias Corvinus of Hungary made various projects for a conquest of the fortress, now known in Ottoman as Semendire, but none of these led to any concrete results (Babinger, op. cit., 385).

Within the Ottoman realm, the Semendire area became a sandjak and was divided up into timars and zâmites [q.v.], itself forming part of the beylerbeylik of Rumeli; in the early 10th/16th century, Belgrade was part of this sandjak, albeit producing far less revenue than the Semendire area (M. Tâylî Gökbulğin, Kanuni Sultan Süleyman devri başlangıçında Rumeli eyaleti, in: Jâhed, ed., Hâkim, eyalet ve kasaban, in: Belleten, xx [1956], 252-7). After the conquest of Hungary, Semendire was transferred to the newly formed vilayet of Buda. In addition to the cavalry supplied by timâr and zâmêts, the local Eflak (Vlach) were accorded tax remissions in return for military services (N. Beldiceanu and Irène Beldiceanu-Steinhauser, Quatre actes de Mehmed II concernant les Vlachs des Balkans slaves, in: Beldiceanu, Le monde ottoman des Balkans [1420-1536]; institutions, société, économie, London 1976, no. III; on Vlach-related issues in the reign of Bayezid II, see for example, Mahmud Âlî Efendi, Bâyezîd dînî ve bâyezîdevi-târîkh, II. Bâyezîd dinemine ait 906/1501 târîhî akbaam defteri, ed. by İhvan Şahin and Feridun Emeene, Istanbul 1994, nos. 208, 209). Entries in the 10th/16th-century Mühimme defterleri reflected the position of Semendire as a military base during the wars of Suleyman the Magnificent against the Habsburgs: its governor was called upon to purchase timber for bridge-building, see to the construction of boats to be used on the Danube and organise supplies of flour and barley for the needs of the army. The town also possessed a cannon-foundry (topkâhîne). A text from 951-2/1544-6 refers to the fact that much of the town had been destroyed by fire, and enjoined the kâddî to make sure that the new houses were not built so close to the walls as to endanger their military function (Hac Osman Yıldırım et alii [eds.], 7. numaralî mühimme defterler 975/976/1567-69, 5 vols. Ankara 1997, i, 273. For one of the oldest extant Mühimme registers, see Halil Sahilioglu [ed.], Topkâhîne Savrî arşiv-i H. Eser 932-952 târîkî ve mühimme defteri, Istanbul 2002, 24-5, 192-3, 219, 306; for a selection of relevant texts from this register in French tr., see Müheva Benièdei and G. Veinstein, L'Empire ottoman et les pays roumains 1544-1545, Paris and Cambridge, Mass. 1987, 8-9, 14-15, 18-19, 29, 40-3, 46, 65-6, 69-70).

Economic life was based on agriculture, stock-rais-
ing and fishing; Semendire functioned as a small-scale market for rural produce, while crafts seem to have been of limited importance and many townsmen cultivated fields and gardens. (B. McGowan, Food supply and taxation on the Middle Danube (1560-79), in Archivum Ottomanicum, i [1969], 139-96; Müneca Bertindedi, Amint Berthier, Marielle Martin and G. Veinstein, Code de lois de Murad III concernant la province de Smederevo, in Südost Forschungen, xxxi [1972], 140-63). Timber was brought in from the surrounding forests, while imports from further afield included metals, Asian spices and also slaves; the Danube seems to have functioned as a barrier at which internal customs could be conveniently collected.

After the period of Zužiturok [1015/1606 [p.r.]] had ended the Long War between Habsburgs and Ottomans, the embassy of Adam Freiherr von Herberstein was, on its return from Istanbul (1610-18/1608-9), permitted to view the fortifications of Semendire (M. Brandstetter, Itinerarium oder Reisbeschreibung, in K. Nehring, Adam Freiherr zu Herberstens Gesandtschaftsreise nach Konstantinopel: ein Beitrag zum Frieden von Zužiturok (1600), Munich 1983, 174-5). This permission may have been granted because Ottoman military men regarded the fortifications as obsolescent. Brandstetter described a once powerful stronghold that he did not, however, consider very suitable for contemporary warfare. Roofs and floors had been neglected, while heavy artillery could only be placed in the towers and on the bare ground; but the fortress did suffice to control traffic on the Danube. Brandstetter also noted the existence of an inner citadel protected by its own water-filled ditch and five towers, as well as the presence of a garrison commander, but he made no reference to a civilian population.

An 11th/17th-century description from an Ottoman perspective is owed to Ewliya Celebi, who visited Semendire as a participant in several Balkan campaigns (Evlîya Celebi Seyahatnamesi. Topkapâ Sarayi Baydâg 307 yazmasının transkripsyonu-dizisi, v. ed. Yücel Dağlı, Seyit Ali Kahraman and İbrahim Sezgin, Istanbul 2001, 316-17). Ewliya relates a set of partly counterfactual traditions concerning the Ottoman acquisition of the town, seventeen years before Constantinople, possibly an allusion to the ephemeral conquest under Murād II. These stories are, however, important because they possibly circulated among the local military men and show the “ideological” importance of Semendire even at this date. Other conquest traditions involve a marital union between Sultan Bâyezîd I Yildırım and a daughter of the Serbian despot which resulted in the conclusion of peace between the two states—this was possibly a reminiscence of the marriage of the Serbian princess Mara to Murād II. These stories also include an account of military conquest on the part of Mehmed II and a subsequent return of the town to the unbelievers in exchange for the liberation of the commander Ball Bey, who had been taken prisoner in battle. After his return, Ball Bey supposedly attacked and took Semendire, so that he was regarded as its second conqueror, his memory perpetuated by a zawiye slightly to the west of the town. This latter story probably refers to one of the first sizeable mosques of the province, Ball Bey Malkoçoglu, who became famous for his two campaigns against Poland and other feats of derring-do (Babinger, Beiträge zur Geschichte des Geschlechts der Malkoç-Oghlus, repr. in Aufsätze und Abhandlungen zur Geschichte Südosteuropas und der Levante, i, Munich 1962, 355-70; and see Malkoç-Oghullarî, in Suppl.).

As in the late 10th/16th century, Semendire in Ewliya’s time was a centre of the homonymous sandjak, famous on account of the numerous soldiers domiciled in this place (‘Ayn-‘Ali Efendi, Kütüphanî-i dîvâni-i ‘Othmânîn deḥkülâ-i meddâm-i derâ-i dîvân, preface by Gökbûlgûn, Istanbul 1979, 17; compare also the description by Kâtib Celebi, Rumeli and Bosna, tr. J. von Hammer, Vienna 1812). The fortress supposedly consisted of an inner and an outer section, with a circumference of 4,000 paces and four gates, protected by the Danube on three sides and in addition by 36 towers. Apart from the garrison officers, the urban elite consisted of the kâbîl, the şehri kethüsâni and the teachers in two local medreses, while four Friday mosques, one of them bearing the same name as Mehmed the Conqueror, were available for worship. There was a settlement outside of the walls (wanîkât) that supposedly contained 3,000 houses and 300 shops, accessible by wooden bridges crossing the river or else the water-filled ditch that made the fortress into a virtual island. Due to the marshy ground, few buildings were of stone, roofs were often covered in wooden shingles and even the streets were paved with boards. Although Ewliya claims that an abundance of goods was available in the two local bâlanit and elsewhere, the lack of a covered market probably indicates that this was not a town noted for its commerce (on the limited economic activity of the entire area, see McGowan, The Middle Danube cul de sac, in Huri İslâmoglu-Inan (ed.), The Ottoman Empire and the world-economy, Paris and Cambridge 1987, 170-7).

In the Ottoman-Habsburg war of 1094-1111/1683-99, Semendire shared the fate of nearby Belgrade: it was first taken by the Habsburgs and then re-conquered by the Ottomans. The Ottomans, however, gave it back to Belgrade in 1140-1/1729; this was probably a sign of the town’s declining relative importance (Adolph Kunike [ed.], Zeyve hundert vier und sechzig Donau-Absichten nach dem Laufe des Donaustromes, comments by Georg C.B. Runy, Vienna 1826, repr. Munich n.d.; non-paginated brochure appended to the lithographs). Nevertheless, in the early 13th/19th century, Semendire formed one of the centres of a Serbian movement for autonomy; in 1219-20/1805 local troops in rebellion against the Ottomans. The Ottomans then gave the town back to Belgrade (J. Stroy, Maršigt’s Europe, 1680-1730: the life and times of Luigi Ferdinando Marsigli, soldier and virtuoso, New Haven 1994, 57, 74-5, 78, 95, 109; Barbara Jelavich, History of the Balkans, i, Eighteenth and nineteenth centuries, Cambridge 1983, 91, 198).

Documenting the physical shape of the town at the beginning of that century, there survive two remarkable lithographs published in 1241-2/1826 (Kunike op. cit., nos. 180, 181). These show that the town preserved quite a few of the characteristics described one and a half centuries earlier by Ewliya Celebi. While according to Runy’s comments, the fortress lay partially in ruins, this is not apparent from the images, which show a wall surmounted by towers of different shapes and sizes and protected by a palisade. The town proper was located not on the peninsula/island but on the river banks, and there was a Muslim section surrounded by many minarets, more than the few surviving in Ewliya’s time. Semendire possessed a sizeable Christian quarter as well, for there was also a church with a high steeple, rather Central European in character. Roofs and walls made for shingles still formed a notable feature of the local architecture, and the Austrian commentator remarked that the town had “a handsome appearance”.

SEMENDIRE 715
SHAH Dagh, a peak of the most eastern
mountain range which in medieval Islamic times separated the districts of Kuba from Shamsa. It now lies in the northeastern part of the Azerbaijan Republic.

SHAHBANDAR (p.), lit. "harbourmaster", an official of the ports in Safavid Persia and one also known on other shores of the Indian Ocean. A lack of information from before the advent of the European maritime companies notwithstanding, it is likely the office of shahbandar first appeared in Persia, and from there spread throughout the Indian Ocean basin. The precise status of the shahbandar remains unclear for the early period. Moreland concluded that, while elsewhere around the Indian Ocean the term had a wide range of meaning in the 10th/16th century, in Hormuz it clearly referred to the harbourmaster. He documents a shahbandar in that port for 1521, and for 1584 the Portuguese sources identify the chief officer of customs du praya, chief warden of the beach and customs house. The Portuguese sources also mention an official called juiz da alfandega, judge of the tollhouse. Already at that time the function had a political dimension as well, for at some point in the early 10th/16th century, the vizier of Hormuz combined his position as governor of the port with that of head of customs.

Most of the subsequent information on the shahban-
dar concerns the position in Bandar 'Abbas [q.v.] after the arrival in the Persian Gulf of the English and Dutch East India Companies in the early 17th century, and is a function of the documents generated by their agents. In the Persian sources the shahbandar appears as the shahbandar, commander of imports and exports, but he is rarely mentioned, reflecting the fact that, although the Persian Gulf trade was important to the state and the official served the central administration, the region itself was not at the centre of official attention.

The shahbandar wielded considerable power in the port. He administered the payment of tolls on incoming and outgoing goods, which generally amounted to 10% of value for both. In order to secure smooth transactions, merchants were forced periodically to hand him gifts, which was really a form of taxation. Thus the Dutch and the English typically paid the shahban-
dar of Bandar 'Abbas 50 tumanis annually, but in 1654 we hear of local merchants being forced to pay a sum of 1,000 tumanis, and in 1661 the resident Indian merchant community was made to pay a similar amount. Shakhbandar were also wont to make private deals with brokers, who bribed them to let goods pass. Shakhbandar had their own agents in other Persian Gulf ports and India and elsewhere in Persia who tried to entice merchants to patronise Bandar 'Abbas. There are also reports of the shahbandar of Bandar 'Abbas terrorising the local merchants and interfering with their trade, demanding the choicest wares available at below market prices and refusing to give a transport license when they demurred.

While sharing many of his responsibilities and traits with shahbandar in other parts of Asia, the shahbandar in Persia resembles the ones in India and South East Asia more than his colleagues in the Ottoman Empire. Whereas in a place like Aleppo the shahbandar was chosen from among the wealthy local merchants, and was sometimes a Jew or an Armenian, in 11th/17th-century Persia he was invariably a political official with a fixed salary, who was sent down by the central government with the task of collecting customs revenue for the shah. At the end of his term in office he had to account for his dealings and submit his financial report to the crown's financial council. The fact that in the late 1620s Maluyim Beg was simultaneously the shah's commercial factor and shahban-
dar of Bandar 'Abbas suggests this strong nexus between politics and commerce. The reports of the maritime companies also make clear that the shahbandar was a shadowing official, sent down to supervise and report on the khan of the town. As this surveillance was mutual, it often led to rivalry and even violent confrontations between the retinue of both officials. As was the case for most positions in Safavid Persia, the post of shahbandar tended to be hereditary, yet no single family managed to establish a hold over it for any length of time. For most of the 1650s, Muhammad Beg, who later became Grand Vizier, and his family furnished a series of shahbandars, beginning with Muhammad Beg himself. Of Armenian descent, he was a ghulam [q.v.], one of the many originally Christian slaves from the Caucasus region who attained high political positions in Safavid Persia. Georgian ghulams, who by the 11th/17th century had taken over most of the administration in the country, infiltrated the position as well. In 1669 it was reported that the new shahbandar was a Georgian ghulam.

Several changes occurred in this same period. Until 1656 the port of Kung fell under the jurisdiction of Lâr [see Lâr, Lâristan]. When 'Avad Beg left his post as khan of Lâr, a separate governor-cum-shahbandar was appointed for Kung, apparently in order to improve the central government's control over its revenues. A similar motivation underlay the changes effected in the smaller ports of the Persian Gulf, which until the second half of the 11th/17th century did not have a customs house and therefore no shahban-
dar. As this prompted those merchants keen to evade tolls and harassment in Bandar 'Abbas to turn to those ports, the Safavid government in the mid-1660s conducted an investigation and decided to establish a customs house in Bandar Rag. Bâghîr [q.v.], which was of minor importance, had a shahbandar, too, at this point. Smaller ports must have remained under the jurisdiction of local shahbandar.

In a more structural change, the position of shahban-
dar of Bandar 'Abbas began to be farmed out in this period. Until the reign of Shah Sulayman (1077-1105/1666-94), each individual port had its own customs official and the office of shahbandar had rotated on an annual basis. Mismanagement, corruption and the attendant dwindling income from customs in the early 1670s prompted the Safavid government to consolidate the customs administration by bringing it under the control of one official, who now farmed the post for six to eight years at a fixed salary and a stipulated revenue of 24,000 tumanis. (Chardin claims that the change came in 1674, but it is more likely that it was part of a series of reforms effected by the Grand Vizier Shâykh 'Ali Khan in 1671-2.) The term of a given official might be prolonged after expiration. Thus in 1684, Mirza Murtaza, having served one term, received the post for seven more years. He was also reinstated as shahbandar of Kung. Various other sources report that, ten years later, the shahban-
dar of Kung acted both as customs official and as dârûgra [q.v.], or mayor of the town, and that he
farmed the customs of Kung, Bandar 'Abbas and Bandar Rīg, for an annual sum of 20,000 tūmāns. 

Būghrū in the mid-12th/18th century offers an example of an Armenian ḡhābdan—-as opposed to a ḡhābdīn—who had been made to convert to Islam. This person was named Khâlel Mellek, a subordinate of the ḡhābdan of Bandar 'Abbas. In 1748 the town's governor, Shâykh Nâṣir, usurped the position. This may have set a precedent, for in the 19th century the head of customs in Būghrū appears to have been the port's ḍâbīn or kalantar (q.v.) or mayor, rather than a ḡhābdan. Beginning in ca. 1850, when the port's trade began to flourish, customs were collected by a private functionary called the hammalbāshī. In Bandar 'Abbas, the term ḡhābdan long remained in use, but here, too, it was the hammalbāshī who in the 19th century collected customs fees. In the smaller ports, tribal chiefs or government officials called ḍâbīs were usually the ones to manage the port's customs.

Having become obsolete for the port towns of Persia, the term ḡhābdan was now used for the official who represented the interests of the Turkish merchants operating within Persia.

SHĀ'IR.

1. B. From the 'Abbāsīd period to the Nahda.

Poetic communication is part of a larger system of social communication governed by a particular set of rules and carried out by participants who are more or less aware of the value and meaning of these rules. The role of the poet is only one of several roles which are mutually co-communicative. Any discussion of one of these social roles must perforce take into account the other roles. S.J. Schmidt (1992) described four action roles which are used below to inform the discussion of shā'ir.

(a) Production. In the period between 750 and 1850, poetry was composed by a very different range of people from all walks of society in the Arab speaking world. Among the producers of poetry we find caliphs and craftsmen, secretaries and slaves, religious scholars and rogues, members of noble Arab tribes or people of non-Arab descent, rich and poor, famous and infamous. Of the three main panegyrists of the 3rd/9th century, Abū Tammām (d. ca. 251/865 [q.v.]) was of Christian descent (and embarrassed by this fact), and had to earn his living as a weaver's assistant and a water carrier in his early years; Ḥāfīz al-Rūmī (d. 283/896 [q.v.]) was of Christian descent as well (and of it), whereas al-Ḥujṭūṭi (d. 284/897 [q.v.]) was of pure Arab stock and grew up in a tribal milieu.

There was no uniform group of poets, nor was being a poet considered a specific profession with an established and definitive course of study or a canon of specific knowledge to be learned. Instead, everybody who had learned to compose poetry that met with common approval was called shā'ir. Professional poets during the 'Abbāsīd period were primarily court poets who were financially dependent on the favour of a patron. In later periods, poets most typically came from the ranks of the 'ulama'. During the whole of the period in question, however, it was taken for granted that every educated person had the ability to take part in poetic communication, at least in the role of a receptive listener/reader. Therefore, poetry composed by professional poets forms only one segment of the poetry composed, composed, and transmitted. Even those poets who can be considered professional poets often played more than the role of the producer of poetry and engaged in processing literary and other roles. SJ. Schmidt (1992) described four action roles which are used below to inform the discussion of shā'ir.

(b) Mediation. The oral recitation of a poem by its producer has always been considered the basic means by which poetry was made accessible to others. Professional singers were not only important but often even famous transmitters of poetry from the latter
Umayyad period onwards, not only in courtly arenas but also in other well-to-do households. Written transmission in the form of letters or books also played an increasingly important role. The output of individual poets was often collected in the form of a diwān, frequently by those other than the original poets themselves. An example was Abu Bakr al-Sṹfĩ (d. ca. 335/947 [q.v.]) who collected the diwān of Abũ Nuwãs, Abũ Tãrmãm, Ibn al-Rũnĩ and others. Of enormous importance for the transmission of poetry were anthologies [see MAŠĀR] and other works of adab. Both linguistic and historiographical works as well as collections of biographies contain a great deal of poetry. Religious texts of an edifying nature and Sṹfĩ works are hardly to be found without poetry. After the rise of the madrasa [q.v.], the formal parameters of poetry (metre, rhyme) and peculiarities of literary language [see AL-MA'AN! WA 'L-BAYAN] would become part of the propaedeutic discipline of adab (in this case meaning the whole of linguistic disciplines). Poetry itself, however, was not a regular subject in the curriculum. Only the most famous works, such as the Diwān of al-Mutanabbi and the Makāmat of al-Hãrîrĩ, were taught within an academic framework. Story-tellers and preachers [see ÎSÁS] included poems in their speeches and thus contributed to their own popularity among the masses. As a whole, the process by which poetry was imparted has not yet been studied adequately.

(c) Reception. Poetry was an everyday commodity. A poet could “réciter une gaïda à son entourage, à ses amis, à des confères. Qu’il aille dans les souks de la ville, parcourt ses rues, fréquente les cabarets de ses faubourgs et leurs jardins, dans le demeure d’un bourgeois ou d’un prince, partout... il peut declamer sans étonner, parler d’amour sans surprendre, pleurer de douleur sans choquer” (Bencheikh, 38). Poetry was an effective system of communication in which a substantial part of the population took part and by which the emotional and affective requirements of the people were met. People listened to poetry for its social, emotional, and intellectual effect [see TĀRAB; TA'ĀMUJ], and it was considered the poet’s task to convey information and to stir emotions, curiosity and interest in poetry rather than to express his own feelings. Modern modes of reception, influenced by the cult of the poet as a genius who is expected to be more in touch with deeper feelings and thoughts than other people, and the individualistic notion of poetry as a means to express one’s own very specific emotions, have often lead to misconceptions about pre-modern Arabic poetry. Whereas modern and individualistic conceptions of poetry have fostered an acceleration of literary change, they have also led to an increasing social marginalisation of poetic communication. By contrast, although the pre-modern understanding of poetry as a social activity resulted in a greater stability of poetic forms and content, it nonetheless allowed literary forms to remain effective and meaningful for a wide range of people over the whole period considered here and thus allowed a greater sector of the population to participate in elaborate artistic activities.

(d) Processing. The Arabic pre-Islamic literary and cultural heritage forms, next to Islam itself, one of the two foundations of Arabic-Islamic culture. The collection of and commentary on pre- and early Islamic poetry therefore was one of the primary activities in the first centuries of Islamic scholarship. The disciplines of grammar and lexicography owed their development more to the need to comment upon ancient Arabic poetry than upon the normative texts of Islam. This creation of a consciousness of poetry was one of the prerequisites for the rise of the scientific study of contemporary poetry and of literary criticism by the 3rd/9th century. These disciplines cannot be dealt with here (see the overview by Ouyang), but it should be remarked that, during the 'Abbãsîd period, literary history and criticism was a discourse clearly separated from the production of poetry itself, notwithstanding the exertion of mutual influence. Among the major poets, only Ibn al-Mu‘azzaz and Ibn Rûshûf were famed theorists as well. The Mamluk period, in which the merger of a secular and religious discourse had already been perfected, witnessed the complete synthesis of poetic production, on the one hand, and literary theory and rhetorics on the other in the form of the badi‘yya commentaries by Šãlî al-Dîn al-Hãlîf (d. probably 749/1348 [q.v.]) and Ibn Hûdîjîdî al-Ḥamawî (d. 837/1434 [q.v.]), among others.

Other important forms by which literature was processed are various forms of intertextuality such as the mušarãd or the sâkhãsî [q.v.], in which a poet transforms a given poem into a new work of literature following a literal rule. These techniques should be understood within the framework of similar forms of appropriation-cum-transformation of the scholarly, cultural and literary heritage of Islamic culture, such as the commentary (Qarî [q.v.]) or the abbreviation (mukbãsîr [q.v.]).

Four important social environments provided a framework for educated poetic communication between the Umayyad and the modern period.

1. The Court. Throughout the entirety of the 'Abbãsîd period, the courts of the caliph(s), provincial rulers, governors and the court-like households of viziers, generals, and other high officials served as centres of literary activity of preeminent importance. Two kinds of literary activities should be distinguished here: first, the recitation of panegyric poems as part of the official representation of the ruler; and second, poetry as part of court entertainment.

Panegyric poems [see MADĪH] formed the most important political discourse throughout a great deal of Islamic history. In panegyric poems, the subject personage was described as an embodiment of royal virtue, above all in terms of military prowess and generosity. The recollection of these virtues simultaneously confirmed and reinforced them, for society as well as for the ruler himself, and by confirming the ruler’s ideal fulfillment of these normative values, the poems contributed to his legitimisation. Further, they served to spread the news of important events (such as battles won), and helped to memorialise them and to locate them and their protagonists within a broader historical context.

To understand the mechanism of the panegyric poem, it is important to bear in mind that the patron, to whom the poem is addressed (the mamlûkh), is not identical with the intended public of the poem. Of course, panegyric poems could fulfill their political and social role only if a general interest in them was granted. Therefore, the dichotomy of the poet and the mamlûkh, which appears in the texts themselves, should be expanded to a triangle with the “public” as third participant. Each of the three participants in this form of communication acted in a mutually informative give and take. This triadic interplay can be generally schematized as follows:
Given the first-rank importance of the panegyric-political discourse as a means of representation and legitimisation, even rulers who had no feeling for poetry could hardly afford not to patronise poets. On the other hand, many rulers and princes pursued an intense interest in poetry, had expert knowledge at their disposal, and often composed poetry themselves. Just to mention a few, the caliph Harun al-Rashid (d. 193/809); his sister the princess ‘Ubayya b. al-Malid (d. 210/825); the prince Ibn al-Mutazz (d. 296/908), one of the greatest poets of letters of the ‘Abbâsid period; the caliph al-Râdi bi llâh (d. 392/940); the Hamdânî Sayf al-Dawla (d. 356/967); and the Ayyubîd Abu ‘l-Fida ‘alî (d. 732/1331). Members of this dynasty. In such cases, where the mandâh assumed both the role of the patron as well as the role of the public, poets had to accommodate their poems not only to general panegyric standards but also to the personal taste of the patron. To mention two examples: al-Bulyuri replaced the traditional našt [q.v.] with all its intertextual strands with the more modern genre of ghazal [q.v.] in order to meet the taste of al-Mutawakkil, who had less literary training than his predecessors. Ibn Nubata al-Misrî (d. 750/1349 [q.v.]) faced the opposite problem after the death of Abu ‘l-Fidâ al-Misrî and tried to win the favour of his pious and ascetic successor by replacing the nasîb of his panegyric odes with ascetic poetry.

Panegyric poets hoped for an immediate reward for any given poem, which often reached rather exorbitant sums of money. Considering the fact that generosity was one of the main virtues praised in the panegyric odes and that the poet offered himself as a first object for the demonstration of this generosity, the exchange of poem for reward assumed the character of a ritual exchange. If successful, poets could even hope for a permanent patronage of the ruler, thus being spared having to wander from patron to patron. Al-Mutanabbî—an extraordinary self-confident poet—could prove to be a sharp weapon indeed. Again, al-Mutanabbi—an extraordinary self-confident poet—provide us with examples in his invectives against the Khâhid ruler Kâfarî [q.v.]. Many poets, however, experienced feelings of humiliation when forced to “beg” for monetary reward for their poems, as is repeatedly told in their biographies.

The circumstances under which courtly panegyric poetry was performed have been only little studied so far. Obviously, panegyric poems were often performed as part of public ceremonies, during a ma’dîls or a banquet. The poems that were recited may have been pre-selected by court officials (al-Kifîr, ibdâh, iv, 149). How these poems became known by a broader public has not yet been explored in detail. The poets themselves, philologists, compilers of anthologies and literary critics may have participated as mediators in this process. In the end, however, this process must have been rather effective, since in most books on literary criticism, panegyric poetry is given privileged interest, and anthologies and chronicles overflow with quotations of eulogies. Since without the participation of the recipients, the process of panegyric communication must have been ineffective as a whole, the study of this part must be considered a major desideratum.

In addition to the ritual and public performance of panegyric poetry, courtly life offered a great many other opportunities for poetry making. Hunting excursions provided an opportunity for the recitation of hunting poetry (iṣrâyîla [q.v.])—banquets and musical gatherings gave rise to the presentation of wine poetry [see hâmallî], love poetry and other genres. On these occasions, the ruler was accompanied by his nuddamî “ boon-companions” (sing, naddâm [q.v.]) a group of talented people from various fields. Even the office of the naddâm was institutionalised at the ‘Abbâsid court. Poetry played a prominent role in the gatherings of the ruler and his nuddamî, and was practiced not only by professional poets but also by nuddamî with other professions. And poetry itself, both ancient and contemporary, was often the subject of conversation in the ma’dîls. It must be stressed that the kind of poetry recited and sung in these courtly environments was not fundamentally different from that practised outside the court in urban milieux. Therefore, a common term like “courtly love” characterising the relations between lover and beloved in a current type of love poetry (ghazal, našt) is misleading, since love poetry sung at caliphal banquets in no way differed from the poetry that was popular in other social environments. Instead, it was rather the ideals, ethical models, and literary tastes of the udbâh and kutdîtî which dominated at the courts [see zarî]. Nuddamî circles also existed in the households of viziers and high-ranking kutdîtî, and the same people practised their poetic skill in circles of philologists and udbâh as well as in their role as naddâm at the court.

In the period after the fall of the ‘Abbâsids and...
Ayyūbids, the importance of the court for Arab literary culture decreased considerably. Though panegyric poems in the Arabic language were still composed about Mamlūk and Ottoman sultans (and poets duly rewarded for them), the Mamlūk and Ottoman courts no longer offered the resources for a vivid literary culture in Arabic language. One of the main reasons for this development is, of course, the fact that rulers of these dynasties often had only limited (if any) command of the Arabic language. But it should also be borne in mind that, whereas in the ‘Abbāsid period political authorities were part of the culture of the civilization non-religious elite of the kuttab and were eager to see their legitimisation expressed in the medium of poetry common to both, the post-‘Abbāsid period witnessed the merger of a religious and non-religious elite, which now formed a counterpart to the military elite which no longer shared this culture. Rather than poetry, Mamlūks instead patronised architecture to an hitherto unprecedented extent.

The kuttab for this development is, of course, the fact that rulers were more interested in private matters. The merger of the religious scholars required knowledge of pre- and early Islamic poetry in order to be able to comment upon the Kuttab and Hidāt, and some of them composed at least poetry of the zuhdiyya [g.v.] genre, as the collection of poetry ascribed to al-‘Abdallāh (d. 204/820 [g.v.]) demonstrates. Due to its emotional effectiveness, poetry of the zuhdiyya genre, as well as love poetry was used in sermons. However, scholars were rarely proficient poets, and in his collection of the biographies of linguistic scholars, al-Kīfī repeatedly speaks with derision of grammarians and other scholars who composed verses of the kind of the poetry of grammarians (mubāth/scientific poets) [– al-Kīfī, Inshā, iii, 219, 263, 267, 288, 343, iv, 165]. Nevertheless, from the latter ‘Abbāsid period onwards, there is an increase in the number of ‘ulmā’ who were composing poetry in different genres. A few kāfīs and muhaddithūn have already been mentioned in al-Tha‘alibī’s [g.v.] anthology al-‘Ayn kitāb al-dahr, which contains poetry from the second half of the 4th/10th century. By the time of ‘Imād al-Dīn al-Isdahānī’s [g.v.] anthology, the adab of culture, as well as in the urban middle class in general. In bdh, the number of ‘ulmā’ composing poetry and the quality of their poems had obviously increased considerably. Here, in this period of transition, we can witness the gradual merger between the adab-oriented culture of the kuttab and the sunna-oriented culture of the ‘ulmā’ (Bauer, Kaffinaat, Homerin, Praehoming poetry). From the Saljūq period onwards, the kuttab gradually ceased to be a distinct social group with their own cultural values. Instead, the duties of the kuttab came to be fulfilled by people who had received the training of a religious scholar. The result, as it becomes very obvious during the Mamlūk period, was a rather homogeneous group of ‘ulmā’ who had become the bearers of Islamic religious as well as secular culture. Remarkably, this development did not prove detrimental to literary culture. Instead, the process of ‘‘ulmā’‘isation of adab’ was counterbalanced by a process of ‘adabisation of the ‘ulmā’’, who in the meantime had made the adab discourse of the kuttab their own. Though the political relevance of poetry decreased, its relevance for the civil elite increased, so that one can speak of a process of privatization of poetry. Poetry became a pre-eminent medium of communication between ‘ulmā’, and this medium included panegyric poetry, which now became addressed from one ‘ulum to the other rather than to rulers and military leaders. For the ‘ulmā’, it would become more and more important to be able to take part in this form of poetic communication. Consequently, the poetry of the Mamlūk period grew more personal and more interested in private matters. The merger of the secular and religious elite into a new group which shared to a considerable extent the values and ideas of the old religious elite, but which also had appro-
ried the literary culture of the old secular élite, led to an unprecedented rise of religious poetry. Since also the boundaries between high and popular culture became blurred, the percentage of the population taking part in a rather homogeneous literary culture became larger than ever. The Mamluk period, therefore, may have been the period which displayed the broadest literary culture in Arab history.

The Ottoman period has not been studied well enough to allow a more detailed assessment. At least, it is beyond doubt that the 'ulamāʾ still played the most important role in poetry. Arabic poetry at this time may have witnessed a decrease in its local importance, but at the same time could expand its geographical range due to the increasingly global and cosmopolitan character of the 'alāma. Texts displaying a very similar literary taste were composed in Sub-Saharan Africa as well as in the Indian subcontinent. Locally, Şiʿī circles seem to have developed into one of the main centres of the production of poetry.

iv. Urban milieu

A study of the involvement of different social environments of the urban middle classes in the poetic discourse has not yet been carried out. However, it is clear from countless hints in the sources that poets wrote in the standard language and the established genres was esteemed and even produced among craftsmen, merchants, and in similar milieus. The site of Abu Nuwās’s (d. ca. 196/813 [p.4]) wine poems is not only the courtly banquet but also the tavern. Another and rather different urban milieu was that of the qurūg, in which the poems of al-ʿAbbās b. al-ʿAmānaf [p.4] are set. Several little-known poets mentioned in Ibn al-Mu’tazz’s Taḥākāṭ al-ḥamārī bear names pointing to crafts, and even professional poets like Abu Tammām had to earn their living by manual work before they were famous enough to live from their poetry. In any case, social boundaries were not as strict as in Europe, and people of low descent and non-privileged social positions were not in principle excluded from taking part in high culture.

In the 4th/10th century we find a baker (al-ʿKhābbāz al-Baladī, see Sezgin, GGS, ii, 625-6), a fruit-seller (al-Waṣṣa [p.4]), and a darner (al-Sarī al-Raffī [p.4]) among the well-known poets of the age. Another poet, al-Khuzāʿaʿarūzī [p.4], was a baker of rice bread in Basra and became famous as a ghazal poet. Young men from all over the town used to visit his shop in the hope of becoming the object of one of his love poems. By quoting poems by al-ʿAmānaf al-Ukbarī, al-Thaʿalībi (Ṭalṭama, ii, 122-4) allows a glimpse of the poetry of the vagabonds [see SāSN, BAN]. These poets owe their lasting fame to the fact that representatives of high culture took an interest in their productions, but they may also be taken as evidence of the kind of interest in poetry that cut across different levels of society.

Sources are much more copious for the Mamluk period, during which a convergence between high and popular culture is attested. The most representative figures of popular poetry (in standard Arabic, as well as in dialect), appealing to ʿulāma and people of the street alike, were Ibrāhīm al-Mīʿāmr for the 7th/13th and Ibn Sāmīna for the 8th/14th century. These and quite a few of other similar figures represent a “missing link” between modern forms of popular literature and time-honoured forms, themes, and motives, and thus point to the fact that Arabic literary culture was not the exclusive prerequisite of a small élitarian group, but was, at least in its fundamental parameters, ideas and way of achieving emotional effects, shared by a broad sector of the population.

During the Mamluk and Ottoman periods, religious poetry was extremely popular in all urban environments. Şīʿī poetry, prayers [see WRD] and poems in praise of vaqīfāt [see VAQ], were composed and recited among adherents of the Šīʿī orders [see TARIQA and TASAWWUF], which were deeply rooted in the middle classes.

During all periods, different forms of folk poetry co-existed alongside poetry which was eventually written down. In many environments, both written and oral forms of poetry influenced each other, and sometimes it is not easy to draw a clear boundary between them. Other forms of poetry transmitted only orally existed without being noticed by the educated. So, for example, Bedouin poets continued to compose poetry in a style reminiscent of pre-Islamic poetry throughout the centuries. This can be deduced by the existence of the so-called nabiṭ poetry [p.4], which has been recorded from the 19th century onwards and is still practised in the Arabian peninsula even today. For further information about the complex of folk poetry, see ŚNA. 1. E. The folk poem in Arab society, at least, was not a phenomenon limited to the south of the Arabian peninsula.

SHAKHAB, (Battle of) [see ‘MARQ AL-SUFAK].

SHALISH, also written Djalish, a term referring to either the vanguard of an army or a flag raised to signal the announcement of a campaign. The word is of Turkish origin, derived from gala, meaning “battle” or “conflict” [see G. Doerfer, Türkische und mongolische Elemente in Neupersischen, Wiesbaden 1963-75, iii, 32]. It appears in Persian during a sword wound to his face (al-Minakrif, M. Iqbal, GMS, NS, 2, London 1921, 347), with the ed.

In the late Seljuk era (Rawandf, Mamluk period, it is used on the one hand as a syno-

teral nature, the term is found in the description of

mamluk army (Baybars al-Mansun, ibid., i, 885); the exact inten-
d. i, 499; Ibn ‘Asakir, xxiii, 189). Shamir led the Hawazin,
d, i, 480). Shamir led the Hawazin,

Umar that if he failed to obey this order he would be replaced as com-

mander by Shamir (ibid., ii, 315-6). Umar reluctantly

obeyed and put Shamir in charge of the foot-soldiers

(Al-Baladhuri, iii, 391; al-Tabari, ii, 317). On 9

Muharram 61/9 October 680, as Umar was making final preparations to do battle with the Husayn, Shamir offered a safe-conduct to three (or four) sons of ‘Ali by Umm al-Banin bt. Hizam, who belonged to Shamir’s tribe, the Banû Kîlîb; the sons rejected the offer, insisting that the Husayn, too, should be granted safe-conduct. Shortly afterwards, a report reached the court of Mâlik ibn Anas that in the battle of al-Baladhiyra, 391; Ibn ‘•hâm, iii, 105; cf. al-Tabari, ii, 316-7).

The next morning—the Day of ‘Ashā’ar—Umar put Shamir in command of the army’s left wing (ibid., ii, 326). Shamir intended to burn down the Husayn’s tent with the women and children inside, but was shamed into withdrawing (ibid., ii, 346-7) and acceded to the Husayn’s request to spare them (al-Baladhuri, iii, 407; al-Tabari, ii, 362). Shamir’s role in the death of the Husayn is disputed in the sources. While some accounts merely refer to his participation in the battle (e.g. Ibn ‘Asâkîr, xxii, 186), he is more usually said to have instigated the final assault, while yet other reports explicitly mention him as having killed the Husayn (al-Wâkidî, in al-Baladhuri, iii, 418; al-Ishafânî, 119; Ibn Hazm, Dharar san’a’î al-arab, ed. ‘A. Hârin, Cairo 1382/1682, 287), as having decapitated his corpse (al-Sâfîdî, xii, 425, xvi, 180), or both (al-Mdqlîs, xlv, 56; cf. al-Tabari, 250). This conflicts with reports that it was Sinân b. Ansâl Kâlî’s who killed the Husayn and decapitated his body (Abû Mîkhnîf, in al-Tabari, ii, 366), or that Sinân killed him and Khawalî b. Yazîd al-Asâhî cut off his head (al-Baladhuri, iii, 418; cf. Ibn ‘Abîl-Barr, i, 393). In the ta’ziya [q.v.] passion plays, Shamir is habitually presented as the Husayn’s killer (Chelkovski, 15, 106, 110, 146-7, 159, 165; Ayoub, 127) and as more evil than even Sinân (Virolleaud, 94-5; Chelkovski, 160).

After the battle, the Shamir was about to kill al-Husayn’s son ‘Ali [see ZAYN AL-A’DAB], but was prevented from doing so (Ibn Sa’d, i, 480). Shamir led the Hawâzîn, who formed one of the contingents that brought the heads of the fallen warriors to Ibn Zîyâd (al-Tabârî, ii, 386; Ibn Tâwîs, 85; later he accompanied the survivors to Damascus (al-Tabârî, ii, 375). An address is preserved in which he recounts to Yazîd the events of Karbalâ’ (al-Dinawarî, 260-1, cited in D. M. Donaldson, The Shiite religion, London 1933, 102-3; this same address, however, is also ascribed to Zâhr b. Kays al-Dhâfî; see al-Tabârî, ii, 374-5). Back in Kufa, Shamir was said to have repented of his actions, explaining that he had been duty-bound to obey Ibn Zîyâd (al-Dbâhâbî, Mitîzan al-‘ubad, ed. ‘A. Mu‘awwad and ‘A. Abd al-Mawgjid, Beirut 1416/1995, iii, 385; cf. Ibn Sa’d, i, 499; Ibn ‘Asâkîr, xxiii, 189).

In 66/686 Shamir was among the Kûfân aghfî who rose against al-Mukhtâr [q.v.]. After they had
been defeated at Djabbanat al-Sabic (in al-Kufa), al-Mukhtar sent his slave Zirbl in pursuit of Shamir, who was surrounded, tried to fight his way out but was killed by one of the attackers (al-Baladhurf, vi, 407; al-Tabari, ii, 663). In the early 1980s, the population of the region was ca. 220,000, these being Zaydis, with the Banu 'l-Sharafi, 'Alid descendants of the founder of the Zaydi dynasty of Yemen, being the most important lineage there.

Al-Sharaf al-ÁlA denotes the northern part of al-Sharaf, whereas al-Sharaf al-Asfal denotes the slightly lower, more southern region, although it seems that in the time of al-Hasan (4th/10th century), the former denoted another region, that of Sharaf Akyan or Shiba'm Akyan (modern Shiba'm Kawkabán), to the southeast (ed. Müller, 107 ll. 17-18, 135 1. 8). The name of al-Sharafín appears very often in the Yemeni chronicles.

In fact, there are numerous al-Sharafins in Yemen, reflecting the term's basic meaning of "eminence, height", hence it is not surprising that Yákút had difficulty distinguishing various homonyms (see Isma’il al-Akwa', al-ÁlA Úmumiyah "nd Yákút al-Husayni, Kuwait 1405/1985, 155).

Al-Sharaf does not appear in pre-Islamic inscriptions, but Hadjur is attested once as Hg Lmd (Ja 616/25) for a small tribe belonging to the Daw'at federation confronting the Sabaean king Naga'karib Yuhuin Yuharib ca. A.D. 260-270 (A. Jamme, Sabaean inscriptions from Mabrum Bilgí, Málaga, 1982, 113-17).

(Ch. ROBIN and AHMAD AL-GHUMARI)
chief of the conquest period and Sara the Visigoth—and these two families long governed Seville.

The enemies of the Sevillans on various occasions launched raids which ravaged the iklim of al-Sharaf, e.g. the Berbers, during the early part of the fitna, Alfonso VI during the reign of al-Mutamid Ibn Abbas [q.v.], and the Portuguese during the Almohad period.

The iklim was very densely populated in Hispano-Roman and Islamic times, with al-Idrisi mentioning a figure of over 800 kawar or villages. In regard to demography, two periods should be distinguished. During the pre-Almohad period (i.e. from the Arab conquest to the second half of the 6th/12th century), al-Sharaf formed, as from Hispano-Roman times onwards, a very populous region with many small villages spread along the watercourses which crossed the region (the Majalberraca and the Repudio). The two hisnas at that time were Kawara (Coria del Rio) and Hīn al-Kaṣr (Aznalcazar). The function of both was to guard lines of communication, that of the Guadalquivir in the first case, and the Guadiamar in the second, as well as the east-west land routes.

In Almohad times (second half of the 6th/12th century to the mid-7th/13th one), there was a change. The Almoravides, who located their important points Sanlucar la Mayor after 1189 to defend this region against Portuguese attacks, and Hīn al-Faradj (San Juan de Aznalfarache) in 1195 as a garrison for the Almohads, the Almoravides, and the Almohads. During the course of the 19th century, since ‘Ali Bâgh Mubârak, our main source for Egyptian Sufism in the late 19th century, does not cite any Sufi order bearing that name in his al-Khdhât taufâkhiya al-ghadâdi li-Msr al-Qâhir, Cairo 1887-9), another indication of its disappearance at this time is that the Shadhîlí shaykh and author Muḥammad b. Khālid al-Kawâkdjî (d. 1305/1888) was the disciple of an ‘Abî ‘Alâ al-Wahhâb (al-Sharaf) who initiated him into the path of his illustrious and homonymous ancestor, but this ‘Abî ‘Alâ al-Wahhâb seems to have grown up amongst the Shâdhiylîs rather than the Shârānîyâ (M. WINTER, Society and religion in early Ottoman Egypt. Studies in the territories of ‘Abd al-Wahhâb al-Sharānî, New Brunswick, N.J., 1982, 70). However, the anniversary of al-Shârânî’s birth (mawlid) continued into the 20th century (ibid., 85 n. 111).

(É. GEOFFROY)

AL-SHÂRÂNÎ, SA`D b. ‘ABD ALLAH b. MIYÂH b. LÝ♫AS b. YUSUF AL-KHÂFRî (1840-1912), linguist and literary figure of the Arab literary Renaissance (nakdâ [q.v.]) in the 19th and early 20th centuries, and a good example of the prominent group of vocational intellectuals of this period. Born in Shartûn in Lebanon, he studied under American missionaries before devoting himself to a lifetime of scholastic activities. He taught in Damascus and in the Jesuit schools of Beirut and Cairo, and also worked for many years as a proof reader of Jesuit publications whilst carrying out his intellectual pursuits. Like a number of his contemporaries, he worked for many years as a newspaper editor and contributed articles to respected journals, mainly on linguistic issues. His eclectic interests are reflected further in his involvement in the publication of a number of works on Maronite history. Although most sources concur on the years of his birth and death, variant dates given for the former include 1848 or even 1847, and for the latter as early as 1907.

His principal scholarly interests lay in the fields of inqîbâ’ [q.v.] “[the art of] composition, style” through which he is generally held to have been a major influence on a new generation of “stylists”; grammar; and lexicography. Some sources maintain that his most enduring contribution to the Arabic linguistic heritage is his dictionary entitled Akhrab al-mawdûdh fi inqîbâ’ al ‘arabiyâ wa l-khâfrî (Beirut 1992, 2 vols., based on ed. Beirut 1899-91, 2 vols., with a supplement in 1983). In this work he sets out to demonstrate the original purity of the Arabic language which, he argues, was being eroded, particularly as a result of the growing influence of foreign languages on Arabic. This was a common, if ultimately unachievable, goal of some scholars of the language at that time who worked
assiduously to prevent it from further degeneration, thus underlining the status of the Arabic language as a nationalistic expression. In his dictionary, al-Shartūnī scrutinised closely the content of previous lexicographical works based on the classical sources, or even those that had errors in their transmission of material from the original manuscripts. In both these regards his scholastic approach to scholarship was no different from the techniques of many of his contemporaries and pre-modern scholars. This work was heavily influenced by the famous dictionaryMuḥāf zoo al-muḥāfiz compiled by his friend Butrus al-Bustanī and was heavily influenced by the famous dictionary lexicographical works based on the classical sources, a form of nationalistic expression. In his dictionary, assiduously to prevent it from further degeneration, claiming that the editors had made errors in their...
the abuse, Muhammad becomes angry and, eventually, springs to his feet. After the dispute has finished, Abû Bakr asks Muhammad why he did not support the Meccans, but instead became angry when he, Abû Bakr, attempted to defend himself. Muhammad replies that an angel had appeared to him and commanded him to go to Mecca, but when Abû Bakr returned some of the abominable words to his adversary the devil entered the scene and he, Muhammad, was unable to remain in a place where the devil is present. This episode from Ibn Hanbal's Musnad, like other similar passages in the canonical hadith collections, suggests that the vilification of the Prophet or his Companions was considered intolerable and therefore forbidden by some of the religious scholars at the time when the respective hadith books were compiled. This impression is corroborated by a report describing possible legal consequences of insulting the Prophet Muhammad (sabb al-nasîl) in the 2nd/8th century. According to this report, a certain Muslim b. Sa'id b. Hassân al-Urdunî was executed in 153/770, in all probability because he had supplemented the hadith: "I am the seal of the prophets; there will not be any Prophet after me" with the phrase "if God does not intend otherwise". This report indicates blasphemous by the scholarly and political authorities at that time (J. van Ess, Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra, Berlin 1991, i, 136-7).

However, the extent to which these hadith reflect theological disputes about the role of the Prophet and his Companions in the first two centuries of Islam still remains to be analysed in depth.

In any case, early legal literature confirms the assumption that blasphemy against the Prophet Muhammad was regarded as intolerable in the 2nd/8th century. The chapter on al-muhâthara of 'Abd Allâh b. Wahhâb's (d. 197/812) Mawsû'at contains a paragraph on the blasphemer in which the one who insults (sabb) the Prophet Muhammad is threatened with the death penalty. Ibn Wahhâb states that Mâlik b. Anas (d. 179/795) held the opinion that a blasphemer against Muhammad, be he Christian or Muslim, must not be granted repentence. In the same passage, the caliph 'Umar b. 'Abd al-'Azîz (r. 101-4/717-20) is reported as having stated that the vilification of Muslim, but not of any other person, is to be punished (M. Muranyi, 'Abd Allâh b. Wahhâb (1253-743-747/812). Leben und Werk. Al-Muwattâ'. Kitâb al-muhâthara, Wiesbaden 1992, 287-8). However, a 3rd/9th-century legal manual, the 'Ushûrâya by the Mâlikî fakhr al-Muhammâd al-Uttî (d. 253/869 [q.v.]), mentions blasphemy against Muhammad's Companions as a punishable act (al-Ushûrâya, printed with Ibn Rughûl, al-Bayîn wa 'l-tâhîf, Beirut 1986, xvi, 420). Also, an opinion ascribed to the Hanâfî legist al-Tahâwî (d. 321/933 [q.v.]), states that the vilification of Muhammad, but not of any other person, is to be punished (M. Muranyi, 'Abd Allâh b. Wahhâb (1253-743-747/812). Leben und Werk. Al-Muwattâ'. Kitâb al-muhâthara, Wiesbaden 1992, 287-8).

However, the 3rd/9th-century legal manual, the 'Ushûrâya by the Mâlikî fakhr al-Muhammâd al-Uttî (d. 253/869 [q.v.]), mentions blasphemy against Muhammad's Companions as a punishable act (al-Ushûrâya, printed with Ibn Rughûl, al-Bayîn wa 'l-tâhîf, Beirut 1986, xvi, 420). Also, an opinion ascribed to the Hanâfî legist al-Tahâwî (d. 321/933 [q.v.]), states that the vilification of Muhammad, but not of any other person, is to be punished (M. Muranyi, 'Abd Allâh b. Wahhâb (1253-743-747/812). Leben und Werk. Al-Muwattâ'. Kitâb al-muhâthara, Wiesbaden 1992, 287-8).

However, the 3rd/9th-century legal manual, the 'Ushûrâya by the Mâlikî fakhr al-Muhammâd al-Uttî (d. 253/869 [q.v.]), mentions blasphemy against Muhammad's Companions as a punishable act (al-Ushûrâya, printed with Ibn Rughûl, al-Bayîn wa 'l-tâhîf, Beirut 1986, xvi, 420). Also, an opinion ascribed to the Hanâfî legist al-Tahâwî (d. 321/933 [q.v.]), states that the vilification of Muhammad, but not of any other person, is to be punished (M. Muranyi, 'Abd Allâh b. Wahhâb (1253-743-747/812). Leben und Werk. Al-Muwattâ'. Kitâb al-muhâthara, Wiesbaden 1992, 287-8).
insulted some of the Prophet’s closest companions like Abâ Bakr, ‘Umar b. al-Khâṣîbâ, and ‘Âthâr b. ‘Affân as violators of the rights of the Prophet’s descendants. When he refused to revoke his blasphemous attacks against these sahâbah, his case was presented to the tribunal of the four Sunni maulûdhs in the Dâr al-sâlihâ. As a result of this session, the blasphemer was sentenced to death by the Mâlikî chief judge (al-nâ’îb al-mâlikî) and executed immediately after judgement had been issued. His body was burnt by the plebs of Damascus who later walked through the city showing his head and accusing that this was the punishment of the one who abuses the Companions of the Prophet. A closer look at the religious-political situation of 8th/14th-century Egypt and Syria suggests that insult against the Prophet’s Companions or even against the Prophet Muhammad himself, on the part of some Shi’îs, or accusations brought forward by the Sunnis against alleged Shi’î blasphemers, are an expression of the strong Shi’î-Sunnî hostilities at that time.

The offence of insult against the Prophet and his Companions continues to be an issue of legal debate and political discourse in Islamic societies until the present time. The controversy on Ahmad Rushdie’s novel The Satanic verses has been the most prominent among a number of cases in which Islamic communities and their leaders have reacted to acts that were conceived of as an insult against Muhammad and other venerated personalities. As has been shown, the legal foundations for this reaction date back to the 2nd/8th century.

**SHAYKHZADE II** [see SİYEH-ZADE. 3].

**ŞI’R**.

5. In Malay and in Indonesian.

In line with their strong preference for theology and Şi’î mysticism over literature and philology, the interest of the Muslims of the Malay-Indonesian world in Arabo-Persian Şi’î has been predominantly drawn by the findings of the four religious writings and its derivative verse forms. It was initially mainly in the north Sumatran kingdom of Aceh [see APRAJ]—in the early 17th century the dominant power in the region around the Straits of Malacca and an important centre of Islamic learning—that this religious poetry was closely studied (Braginsky 1996, 372-3) and it was there that most local forms of Islamic poetry were developed under its influence, subsequently to spread among the Muslim communities of the Archipelago.

A case in point is the genre of Malay poetry, called nazam (from the Arabic synonym for Şi’î, nazm). It consists of a long sequence of couplets (bayt [qfr.]) comprising two hemistichs, each usually numbering from nine or ten up to twelve syllables, that rhyme with each other on one of the following patterns: (a) aa, bb, cc . . . ; (b) aa, aa, aa . . . ; (c) aa, ba, ca . . . . Couplets rhyming ab, ab are rare. The oldest specimens of nazam, teaching good rulership, are found in the Mirror for Princes, Tadi‘ al-sâlihîn (1012/1603-4) by the Acehnese ‘îâm Bahâdur al-Dâjahwârî (Braginsky 2000, 183-209). Some of these ([pattern [a] are modelled on the Persian mathnawî [qfr.], while others ([pattern [b]) resemble the poetry of Arabic versified treaties of scholarly or religious content (udîgâzâ [see ra’dâz]), whereas still others ([pattern [c]) imitate the Arabic kasîda or ghazal [qfr.] with its monorhyme (Braginsky 1996, 377-80).

Malay nazam, containing religious teachings, praise of the Prophet and suchlike, have subsequently come into prominence to the extent that in Malay and in Indonesian, containing religious teachings, praise of the Prophet and suchlike, have subsequently come into prominence to the extent that in Malay and in Indonesian.

6. In the Indonesian Archipelago.

The metre of its lines, which tend to comprise four feet (Snouck Hurgronje, ii, 1906, 73-8; Djajadiningrat, Indonesian literature called nalam was practised, which, like the Malay nazam, was probably also created using partly Arabic udîgâzâ, partly kasîda as a model. Although the nalam’s verse line seems to be patterned on the Arabic ra’dâz and tawîl [qfr.] metres, it has remained closely tied to indigenous conventions. According to the demands of its metre (sanja, from Arabic sanja [qfr.]), it usually comprises two hemistichs and numbers six to ten metric units of one to three syllables each, the latter being arranged to form eight feet of a sort. The fourth foot, that is, the last foot of the first hemistich, is connected by a compulsory internal rhyme to the sixth foot, that is, the second foot of the second hemistich, while all lines have an external monorhyme represented by words ending with the vowel a. Thus the arja (from the Arabic ra’dâz) metre of the nalam is an eight-foot modification of the sanja metre and its sanja (from the Arabic tawîl) metre, one with nine feet (Snouck Hurgronje, ii, 1906, 73-8; Djajadiningrat, 1934, 279, 462, 664, 988).

The most important new genre of poetry to emerge in the early 17th century Malay literature is the şair (in the Malay version of the Arabic script, Jawi, this word is usually written şîr but sometimes şîr). The şair consists of a chain of quatrains, each of them monorhyme of the type ana, bbba, cccc . . . The metre of its lines, which tend to comprise four full words of a length of two to three syllables including their bound morphemes, is based on a relative tendency towards isyllabism. Each line may contain between nine to twelve syllables, a ten-syllable line being the dominant tendency, and is divided by a caesura into two roughly equal hemistichs that tend to form complete syntactic units (Braginsky 1998, 225-6). The following sample is from the poetry of the
Acemihouse Sufi mystic Hamza Fansuiri [q.v.] (active ca. 1600), who is now generally accepted to have created the genre: “Bahh-al-Hakk terlaalu dalmun / ombaknya menjadi ‘alam / asalnya tiada bersiang malam / di laut laut itu ‘alam nin larnam” // Dengankan hai anak dagang / lautnya tiada bersurut pasang / muarananya tiada bersang-sangang / banyaklah orang sana terkenang” (Drewes and Brakel 1986, 134) (“The Sea of the Truth is immensely deep, / The world has sprung from Its waves, / Its beginning is foreign to day and to night, / And the world will sink again in that Sea. / /Hear ye, oh wanderer, / There is this indicates that Hamza may well in part have modelled it on a variety of kasda or ghazal, widespread in Persian, Ottoman and Urdu Sufi poetry, which is ca. [q.v.] four lines, doing away with the final monorhyme, a line of forty-one or forty-two syllables, consisting of a chain of between thirteen to twenty stanza-forms with four rhymes in each of the four lines, operating as a monorhyme. Amusingly, eddied it on a variety of kasidas and nazams. The introduction of kasidaa in Arabic and nazam (Harun Mat Piah 1989, 262-4; Lombard-Salmon 1977, 1993; Sanders 1986, 266-82).

In the transition of Malay literature to modernity that began to manifest itself in the major colonial cities of the Archipelago between 1850 and 1870, concomitant with the rise of the printing press and the newspaper, the syair was enthusiastically taken up by non-Muslim writers as well (ethnic Chinese and Eurasians) and was published in profuse numbers, in lithographs, printed booklets and newspapers. At the same time, it underwent yet another widening of its thematic scope, treating, for instance, sensational events, as it adapted itself to its urban milieu and usage. (Harun Mat Piah 1989, 262-4; Lombard-Salmon 1977, 1993). In the love stories in the early novels of Modern Indonesian and Malay literature written around 1920, syairs were inserted at moments of climax, and both literatures used them for lyric (sometimes nationalistic) poetry in Indonesia until about 1930 and in Malay until about 1950 (Harun Mat Piah 1989, 260-1; Johan Jaafar et al. 1992, i, 67-83, ii, 58-60; Teeuw 1967, 49-51). In the modern poetry of the Malay-Indonesian world, except that of the Sultanate of Brunei (Harun Mat Piah 1989, 238), there is now no longer any place for the syair, but its place as an Islamic genre of poetry is still acknowledged; among the Malays, syairs continue to be performed at important religious feasts and events in the Islamic lifecycle alongside kasidas in Arabic and nazams (Harun Mat Piah 1989, 266-82).

On Java’s northern coast and in east Java, in particular in Ponorogo which is well known for its religious schools, a form of Islamic poetry is found called syair or geguritan, treating themes similar to those of religious syairs. To what extent this genre can be related to Arabo-Persian shfr is still an open question. Like the syair, it consists of verse lines of between eight to ten syllables in length. These may be broken into rhyming couplets or, as in the syair, into quatrains, but may also be arranged into groups of variable lengths as “tirade poems”. The singir is performed by singers to the accompaniment of musical instruments (angklung, terbang) (Darnawi 1964, 53-4; Pigeaud 1938, 304-321).

SHIR—SIBA

SHIR—SIBA

SIBA, BILDÀ AL-SIBA, a term borrowed from local speech
by the French colonial authorities to designate the
absence of control by the Sultan of Morocco
over a considerable part of his territory at
the end of the 19th century. It presupposes a con-
genital disorder threatening the existence of the
"aus-
picious empire". The origins of the term go back to
explorers like Charles de Foucauld, academic profes-
sors like Alfred Le Chatelier and Augustin Bernard,
and military men like Lyauyey, eager to conquer
Morocco from the contiguous French territory of Algeria. It forms the concept behind the Comité du
Maroc, a lobby operating at a level below the deci-
sion makers in Paris with the idea of extending French
power over the land, given shape in the Protectorate
of 30 March 1912. These experts put together an
imagery based on a dichotomy between the Bilad al-
siba and the Bilad al-makhzan [see MAHKZAN].
The former was a land outside the authority of the Sultan,
hence free from taxes and conscription, whose peo-
ple lived in an insolent, free fashion impervious to all
outside influences. The latter was the land over which
government authority levied taxes in an iniquitous
fashion and recruited tribal militias, driving rural soci-
ety into a state of non-submission, siba.

Colonial terminology equated the antagonistic
dichotomy of the two terms with a semi-racial cleav-
age, setting the autochthonous Berbers against the Arab
invaders, who imposed themselves on a refractory
indigenous element. The Berbers lived under cus-
tomary law, sa'd, whilst the Arabs were subject to the
shar'ia, an expression of Muslim theocracy and a pla-
ny system under the Sultans' despoticism which the
Berbers continuously rejected. It was postulated that
the Berbers were spirits basically inspired by laity
under their Islamic coating and that they had attained
a form of republican local democracy in their strong-
holds of mountain towns and regions. This vision of
Morocco gave further life to the Kabyle myth so
active in the constituting of French Algeria and con-
verged on a policy of separating the Berbers, the
"good savages", in their mountain retreats, from the
Arabic-speaking peoples of the plains and the great
Muslim cities, as illustrated in the famous Berber dahi
of 1930 [see SAFTIK], which did much to crystallise
national sentiment in Morocco.

The Bilād al-siba rightly appeared to post-colonial
Moroccan historians as a fantastic intellectual con-
struction meant exclusively to bolster the Berber pol-
icy of the French Protectorate. However, the term
appears, if only rarely, in the correspondence of the
Mahzhan in the 19th century, for stigmatising local
tribal groups hostile to all the local authorities (ka'd-
mudaddam, ca'asure and kalb' over tribal sections) who
tended to interpose themselves between the Mahzhan
and the segmentary base of society. In fact, the term
Bilad al-siba is an ancient one going back to early
times, and its usage, current in al-Andalus from the
11th century onwards, became generalised in the
vocabulary of Maghribi 'alsami' from the 15th century
onwards for condemning the backward rural areas
living in a state close to djahdisiya since they ignored
injunctions like the shari'a and transgressed the pres-
scriptions of fikh.

These Maghribi scholars were correctly following
the original sense of the term sā'tiba, one which
denoted, within a semantic and spatial complex, suc-
cessively: a beast brought out of the herd for offer-
ing to the gods of ancient Arabia; a freed slave, but
one foot-loose and without a patron in early Islam;
by extension, a woman left to herself, a rebel or a
prostitute; the breaking of allegiance to a sovereign
and, from that time onwards, the territory where this
disobedience was rife, when the term passed from the
East to the West via al-Andalus. Bilad sā'tiba appears,
probably for the first time, in a commentary of Mālikī
law on Sahānīn's Mudawwana by Abū 'l-Mā'in al-Fāsī
(d. 430/1039), a scholar of Moroccan origin settled in
Kayrawān.

The Term Bilād al-siba was never, however, used
by those Maghribis to whom it applied. Most of these
were vacillating and uncontrolled subjects. They were
vaccillating because they oscillated between allying to
the sovereign and rejecting the central power's local
agents, between being dogs and wolves, when they
could not be sheepdogs, to use Ernest Gentner's
metaphor. They were uncontrolled, as the maxim in
the Tunisian Djerid says, tā bāy, tā rāy. They feared
subjection to the central power which would entail
their being shorn like sheep by its local agents. This
is why, except for some islands in the mountains and
along the Sub-Saharan fringes, the Bilad al-siba never
corresponded to a fixed territorial entity which could
raise up a lasting counter-force able to divide up the
area over which three powers claimed control since
the 16th century. In a certain way, the Bilad al-siba
was everywhere, as appeared from the difficulty of
travelling without a safe-conduct negotiated with the
tribal peoples. It insinuated itself over almost all the
territory through the institution of the mahāla [q.e.],
a splendour which inspired local riches but also redis-
tributed them, in such a way that all the prince's
subjects were in a relationship, more or less asymmet-
rical according to the place and time, with the sovereign
and his local representatives. In practice, when it
became a concrete entity, the Bilad al-siba was sought
after for bringing to heel the Bilād al-makhzan. Some
rebellious tribes acted as guard dogs over the tribes
which had submitted, showing how far they were
integrated in a unified system personified by a Bey in the Ottoman Maghrib, and by the Sultan, the Commander of the Faithful, in Morocco.

**SIÎHÅFA.**

4. Persia.

During the century and a half of its existence, the Iranian press has experienced several periods of expansion and contraction. From 1851 to 1880 the press had only a limited audience, as it meant only for civil servants. In all, some seven newspapers (*ruznâma-hâ*) were published. From 1880 to 1906, the press began publishing for all Persians, although few could afford a newspaper. By the end of the century almost forty newspapers and journals had been published. From 1906 to 1925 the number of newspapers grew enormously and editors were able to influence the course of events in the country. During the period 1925-41, the press was reduced to an instrument in the hands of a strong authoritarian state. The period 1941-53 marked the country's return to a free and expanding press. From 1953 to 1977 the press was basically muzzled; after 1965 it became a cheerleader for the régime. From 1978 to the present the press experienced, first, four years of freedom, followed by the severest censorship it had ever known. Since 1998, however, the press has become more expansive and is trying to become a free agent of change.

The first Persian newspaper, *Ahkâbâr-i Wakâyê*, was published in Muharram 1253/April-May 1837 in Tehran (*JRAS*, v [1839], 355-71), but it lasted less than two years. It was only in February 1851 that a new government weekly newspaper, *Wakâyê-i Itfâkâyê*, was published. The stated purpose of the newspaper was to explain government activities. By royal order, all leading government bureaucrats had to subscribe to the newspapers. From 1871, the press was under the control of the newly-created Ministry of the Press with its censorship office. The rationale for censorship was published in issue 522 (22 December 1863) of the government newspaper *Akhbâr-i Wakâyê*, sc. to bar publications harmful to infants and contrary to religion. The text was addressed not to readers but to listeners, which confirms what Eichwald noted in 1826, sc. that literature or news was read out loudly for the entire community (E. Eichwald, *Reise auf dem Caspischen Meere und in den Caucasus unter nommen in den Jahren 1825-1826*, 2 vols., Stuttgart und Tübingen 1834, i, 384). Given the very low level of literacy (about 5%), this is understandable, and confirms that the actual readership of the newspapers was much larger than the number of subscribers. The "journalists" were civil servants reporting on non-controversial and approved events (government, religion, foreign, literature, science). After 1880, political reformists started to publish newspapers but to avoid the censors they printed their papers outside Iran. Once published, they smuggled them into Iran. These newspapers published abroad had an enormous influence inside Iran, and those that were published was killed in *Suppl.* was killed in 1924, allegedly by the authorities. One year later, the Pahlav régime was established, which did not allow any discussion of political subjects, and certainly not criticism of government. The number of newspapers dropped from 30 in 1914 to 20 in 1925 and 1941. They served to propagate the government's programmes and were censored by the Department of Press and Propaganda prior to publication.

After the fall of RâdÅ Shâh [p.2] (1941), the press was controlled by the Allies (1941-6) and by martial law (1941-8), although there was considerable freedom of expression. The Allies, as well as national interest groups, wanted certain positions taken, and thus editorials were again mostly marked by their extremely partisan tones and aggressive styles. Most newspapers were small, limited in circulation, and short-lived. The journalist (*ruznâma-nizâs, ruznâma-nigâr*) was usually both editor and publisher. The topics were mainly analysis and criticism of personalities in public life, and discussion of contemporary social-economic-political problems. Although nobody wanted censorship or banning of newspapers, both methods were used, for the new 1941 Press Law could not rein in excessive vituperation in the press. However, suppressed papers would often immediately reappear under the name of a legally-licensed other newspaper. Attempts to bring about a more responsible press failed, because often financing of papers was provided to attack certain political issues (blackmail of politicians; subsidies from foreign powers). The strongest group was the pro-Soviet Tudeh (*Tûdá*) press that formed the Freedom
Front in 1943. There also was a pro-British, nationalist coalition of papers, and some independents. The suppression of separatist movements in Ardabil, Gorgan, and Kurdistan in 1946 led to a clamp-down on the journalistic role of Tabriz that had been in the forefront from the beginning. The struggle between the conservatives and those who favour greater press freedom has become a major issue in Iran, resulting in banning of newspapers and jailing of journalists. Following the 1999 student uprising, parliament passed new laws banning any publication other than those specifically sanctioned, holding the licensee, editors, writers and even typists directly responsible for any unauthorised article or publication.

From 1956, a School of Journalism offered a four-year B.A. course. In 1960, an advanced course was added. There were 137 graduates in 1960, when Tehran University announced that it would close the school. The two major dailies also offered courses on journalism in the 1960s. The major papers also started to hire more qualified, academically trained staff. Although the Universities again offer Journalism as a subject for study, its effect is minimal. Since 1966, about 900 people have graduated from journalism courses in Iranian universities, of whom 95% are not working for the press. Although 68% of current journalists have a university education, only 4.6% have received academic education in communications.

5. Turkey.

(a) Up to ca. 1960 [see TaRDA. iii].

(b) Since the 1960s.

The 1960s.
The military takeover of 27 May 1960 put an end to the period when freedom of the press had been seriously threatened in Turkey due to the increasingly close cooperation with the Doenek Padi [g.v.]. For the most part the Turkish press welcomed the coup and the resultant “Government of National Unity” (Millî Birlik Hükümeti). The Constitution of 1961 (articles 22-7) guaranteed freedom of the press, and laws restricting it were abolished. A new press law assured
the rights of journalists in their working place, much to the chagrin of certain newspaper barons. The restrictive Penal Code remained in force. The "Press Advertising Organisation" (Baskin İlan Kararnası) was established in 1961 for the purpose of controlling the distribution of advertisements from public institutions and organisations. The Turkish press decided to institute a system of self-control: a code of press ethics (Baskın ahlâk Yasası) was signed by all major newspapers.

The principal successor to the DP, the "Justice Party" (Adalet Partisi; AP), which won the general elections of 1965 and remained in power until the muhtra of 1971 (see below), remained tolerant towards the press. The leftist press, often supporting the newly-founded "Labour Party of Turkey" (Türkiye İşçisi Partisi; TIP), flourished during the 1960s in a hitherto unknown way: the weekly Yim (1961-7) founded by Doğan Avcioglu (1926-83), was one of the most discussed periodicals in Turkey for a while. It was followed by Ant (1967-71), and Dervim (1969-71) (see on these J.M. Landau, Radical politics in modern Turkey, Leiden 1974, 49-87). Among the newly-founded papers of the 1960s, the Yeni Gazete (1964-71) was the first daily paper printed in the offset technique. Another newspaper of economic liberalism was Akit (Akit gazetesi) Gündayin, founded in November 1968 by Haldun Simavi. Among its editorialists (köşê yazarlann) was Aziz Nesin (1916-95) who also edited its weekly humoristic supplement Ustana. The rise of the conservative-nationalist paper Teriman (founded in 1955) also began after 1961. Hürriyet [see Çagıda, iii] was the first newspaper whose circulation exceeded one million in the middle of the 1960s (Gevgülî, Türkiye bâzim; 225). Television was introduced in Turkey in 1960 and from then on it was only one black-and-white channel until the mid-1980s.

The 1970s

Increasing violence in the country brought about a second military intervention, through the memorandum (muhtra) issued by the armed forces on 12 March 1971. Martial law was proclaimed in eleven provinces. This intervention did not abolish the parliament, but governments of that period exercised pressure, especially on the leftist press. Journalists were arrested, papers were banned and publications forbidden. The 1973 elections paved the way for a return to parliamentary democracy. The work of journalists was then, however, seriously disturbed by something like a civil war which ravaged the country. Numerous journalists, both rightists and leftists, became victims of attempts on their lives. A climax was reached with the assassination of Abdi İpekçî (1929-79), editor of Milliyet [see Çagıda, i] by Mehmed Ali Ağca (who later attempted to kill Pope John Paul).

Social and political polarisation was also reflected in the media. Apart from the conservative papers Teriman, Son Havadis, Haikat (founded in 1970, it changed its name to Türkiye in 1971), and Güneş (founded in 1975), there were left-wing periodicals like the dailylets Ortona, Cevdet Sendikaları Konfederasyonu (DBSK) and Politika (1975-7), whose director Ali İhsan Özgür was assassinated in 1978. A paper close to the AP was Yeni Aya (founded in 1970). The Islamist Millî Selâmê Partisi (MSP) had the support of the Millî Gazete (founded in 1973). The ideas of the neo-nationalist Millî Harakat Partisi (MHP) were voiced by Hurğan, Millî (1975-86) and Ortağûlu (1972), whose director İhsan Darendelâghûlu was assassinated in 1979. Several old-established newspapers ceased publication in the 1970s: the might-piece of the CHP, Ulu (1934; founded in 1920 in Ankara as Hâkimiyet-i milletvekli, ended its existence in July 1971, Vatan (1923 [see Çagıda, iii]), whose orientation had changed several times since 1950, in 1978. Important news magazines of the 1970s were Türk (founded 1973; the intermittent On Time, Mehmet Ali Kağha), 7 Gün and Toplam. Güder, founded in 1972, was to become, after Kinoledîlî and Mad, the third largest satirical paper in the world.

The 1980s

After the third intervention of the military on 12 September 1980 (12 Eylül), all political parties were banned. Printing houses of newspapers were closed down, and four papers (the leftist papers Demokrat, Politika, Aşkülî and Hurğan, the organ of the MHP) were banned immediately after the coup. Between 12 September 1980 and 12 March 1984 publication of eight national papers was suspended seventeen times, for 195 days. In total, 181 journalists and writers were arrested and 82 of them sentenced during the same period (details in Baskın 80-84, 197-230).

The influence of the military decreased after the general elections of 1983 were won by Turgut Özal’s "Motherland Party" (Anawat Partisi; ANAP) with a clear majority. This victory inaugurated a new period of economic liberalisation. The Turkish press had a share in the relatively rapid re-democratisation of the regime and became a significant factor in politics. Most papers were eventually fiercely opposed to the ANAP governments. In the late 1980s, Prime Minister Özal used the control of paper supplies against the hostile press. The freedom of the press continued to be restricted on the basis of the restrictive Constitution passed in 1982 (esp. articles 22, 24-30), the Press Law, the "Law on Harmful Publications", and the Penal Code (esp. articles 312 and 158). A series of government regulations in the spring of 1990 and later the "Law on Terrorism" also brought censorship to the press. In 1984, the "Kurdish Workers’ Party" (PKK), founded in 1978, had started its first action. A number of papers was founded in the 1980s among which Doğru (1981), Sabah (1985), Cemân (1986; see below) are still published today (2003). The circulation of Sabah, founded by the dynamic Dinç Bilgön (b. 1940), publisher of the Izmir-based Yeni Asr, exceeded that of Hürriyet in 1987. Aşkam, then the oldest newspaper of Turkey (founded in 1918 [see Çagıda, iii]), ceased publication in 1982, Yeni İstanbul (founded 1949) in 1986, and SonHAVADIS in 1988. In the second half of the 1980s most papers adopted the editorial system (computer system, first used by Yeni Asr). The tabloid Güneş (1982-9) gave new impetus to give-away and lottery campaigns in the Turkish press which only Cumhuriyet refused to join. There was an explosion of weekly and monthly magazines in the 1980s, including cultural reviews of superior quality, 2000'e Doğru (1986) was one of the best-known news magazines. A Turkish version of Playboy came on the market in 1985. The world of the press was shaken by the Asil Nadir affair in 1989. This Cypriot business man had acquired, thanks to his contacts with government circles, the tabloids Gündayin and Tan, as well as several magazines, including the news magazine Nokta (founded in 1983 with the French Le Point as a model).

Most papers had left at that period the Avenue of the Sublime Porte (Bâbîsîli Caddesi) in Istanbul, the Turkish Fleet Street. In 1988 a Press Museum (Baskın Müzesi) was opened in the same area thanks to the Newspapersmen’s Association (Gazeteciler Cemiyeti).

The 1990s and beyond

The downfall of the ANAP government in 1991
has been in part attributed to the mobilisation of public opinion by the press. Tansu Çiller became the first female prime minister in 1993. The end of Kemalism seemed to have arrived with the general elections of December 1995 when Necmettin Erbakan's Islamist Welfare Party (Refah Partisi, RP) obtained 21% of the vote. A coalition government, the first Islamist-led government in Republican Turkey, was formed in July 1996. But once more, the military started to play a more active role. An ultimatum issued by the generals in February 1997 to restrict the influence of Islamists compelled the prime minister Erbakan to resign. His downfall was speeded by a sustained campaign in some sections of the press. Subsequently, the country was governed by various coalition governments formed by Kemalist and nationalist leaders. The PKK-led Kurdish insurgency came to an end after the capture of Abdullah Öcalan in Kenya in 1999. The country was shaken by a severe economic crisis in 2001. In November 2002, Recep Tayyip Erdoğan won the general election with his moderate Islamist Justice and Development Party (Adalet ve Kalkınma Partisi, AKP).

These developments were also reflected in the Turkish press at the turn of the 21st century with the rise of a "Kurdish" press and a growing importance of Islamic and Islamist papers (see below). Violence against journalists continued in the 1990s. Cumhuriyet lost seven of its writers through attacks, the most prominent victim being Ugur Mumcu (1942-93), known for his investigative journalism, who was killed by a car bomb in 1993.

Concentration and monopolisation (tekelleme) became one of the major problems faced by the Turkish press. There was also serious concern about the media moguls', journalists' and columnists' increasingly close relations with the political establishment. Most national newspapers belonged (in 2003) to three important press groups which also controlled the country's largest private TV channels. Traditional ownership had already disappeared from the media market. Cumhuriyet remained the only independent paper. Twelve papers, including the mass circulation papers Hüriyat, Milliyet and Radikal founded in 1996 and considered by some as the most "Western" paper, and the sports paper Fanatik, belong to Aydın Doğan's Doğan Media Group. It is said to control nearly 40% of the country's advertising revenues and 80% of distribution (2003). The Sabah group plunged into crisis when its head Dine Bilgin was jailed in 2001. Thanks to its promotional activities, the paper Sabah had reached a circulation of 1.5 million in October 1992. A law (promouyoy yasasi) eventually prohibited in 1997 promouyons except those of cultural value. Tercüman ceased publication in 1994, but two papers bearing the same name re-emerged after 2000. The leading news magazines in the 1990s were Aktüel (circulation: 40,000), Tempo (28,000), Akşiyon (18,000) and Nokta (3,000).

The "Kurdish" press

The 1990s also saw the emergence of a new type of papers focussing on Kurdish issues which appeared in Istanbul and Ankara, usually in Turkish. All of them were accused of being close to the PKK. The first of them, Özgür Gündem, founded in 1992 and later known as Ankara State Security Court (DGM) in 1994, lost seven of its writers and correspondents and thirteen vendors to killings. It was followed by Özgür Ulke (1994-5), whose premises in Istanbul were the target of a devastating bomb attack in December 1994. Terci Politika (13 April-16 August 1995) was one of the most often censored papers in Turkey. Its successors (Demokrasi, Ubıde Güdçem, Özgür Baktı, 2000'le Yeni Güdçem) had a similar fate, and functioned usually in a most precarious situation. Terci Otuz Güdçem (founded in September 2002) had a circulation of ca. 10,000 in November 2003. In the 1990s, many Kurdish weekly or monthly magazines also began to appear, including local papers. The Kurdish language paper Rojname was soon banned after its first publication in December 1991. In the same year, the prohibition of Kurdish publications had been removed. There is now (2003) a Kurdish-language literary magazine, Azadiya Welat, published in Istanbul. However, most papers destined for Kurds from Turkey are published in Western countries known for their large Kurdish immigrant population (e.g. Sweden, etc.). The paper Özgür Politika is published in Europe. Kurdish satellite TV and numerous internet sites have created what has been called a "virtual Kurdistan".

Islamic and Islamist press

The spectacular rise of the Islamic and Islamist press dates from the 1980s. Prior to 1980, its percentage in terms of newspapers and periodicals was 7%, in 1993 it had reached 47% (G. Seufert, Politischer Islam in der Türkei, Istanbul 1997, 392n.). Many periodicals (including newspapers like Terci Aya, Türkiye, Milli Gazete) have been associated with religious orders and groups in the Muslim world, the Nakshbandi dervish order and its branches [see NAKSHBANDIYYA] being particularly influential. Terci Safak (founded in 1995) was financed by a pious industrialist. The paper Zaman (see above), organ of the group around Fethullah Gülen of the Nurcu (see NURCUKUL), is now (2003) among the top five national daily newspapers in Turkey, with an average circulation of 300,000. It has been described as the first Turkish daily newspaper to appear on-line (since 1995). It has bureaux and correspondents in many countries all over the world. It has special international editions for twelve foreign countries, those for the new Turkish Caucasian and Central Asian republics being printed in their own alphabets and languages. Zaman also owns the weekly news magazine Akşiyon, a children's monthly, a news agency, and the private TV channel Samanyolu.

Islamist reviews and magazines include weeklies, numerous monthly magazines (Sems, İltizam, published by the Türkiye Öğretmenler Vakfı, founded in 1978), and publications for women: Kadın ve Aile (founded 1985) was the largest Muslim women's magazine, reputed to have sold 60,000. It was closely associated with that branch of the Nakshbandi order whose major mouthpiece is the magazine İslam (circulation 100,000), Bizim Aile (published since 1968) is a spin-off of the magazine köprü, published since 1977 and representing the views of a section of the Nurcu order.

Local newspapers

National newspapers based in Istanbul account for about 90% of total circulation. But there have been registered up to 745 local newspapers published in Turkey, almost half of them being dailies. The circulation figures vary according to the economic development of the region. Terci Aşır, published in 1924; its predecessor, 'Aşır, was founded in Ottoman Sultanı in 1895), remains the biggest newspaper with a regional character (circulation 43,000 in November 2003). The local press has been trying to renew itself technologically in recent years and many papers are produced by printing houses with offset printing facilities.

Turkish papers published in Europe

The first Turkish papers printed in Europe were Akşam and Hüriyat (Munich 1969). They were followed
The decline of the Greek community in Istanbul from the 1960s onwards was also reflected in the Greek minority papers. Elefteri Phiné and Emaros, which figure among the signatories of the Basin ablak yasan, disappeared in 1965. Two Greek dailies still appear in Istanbul for a community of 2,000-3,000 souls: Anayegeszvágy/APygosmatini (founded in 1925), which until the death of its founder, Gr. Yaverides, and Milliyet, Fanatik Hqfta Sonu, in the 1970s, used to employ some ten journalists; from the 1960s onwards was also reflected in the souls: appear in Istanbul for a community of 2,000-3,000 Turkish newspapers sold in Europe.

The minority press

**SIHAFÄ — SILAH**

The press freedom in Turkey remains limited by various laws and a frequently restrictive interpretation of press freedom and freedom of expression by the judiciary. There is no functioning journalist's trade union. Journalists continue to be arrested and sentenced to prison terms. Lefist, Islamist and pro-Kurdish media are the primary targets. For many modern Turkish writers and intellectuals, criminal prosecution has been an indispensable part of their curriculum vitae. But even members of the mainstream media occasionally face legal action, although these papers usually practice a sort of self-censorship and avoid sensitive issues such as criticising the military and high-level corruption.

**Conclusion**

The number of newspapers with an average daily circulation over 10,000 was 11 in 1983, 14 in 1990 and 32 in 1997. According to August 2003 figures, the average total daily sales of 35 major daily papers was about 4 million. Some 25 of them had their own website in 2004, including several regional papers. The number of magazines has increased with extraoordinary speed. Its total number, which was 20 in 1990, reached 110 in 1999 (total circulation around 2,300,000). They include magazines with foreign brand names like Marie Claire, Cosmopolitan, Harper's Bazaar, Esquire, Your Beaux, or National Geographic. As far as printing techniques are concerned, the Turkish press has attained in most domains European standards.

But some basic issues remain: press readership is still low. Attestations of any parallel form of sildhdt has exceeded twenty within a few years. But even the curriculum vitae. (founded in 1917 by Albert Carasso), disappeared in 1971. It is, however, published in Turkish, with an English-on-line edition.

to official sources (Facts about Turkey, 412), the average number of newspapers sold to 1,000 persons is 58 (cf. Germany: 314). The habit of reading newspapers regularly has remained the privilege of a relatively small group, around 15% of the population (estimated at 67 million in 2000). The visual media have emerged as the most influential institution shaping public opinion. The number of private TV channels has exceeded twenty within a few years.

SILAH

II Chron. xxiii. 10, Joel ii. 8, etc., and as a possible parallel, despite the phonetic problem, Akk. šēlu “to sharpen weapons”, šēluš “dagger blade” (CAD, Letter S, ii. 275).

1. The pre-Islamic period.

The weapons of the pre-Islamic Arabs were essential parts of their culture. The use of the spear or lance. Our knowledge of these weapons of theirs is almost entirely a bookish one, and it was from the evidence of pre-Islamic poetry that F.W. Schwarzlose compiled his Die Waffen der alten Araber aus ihren Dichtern dargestellt (Leipzig 1886, repr. Hildesheim 1982), a work concerned primarily with the nomenclature of weapons and their component parts.

Fighting was a prominent aspect of desert life, in which tribes often competed over pasture grounds, sought to drive off opponents’ herds or were involved in protracted vendettas entailed by the unwritten laws of revenge, retaliation and the exacting of compensation for losses to the tribe’s fighting strength [see dīva; rīsā; thā’ra’i]. Hence a rich vocabulary evolved for weapons and armour, often descriptive, by metonymy, of some special characteristic (“shining”, “incisive”) or of some origin, real or supposed (“Indian”, “Yemeni”, “Khāṭṭī”). This vocabulary naturally, attracted the philologists of Islamic times, concerned to elucidate the names of weapons, armour and their synonyms in early poetry. Whence the composition of works with titles like Kitāb al-Silḥ, such titles being attributed to the Bayrān scholar al-Nādīr b. Šumayyāʾ (d. 204/820), al-Aṣmāʾī, Ibn Durayd (d. 320/932) and Shāmīr b. Hamdāwāyh (d. 555/846); see Schwarzlose, 11 n. 1. Few of these works have survived (Sezgin, GAS, 173 n. 3), but there are rich sources of information on the nomenclature of weapons and their component parts. It is highly improbable that any of these works gave any actual descriptions of weapons or their use—the authors were literary men, who probably never wielded a weapon in anger in their lives, and not practical warriors—and on these points we have virtually no information. It is not till later mediaeval times that practical treatises on the art of war and the use of weapons are known [see below, 2; Fittow 1987: 102 n. 1]. The only direct, contemporary source which might conceivably give us some idea of pre-Islamic weapons lies in possible representations in petroglyphs and similar drawings. There are quite a lot of depictions of warriors wielding lances and bows, and possibly swords, on horseback and on foot, in the Thamudic and Safaitic materials, cf. also the frontispiece photograph of a rock graffiti showing an archer, and the drawing of a South Arabian spear, of uncertain age, at p. 65 of R.B. Serjeant, South Arabian art, London 1976.

The weapon most frequently mentioned in the ancient literary sources is the sword (ṣiyf), for which special works by the philologists are recorded, e.g. Abū ‘Ubayda’s Kitāb al-Siyf and a work by Abū Ḥātim al-Sūdāstānī, a Kitāb al-Siyf wa l-rumāḥ; see Rummūs; Schwarzlose, 124 n. 1). These must have been stabbing swords for close, hand-to-hand fighting rather than cavalry swords. There emerges that swords of Indian steel (hantī, samhān) were particularly prized; whether the Hind envisaged here relates to the Indian subcontinent or to lands beyond in Southeast Asia, such as Malaya or Sumatra, is unclear, but any such weapons were presumably imported via the Persian Gulf ports. Nearer home, the ancient Arabs prized blades forged by the smiths of Syria, e.g. of Būṣrā (ṣir), see (see below), a land which had access to supplies of iron ore and to wooded terrains for the production of charcoal. On the other hand, it is unlikely that “Yemeni” swords were actually made in Yemen; more probably, blades or complete swords were imported from lands further east, to the ports of the Thamudic and Hadrami tribes of Yemen, thus acquiring this territorial name. See in general on swords of this period, Schwarzlose, 124-209.

The spear or lance (rumāḥ, ṣawāqa, kānāt, the latter term, originally “bamboo, reed shaft” being used by synecdoche for the whole weapon) was, it seems, included in the work by Abū Ḥātim al-Sūdāstānī on swords and spears mentioned above (see also Schwarzlose, 210 n. 1). It was used as a thrusting weapon in close fighting, but spears which could be thrown at the enemy like javelins (muṣṭak < Pers. nīq, mīnud, harba) are also mentioned, and the designation mīnud indicates that such throwing weapons could be used for hunting as well as war. Spears with a bamboo or strong reed shaft (kāndt) are often described as khāṭṭī, from al-Khāṭṭī (ṣir) in Bahrain or Hadjar, where a certain Samhar is said to have been an expert fashioner of spears, whence samhāri ones. Whether these spears were made from the stems of the vegetation growing along the Gulf shores, or were imported from further east, as the term kāndt al-Hind implies, is unclear. Various trees are also mentioned as providing wood for spear shafts, such as the wakūḏī or ash (?). Spears had a head (ṣarrān) and a tapered iron butt at their lower end which could be stuck into the ground when the weapon was not being carried (zuddī). See, in general, Schwarzlose, 210-45.

The bow and arrow were used by the ancient Arabs, and the sources distinguish “Arab” from “Persian” bows. See further 2 above, and Schwarzlose, 246-319.

As well as all these offensive weapons, there are frequent mentions of protective body armour in the shape of coats of mail (dir or sard, zard, muzarrad < Pers. zard, traceable back, according to Franz, Die aramäischen Fremdwörter im arabischen, 241-2, to a Persian form preceding MP zārith with a final d, Avestan zardita; see in Kurān, XXXIV, 10/11, in a passage concerning King David’s skill as a maker of closely-woven mail, cf. Jeffery, The foreign vocabulary of the Qur’ān, Baroda 1938, 169). The manufacture of chain armoured coats must have been basically in the settled fringes around the Arabian peninsula, as the Persian origin of some of its nomenclature shows. Also, Būṣrā in the Hawrān region of southern Syria was in Byzantine times a noted centre for the forging of weapons and the making of armour, and the Byzantine authorities tried on occasion to stop the export of these to the nomads. In waṣīrī (ṣir) lore, the original making of mailed coats is attributed to King David (or, as some Arab commentators on ancient poetry averred, to a celebrated Jewish (?) smith called Dūwūd or to his son, but the identification of the inventor of mailed coats with the Biblical David was already made in pre-Islamic times [see nāwān]). This skill was also attributed to the Tuba’i kings of Yemen. See, in general, Schwarzlose, 322-49. Mailed coats were accounted valuable in desert fighting, and it was weapons and coats of mail which the poet and prince of Kinda, Imrūʾ al-Kays, allegedly entrusted to the Jewish Arab poet and lord of Tama’ar al-Samaw’al b. Ḥadhīr (ṣir), and which the latter refused to give up to the Ghassānīd king al-Hārith b. Ḏibāla. Iron helmets were termed byḍ̄a, from their resemblance in shape to an ostrich egg, see Schwarzlose, 349-51, and also ḏīḏa or Pers. khūd. Although not
mentioned extensively in poetry, which prefers to extol fearless warriors who scorned to protect themselves in battle behind shields, the pre-Islamic Arabs do seem to have employed shields on such occasions (turs, ḥijānna, miḏgann, ḏānika). Such shields were probably made of hide (as is specifically said of the ḏānika) stretched over a wooden frame, enough to deflect the indifferent weapons of the nomads. See Seidensticker, 351-6.

Bibliography: Given in the article.

C.E. Bosworth

2. The Islamic period.

The military technologies of Arabia at the time of the Prophet Muhammad remain little known, but they were still clearly under strong influence from neighbouringtechnologically advanced neighbours such as the Byzantine Empire, Sāsānid Persia and India via maritime trade contacts. Not surprisingly, early Byzantine styles dominated in the north and west, Persian in the east and, to a less certain extent, Indian in southern Arabia. Swords and spears remained the favoured weapons, while archery played a minor role and only amongst foot soldiers. Most armour was of mail although leather defences were also widespread, much of this latter probably being manufactured in Yemen (see 1. above). Similarly, the people of prosperous but strife-torn trading regions such as the Hidjaz and Yemen drew on weapons to be copied in weaponry.

With the rapid Muslim Arab conquest of vast regions from Central Asia and India to Spain and the Atlantic Ocean, other military techniques began to appear in the arms and armour of Muslim armies during the 8th and 9th centuries. After the establishment of an Islamic “empire”, such armies became largely territorial which further encouraged the development of regional styles. Thus Central Asian Turkish military techniques had their first impact in 8th to 9th-century Transoxiana and what is now eastern Persia, while Sāsānid Persian military styles remained dominant in western Persia and eastern parts of the Arab world until the 9th-10th centuries. Early Byzantine military styles survived in areas like eastern Anatolia well into the 10th century, and in Syria and Egypt well into the 12th century. Yet the situation was less clear in North Africa and the Iberian peninsula. Here pre-Islamic military techniques had generally been more primitive than those of the conquering Muslim Arabs, despite a residual early Byzantine military heritage.

This is not to say that the Muslim Arabs merely adopted the military styles of those whom they conquered. Nevertheless, the Muslim Arabs’ contribution to the development of a specifically Islamic military tradition, and to the history of military technology as a whole, was primarily to open up a vast area to differing military influences. Thus Persian influence was eventually felt in North Africa, Byzantine technology reached Iberia and, above all, the Turkish Central Asian military tradition spread throughout the Middle East. Such Turkish influence also served as a channel whereby Chinese military techniques spread westward and may even have reached the Iberian peninsula, though in a very diluted form.

A truly Islamic tradition of arms, armour and their associated tactics developed rapidly, yet this was neither uniform nor monolithic. Large variations could always be seen between different regions resulting both from local traditions or conditions, and from the recruitment of troops from specific geographical zones which had their own distinctive styles.

In general, however, it could be said that Persian and Turkish influences were the most powerful, whereas those of the Byzantine or Mediterranean countries were of secondary importance, at least after the first century of Islamic history. Such a pattern persisted until early modern times as peoples and dynasties of essentially Turkish origin rose to political dominance in most of the militarily significant Islamic countries. Only in the late 16th and 19th centuries, with the rise of European military power and strong colonialism, did indigenous or Turkish military practice rapidly give way to a widespread adoption of European weaponry and of the tactics associated with such modern technologies.

Weapons

For Islamic bows and archery, see KAWS; for firearms, see BANDAN; for siege weaponry, see HISAR; and see also QAYNV.

Since ancient and pre-Islamic times the long bamboo-hafted spear or ṭamīd had been regarded as a typically Arab weapon. It was used on foot, on horseback and when riding camels. In the early Islamic centuries the Arabs were also renowned for their use of a relatively short sword (ṣayf). This was probably a broad-bladed weapon reflecting Roman and Byzantine infantry traditions rather than the cavalry traditions of Persia, where long-bladed slashing swords had been widespread for some centuries. Whereas the typical Arab sabre or sayf was to become a popular weapon well into the 10th century, the Arabs’ short ṣayf was soon replaced by longer-bladed weapons suitable for mounted combat, though these were still largely known as ṣayfī. Only in southern and eastern Arabia (Yemen, Ḥḍrāmawt and ’Umān), and in a few other isolated parts of the Arabian peninsula, did short swords persist along with a tradition of infantry-dominated warfare.

Long, single-edged cavalry swords were already characteristic of Turco-Mongol Central Asia and had appeared in Persia and the Byzantine Empire shortly before the Islamic conquests of the 7th and 8th centuries. Thereafter, they become increasingly popular throughout most of the Islamic world, becoming the dominant cavalry sword by the 15th century although the single-edged sword or sabre never entirely replaced the double-edged weapon. The curved or true sabre spread from Turkish Central Asia into Islamic Persia by the 11th century, or perhaps slightly earlier. Thereafter, in a great variety of forms, it spread throughout most of the Islamic world reaching Granada, the last bastion of Andalusian Islam, by the 15th century. Heavier straight and double-edged weapons were, nevertheless, still used in many parts of the Islamic world in the 19th century, particularly in Islamic sub-Saharan Africa.

Smaller weapons, including those which fell between the categories of sword and dagger, were similarly used in most areas at most times. Here there may have been a greater degree of similarity across the Islamic world, perhaps because a particular type or shape of personal weapon was often worn as a mark of religious or cultural identity. The most obvious example was a heavy dagger or short stabbing sword widely known as a khanda (for variations on this and other weapons terminology, see the Glossary below). Although the development of the khanda drew on many regional traditions and evolved into various shapes of dagger in different parts of the Islamic world, the basic weapon again appears to have been of eastern Iranian or Turkish origin. Other sometimes highly distinctive styles of dagger were limited to smaller areas, generally on the fringes of the Islamic world such as Morocco, the Caucasus and the East Indies. In the latter region, the double-edged kīris
dagger or short sword was retained from pre-Islamic times and continued to have an almost magical and pagan significance amongst a population sometimes only superficially converted to Islam.

Other weapons where a distinctly Islamic style developed were war-axes and maces. The latter were occasionally described as a "friendly" weapons, suitable for use during conflicts with fellow-Muslims as a lighter mace, when skilfully used, could incapacitate without killing a foe. Both also involved a large and complex terminology which distinguished between sometimes minor varieties of weapon but which nevertheless remains in part obscure. This terminology, along with surviving weapons and abundant pictorial representations, show that axes ranged from those with large "half-moon" to narrow spiked blades, while maces varied considerably in weight, shape of head, length of haft or handle and in the material from which they were made.

The javelin was widely used during the early period (7th-15th centuries), particularly by Arab and Persian troops, and remained in use by cavalry in most Islamic countries at least until the 15th century, certainly long after the javelin had been abandoned in western Europe. This probably reflected the more mobile and more disciplined character of Islamic armies during the mediaeval period, at least when compared to their European rivals, as well as the lighter styles of armour associated with Islamic tactics. The fact that such an apparently simple weapon as a javelin came in a large variety of sizes, weights and types of blade, along with an equally complex terminology, further illustrates the importance of the javelin in the hands of both foot soldiers and horsemen. It is also worth noting that cavalry training exercises or "games" involving the javelin were not only developed within the Islamic world but were copied by neighbours ranging from Spaniards and Ethiopians to Armenians [see DJERID and FURQASYAYA].

Armour

Islamic armies have been widely regarded as lightly armoured when compared to their Western European rivals, but this is a misleading over-simplification. The amount of armour available to early mediaeval European forces such as those of the Crusaders has been exaggerated, while that available to Islamic armies from the time of the first conquests onwards has generally been underestimated. Nevertheless, there were wide variations between regions resulting from the differing availability of iron and of wealth to pay for the manufacture or importation of expensive military equipment.

Four types of body armour dominated throughout Islamic military history. These were mail (inter-linked metal rings, usually of iron); lamellar (small scales of iron, bronze, hardened leather or other rigid materials laced to each other but not to a flexible fabric or leather backing); so-called soft- armour of felt, quilted material or flexible buff leather; and a distinctive later form known as mail-and-plate armour. A fifth system of construction has only recently been recognised on the basis of archaeological finds rather than obscure textual references and barely decipherable artistic representations. This is a form of flexible protection consisting of partial hoops of hardened or apparently reconstituted leather which may have been of Central Asian or even Chinese derivation. Hardened and apparently reconstituted leather was also used in the construction of helmets, as shown in written sources such as Mar' Gö or Mur'da b. 'Ali al-Tarsus [see AL-TARSUSI] (Tabisarat arbab al-labab, ed. and tr. Gl. Cahen, Un traité d'armurerie composé pour Saladin, in BEO, xii [1948], 103-65), and confirmed by recent though as yet unpublished archaeological finds in Syria. Carbon dating tests on wood and sinew amongst these finds have produced dates of the 10th and 12th century, while tests on the leather have produced an optimum date of A.D. 1220. It is however, worth noting that a leather helmet or reinforced hat amongst these Syrian finds incorporates small piece of wood; supposedly "wooden" helmets have been mentioned in previously inexplicable texts.

Full plate armour consisting of large shaped pieces of iron buckled or rivetted together, of the type known in western Europe from the 14th century to early modern times, remained rare though not entirely unknown in the Islamic world. Where they seem to have been occasionally used, as in al-Andalus, southern India and the Philippines, they almost invariably reflected direct Western European military influence.

The body-covering mail hauberk (coat or tunic-like protective garment) generally known as the d'iz, and the coif (hood) known as the migfar, were by far the most common form of metallic protection throughout the Mediterranean lands, the Middle East and Persia at the time of the Prophet Muhammad. It subsequently evolved into a greater variety of forms than was seen elsewhere, ranging from ordinary hauberk, given names describing their overall size or shape, to the kazişgard which had its own integral padded lining and a decorative outer layer of cloth.

Only in eastern Persia, Afghanistan and Transoxania was lamellar armour common, although it was used in the late Roman Middle East and Sassanid Persia during earlier centuries and remained known to only occasionally worn. The period from the 8th to 15th centuries saw such lamellar armour spread westwards in the Islamic world along with other essentially Turkish Central Asian military styles. As a result, the lamellar d'awshan became widespread throughout most Islamic countries (with the possible exception of North Africa and the Iberian peninsula) by the 12th century, and even in the Islamic West, lamellar was known if not popular. Nor was mail armour abandoned in favour of such lamellar protections. Instead, the two were often worn together, usually with the lamellar d'awshan on top, until the development of mail-and-plate protections combining the advantages of both forms made it unnecessary to wear two armours at once.

Such mail-and-plate armour appeared in a variety of forms and used varied terminology, some of it stemming from earlier and different usage. In the Ottoman Empire, however, such the new style of body protection was often called a konaç, from the common European term cuirass and its various Balkan dialect forms. In this mail-and-plate armour, pieces of iron plate of varied shapes and sizes designed to protect different parts of the body were linked by pieces of mail of varying widths depending on the degree of flexibility required. It was an essentially Islamic technological development, perhaps first appearing in 'Irāq or western Persia in the 14th century, from where it spread to become the most typical 15th to 16th-century form of Islamic armour for both men and horses. As such it was characteristic of the late Mamluk, Ottoman, later Persian and Indo-Muslim states.

So-called soft armours were widespread in early Islamic centuries and seem to have remained popular until the early 14th century, thereafter largely being relegated to the hottest regions such as India and Sudan. These should not, however, be seen only as
a cheap alternative to metallic armour. Rather, they were a light, effective and easily-made protection suitable for the highly mobile cavalry-dominated warfare which characterised Islamic military history. Soft armour could also be combined with other forms of protection. In particular, it was worn beneath or combined with mail protections. Soft armours were also suitable in the relatively short chariots characteristic of some Islamic countries and survived throughout the 19th century in the sub-Saharan Sudan.

The history of Islamic helmets differed from that of Europe, generally reflecting a preference for good visibility and mobility at the cost of less protection. Little is yet known about helmets in the early Islamic period (7th to 9th centuries), but in general they seem to have continued previous Romano-Byzantine and Persian shapes and forms of construction, most of which were based on two pieces joined along a central comb. Unfortunately, the terminology, though varied, cannot usually be identified with one specific form of helmet. In fact, it seems that the naming of helmets, though not entirely interchangeable, was generally unspecific (see the Glossary below).

Central Asian types of pointed and segmented helmets were already spreading into the Middle East and eastern Europe before the coming of Islam. Thereafter, single-helmet forms became more widespread, with various designs joined either to each other or to an iron frame, spread throughout the Islamic countries. Meanwhile, advances in metallurgy within Islam during the 8th to 11th centuries, and perhaps even earlier, led to the production of one-piece iron helmets in relatively large numbers long before such defences appeared in Europe or even the Byzantine Empire. By and large, this one-piece form was known as the bayda. Helmets were an obvious and popular object on which wealth or prestige could be demonstrated, as a result of which most of the techniques of inlay and surface decoration found in other forms of Islamic metalwork also came to be seen on helmets. Meanwhile, lighter helmets made of leather and, apparently, a form of reconstituted hard leather were also used in most regions.

Facial and neck protection was provided by mail coifs (hoods) and mail or lamellar aventails (veil-like skirts hanging from the rim of a helmet). Only rarely were rigid metallic face- or hinged visors seen on Islamic helmets. Nevertheless, they did appear in Central Asia and Persia during the 12th to 14th centuries and, in a very different form, in the Iberian peninsula around the same period. These exceptions probably reflected special military circumstances, such as an enhanced threat from horse-archery composite bows in the east and from a greater use of handheld crossbows in Iberia. Elsewhere, flexible mail or lamellar head and neck protections, often pulled across the face to leave only small apertures for the eyes, were common in many regions.

Shields of wood, hardened leather, wickerwork and, in later centuries, of iron were all used by Muslim warriors. Most were round and relatively small, being suitable for light cavalry warfare. Yet there were plenty of other variations. Tall, kite-shaped shields for infantry use were used in the Middle East during the 11th to 13th centuries. These included the flat-based djinnānāyya whose name might indicate that it was initially imported from Genoa, since identical flat-based infantry shields or mantlets were also characteristic of Italy though not of other parts of western Europe at this time. Large shields which were apparently mantlets (shields that could be rested on the ground), made of woven reeds, were probably widespread in Arabia at the time of the Prophet and appear to have continued in use, at least in Irāk, until at least the 9th century.

Large and flexible shields made from various animal hides were used in the Sahara, North Africa, Egypt and the Iberian peninsula during the mediaeval period and subsequently developed into the smaller but distinctive kidney-shaped “Moorsih” adarga of 14th to 17th-century Spain and Portugal (this name stemming from the Ar. daraka meaning a small shield, usually of leather). Shields of purely European form were also used by Muslim Andalusian soldiers during periods when western European military fashions dominated, most obviously in the 13th century.

Meanwhile, the typical Turkish kalkan shield was constructed from a spiral of cane bound together with cotton or silk thread. This formed an exceptionally light and effective cavalry shield in which the threads gave almost unlimited scope for colour and decoration. Iron shields were known by the 12th century, the earliest known example being of segmented construction, but they only became more widespread and of one-piece construction in the 16th and 17th centuries. These later metal shields had developed in response to guns, as they had in Europe, and were as rapidly abandoned when advances in firearms rendered them redundant.

Armour of a rigid or semi-rigid type for the limbs was used in several Islamic countries long before it became more than a localised novelty in mediaeval Europe. This almost certainly resulted from the importance of close-combat cavalry warfare with swords. Nevertheless, Islamic warriors never took limb defences to the extremes seen in later mediaeval and early modern Europe. Early Islamic arm protections such as the hāzār band, haff and sī'ād (7th to 14th centuries), though never very widespread, followed in the Byzantine and Turco-Persian traditions. The latter consisted of segmented vambraces for the lower arms, probably of iron or bronze but perhaps also of hardened leather, while the upper arms were protected by the sleeves of a mail hauberk or by flaps of lamellar armour attached to the body of a lamellar cuirass. A style of long-hemmed, half-sleeved lamellar cuirass became more widespread after the Mongol invasions of the 13th century but was rarely seen west of Persia. A rigid tube-like iron vambrace for the lower arms, known in Turkish as the koğtuk or kaltük, appeared in the second half of the 13th or early 14th century and was almost certainly of Sino-Mongol origin. Thereafter it remained popular in Central Asia, Persia, Turkey and Mamlūk Egypt.

Leg protections of similar construction to arm defences were known in pre-Islamic Transoxiana but seem to have declined in popularity after the coming of Islam. Mail leg protections appeared in Islamic and Byzantine sources in the 11th century, slightly before they did so in western Europe. These and other forms, included those of mail-and-plate construction, reappeared in later years being known as butuğ, dizieğ, kalsat zarad, rūnāt ṣadūl and sāh al-māżū. Nevertheless, such items of armour were generally reserved for a small elite of heavily-armoured cavalry.

**Horse-armor**

It has often been assumed that horse-armor was rare or even unknown in the early Islamic period because it is virtually unknown in art before the 14th century. Documentary sources, however, make it clear that various forms of horse-armor were widespread. The most popular type appears to have been of quilted or padded construction; this being reflected in the
most common Arabic term for horse-armour, *tağhāf*. Before the late 13th century, references to horse-armours of scale, lamellar, mail or mail-and-plate construction in the Islamic world where, even in the later period than close-range shooting. This was clearly true for arrows or other such missiles. Even in these circumstances it was more effective against long-range harassment than close-range shooting. This was clearly true for the rider’s own armour, though there tended to be a certain time lag between the introduction of new styles for the rider and for his horse. Thus a rider might wear a mail-and-plate cuirass while riding a horse still protected by hardened leather lamellar.

The chamfron or armour for the animal’s head was also used, being known as a *burkā*, *kasagha*, *sāri* and probably *tishtanṭiya*; the variety of terms indicates that this form of protection was more widespread than is sometimes thought. This was probably of hardened leather until plated metal forms, along with fully laminar horse-armours, became common in the 14th century. Nevertheless, there is some evidence that rigid metal chamfons were known in Egypt and neighbouring Islamic territories some centuries earlier and that these were almost certainly descended from Roman forms of horse-armour.

A few surviving head protections for camels date from the Ottoman period but these are likely to have been for parade rather than war use. Much elephant-armour was, however, used in war. Naturally, it was most highly developed in Islamic India although war-elephants continued to be used elsewhere in the eastern parts of the Muslim world, as they had been in the pre-Islamic period (see fl. 2. As beasts of war. Little is known about such early Islamic elephant-armour, although enormous circular shields to protect the animal’s vulnerable ears do appear in art sources from the 12th or 13th centuries.

**Terminology.** The terminology of Islamic arms and armour is huge and embraces several languages with the same terms, or minor variations on such terms, being used within several languages. Many other terms are merely descriptive or poetic. The following list includes only the most important.

**GLOSSARY**

*a*māz: short spear or staff weapon with a large elongated blade (Ar.)

*a*nāz: short infantry spear, Mughal India (Indo-Pers.)

*anj*: nasal of helmet (Ar.)

*ard*: blade of large-bladed spear (Ar.)

*a*nā*: flat surface of sword-blade (Ar.)

*a*nūk-i kāju*: horse-armour, Mughal India (Indo-Pers.)

*a*sā*: club, cudgel, iron staff or light form of mace (Ar.)

*a*bā*: possibly the cheek-pieces of a helmet (Ar.)

*a*ā*: helmet, equivalent of Ar. *khwā* (Kipčak Tk.)

*a*š*: shaft of spear (Ar.)

*a*š*: staff weapon in which the blade is longer than the haft (Ar.)

*a*layn*: individual lamellae or pieces of a lamellar cuirass (Ar.)

*ā*gy*: central ridge of a spear-blade (Ar.)

*b*dān*: short hauberk or shirt of mail, sometimes sleeveless (Ar.)

*b*aghlā*: horse-armour, usually quilted (Pers.)

*b*akht-i kāju*: scale or scale-lined armour of Mongol origin, Mughal India

*b*allam*: broad-bladed short spear, Mughal India

*b*alta*: war-axe (Kipčak Tk. and Ar.)

*b*alt*: war-axe, Mughal India

*b*and-maṣ#: “watering” pattern on sword-blade (Indo-Pers.)

*b*ank*: dagger with extravagantly curved blade (Hindi)

*b*aɾāːh*: spear all of metal, Mughal India

*b*aɾāːs*: horse-armour or caparison (Ar.)

*b*ard*: type of sword-blade (Ar.)

*b*ayf*: helmet, probably of one-piece construction (Ar.)

*b*zābān*: vambrace, lower arm protection (Pers.)

*b*eker*: cuirass, usually lamellar (Mongol)

*b*hala, bḥalla*: spear or cavalry javelin (Indo-Pers.)

*b*ḥandʒ*, *bʰandʒ*: armour with throat-guard, Mughal India

*b*ḥir*: combined axe and dagger, Mughal India

*b*īr*: knife (Kipčak Tk.)

*b*īr*: single-edged dagger, Mughal India

*b*īm*: body armour of Mongol origin, Mughal India

*b*īř*: pl. *bīra*: chamfron (lit. “veil”); (Ar.)

*b*cʰār*: helmet, probably of one-mirror construction (Ar.)

*b*cʰār*: helmet with a neck-guard, pendant ear-pieces and a sliding nasal (Tk.)

*b*cʰār*: face-covering aventail of helmet (Pers.)

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: face-covering aventail of helmet (Pers.)

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: helmet with a neck-guard, pendant ear-pieces and a sliding nasal (Tk.)

*b*cʰur*: body Armour (Pers.)

*b*cʰur*: infantry mantlet (Indo-Pers.)

*b*cʰur*: cavalry axe, Mughal India

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: face-covering aventail of helmet (Pers.)

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: helmet with a neck-guard, pendant ear-pieces and a sliding nasal (Tk.)

*b*cʰur*: body Armour (Pers.)

*b*cʰur*: infantry mantlet (Indo-Pers.)

*b*cʰur*: cavalry axe, Mughal India

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: face-covering aventail of helmet (Pers.)

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: helmet with a neck-guard, pendant ear-pieces and a sliding nasal (Tk.)

*b*cʰur*: body Armour (Pers.)

*b*cʰur*: infantry mantlet (Indo-Pers.)

*b*cʰur*: cavalry axe, Mughal India

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: face-covering aventail of helmet (Pers.)

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: helmet with a neck-guard, pendant ear-pieces and a sliding nasal (Tk.)

*b*cʰur*: body Armour (Pers.)

*b*cʰur*: infantry mantlet (Indo-Pers.)

*b*cʰur*: cavalry axe, Mughal India

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: face-covering aventail of helmet (Pers.)

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: helmet with a neck-guard, pendant ear-pieces and a sliding nasal (Tk.)

*b*cʰur*: body Armour (Pers.)

*b*cʰur*: infantry mantlet (Indo-Pers.)

*b*cʰur*: cavalry axe, Mughal India

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: face-covering aventail of helmet (Pers.)

*b*cʰur*: single-edged sword or large dagger with a reinforced back, known in Europe as a “Khyber knife”, Mughal India (see also *salawar* and *chur*)

*b*cʰur*: helmet with a neck-guard, pendant ear-pieces and a sliding nasal (Tk.)

*b*cʰur*: body Armour (Pers.)

*b*cʰur*: infantry mantlet (Indo-Pers.)

*b*cʰur*: cavalry axe, Mughal India
čibah: staff or club, or shaft of spear or mace (Pers.)
čibah-i ąham: probably long form of infantry mace (Pers.)
čakah: mail hauberk (Tk.)
čakmar, ąkmar: mace (Kipcak Tk.)
čamuk, ąmuk: mace (Kipcak Tk.)
dabkās, dabkās: general term for mace (Ar.)
dab która: rear part of a helmet, neck-guard or aventail (Ar.)
dabna: curved dagger (Pers.)
darakā: small shield, usually of leather but sometimes of other materials (Ar.)
dās: agricultural implement sometimes used as a weapon (Pers.)
dāgha, dāg: large dagger (Pers.)
dast: edge of sword-blade (Pers.)
dāmāna: vambrace, Mughal India
dāwarī: javelin with a long socket to the blade, like Roman šalm or Frankish aex (Ar.)
dest-chab: mace (Tk. from Pers.)
dāfā: shield, Mughal India
dāfil-kāfā: shield of folded silk, Mughal India
dāgūbāc: decorative tassels on spear or sword, also wriststrap of sword (Ar.)
dāgbā: point or top part of sword (Ar.)
dāghā: straight sword with enclosed basket-hilt, Mughal India
dū: mail hauberk (Ar.)
dīzēk: thigh and knee defenses (Ott. Tk.)
dāba: fabric-covered mail hauberk; also quilted soft-armour or incorporating such a soft-armour (see also dīgha; Tk.)
dāfē: scabbard (Ar.)
dāgūnāk: axe with narrow blade shaped like a bird's beak, Mughal India
dāk: throwing disc (Indo-Pers.)
dāfār: form of mace (Pers.)
dāfāqār: broad thrusting dagger with a horizontal grip, Mughal India
dāruṭiyya: kite-shaped infantry shield with flattened base (perhaps originally "from Genoa"); (Ar.)
dārā: light cavalry javelin (Ar. "palm branch stripped of its leaves")
dāsāb: shield or mantlet of wood and leather, or perhaps of leather-bound cane (Ar.)
dāwaḵānow: lamellar or laminated cuirass (Ar. and Pers.)
dāfā: quilted soft armour, Mughal India (see also dīgha)
dīmuṭ: style of dagger, Algeria, lit. "Genoese" (Ar.)
dīnīb: cover for scabbard and perhaps also sword (Ar.)
dīrī: Indian dagger (Ar.)
dīwarī: unclear form of Indian armour (Pers.)
dīgūba: large form of quilted soft armour, sometimes incorporating a layer of mail (Ar. and Pers.)
dinnā: shield, normally wood (Ar.)
dīdū:kā: double-edged short-sword or dagger, Mughal India
dū-sangā: spear or pike with two-pronged blade (Indo-Pers.)
dūshālīgī: domed helmet without ear-pieces, Mughal India
dūshārī: crupper, armour for rump of horse, Mughal India
durē: infantry spear with a doubled-point, later perhaps an infantry axe with half-moon blade (Pers.)
dūghī: small dagger (see dāgha; Ar.)
dulaṅga: sling (Pers.)
fāṭifā: rivets of mail links (Ar.)
fāret: "watering" pattern on damascene sword-blade (Ar.)
fakrā: groove down sword-blade (Ar.)

furangiyya, furangiyya: infantry spear or staff weapon, possibly with European-style flanges or "wings" below the blade (Ar.)
ganda: quillons of Malayān kiris dagger (Malay)
gura: knot or lacing or armour (Pers.)
gurandit: gauntlet, Mughal India
girva: girvāt: quilted leather soft-armour, or a form of quilted shield or mantlet (Pers.)
gislāf: scabbard, sheath or container for armour (Ar.)
gislāla: rivets in construction or armour or weapons (Ar.)
ghīmā: scabbard (Ar.)
gīrār: edges of sword-blade (Ar.)
ghuṭavā: mail hauberk with integral coif, Mughal India
gīra: hooked spear (Indo-Pers.)
girbān: aventail, gorget or tippet (Pers.)
ghudhā: infantry javelin or staff-weapon (Pers.)
gundā: javelin (Tk.)
gūpā: form of mace (Pers.)
gupt kard: small thrusting knife with integral gauntlet, Mughal India
gur: mace, probably asymmetrical, animal-headed form (Pers.)
gustuwan: horse-armour (see bangustuwan; Pers.)
hakka: coif or more likely aventail (Ar.)
ahdā: point or perhaps edge of sword-blade (Ar.)
ḥadīgāf: shield, usually leather, of Africa and Andalus (Ar.)
ḥadjarat al-yaf: hand-thrown stone (Ar.)
ḥakka: ring, either as part of a mail hauberk or for other purposes (Ar.)
hamīlā, himīlā: baldric, or attachment points on scabbard for a baldric or sword-belt (Ar.)
handjēr: dagger (see khandjēr; Ott. Turk.)
harba: large-bladed infantry spear or staff-weapon (Ar.)
harbā: edge of sword-blade (Ar.)
harī: Indian dagger (Ar.)
ḥagū: padded garment or soft armour (Ar.)
ḥeṣna: decorative elements on scabbard and sword (Ar.)
ḥirāwa: thick haft of a staff weapon or spear (Ar.)
hūsūm: edges of sword-blade (Andalusian Ar.)
ḥukhūst: ball and chain (Urdū)
ḥakha: grip or hilt of sword (Pers.)
ḥakā: a pommel of sword-hilt (Ar.)
ḥābāra: heavy form of cuirass (Ar. prob. from Pers.)
ḥadd: sword-blade (Ar.)
ḥuddara: two-straight edged sword (Pers.)
ḥijam, ḫadīm, ḫāfin: horse armour of mail (Pers.)
ḥaff: gauntlet or extension to a vambrace; also perhaps an upper arm defence attached to body armour (Ar.)
ḵēfīr-kūbāt: form of mace (Ar.)
ḵhazana: thick haft of spear or staff weapon (Ar.)
ḵūm: hilt of sword (Ar.)
ḵal: form of straight broad sword-blade (Ar.)
ḵ탈ākhār, ḵaṭāf, ḵalṭāfī: curved sword or early form of sabre (pos. from Turk. kilč, Pers. and Ar.)
ḵakāla: helmet-crest, Mughal India
ḵalī: ring on scabbard to attached baldric or straps to belt (Ar.)
ḵalā: centre of shield, over the grip (Ar.)
ḵalkan: spiral cane shield bound with silk or cotton (Turk.)
ḵalsāt zardat: mail chausses (Ar.)
ḵamand: lasso (Pers.)
ḵamarband: waist and abdomen protecting armour or the central part of a ʤewšan cuirass (Pers.)
ḵanāt: long spear (Ar.)
κανθα: caparison or horse-cloth (Ar.)
κανθα-Ꮀ buổiha: gorget for neck and throat, Mughal India
kantup: one-piece helmet, Mughal India
kanyūl: sword associated with Central Asian Turks, probably a corruption of kalatūr (Indo-Pers.)
kāṅd: knife or small dagger (Pers.)
kārkal: quilted soft armour or arming coat, later incorporating iron scales or plates (Ar.)
karta: Indian curved sword or dagger (Ar.)
kord: straight-bladed narrow-bladed dagger, Mughal India
kārīna: leather mantlet padded with cotton (see also gārāna; Indo-Pers.)
kāshīka, kāshkēḍ: chamfron or the front part of horse-armour, Mughal India
kaskara: Sudanese straight double-edged sword
kātrā: Indian sword or large dagger (Pers.)
kātīr: rivet-heads of a mail hauberk (Ar.)
kātrīḍa: sword associated with Central Asian Turks, probably a ... war-axe, equivalent of Arabic tabar (Kipcak Tk.)
kālīḍ: one-piece helmet, Mughal India
kātup: arm protection (Tk.)
kummiya: sabre or curved dagger (Berber)
kurtārya: relatively short cavalry spear for thrusting only (from Greek kontiōnos; Ar.)
kūf: mace (see ghūf; Pers.)
kūrūn: edges of spear-blade (Ar.)
kūz: mace (see gūz; Pers.)
kūsh: belt for sword and archery equipment (Tk.)
lakḥīṭ: form of mace (see lāṭī; Pers.)
latt:Berber and Saharan large leather shield (Ar.)
latt: mace with elongated head (Ar.)
līfīm: aventail also covering the throat, lit. "veil" (Ar.)
lakummiya: sabre or curved dagger (Berber)
lūtā: tassels on sword (Ar.)
līmid: grip of sword-hilt, probably corruption of niḥād (Ar.)
lūṣ: Berber javelin (Andalusian Ar.)
lūṭī: swords (Ar.)
lūṭī: shield (see gūnna; Ar.)
lūṣ: knife or dagger used by Europeans (Ar.)
lūṣ: nail fixing blade to haft of spear (Ar.)
lūṭ: short cavalry spear (Ar.)
lūṭ: short infantry spear or javelin (Pers.)
lūṣvar al-wṣūr: horizontal lacing of a lamellar cuirass (Ar.)
mandībāḍ: individual links of a mail hauberk (Ar.)
māndīb: sword-belt (Ar.)
mārāba: short spear (poss. from Greek riptaria; Ar.)
mard gīr: spear with a hook beneath the blade (Indo-Pers.)
naktīl: early Arabian sword, largely in poetic usage (Ar.)
masrīda, niṣrīda: possibly the scales of a coat-of-plates (Ar.)
mīghtār: hood or coif, usually of mail, to protect the head; later sometimes referring to the mail aventail attached to a helmet (Ar.)
mīghtīr: helmet (Ott. Tk. from Ar.)
mīghtīr: helmet with a hook beneath the blade (Ar.)
mīkād: curved or single-edged sword (Ar.)
mīkīdā: slings (Ar.)
mīkūra: club or cudgel (Ar.)
mīkūz: foot or shoe of spear-shaft (Ar.)
mīzāba: foot or shoe of spear-shaft (Ar.)
mīsīrār: nail or rivet attaching hilt to sword (Ar.)
mīsīrūka: form of helmet largely consisting of mail with a small skull-top, mostly used in the Caucaus (from Tk.)
mīṣtūla: short hunting spear, javelin or staff weapon, later used as a standard (Ar.)
mīyān: sheath or strap to hold mace (Pers.)
mīzūk: javelin with armour piercing blade (Ar.)
mudālkāla: possibly a scale armour (Ar.)
mudīlīltā: protective leather costume worn by fire-troops (Ar.)
mudāllā: curved or single-edged sword (Ar.)
mudībā: slender sword-blade (Andalusian Ar.)
murūnā: infantry spear with flexible wooden haft (Ar.)
mustanṣīfiya: long halted mace, probably ceremonial (Ar.)
muzā-i lāḥān: iron leg armour, Mughal India (Pers.)
nīnāk: war-axe, perhaps with half-moon blade and often with a hammer at the back (Pers.)
nīnāk: war-axe (see nīnāk; Tk.)
nīnāk: war-axe (see nīnāk; Ar.)
nūl: shield-boss or nails to hold grip, North Africa (Ar.)
nūl: blade of Indian or Yemeni sword (Ar.)
nuṣ: point of spear-blade (Pers.)
nuṣ: short spear with a pointed foot (Ar.)
nuṣ: war-axe, equivalent of Arabic tabar (Kipcak Tk.)
nūṭā: scabbard-mounts for rings to baldric or sword-belt (Ar.)
tenke: individual lamellae of a lamellar cuirass (Tk.)
.tafrut: sabre, Morocco (Berber)
.tafrut: soft armour quilted with camel hair (Ar.)
.tafrut: part of spear-shaft entering socket of blade (see tālībīh, Ar.)
tāţifīf: horse-armour of quilted material or felt (Ar.)
tīfrī: knife or small-sword (Berber)
tīgh: sword-blade (Pers.)
tīßi: cavalry shield, Mughal India
.tīr-i andāžān: light infantry javelins (Pers.)
tīfrīī: sheath or holder for mace (Tk.)
tīfrut: long-hafted battle axe or halberd (Pers. and Ar.)
tīghāntiya: probably chamfron, armour for horse’s head

(Ar. from Latin)
tīra: wooden mantlet, Mughal India
tīrīs: shield (Ar.)
.tikīsī: Berber infantry mace (Ar.)
.tāri, pl. of tārar or tārār: holes in the rim of a helmet by which it is attached to an arming cap or an aventail (Ar.)
talakāhānta: bamboo or leather shield, Mughal India
.tarman: mail hauber; or body armour, Mughal India
tāwāf: Berber sling (Ar.)
tāwāh: lasso (Ar.)
tāfīrt, tāfrūt: slender thrusting dagger, Berber
(prof. from Berber tāfīrīt, Ar.)
tīkhāndī: sword-blade, Mughal India
.tarq: knuckle bone of left hand-gloved short sword (Ott. Tk.)
.tarqān: ear: early Southern Arabian spear or javelin (Ar.)
tāzālik: axe with a pointed rather than curved blade,
India
.tarāka: local form of helmet (Andalusian Ar.)
.tarādīs: mail armour in general (Ar.)
.tarādīsī: mail coif or helmet largely of mail construction (Pers.; see also zardīsī)
.tarādīsī: rings to attach scabbard to baldric (Ar.)
.tarādīsā: mail hauber; or layer of mail forming part of armour (Ar.)
.tarābīn: javelin (see mūzārāb; Ar.)
.tarīm gīqi: mail-and-plate cuirass (Ott. Tk.)
.tarī: mail hauber; or mail armour in general (Pers.)
tāzā: edge of sword-blade (Ar.)
.tarībīn, timpi, zariqī: heavy javelin with a pointed foot or second blade (Pers.)
tażīdīf: iron foot of spear (Ar.)

Captions

1. A hard-cased crocodile-skin helmet with an iron lamellar neck-guard and one remaining crocodile-skin cheek-piece; said to be from Wadi Garāra east of Kalabsha in Nubia. Although this helmet is sometimes considered to be from the "Roman" era, the presence of a neck-guard made of iron lamellae over camel skin could indicate a later origin, perhaps from the 5th to 8th centuries. Until the helmet is carbon-dated, the question remains unresolved; meanwhile, the helmet itself is an interesting example of non-metallic Middle Eastern military technology. (Staatliche Museen zu Berlin, Preussischer Kulturbesitz, Antikensammlung, inv. nr. 30882, Germany)

2. A very corroded iron helmet made of two pieces joined beneath a flat comb, from Hadftah in the eastern shore of the Dead Sea, Jordan. This typical late Roman helmet is generally considered to date from the 4th or 5th centuries, though the history of Hadftah as a Romano-Byzantine military outpost could make a late 6th to mid-7th century date more likely. This helmet was also found in conjunction with a dagger or short-sword identical to one found in Pella [see Fahl] and undoubtedly dating from the mid-8th century. Comparable helmets continued in use elsewhere in the Byzantine Empire and parts of Western Europe at least until the 8th century, and are likely to have similarly continued in use in the early Islamic Middle East. (Castle Museum, Karak, Jordan)

3. An iron and bronze helmet excavated at Nineveh in northern Irāq. It is a late and undecorated version of the so-called Parthian Cap style characteristic of Sāsānīd troops. The style and context suggest that this helmet dated from the very end of the Sāsānīd Empire in the early 7th century, though some pictorial evidence from the first centuries of Islamic civilization indicates that comparable helmets continued in use for a century after the coming of Islam. (British Museum, inv. 22497, London, England)

4. A second iron helmet found at Nineveh is in a completely different Spangenhelm style stemming from Central Asian military techniques. It also retains a fragment of its mail aventail. This helmet represents a major technological shift which would also be seen in much of Europe. It is again assumed to date from the very end of the Sāsānīd period, but is just as likely to have been made during the first century of Islamic rule. (British Museum, inv. 22495, London, England)

5. A well-preserved iron helmet in a version of the Spangenhelm form of construction in which the "frame-plates" are actually broader than the "infill-plates". It probably dates from the 8th or 9th centuries and was found at Stary Oskol, near Voronezh in Russia. Yet it was probably imported from Islamic Persia or Transoxania, where identical helmets are shown on fragmentary wall-paintings dating from the 8th to 10th centuries. (State Hermitage Museum, St. Petersburg, Russia)

6. The earliest known helmet forged from a single piece of iron is this low-domed protection with a row of iron rings. These were probably the attachment for a lamellar or mail aventail rather than being the uppermost row of mail links. It was found in the early 8th century stratum in a ruined temple at Waraghsar near Samarkand in Uzbekistan. Whether such advanced metallurgy originated in Transoxania, the Islamic Middle East or reflected Chinese influence remains unknown, but it is interesting to note that one contemporary Arab chronicler differentiated between enemies "wearing round helmets" and those "wearing pointed helmets" on the north-eastern frontier of the Islamic world. (From a drawing by the archaeologist, Masud Sambayev; present whereabouts unknown)

7. A much better-known one-piece iron helmet came from Chamosen in Switzerland and dates from the 9th or 10th century. It is believed to be of Arab-Islamic origin and, beneath its purely decorative "frame-straps" and more functional brow-band, this helmet has essentially the same narrowing around its rim seen on the earlier one-piece helmet from Waraghsar. (Schweizerisches Landesmuseum, Zürich, Switzerland)

8. A third one-piece iron helmet was found in Tunisia. Though provisionally dated to the Hafsid period (13th to 16th centuries), it has a virtually identical outline to the helmet from Chamosen. As such, it might have been made as early as the 10th century. (Museum of Islamic Studies, Rakkadah, Tunisia)

9. Another very distinctive form of iron helmet, of which this appears to be the only surviving example, appears in Christian Iberian art from the 12th to early 14th centuries. It is generally worn by "evil" figures which might indicate that it was originally associated with Muslim troops from al-Andalus. This style of helmet may, indeed, have originated in the Islamic south of the Iberian peninsula. (W. Scollard private coll., Los Angeles, USA)

10. This apparently unique helmet is so unusual that it might initially be dismissed as a fake, except that a very similar form of helmet is illustrated in a Moroccan manuscript dating from 621/1224. If it is genuine, then it could be a very late development of the Roman two-piece helmet seen in figure 2. (From a drawing by Dr. Michael Brett, made in the local archaeological museum at Frawān in the 1970s; present whereabouts unknown)

11. One of two very similar late 13th or early 14th century Turkish helmets, still with their long neck and shoulder covering mail aventails. This one has a bowl either strengthened by widely spaced "ribs" or made from plates joined by "rolled joints". The other has a one-piece bowl, though both are characterised by exceptionally deep brow-bands and decorative eyebrows. (Askeri Müzesi store, Istanbul, Turkey)

12. A simple Spangenhelm from southern Persia. It was found with the remains of a lamellar cuirass and perhaps a lamellar aventail to be fastened to the rim of this helmet. The ring on the finial suggests that it dates from after the Mongol conquest, as this was a feature of perhaps Chinese origin which was introduced to many areas by the Mongols. The helmet probably dates from the later 13th or early 14th centuries. (After a drawing by V.V. Osvyannikov; present whereabouts unknown)

13. A damaged but still recognisable lacquered leather or rawhide helmet, lined with small blocks of wood judged by a second fragmentary example, which came from the Ephrates region of northeastern Syria. It was decorated with black and red lacquer (shown here in black) which included a heraldic lion on one side. This heraldic cartouche, plus inscriptions on other pieces of equipment from the same location, indicates that they were of Mamlūk origin, the optimum
14. One-piece helmet with an inscription dedicated to the second Ottoman ruler Orkhan (Ghazâ), mid-14th century. It is the earliest known example of the so-called "turban helmet" style which originally originated in Anatolia or western Persia and would become particularly associated with Ottoman armies of the 15th century. (Askeri Müzesi, Istanbul, Turkey)
15. A magnificent though extremely practical late 13th or early 14th century iron helmet with an original mail aventail to protect the wearer's neck and shoulders. By this period, armourers in the central Islamic lands, including Persia and the expanding Ottoman Empire, had reached their metallurgical and stylistic pinnacle. Their products were also very different to those made by European armourers to the west and Chinese armourers to the east. (State Hermitage Museum, St. Petersburg, Russia)
16. At the end of the mediaeval period, a very distinctive style of helmet appeared in the Islamic Middle East, thereafter being almost universal in Persian speaking regions, Islamic India and parts of the eastern Arab world. The example shown here may be one of the earliest surviving examples since the dedicatory inscription (X) names the early 8th/14th-century Mamluk ruler Nâsîr al-Dîn Muhammad b. Kalâwûn. It is, however, possible that this dedication was a later anachronism. (Musée de la Porte de Hal, Brussels)
17. As Islam spread across the Eurasian steppes, a number of very distinctive forms of helmet appeared, particularly in the western steppes where Turkish, Mongol, Persian and perhaps also Byzantine influences combined. One result was a form of tall one-piece iron helmet based upon the segmented Spangenhelms of earlier years, but incorporating an anthropomorphic visor which seemed to reflect European artistic values. These helmets are generally thought to date from the immediate pre-Mongol period but are more likely to stem from the late 13th-early 14th centuries A.D. This was a period of cultural transition when the western Mongol Khânate was evolving into the Islamic Golden Horde. (State Hermitage Museum, St. Petersburg, Russia)
18. This late 7th/13th or early 8th/14th-century helmet, probably from Mamlûk Egypt or Syria, has some features in common with the visored helmet from the Golden Horde while remaining very different in other respects. It is forged from one piece of iron, then richly decorated with arabesques and Arabic dedicatory inscriptions. (After a drawing by H. Russell Robinson; present whereabouts unknown)
19. Though now lacking its characteristic mail aventail and sliding nasal bar, this 8th/14th-century Persian helmet is a fine example of a form that would be widely used throughout most of the eastern Islamic world from the late 14th to 19th centuries. (Wawel Collection, Cracow, Poland)
20. During the 15th and 16th centuries an apparently new form of cavalry helmet came into use in Mamlûk and Ottoman armies. It proved so successful that it was adopted throughout most of Europe, spreading as far as England where it became known as the "Cromwellian pot helmet". In reality, it was of neither European nor Islamic origin but seems to have been developed by the Mongols or their successor khânates from a Chinese original. Thereafter, it was copied and developed by Mamlûk and Ottoman armourers. The crudely-constructed example shown here is one of the earliest. It was found in a Turco-Mongol grave near Płysy in the Ukraine, from the superficially Islamised Golden Horde and dating from between 1290 and 1315. (After a drawing by M. Gorelik; present whereabouts unknown)

**AL-SÎN**

5. Chinese Islamic literature.

Muslims settled in Kuan-chou (Canton, Khandu [q.v.]) and possibly in Ch'ang-an (Hai-an) and Ch'uan-chou (Zazyûn) as early as the Tang dynasty, 2nd/8th century, thereafter also in Hang-chou (Khandse [q.v.]) and Pei-ching (Khandabalik [q.v.]), and throughout China (see also mîbahâ). Extant tombstone and other inscriptions in Arabic and Chinese, however, date only from the 7th/13th and 8th/14th centuries (Ch'en Ta-sheng, Leslie, Guide, 26-31; Beijing National Library list of rubbings of inscriptions).

The most significant are three stelae in Chinese, from 749/1348 in Ting-chou, 751/1350 in Ch'uan-chou, and 751/1350 in Kuan-chou. The first two describe the supposed visit to China of Wakkâs (the Companion Sa'd b. Abi Wakkâs [q.v.]), a maternal cousin of the Prophet, and a famous general in the 1st/7th century, sent, it is suggested, as an envoy of the Prophet himself (Yang and Yu, 91-106; Devéria; Tasaka, Wakkâ). One should also mention an inscription dated 770/1368, set up in Nan-ching and copied in Wu-ch'ang, supposedly written by the first Ming Emperor Tai-tsu, the Hung-ua Emporer (Low). Most intriguing is an undated inscription in Ch'ang-an, claiming a permit to build a mosque as early as 86/1705 (Picken).

These Chinese-style inscriptions served four main purposes: to record the history of the community; to explain Islamic ideas to the Muslims themselves and to non-Muslim Chinese; to demonstrate Confucian attitudes; and to protect the community. They are invaluable for the history of Islam in China, but of less value for the religious beliefs and practices of Chinese Muslims.

Islamic astronomy and medicine were influential in China in the Yuan and Ming dynasties. Four volumes (out of 36) of the large medical translation Huî-hui ywo-fang are extant, preserved in the Yang-lo ta-tien, 811/1408.

One should note, too, the Sayyid Adjall, Muslim official of the Mongols in China, about whom much has been written [see al-sîn, at Vol. IX].

Three books written about the voyages between 808/1405 and 837/1433 to Africa and Arabia of Cheng Ho, the famous Muslim admiral of the Ming, include the Ting-yai sheng-lan, written by a Muslim who accompanied him, Ma Huan [q.v.], in 837/1433 (Mills). It is only with the Ming dynasty (1368-1644), that Islamic literature in Chinese as such developed. The earliest extant full-length Islamic book written in Chinese is the Cheng-chiau cher-ch'ien by Wang Tai-yüi, in 1052/1642. This gives a full account of the Islamic religion, with some criticism of Chu Hsi, the Sung dynasty Aquinas of Confucianism. The main aim was probably to educate Muslims living in China, who by now could be called Chinese Muslims. A large stream of Islamic books, some in Arabic, some in Arabic and Chinese, and several only in Chinese, were written soon after this, some translations, some original. Most significant are: Ma Chu, Ch'ing-chen shih-nan ("The compass of Islam"), in 8 volumes, 1095/1683 (Hartmann); and Hu-tai yuan-lai ("The origin of Islam in China"), possibly 1135/1722 (Devéria).

The peak of Islamic literature in Chinese was reached around 1704 to 1724, when Liu Chih [q.v.] (Liu Chieh-lien, Liu I-chai) wrote his three main works:
Tien-fang hsing-li about Islamic philosophy; Tien-fang tien-li about Islamic laws and rites (this book was reviewed by the prestigious Ssu-k'ü ch'ian-shu tsung-ma ti-yao). Another book by Tien-fang chih-sheng shih-li, a biography of the Prophet, probably based on the Tang-kum-yi Mawlid i-Mustafa, is available in Arabic and Persian translations from the Arabic work by Sā'id (al-Din Muhammad) b. Mas'ūd b. Muhammad al-Kāzarānī, d. 758/1357 (a partial translation is given by Mason). Two other works by Liu are Wu-kung shih-i and Chen-kung fa-wei (Palladius).

The first two works include lists of sources with titles in transliterated Chinese, Chinese paraphrases of the title, and Arabic originals, many of which can be identified with the help of Brockelmann, Storey, etc. (see section XVIII (by A. Vissiere); Vissiere, Ouvrages de l'Ecole des Langues Orientales Vivantes, Paris 1987). These works are: (1) Tōfu (Ch'ung-ch'ŏng chu) (one or more); (2) Lawo'á (Ch'ung-ch'ang chao-wei), by Džāmi, d. 898/1492; (3) Aght'ā (al-lama'āt) (Fei-yin ching or E-shen-ch'ing) by Džāmi; (4) Miṣrād al-šabā (Kui-ch'en yao-yo or T'ai-yuan cheng-tao), by the Kubrawīya Nadīm al-Rāzī Dāya (sic. This is according to the Mardj, al-Nasiri al-Djarkas! al-Hanafi, d. 930/1524 [see IBN IYAS].)

Other works by Pai Shou-i (1948 [mostly reprinted in 1982-3], and 1985, 1988, 1992, 1997); Ma En-hui (1983); and also some for the P'u family, possibly tracing descent from P'u Shou-K'ung of the Sha families; and also some for the P'u family, and Sha families; and also some for the P'u family, but also Kui-ch 'en's story. At this time, several Muslims were suc-

There are also several works written analysing the voyages of the Muslim admiral Cheng Ho to Africa and Arabia.

SINDHI [see sind. 3.]

SINDHU, the Sanskrit name for the Indus river. See for this mirhah, and for the lands along its course, SIND, MULTAN, PANDJAB and KASHMIR.

He is said to have imparted to the famous Abu Yazid al-Bistami (al-Bastami) (d. 261/874 [q.v.]), Sharh-i nisba, i.e. Hindu or Buddhist, influences. However, current sources have tended to consider not Abu Yazid as the founder of the doctrine of fanā’ but rather his contemporary Abu Sa’d al-Khârîj al-Baghdâdi (d. 277/890-1 [q.v.]).

SÎRB

I. The Ottoman period to 1800

A. SERBIA BEFORE THE OTTOMANS

(a) The origins of the Serbian kingdom. The arrival of South Slavs" in the Balkan peninsula took place in the second half of the 6th century and the beginning of the 7th one. These peoples, later to be called "South Slavs", were grouped round three main tribes: those of the Serbs, the Croats and the Slovenes, who had occupied Pannonia towards the end of the 6th century and who had moved from there towards the Adriatic coast, slowly assimilating the various Romanised peoples of Illyria. The most numerous of these "South Slavs", the Serbs, became implanted, towards the end of the 8th century, in a territory defined by the rivers Ibar (in the east), Neretva (in the southwest), Bosna (in the west) and Sava (in the north).

At that time they were organised into petty principalities, governed by jupans, and when one of them secured an ascendancy over the rest, they would assume the title of great jowan. Under the political tutelage of Byzantium, the Serbs became Christian in ca. 874, Serbia became independent towards the mid-9th century, thanks to the first princes of Raška (Rascie), i.e. the "Old Serbia", whose capital was at that time in the town of Ras (on the Ibar, to the northeast of Skadar/Scutari/Shkodër [see YEST BàRA]). Under pressure from its enemies, notably the Byzantine emperors and the Bulgarian kings, the Serbian state's centre of gravity then moved towards the Zeta (the modern Montenegro and the extreme northwest of modern Albania) and then, at the time of Stevan/Stephen Nemanja (r. ca. 1166-96) and his successors (sc. the dynasty of the Nemanjići or Nemanids, ca. 1166-1371) towards the valley of the river Morava, towards Kosovo [see KOSOVA and PRIVITEA] and towards Macedonia [see ÔSKÖN]. In 1219, one of the sons of Stevan Nemanja, Rastko (the future great saint of the Serbian Church, under the name of St. Sava), obtained from the Patriarch at Nicæa archiepiscopal consecration and the autocephalous status of the Serbian Church and an action which was going to play an important role in preserving Serbian identity during the five centuries of Ottoman domination. The mediaeval Serbian state's apogee was in 1346, under Stephen IX Uroš IV Dušan (r. 1331-55), who had himself crowned "Emperor (zar) of the Serbs and Greeks" and had the Sabor or Assembly at Skoplje set out the Dušanov zakonik "Code of Dušan" (1349). The anarchy which followed his premature death at the age of 47 favoured the beginning of Ottoman expansion in the Balkans during the next decades. (On the Nemanid tradition and the introduction of "sacral kingship" in Serbia and in general, see B.I. Bojović, L'archéologie dinastique et l'ideologie de l'Etat serbe au Moyen-Age (XIII-XV siècles), in Cyrilometodieum, xvi-xviii [Thessalonika 1993-4], 7-92.)

(b) The first contacts with the Ottomans. It was in the time of Tsar Dušan that Turkish units (at that time still only mercenaries or allies of the Byzantines) inflicted their first defeats on Serbian forces: first before Stephaniana in 1344 and then near Dimetoka [g.v.] in 1352. But the real Ottoman conquest of Rumelia (this time, undertaken on their own account) began in 1354 by the seizure of the fortress of Gallipoli on
the Dardanelles [see GELIBOLT], or, to pinpoint the moment when the Serbian state felt the Ottomans pressingly, seventeen years later, in 1371, at the battle of the Maritsa [see MERIG], in the course of which the Serbian king Vukašin Mračević (who ruled western Macedonia) and three of his sons, plus his own brother Ugljesa Despot of Serres [see SIROZ], were killed. However, this was only felt within the Serbs' collective memory as a baneful prelude to the disaster suffered by the troops of Prince Lazar (the "Tsar Lazar" in popular memory) on 15 June 1389 at the "Field of Blackbirds", the battle better known as that of Kosovo [see KOŠOVA, KOSEVO]. On the one hand, this event gave rise to the "myth of Kosovo" and, on the other hand, to a famous cycle of Serbian popular epic poetry (gathered together by Vuk Karadžić at Vienna from 1814 onwards, which was to attract very close interest from European intellectuals of the time; see, most recently, Kosovo, six siècles de mémories créées, in Les annales de l'autre Islam, no. 7, INALCO [Paris 2001], with further references).

B. SERBIA UNDER OTTOMAN DOMINATION (TO 1804)

The first four centuries of this history can be divided into three phases: (a) from the battle of Kosovo to 1552, the date when all the Serbian territories came under Ottoman control; (b) from 1552 to 1699, the time of the Ottoman retreat in Danubian Europe after their maximal expansion in those lands; and (c) the slow but irreversible decline of Ottoman power in the Balkans up to 1804, the date of the first Serbian revolt.

(a) The period 1389-1552. The result of Kosovo was that Serbia became a vassal state of the Ottomans, forced to pay tribute and to furnish troops. With that said, the Serbian state did not disappear from existence after that date, but its centre of gravity moved much further north, where Serbian principalities were to subsist, for good or ill, for some 60 years. In the first place, there was that of the prince of Northern Serbia (the son of the Tsar Lazar, put to death by the Ottomans after the battle of Kosovo), the despot Stevan/Stephen Lazarević (r. 1389-1427), succeeded by his nephew George Branković (r. 1427-56), who in 1439 fixed his capital at Smederevo (at that time, on the Danube) [see SEMENDIRE, in Suppl.] and became involved in a double vassal status with the Ottomans and the kings of Hungary. Profiting from the Ottomans' difficulties in Anatolia and the situation of the Serbian people at this period. But we do know that many monasteries were devastated, such as e.g. that of Visoki Dečani, that the greater part of their immense estates were confiscated and that, in the towns, certain churches (usually the finest) were transformed into mosques. Other churches suffered destruction later in order to provide materials for building various structures such as mosques, caravanserais, etc. Nevertheless, the Church did not lose all its lands, and not all monasteries—far from it—were devastated and left abandoned. Thus e.g. the monastery of Ravanica secured certain privileges from the time of the first Ottoman period onwards (that of 1439-44), and during this time, sultan Murād II awarded privileges to certain other Serbian monasteries. Some of these last were even excused payment of taxes, or else they were given the status of small fīmāns [q.v.] with the obligation to furnish one or two ḍevēlis at the times of military campaigns (i.e. auxiliary troops, supplied and equipped by the beneficiaries of sources of revenue given by the state). But those mostly involved here were the monasteries in the frontier zones, or along the axes for provisioning the Ottoman army at times of campaigns (see A. Popovic, Les rapports entre l'Islam et l'orthodoxie en Yougoslavie, in Aspects de l'orthodoxie. Structures et spirituālité, Colloque de Strasbourg, septembre 1978, Paris 1981, 169-89).

As for the Serbian people, with the Ottoman conquest a more or less irreversible phenomenon is observable the definitive division of Serbian society into three groups. First, the group that, for various reasons, became converts to Islam and thus became separated (relatively quickly, and, even, very quickly) from the "common trunk", espousing not only a new belief and ideology but also cutting themselves off, in the long term, from anything in common with their past. Then
there was the group of those who fled the lands occupied by the Ottomans (for Hungary in the first place, then for Austria, and then, much later, for Russia), certain of whose descendants were to play a great role in Serbian political and cultural life when the state was rebuilt in the 19th century. And finally, by far the most numerous, there were those who stayed behind, where they were forced to live under the new status of "ghimis" [see GHIMIS and RAIYA], a way of life punctuated by long periods of submission and daily collaboration with the Ottoman authorities but also by insurrections against these authorities, providing backing for Hungarian and Austrian armies in turn, according to the different phases of the international situation, risings which were regularly bloodily suppressed. This schema repeated itself regularly throughout the four centuries of history dealt with in this article, a history that should nevertheless be considered not only by events and by political and diplomatic processes, but also by a very close examination of the extremely complex processes going on within the central Ottoman empire and within its society in general.

(b) The period 1552-1699. The period that followed was to be marked, for the Serbian population, by a certain number of new occurrences. The advance of Ottoman forces towards European Danubia, and the Ottoman troops' withdrawal had grave consequences both for the central Ottoman empire and within its society in general. The key dates during this century and a half are:

- 1557, reestablishment of the Patriarchate at Pec; 1593, Ottoman defeat before Sisak [see SISSA]; 1593-1606, the Ottoman defeat before Sisak; 1593-1666, Ottoman defeat before Sisak; 1606-1650, Ottoman defeat before Sisak; 1650-1656, Ottoman defeat before Sisak; 1656-1666, Ottoman defeat before Sisak; 1666-1676, Ottoman defeat before Sisak; 1676-1683, Ottoman defeat before Sisak; 1683-1690, Ottoman defeat before Sisak. This restored Patriarchate of Pec covered an enormous territory (part of Macedonia and Bulgaria, Serbia, Montenegro, the Voivodina and Bosnia, plus certain parts of Croatia, Dalmatia and Hungary). But, contrary to what was envisaged, this period of collaboration between the Serbian Orthodox Church and the Ottoman power was merely a flash in the pan.

The reasons for this deterioration in relations between the Serbian Church and the Porte probably resided from the start in the ambiguity of Serbian Orthodoxy’s attitude vis-à-vis the authorities, but the reasons must above all be found in the transformation of Ottoman society itself. The first task of the renewed Serbian Church was obviously to rally the Serbian people. It thus became not only a religious organisation but also a truly political one, becoming the focus for the feelings and aspirations of the people. The basis of such an ideology could only be a glorification of the work of St. Sava, an action that was logically based on the Nemanid tradition and, in particular, on the myth of Kosovo, and because of this, Serbian Orthodoxy was compelled sooner or later to emerge from this contradiction and to break with
the “Long War” between Austria and Turkey; 1594, Serbian revolts (in the Banat and elsewhere); 1595, the public destruction of the relics of St. Sava at Belgrade; 1606, the peace treaty of Zitvatvorek [q.v.]; 1614, the Patriarch Pajšije renews the policy of compromise with the Ottomans; 1618, the Ottoman check at Vienna; 1686, definitive loss of Buda; 1687, the Holy League against the Ottomans; 1688, Serbian rising and conquest of Belgrade; 1689, Austrian troops reach as far as “Old Serbia”; 1690, great Serbian emigration from Kosovo and return of the Ottomans; and 1699, the peace treaty of Carlowitz (Sremski Karlovci) [see KARLOVČA].

(c) The period 1699-1804. As during the preceding two periods, the 18th century was to bring the non-Muslim Serbian people a fresh lot of “vain hopes” and “bitter disillusionments”. All this had its basis in the slow decline of the Ottoman empire, which did not, however, lead to its disintegration, supported as it was at that time by France, Britain and the Netherlands, who looked with a jaundiced eye on the subsequent successes of the Austrian Hapsburgs and the Russian Tsars (thus confirming the foresights of Montesquieu). On quite a different plane, the social and religious divisions between the Muslim and non-Muslim populations of Rumelia were to crystallise, impelling the non-Muslim Serbians to participate actively in fighting against the “Turks” in the course of each new war launched by Austria into their territory. But the ephemeral victories and the long-lasting defeats of the 18th century (notably from that time when the Serbian population had to suffer a long occupation by the Austrians, in 1718-39, one whose methods were no different from those of the Ottomans) made the Serbian people conscious of the political implications of their fight.

Here follows a chronology of events: the renewed Austro-Turkish war (of 1716-18) ended in practice with the greatest success the Hapsburgs had ever enjoyed since these last took possession, under the Treaty of Passarowitz/POZAREVAC [see PASSAROFOVA], of the eastern part of Sirmia (Srem); the Banat (with Temesvar), Lesser Wallachia, all the northeastern part of Serbia, including Belgrade; and the northern zone of Bosnia (along the Sava), territories they retained for some 20 years. (On the desert aspect of Serbia in 1717, with the encroachment of virgin forests with strips of cultivation abandoned for many years, with miserable, scattered village populations, see Lady Mary Stuart Wortley Montagu, Turkish letters, London 1763, with many later editions.) The measure of disenchantment of the non-Muslim population during these years (faced with the Austrians’ attitudes, their arbitrary taxes and the missionary activities of the Roman Catholic Church) can be simply measured by the numerous cases of flight by the Serbian Orthodox people back to Ottoman territory.

Then, twenty years later, a fresh Austro-Turkish war broke out (1737-9) which, after great initial successes by the Austrians and the insurgent Serbs (conquest of southwestern Serbia, with Alleksinac, Kruševac, Novi Pazar, Prizhina and Nish), ended in a terrible defeat before Grocka (not far from Belgrade), and by the Treaty of Belgrade (1739) the Hapsburgs lost all the territory captured twenty years before. Naturally, there were more waves of emigration by Serbs into southern Hungary, one of which, under the Patriarch Arsenije IV Jovanović Sakabenta, became known as “the second Serbian migration from Kosovo”.

The years that followed, generally called “the thirty years of peace”, were marked by the suppression in 1766 of the Patriarchate of Peć (whose increasingly frequent flirtations with the Russian Orthodox Church ended by seriously worrying the Porte, but which had already, for a fair amount of time, been in a lamentable state (see O. Zirojević, 152-5), and by attempts by Russia (from 1751-2 onwards) to attract Serbian emigrants from Kosovo to settle in the Ukraine. [These events are described in a magistral fashion by M. Crnjanski [1893-1977] in his novel Sobe [“Migrations”], Belgrade 1929, 21962, etc., Fr. tr. Paris 1986.]

Then a third Austro-Turkish war broke out in 1788 (as a prolongation of the Russo-Turkish war that had begun the previous year), in which a large part of the Serbian population took part, notably in the famous volunteer bands of Pagorić (< GER. Freikorps), led by their own officers. These troops, led by the famous Koća Andjelković (hence the name “Kočina Krajină”), succeeded in conquering western and northern Serbia (sc. Sumadija and the POZAREVAC region) and in 1789 (in collaboration with the Austrians), the city of Belgrade itself. However, two years later, in 1791, the peace treaty of Świețow [see zHARROWS] deprived the insurgents of their conquests and authorised the return of the Ottomans. Finally, at the end of the 18th century, the reforms undertaken by Selim III [q.v.] provoked plots and risings of the Janissaries in various parts of Rumelia. Among these, more specifically, was the rising in Serbia of 1804, provoked by the excesses and violence of the Janissaries; this was genuinely a rising with a national character, affecting the greater part of the Serbian people and conducted by one of their chiefs, George Petrović, called Kara (“black”) George (see R. Mantran, in idem [ed.], Histoire de l’Empire ottoman, 430-1). It was in these conditions that there broke out in 1804 the “First Serbian Revolt”, which allowed, by successive stages and three decades later, the definitive freeing of Serbia from the Ottoman empire and the beginnings of its independence.

The key dates, which spanned a century (1699-1804), are the following: 1716, a new Austro-Turkish war; 1717, the conquest of Belgrade by Prince Eugene of Savoy’s army; 1718, the peace treaty of POZAREVAC, with Belgrade becoming the capital of Northern Serbia under Austrian occupation; 1737-9, a new Austro-Turkish war; 1739, the peace treaty of Belgrade, by which the Ottomans re-occupied their former Serbian territories; 1739-74, the so-called “thirty years of peace”; 1766, suppression of the Patriarchate of Peć; 1768-74, Russo-Turkish war; 1774, the peace treaty of Kucišć Kaynardža [q.v.]; 1788, fresh Austro-Turkish war; 1789, conquest of Belgrade by Austrian troops and Serbian insurgents; 1791, peace treaty of Świețow stipulating the return of the Ottomans in Serbia; 1792, revolt of the Janissaries of Serbia against the Porte and Selim III’s reforms: 1794-7, conquest of the pagodol of Belgrade by the rebel pasha of Vidin [see VIDIN], Paswan-oghlu [q.v.]; 1801-3, reign of terror by the four rebel Janissary chiefs, installed in Belgrade; 1804, the First Serbian Revolt led by Kara George.

In the course of this rapid survey, several important questions have remained unexplored: economic topics (agriculture, stockrearing, exploitation of mines, large-scale colonisation by the Ottomans authorized through the intermediacy of installing pastoralist nomads and “Wallachs/Vlachs”—whose name, however, poses certain problems—etc.); the formation and growth of the towns, and the town-and-country relationships (taking into account the minimal representation of Serbs in the towns and of “Turks” in the
villages); the Serbian patriarchal society and the sys-
tem of zadruga (extended families living under the
same roof); the very numerous migrations and emig-
ratings (notably towards southern Hungary, south-
western Bosnia, Southern Russia and the Croatian
"Krajina"); the demographic evolution of the Serbian
population, with the growth of guerrilla bands against
the Ottoman authorities (the haskals and ustašas), the
result of the wars and the continual devas-
tions (shring of the economy from primitive agri-
cultural methods and exhaustion of the soil); famines
and epidemics (cholera and plague); the increasing
authority of the Serbian Church and the crystallisation
of Serbian national feeling; and cultural topics and
the rule played here by Jovan Rakić (1726-1801),
Zaharije Orfelin (1726-85), Dostoj Obradović (1739-
1811) and Vuk Stefanović Karadžić (1877-1864). These
subjects can be explored through titles listed below in
the Bibli.

**SIRB — SIRR** (A. Popović),
1. The first notion is that of secret, mystery, arcana,
in the sense of a teaching, a reality or even a doctrinal
point, hidden by nature or which is kept hidden from
people considered unworthy of knowing it. If there is
a secret, says al-Sarrāj al-Tust (d. 738/958), prob-
ably taking up the Shi‘i concept of two levels of real-
ity (Amir-Moezzi, 1997), it is because the object
of knowledge sought by the individual has an obvious,
exoteric (zahr) aspect and a hidden, esoteric (batin)
one. The Kur‘ān, the Hadith, knowledge, Islam, etc.,
all have these two distinct, complementary levels.
In order to attain the esoteric level, a person must
so dispose his body (lit. "his members", ḥālāt)
that only the initiates can discover and which they
must protect (al-Sarrāj, 43-4). The mass of people,
prisoners of their own ignorance and blindly attached
to the letter only of religion, can only become vio-
 lent if the secret is revealed to them, even if only
partially (Lāhajj, 100, 498; al-Šayrānī, 116; Abū
al-Nabi, ii, 167). Even the Kur‘ān, in two places,
authorises the faithful to dissimulate their beliefs in
cases of danger (II, 28-31), whence the adage,
"the breasts of free men are repositories (lit. 'tombs')
of secrets" (ṣudūr al-ahbār kubur al-asrār, see e.g. al-Tahānawī, 92).

According to the Shi‘i (for whom "everything
has a secret; the secret of Islam is Shi‘ism", al-Kulayn,
iI., 14), this—i.e. essentially the Imāms‘ teachings,
which has several esoteric levels, batin and batin al-batin,
contains secrets that must be protected at all costs
(al-Saffār, 28-9); the duty of keeping such secrets
(takhīya, kinān, khab) is thus a canonical obligation
for them (Kohlberg, 1975, 1995; Amir-Moezzi, 1992,
index, s.v. tajyō).

For the Shi‘is likewise, such notions as “protection
of the secret” (ḥifz al sour), around which expression,
above all, certain mystics combine the two senses
of sin, "concealing, changing the guise of something
to make it appear other than it is" (tahlīl), or further,
"hiding the real nature of the particular interior state"
(ikhtibā‘ al-ba‘ād), make up practices and disciplines
which are particularly important (al-Suhrawardī 1983,
72; Hujwīrī, 500-1; ‘Alīf, 89, 117; al-Shaybānī, 20f).
In the literature of mysticism, constant reference is made
to the trial of al-Hallajī (g.a.), who was executed in
309/922 for having divulged the Secret par excellence,
by putting forward the famous ʿshūr “I am the Real
(and ‘l-kabkab), ḥabak being a Name of God. The great-
lest Persian mystical poets, such as ʿAṯrār, ‘Irāqī and
Ḥāfiẓ, very often allude to the "crucified one of Bagdād"
(sc. al-Hallajī) and call the masters "the esoteric
masters "the people of the Secret" (Khurramshāhī,
s.v. ʿshūr rāz). This is why mystical authors, from
their oldest writings onwards, devised an "allusive
language" (izārā‘a), a coded form of discourse which was later
to assume very numerous forms (technical vocabularies,
symbolic lexica, fables, poetic images, etc.), reflecting esoteric realities and distinguishing themselves from “literary language” (tā‘āra) which is unsuitable for exoteric topics (al-Sarrāj, 414, concerning ẓam‘; al-Kalābādī, ch. 4, 30f; Hudūrī, 480f; and see Amr-Moezzi 2002, 10ff.).

2. The second notion is that of a “subtle organ”, one of the layers of the “heart”, making up the human spiritual anatomy, which may be translated by “secret, inner consciousness”. It seems that for the Khurasān school of mystics, the Malāmatiyā (q.v.) comprise the progression of levels of consciousness, “organs” of invocation (dhikr) and vision (maḥabbāh), going through the soul (nāfś), to the spirit (rahb), passing by the heart (daluḥ) and the inner consciousness (al-Tustārī, 16, 19, 34, 45, 78; al-Sulamī 1991, 16). It should be noted that al-Hakīm al-Tirmidhī (d. ca. 318/936) said to be the seat of vision, whilst the spirit is the seat of “secret, hidden”) (Kashanī, 82ff., 101 and the editor’s notes).

In this context that one should probably understand as amongst the most subtle and the noblest parts of the organs, (latifat, nafās, kalb, ruh, mushādha), and vision (mushādha), associated with the colour white. The organs, (latifat, nafās, kalb, ruh), are found from the time of the oldest compilations of printed texts, beginning with that of Flidelberg, Leipzig 1845; Kalābādī, K. al-Ta‘ṣ̄īr, ed. A.M.A. Surūr, Beirut 1400/1980; Kalābādī, Mīshāb al-ḥidāyā, ed. Dj. Humā‘ī, Tehran 1239/1954; Nadim al-Dīn Kūbrā, Fawdih al-ḥidāyā, ed. B. Ballanfat, Nimes 2001; Kalābādī, al-Rawdah min al-kūfī, ed. R. Mahālallī, Tehran 1389/1969; Lāhijādī, Muḥfīz al-ṣūfī, maḥfīz al-ṣūfī, fī sharh ʿasbāb al-ṣūfī, “may God sanctify his noble inner consciousness”.

Such great mystics as Uthmān (laḥiyya, Dhahābīyya and Khaksar), organised in his school (Confin 1951, 113, ii, 411f.), whilst others, like al-Kharrāẓī (d. 286/899) for example, develop a much more complex spiritual anatomy, comprising instincts (tab‘), soul, heart, will (irāda), spirit, inner consciousness and spiritual aspiration (himma) (Nwyia, 243-5, 272, 301).

After the attempt at a synthesis of the different systems by Umar al-Suhrawardī (d. 467/1072) and the mystics of his school (Confin 1971; al-Isfahānī, 1986, introd., 60-2; Landolt, 287-8; Kūbrā 2001, index s.v. organs subīt), from Ibn al-ʿArabī’s followers such as Muʿāyyad al-Dīn Dāvūd al-Kaysārī (Gibbōlīt and Ballanfat, 189-90), up to the modern and even contemporary Sūfīs Muḥammad b. ʿAlī al-Suṣ̄alī of Algeria (d. 1276/1879) (q.v.) (105f) and the Kūrdu Muhammad Anīn al-Suhrawardī (d. 1244/1915-14) (549-50). In the different progressions of the “subtle organs”, “spirit” is almost always seen as the most associated with the colour white. The dhikr corresponding to it varies greatly according to authors or mystical orders. The most often found is: tab‘, nafs, kalb, ruh, sin, rirḥ (“what is hidden”) and akīfī (“what is most hidden”) (Kashānī, 82ff., 101 and the editor’s notes).

In Shi‘ī mysticism, allusions of varying precision to the subtle “layers” of the “heart” and vision by means of the heart, are found from the time of the oldest compilations of hadith onwards (Amr-Moezzi 1992, 112ff). However, the Shī‘ī Sūfīs (N-mutal-lāḥiyā, ʿAbdābīyā and ʿAlḥākkār), organised in his school (Dj. Humā‘ī, Tehran 1239/1954, 112ff.), went on to adopt one or another of the systems used by Sunnī orders like the Kādīriyya, Kūbrāwīyya or Naqshbandiyā (Gribouilh, ii, 207 n. 1073, 247-50; Amr-Moezzi 1992, 129ff; edid 2002, passim).
Apart from literacy in the Roman script, easy access to mechanised printing facilities was the main reason why the switch to the Roman script, while continuing to modernise their writing, meant holding on to their own Arabo-Islamic heritage. Members of this community were literate not in the Roman script; they could read languages based on Arabic orthography and could read the Qur'an for liturgical purposes. The largest collection of them was assembled in the Cape around the 1880s. He quickly mastered the local patois and began writing in Arabic-Afrikaans, producing smaller tracts directed at an adult audience. Texts were also produced for the local madrasa education system that students attended in the afternoon after their schooling in the secular educational system. The second person was Imam 'Abd al-Rahmān Kāsim Gamieldien (d. 1921), his creolised family name being possibly a corruption of Djamāl al-Dīn or Hāmid al-Dīn (Davids 1991, 147), who wrote several texts for the madrasa curriculum. The third person was the son of Abū Bakr Effendi, sc. Hāmid Nī'mat Allāh Effendi (d. ca. 1945), who published several Arabic-Afrikaans books in his desire to advance education among the local Muslims. According to an inventory made by Davids, some 74 Arabic-Afrikaans publications have been identified, with the possibility of more being discovered in private collections and libraries. Further investigation of these texts should shed light on how knowledge from the metropolises of the Islamic world was transferred to marginal and smaller communities, thereby increasing local knowledge and introducing new practices.

[ERASIM MOOSA]

AL-SUFYANI, a descendant of the Umayyad Abū Sūlāyah [g.v.] figuring in apocalyptic prophecies as the rival and opponent of the Mahdi [g.v.] and ultimately overcome by him.

The bulk of these prophecies dates from the 2nd/8th century. The largest collection of them was assembled by the Sunni traditionalist Nuṣaym b. Hammād (d. 227/842) in his Kitāb al-Fihrist. Different views have been expressed about the origins of this figure. The bulk of these prophecies dates from the 2nd/8th century. The largest collection of them was assembled by the Sunni traditionalist Nuṣaym b. Hammād (d. 227/842) in his Kitāb al-Fihrist. Different views have been expressed about the origins of this figure. The fact that it was later transformed by orthodox religious tendency into an Umayyad Antichrist. Following sug-
gestions by J. Wellhausen, H. Lammens questioned this view and connected the figure with the abortive anti-'Abbasid rising of 'Abd Muḥammad al-Sufyānī in Syria in 133/751. The Syrians denied his death and believed that he was hiding in the mountains of al-
Ta'if from where he would return in triumph. Shi'i and pro-'Abbasid traditionists then turned this "Syrian national hero" into a figure resembling the Dadjdjāl [q.v.]. Combining the two views, R. Hartmann argued that the Sufyānī was at first an anti-Marwānid messianic figure which, after the overthrow of the Umayyad dynasty, was turned by Syrian advocates of an Umayyad restoration into an anti-'Abbasid messiah. The Syrians, Hartmann suggested, may at that time have longed for a return of the caliph Yazīd I. Only thereafter was the figure taken over by the 'Abbasids and their Shi'i backers and transformed into an opponent of the Mahdī.

The image of the opposition between the Mahdī and the Sufyānī goes back to a hadith (fully quoted in the art. AL-MAHDI at Vol. V, 1232a), which predicted the rise to power of a political refugee from Medina in Mecca and the subsequent rise in Syria of "a man whose maternal uncles are of Kalb", who would send an army of Kalb against the rebel in Mecca. This army, however, would be utterly defeated, and the rebel caliph in Mecca would justly rule Islam for seven or nine years. The first part of this hadith reflected, as pointed out by D.S. Attema, the career of 'Abd Allāh b. al-Zubayr, and the prediction dates from shortly after the death of the caliph Yazīd (64/683). In the later Umayyad age, this prediction was widely spread as a prophetic hadith by the highly regarded Başran traditionist Katāda b. D'ā'ama (d. 177/795). As its contents were now projected into the apocalyptic future, the rebel caliph in Mecca came to be identified with the Mahdī and his rival, whose maternal uncles were of Kalb, with a Sufyānī opponent.

As the Mahdī in the later Umayyad age was more and more identified with a descendant of Muhammad, the figure of his Sufyānī opponent was commonly appropriated from the originally pro-Zubayrid Katāda hadith and developed by Shi'i and pro-Alīd Kūfī circles. The appearance of the Sufyānī was thus closely connected with the advent of the Mahdī. A Kūfī traditionist Artat's predictions turned the Sufyānī into a thoroughly repulsive and monstrous figure resembling the Sufyānī (historically the caliph Yazīd), was now incorporated into the calendar of prophets foretold that the Sufyānī and the Mahdī would come forth like two racehorses. Each one would subdue the region next to him. The Shī'ī ima'm Muhammad al-Bakir was quoted as predicting that the Sufyānī would reign for the time of the pregnancy of a woman (haml mar'a). The prediction of a "swallowing up (khasf)" of a Syrian army by the desert between Mecca and Medina, which according to the Kitāba hadīth was to occur under the predecessor of the Sufyānī (historically the caliph Yazīd), was now integrated into the career of the Sufyānī. Shi'i referred to the Sufyānī also as the Son of the Liver-eating Woman (ibn akilat al-akbdd) after 'Abū Sufyānī's wife Hind b. Utba [q.v.], who was said to have bitten the liver of Muhammad's uncle Ḥamza after he was killed in the battle of Uhud. The Sufyānī, it was predicted, would first come forth in the Wadī al-Yāhıs near Damascus. In the later Imāmī Shī'ī standard doctrine, the appearance of the Sufyānī in the Wadī and the statements of that month of August (the way of an army sent by him in the desert) are counted among the indispensable signs for the advent of the Mahdī or Kā'im [see Kā'IM AL MUḤAMMAD].

There is no sound evidence for an early anti-Marwānid expectation of a restorer of Sufyānī rule. The apocalyptic Sufyānī figure came to Syria and Egypt together with that of the Fāṭimid Mahdī and represented a minority view there in the late Umayyad age. The great Berber rebellion in the Maghrib in 123/740-1 aroused fears of an invasion of Egypt and Syria, the fitna of the Maghrib inaugurating the end of time, and there were prophecies of a reappearance of the Sufyānī connected with it. In post-Umayyad Sufyānī prophecies, the coming of a rebel Berber army, often described as carrying yellow flags, became a standard element.

After the overthrow of the Umayyad caliphate by the 'Abbasids, the apocalyptic Sufyānī was in Syria given the role of a successful challenger of the eastern conquerors. Already during the anti-'Abbasid revolt of 'Abū Muḥammad al-Sufyānī in 153/771, word was spread by his supporters that he was "the Sufyānī who had been mentioned". The Sufyānī was now associated with a prediction that the Syrians would march against an eastern caliph in Kūfā, which would be razed to the ground "like a leather skin". Baghdad was soon added as a town to be destroyed by the Sufyānī, who would send his armies to the east, the Maghrib, Yemen and Iraq. Such anti-'Abbasid prophecies were first spread by pro-Alīd and pro-Kūfī narrators, who invariably portrayed the Sufyānī as a ruthless forerunner of the just Fāṭimid Mahdī to whom he would ultimately lose out. In some prophecies, the Sufyānī was described as "handing over the caliphate to the Mahdī (yadid al-khalīfat li 'l-Mahdī)". The themes of these Shī'ī prophecies were taken over and further developed by Sunni traditionists, especially in Hims. The largest contribution was made by Arṭāʾī b. al-Mundhir (d. 162-3/779-80), an ascetic worshipper highly regarded as a transmitter who produced lengthy predictions, either attributing them to Ka'b al-Abhār [q.v.] and his stepson Tabyū'ā b. 'Alīm al-Hīmarī or in his own name. Arṭāʾī's predictions turned the Sufyānī into a thoroughly repulsive and monstrous figure resembling the Dadjdjāl. Sometimes Arṭāʾī divided the Sufyānī into two figures. The first one, named 'Abd Allāh b. Yazīd, would be al-Azhār or al-Zuhrī b. al-Kalbīyya, the deformed Sufyānī (al-Sufyānī al-muḥāqash). He would take the gīzā from the Muslims, enslave their children and split open the wombs of pregnant women. After he had died from a carbuncle, another Sufyānī would come forth in the Bidgāz. He, too, would be deformed, flat-headed, with scarred forearms and hollow eyes.

In Egypt, the apocalyptic Sufyānī figure was promoted and elaborated by 'Abd Allāh b. Lāhī'a (d. 174/790 [q.v.]), in numerous traditions spuriously ascribed to early authorities including Companions and the Prophet. Although one-eyed (aḥār) and the perpetrator of massacres of 'Abbasids and 'Alīds, Ibn Lāhī'a's Sufyānī could not compete with Arṭāʾī's repulsive ugliness and bestiality nor be described as a forerunner of the Dadjdjāl.

The Umayyad rebel Abu l-'Amayṭar, a grandson of Kūfī b. Yazīd b. Muṭawwiyah, who rose against the 'Abbasid caliphate in Damascus in 195/811, gained some support as the expected Sufyānī. Already before the eruption of the revolt, the Damascene traditionist al-Walīd b. Muslim spread the prediction that the Sufyānī would inevitably come forth even if only a single day remained of the year 195. Umayyad backers claimed that the signs for the Sufyānī mentioned in the prophecies were present in Abu l-'Amayṭar and that Kalb would be his supporter. A prophecy describing the reign of Hārūn al-Rashīd and the succession of his son al-ʾĀmīn foretold the appearance of...
of the religious sciences.

He was born either in the village of Suhalı, modern Fuengirola, or in nearby Málaga, and studied Kur'án, hadith and philosophy there as well as in Cordova and Granada. His most famous teacher was Ibn al-'Arabi (qu.), under whom he studied for a while in Seville. Stated in Málaga, he led a quiet scholarly life. Since he had lost his sight at the age of seventeen, he relied for his reading and writing on, among others, Ibn Dibya (qu.), his best-known pupil. At the Almohad court in Marrákiš, where he stayed for some time, he achieved fame and wealth; he died during a visit to Morocco in 581/1185.

(W. Mädelung)

AL-SUYAYLI, 'ABD AL-RAHMAN B. 'ABD ALLAH, Ibn 'l-Kásim (508-81/1114-85), Andalusi scholar of the religious sciences.

In this they were emulating the Prophet Muhammad who had designated an open space in Medina for a similar use. A distinctive method in the organisation of markets began to emerge in the new Islamic cities of Wáṣíf, Bagdád and Sámrarrá during the late Umayyad and early 'Abbasid periods. Evidence from the 'Abbasid period suggests that there were often a series of markets (su'úk) adjacent to each other and separated only by roads and streets. Outside the central market in Bagdád and Sámrarrá, other markets were created for local residents and there were also a number of smaller markets known by the diminutive suwýq.

Markets, according to al-Shayzari (d. 589/1193), author of the earliest bida' manual, should be as spacious and wide as possible (like the Roman market), and every kind of craft or profession (jian) represented in it should be allocated its own market (su'úk). The reference to separate space for each product sold or manufactured probably implies a series of markets or a row of shops and workshops producing and selling similar goods. Thus al-Shayzari recommends that a market should allocate space to a concentration of shops selling the same product. The shops were arranged in a linear fashion along roads, streets and lanes. The author further recommends that traders who used similar preparation of their products, such as bakers (khábbáh), cooks (habákhan) and blacksmiths (haddúdín) should for safety reasons have their shops at some distance from others, for instance, perfumers (tu'átríwn) and cloth merchants (baázází). A similar market layout was endorsed by Ibn Bassám al-Mu表白taš and other principles applied to the organisation of shops in a market took into account non-topographical considerations. For instance, Ibn al-Djawzf (d. 597/1200), writing about the markets of Bagdád, noted that in the markets of al-Karak the perfumers did not associate with traders selling noisome goods nor with sellers of fancy or of secondhand goods. People of refined culture lived in special residential areas. No working-class people lived in the Saffron Road (darb al-sághara) in Karh', the only residents there were the cloth merchants and perfume traders (cf. Marákiš Bagdád, 28). The segregation of the traders in products that smelled nice (perfumes, sweets, jewellery, silk cloth, etc.) from those dealing in stenchy things, such as tanners, dyers, garbage collectors and bric-à-brac merchants, was a principle which seems to have been widely adopted in laying out these markets. Such social custom, according to Massignon, was responsible for the practice of housing the markets (su'úk) with those of the money-changers (su'úk al-sayyář) (AbdÁl Bagdád, 84). Another reason for grouping the shops of jewellers and money-changers together was probably the fact that these commercial enterprises were monopolised by Jews and Christians.

Al-Shayzari's views on the topographical organisation of markets, in which shops and workshops were grouped together for manufacturing or selling similar goods, reflect the broadly-accepted principles followed by Arab town-planners in the early Islamic period. Our knowledge of the early Irákí markets goes back to the 1st/7th century, when Bagr and Kifá were laid out using these principles, according to al-Tabári. Bagr was founded in 583/1187 on the site of the base camp established by Utba b. Ghazwán, whose first action was to select the site of the mosque. At the same time, Bilál b. Abi Burda marked out a makeshift market, which was gradually expanded, thus contributing to Bagr's success as a trading centre.
It seems that a site for the town's market was not originally allocated. The governor 'Abd Allāh b. 'Amīr later chose a particular site, which came to be known as sūk 'Abd Allāh. His successor Ziyād b. Abīhi encouraged the settlers to establish a permanent market. The sūk al-.tabbāhīn, which was located within the residential quarters, proved inadequate for a rising population (cf. Naji and Ali, 298-309), and the old market was transferred to the Bilāl canal (nahār Bilāl). Most of the early markets of Baṣra were designated open space, and permanent shops (hānād) were not built until the 3rd/9th century.

During the 1st-2nd/7th-8th centuries Baṣra's markets selling specialised wares were located in a single space or road; for instance, the leather market (sūk al-tabbahtūn lit. tanners' market), the camel market (sūk al-ahbl), market of the straw sellers (sūk al-tabbahtūn) and the locksmith's market (sūk al-kaffīfīn). The Mirbad [g.v.] market was situated at the caravan station on the edge of the desert, where town-dwellers and Bedouin gathered to sell camels and other animals and to listen to poets reciting poems and orators speaking on current affairs. By the 3rd-4th/9th-10th centuries, the great market (sūk al-kadāhin) was located at the junction between the Maqḍīl Canal and the Ibn 'Umar Canal, where a variety of products, including glassware, bottles, combs, textiles, cooked food, flour, fish, fruits and vegetables were sold. Carpenters and tailors also had their shops there. The shore market (sūk al-kadāhin) lay in the residential area along the Fāy Canal. It also had a food market (sūk al-tālūm), which sold flour, rice, dates, meat, vinegar and second-hand goods. In addition, there was a money-changers' market, a goldsmiths' market and a slave market (sūk al-nakhtūn).

Baṣra's trade with foreign merchants was conducted through the ancient port of al-Ubulla [q.v.], which was linked to the garrison city through a canal dug by Ziyād b. Abīhi (Yāqūt, Buldān, Cairo 1906, i, 89-90). One traveller noted in 443/1051 that al-Ubulla was located to the south-west of Baṣra, and the Shat al-'Arab [q.v.] lay to the east of this port, which had thriving markets, caravanserais, mosques and luxury villas. The Ubulla canal was busy with boats carrying merchandise to and from Baṣra. Nāṣir-i Khusrāw visited the city in the mid-5th/11th century and found that Baṣra's markets opened for business at different times of the day. For instance, a morning market was held at sūk al-Khursān, a mid-day one at sūk 'Ulbūlā and a late-afternoon one at sūk al-kadāhin (the lintmakers' market) (Safār-nāma, 91-5).

Kūfa, which was founded shortly after Baṣra, was a better planned town. However, al-Tabarī does not specify the sites of its markets. Kūfa began with an open-air market. 'Alī b. Abī Tālib, who moved his capital from Medina to Kūfa, is reported to have said "For the Muslims, the market is similar to the place of worship: he who arrives first can hold his seat all day until he leaves it" (al-Balāḏūrī, Futūḥ, tr. Hitti, 463-4). The same theory that a seller had a right to a space in the market was upheld by the governors al-Maghīra b. Shu'ba and Ziyād b. Abīhi, who held that a trader who sat in a specific space in a market place could claim the spot so long as he occupied it. This meant that no permanent shops were built in the market of Kūfa during the early Umayyad period and that these were only erected during the caliphate of Hī bah by Khalīl b. 'Abd Allāh al-Kaṣrī. Endorsing al-Balāḏūrī's statement, al-Ya‘kābi affirms that Khalīl al-Kaṣrī built markets and constructed a room and an arch (tāb) for every trader (K. al-Buldān, 311). Yākūt, on the other hand, recorded that the Asad Market (sūk Asad) built at this time in Kūfa was the work of Asad b. 'Abd Allāh al-Kaṣrī (Buldān, v. 175). Setting up a temporary stall/shop in a market incurred no tax during the 1st century of the Abbasid period. According to al-Muqaddamī, the market in Baṣra during the 3rd-4th/9th-10th centuries, included the following craftsmen: the book and parchment dealers, carpenters, goldsmiths and smiths; the smiths, butchers and bakers, who worked in an open space near the central mosque. Al-Dāhūzī recorded that much of Kūfa was in ruins in his time (K. al-Buldān, 500). Most of the cost of living was higher in Kūfa than in Baṣra. For instance, building a house in Kūfa or Baghdād cost 100,000 dirhams, whereas a similar house in Baṣra cost half as much (ibid., 503-4). According to Massignon, the market in Kūfa during the 3rd-4th/9th-10th centuries, included the following craftsmen: the book and parchment dealers, carpenters and paper-sellers were sited on the kūfa side of the city's major mosque; other crafts nearby included datesellers (tamārūṭ), the manufacturers and sellers of soap (ashāb al-sūbih) and grocers (bakkalān). There were also carpet-sellers (ashāb al-annāṣ) and cloth merchants; laundrmen (kaṣāṣrah) at Dār al-Wālid, butchers (gazzārīn) and wheat merchants (hamuṣīn); sellers of roast meat (sawwakān); other merchants who were neighbours of the tradesmen were money-changers (sayyāfūn) and goldsmiths (sayyāghūn) (Exposition du plan de Kūfa, in Opera minora, iii, 50-1). The markets of Kūfa flourished throughout the 'Abbāsīd period, and after, according to Ibn Ḫujayb and Ḥamd Allāh al-Mustawfī, but details of commercial activities are lacking in most of our sources. While visiting Kūfa, the Spanish traveller Benjamín of Tudela (ca. 1173) reported that the Jewish population of about 70,000 had an impressive synagogue (The world of Benjamin of Tudela, 226). These population figures were probably exaggerated; nevertheless, they remain significant. Jews in the medieval Middle East were well known for their commercial activities and their craftsmanship as jewellers, and were also famed as bankers and money-changers. Their presence in large numbers in the predominantly Shiʿi city of Kūfa (only 2,000 Jews lived in Sunni-dominated Baṣra) would tend to suggest that the former was still an important commercial centre in the late 'Abbāsīd period. But when Ibn Ǧubayr visited Kūfa, he found that it was merely a caravan station for pilgrims from Mawṣil and Baghdād travelling to Mecca; the commercial city had fallen into ruins as a result of attacks by Bedouin. However, he found the neighbouring Nadjaf a populous town with a thriving market, admiring the fine and clean sūk which he entered through the Bāb al-Ḥadra. He then offers details of the layout of the Nadjaf sūk, beginning with the food and vegetable shops, markets of the greengrocers, cooks and butchers, the fruit market, the tailors' market, followed by the covered market (kaṣāṣrah) and the perfumers' bazaar, which was close to the alleged tomb of the Imam 'Ali b. Abī Tālib. Al-ʿWaṣfī [q.v.] was founded by al-Hādjīdājī, and its markets, according to the local historian Buldānī (d. 292/905), were well planned. The layout of the market allotted to every trade a separate plot of land and segregated each craft or trade. Each group of tradesmen was given its own money-changer (ṭūlīkhi ʿWaṣfī, 44). ʿĪyāb b. Muṣṭwīya was appointed inspector of the Waṣfī market; a kind of toll or rent was collected from the tradesmen. The sūk was divided into two broad sections. On the right side of the market the shops of the food-sellers, cloth merchants, money-changers and perfumers were located; on the left side, the greengrocers, fruit vendors (ashāb al-fālāḥa) and sellers of second-hand goods (ashāb al-sukat).
established their shops or stalls. Day labourers (nuz'at-dariri) and craftsmen (sunnat) waited for work on a space stretching from the sandal-makers’ road (darb al-khatta) towards the Tigris river. The market was thus an elaborately laid-out affair. This main road was lined with the western side of the town.

In planning a circular-shaped double-walled citadel city of Baghdad, with four massive arcaded gates, the ‘Abbasid caliph al-Mansūr was also responsible for laying out the city’s markets in the arcaded space of the four city gates, following the practice of ancient cities such as Jerusalem. However, after ten years or so, Abū Dī‘afar is said to have been advised by a visiting envoy, the Patriarch, from Byzantium that sitting markets near his palace posed danger to a ruler from foreign spies visiting the markets in the guise of traders. Shortly before the removal of the markets from the arcades (measuring 15 x 200 cubits) of the four gates, there was a riot incited by a certain Yahyā b. ‘Abd Allāh, whom Abū Dī‘afar had appointed the city’s mayor, for which Yahyā was executed. Nevertheless, the emergence of the multi-tatis in Baghād heralded the rise of this urban institution which regulated the ethical behaviour of traders and craftsmen in the ‘Abbasid markets [see Hisba].

The markets of the Abbasids were described in the Travels (Khitat Baghdad, 40–3). In 1375/1957, the city’s markets were transferred to the district of al-Karkh [q.v.] where shops and workshops were laid out on the principle of selling homogenous products in adjacent shops/stalls systematically arranged in rows of roads (darb, pl. darabi) and streets (sikka, pl. tisak). The markets of the butchers, who carried sharp tools, were allotted a space at the far end of the market. Thus according to al-‘Ibād b. al-Mu‘aṣṣar, al-Mansūr instructed his officers Ibrāhīm b. Huwayhā al-Kufī and Khīrād b. al-Musayyab al-Yamanī to develop the central business district at al-Karkh on the west bank of the Tigris. Al-Mansūr’s successor al-Mahdī was later responsible for laying out the markets at the Bahā al-Tāk and Bahā al-Shā’r in the east bank of the Tigris, around the palace of Khuld beginning in 143/760 for the prince al-Mahdī, and this had its own markets: the fief of Badr al-Mu‘aṣṣar and the market of the hospital (suk al-khasṣab), the carpenters’ market (suk al-tāl), the wood-sellers’ market (suk al-ṣuwaysa6), the fruit market of Abdunn and the market housed in a splendid building. Next to Arabic, there were markets selling all kinds of goods; these included over a hundred shops selling paper and books and the shops of copyists (al-Ya‘kūbī, Baldūn, 245). These workshops spread from the Tāk al-Harrānī to the new bridge on the Sarāt Canal, occupying both sides of the road and on the bridge itself. Al-Ya‘kūbī, 246, states that, in his time, the market of al-Karkh occupied an area two farāsks in length from Kaṣr Waddād to the sūk al-thuldriri (Tuesday Market) and one farāsk from the Kaṣr al-Rabī’ towards the Tigris. Each trade was located in a well-known street and the shops and workshops were arranged in rows of shops. Craftsmen of one kind did not mix with another kind and were segregated from those of other markets, each market constituting a separate unit. The Harb b. ‘Abd Allāh Street was the largest street around which people from Bukhara, Marw, Bukhārā, Khuttal, Kabul and Khīratām settled (248). In the same locality was located the dār al-rakāk, where slaves were bought and sold under the supervision of al-Rabī’ b. Yūnūs. When the Andalusian traveller Ibn Dūbayr visited Baghād in the 6th/12th century, he found that the Harbiyya markets and residential areas had declined. He also noted that the market of the hospital (sūk al-muṣirīn) where physicians attended the sick every Monday and Thursday, was located at the old Bara Gate in west Baghād. The shops and workshops of leather workers (dabkabān) were situated at the ‘Irā Canal on the west bank of the Tigris away from the main market of al-Karkh, and not far from a rubbish dump (kunds) and an ancient graveyard (Travels, 2, 234–5, 244). In 449/1057, a fire caused extensive damage to the food market (sūk al-tāmām), the wood-sellers’ market (sūk al-khāshāb) the carpenters’ market (sūk al-nadigārin), the butchers’ market (sūk al-djazzārin), the dyers’ market (sūk al-sujjāb) and the market of the perfumers and chemists (sūk al-chemists) which were sited in adjacent buildings (Khitat Baghād, 41–43).

On the east bank, construction for the palace of al-Khulī began in 143/760 for the prince al-Mahdī, and this had its own markets: the fief of Bādī-
Wasif housed the ēsuk al-atash; in east Baghdad, there was a ēsuk Khudayr, from Central Asia and from the Far East as far as China, and al-Dīżāḥ in his K. al-Tabāsuṣr bi 't-tīgāra gives a list of exotic products available in īrāk’s markets.

When al-Muṭāṣim built the city of Sāmarrā’ (q.v.), he followed the established pattern for earlier markets in Islamic cities such as Baghdad. After laying out the palace and public buildings, he marked out the site of the chief mosque and built the markets around it; the rows of shops and workshops were made spacious and every kind of product was sold in adjacent shops. In the north of Sāmarrā’ some groups of Turkish soldiers were allotted land on which to build their houses, but the barracks of the Turks and the men of Farghāna were established far away from the markets so that these troops did not mix with local people and traders. Some folk were settled further north, in the area of al-Dūr, where small markets, some shops and butchers’ stalls were built for the muwalladun. The kafṣa or belfry of Hīzām on which the slave market was situated, was near the guard headquarters and prison. Shops and rooms for housing slaves were located there, and on this main thoroughfare there were houses for traders and markets where craft and product were sold separately. This was Sāmarrā’ second big market. Outside the old Sāmarrā’, al-Mutawakkil built a satellite town, where all the traders of demeaning status, such as the sellers of barley beer, harṣa soup and wine (aṣḥāb al-fakāk) were born and reborn were isolated from the rest of the market. Market taxes and rents (ghalā wa-mustaghfīlāt) collected in Sāmarrā’ amounted to ten million dirhams a year.

Mawsīl also had its markets, and its Wednesday (sūk al-arba’ād) and Sunday Markets (sūk al-āhad) were well known as early as the 2nd/8th century. The local historian al-Azdì mentions other markets, including the hay market (sūk al-baṣīgh) and market of sellers of saddles stuffed with straw (sūk al-katāqāt) and food market (363). Al-Maḵāḍdāsī noted that Mawsīl had fine markets, which extended to the tanners’ road and gypsum sellers’ road (dāra al-qaṣṣāṣīn). In the city’s square (marābāṭa), near the inns, was the Wednesday Market, where farm labourers (akbara) and harvesters (haqawṣ) came from the surrounding countryside to seek temporary or seasonal work in the city. From Mawsīl’s covered markets, provisions for Baghdad were transported by boats and caravans. Among other towns, al-Maḵāḍdāsī cites Kaṣr Ibn Hubayya, which had a large concentration of weavers and Jews in a thriving market economy. At the same time, Tīkīṭ was a sizeable town, where a monastery provided the focal point for local Christian pilgrimage and many woolen workers settled there in order to meet the demands of the pilgrims.

SUKARNO, Soekarno, the first President of the independent Republic of Indonesia (q.v.) from 1945 to 1967 (b. 6 June 1901, d. 21 June 1970).

His father, Raden Sukemi, came from lower Javanesen nobility and worked as a teacher and civil servant, while his mother originated from a Balinese brāhmaṇa family but was excluded after her marriage to her Muslim husband. Sukarno’s name in his childhood was Kusno. Later his father renamed him Tjokroaminoto. This expectation had first appeared in Java in the 17th century. Tjokroaminoto himself, however, is said to have stressed that the movement for independence did not involve establishing the rule of a Ratu Adil, but open compromise against evil and injustice but open to mercy and compromise in one’s own quarter, and much of his later political vocabulary was rooted in the symbols of zgung (shadow play) performances, where the stories of the Mahābhārata are displayed, than to squawg (shadow play) performances, where the stories of the Mahābhārata are displayed, than to
but of a *ratuning adil*, a realm of righteousness ruled by the people and their representatives.

During his five years in the Hogere Burger School (HBS) in Surabaya (1916-21) Sukarno became not only acquainted with the aims and targets of the Sarekat Islam (SI), but C. Hartog, teacher of the German language at the HBS and co-founder of the "Indische Sociaal Democraatse Vereeniging" in 1914, introduced Sukarno to socialism and Marxism, warning, however, against too radical action against Western capitalism and favouring an accelerated evolution of the indigenous society and its economy. Among the Indonesian leaders of that time, a controversy between more universal, international, socialist and radical options on the one hand and views dealing more with the "national" problems in the Dutch colony and favouring stepped-up co-operation with the government for achieving freedom on the other, led finally to a split in the Sarekat Islam. In 1921 the Communist Party (PKI) was established and communists were expelled from the SI, albeit against the will of Tjokroaminoto, who feared a decay of the Nationalist Movement, but thus urged by Haji Agus Salim, another SI leader. It is noteworthy that the communalism in the Indonesian version of Hindu terminology, particularly that of the modernist movements in both communities, Atatürk and Gandhi being among their favourites. After 1921, the SI became more receptive to the Islamic international movement (so-called Pan-Islamism (q.v.)).

After his successful graduation from the HBS and his marriage with a daughter of Tjokroaminoto, Sukarno moved to Bandung in 1921 and there enrolled as a student in the newly-established Technical High School, where he graduated in 1926 as a civil engineer. In Bandung, Sukarno met with more radical nationalists like Douwes Dekker and Tjipko Mangunkusumo, both co-founders of the Nationaal Indische Partij (NIP) whose leaders resided in Bandung. Deeply disappointed with the reviving colonial attitudes and measures after World War I, they refused to cooperate with the government and its institutions, including the Volksraad (consulting body). Sukarno adopted their position and thus estranged himself from Tjokroaminoto and even from his wife, whom he divorced. Thus he became what he remained: a convinced and fervent nationalist advocating religious and ethnic tolerance and equal rights for all Indonesians as internal goals, and fighting capitalism and co-operation with the unjust government as external measures. In contrast to nationalist students who had spent some time in the Netherlands and experienced there a democratic society and a well-functioning administration of the law, Sukarno, lacking such experience, viewed everything Western with deep suspicion and antipathy.

After his graduation, Sukarno dedicated his time and energies to efforts towards uniting the different anti-colonial parties and groups, all of which were pursuing quite different options. Nationalism was endangered from two sides: internationalism and regionalism. Therefore he urged the three strongest groups, namely, the Nationalists (NIP), the Islamic Nationalists (SI), and the Marxists (PKI), to find one voice in fighting against the "Kaurawas", the representatives of colonialism. All nationalists should be united in one goal: achieving *Indonesia merdeka* (an independent Indonesia). On this point Sukarno was not only an analytical thinker, but also—based on the world view of *wong*—a bit of a mystic: the notion of nationalism, national unity, resembles a revelation (teady) given by God, and to strive for it is like an act of liturgy or service (bakti), the work of a true *karmiya*. The space of nationalism was as "wide as the air", a perception already present in the early Sarekat Islam, where Marxists, Christians and others were active together.

After both the failure of the new ruler in Arabia (since 1924), 'Abd al-'Aziz of the Al Su'id, to call a conference of the Islamic world, and the founding of the Nahdlatul Ulama party in early 1926 in Java, with the aim of safeguarding traditionalist Islamic teaching in the Holy Places, the SI lost interest in pan-Islamic visions. Sukarno and Tjokroaminoto became reconciled, and Haji Agus Salim encouraged Sukarno to proceed with his plan to establish a Federation of the biggest nationalist organisations, including his own, the "Nationalist Union of Indonesia" (Perhimpunan Nasional Indonesia: PNI) founded in July 1927. Because of communist riots, the PNI had been outlawed in 1927, leaving the struggle for independence to the nationalists and the national Islamists.

Sukarno's self-confidence grew apace. Those who did not agree with his radical attitude but favoured a more consultative way to deal with the Dutch, while firmly striving also for independence, like the socialists, were not included in his front of the "Pendawas". But the colonial government's actions seemed to justify his suspicion and adversary attitude: even people ready for compromise like Tjipto Mangunkusumo, were attacked by the Dutch with false accusations and exiled.

In 1930 the outbreak of a Pacific war was expected, one which, it was hoped, would bring colonial rule in Asia to its end. In Indonesia, old prophecies related to Jayabaya, a Javanese king of the 12th century, who is said to be the source of the *Ratu Adil* expectations as well, foretold the victory of a "yellow people": Sukarno, and with him many other people from India to China, expected the Japanese to take the leading role in this forthcoming anti-colonial revolution, remembering their victory over Russia in 1905. Combining Jayabaya with Karl Marx's prediction of the final victory of the suppressed proletariat, Sukarno firmly believed in the imminent victory of the "brown" people, or Pendawas. Although imperialistic themselves, the Japanese would at least crush the power of the U.S. and England and other colonial powers from the West and thus pave the way for final liberation. But to prevent such expectations causing unrest, on 29 December 1929 the colonial government detained all leaders of Sukarno's PNI, including himself. Although it was impossible during the subsequent trials to prove that the PNI or Sukarno himself had any concrete plans for an insurrection, he was sentenced to four years imprisonment in December 1930, thereby becoming an innocent martyr for many Indonesians. After an act of clemency by the then departing Governor-General De Graef, Sukarno was released at the end of December 1931. But both organisations led by him, the PNI and the Federation, did not survive his detention and were dissolved by the remaining leaders. This was criticised by a leader of the Perhimpunan Indonesia (PI, "Indonesian Union") in the Netherlands, Moh. Hatta, who accused Sukarno of only provoking the government and not trying to educate the people at the same time. For Sukarno and his supporters, these events only showed how important he himself was for the independence movement. Thus the nationalists split into two groups: one gathered into the PNI Baru ("New")
around the socialist Sutan Sjahrir who, like Moh. Hatta, originated from West Sumatra, preferring incising analyses of the political and societal situation and the functional role of organisations, and the other gathered around Sukarno in the Partindo (Partai Indonesia), which emphasised more strongly a feeling of unity that took in specific dissent. Partindo now became the platform for Sukarno's new concept of "Marhaenism", which he also called "Socio-Nationalism"; Marhaen was a common name mainly among Sundanese farmers (cf. Dahm, 110). A feeling of social responsibility would unite all Indonesians— not only the proletariat—to establish social justice in the nation. No opposition or deviation would be tolerated. The leadership of a Marhaenist party would have the right to punish anyone who disturbed the consensus by exclusion. For this attitude, Sukarno was much criticised by Sutan Sjahri and Moh. Hatta, who urged the acceptance of democratic rules. On 1 August 1933, Sukarno was again detained and consequently exiled to the island of Flores. He terminated his membership in Partindo, which later (1936) dissolved itself. His isolation in Flores encouraged him to revive old acquaintances in the SI, which meanwhile had become Partai Sarekat Islam Indonesia (PSII), trying to harmonise Islamic internationalism with Indonesian nationalism. Friendly contact with Catholic missionaries seems to have strengthened his religious awareness. In 1938 he was transferred to Bengkulu (Bencoolen), West-Sumatra, where he became a member of the reformist Muhammadiyah social organisation. There he joined those who pleaded for a radical new interpretation of Kur'an and Sunna, which one was sometimes too rationalist for other members like Moh. Natsir, who urged obedience to tradition in matters of faith first and then revision of social rules. To justify his more radical position, Sukarno pointed to the progress Atatürk and the Turkish Kurs came about in Turkey. He pleaded for a separation of state and religion, which led to another emotional controversy with Moh. Natsir in 1941.

When Japan started occupying Indonesia in 1941, Sukarno, who returned to Java in July 1942, was open for co-operation with the proviso that the Japanese should help the Indonesians to achieve their independence in accord with Javabaya's prophecy. The foundation of the "putera" (Pusat Tenaga Rakyat, centre for people's work; putera means literally "son"), intended as a basis of the people's support for Japan, became Sukarno's basis of action. The ambiguous policy of the Japanese—sometimes treating "the Southern Regions" as a colony, occasionally also promising self-government, and sometimes favouring the Islamist nationalists, while on other occasions preferring the religiously neutral nationalists—led to an estrangement between Sukarno and the Japanese government, which added to Sukarno's popularity. But after the announcement of Prime Minister Koiso on 7 September 1944 that all Indonesian peoples should be granted independence, and despite the people's continued distrust of and contempt for those who co-operated with the Japanese, Sukarno on the one hand urged support for the Japanese, who faced the advancing Allied forces, and on the other hand urged the Japanese to speed up their own thus losing in the end the still-occupied Indonesia and therefore re-establish colonial rule. His violent pro-Japanese agitation and loyalty to Japan, and his emotional anti-Western rhetoric, again earned him much criticism. But on 28 May 1945, the Investigating Board for Preparatory Work on Indonesian Independence (the BPUPKI), appointed by the Japanese, started its work. On 1 June, Sukarno presented his famous concept of the Pancasila ("Five Principles"), meant to become the weltanschauliche basis of the Indonesian Constitution to which all Indonesians could consent (Eng. tr. in: Mangullang, 1980;: Nationalism (one nation, kebangsaan), Internationalism or Humanity (perikemanusiaan), People's Rule (kekyataan, always striving for consent, nufakat, from Ar. muwafaka), Social Justice (keadilan sosial, originally social welfare, kesejahteraan social) and Divine Oneness (Ketuhanan yang Maha Esa). These could also be reduced to three: socio-nationalism, socio-democracy and Divine Oneness, or to one: gotong royong (the Javanese principle of mutual co-operation), as Sukarno stated. Complaints from the side of the Islamists led to a compromise on 22 June, stating the Ketuhanan as first principle with the addition that all Muslims are obliged to follow the quran; this compromise became known as the Jakarta Charter. Encouraged by the Japanese, who referred to "Asian traditions", and very much to the liking of Sukarno, it was also agreed that the independent state should resemble a presidential democracy with a parliament (Dewan Perwakilan Rakyat: DPR) only serving as a consultative body. A People's Consultative Assembly (Dewan Permusyawaratan Rakyat: MPK), consisting of the members of the DPR and other members nominated by the government or by people's organisations, meeting once every five years, was to elect the president and define the general political guidelines for the government. In the general anti-colonial mood, Sukarno and others favoured the inclusion into Indonesia Merdeka of peninsular Malay and territories on Borneo and Timor still claimed by the Dutch. This proposal was rejected by the Japanese, who wanted Indonesia restricted to the former Dutch possessions. Under pressure from external and internal events, Sukarno, assisted by Moh. Hatta, declared the independence of Indonesia in the early morning of 17 August 1945.

During the following days the Preparatory Committee for Indonesian Independence, inaugurated by the Japanese on 7 August, met and passed the provisional constitution (Basic Law), with a modified Pancasila, included in the preamble: as second principle there now stands Internationalism, with Nationalism becoming the third principle. The provision of the Jakarta Charter for the Muslims was omitted because it implied a special relation with the Muslims which would endanger the neutrality of the state in religious matters. Sukarno was elected president and Moh. Hatta his vice-president. A Central National Indonesian Committee (Komite Nasional Indonesia Pusat: KNIP) was to support the government until a parliament could be elected, and Sukarno favoured the formation of one political party only, a Partai Nasional Indonesia. In this, however, he was opposed by Sutan Sjahri, Moh. Hatta and some of the Islamist nationalists. To avoid an open domestic crisis, Sukarno agreed to the formation of different parties and he accepted also that ministers should be accountable to the parliament or the KNIP. Thus Sukarno's short-lived presidential government came to its end, and on 14 November 1945, a parliamentary government was elected with Sutan Sjahri as prime minister.

Sukarno's popularity increased again when he, Hatta, Sjahri and other leaders of the young republic were detained by the Dutch, who wanted to re-establish their rule and punish at the same time those
who had collaborated with the Japanese. After the end of the Dutch police actions and acknowledgement of Indonesia's independence in late 1949, Sukarno was accepted as president, an office still to his own dislike, however, as it was hampered by the liberal constitutions that were drafted in 1945 and 1950. He met other challenges from the militant Islamists, who staged insurrections in West Java and Sulawesi, and from regionalists, who opposed the strong political and economic centralisation in Java. His international reputation increased in 1955 when, inspired by the second principle of Pancasila, he succeeded in hosting in Bandung the first conference of independent "Third World" leaders (his opening speech is in Feith and Castles, 454 ff.). During the political campaigns preceding the 1955 elections to the first parliament, and, some months later, to a Constitutional Assembly (Konstituante) to design a final constitution, Sukarno made it clear that he wanted a presidential republic based on the Pancasila, against the option of an Islamic state, and also a unitary state, against demands for more autonomy in the areas outside of Java. In opposition to Sukarno's agitation, Moh. Hatta resigned as vice-president in 1956. Anticipating a great majority of votes for Sukarno and liberal parties, Sukarno dissolved the Konstituante on 5 July 1959 dissolving the Konstituante and declaring the Basic Law of 1945 as the final constitution. Guided Democracy (demokrasi terpimpin) was the name of the new system, himself being the Great Leader (of the Revolution), as he explained in his independence speech on 17 August 1959, which later became known as his "Political Manifesto" (Mampol), elaborated later by "USDEK", the Basic Law of 1945, Indonesian Socialism, Guided Democracy, Guided Economy and Indonesian Identity. In 1960, Sukarno also dissolved the parliament and later in the same year he banned the modernist Islamic party Masyumi, chaired by Moh. Feith and Castles, 1970; Feith and L. Castles (eds.), Indonesian political thinking 1945-1965, Ithaca and London 1970; D.H. Legge, Sukarno. A political bibliography, London 1972; A. SULAYMÂN b. AL-ḤAKAM b. Sulaymân al-MASTĀʾĪN, Umayyad caliph of al-Andalus, proclaimed at Cordova in 400/1009, died in 407/1016. The two phases of his reign are located in the period of the Andalusī fitna following the "Revolution of Cordova", at the time of the serious political crisis which was to lead to the demise of the Umayyad caliphate in 422/1031.

When the Cordovans put an end to the 'Amirid regime in Qumādā II-Radjab 399/February-March 1009, and replaced the incompetent caliph Hishām II with one of his cousins, Muḥammad al-Mahdī, the latter, on account of his political blunders, speedily aroused opposition, in particular that of the Maghribī Berber contingents of the Umayyad army, whose families had been the object of harassment on the part of the Cordovans. These soldiers, numbering several hundreds, rallied around Sulaymān b. al-Hakam, who was a great-grandson of the first caliph of Cordova, 'Abd al-Rahmān III, and whom they put forward as a claimant to the caliphate. With him, they made their way to the frontier zone of Medina in search of support. Confronted by the former slave governor
of this region, Wadih, they obtained the aid of the Count of Castile, Sancho Garcia, in exchange for a promise to cede frontier fortresses to him. Having defeated the forces of Wadih in Dhu 'l-Hijja 400/1010, they returned to Andalusia to march on Cordova, where they entered after overpowering the quite significant, but disparate and ineffective troops of al-Mahdi. The latter was forced to take refuge in the capital where Sulayman was proclaimed caliph on 17 Rabii' 1/9 November, with the takab of al-Mustać'a

Having placed himself under the protection of Wadih, who henceforward became his "strong man", al-Mahdi rallied supporters in the north and, crucially, obtained the support of Count Raymond Borrell III of Barcelona and of his brother Armengol (Armenqand) of Urgel, in order to march in his turn against Cordova with some 40,000 men, including 9,000 Franks. The defeat of El Vacar (akabat al-bakar, in Shawwāl 400/21 June 1010, 20 km/12 miles to the north of the capital, forced al-Mustać'a to flee and enabled al-Mahdi and Wadih to enter Cordova and restore the caliphate of the former. But this success could not be consolidated, and on b Dhu 'l-Ka'da 400/21 June 1010 Sulayman's Berbers inflicted a heavy defeat near Roneda on the forces of al-Mahdi and their Frankish allies. Henceforth, it was Sulayman al-Mustać'a and his Berbers who found themselves again in a position to lay siege to the capital, which resisted until its surrender on 26 Shawwāl 403/9 May 1013. The Cordovans were killed, including probably the caliph Bay'a

Sulayman al-Mustašän was to last until the arrival of the Almoravids. 

Like all Ghazalys, the Sulayman Khel are notable for their Prankish allies. Henceforth, it was Sulayman al-Mustać'a and his Berbers who found themselves again in a position to lay siege to the capital, which resisted until its surrender on 26 Shawwāl 403/9 May 1013. The town was sacked by the Berbers and numerous Cordovans were killed, including probably the caliph al-Mahdi, although a rumour was later put about claiming that he had escaped.

It is known about the second reign of the caliph al-Mustać'a, which lasted three years until the insurrection against him by the Maghribi chieftain of Idrisid origin 'Abī b. Hammūd, whom he appointed governor of Ceuta. The latter took the capital, killed al-Mustać'a and obtained the bay'a of the Cordovans, who recognised him under the name of al-Nāṣir li-dīn Allāh (22 Muharram 407/1 July 1016). Sulayman al-Mustašän seems to have been ended with more qualities than his rival al-Mahdi, reasonably cultivated but of irresolute character and very much dependent on the Berbers who had put him in power. A large portion of the territory of al-Andalus eluded his authority. He consolidated the local power of certain chieftains who were in process of becoming "party kings" [see mulek al-tawā'if], such as the Tugibid al-Mundhir b Yahya, who had lent him his support in Saragossa. In particular, he appointed his Berber supporters to command regional "fiefs" which were in fact virtually amirates, the most important being that of the Sanhadjī Zīrīs of Granada which was to last until the arrival of the Almoravids.

SULTAN 'ALİ ÜĞLİ

[see GASPRÁLI (GASPRINSKÍ) ISMA'İL], as well as some secular subjects such as arithmetic and the rudiments of geography and modern history. His knowledge of Russian, which he learned from his father, enabled him to study at the Tatar High School (Tatarşakı şəhidlik şəhəri) of Kazan, the only state-sponsored secondary school available to the Muslims of the Empire. From the mid-1890s onwards, a group of pupils formed a secret revolutionary society there, led by the writer Muhammed 'Ayyād Islahi (1878-1954) and influenced by Russian populism; it was to make a profound and lasting impression on the young Soltangaliev. After 1905, as an employee of the Municipal Library of Ufa, he was to participate in the Islahi movement of the young Tatar intelligentsia, of which 'Ayyād Islahi was the most prominent figure. Soltangaliev contributed, under various pseudonyms, to the leading journals of the Urais, most notably Turağalı ("Life"), a reformist Tatar review in which he published translations of the later works of Tolstoy. From 1911 onward he published stories and articles in the Musul'manskaya gazeta ("Muslim Journal") of Moscow, showing the influence of his Tatar and Russian literary models; his themes (reform of education, the status of women, the parasitism of the musul'man rural bureaucracy [in the public good], borrowed from Russian populism, had been promulgated from Kazan since the beginning of the century by authors sympathetic to the Islahi movement such as 'Ayyād Islahi or the novelist and poet 'Abd Allah Tuḵay (1886-1913). During the First World War, Soltangaliev took up a teaching appointment in Baku; from there he contributed to various Russian Muslim periodicals.

December 1917-March 1919. Revolution as an instrument of constitutional change.

In April 1917, Soltangaliev was summoned to Moscow to direct the executive committee of the "Muslim Congress", before making his way to Kazan where he joined the "Muslim Socialistic Committee". Created the 7 [19] April on the basis of Muslim workers' committees, the MSC was led by Mullā Nār Wāḥīdov (Vahitov) (1885-1918) whose project was to unite the revolutionary forces of the Tatar lands into a militarised group. The political ideas of Wāḥīdov—who was to be killed in the early stages of the Civil War—constituted the basis of what would later be called "Soltangalievism"; they centred on the struggle against traditionalism, the liberation of Muslims from Russian domination and the extension of Socialism to all of Islam. However the Bolshevik coup d'état of 26 October [8 November] 1917, imposed Russian power in the Volga-Ural region, since Russians dominated the urban and provincial soviet of Kazan. The party of Lenin was nevertheless seen as constituting a superb school of political theory; Muslim nationalist leaders like Wāḥīdov understood that by imitating them they could, perhaps, neutralise him. After all, Lenin's "April Decrees" [1917] were perceived as allowing the minorities of the former Empire to hope for a right of secession. The leadership of the MSC (Wāḥīdov, and his lieutenant Soltangaliev) sought to exploit the anarchy into which Russia had been plunged to exact concessions from the Bolshevik leaders, who needed all the support they could get. At the end of 1917, Stalin, Commissar of the People for the Nationalities, called on Soltangaliev to direct the Muslim section of his ministry. On 19 January 1918, Stalin created the "Central Commissariat for Muslim Affairs of the Russian Interior and Siberia" (Muskom), headed by Wāḥīdov; Soltangaliev was recruited in June to take charge of propaganda in Muslim circles. Until the offensive mounted by the White Armies on the Volga in July 1918, the regions populated by Muslims in European Russia were covered by a network of regional and local commissariats dominated by nationalist populists, independent of the local soviets which were dominated by Communist organisations. By the Muskom, these commissariats were to form the nucleus of the great "Tatar and Bashkir Republic" promised by Stalin to the Communist Muslim leaders. In a parallel development, Wāḥīdov and Soltangaliev created in Moscow, on 8 March, the Muslim Socialist-Communist Party (replaced in June by the "Party of Communist (Bolshevik) Muslims of Russia")

Autonomous in its relations with the Russian CP, the new party severed links with the "bourgeois" Muslim organisations which were henceforward isolated (an example of this being the dismal episode of the short-lived "Republic of Transbulakia" in Kazan), but sought to gather Muslim revolutionaries into a united front. Wāḥīdov and Soltangaliev concentrated their efforts on the training of political cadres (with the projected Muslim University of Kazan, a long-standing demand of the Islahi movement), and on the mobilisation throughout the Volga-Ural region of the Muslim revolutionary committees (now autonomous). From 1918 onward, however, these regimes were incorporated into Russian units, after the fall of Kazan into the hands of the Whites, who executed Wāḥīdov. In November 1918, at the "First Congress of Communist Muslims", Soltangaliev and Isma'il Firdawsi (1888-1937) a Tatar from the Crime, sought confirmation of the autonomy of the Muslim Communist Party. But Stalin, intent on retaining control of the "colonial revolution", rejected this demand; the crucial moment when the Tatars could argue with the Russians over the direction of the revolutionary movement seemed to have passed. In fact, from the spring of 1919 onward, the Civil War turned on the eastern front in favour of the Bolshevists, and in the Muslim territories reconquered by the Red Army, the civil and military apparatus installed by Wāḥīdov was dismantled.

March 1919-April 1923. Russian monopolism against Muslim polycentrism.

From March 1919, the 8th Congress of the Russian Communist Party (in Moscow, 18-23 March) proposed the suppression of all national communist organisations. The "Bureau of Muslim Organisations"—which had replaced the Muslim Communist Party—was replaced in its turn by a "Central Bureau of Communist Organisations of the Peoples of the Orient". It was the principle of the distinctness and unity of the Muslim world, dear to the former leaders of the Islahi movement, which was thus negated. The "oriental" revolution was making rapid progress, in Persia especially, where the Djamali revolution [g.v.] was supported militarily by the Bolshevists. But the policy of the Komintern in the Middle East was also to be marked by a fundamental divergence between Russians, supporters of monolothism, and Muslims, supporters of decentralisation. At the "Congress of Oriental Peoples" in Baku, September 1920, the ideas of Soltangaliev regarding the liberation of colonial peoples were in collision with those of the Komintern, which was only interested in the East as a source of temporary assistance to the western industrial proletariat, through the weakening of colonial powers. Soltangaliev sought to bypass the obstacle of the RCP by approaching the "Organisation of Communist Youth" (Komsonol); between 12 and 18 September
1920 he convened in Moscow the “First Pan-Russian Conference of Communist Organizations of the Lands of the Orient” where he evoked for the first time, it seems, the notion of a “colonial Communist International”, independent of the Kominintern. Cast in a minority, he succeeded nevertheless in transforming the komsomols of the Muslim republics of Russia into power-bases of his movement.

In the autumn of 1920, after the victories of the Red Army on all fronts, the civil war came to an end. As the Muslim communist party no longer existed and the dream of a great Tatar and Başqır Muslim State had been frustrated (Stalin had opted for the creation of two small and distinct republics, Tatar and Bashkirs), the Muslim nationalist communists turned their efforts towards the new national republics. At the same time, they promoted their ideas externally: Soltangaliev won over an international audience at the Communist University of Workers from the East, founded in Moscow in 1921. Refusing to reject outright the Tatar heritage and the religion of Islam, he also maintained contact with the principal reformist ‘ulama’, among whom ‘Alimdjan Bärıtd (mufti of Russia between 1917 and 1921) and Rüdä al-Dîn Fâhîr al-Dîn (mufti from 1922 till his death in 1936), and sought to maintain their role as cultural intermediaries between the Soviet authorities and the Muslims, essentially rural, masses. Islam was presented as an oppressed religion, whose historical evolution, cherishing among its adherents a strong sense of solidarity, had to some extent resisted the anti-religious campaigns of the early Soviet period. Stalin was soon to see, in these efforts, an aspiration to found an “Islamic Communism” opposed to Marxism-Leninism.

April 1923-November 1928. East versus West?

In the spring of 1921, the 10th Congress of the Russian Communist Party pushed the nationalist Communist Muslims towards clandestine opposition, by denouncing “nationalist deviants”. The notion of a non-Russian socialist party, mooted in the spring of 1919, was revived in November of the same year: a number of leaders, assembled in Moscow by Soltangaliev, decided to create an independent socialist Muslim party, which came into being the following year under the name of İttihat ve Terakki (Unity and Progress). In parallel, from the start of the year 1921, the Tatar Republic underwent a period of intense nationalist agitation, which continued throughout the following two years. At a regional conference of the Russian CP in Kazan, March 1923, the Tatar majority went as far as to pass a motion demanding the expulsion of Russian colonists as well as a radical “nativisation” of the administrative apparatus of the republic; the Tatar communists refused, furthermore, to purge their organisation of its non-proletarian elements.

Shortly after this, in the wake of the 12th Congress of the CP, which witnessed, in April, the denunciation of “local nationalisms”, Soltangaliev was arrested in Moscow on a personal order from Stalin, countersigned by the principal Bolshevists leaders. Excluded from the Russian CP, Soltangaliev, like many former İslâhi activists (such as Culpâın in Central Asia), seems to have been preoccupied by awareness of an insoluble conflict between East and West, and to have been convinced that the Bolshevik revolution was the most dangerous, because the most devastating attempt by the West to perpetuate its domination. Soltangaliev was soon at the heart of a secret organisation led by Communist Tatars and linked with various clandestine groups in European Russia, the Caucasus and Central Asia (İşlâm Ordu in Kazakistan, Millî Firka in the Crimea, the former Himmet in Azerbaycan and Millî İstîhab in Uzbekistan). The political thought of Soltangaliev, from 1923 onward, is known only from the criticisms voiced by his opponents, and the “confessions” extracted in the course of his successive trials. His political programme hinged on the creation of a great Turkish national state in Russia, the “Republic of Turan”, governed by a single party, but based on state capitalism and with economic independence assured by orientation towards the lands of the Far and the Middle East.

An attack on the part of the commissars of the people of the Tatar Republic led to the second arrest of Soltangaliev in November 1928, the prelude to a series of large-scale and bloody purges which were to be inflicted periodically on all the republican communist parties until 1939, not sparing the national intelligencias. Sentenced in 1929 to ten years of hard labour as an agent of imperialism, Soltangaliev was deported to the camp of the Solovki islands on the White Sea. He took advantage of early release in 1934, only to be arrested again in 1937 and tortured, then executed 28 January 1940. On the eve of the Second World War, Soltangalievism seems to have been eradicated in Russia. In Central Asia and in the Caucasus, as the Muslim axioms had made good the lack of cultural development which in the early 20th century had separated them from the Tatars, the latter had lost their status as models to be copied. Born in a land of secular confrontation between Muslims and Christians, Tatar nationalism, initially supposed to be spread beyond the zone of the Middle Volga, was ultimately to withdraw, confined to its place of origin. Soltangaliev, mythologised outside the USSR as the father of non-European, even anti-European revolution, enjoyed in Russia itself only a belated rehabilitation—today virtually limited to the territory of Tatarstan, of which he was not a native. His memory has helped the Turkish-speaking peoples of the former USSR to consider themselves protagonists in their own modern history. But the rediscovery of this history tends to relativise the role played by communist nationalists, giving more credit to the great figures of Muslim reformism. The former and the latter shared, between 1929 and the Second World War, the same conviction of a cataclysmic confrontation between Tatars and Russians, Muslims and Christians, East and West, rural and industrial worlds—a parallelism given insufficient emphasis in studies of Soltangalievism, and in studies of the Muslim reformisms, of which the İslâhi movement was a component.

Bibliography: In the absence of complete works, the most important collection of texts of Soltangaliev is the very selective anthology published by I.G. Giziatullin and D.R. Sharafutdinov: Mirsaet Sultan Galiev. Le père de la révolution tiers-mondiste, Paris 1986, with a very thorough critical bibl., a work which, in spite of its title, establishes the most subtle distinction that has yet been drawn...

**AL-SUNAMI**

*Umar b. Muhammad b. ‘Iwad, Hanafi scholar of mediaeval Muslim India whose importance comes from his work on hisba [*q.v.*], the *niṣāb al-ḥisab, which refers to the author’s own role in this office. Judging by the number of surviving ms., some sixty, the work was highly popular in the eastern Islamic lands. Previous scholars have been uncertain about the author’s origins and life (c.f. e.g. Brockelman, S II, 427). It now seems clear from internal evidence in his book that he stemmed from numerous other sovereigns of al-Mansur, only dirhams of poor quality were minted with the more “caliphal”-sounding one of al-Mu’izz bi-fadl Allah. He did not differ in this respect from numerous other sovereigns of al-Mamun, who refused to adopt a *lakab* not adopting a *lakab* not adopting a *lakab* not adopting a *lakab* not adopting a *lakab* not adopting a *lakab* not adopting a *lakab* not adopting a *lakab*

Like other courts of the taifas, that of the Banu Sumadih was a literary centre, which seems to have maintained a certain ideal of Arabism: it was in response to a poet at the court of al-Mu’taṣım who had insisted on the Arab origins of the dynasty, that Ibn Garcia, secretary and court poet to Muḥammad b. Tughluk (r. 725-52/1325-51 [*q.v.*]); and that he died at the newly-founded town of Almeria. He died in the summer of 484/1091, just as Almoravid troops, having taken possession of Granada, were moving against Almeria; his son resisted for only a few weeks in the *kasaba* before leaving the city by sea to spend the rest of his life in Bougie [*see nāqṣa*]; then governed by the Hammādids. In Ramadan 484/ October-November 1091, the Almoravids absorbed Almeria and the taifa into their empire.

In 443/1052, Abū Yahya Muhammad b. Ma’n succeeded his father, initially under the tutelage of his uncle Abū ‘Utbah on account of his youth. It was during his reign that the power of the Banū Sumadiḥ took on the “royal” forms current under the taifas: he replaced the “amiral” title of Mu‘izz al-Dawla which he bore at the time of his accession to power, with the more “caliphal”-sounding one of al-Mu’taṣım b. ‘Ilāhah and al-Walīḥah bi-‘aṣal Allah. He did not differ in this respect from numerous other sovereigns of taifas in the second half of the 5th/11th century. Coins on which these *lakabs* appeared were minted at Almeria. But it seems that under his reign and in his name, only dirhams of poor quality were minted at Almeria, and in limited quantities, judging by the standard and the rarity of the examples preserved in numismatic collections.

The contemporary geographer and historian al-‘Uḍhrī, a native of the region of Almeria and probably a visitor to the court of the Banū Sumadih, gives in his *Tarāṣ* al-‘alākim a rapturous description of the splendid palace maintained by al-Mu’taṣım in the *kasaba* which dominates the town of Almeria. Furthermore, it is known that there existed a sub-
Deccan capital of the Tughlukids, Dawlatabād [q.v.], the ancient Deogiri, around or after 743/1333-4.

The value of the Niṣāb lies in the fact that it is the first known Ḥanafi text on ḥidā, with its practical and theoretical approaches reflecting al-Sunāmī’s dual functions as a lawyer and a muḥtāsib. The author tackles the common problems facing the muḥtāsib in accordance with the Ḥanafi madhhab, and his insights show the importance of local Indian customs and the practices of daily life, often denounced by him as ḥidā, within the formal framework of Islamic law.

(MAWL. Y. IZZI DIEN)

SÜRGÜN (tr., lit. “expulsion”), a term of Ḥanafi administrative and social policy.

It encompasses a wide range of practices employed by the Ottomans, not just to remove dissident elements from politically troubled provinces, but also more constructively to achieve vital state-defined economic and military objectives. The term is better translated as population transfer or strategic resettlement, and its purpose was fundamentally different from the purely punitive sentence of internal exile or banishment (ṣef) temporarily imposed on individual members of the ruling elite who had incurred the sultan’s disfavour. The use of surgiin forcibly to remove fractious elements such as uncooperative tribes or rebellious city populations from persistently troublesome areas is documented as part of the Ottomans’ attempts to impose control over Anatolia, especially during the closing decades of the 6th/14th and the first part of the 9th/15th century. However, its use as a weapon for political suppression without concomitant social or economic benefits was frowned on in Muslim popular opinion (see Ibn Kêmâl’s remarks on the mass deportations from Lürende to Istanbul in 872/1467-8, as cited in Bilî, . . . , ed., Lürendeyé bir ışık etti ki üzerine dağiman-i bed-kâh dâhî ışe, hâle etmezdi). In principle, surgiin was designed not to punish the source area which contributed a part of its labour force as emigrants but to provide some advantage to the target area to which they were being dispatched as immigrants. It had the real potential for providing the double benefit of relieving population and land pressure in the source territory while at the same time acting as a stimulus to the growth and development of the target territory. It also facilitated the transfer of groups with essential skills to the areas where they were most needed. The underlying purpose, whether it was the repopulating of Istanbul after its capture in 856/1453 by the transfer of population groups with specific commercial and artisan skills to provincial cities in Anatolia and (after 880/1475) the Crimea, or the settling of rural populations as agriculturalists in newly-conquered territories in Rumelia, was essentially the same: the settlement and development (isktân ʿe ṭanîr) of key strategic areas identified as either economically fragile or militarily insecure. This logic applied with particular force to the period of Ottoman territorial expansion in the Balkans lasting until the end of the 10th/16th century, but strategic resettlement of tribes and displaced peasants also formed an important dimension of Ottoman rural development initiatives in subsequent periods of territorial contraction. The creation of new settlements on the Upper Euphrates in the 1100s/1690s using tribes transferred from contiguous regions of Anatolia is just one example of the continuing use of surgiin in later centuries (see the study by Orhonlu cited in Bilî, and, for developments in the 19th century following territorial losses in the Balkans and Russian expansion in Crimea and the Caucasus, see mutâlîqr. 2.)

Bibliography: 1. Sources. O.L. Barkan (ed.), Kanunlar, İstanbul 1943, 272-7 (Kanunname-i liva-i Sâlîste, 274, § 8, on the tax and residence obligations of surgiin populations from Anatolia); idem (ed.), text and analysis of the surgiin hikmât sent in 960/1552 to districts of southern Anatolia to promote population transfers to Cyprus after its conquest in the previous year, İstisâat Fâkilîsî Mecmua, xi (1952), 559-60 (text transcription), 562-4 (facs. of múhtümûm document); Ibn Kêmâl, Tavarîh-i Al-i Osman. AL-SUWAYN›, SA’D B. ‘ALÌ BÀ MAHMUD (d. 857/1453), ‘Alawi sayyid of Hadramawt. He was the student of ‘Abd al-Rahmân B. ‘Ali as-Madhâ, the patron saint of Aden (see ‘ALAVI, d. 914/1508; see ‘AYDARIS). It was this last who was to compose the ma’likh of al-Suwaynî.

Indo-Persian term zamindar, which included also feudal rights for the zamindar [q.v.] who was in charge of it, while the ta'allukdar, originally considered as a tax farmer, was only in charge of collecting the revenue of his ta'alluk, except for a small part of it on which he had zamindari rights. For this reason, ta'allukdar ranked lower than zamindars.

From the 18th to the 20th centuries, under the late Mughals, the successor states and colonial rule, the words ta'alluk and ta'allukdar came to mean different things according to place and time. In Northern India, the ta'allukdars were men of substance who acquired hereditary and transferable rights on their ta'alluk and were barely distinguishable from the zamindars in Bengal before the British conquest, working as the subordinates of powerful zamindars, they brought large tracts of land under cultivation; in Awadh [q.v.], they collected taxes over large estates and constituted a rich feudal class of landlords whose fortunes lasted up to the end of the British period. Elsewhere, the word ta'alluk meant only a fiscal jurisdiction of varying size, equivalent to a district in the state of Haydarabad [q.v.] and only to a fraction of a village in Nepal; the office of ta'allukdar as that of tax collector died out during the British period, except for a small part of it, while the ta'allukdar bi 'l-nasab (madj_hul al-nasab), which included also feu-

Adoption as practised before the revelation of Kur'an, XXXIII, 5, 37, was plenary, entailing the same legal consequences as natural filiation (the right to inherit, etc.), and more significantly, the same prohibitions applied to marriage; the verses abrogate adoptive filiation and, explicitly, the prohibitions applying to marriage which would result from it. This is a good example, according to the Hanafi-Dhâsa, of abrogation of the aynun by the Kur'an (a theoretical remark directed against al-Shafii [q.v.], who did not agree that the Kur'an could abrogate the aynun). Muhammad intended to marry Zaynab bt. Dhâshq [q.v.], the repudiated wife of Zayd b. Hârîthah, who, if plenary adoption had remained valid, would have been absolutely forbidden to him. The marriage of Muhammad with Zaynab bt. Dhâshq would not have been legally permissible without the abrogation of plenary adoption (see al-Mawardi, al-Nakht wa l-fu'âna, Tafsir al-Mawardi, 6 vols. Beirut 1412/1992, iv, 370ff. and 405ff.).

Numerous students of Islamic Studies have seen this episode from the marital life of Muhammad as a sign of the moral weakness of the Prophet of Islam. It is true that certain 'ismam of the classical epoch had difficulty hiding their embarrassment, and it is certainly no accident that Faakhir al-Din al-Razi [q.v.] undertook to show that the marital life of the Prophet was in no way governed by his carnal appetites, with the following commentary on Kur'an, XXXIII, 37: "Here is evidence that the marital life of the Prophet (al-taqad min al-nabî) did not have the purpose of satisfying the carnal appetite of the Prophet (ka'dî shakwat al-nabî)" and on the contrary, its purpose was to render the Law explicit though hisagency.

In other words, there was nothing here other than one example among others of "clarification of the Law through the agency of the Prophet" (bayda al-Shari'a bi-fih), see al-Razi, Tafsir al-kabîr wa mafdi'uh al-ghayb, 7 vol., Beirut, n.d. (xxvi, 1981, 36). The prohibition of adoption under the terms of the revealed Law (Shari'a) is no doubt more easily understood if it is remembered that Islam regards the "natural" family, rather than the tribe, as the basis of the community (umma). From this perspective, which is that of Abrahamic monotheism in general, adoption appears as a disruptive element, confusing "incages" (nasab, pl. nasab), or the lines of "natural" filiation which reflect the familial order as willed by the Divine Legislator (see Ps., al-Shafii, Abkâm al-Kur'ân, ed. Kâthârî, 2 vols., Damasusc n.d., ii, 164).

If reference is made to the "occasion" of the Kur'anic prohibition of adoption—or the case of Zayd—"it can well be understood why, in classical doctrines, a de facto distinction is imposed between, on the one hand, the child whose genealogy is known (marjî al-nasab) and on the other, the child whose genealogy is unknown (mâshhî al-nasab), the lâfî [q.v.] ("founding"), who is the object of a specific chapter in treatises of fikh. In the second case, a recognition of paternity, with transference of the nasab (istilhâk or ikhri bi l-nasab) by the finder of the child proves possible, under certain circumstances, and even facilitated, since Muslim jurists show themselves very flexible on this point, demanding only indications of "probability" in such recognitions and not formal proof.
TABANNIN -- TABĪYYAT

(see M.S. Sujimon, *The treatment of the foundling according to the Hanafis*, in *ILS*, ix/3 [2002], 358-85). As for the possibility of passing from one known genealogy to another, it is unequivocally barred according to all legal schools. In the Muslim legal order, the creation of a genealogy *ex nihilo* thus proves easier than a change of našāb.

At the present time, only one Arab Muslim country, Tunisia, has had the audacity to contravene openly the Qur'anic prohibition of plenary adoption. In 1958, the Tunisian legislature, more aware of new social realities than others, established adoptive filiation in the full sense. It seems nevertheless that in the tribunals interpretation of statutes of adoption is often restrictive and sometimes expressly infringes the terms of the legislation in force (see L. Pruvost, *Intégration familiale...*, in *Recueil d’articles offerts à Maurice Bormans par ses collègues et amis*, Rome 1996, 155-80).

Modern and contemporary ethnology has shown that despite its theoretical prohibition, adoption used to be practised in numerous Muslim societies. Adoption in Islam probably constitutes one of those instances where custom, in the event more favourable to this institution, has been only very superficially Islamised. *Bibliography*: 1. Surveys of the classical doctrine. References given in the article: the corpus of comments on *Kurān*, XXXIII, 5, 37; and for an unusual point of view, cautiously favourable to adoption, Zamākhshārī, al-Kāshīf ‘an ḥabīl al-Ŷurūn, Beirut n.d. [1947] on *Kurān*, XXXIII, 5. Treatises of ṬabīYYaT barely mention the question of the prohibition of adoption.

In their discussion of infinity, Islamic philosophers adopted Aristotle’s definition, but they used a way to prove that infinite quantities cannot actually exist, which was first propounded by Philoponus. His proof was based on the (mistaken) idea that a part of an infinite collection cannot be infinite, for if something is smaller than infinite, it must be finite. Al-Kindi and al-Ghazālī [q.v.] used this method also to prove, against Aristotle, that time cannot be infinite, but must have a beginning. Objections against this again were raised by Ibn Sinā and Ibn Rushd. It is worth mentioning that Ṭabīb b. Kūra [q.v.] recognised that infinite collections may have parts that are also infinite; this in fact invalidates the proofs of Philoponus and his Islamic followers.

In opposition to the Aristotelian explanation of motion, that “every body that moves is moved by another body”, Islamic philosophers adopted the concept of impressed force such as conceived by Philoponus; this was further developed by Ibn Sinā and his school, and became known as *muṣ*y (‘inclination’).

Aristotle’s “law of motion”, stating that the velocity of a body moving through a medium is inversely proportional to the density of that medium, was criticised by Philoponus and subsequently Ibn Bāḏjī. Aristotle’s law implies that motion through a void (if void existed) would occur with infinite velocity, that is, any distance would be covered in no time, and this absurd consequence was an argument for Aristotle to assert the impossibility of the void. However, Philoponous and Ibn Bāḏjī stated that covering a distance always needs a finite time, even in void, if it existed, and that the effect of the presence of a medium will be that more time is needed to cover that distance.

Atomism was discussed by Ibn Sinā in a way not found in Greek philosophy, for he wrote in opposition to the atomism of the *mahāyana*, who defended atomism with their own arguments.

The discussions of meteorological phenomena [see AL-AThAR AL-ULWIYYA] are mostly based on Aristotle’s assumption that they are caused by the two exhaling, the dry one from the earth and the moist one from the water. However, in their explanation of some

“Actions and passions”, each of these sections corresponds to a work from the Aristotelian school; in fact, the section “Actions and passions” together with the next section “Meteorological phenomena” discusses the subjects from Aristotle’s *Meteorologica*.

Furthermore, Islamic philosophers such as Ibn Bāḏjī and Ibn Rushd [q.v.] wrote individual commentaries on several of Aristotle’s physical works.

It should be mentioned that the Islamic theologians (mutakallimin) also discussed subjects that fall under ṬabīYYaT, such as the structure of matter and the nature of change.

The Islamic philosophers writing on subjects of natural science remained within the framework of Aristotelian natural philosophy; they used concepts such as potentiality/actuality, matter/form, natural place and natural motion vs. non-natural place and forced motion; they adopted Aristotle’s definition of motion; and they denied the existence of the void and conceived matter as continuous, not atomic.

However, it appears that the work of Philoponous [see YAHYA AL-NAMHĪ], who opposed Aristotle in several respects, was also well studied, and that often Islamic philosophers took sides with him against Aristotle. Moreover, they often had a different way of discussing things and brought forward new arguments. A few examples follow.

In their discussion of infinity, Islamic philosophers adopted Aristotle’s definition, but they used a way to prove that infinite quantities cannot actually exist, which was first propounded by Philoponus. His proof was based on the (mistaken) idea that a part of an infinite collection cannot be infinite, for if something is smaller than infinite, it must be finite. Al-Kindi and al-Ghazālī [q.v.] used this method also to prove, against Aristotle, that time cannot be infinite, but must have a beginning. Objections against this again were raised by Ibn Sinā and Ibn Rushd. It is worth mentioning that Ṭabīb b. Kūra [q.v.] recognised that infinite collections may have parts that are also infinite; this in fact invalidates the proofs of Philoponus and his Islamic followers.

In opposition to the Aristotelian explanation of motion, that “every body that moves is moved by another body”, Islamic philosophers adopted the concept of impressed force such as conceived by Philoponus; this was further developed by Ibn Sinā and his school, and became known as *muṣ*y (‘inclination’).

Aristotle’s “law of motion”, stating that the velocity of a body moving through a medium is inversely proportional to the density of that medium, was criticised by Philoponus and subsequently Ibn Bāḏjī. Aristotle’s law implies that motion through a void (if void existed) would occur with infinite velocity, that is, any distance would be covered in no time, and this absurd consequence was an argument for Aristotle to assert the impossibility of the void. However, Philoponous and Ibn Bāḏjī stated that covering a distance always needs a finite time, even in void, if it existed, and that the effect of the presence of a medium will be that more time is needed to cover that distance.

Atomism was discussed by Ibn Sinā in a way not found in Greek philosophy, for he wrote in opposition to the atomism of the *mahāyana*, who defended atomism with their own arguments.

The discussions of meteorological phenomena [see AL-AThAR AL-ULWIYYA] are mostly based on Aristotle’s assumption that they are caused by the two exhaling, the dry one from the earth and the moist one from the water. However, in their explanation of some
phenomena, such as precipitation, wind, earthquakes, thunder, rainbow and the climates, al-Kindî and Ibn Sînâ do not always follow Aristotle. They show an independent way of thinking and criticize Aristotle on the basis of personal observation of these phenomena.

Most of the discussions of the above-mentioned subjects remained speculative or philosophical. The discipline that is nowadays called physics also had its scholars in the period of the flourishing of Islamic science. Statics was the subject of the Kitâb al-Karâstun by Thâbit b. Kurra and Kitâb Mìzân al-ikbâna by al-Khâzînî [q.v.]. Hydrostatics and the determination of specific weights were discussed in the same book of al-Khâzînî and by al-Bîrûnî in his Maqâla fi nasb. These scholars were able to execute very precise measurements of very specific weights with their diverse instruments.

Although the work of Ibn al-Haytham [q.v.] on optics also contains much speculation, it stands out as one of the first examples of a systematic experimental investigation of the behaviour of light. This work was continued by Kamâl al-Dîn al-Fârisî as one of the first examples of a systematic experiment and in apparitions in dreams of the Prophet himself to privileged or pious persons and mystics. The second is seen in the immense oneirocritical literature in Islam (see idem, La divination arabe, 247-367). To these types of knowledge of the future a third may be added, incubation, in which a revealing angel is prompted to get in contact with the supernatural world and bring back knowledge of the future, a procedure already known from the Gilgamesh epic (J. Bottero, Les songes et leurs interpretations, Paris 1959).

From oneirocramy, said by the Prophet to be one part of prophecy, following the Talmudic tradition (Berakhot, 57b, with comm. of Maimonides, Le guide des égarés, ii, 136), to oneirocriticism, the transition was made by two simultaneous impulses from the ancient Babylonian and Hellenistic traditions. In fact, by its symbolism and its formulation, oneirocriticism showed the constant symbolism. The oneirocritic should consider all aspects of the phenomenon and give a clear, measured response. The oneirocritic should consider all aspects of the phenomenon and give a clear, measured response.

Much of the discussions of the above-mentioned phenomena, such as precipitation, wind, earthquakes, thunder, rainbow and the climates, al-Kindî and Ibn Sînâ do not always follow Aristotle. They show an independent way of thinking and criticise Aristotle on the basis of personal observation of these phenomena.

The oneirocritic should consider all aspects of the phenomenon and give a clear, measured response.
Note must be taken of the status, age, etc. of the person involved, the conditions in which the dream has been experienced, etc. Faced with a difficulty, the oneirocritic must go back to basic principles, but if after all that, he can find no answer, he must confess this, and no-one will reproach him, since this has happened to the prophets themselves. The dreams of all classes of men must be interpreted, after a rigorous enquiry into the status, etc. of the questioner. If no progress can, however, be made, recourse must be had to one's own personal opinion. Above all, discretion is vital (al-Dtnwarf, fols. 41-3).

All the authors stress the need to have a vast knowledge of all the sciences; all branches of knowledge are useful, including mathematics, law, etymology, onomastic, literature, proverbs, the practices of the Islamic cult, etc. Nothing has changed in the ancient principles of oneirocriticism; the only differences revealed in the course of time come from the conditions of men and their preoccupations, morals and whether they prefer immediate, present gains at the expense of the Afterlife, whereas previously, religious affairs formed the main activities of men. When the Prophet's Companions dreamed of dates, they saw there the sweetness of their religion; for them, honey symbolized the delights gained for them from reading the Kur'an, whereas previously, religious affairs were useful, including mathematics, law, etymology, onomastics, literature, proverbs, the practices of the Islamic cult, etc. Nothing has changed in the ancient principles of oneirocriticism; the only differences revealed in the course of time come from the conditions of men and their preoccupations, morals and whether they prefer immediate, present gains at the expense of the Afterlife, whereas previously, religious affairs formed the main activities of men.

One should say in conclusion that, despite the efforts of the oneirocritics to furnish their art with principles and techniques, they were forced to recognize that "the interpretation of dreams remains based on analogy, relationship, comparison and probability. One cannot base a course of action, nor refer to its findings, before their accomplishment in the waking state and even before proof for it is put forward" (ibid., i, 4). In fact, wrote E. Dourett, "Magie et religion dans l'Afrique du Nord, Algiers 1909, 407, "la pluralite des methodes, l'arbitraire avec lequel on les emploie, l'abus de symbolisme font de l'interprétation une pure fantasy et il n'est pas un songe qui ne puisse, au gre du devin, être interprete d'une facon favorable ou defavorable aux interets de son client".

Nevertheless, the severe judgements of both ancients and moderns do not reduce the considerable value of oneirocritical literature for the light it throws on psychology, sociology and mysticism. Beneath dreams, simple or incoherent, there are ambitions and ambitions and ambitions and rivalries. Whether spontaneous or fabricated, they are the vehicles for conceptions and ideas issuing from the popular milieu, one not widely revealed in other literary genres. Since the dream forms part of the life of rich and poor alike, it forms something like a screen between the dead past and the present, which can be used to reconstruct, with great precision and realism, the social life and aspirations of any given class at any fixed time.

TABRIZI, DJALAL AL-DIN, Abu i-Kasim, a saint of the Suhrawardyya [q.v.] order (date of death perhaps 642/1244; Ghulâm Svar-i Lāhawī, Khasīnāt al-asfīfī). Together with Bahāʾ al-Dīn Zakariyāʾ [q.v.], Djālāl al-Dīn is to be counted as the founder of the order in India (Saʿīd Aṭhār Aḥḥabā Rizvī, A History of Sufism in India, New Delhi 1978, i, 130). It was his great-grandfather, Aḥḥabāb al-Dīn Tabrīzī, Djalāl al-Dīn went to Baghdād to join Abū Hāṣem Ṣumār al-Suhrawardī (d. 632/1234 [q.v.]). In accordance with the eponym of the order, as a disciple, when al-Suhrawardī was already old, Djalāl al-Dīn stayed with al-Suhrawardī for nearly a decade and he accompanied him on his annual pilgrimages to Mecca and Medina. In the company of Bahāʾ al-Dīn Zakariyāʾ who was to found a šāhīnākhī Ṣufr in Multān, Djalāl al-Dīn set out to travel to India (Djami, Naṣafi, 504). However, they separated on the way, a fact explained by legend as follows: Djalāl al-Dīn met the mystical poet Āʿtār (d. 618/1221 [q.v.]) in Nīshāpūr and was asked by him, who in Baghdād was to be included among the mystics. Impressed by the poet's spiritual presence Djalāl al-Dīn is said not to have uttered the name of al-Suhrawardī (Ciṣhtf, Mīrīāt al-asrār, Staatsbibliothek zu Berlin SPK, Ms. orient. Quart. 1903, 284b). At the beginning of the 7th/13th century, during the reign of Ilhūnūs (607-33/1210-36 [q.v.]), Djalāl al-Dīn arrived in India where he was warmly welcomed by the Sultan. The Šaghpāshī-ned Ḳhādramūt Nāḏm al-Dīn, however, resented this and tried to influence the Sultan against the Śufī (Ciṣhtī, loc. cit.). An accusation was concocted and in 1228 the Sultan organised an investigation, which was presided over by Bahāʾ al-Dīn Zakariyāʾ. Though the charge was soon found to be false, Djalāl al-Dīn left Dihīl for Bādīl. There again Djalāl al-Dīn became friendly with the ruling classes, viz. the local administrator Khwādji Kāmāl al-Dīn, who enrolled his son as Djalāl al-Dīn's disciple.

Finally, Djalāl al-Dīn reached Bengal where he settled down. In recruiting followers, Djalāl al-Dīn converted many Hindus and Buddhists to Islam (Rizvī, ii, 398; Trimminger, 232). In accordance with the policy of the Suhrawardī order of supporting enforced conversion, Djalāl al-Dīn demolished, at Devatālla in northern Bengal, a large temple that a Āṭīf (Hindu or Buddhist) had erected and constructed a monastery there. In the Rīhla of Ibn Bāṭṭūṭā [q.v.], Djalāl al-Dīn Tabrīzī is confused with Shāh Djalāl of Sylhet, one of the Bengāli warrior saints (Rizvī, i, 314). In the Kāmīrāb hills of Assam Djalāl al-Dīn was said to have been met by the Moroccan traveller (Rīhla, iv,
Two forms of tabshir are distinguished. The direct the Islamic world. Within the work of missionaries (mubashshirun), of the Bible for Grk. evangellon origin, corresponding to its usage in Arabic translations Christian missions. It seems to be a term of Christian way, al-mubashshir wa 'l-ajamil and that it is the epi-

Tehran 1978, 63). Reliable information of Muhit in the general sense of i, 208, simply has mubashshir

Curiously, and in which he is followed bi 'l-yundniyya.

Finally, the term “the West” embraces not only Europe, but also North America, especially the United States, even though colonisation activities in predominantly Muslim lands have never been directly launched, so these authors state, from the USA.

Alongside this direct, avowed missionary work, numerous authors devote—some more, perhaps, than others—an important place to the indirect form of tabghir, one that is “hidden” or “stealthy”, which, with concealed means (verbal use), reached the non-Bernardian (cultural and political) to achieve its aims indirectly. The authors who denounce this indirect missionary work connect it to two main trends, which they allege, are its main inspirers, viz. colonisation (isti'mdr) and orientalism (isti'dar).

The titles of certain works on this theme, placing tabghir in direct connection with colonisation, are revelatory enough of this fact. One may cite e.g. Muṣṭafā Khalīfī and Umar Farrūkī, whose work is often cited as a reference work on the topic, al-Tabghīr wa 'l-isti'mdr wa l-isti'ārīyāt maṣdar or verbal noun of Form II from the collec-

Christian-Roman, 1831) and the Roman Catholic (Beirut 1898) translations, where in Mark, xvi, 16, we have, however, dīnā al-bishdra without, however, the form tabghir. Tabghir does not appear in such classical dictionaries as LA and TA, and bishdra is found for the first time in Freytag's Arabic-Latin dictionary (Halle 1830-7, 1, 124) in the sense of evangellon, uncapitalised and without any connotation of the Gospel itself. Lane, Lexicon, i, 208, simply has mubashshir in the general sense of “one who announces good news”. Butrus al-Bustanī in his Maḥāla (Beirut 1867, i, 95) is the first person to give a reasoned definition, citing the expression bishdra al-inglejlī, where the origin of this neologism is explained: idfā hayyina bi-anna al-Ingilī mānuhā al-bishdra bi l-yānnīnīyya. Curiously, and in which he is followed by the author of the dictionary Abūrab al-mawṣūrāt (1889), he mentions (96) that al-tabghir means, in a general way, al-mubashshir wa l-yānnīl and that it is the epithet given to St. Luke by the Christians, tabghir Misūr al-Najārūn. Words from this root b-sh-r occur several times in the Kurān (‘Abd al-Bākī, Muqadmat al-mufāhara, Cairo 1378/[1945], 119-21), especially in the verbal forms bishdra and abshara, whose ambivalent sense can announce some good news but also, in menacing tones, the coming of bad news; mubashshir is attested in speaking, inter alios, of the Prophet, but not tabghir in regard to him. It is impossible to discuss here the innumerable books and articles devoted directly or indirectly to tabghir, in Arabic. For representatives of the Arabic of the mediaeval period will be given. The enquiry ought, however, to be extended beyond the Arab to the wider Islamic world, notably to India and Indonesia.

Reading these works, one notes that, at different levels, the authors treat various aspects of the subject. Two forms of tabghir are distinguished. The direct one is an effort by churches and missionaries in the strict sense, mubashshirān, to announce to Muslims the Christian “good news”. It involves, then, an individual or collective enterprise of the Christians, openly pro-

claimed. Distinguished from it is a more radical notion, sometimes confused with the first, envisaging directly “conversion” or more precisely, Christianisation, tāṣir, a masdar or verbal noun of Form II from the collec-

tive designation of Christians, al-Naḥḍa [q.v.], traditional among the Muslims.

The tabghir in these works can denote proselytisation aimed directly at Muslims but equally, and frequently, aimed at whole populations, as in Black Africa or amongst certain ethnic minorities not connected with Judaism or Islam, as in the Sudan, in Chad or elsewhere. These Christian missionary activities, openly declared, have for the most part their origins in Western, traditionally Christian—Catholic or Protestant—countries, but do not stem, above all in the Near East, from the churches or members of the Eastern Christian churches, present in that region for two millennia. However, according to authorities consulted, certain members of these local churches may have been involved in the missionary activities, tabghirāyā, of missionaries of Western origin. Finally, the term “the West” embraces not only Europe, but also North America, especially the United States, even though colonisation activities in predominantly Muslim lands have never been directly launched, so these authors state, from the USA.

Alongside this direct, avowed missionary work, numerous authors devote—some more, perhaps, than others—an important place to the indirect form of tabghir, one that is “hidden” or “stealthy”, which, with concealed means (verbal use), reached the non-Bernardian (cultural and political) to achieve its aims indirectly. The authors who denounce this indirect missionary work connect it to two main trends, which they allege, are its main inspirers, viz. colonisation (isti'mdr) and orientalism (isti'dar).
the end of the 19th and beginning of the 20th centuries, admittedly without recourse to the term tabshir, e.g. in the commentary of the Manār [see al-Manār] on sura V, 82. Also attacked are the endeavours of these establishments to promote or to favour various forms of bilingualism or trilingualism to the detriment of the two religions.

Certain authors go even further and argue that these missionary enterprises find agents ('umāda) to aid them within the heart of the Arabic and Islamic worlds themselves, and they cite in particular passages from the famous work of Tāhā Haṣyan [q.v.], Mustakhbal al-ṭabakṭa fi Miṣr, or that of Kaṣim Amin [q.v.], al-Ma'ār al-dgadla (see 'Abd al-'Azzīn al-Murtada, al-Tabshir al-ṭabīmadd al-Īlām, al-ḍabāhūna, wasul-ṭāhūna, tarukūhū, muwādghāhū, Miṣr al-Djadida 1992, 37 ff.).

Orientalism, istishrāk, is often mentioned and denounced as one of the indirect means of tabshir. Without always avoiding a facile juxtaposition, but with some persons recognising the positive aspects of istishrāk, this link between the two notions brought together in this fashion often goes on to an analysis of the "religious and missionary impulse" of the orientalist's activities, al-dāljī al-dānī al-ṭabakṭī (see Sultān 'Abd al-Ḥamīd Sultān, Min wawer al-ghzawet al-fikryt 1 'Īlām al-ṭabīmadd al-istishrāk al-inšāyiyya, Cairo 1990, 166).

One may conclude this summary sketch with some reflections. The first is that this idea of tabshir and the positions taken up by those involved with it, should be placed in a much wider and more ancient context, often far from eirenic, of Islamo-Christian relations in general, and, since the end of the 19th century, of relations between Islam and the West, regarded as an emanation of and as being representative of Christianity. On the more particular level of the basic choices of the two religions regarding tabshir, one may refer to the opinions of 'Abd al-Ḥaḍīr al-Shuwayrī, Aftāh al-istishrāk: was-ṣayf muwādghāhū, in Dhrāhār al-Īlām, vi /1 (Tunis 1973).

One may conclude this summary sketch with some reflections. The first is that this idea of tabshir and the positions taken up by those involved with it, should be placed in a much wider and more ancient context, often far from eirenic, of Islamo-Christian relations in general, and, since the end of the 19th century, of relations between Islam and the West, regarded as an emanation of and as being representative of Christianity. On the more particular level of the basic choices of the two religions regarding tabshir, one may add that these two religions see themselves equally, although employing differing means, as faiths dealing with universal final ends, bearers of a message meant to aid umuld of the two religions. For men of all places and ages, a message which can be placed in a much wider and more ancient context.

Information about his family and education is limited. Reşdfī-zade Ekrem [q.v.] reports that Tāhir Beg's mother looked after his older son. It is known that when he was working as a reporter at Therwet, the newspaper published in Turkish by Dimitraki Nikolaidi [q.v.] and caused to be suppressed for 40 days and its owner and editor, Redja'T-zade Ekrem [q.v.], was awarded various medals and decorations by the Sultan. In 1901, together with Dr. M. Pasha, he produce spurious decorations and sold them, especially to foreigners. In addition, he printed publications close to him, and he published those names in his printing-house, from the fact that he introduced Ahmed Rasim lākab (Baba Tdhir] is given as an example for such situations.

TĀHIR BEG. MERMED, late Orientalist, publisher, and owner of journals, newspapers, and a printing-house in Istanbul (1864-1912). He was one of the journalists and publishers who were supported by 'Abd al-Ḥamīd II, being awarded various medals and decorations by the Sultan.
When his offences were revealed, he was arrested, tried and in 1903 sentenced to 15 years' imprisonment. But, only after five years, benefiting from the amnesty declared after the Meşrutiyet in 1908, he returned to Istanbul. He was then kept under surveillance by the police authorities and not permitted to publish his magazines. Having been involved in the incident of 31 March 1325/13 April 1909, he was exiled to Tripoli, but after a while escaped from there to Naples and then to Paris. In both places he established businesses, but these failed. From the fact that A.I. Tokgoz's article on his death is dated 16 February 1912, it appears that he died at the beginning of that month in Paris.

He published five journals and newspapers: Bahir (1299/1398, 19 issues, fortnightly), Theter (1314-18/1898-1903, 2088 issues, daily), Ikir (1315-19/1899-1904, 251 issues, weekly), Mevlumdat (1311-18/1895-1903, journal-newspaper, 2443 issues, weekly-daily) and Musawwar Fenn ve Edebi (1315-19/1899-1903, 222 issues, weekly). Initially 48 issues of the Mevlumdat were published by the Artin Asadoryan Press weekly (1309-11/1894-5). Mevlumdat, with its writers and contents, filled an important gap during the period when it was published. Since it attracted attention through photographs and illustrations, it was also known as the Musawwar Mevlumdat. The journal was distributed throughout the Ottoman lands, Persia and Russia. It was also printed locally in Filibe (Çeşme) under the title Aفكر ل شکریه پدلی' Edu'd Edén Mevlumdat (1314/1896). Readers' letters sent from places like Cyprus, the Mediterranean shores, the Aegean Islands, Algeria and Egypt, show the extent of the domain where it was being read. Some of its issues were in Arabic and Persian, and it had supplements on diverse themes (Matbuat al-muğaffal Mevlumdat, İhlas-ı Mevlumdat, etc.). The journals Mevlumdat and Theter-i Fımn were always in a state of rivalry, but while Theter-i Fımn was the journal supporting modern literature, Mevlumdat was the journal of supporters of a more moderate line (mutawahfid) in literature.

Apart from these, Tahir Beg also published books at his printing-house. According to Seyfettin Özege's catalogue, 95 books were printed at the Matbuat-i Tahir Beg between the years 1311-19/1895-1903. Among these, books were printed in three languages: in Turkish-Arabic-French or in Persian-Turkish-French. Moreover, it is known that some French books were also printed by him. Some of the books have the name of the series Mevlumdat Kütüphanesi or Tahir Beg Kütüphanesi and the publisher's name as Mevlumdat ve Theter gazeteleri şehib-i imtiyaz es-Seyyid Mehmed Tahir. In the books, the name of the printing-house is given as Mevlumdat-i Tahir Beg, Tahir Beg Matbuat-i, Tahir Beg, in Turkish-Arabic, in Persian-Turkish and in French. The relation with Tahir Beg's printing-house of the 20 books that appeared in Seyfettin Özege's catalogue as having been printed at the Mevlumdat Matbuat-i between 1311-17/1894-1901, is a matter which still needs to be examined. Tahir Beg had received the privilege of printing official documents at his printing-house during the period when the Matbuat-i 'Amire was closed.

**TAKALİD** (a.), pl. of the masdar or verbal noun takalîd, the Form II verb takala'd having the meaning, inter alia, "to mimic, imitate" (for takalîd in its legal and theological context, see the art. s.v.), is used in Arabic today for the ensemble of inherited folk traditions and practices, popular customs and manners, and folklore in general, although the loanword from English takalîd is often used, especially for the discipline and its study at large. In recent years also, the term al-turâdîd al-sâhîd "folk inheritance" is being used to denote the common Arabic heritage of popular culture.

According to the common definition of the term "folklore," it denotes the cultural popular traditions which are passed on from generation to generation and their study. Folklore may be divided into five main categories: (1) Oral traditions: folktales, legends, myths, fables, riddles, jokes; popular poems, common expressions, expletives and oaths; (2) Written materials: proverbs, amulets and talismans; (3) Traditional practices: food and drinks, clothes, embroidery, cosmetics, jewellery, household tools and furniture; popular medicine, witchcraft; customs and manners; (4) Beliefs and superstitions; and (5) Popular art: popular theatre, songs, dances, musical instruments, paintings, drawings and sculpting.

1. In the Arab world.

Although descriptions of popular traditions and customs among Arabs, mainly the Bedouin, appear already in early Arabic literature, and, in particular, within travel literature, serious discussion of Arab folklore only started in the 19th century with the appearance of works such as E.W. Lane's (1801-76) *A Thousand and One Nights*. As account of the manners and customs of the modern Egyptians (1836). However, research of this field was not very common until the second half of the 20th century. This omission is clearly illustrated by Ahmad Amîn (1878-1954) in the introduction to his *Kûnûs al-‘âdâd wa l-takálid wa l-turâdîd al-mas’ala* (Cairo 1953) in which he says: "I sincerely believe that historians have deliberately neglected popular aspects in their books of history, showing off their aristocracy, although popular literature, in many respects, is not of less importance than the literary Arabic language and literature. . . . It is quite possible that some aristocratic scholars will look askance and be bewildered as to how an academic professor degrades himself by recording manners and popular expressions which concern the populace" (pp. II-III).

This attitude among Arab scholars towards their popular heritage in the past resembles their attitude towards the study of Arabic dialects, which also won recognition as a discipline with investigating only during the second half of the 20th century after the appearance of works by non-Arab scholars who valued both Arab heritage and Arabic dialects and consequently published extensively on both subjects.

Oral traditions have been known for genera-
TAKALID 775

The genre of folk tales is represented by Kādīla wa-Dīmna [q.v.] attributed to the Indian philosopher Bidpai (4th century B.C.) and rendered into Arabic by Ibn al-Muṣaffā (721-57 [q.v.]). Another genre is that of amusing anecdotes [naqdīri, mulāḥ], e.g. the funny stories of Ǧūdā [q.v.]. (Turkish: Nāṣīr al-Dīn Khodja [q.v.]), about whose real existence or non-existence scholars are divided. It is mainly the Bedouin and the inhabitants of rural areas around the Middle East who still continue with the long tradition of story-telling which, together with riddles [ḥazzūrāt wa-haydīr], and jokes [nukhār], are the most common and basic forms of entertainment. Several collections have been published and new editions continue to appear, sometimes offering the reader different versions of the same story or anecdote.

Another important genre which has been very popular from old times are poems composed by professional or amateur poets to commemorate a special occasion or event, such as parties in honour of a person, weddings, eulogies or obituary speeches. Although these poems usually take the form of the Arabic ǧāṣīda [q.v.], which is composed in literary Arabic, some are recited in colloquial or something resembling Middle Arabic, similar to common songs which are performed on such occasions.

So far as common expressions, expletives and oaths concerned, they are usually associated with special situations and circumstances or etiquette, such as weddings, the birth of a child, bereavement, etc., which are often connected with local customs. These are usually recorded in the various dialect dictionaries. What most of them, however, have in common is the fact that many of them contain the word Allāh, including the commonest expression used for encouragement and urging: yālla [in the name of God], and the word ʿaddīla (by God), used customarily to express astonishment or as an oath. Other common words used as oaths are wa-ḥṣāb rahnū (by God), wa ʿl-nabi (by the Prophet), wa-ḥṣālbīt wa-ḥṣālbītak (by my/your life), wa-ḥṣālbīt niṣātīr-sīrat (by my/your head), wa-ḥṣālbīt wa-ladi (by my children), wa-ḥṣālbīt ruha (by my life). The word ṣūr (by my father/mother), ṣūr wa-ḥṣālbīt (by my honour) and ṣūrbīt bi ʿl-talak (I swear I will divorce my wife). Common expressions often used are: e.g. when a person sneezes, people say to him rahimuka allāh (may God have mercy upon you), or simply ṣūr (may you live long), and when a person leaves, others wish him Allāh maʿāk (may God be with you). The word mahbrak is the commonest wish to congratulate people on such occasions, and is usually expressed as an open hand called iḥār (in Arabic, similar to common songs which are performed on such occasions).

TAKALID 776

As one of the earliest and most common-positions in prose, even though some of them are based on Arabic poetry. The thousands of proverbs found in Arabic demonstrate the important role they play in writing and in daily discourse. Moreover, as many proverbs depict a situation or give advice or warning, it is customary among Arabic speakers or writers to use them in order to illustrate their speech/written work to draw conclusions of a comparable situation. Old collections of Arabic proverbs, such as that of al-Maydānī (d. 518/1124 [q.v.]), are constantly being reprinted while new collections of proverbs, arranged by countries, continue to appear.

Amulets and talismans (tammāt, rukāyāt, ṭaḍīd, talīsām, ṣahten, ḍūnūb) are very popular, especially in rural areas [see RUKYA; TAMIMA]. Many of these are meant to protect the bearer against the evil eye [see ʿAYN], bring blessing and prosperity, speed the recovery from an illness or bring good luck in general. The most popular amulet is the one in the shape of an open hand called ʾkhamsa, i.e. "five," referring to the five fingers of the hand, which are meant "to stop" bad luck or envy. The amulet may be a copy of the Kurʾān, a few verses from it or brief statements such as: ʾyn al-hāsād bi tāʿūl (May the eye of the one who envies never prevail) or ʾyn al-hāsād fihd ʾrūd (The eye of the one who envies will have a piece of wood in it), but may also be simple blue beads, a piece of blue cloth (since the eyes of the devil are believed to be blue), leaves or flowers of certain plants and even a pinch of salt. It is customary to give such amulets to children or hang them at home, in the car, at work and even on animals. There are also talismans which are written in a code or contain numerals and other symbols which are only known to the writer. Moreover, although the traditional rosary, commonly used by men [mīshūjā], is more associated with a ritual based on the custom of mentioning on every occasion God's Most Beautiful Names (al-asmāʾ al-husnāt [q.v.]), it may also be regarded as a kind of talisman.

Traditional practices vary from region to region and from one society to another. That is to say, daily practices of the urban society may differ from those of the rural one in the same way that they may be different between one Arab country and another and between sedentary and nomad society. Hence, what, for example, is generally known in the West as Oriental cuisine may have different recipes, names of ingredients and occasions for their consumption. Thus harīsā is the term for a dish of meat and bulgur, but in Egypt it refers to a sweet pastry made of flour, melted butter and sugar (see Wehr, under harīsā). Bread is called in Syro-Palestine ḍābūz, whereas in Egypt it is called ṣūr (which has the same meaning as "life"). Fresh of lamb (ḥāfar) is usually consumed in festivals such as Ramāḍān and the two ʿĪds, as well as sweets (halaqāt) such as karfā, bakkāla, ḍhawiqba and muḥānāt. Sweets, mainly for children, as such ʿgāzī al-banāt ("girls' spinning") are also popular on special occasions. Incidentally, the ingredients used for these dishes or the method of their preparation may differ from one region to another. Traditional food served in family celebrations such as weddings, birth of a child or bereavement may also vary in accordance with the local customs, except for bereavements when sweet dishes are normally avoided.

Coffee (kowās [q.v.]) and tea (ḥālī) [see ČAY] are the most popular drinks all around the Middle East. Black coffee, usually with cardamon (ḥīl), may be served with sugar (madbūṭ) or without (ṣūda) in small cups, after being boiled a few times, first without
sugar and then with. Tea is always strong and very sweet and is usually served with mint leaves (nālūd). The popularity of coffee has, over the years, given rise to a whole ethos: it is offered to guests, and in addition, to mark reaching an agreement concerning engagement, transactions or settlement of feud. It is also customary to offer bitter coffee in the house of a bereaved family to people who have come to express their condolences. Several customs are current in various areas which are associated with coffee drinking, such as, shaking the cup to indicate that no more coffee is wanted or using the word dāymān or al-kahwe dāyme ("always"), i.e. may coffee always be in this house) to thank the host after finishing drinking, or the word tūmir (lit. fully inhabited, i.e. may this house never again suffer the loss of any of its members), when finishing drinking coffee in a house of a bereaved family. The third cup of coffee, when offered to a guest, may symbolise, in some areas, a start of enmity or it may politely hint that the meeting is over and that the guest is expected to leave. Telling the fate or it may politely hint that the meeting is over and that the guest is expected to leave. Telling the fate.Telling the fate.

Finally, drinking coffee in cafés while smoking a hookah (āfīlā, nāfīlā or dājhī, and reading or chatting with friends is another daily popular custom for one’s leisure.

Traditional Arab clothes vary: upper and middle class urban citizens are increasingly wearing western clothes, while the lower class males among the fellahin and the Bedouin usually wear the gullahīyya, gūlāb, kasfān, kūmbāz (or kūmbāz), 'ābā' (or 'ābīya), ḍūḥa, ḍūḥahā: smūd (or gurūd) and cover their heads with the kūffā and 'ākdāl, tāfīya (cap) or lājfe (lap kerchief). Few men wear today the lāhābā (or fīx) or nūrīyya, while the European bānīla is hardly seen. Often a combination of the ordinary European bāndālun (trousers), hāmīs (shirt) and ḍūkhā (jacket) are worn, while the head is covered with a kūffā and 'ākdāl. Religious leaders, orthodox people or teachers at rural schools, however, still cover their heads with a lajfe or 'īmāma (Turban). Most women who belong to the upper and middle classes normally wear European dresses (fusīnā) or suits (tājdīm), while those who belong to the lower class usually wear the traditional mitāla and cover their head with a ṣīfīla. In strict Muslim society, only married women cover their faces with a veil (bānīla, līqām, tārha or yāshmak). It is worth mentioning that both sexes of the upper and middle classes often wear traditional clothes at home and on special occasions. The traditional clothes, in general, are embroidered and often made in deep colours [see further, lūkās].

Traditional jewellery is still worn by women, and is mainly made of gold or silver. Diamonds may be worn by women of means, while the middle and lower classes wear various precious and cheap stones. It is often customary for a woman to wear several necklaces, bracelets, earrings and rings, and Bedouin women wear in addition nose rings and anklets. Many of these are made of coloured beads or old coins that are no longer in circulation. The names of women’s jewellery differ from area to area. Men adorn themselves mainly with rings, gold watch and ornamented daggers, whereas some women and men, especially Bedouin, have in addition various tattoos [see wāṣmiq]. The most popular make-up, which is also associated with good luck and used against the evil eye, is henna [see ṭarnāq], used mainly by women though many men also use it. Henna constitutes part of the wedding ceremony preparations all around the Middle East.

Traditional household tools, furniture, fixtures and fittings are still in use especially in rural regions and by the lower class. They vary from one area to another and have different names. Thus one rural may find in the kitchen the traditional hādūn or ḍāmūn (mortar) used for grinding coffee and spices; bālābāq or dāla'a (coffee pot), ḍūfīn (coffee cup) and many more articles. The same applies to traditional furniture which often has names of non-Arabic origin, e.g. māwīyya (furniture), ḍūkkā (sofa-like bench), tāwāa (table), bargā (curtain), lamba (lamp).

Popular medicine is still practised in rural areas and by some Bedouin tribes, and even the urban and the higher classes often resort to traditional methods for curing less complicated illnesses. Various herbs, fruit, oil and special liquids may be used as medications. Thus onion drops are still used in Egypt against trachoma and watermelon seeds are prescribed for high blood pressure. Smallpox may be treated by burning dung near the sick child. Fig juice is used against corns or calluses, while burning or cauterising the skin against pain, fear and paralysis is believed to alleviate suffering.

Witchcraft and magic are used for three main purposes: to avert the evil eye, to cure illnesses and to regain the affections of the husband. The first involves various customs such as writing on a piece of paper the name of the person who is believed to have put the evil eye on one, then setting it on fire while pouring salt on it and reciting some formulae that basically wish the person total destruction or blindness. The second witchcraft practice mainly involves the use of talismans or "blessed" objects or plants prepared usually by older people known for their piety [see ṭūsāg], and the third, which is called ḍaḥāgha, denotes a ritual mostly current in Egypt in which a woman casts a spell by beating her genitals with a slipper while pronouncing a magic formula to jinx an inattentive husband or a female rival. (See Hinds-Badawi, under ḍub-ḥub-b.)

Customs and manners. Since the Arabs themselves often describe their society as devout, emotional and fatalist, it is not surprising that scores of customs and manners are current within the Arab world, making the discussion of even a fraction of them an impossible task within the present article. Moreover, the diversity and heterogeneity of Arab society with its long history and contacts with other cultures (e.g. Persian and Turkish) prevent any attempt at formulating a monolithic ethos.

Among the characteristics typical of the Arabs is hospitality, generosity and strong commitment to the family and tribe. Hence most of the customs and manners current among Arab society revolve around those. Moreover, the general attitude towards life and death is of resignation to fate. Hence it is customary to accept happiness and tragedy with the same dictum, expressing praise to God (ḥamdāla) and bearing in mind that, in the case of death, the deceased will eventually reach a better world.

Many customs are mentioned in the Ḥadīth literature as practices attributed to the Prophet Muhammad, hence are sunn which should obviously be adhered to by all Muslims. For example, customs concerning hygiene, such as bathing or the need to clean the teeth (sawādāl) with a toothpick (sawādāl or sawāl [see miswāk]), or food. Eating "procedures" include washing the hands before and after the meal; saying the basmālā before starting; encouraging the guest to eat more. Satiety is indicated by leaving some food on
the plate (in some communities, satiety is indicated by burping), and wishing the host that his table will always be full (al-sufrā dāyūm), or wishing the lady of the house that her hands will be protected by God (tislam/yislamu or yesائل التّ altura).

Many customs recorded by classical Arabic literature, not only suggest that the Arabs paid considerable attention to good manners but that some of these older customs are still current in the society. For example, the custom of holding food with the right hand and with three fingers is mentioned by Djalal al-Din al-Suyuti (d. 911/1505), who explains that using one finger in order to hold the food is abominated, and that using the plate (in some communities, satiety is indicated by gorging 182).

Most of them concern family life, e.g. a husband and wife may address each other in front of other people as (the father abu . . .). One finger in order to hold the food is abominated, and using the plate (in some communities, satiety is indicated by gorging 182).

Another custom aiming at the propagation of pleasure (nīdh al-mutatt), which contained a talisman, is still widespread in the region. It also appears in a number of folk-tales which aim at warning recalcitrant children.

Beliefs and superstitions and some customs associated with them are very common in Arab society. The most popular are a strong belief in the devil (al-Shayṭān see SHAYTAN), who has several names and epithets in the Kurʾān and other Muslim literature, such as (al-Shayṭān), (the respected), (the name of Allah on him) when speaking of or looking at a child.

A strong belief in luck and fortune is also common. Hence the family who has suffered a disaster may resort to using amulets, pray and give money to charity and even go to live elsewhere. In some areas, the days of the week are either good or bad. Hence they may influence actions. Thus Monday, Wednesday, Thursday and Friday are regarded as "good" days while the other days are usually "bad". This division may differ from area to area. The eclipse of the sun and the moon (see xustar) indicate bad luck. Hence it is customary that when an eclipse occurs, people pray to God to save the world. Some believe that in the case of the eclipse of the moon, it has in fact been swallowed up by a big whale or leviathan (ḥūb) and therefore people should pray to God calling on him to "let it go". Strong belief in the good luck brought by the first customer (istifādā), makes a shopkeeper do anything to persuade the first customer to buy something, even at a loss. Moreover, it is customary for a shopkeeper to open his business in the morning, reciting a short dictum consisting of four of the Most Beautiful Names of God (see above): yā fattāh yā ’alīm yā razzāk yā kamīn in which he invokes God that the day will be profitable.

Many beliefs are well known from the time of the Ḥāshilaya [q.v.], some of which are still current, e.g. the belief associated with the flight of birds, called (exorcism) is particularly popular in Egypt. Examples are: dreaming of a snake symbolises a long life, probably because a snake is an old symbol for cure, and also the word "snake" (ḥāpy) shares the same root as that of for "living", life (ḥāpy/hāyā); dreaming of water or oil portends imminent disaster, whereas dreaming of a donkey bodes the receipt of a present.

Customs associated with the belief in saints (awliyā’ see WALI) are also current in the Middle East. The waḍi is usually the patron of the area whose grave is visited mainly on special dates (maṣaʿalā) or in certain seasons. This usually involves rituals around the tomb in which people pray and place their requests, e.g. for a cure for an illness, for becoming pregnant, for finding a husband, etc. Among the famous saints are al-Sayyid al-Badawi and al-Sayyida Zaynab in Egypt.
and al-Nabi Shu'ayb in Israel. Many other tombs of famous pious personalities which are visited regularly (ziyāra [q.v.]) are the tomb of the Prophet Muhammad in Medina, the tombs of the Patriarchs in Hebron and some of the prophets who are mentioned in the Qurʾān, as well as other local saints (some of whom were famous Sufis or muṣārātīs, traditional clowns or mu'allṣātāt, or even famous belly-dancing performed usually by one woman (called in the past ghāzīyya, but today usually called rakākāt) in nightclubs or at weddings is still very popular. Traditional musical instruments used in all these performances include string instruments such as the rabāb (one/two-string violin), taq (lute), hāmn (psaltery) and kamaqma (violin). Wind instruments include different kinds of flutes and pipes, such as the mizmūr, mizmūr turki, arqūl, andy(e), shabdaḫa and include different kinds of flutes and pipes, such as the famous oriental belly-dancing performed usually by one woman (called in the past ghāzīyya, but today usually called rakākāt) in nightclubs or at weddings is still very popular. Traditional musical instruments used in all these performances include string instruments such as the rabāb (one/two-string violin), taq (lute), hāmn (psaltery) and kamaqma (violin). Wind instruments include different kinds of flutes and pipes, such as the mizmūr, mizmūr turki, arqūl, andy(e), shabdaḫa and include different kinds of flutes and pipes, such as the famous oriental belly-dancing performed usually by one woman (called in the past ghāzīyya, but today usually called rakākāt) in nightclubs or at weddings is still very popular. Traditional musical instruments used in all these performances include string instruments such as the rabāb (one/two-string violin), taq (lute), hāmn (psaltery) and kamaqma (violin). Wind instruments include different kinds of flutes and pipes, such as the mizmūr, mizmūr turki, arqūl, andy(e), shabdaḫa and include different kinds of flutes and pipes, such as the famous oriental belly-dancing performed usually by one woman (called in the past ghāzīyya, but today usually called rakākāt) in nightclubs or at weddings is still very popular. Traditional musical instruments used in all these performances include string instruments such as the rabāb (one/two-string violin), taq (lute), hāmn (psaltery) and kamaqma (violin). 2. In Persia.

The term “folklore”, which has been accepted in Persian as well as in a number of other Middle Eastern languages, was first proposed by William John Thorns (1803-85). In a letter to the Athenaeum 22 August 1846, Thorns, writing under the pseudonym Ambrose Mer-ton, proposed that the term “folklore” be adopted in place of the more cumbersome “Popular Antiquities”, or “Popular Literature”, to describe “the Lore of the People, . . . their manners, customs, observances, superstitions, ballads, proverbs, etc. of the olden time” (A. SHIVTIEL). Their suggestion gained acceptance within a year of its proposal, and the term refers not only to rural but also to urban “lore” these days. However, the debate concerning the exact definition of the term “folklore” rages on. The general atmosphere of ambiguity that surrounds this word may be deduced from the decision of the editors of the standard Dictionary of folklore, mythology, and legend (1949) to include no less than twenty-one definitions of it (s.v. Folklore). Driven by the kind of nationalist zeal that propels many Muslim scholars to coin and use native words in place of foreign vocabulary, indigenous Persian scholars have proposed a bewildering variety of terms to denote “folklore”. Some of these are: farhang-i mar- dam literally “people’s culture”, farhang-i ‘amma, farhang-i tâd “culture of the masses”, ab-khod, mîr, bidwârdâ’iyyâ-yi ‘amma (or ‘awwârn or ‘awwârnî-yâna or mar-dam or tâd), “beliefs, customs, notions of the general public (or common folk, masses)”. Whereas the words ‘amma and folk are clearly used in contradistinction to khânr “the elite”, and are more innocuous, the form tâd “masses” (cf. bi-h-i tâd “the Communist Party”) has ideological associations of a leftist nature because many of the intellectuals who began the systematic study of Persian folklore were inspired by socialist or communist ideologies. Be that as it may, of these, the term farhang-i mar-dam, a literal
Persian translation of the English "folklore", is probably the most widely accepted. However, the loan word "folklore", spelled folklore in Persian, continues to be used side-by-side with it and there may even be a movement toward its adoption in specialized publications. This is signalled not only by the early uses of it, its Persian plural folkloreh and its adjectival form folklori (Kāfrāt 1357/1978, 93, 135, 138) but also by the fact that the word folklore is used interchangeably with farhang-i mardam in the first two issues of the Iranian Folklore Quarterly in Spring 2002 (i, 7-8, 9-16; ii, 43, 132).

Scholarship on Persian folklore, which is concentrated chiefly on verbal lore, may be divided into two groups. The second, conducted by Iranians, and that which is undertaken by Westerners. Although the Persian study of folklore is typically traced to the Aḥa Ḍamārī Khānsārī’s (d. ca. 1121-5/1709-13) satirical treatise on superstitions of the Isfahanī women, which was entitled Kūltūm-nāma (for an edition see Kāfrāt 1349/1970), this appearance attributes unreasonable. Khānsārī intended to ridicule these women’s beliefs as a way of combating superstition; he was neither trying to collect folklore nor present an accurate account of his time. By the same token, attributing folklore collection activity to Persian novelists (e.g., Sādik Čubak, or even Ğamālāzada), who happen to use a significant number of “folksy” expressions in their writing as a matter of style, would be stretching the point.

Although brief collections of Persian folk expressions, beliefs and especially proverbs are scattered throughout Persian and Arabic literatures, none may be called systematic until the appearance of Dīkhūda’s (1297-1375/1879-1955) four-volume Anthology of Persian Proverbs and Dicta (i, 1308-11/1929-32). Dīkhūda’s collection is, however, no more than an alphabetical list of literary and folk proverbs, which rarely provides contextual information. The systematic collection of Persian folklore had to await the attentions of Sādik Hīdayat (1281-1330 š./1902-51), who, inspired by Arnold van Gennep’s (1873-1957) classificatory system, published several tales, folk songs and collections of Persian folklore between the years 1310/1931 and 1324/1945 (e.g., Dīkhūda 1312-5 and 1344/1965, 447-83). Of these, the two volumes, šārūm “faitytales”, and nīrangīstān (a title adopted from a Middle Persian treatise on counter-magical incantations), published respectively in 1310/1931 and 1312/1933, are the most extensive. Hīdayat later published two articles on folklore and the method of its collection, the methodological aspects of which were inspired by Pierre Saintyve’s (1870-1935) Manuel de folklore (1936). These essays later inspired the work of the most important Persian collector of folklore, Aḥa Ḥ-Kāṣim Indjawi (d. 1993), who in the spring of 1340/1961 began a radio programme that aimed to collect folklore data by direct appeal to its listeners, who were also provided with training as well as with supplies (e.g., paper, forms, pencils). Indjawi’s appeals generated an enormous public response. Soon a flood of data from his listeners began to come in, and he was thus able to amass a vast archive of Persian folklore data, some of which he published in a series called Gāndjina-yi farhang-i mardam (“the treasury of folklore”; see Indjawi 1352 š./1973, 1352-5 š./1973-7). This massive archive, that represented some two decades of systematic collection, contained some 120,000 folklore texts, hundreds of objects, 3,000 documents of cultural history, thousands of phonograph recordings, cassettes, films, videos and over 2000 photos (Dâlwand, 1377/1998, 3-4). This material was preserved in the Markaz-i farhang-i mardam (Folklore Centre).

Since the 1970s, folklore had enjoyed significant backing from the royal family and other wealthy organisations. During this period, folklore research was promoted and even an international congress on folklore was held in Isfahān in the summer of 1977 (for an excellent summary, see Marzolph, art. Folklore studies, in EIr). Folklore studies fared poorly after the Islamic Revolution of 1979-9. Folklore was viewed as promoting superstitions and even pagan beliefs, and most funding for it came to a halt. In spite of this, the Folklore Centre continued an anaemic existence until the early 1980s when Indjawi’s radio programme was discontinued. The discontinuation of the programme not only brought the process of collection to a virtual halt but also signalled the final fall of folklore from grace. Much of the holdings of the Persian folklore archives, especially its audio-visual collection, was unceremoniously dispersed among other centres or was sent to storage. Only some written documents, especially texts that were submitted by the public, were allowed to remain at the archives of the Folklore Centre. Most of these texts were placed under the control of the Islamic Republic’s broadcasting agency (şadd u simā-yi ġumār-hā-yi islāmī).

This unfortunate situation continued until 1374/ 1995, when following a speech by the leader of the Islamic Republic of Iran in which dangers of assimilation to Western culture were pointed out and Iranians were called back to their native cultural values, folklore studies were revived. This new interest in folklore has led to attempts that seek to impose some order on the chaotic mass of the existing folklore data in Iran. R.S. Boggs’ art. “Types and classifications” in the Dictionary of folklore, mythology and legend has been used as a guide in an experimental effort to classify this material (Dâlwand 1377/1998). Folklore publication and research continues, and a number of important Western studies on folklore have been translated (e.g. Propp 1368 š./1989, 1371 š./1992).

The earliest European interest in Persian folklore came about as a result of the British and Russian political interests in the Persian-speaking world. Alexander Chodzko (1804-91), Valentin Zhukovski (1858-1918), D.C. Philot (1860-1930), D.L.R. Lorimer (1876-1962), B. Nikitin (1883-1960), L.P. Ewell-Sutton (1912-84) and above all the French Persianist Henri Massé (1886-1969), made significant contributions to Persian folklore studies (see Chodzko 1842; Christensen 1875-1945 and the French Persianist Henri Massé (1886-1969), made significant contributions to Persian folklore studies (see Chodzko 1842; Christensen 1875-1945, 1938; Lorimer 1919; Massé 1938; Nikitin 1922; Philot 1905-7; Zhukovski 1902; cf. also Radhnyapterian 1973-4, and Marzolph, art. “Folklore” in TAKALĪD, Massé drew on the resources of his Iranian connections to collect and publish the most extensive body of Persian folklore of his time. He worried about the disappearance of the rural Iranian folklore as a result of rapid modernisation (Massé 1938, i, 13). Therefore, early in the 1920s, he embarked on a research trip to Persia in order to collect Persian rural folklore. Interestingly enough, his data came almost exclusively from city dwellers. Religious and ethnic minorities such as Zoroastrians, Armenians and Jews were intentionally excluded (i, 16). In spite of his concern for the endangered rural tradition he accordingly finished his work in 1925 and returned to France where he died in 1938.
folklore; the best study in depth on the history of Persian folklore is Ulrich Marzolph, who of the subject in EIr.

...
according to His will". As a religious concept in Islam, takwā, as will be seen below, has definite extra-Islamic resonances.

William Law's two principles of "fear of God" and "abstinence" from all ungodly affairs are found, in fact, in the earliest work in Persian on Sufism: the Sharḥ-i Ta'arruf by Abū Ibrāhīm Mustamīl Bukhārāʾī (d. 1042/1632), where takwā is described as having "two principles: fear and abstention. Thus the devotee's attitude of takwā towards God has two senses: either fear of chastisement (šābāb) or fear of separation (fiṭrāt)." The attitude of fear generates observance of the commandments of God, while "fear of separation" means that "the devotee is content with nothing less than God, and does not find ease in anything beside Him" (from the anonymous Miftah-i Sharḥ-i Ta'arruf, ed. A. Rājdī, Tehran 1349 A.H./1970, 294, an 8th/14th-century summary of this work). In an almost identical definition by the great Kubrawi master Muḥammad Lāhīdji (d. 912/1507) in the Majāfīl al-ṣīlah fi ẓāriḥ-i Ghulām-i nāz, ed. Muḥammad Rūḍa Barzgar Khālīkī and 'Iffat Karbāsī, Tehran 1371 A.H./1992, 250 takwā is described as the "fear of God regarding the final consequences of one's affairs, or the fear of separation". "Takwā" (i.e. the attitude of fear) "will play the brigadier, casting one into the perdition of separation and being veiled from God". After over half a millennium of theosophical speculation—from Bukhārāʾī to Lāhīdji—the two foundations of takwā: fear and abstention, remain completely intact.

2. Takwā in the Kurʾān and Hadīth.

In general Kurʾānic usage, the moral virtue of takwā denotes piety, abstention and God-fearing obedience, suggesting the idea of a faith animated by works, and works quickened by a genuine experience of faith; in brief, such takwā is the substance of all godliness. Takwā is one of the most frequently mentioned religious concepts in the Kurʾān, having entered into the world of Islam upon the very first appearance of the angel Gabriel to the Prophet. "Have you seen him who tries to prevent a servant when he would pray? Have you considered if such a one has any divine guidance or enjoins [others] to piety (takwā)?" (Gabriel asks Muhammad in the very early sūra, XXVI, 9-12, revealed in the cave on M. Ḥira'ī near Mecca, witness: Ibn Iṣḥāq). An allusion to takwā reappears in the second verse of the first sūra revealed in Medina (II), where the Kurʾān is described as "a guidance for all endowed with piety (hadīth li l-muttaḥāthin)." In XXL, 10, the believers are described as "naught but brothers" and, in a kind of communal participation in their "pious vigilant awareness of God" (takwā Allāh), are enjoined to establish fraternal peace amongst themselves. Another verse (IX, 123), devoted to the theme of being harsh on the enemies of Islam, assures believers that "God is with the godfearing pious devotees (muḥāna l-muttaḥāthin)." This latter verse may be compared with the hadīth which situates takwā as the "aggregate of all good things" alongside ḥārām which is described as "the monasticism of the Muslims" (al-Kušāyri, al-Risāla, ed. Maʿṣūm Zarfī and 'Alī 'Abd al-Ḥamīd Bāltandji, Beirut 1990, 105).

Ultimately, salvation in both this world and the next is attained through takwā; with it the saints gain "their deserts and are untouched by evil and they have no grief" (XXIX, 61; an idea also repeated in X, 62-3); while those with takwā "are driven into Paradise" (XXIX, 73). The true mosque must also be "built upon takwā" (IX, 108-9) if it is to be consecrated (an echo of Luke, vi. 47-9). This connotation of takwā is echoed in an early Kurʾān commentary—by Mukātī b. Sulaymān (d. 150/767 [q.v.])—where takwā is "considered as synonymous with šābāb, pure sincerity, [and] šābāb is translated as tarāka in the sense of 'to abstain' from what is evil, such as disobedience (muḥāya) or associationism (dābīq')" (P. Nywia, Exégèse coranique et langage mystique, Beirut 1990, 20).

While takwā is, in particular, the universal measurement and the final criterion of the sincere religious life of the faithful Muslim who is enjoined to "avoid suspicion" and instead to "fear God" (takwā Allāh, XLII, 12; cf. II, 41), in a more general sense takwā appears as the common ecumenical characteristic of the universal man of faith, regardless of sectarian divisions and political differences based on nationality and ethnic origin in the verse: "We have created you male and female, and made you nations and tribes to know one another. Indeed, the noblest of you in the sight of God is the most God-fearing (takwamān ʿind Allāh atkātām)" (XLII, 13). In al-Sulamī's recension of the text of the Kurʾānic Tafsīr ascribed to Dījaʿār al-Sādīk (d. 148/765 [q.v.]) (ed. Nywia, in MUSJ, XII/4 [1967, 181-230]), the ʾImām explains the verse as follows (221): "the generous person (al-kaʾim) is one who is, in truth, piously God-fearing (al-muttaḥāth) and one who is piously God-fearing (al-muttaḥāth) while learning all his ties to created things for God's sake.

The idea of takwā as specifically the Islamic species of piety appears in the Prophet's saying: "Faith is naked and takwā its dress" (al-ʾimān ʿurūn wa-liḥāzahu al-takwā) (cited by 'Ayn al-Kuḍāt Hamadānī, Tābīdāt, ed. A. 'Usayrī, Tehran 1962, 325). Another hadīth recounts that someone asked the Prophet, "Who are the Family of Muḥammad?" He replied: "Every pious God-fearing person (kaull takwā)" (al-Kušāyri, al-Risāla, 105). From such traditions, it is evident that takwā, as a religious concept, was seen to represent the robes of the Islamic faith, as well as to personify the very garments which cloaked the Sacred appearing within diverse cultures and religions.

3. Takwā and ʾimān.

Takwā was regarded as an essential element of the interior dimension of the act of faith, of ʾimān "enlightened faith" (see L. Gardner, ʾImān, vol. III, 1173). The Prophet said: "Submission is public and faith is in the heart." Then he pointed to his breast three times, repeating: "Fear of God (takwā) is here, fear of God is here." (Ibn Ḥanbal, and Ahmad b. Māḍja, cited by C. Ernst, Words of ecstasy in Sufism, Albany 1985, 56).

As an element of Faith, takwā thus embodies the purely internal and contemplative attitude of heart rather than merely external ritual practice; the same interiorisation of ʾimān which is, in fact, reflected in XXII, 57, which, regarding such purely physical practices as the sacrifice of animals to feed the poor, affirms that "it is not their flesh nor their blood that reaches God: it is your piety (takwā) that reaches Him". Commenting on this verse in his Iḥyāʾ, al-Ghazālī notes that "What is meant here by 'devotion' (taqwā) is a quality that gains control of the heart, disposing it to comply with the commands it is required to obey" (cited in Al-Ghazālī, Inner dimensions of Islamic worship, tr. Muḥārīl Holland, repr. London 1992, 35). Indeed, interpreting the Kurʾānic reference to "piety" (takwā al-aḥād) in the same sūra (XXII, 32), Ibn al-Arābī (d. 1268/1240) was to point out that just as the human heart is in constant fluctuation in every breath, so genuine takwā must by understood as a kind of "pious-wariness-awareness" of God with every breath, which is the ultimate end of what God desires.

Takwâ was sometimes considered the supreme proof of the certitude of faith (yaqîn). Abû Bakr al-Warrak (d. 294/906-7), an early Khurshâbîan mystic, observed that "certitude (yaqîn) is a light by means of which the devotee's spiritual condition is illuminated. After he experiences such enlightenment, he is enabled to realise the rank of the pious (muttakîm)" (Aţâr, Tadhkîrât al-mu'âljâ, ed. M. Is'tîlâmî, Tehran 1372 A.H./1993, 538). Underlining the esoteric nature of piety in the spiritual life, al-Kalâbîdî'î (d. 380/990), author of one of the earliest mystical Kur'ân commentaries, that "piety is to contemplate and understand the esoteric meaning of the Prophet's saying: Faith is naked and takwâ its dress" (ed. N.M. Hoca, Istanbul 1973, 30).

This interiorised concept of takwâ of the heart or more disappeared but did not altogether die out from the vocabulary of Sufism after the 5th/11th century. Thus Rûzîzâhîn Bâjî (d. 606/1209 [q.v.]) wrote in his Majârâb al-arârâdîth that "The root of God-fearing piety is detachment of one's inmost consciousness (sirr) from everything but God, whether from the material or spiritual realms, during contemplation of the proofs of the divine Attributes and flashes of the divine Essence. In this manner, one's inmost consciousness melts away before the onslaught of the majesty of the Creator. This is the esoteric meaning of the Prophet's saying: Faith is naked and takwâ its dress" (ed. T. Izutsu, The concept of belief in Islamic theology, repr. Salem, N.H. 1988, 72-4).

4. The mystical theology of Takwâ

(a) Takwâ-as-abstinence

In Muslim mystical theology, the general notion of takwâ is that of holy fearfulness, pious vigilance over and abstemious fear of following one's passions; in a word, the heart's awe of God who is ever-present in the contemplative life of the soul (cf. al-Shârîf al-Durjânî, K. al-Ta'rifâtî, ed. I. al-Abşârî, Beirut 1985, 90). Saâlî al-Tustârî's maxîm "There is no helper besides God; no guide besides the Prophet. There is no spiritual sustenance besides takwâ, nor any other work than patience (sabr)" quoted by al-Khuşhayrî, Risâlât, 101) declares takwâ to be the mainstay, if not the very sustenance, of Sufi spiritual practice. In its perfect form, takwâ involves abstinence from everything but God, for, as Ibn Khašîî (d. 371/981), holds that the believers (mu'âmînûn) are equivalent to the God-fearing (mu'tâkîmûn), who, in turn, are identical to the upright (âshârî) (T. Izutsu, The concept of belief in Islamic theology, ed. N.M. Hoca, Istanbul 1973, 30).

(b) Takwâ-as-heart-abstinence

The contemplative interiority of takwâ, with the connotation of "takwâ-as-the heart's-abstinence" from all but God, is summed up in one of the earliest definitions of the term given by Da'i-fâr al-Sâdîqî that "for those who traverse the spiritual path (âhî al-su'ûlî, piety (takwâ) is that you do not find within your heart anything but Him (al-Ta'âhânawî, Khašîî fi'ilûtâlîhî al-fânîm. A dictionary of the technical terms used in the sciences of the Muslims, Calcutta 1862, ii, 152). Abû Sa'id al-Khašîî (d. 277/890 or 286/899), an important Sûfî of the school of Baghdâd, in his K. al-Hašâ'îî devoted to the vocabulary of Sufi mystical experience on the two-fold levels of rational expression (šâhîn) and mystical allusion (sâhîra), combined this interiorised vision of takwâ with the more traditional Kur'ânic understanding of the term in his statement that takwâ is "to have a heart vigilant not to let itself pursue passion, and a soul which guards itself against occasions of sin and error" (cited by Nywia, Études coranique et langue mystique, 209). Another leading member of the third school of Sufism, Abu 1-Husayn al-Nûrî (d. 295/907), in the first chapter of his Makmîîât al-kulâh discovered and edited by Nywia, Textes mystiques inédits, in MUSJ, xlv/9 [1968], 132), in a section devoted to "the qualities of the house of the faithful believer", mentions takwâ as the Light of Piety, the soul of Sufi ethics, for the contemplative "Light of Piety" illuminates both faith and works.

This interiorised concept of takwâ of the heart or more disappered but did not altogether die out from the vocabulary of Sufism after the 5th/11th century. Thus Rûzîzâhîn Bâjî (d. 606/1209 [q.v.]) wrote in his Majârâb al-arârâdîth that "The root of God-fearing piety is detachment of one's inmost consciousness (sirr) from everything but God, whether from the material or spiritual realms, during contemplation of the proofs of the divine Attributes and flashes of the divine Essence. In this manner, one's inmost consciousness melts away before the onslaught of the majesty of the Creator. This is the esoteric meaning of the Prophet's saying: Faith is naked and takwâ its dress" (ed. T. Izutsu, The concept of belief in Islamic theology, repr. Salem, N.H. 1988, 72-4).

From the early 3rd/9th to the 5th/11th centuries, takwâ was regularly featured in classifications devoted to the spiritual transactions (mu'âmîlatâ) or moral virtues (âhkâhî) of the Sufis' spiritual journey, being closely aligned to the analogous concepts of fear (khañfî), asceticism (zuhdî), and abstinence (wardî). Al-Hârîmî al-Muhsâsîî (d. 243/857) propounded in his K. al-Risâlât that all piety stems from fear and dread of God Almighty. According to him, "Obedience [to God's commands and prohibitions] is the road to salvation, and knowledge is the guide to the road, and the foundation of obedience is abstinence (wardî), and the foundation of abstinence is godfearing piety (takwâ), and the foundation of that is self-examination (mu'hâzâhî), and self-examination is based on fear (khawfî) and hope (ru'ûdî)" (Margaret Smith, Al-Muhsâsîî, an early mystic of Baghdad, Cambridge 1935, 89, 112). If takwâ appears in this description as an essential "foundation" of ascetic theology, the emphasis on piety is even more accentuated later on in the same book: "O brother, let godliness (takwâ) be your chief concern, for it is your capital stock, and works of supererogation beyond that represent your profit" (ibid., 129), cf. also Massi-gnon, Essai sur les origines du lexique technique de la mystique musulmane, Paris 1928, 149.

Al-Muhsâsîî's emphasis on piety-as-godliness in early Islamic mysticism was formally integrated into the Sûfî methodological approach to the spiritual stations (makmîîâtî) in his K. al-Risâlât (91-140), where takwâ is placed fourth among the first ten spiritual stations, in the following sequence: [1] repentance (sâzûh) → spiritual struggle (mu'âhîdîhî) → spiritual retreat, withdrawal (khañasî, 'açîl) → God-fearing piety (takwâ) → abstinence (wardî) → asceticism (zuhdî) → silence (samî) → fear (khawfî) → hope (ru'ûdî) → grief (hûşî). Despite al-Khuşhayrî's traditional classification of takwâ among the rudimentary spiritual stations of the Path, the term often seemed to fall out of usage among some of the later classical authors who wrote on the makmîîâtî. Thus, there is no mention of takwâ (whether as a station or a technical term) in Nicholson's index.
TAKWA

of technical terms to his critical edition of al-Sarradj's (d. 378/988) K. al-Lumac, nor in the Kut al-kulub ... feet, so we can cast aside this blue [Sufi] cloak/Throw to the winds of antinominianism this idolatry which bears

As in the Rule of St. Benedict, for the Persian mystics of the Kubrawi order, God-fearing piety had come to be viewed as an essential virtue in the practical ethics of the master-disciple relationship, so that religious devotion is indistinguishable from unhesitating obedience to the order's superior.

6. TAKWA's apophasis in mediaeval Sufism.

Wherever the term turns up in later works it is usually considered as a necessary corollary of wa'ra or zuhd. For instance, in Sa'd al-Din al-Farghani's (d. 699/1393) Mas'ar ar-Rahbani, Shahr-i 'Ishq-i Firdawsi (ed. Djalal al-Din Ashtiya'i, Tehran 1979, 150-1), takwa is placed among the stations belonging to the first three ascending degrees of "annihilation" (fan'a). The first degree of fan'a involves annihilation by means of "faring through and realisation of the spiritual stations, stages and mystical states such as repentence (taubah), self-examination (muhabbah), contemplative vigilance (muwakkalah), spiritual struggle (mu'dhahhah), sincerity (ikhlas), God-fearing piety (takwa), abstinence (wa'ra), asceticism (zuhd) and similar related degrees. . . ." As in al-Khusrawi's schema, al-Farghani's classification places God-fearing piety among those virtues which the mystic must struggle to realise by his own will; for aspirants still bound in the bonds of egocentric personality, takwa is a knife to cut through the cords of Selfhood. In the writings of the Persian mystics of the Kubrawi school, the virtue of takwa featured quite prominently. In his monumental conspectus of Sufi doctrine, the Misrul al-bad' (ed. M.A. Rizvi, Tehran 1354 A.S.H./1973, 257-60), Nadim al-Din Razi (d. 654/1256) cites some twenty qualities (sifat) with which the disciple must be characterised in a chapter devoted to "the conditions, manners and qualities of a disciple", and here takwa is the fifth of his sifat; and a similar conception of the place of takwa in Sufi ethics appears in the third book of the Kdajl al-bakht-i' (ed. Ahmad Daghani, Tehran 1359/1980, 131-2) — "an exposition of the conditions for wayfaring (suluk) the mystical path"—by Raz'i's fellow Kubrawi Shaykh 'Aziz Nasa'i (d. between 1281-1300).

As the Rule of St. Benedict, for the Persian mystics of the Kubrawi order, God-fearing piety had come to be viewed as an essential virtue in the practical ethics of the master-disciple relationship, so that religious devotion is indistinguishable from unhesitating obedience to the order's superior.

This redirection of Islamic piety towards cultivation of, and concentration on, the elect "Perfect Man" [see AL-insan al-kamil] with the consequent devaluation of the devotee's own private ascetic vigilance, is visible in the thought of most Sufi poets of the Mongol period. One such poet, Mahmud Shabstari [q.v.], in his Golshani-i niz, thus describes the Perfect Man as "endowed with praiseworthy qualities, celebrated for knowledge ('ilm), asceticism (zuhd) and piety (takwa)" (Maghfiri's Absh-i Shabstari, ed. Samad Muwahhij, Tehran 1365 A.S.H./1986, v. 351), relegating takwa, as did the classical masters of the School of Baghdad, to being a rudimentary but not insignificant principle of the Sufi ethical system. However, a discernible difference in accentuation has occurred, so that the Perfect Man is the source of piety rather than piety being the animus of individual spirituality. Ultimately, the Perfect Man may decide to dispense with all pious fear as well, since he is "free of the ties of master and disciple, beyond all asceticism (zuhd) and all the fictions of piety (takwa)" (ibid., v. 862).

In the works of Sa'di and Hafiz, the two greatest Persian Sufi lyricists, another kind of de-accentuation on individual piety is evident, with takwa often demigrated as a kind of spiritual attitude characteristic of cold-hearted ascetics (zuhd) and formalist preachers. "Wherever the Sultan of Love appears, no power is left in the arm of takwa," asserts Sa'di in the Gulistan (Kh. Khattib-Rahbar, Tehran 1348/1969, 337), and in his Ghazals he cries out: "Stand on your feet, so we can cast aside this blue [Sufi] cloak/Throw to the winds of antinomianism this idolatry which bears
often engendered in less sincere adepts, takwā wished to criticise the element of self-consciousness probably knew of al-Kushayrī’s notion that “the root of takwā is fear of all idolatrous associationism (al-
shirk)" (Rūdā, 105), and in this verse no doubt merely of takwā is fear of all idolatrous associationism (understanding the affirmation of faith and piety as a subtle form of delimitation, an idolatry of a mundane doctrine instead of adoration of the Transcendent), is best expressed in the poetry of Hāfiz, in the following verse:

Best in the way of the Şāfi‘ it’s total infidelity to put your trust in knowledge and piety; Although a pilgrim boast a hundred arts Just the same, he must have trust.

Elsewhere he asks: “What relation does libertinism (nard) have to purity and piety (takwā)? How wide the gap between the priest’s homily and the rebeck’s reification—in the wish to transcend the dichotomy of piety/impiety, godliness/ungodliness (understanding the affirmation of faith and piety as a subtle form of delimitation, an idolatry of a mundane doctrine instead of adoration of the Transcendent), is best expressed in the poetry of Hāfiz, in the following verse:

In the way of the Şāfi‘ it’s total infidelity to put your trust in knowledge and piety; Although a pilgrim boast a hundred arts Just the same, he must have trust.

Elsewhere he asks: “What relation does libertinism (nard) have to purity and piety (takwā)? How wide the gap between the priest’s homily and the rebeck’s reification—in the wish to transcend the dichotomy of piety/impiety, godliness/ungodliness (understanding the affirmation of faith and piety as a subtle form of delimitation, an idolatry of a mundane doctrine instead of adoration of the Transcendent), is best expressed in the poetry of Hāfiz, in the following verse:

In the way of the Şāfi‘ it’s total infidelity to put your trust in knowledge and piety; Although a pilgrim boast a hundred arts Just the same, he must have trust.

Elsewhere he asks: “What relation does libertinism (nard) have to purity and piety (takwā)? How wide the gap between the priest’s homily and the rebeck’s reification—in the wish to transcend the dichotomy of piety/impiety, godliness/ungodliness (understanding the affirmation of faith and piety as a subtle form of delimitation, an idolatry of a mundane doctrine instead of adoration of the Transcendent), is best expressed in the poetry of Hāfiz, in the following verse:

In the way of the Şāfi‘ it’s total infidelity to put your trust in knowledge and piety; Although a pilgrim boast a hundred arts Just the same, he must have trust.

Elsewhere he asks: “What relation does libertinism (nard) have to purity and piety (takwā)? How wide the gap between the priest’s homily and the rebeck’s reification—in the wish to transcend the dichotomy of piety/impiety, godliness/ungodliness (understanding the affirmation of faith and piety as a subtle form of delimitation, an idolatry of a mundane doctrine instead of adoration of the Transcendent), is best expressed in the poetry of Hāfiz, in the following verse:

In the way of the Şāfi‘ it’s total infidelity to put your trust in knowledge and piety; Although a pilgrim boast a hundred arts Just the same, he must have trust.

How wide the gap between the priest’s homily and the rebeck’s reification—in the wish to transcend the dichotomy of piety/impiety, godliness/ungodliness (understanding the affirmation of faith and piety as a subtle form of delimitation, an idolatry of a mundane doctrine instead of adoration of the Transcendent), is best expressed in the poetry of Hāfiz, in the following verse:

In the way of the Şāfi‘ it’s total infidelity to put your trust in knowledge and piety; Although a pilgrim boast a hundred arts Just the same, he must have trust.
al-Hadrami was recognised as his successor by the Ibādi of both Hadramawt and Baṣra.

(ERSILIA FRANCESCA)

**TALĪBĀN.** Pers. plural of Arabic talīb "student", a term coming into use in the last years of the 20th century for a radical Islamist group in Afghanistan.

These "religious students" became the face of radical Islam during the late 1990s, when they controlled all but the last and most vehement of Afghanistan's Islamist leaders. The Taliban were thus able to provide the Taliban with specialized military skills in the north of Afghanistan and finish off the remnants of the Taliban forces there, while a Taliban force that went up from the north of Afghanistan captured most of the ex-Communists were purged). The Taliban also were an international force, with a number of foreign fighters who provided the Taliban with specialized military skills in the north that might have been successful had the events of 11 September 2001 not brought the United States into the Taliban and drove them out of range of Kabul in the spring of 1995, so the Taliban turned their attention to western Afghanistan, capturing Harat in September 1995. In September 1996 the Taliban flanked Kabul to the east and captured Baladahāb, then drove up the main road through steep gorges toward Kabul, which fell without a fight later that month. Having taken control of the capital and most of Afghanistan after only two years, in 1997 the Taliban sought to conquer the north of Afghanistan and finish off the remnants of the Būrāhmmūnī and Rābbānī government.

Divisions within the Northern Alliance made possible the Taliban capture of Mazar-i-Sharif in May 1997, but after four days local militias rebelled and destroyed the Taliban forces there, while a Taliban force that went up from the north of Afghanistan captured Harat in September 1998. The Taliban turned their attention to the north once again, this time capturing Mazar-i-Sharif in August and Bamiyan in September. In September 1998 the Taliban pushed resolutely into the north once again, this time taking Tadjikistan. Following the fall of both cities, the Taliban killed or forcibly relocated thousands of the residents. After the campaigns of 1998, the Taliban controlled all but 10-15% of the country, primarily the rugged north-eastern mountains where Ahmad Shah Mas'ūd's well-organized Tadjik army held on. Combat ebbed and flowed in and out of this area over the next three years, with Mas'ūd having great success in August 1999, but his assassination on 9 September 2001 by al-Kā'īda (al-Qaeda) operatives coincided with the beginning of a final Taliban push into that salience that might have been successful had the events of 11 September 2001 not brought the United States into Afghanistan with the goal of destroying the Taliban. Afghanistan's long war destroyed or discredited most of its Afghan government and led to a deep Islamisation of its society, providing the mikey in which the Taliban could arise. The Taliban were the last and most vehement of Afghanistan's Islamist leaders, but they were simultaneously a Pashtun ethnic movement and a militia for Pakistan. Thus, their rise to power harnessed ethnic divisions in Afghanistan and heightened the regional competition between Pakistan, Saudi Arabia, Iran and Russia for control within the country. The multiple sources of Taliban identity gave the movement a plasticity that enhanced its fluidity over time. The Taliban leadership was comprised of Kandahar-area Pashtuns of different tribal and sub-tribal lineages, but most of the Inner Shīrā council knew each other from shared combat experiences during the Afghan-Soviet War and/or shared time in Pakistani madrasas. As the movement expanded its territorial control, its ranks grew to include eastern and northern Ghilzai Pashtuns, some ethnic minority militias, and former Afghan Communist soldiers from the Khall/Khayat faction introduced by the Pakistanis to provide the Taliban with specialized military skills in which they were lacking; following the conquests of 1998 most of the ex-Communists were purged.

The Taliban also were an international force, with
from organisations such as the Ministry for the
Umar, or to destroy a Western model of government there, but
and deeper Islamist trends in that society, produc-
ing an effect referred to within that country as the
All the attacks by al-Ka\'ida on the U.S. on
11 September 2001 brought about the destruction of
the cliff Buddhas of Bamiyan in March 2001 and
the death of Muhammad Rabbani in April 2001.
Ultimately, the attacks by al-Ka\'ida on the U.S. on
11 September 2001 brought about the destruction of
the Taliban and al-Ka\'ida rule and the implementation
of an interim government in December 2001 headed by
Hamid Karzai, a Durrani Pushtun tribal leader.
The Taliban were a tribal militia, a Pakistani proxy
army, and a movement for social change in Afghan-
istan. Their early success on the battlefield was due to
the shared ethnicity and war-weariness of the popu-
lations in the areas that they conquered during 1994-6.
They also presented themselves as simple men moti-
vated by piety and a desire to Islamise Afghan society,
holding themselves in contrast to the formerly
title of the Pushtuns, such as execu-
tion for adultery and amputation of hands for
forcing men to attend mosque services and grow beards
as signs of piety; bans on all forms of secular enter-
tainment, such as sports, music and television; and
ultimately the destruction of images in Afghanistan,
including the world-famous Bamiyan Buddhas.
The Taliban were a by-product of Afghanistan's
long and highly destructive war and capped a decades-
long movement to Islamise Afghan society, itself a
reaction to an even longer attempt by Afghan urban
elites to modernize the country. The collapse of the
Afghan state, the Islamisation of the Afghan resistance
movement and refugee population, and the regional
gopolitical struggle following the Cold War combined
to create the unique conditions that gave rise to the
Taliban. U.S.-led military operations beginning in late
2001 have now almost destroyed the Taliban move-
ment, but the underlying ideology of Islamising the
state and society remains and continues to influence
Afghanistan.

Typically, Arab translators dealt with differences of forms of linguistic and cultural import. This new cultural phenomenon was related to a massive translation of Western literature became an integral part of their experience of translation. Prominent early contributors to Arabic literary translation were the writers and poets Ḥāḍir Ibrāhīm, Muṣṭafā al-Manfalahī [q.v.], the first school of modern Egyptian writing, madrasat al-diwan (the Diwan school); Nadjīb al-Haddād, Salīm al-Nakkāsh and Nikūlā Haddād in Lebanon; Ḥālij Bāylās, Aṭīn Bahlān, and Nadjaṭī Siḍīk in Pālēstīn; Muḥammad Kurḍ ‘Alī and Ṭanṣūṣ Ābdūh in Syria; Salīm Bāṭṭī and Muḥāmmad ‘Aḥmad al-Sayyīd in Trāk; and the leading figures of madrasat al-maḥājīr (the literary school of Arab immigrants in the United States). Naṣīr ‘Arīḍa, ‘Abd al-Muṣṭafā Haddād and Muḥīṭ al-Naṣīyān [q.v.].

The involvement of writers and poets broadened the scale of literary translation. While the majority of translated texts represented short stories, novellas and poetry. In addition to French classical plays by Corneille, Rostand and Molière, Shakespeare’s works—especially Romeo and Juliet—inspired several early Arabic adaptations. Tāḥā Ḥuṣayn [q.v.] translated and published an anthology of Greek dramatic poetry (1920), Racine’s Andromaque (1935) and a selection of Western drama (1959). Poems by Vīctor Hūgo, Lamartīn and Shelly were amongst the first rendered into Arabic. Typically, Arab translators dealt with differences of prosody by way of human and intellectual experience. Not all Western source texts selected for translation, nor all of their Arabic versions, were of high literary and cultural value. A great deal of translators’ production catered to the needs of a growing popular market for romantic stories, mysteries and adventures. Translation techniques involving rewritings (tārajama muḥākhkhas), adaptations (tārajama bi-l-tasarruf), additions (iḍdfāt), abridgements (tārajama muḥallakhkhas), and various changes of the genre, set, plot and characters of the original, did not always yield good quality in the target language. Yet the substantial body of Arab fictional texts that those early translations built contributed, by its sheer mass, to familiarising Arabic readers with new genres of fiction. At their best, the pioneers of Arabic literary translation created works, which, like original writings, expressed and affirmed their own cultural identity and traditions through the forms of Western literature. The appreciation of their audiences accounts for the longevity of such creative translations. They continued to flourish well into the 1940s, long after the genres of Western fiction had been adopted in Arabic writing, replacing traditional forms of literary discourse. A similar symbiosis between translation and creation of literature is observed in many national cultures at the formative stage, when writers commonly use translation as a creative device and for addressing what they perceive as the pressing issues and actual cultural needs of their societies and time. Since the 1920s, modern Arabic literary theory and criticism have contributed to the emergence of new perceptions of translation, which have determined its subsequent evolution as a creative activity with specific social and cultural functions.

Extensive transmission of Western scientific knowledge and intellectual thought continued. Translated contemporary works of history, philosophy and literary theory were an integral part of the critical debates of the day (e.g. the translation of Thomas Carlyle’s On heroes, hero-worship, and the heroic in history [1911] by the Diwan school). Translations of Herbert Spencer’s On situation (1908) and Lebon’s work on pedagogy (by Tāḥā Ḥuṣayn, 1921) reflected the edifying priorities of Arab intellectuals. ‘Aḥmad Lūfī al-Sayyīd’s [q.v.] renditions of Aristotle from the original (1924-35) introduced the classical tradition of Western intellectual thought. At that time, major influences on modern Arabic literary theory and criticism (Freud’s psychoanalysis, the ideas of the Russian formalists,
etc.) were also exercised through the intermediary of Western languages different from the original.

In the second half of the century, the translation entered a new phase of development under the aegis of the independent Arab nation states. The cultural policy of "Arabisation" (e.g. in Algeria) adopted by Arab states placed special emphasis on translation as a means of interaction with other cultures meant to serve what they deemed the interest of Arab societies and their comprehensive advancement.

Efforts have been made to support the study of translation and develop translators' professional skills. Translation is a commonly taught subject within foreign language acquisition programmes at the high school level. Arab translators receive modern professional training in independent academic institutions (e.g. al-Mustansiriyya School in 'Iriq; King Fahd School for Translation in Morocco), or through academic programmes in translation offered in a number of universities (e.g. the King Su'ud University in Saudi Arabia; Yarmük University in Jordan; Alexandria University in Egypt, etc.). The academic institutions develop translation studies as well (e.g. the Translation Center at the King Su'ud University worked in the last decade on a major project designed to catalogue 20th-century Arabic translations). Pan-Arab conferences provide forums for discussion of policies and issues of translation (e.g. al-Tunis, 1979, on developing common criteria for selecting texts for translation, reassessing the status and training of Arab translators, etc.; Jordan, 1992, on translation studies; Egypt, 1995, on scientific translation; etc.).

At the national level, the ministries of culture and education oversee translation activities. In many countries, translators are syndicated in professional organisations and unions, and some are individual members of the International Translators' Union (Geneva).

At the regional level, two organisations formulate pan-Arab strategies of translation. The objective of the Arabisation Coordination Bureau (1961, Rabat) is to create and update a unified system of modern Arabic terminology. The Arab Center for Arabisation, Translation, Authorship and Publication (1989, Damascus) supports translation into Arabic of materials for higher and university education in all areas of academic and technical specialisation, and of distinguished works in the fields of the sciences, literature and arts. Both organisations are affiliated with ALECSO. Recent contributions of Arab translators to ALECSO's cultural programmes include publications of Basic Arabic dictionary (1988) and Trilingual thesaurus: Arabic, English, French (1995); and the ongoing projects Translations of distinguished books on science and technology, and Arabic unified dictionaries. The Islamic Organisation for Culture and Science also retains translation programmes.

Over the last five decades, translation production has increased everywhere in the Arab world. Egypt and Syria hold leading positions, with more than 100 publishers of translations in each country (here and further below, statistics by UNESCO, Index translationum). Recently, Saudi Arabia and Kuwait have emerged as major translation centres.

English, French and Spanish remain the important sources of Arabic translation, used also as intermediaries for transmission of texts written in other original languages. Since the 1930s, and especially with the influx of American culture in the post-World War II period, English became the main source language of translation into Arabic. In the course of the most recent decades, the source languages diversified, reflecting new cultural priorities on the part of Arab authors, audiences and institutions related to the acquisition of modern technologies and know-how; to the interest in literatures and cultures traditionally not represented, or under-represented by Arabic translation, etc. The pool of languages through which translations are currently undertaken includes Japanese, Chinese, and other less common foreign languages. The leading languages from which books were translated into Arabic in the last 20 years are: English (3188 translations), Russian (1388), French (929), German (263), Spanish (149), Persian (77), Italian (58) and Turkish (49).

The majority of texts translated in the second half of the century represent fiction of European origin: Shakespeare is the most translated foreign author, with a total of 49 Arabic translations, closely followed by Agatha Christie with 47. Emerging since the interwar period new concepts of the nature of translation and its cultural functions manifested themselves in a more attentive approach to the selection and transmission of original texts. Translators' creativity was employed to best express the ideas of the original using the tools of the modern Arabic language. The resulting more accurate renditions of classics by Bolz, Turgenev, Dickens, Baudelaire, Guy de Maupassant, Sartre, Gorky, Thomas Mann, Camus, James Joyce, T.S. Eliot, Virginia Woolf and Apollinaire exposed readers to a variety of writing styles, and encouraged since the 1950s new trends in Arabic prose (realism, modernism, stream-of-consciousness), and poetry (the free-verse movement). In drama, Chekhov, Henrik Ibsen and Harold Pinter elicited many translations (the latter's works compiled in a three-volume edition appeared in Cairo in 1987). Since 1983, Kuwait's Ministry of Information has published a series of modern translations from classical Greek of Euripides' tragedies.

Among the significant American writers translated in that period (e.g. Faulkner, Hemingway, Fitzgerald, Henry Miller), Edgar Allan Poe was better known for his mystery stories than as a poet, but Mark Twain remained most popular, his early Arabic renditions revisited by later translators. Lately, Arabic versions of Walt Disney's books have grown popular among children's literature in translation, including classic tales by Leo Tolstoy, Wilhelm and Jacob Grimm, Hans Christian Andersen, and modern Western authors.

In the 1960s to early 1980s, publishers in Moscow, Leipzig and other cultural centres of the then Communist countries produced a large number of Arabic translations introducing classics of their national literatures. The collaboration between Arab and European translators and publishing houses continues to broaden the perspective of Arab readers on European literary traditions (e.g. Arab and Swedish translators at present render from the original poems by Tomas Tranströmer, one of Sweden's most important contemporary poets, whose forthcoming Arabic anthology will be published by al-Mu'assasa al-Arabiyya li 'l-Dirasat wa 'l-Nashr in 2003).

Numerous translations of works by Milan Kundera (Czech Republic), Wole Soyinka (Nigeria), Gabriel Garcia Marquez (Colombia) and Aziz Nesin (Turkey) in the course of the last decade testify to lasting aspirations by leading Arab translators and publishers to bring the best of modern world literature to their audiences.

In literary translation, transmission through intermediary languages remains a problem (e.g. Kundera and Marquez were first translated from French; Italo
Calvino and Ibsen from English; etc.). Duplications (e.g., four recent renderings of George Orwell's 1984) could be avoided through better professional communication (al-'Asawī, 11-12).

Translations of non-fictional literature range from the modern sciences, business, social theories, philosophy (e.g., Toecau, psychoanalysis, etc.) to general history, history of religions and religious writings, psychology and social behaviour (e.g., Edward De Bono), to popular science adaptations, textbooks at all educational levels, etc. Randomly selected and outdated source texts are by no means an exception.

Works which represent Western points of view on the history and culture of the region, have always aroused interest among Arab translators and readers (e.g., the latest accomplishment of the Egyptian National Translation Project, the 2002 translation of Marilyn Booth's study on Bayram al-Tunisī). The recent translations of studies on modern Palestinian and Egyptian history by the German scholar Alexander Schölch; on Libyan history by the Italian scholar Francesco Coro; etc.

A growing transmission of modern scientific knowledge has emphasised the need for an even closer cooperation between professionals in specific fields and in the translation of studies on modern Palestinian and Egyptian levels. While the part of al-fushā increases in original fictional writings, and the performing arts of Arabic theatre and cinema, it remains limited in fictional translation. The colloquial versions of Arabic are entirely absent from non-fictional translation. As a target language, al-fushā has shown flexibility, adjusting its structures to fit new forms of discourse brought by translation. In the process of giving shape to new ideas and meanings, translation has constantly perfected its linguistic vehicle. By modernising the vocabulary, amplifying the semantics, and modifying and simplifying the sentence structure of the language, translation contributes to building a modern, informative and to-the-point style of expression (al-‘Asawī, 15).

During the entire modern period, translations have been made primarily in al-fushā. While the part of al-‘imāmya increases in original fictional writings, and the performing arts of Arabic theatre and cinema, it remains limited in fictional translation. The colloquial versions of Arabic are entirely absent from non-fictional translation. As a target language, al-fushā has shown flexibility, adjusting its structures to fit new forms of discourse brought by translation. In the process of giving shape to new ideas and meanings, translation has constantly perfected its linguistic vehicle.

Given that the Arabic language is commonly identified as a vital, if not the most important, aspect of Arab nationalist ideologies—whether they are pan-Arab, regional, or state-specific—Arabicisation has played a significant role in modern Arab politics. In the early 19th century, before Arab nationalist discourse began to emerge, Muhammad ‘Ali (q.v.) of Egypt laid the foundations for the use of Arabic as an instrument of state-building. As part of his efforts to modernise education in Egypt, particularly military, medical and scientific education, Muhammad ‘Ali authorised the establishment of a School of Languages (Madrasat al-alōm) in 1835. The school was closed in 1850 during the reign of ‘Abbās Hilmi I (q.v.) but reopened in 1863 on orders of Ismā‘īl. Under the leadership of Rifā‘a al-Tahāwī (1801-73 [q.v.]) during both of its phases, the school undertook an ambitious program of not only training translators, but also of translating and publishing European texts in Arabic.

Thus, the School of Languages pioneered the ideology and the methodology of ta‘rib. The European works chosen for translation reflected the interests of the State as determined mainly by al-Tahāwī, who remained loyal to the house of Muhammad ‘Ali throughout his life. These works included texts in geography, history, medicine, military sciences and politics. In translating modern European works into Arabic, the School of Languages devised not only the principles for rendering foreign languages into a clear, modern Arabic idiom, but also coined Arabic vocabulary to express novel technical terms. In many ways, therefore, the school provided the intellectual resources for the Arab nationalist movement that gained ground in the latter half of the 19th century and provided Arab nationalists with grounds for asserting the continuing vitality and centrality of Arabic in their nationalist programs.

The work of European and American missionaries, primarily in the Levant, provided a second catalyst for the revitalisation of Arabic during the 19th century. American and British Protestant missions, eager to distinguish themselves from the French Catholics, who insisted upon and actively promoted the use of French, encouraged the translation of the Bible and liturgical readings into Arabic. The schools established by Protestant missionaries also promoted the study of Arabic in their curricula.

Arabicisation in Arab nationalist discourse

The unifying factor of language in Arab nationalism is a theme developed at length by a number of intellectuals during the late 19th and early 20th centuries. ‘Abd al-Rahmān al-Kawkābī (ca. 1849-1902 [q.v.]) viewed Arab political unity and cultural revival as a necessary precursor to pan-Islamic unity and revival. In Umm al-‘arbī, as part of his argument for Arab leadership of the Islamic world, he claims that the language of the Arabs is the language common to all Muslims. Yet he also prepares the foundation for later...
secular Arab nationalists by acknowledging that Arabic is the native language of both Muslims and non-Muslims. The Lebanese Maronite scholar Ibrāhīm al-Yāzīdī (1847-1906 [see al-Yāzīdī. 2.]) equated it with colloquial dialects and associated it with clandestine religion and culture. For this reason, al-Yāzīdī championed the revival and dissemination of the standard literary language (al-būgha al-fishli), based on classical Kurʿānic Arabic, in opposition to various suggestions for replacing it with colloquial dialects (al-būgha al-dammī). He participated in efforts to modernize and simplify Arabic pedagogy, arguing that the proper use and teaching of a language is necessary to political, economic, and cultural modernization efforts. The standard Arabic also demarcates, for al-Yāzīdī, the boundaries between the Arab nation and other peoples. To maintain their cultural distinctiveness and by implication their eventual political autonomy, the Arabs had to preserve their language from foreign corruption, including the use of loan words and especially the adoption of the Latin script in place of the Arabic, as suggested by some reformers of the time. Instead, he proposed rules for Arabicization of foreign words and names that would either assimilate them into Arabic phonology and morphology or distinguish them clearly as foreign proper nouns.

The most powerful stimulus for the rise of an Arab nationalist discourse came from the Turkification policy pursued by the Young Turks after they seized power in Istanbul in 1908. The Ottoman constitution of 1876 had established Turkish as the official language of the empire but had provided no details for the practical enforcement of this provision. The political program adopted by the Committee of Union and Progress [see ITTIHAD WE TERAKKI DJEM C.Society 1966, 161] conducted provisions for enacting this policy (see Kayah 1997, 90-4). All civil servants and government officials, including members of parliament, were instructed to conduct business in Turkish. The teaching of Turkish was made compulsory in elementary schools and Turkish was imposed as the medium of instruction in all secondary and higher education. As a result of this policy, Arabic was taught in the state secondary schools of the Arab provinces as a foreign language, with instruction in Arabic grammar provided in Turkish by Arab teachers who were often not conversant in Turkish or by Turkish teachers who were frequently not expert in the intricacies of Arabic grammar. Arab students caught speaking Arabic outside the classroom were subject to punishment. The imposition of Turkish was coupled with a campaign conducted through the Turkish newspapers to paint Arabic as a stagnant language and its speakers as an obstacle to the progressive reforms launched by the Young Turks.

Arab responses to the Turkification policy came from a number of political, literary and educational societies, some based in Arab cities, others in Europe. The Arab Congress of 1913, a gathering of Arab intellectuals and political activists in Paris, adopted a resolution demanding in part: “La langue arabe doit être reconnue au Parlement ottoman et considérée comme officielle dans les pays syriens et arabes.” (Zeine 1966, 161). Another group, the Arab Revolutionary Society (al-dā'irah al-dā'irah al-arabiyah), called in the same year for a more drastic measure: complete Arab independence from the Ottoman Empire. The society’s “Proclamation (balāqh) to the Arabs, the Sons of Kahfān” expounded the superiority of Arabic over Turkish and denounced Turkish attempts to substitute the “sacred” language of Islam with Turkish translations of such things as the call to prayer and the ritual prayer itself. The proclamation also appeals to Christians and Jews to recognize that their common language unites them with Muslims in a single Arab nation: “Let the Muslims, the Christians, and the Jews be as one in working for the interest of the nation (umma) and of the country (bilād). You all dwell in one land, you speak one language, so be also one nation and one hand.” The fanaticism that divides the religious communities is deliberately cultivated by the Turkish authorities, the proclamation avers. Religious hostilities will subside when “our affairs, our learning, and the verdicts of our courts will be conducted in our own language” (ibid., 174-7; Haim 1976, 83-8).

Opposition to the Turkification policy also figures prominently in the works of individual intellectuals. In his newspaper al-Mufid, ‘Abd al-Ghanf al-Urays (1891-1916) wrote incessantly on the need for Arabs to resist attempts to undermine their language. He demanded that Arabic be recognized in the Ottoman constitution as the primary official language in the Arab provinces of the empire, and that it be enforced as such in the schools and civil administration. He urged Arabs to insist that all foreign schools teach Arabic as the national language of the students they were educating, alongside Turkish, the official language of the empire, and a foreign language, such as English or French. Al-Urays also campaigned for the use of a simple, pure Arabic idiom in private communications, one that avoided flowery expressions that he blamed on Turkish influences or words and phrases borrowed from French, the language popular among many educated Arabs, especially his fellow Lebanese. Al-Urays’s growing influence among Arab nationalists led to his execution by Turkish authorities in Beirut in 1916.

Arab nationalist writing in the period after World War I continued to emphasize the role of the Arabic language, but with the imposition of English and French mandates in much of the former Ottoman Empire, the perceived threat to Arabic came from English and French, not Turkish. ‘Abd Allāh al-Alāyīlī (b. 1914) Dustūr al-arab al-kaumi, published in 1941, is a not so veiled attack on the dissemination of French in his native Lebanon: “The duty of nationalists who are imbued with a burning and true belief is to persuade society by all possible means to free itself from all languages except the one which it is desirable to impose, attachment to which must be fanatic... In such a fanaticism we must mingle hate and contempt for anyone who does not speak that national language, which we hold sacred and venerate as a high ideal” (Haim 1976, 121-2). In his 1952 article al-Isām wa l-‘umma al-‘arabiyah ‘Abd al-Rahmān al-Buzzāk (1913-73) declared the Arabic language to be the “soul of our Arab nation and the primary aspect of its national life” (ibid., 181). Zāki al-Arsūzī (1900-68) argued that the true Arab genius lies in the Arabic language, which had flowered well before the advent of Islam. Thus, for al-Arsūzī, the origins of the Arab nation lie in its pre-Islamic antiquity, and the Prophet Muhammad becomes simply one among many who forged an Arab national consciousness. The challenge of all modern Arabs, Christians and Muslims, according to al-Arsūzī, is to reinvigorate this national identity by reviving the language, for which
he suggested a number of radical reform measures (see Suleiman 2003, 146-57).

The period between the two World Wars saw increasing opposition to French rule in Algeria, Morocco and Tunisia as well. French colonialism in all three countries had meant the imposition of a policy of francophanie that made French the sole official language. The independence movements in the Maghrib would consequently stress Arabic along with Islam as the unifying and authentic markers of national-terminology in their definitions of Arab nationalism, al-Husri limited his idea to a shared language and a shared history. The priority he attaches to the two is clearly articulated in the following passage from Muhādārat fi nushū al-ḥikma al-kawmiyya: "Language constitutes the life of a nation. History constitutes its feeling. A nation which forgets its history loses its feeling and consciousness. A nation which forgets its language loses its life and [very] being" (Suleiman 2003, 132).

Al-Husri was keenly aware, however, that linguistic unity was largely a fiction, that the common standard Arabic was shared by only a small fraction of Arabs, namely, the literate classes, whereas the vast majority of Arabic speakers were divided by widely divergent colloquial dialects. In order to realise his vision of a language-based Arab identity, al-Husri devoted much of his career to promoting the modernisation and simplification of classical Arabic grammar, with the intention of reconciling standard Arabic with the dialects, and then disseminating this modern standard Arabic in the new educational system of Arab countries. At the same time, he waged a fierce intellectual battle against advocates of regional vernaculars as the basis for an Egyptian, Syrian or 'Iraki national language. Sati al-Naṣr, whose Arabicization project, where sometimes different regional vernaculars exist within a single state. Finally, Arabisation has been bolstered by the rise of Islamist groups that accentuate the connection between Arabic and the Islamic identity of the vast majority of the populations of Arab states. Arabic is today designated as an official language in the constitutions of nearly all 22 members of the Arab League, and it is the sole official language in some 16 states.

Egypt was among the first Arab states to react to the dissemination of English and French as a deliberate policy of imperialism. In 1888, the British colonial administration in Egypt announced that the language of instruction in all Egyptian schools should be either English or French. This policy was coupled with the promotion of the Egyptian colloquial over the literary Arabic as the "authentic" language of Egypt. Various Egyptian intellectuals, such as Mustafa al-Husur, adopted the proposal. "Arabic as the basis for an Egyptian, Syrian or 'Iraki national language was a major reason for its backwardness and that the key to Egypt's progress lay in making the spoken language Egypt's written language as well. The British language policies were not met with immediate resistance, but to the contrary the policies found champions among many influential Egyptian reformers. Calls for a restoration of standard Arabic in the national life of Egypt became pronounced when the independence movement gained ground in the early 20th century. Sa'd Zaghlul [g.e.], in his capacity of Minister of Education (1906-10), worked on the Pedagogy Committee of the University of Cairo (est. 1908), headed by the then Prince Fu'ād, recommended that the official language of instruction at the university be Arabic, but, given the poverty of instructional material in that language, French and English would serve by necessity and temporal translation as the medium of instruction in many faculties. Despite these early efforts, as late as the 1940s Arabic was rarely the medium of instruction in Egypt's educational system, except for the religious schools supervised by al-Azhar. The foreign-language schools, where most of Egypt's elite were educated, continued to exclude Arabic altogether, leading Tāhā Husayn in Mustuokableh fi Musti (1930) to warn of the cultural and political consequences for the nation. Tāhā Husayn's demand that Arabic be taught in all foreign schools (though the medium of instruction remained English or French) became government policy in the early 1940s.

Syria and then 'Irāq launched Arabisation policies under the direction of Sā'id al-Husur, who served as an advisor and education minister to Fāsyl b. Husayn [see Fāsyl 1]. The short-lived Arab national government in Damascus (October 1918-July 1920) undertook several measures to build Arab national consciousness in the country, including the implementation of an Arabic curriculum at all grade levels, requiring the rapid translation into Arabic of textbooks and the training of qualified instructors. Al-Husur continued the aborted Arabisation program in Syria when he relocated to 'Irāq with Fāsyl. The teaching of foreign languages was eliminated in state
primary schools, and the foreign-sponsored schools were forced to adopt much of the nationalist-oriented curriculum developed for the state schools.

The ascendancy of pan-Arab politics during the 1950s raised the language issue to new levels of political saliency. Both of the dominant ideologies of pan-Arabism and Arab nationalism emphasized the alleged unity of language as a key constituent of the single Arab nation. The result was the further curtailment, if not outright elimination, of the influence of foreign languages in Egypt, Syria and 'Irāk. In Egypt, standard Arabic was promoted as the language of instruction in all subjects, including technical and scientific subjects generally taught in universities in English. The debates on the place of colloquial Egyptian in national life faded, but did not die entirely, as evinced by the controversy engendered by the publication of Luwīs 'Awad’s (1915-90) *Mukaddima fi ṣīḥ al-bughā al-'arabīyya* in 1980. This work, which attempts to sever the link between Arabic and Egyptian nationhood, was published, perhaps not by coincidence, following Egypt’s expulsion from the Arab League because of its peace treaty with Israel.

Lebanon was the Arab state most torn by the advent of pan-Arab ideologies, and language figured prominently in its political disputes. In 1962, Père Selim Abou, a young Lebanese Jesuit teaching at the University of St. Joseph in Beirut, published *Bilinguisme arabe-français au Liban*, in which he argued that Lebanon’s bilingual character is unique among Arab countries and not the result of foreign domination. Much of the Christian population and many of the Muslim elites as well used French well before the French Mandate, he pointed out. French has been voluntarily adopted, Père Abou suggests, by a segment of the Lebanese population, especially the Maronites, "to express their deepest spiritual needs" (Savigny 1965, 121). Such views were strongly challenged by other Lebanese writers, including a number of prominent Maronites. Kamāl Yūsuf al-Hājjī (1917-76), for example, argued that Lebanon's bilingualism was largely a myth, since only a small percentage of the elite classes in each confessionist group commanded native mastery of either Arabic or French. French was the language of business and the government's continued use instead of Arabic by the Lebanese was one means of marking their inferior status and dependence upon Europe.

Similar controversies involving the role of French have occurred in the countries of the Maghrib. Algeria, Morocco and Tunisia have all pursued efforts to promote standard Arabic as a marker of their national identities as well as their solidarity with the broader Arab world. But the three countries have exhibited varying degrees of official hostility to the use of French in national life. Algeria, which experienced the longest period of French colonial rule, has always been accepted by the government in the pre-independence period. Its 1973 constitution declared Arabic alone to be the official language. Kurdish-language publications were banned in Syria after independence. Its 1973 constitution established Arabic as the sole official language of the country, but the use of Kurdish in schools and universities, demanding that the government officially recognise the Berber dialect of Tamazight [gæ].

The government responded by creating the Haut Commissariat à la Amazighite in 1993 for the promotion of Tamazight in education and mass communication. In April 2004 Tamazight was recognised as a second national language in Algeria. The recognition fell short of Berber demands that it be acknowledged as an official language, which the government reaffirmed throughout the 1990s as being standard Arabic.

The Kurdish minorities in Syria and 'Irāk have faced similar obstacles to gaining official status for their language. Kurdish-language publications were banned in Syria after independence. Its 1973 constitution declared Arabic alone to be the official language. 'Irāk’s 1925 constitution also established Arabic as the sole official language of the country, but the use of Kurdish in schools and other public spheres was always accepted by the government in the pre-dominantly Kurdish regions of the north. The 'Irāk law of administration for the transition period, promulgated in March 2004 following the American occupation of the country, recognises both Arabic and Kurdish as official languages.

The constitution of Sudan designates Arabic as the official language of the republic, but adds that "the
state shall allow the development of other local and international languages". The reference to other local languages is presumably to the 100 or so African languages spoken in the southern, mainly non-Muslim part of the country. The British colonial administration cultivated these regional dialects along with English in an openly espoused policy of divide and rule. Post-independence Sudanese governments have pursued Arabicisation with the argument that a common language is the most effective means of maintaining the unity of the country. Yet Arabicisation has been strongly resisted in the south as merely one aspect of Khartoum's attempts to Arabise and, since the late 1980s, Islamise the Christian and animist regions of the country.

Organisations promoting Arabicisation
A number of organisations have been founded by Arab governments and by the Arab League to promote the policy of Arabicisation. The Arab Academy was created in 1919 in Damascus as part of the intensive Arabicisation program launched under Sā'īd al-Ḥṣīf. Its principal mission was to coin Arabic terms for scientific and technological applications. The Royal Academy of the Arabic Language (al-Majma‘ al-malākī li ‘Ugīga al-wuqūyīyā) in Cairo was established in December 1932 by a royal decree of King Fu‘ad. Its mandate was to explore all means by which the Arabic language could be revitalised. The King personally took an interest in orthographic reform, advocating the use of different characters to function as capital letters, dubbed the ḥurūf al-tāṣī. This experiment was ultimately abandoned, but the academy continued to debate various measures for orthographic and grammatical simplification for years to come. Under Nasser [see ABD AL-NASIR, in Suppl.], the academy diverted its attention away from internal reform of the language to formulating new terminology for scientific and technical applications. This shift reflected the regime’s argument that Arabicisation should proceed with minimal internal alterations to classical Arabic, the bearer of the common Arab heritage, and should focus instead on only those reforms necessary for economic and scientific progress. Other Arabic language academies have been established in Baghdad (1947) and Amman (1976).

The need to coordinate the work of the various national language academies was acknowledged in 1961 by the Arab League. The Bureau for the Coordination of Arabicisation in the Arab World was established the following year in Rabāṭ. The bureau has organised a number of international scholarly conferences on Arabic reform and pedagogy and publishes the journal al-Lisdn al-arabī (al-Majma‘ al-malākī li ‘Ugīga al-wuqūyīyā). ACATAP was established in Damascus by an agreement between the government of Syria and the Arab League Educational, Cultural and Scientific Organization (ALECSO). ACATAP’s goals include translating foreign works into Arabic and translating key Arabic texts in science, art and literature into selected foreign languages. The centre also publishes a semi-annual journal titled al-Tarīb.

Bibliography:

(ŠOAIL H. HASHMI)
genre of this last, the "road books" or al-masālik wa 'l-mamlūk [q.v.], an important element of which was also the fixing of the geographical co-ordinates of places (see Biacherie, Extraits des principaux géographes arabes du Moyen Âge, Beirut-Algers 1934, "Paris 1957, 11-200, 10-250, 11-255, at Vol. II, 573); at all events, Ibn Khurraḍāḏbih [q.v.] may be accounted the father of this sub-genre.

Those tarnūk which were major highways of the Islamic world for trade and communication naturally stimulated the growth of staging posts (mandril [q.v.]) and important towns along them. Mecca may have been along one of these tarnūk, the route from Syria down the Ṭūth al-Ḳurā [q.v.] (but cf. the thesis of Patricia Crone in her Meccan trade and the rise of Islam, Oxford 1987, that the importance of Mecca as a centre for pre-Islamic trade has been much exaggerated). Yet undoubtedly, Samarkand [q.v.] lay at the intersection of trade routes coming from India and Afghanistan and from Khurāšān and western Persia and then leading northwards and eastwards along the "Silk Route" to eastern Turkestān and China—the "Golden Road to Samarqand" which forms the culmination and envoy of the James Elroy Flecker's (d. 1915) poetic drama Ḥassān. The famous Silk Route, or better, Silk Routes, ran westwards from Xi'an in China through Lanzhou to Dunhuang, where the ways split, proceeding either along the northern or southern rims of the Tarim basin [q.v.] to Ṭaḡḫent, Samarkand, Bukhārā, and thence to the caliphal lands of Persia and Īrān, and through Anatolīa or along the Black Sea coast to Byzantium (see M. Mollat du Jourdin, ch. "Des routes continentales à la voie maritīme (fin du Moyen Âge)", in UNESCO, Les routes de la soie, Patrimoine commun, identités florissantes, Paris 1984, 1-19; K. Baipakov, ch. VIII/2 "The Silk Route across Central Asia", in E.G. Bosworth and Muhammad Asimov [eds.], UNESCO History of the civilisations of Central Asia, iv, The age of achievement: A.D. 750 to the end of the fifteenth century, pt. 2, Paris 2000, 221-6; Frances Wood, The Silk Road, London 2000, 13). At the other side of the Islamic world, caravan routes across the Sahara Desert brought the slaves and gold of ancient Mali and Ghāna to the North African cities (see F.E. Bosvill, The golden trade of the Moors, London 1958), whilst the Darb al-ʿArbaʿīn [q.v.] "Route which took forty days" linked Egypt and Nubia with the eastern lands of the Bilad al-Sudan, bringing slaves, ivory, ostrich feathers, etc. (see SUĐĀN, BILAD AL-).

It should be noted that tarnūk should not be confused with the related term ṭarīḵā, pl. ṭarīḵā, Šīfī "path" or order; for these, see ṬARĪḴĀ.

TAṆIK — TAṆIKH

II. 1. In the Arab world.

(a) The period 500-600 A.H. (1000-1800).

i. The Ottoman occupation of the central Arab lands

The Ottoman Empire, in a few decisive battles, destroyed the Mamlūk Sultanate (1290-1517 [see MAMLŪKS]), which included Egypt, Syria and parts of Anatolīa (with the Ḥidjāz within its sphere of influence). Egypt, the centre of empires for centuries, and also Syria became tax-paying Ottoman provinces for the next three, nominally four, centuries. Later in the 16th century, the Yemen, Īrān and North Africa (with the exception of Morocco) were also incorporated into the Ottoman Empire with varying degrees of centralisation.

For Egypt in particular, the change of rule was traumatic. It is true that like the Mamlūks, the Ottomans were Turco-phone Sunnīs and were ruled by a foreign-born military caste. Yet the nature of administration under the Mamlūks had been Arabic; now, under the Ottomans, it was Turkish. Under the new régime, all governors, chief government officials, kāḥīṭs and soldiers came from the Turkish provinces and spoke Turkish. Thus the foreign presence in the Arab lands was much more massive than before. At the beginning, many of the natives of Syria, Egypt and other Arab lands regarded the Ottomans as bad Muslims, negligent of the religious ordinances and disrespectful of the šuʾrā. This judgment entailed automatically a view of the rulers as unjust. Later this negative image of the Ottomans changed, however, as the Ottomans, starting with the long and stable reign of Sultan Sulaymān Ḧānī (the Magnificent, 1520-66 [q.v.]), became themselves more devout. The Ottoman dynasty emphasised its role as pious Muslim rulers and defenders of Islam against Christian infidels in the west and Shiʿī heretics in the east. Nevertheless, anti-Turkish sentiments persisted, beside a genuine loyalty toward the Ottoman dynasty itself and the distant sultan in Istanbul. Such seemingly contradictory sentiments could coexist in that pre-national age and are reflected in the writings of Arab historians.

The Mamlūk sultanate was extremely rich in historiography (see (b) at Vol. X, 276a-280a), more than any other period in pre-modern Islam. Yet research into the history of the Arab provinces of the Ottoman Empire has also been increasing recently, and there is a better appreciation of the wealth of Arabic historiography under Ottoman rule (see BIDĪ).

EGYPT

The political, diplomatic and military events leading to the Mamlūk-Ottoman conflict and the occupation of Egypt (Muḥarram 923/January 1517), and then the first six years of Ottoman rule (until Dhū l-Ḥidjād 928/November 1522) are superbly narrated by the Cairoene chronicler Muḥammad b. Iyah [see IBN IYAS]. The fifth volume of his Badīʿ al-ẓahār fi wakāṭ al-dīn [q.v.] is a most valuable work that has few equivalents in describing day by day how a new régime steps into the shoes of the old one. Ibn Iyah not only reports the decisions and moves undertaken by the Ottomans in Egypt but his writing reflects the people's attitudes and feelings toward their new masters.

Ibn Iyah's hostility towards the Ottomans is obvious throughout his chronicle. He identified with the fallen Mamlūks, since he was one of anīlāḏ al-nās [q.v.] "the sons of the (important) men", namely, the Mamlūks. He judged all the Ottomans—Sultan Selīm, who defeated the Mamlūks, his soldiers, and his kāḥīṭs—as cruel and ignorant.

The problem with this chronicle is that it is almost isolated. Ibn Iyah was one of the best, but also the last, representatives of the great Egyptian Mamlūk historiographical tradition. This tradition stops abruptly after the Ottoman occupation. It cannot be determined whether that happened because Egypt was relegated from an empire to a province, or because the greater part of the 16th/17th century in Egypt passed peacefully and without major political upheavals. Some
information about the history of Egypt in the 10th/16th century is provided by non-Egyptian Arabic sources, such as by the important histories of the Meccan historian ʿAbd al-Din al-Nahrawalī (d. 950/1542 [g.g.]), who wrote a detailed account of the exploits of the Ottomans in the Yemen. He was familiar with developments in Egypt, in the Hijāz and, to a certain extent, in Istanbul as well, since he travelled to the Ottoman capital where he met some of the most influential men. Al-Nahrawalī wrote a lengthy history of the Ottoman Empire up to his time, which comprises a great part of his book about the history of Mecca (al-Bark al-ṣamālī fī ʿl-jāh al-ṣamālī, ed. Hamad al-Djawārī, al-Riyād 1967; K. al-Ṭūm bi-dīlām biʾl-lāhī Allah al-khādir, Beirut 1964). His attitude towards the Ottoman state is positive in the extreme, and his works influenced Egyptian historians for a long time.

Since contemporary chroniclers did not cover the greater part of the 16th century, the information about that period is cursory and episodic. The historiography of the period organises its coverage of events by what has been called by scholars the “sultan-pasha” type of chronicle. The paĝa is the central figure in the narratives. The chroniclers characterise each viceroy by his personality and religious profile.

One of the two notable historians of this period is Muhammad b. Abi ʿl-Surur al-Bakr al-Siddikīf (d. 796/1394). In his Kitāb Aḥkām al-awsal fī muḥā Fansarqā fī Muḥir min al-awāl al-awdīl he gives a valuable and extensive view of the chronicle of the Ottoman dynasty and a history of Egypt up to his time. Of far greater importance are the numerous historical writings of Muhammad b. Abi ʿl-Surur al-Bakr al-Siddikīf (d. 1071/1661) [see al-Barkārī], the leading historian of the 11th/17th century. He was a member of a famous aristocratic Sūfī family of Adhūfi, who also claimed descent from Abū Bakr, the first caliph [see Barkārīyah]. The Bakrīs played a role in Egypt's religious and public life until the middle of the 20th century. Ibn Abī ʿl-Surūr himself had close relations with the Ottoman authorities in Egypt, and his attitude toward the Ottomans is extremely laudatory, describing the sultans as impeccably orthodox. Almost all his chronicles are about Ottoman Egypt, but he also wrote a history of the Ottoman Empire, naturally with a strong emphasis on Egypt (al-Maḥāb al-namānīyya fī ʿl-dawlat al-Mamdlik, ed. Laylā al-Ṣāḥibkhāgh, Damascus 1995).

It was only towards the end of the 11th/17th century and during the 12th/18th century that Arabic history writing in Egypt became really mature and rich. We may have many chronicles, some of them very valuable, which fall into two main categories: (a) literary chronicles, written by educated 'alāmā or scribes in standard literary Arabic, and (b) the popular chronicles or “soldiers' narratives". The "soldier" language is not grammatical, and the narratives have the characteristics of stories told before an audience. The chronicles of this category were created in the milieu of the seven ogāb, or the regiments of the Ottoman garrison in Cairo, more specifically in the ʿAzab ogāb, the second largest regiment in Cairo (after the Janissaries). These five manuscripts are known as the Damurdashi group, since their authors are related in one way or another to officers in the ʿAzab regiment called by this surname. The most important chronicler of this group is Ahmad al-Damurdashi KāthīfīlʿAzabān [see al-Damurdashi], who was an officer below the rank of the regimental commander in the ʿAzab corps, whose chronicle ends in 1170/1756 (al-Dūrā al-musānā fī Aḥkām al-Kināna, ed. A. ʿAbd al-Rahīm, Cairo 1989, ed. and tr. D. Crecelius and ʿAbd al-Wahhāb Bakr, Al-Damurdashī's chronicle of Egypt, 1688-1755, Leiden 1991). His narrative is lively, detailed and trustworthy, and is full of information about military and political events, as well as anecdotes that throw light on various economic, religious and cultural aspects of Egyptian civilisation.

It is important to note that Ahmad al-Damurdashi was aware of the de facto autonomy of Egypt within the Empire. He calls the régime in Egypt dawlat al-Mamlūkī, namely, the Mamlūk government, as it appears in the book’s sub-title Fi Aḥkām mā wūdāʾ bi-Mīr fī dawlat al-Mamlūkī “that which happened in Egypt under the Mamlūk government”.

The historians of the period describe in detail the political struggles that they witnessed in Egypt, again, particularly in Cairo. After the pağes’ authority declined from the latter part of the 10th/16th century, power passed in the next century to the military grandees, called amīr, bey or sandjakī (the arabised plural of the Turkish sandjak or sandjak beyi). In the late 17th and early 18th centuries, power shifted to the ogāb, primarily to the Janissaries and the ʿAzab, in that order. For most of the 12th/18th century, the supremacy belonged to the constantly-feuding Mamlūk beykis until 1798, when the French occupation put an end to the Mamlūk régime.

Ahmad Shalābī, for example, wrote a valuable, which fall into two main categories: (a) literary chronicles, written by educated 'alāmā or scribes in standard literary Arabic, and (b) the popular chronicles or "soldiers' narratives". The "soldier" language is not grammatical, and the narratives have the characteristics of stories told before an audience. The chronicles of this category were created in the milieu of the seven ogāb, or the regiments of the Ottoman garrison in Cairo, more specifically in the ʿAzab ogāb, the second largest regiment in Cairo (after the Janissaries). These five manuscripts are known as the Damurdashi group, since their authors are related in one way or another to officers in the ʿAzab regiment called by this surname. The most important chronicler of this group is Ahmad al-Damurdashi KāthīfīlʿAzabān [see al-Damurdashi], who was an officer below the rank of the regimental commander in the ʿAzab corps, whose chronicle ends in 1170/1756 (al-Dūrā al-musānā fī Aḥkām al-Kināna, ed. A. ʿAbd al-Rahīm, Cairo 1989, ed. and tr. D. Crecelius and ʿAbd al-Wahhāb Bakr, Al-Damurdashī's chronicle of Egypt, 1688-1755, Leiden 1991). His narrative is lively, detailed and trustworthy, and is full of information about military and political events, as well as anecdotes that throw light on various economic, religious and cultural aspects of Egyptian civilisation.

It is important to note that Ahmad al-Damurdashi was aware of the de facto autonomy of Egypt within the Empire. He calls the régime in Egypt dawlat al-Mamlūkī, namely, the Mamlūk government, as it appears in the book’s sub-title Fi Aḥkām mā wūdāʾ bi-Mīr fī dawlat al-Mamlūkī “that which happened in Egypt under the Mamlūk government”.

The historians of the period describe in detail the political struggles that they witnessed in Egypt, again, particularly in Cairo. After the pağes’ authority declined from the latter part of the 10th/16th century, power passed in the next century to the military grandees, called amīr, bey or sandjakī (the arabised plural of the Turkish sandjak or sandjak beyi). In the late 17th and early 18th centuries, power shifted to the ogāb, primarily to the Janissaries and the ʿAzab, in that order. For most of the 12th/18th century, the supremacy belonged to the constantly-feuding Mamlūk beykis until 1798, when the French occupation put an end to the Mamlūk régime.
attention was paid to religious matters, both among Muslims and Christians. Since Damascus was a major station on the Pilgrimage route, much information is provided about the Pilgrimage. The chronicles are good sources for social, economic and urban history, giving details about food prices, construction projects, and the like.

By far the most important and prolific historian of the late Mamlûk and the early Ottoman period is an 'ālim, a native of the al-Šâlihiyya (q.v.) suburb of Damascus, called Muhâmmed b. 'Alî Shams al-Dîn b. Ťulûn al-Šâlihi al-Dîmâshqî al-Ḥanâfî (880-953/1475-1546 [see H. THOMAS]). Like Ibn Ġiyâs, his Egyptian contemporary, Ibn Ťûlûn witnessed the Ottoman occupation of his town, which he described in detail. He was a professional and devoted 'ālim, however, and, his judgment of the Ottomans, from the Sultan downwards, was more balanced than that of Ibn Ġiyâs. His Arabic style is literary, unlike that of Ibn Ġiyâs, whose Arabic is lively but ungrammatical. Ibn Ťûlûn wrote no less than 753 treatises, many about Islamic learning, but he owes his fame to his many historical writings. He also wrote an autobiography. His best and most detailed historical work is Muḥāsabat al-šâlihi fī tawdîhī al-zamān, a chronicle covering the last decades of Mamlûk Syria, Damascus in particular (from 884/1475), and the first years of Ottoman rule in Damascus until the year 963/1556 (ed. Muḥâmmed Muṣṭafâ, 2 vols. Cairo 1381/1962; ed. Khâlîf al-Manṣûr, Beirut 1418/1998). He reveals a humanistic sense of justice.

Another outstanding historian of the period, whom Ibn Ťûlûn regarded as his teacher, was 'Abd al-Ḳâdir al-Nuʿaymî, the author of the important historical encyclopedia of the schools and houses of worship of Damascus, entitled al-Dâris fī taʿrîkh al-madâris (several editions: Cairo 1248/1832; Beirut 1313/1896; Damascus 1988); Al-Nuʿaymî was an expert on usūfî (see WAGNER). The work is organised by madâhil and types of institutions—Kurʾân schools, madrasas, cayînas (Sûfî centres) and the like, and includes biographies of teachers and also details about relevant usūfî.

An important historical source for Syria in the 10th/16th century is Nadîm al-Dîn's al-Ǧazzâr's al-Kawâhîb al-sâlihi fī dyân al-miʿâl al-ṭâlîbîn, the first of the three centennial dictionaries of Ottoman Syria (3 vols. Beirut, Journih and Hârisa 1945-59; Al-Ǧazzâr [977-1061/1570-1651]) was a member of a family of 'alîmî and an orthodox Sûfî of the Kâdirî order, who lived in Damascus where he held several religious offices. The biographies in the Kawâhîb are
arranged by generations (tabakāt) of 33 years each. The order is alphabetical. Among his biographies there are Ottoman officials, kadis, and governors. He had to rely extensively on information he found in works of earlier historians.

A popular collection of biographies from early Islam to the year A.H. 1000, the Shadhīrūt al-dhahab fi akhbār man dhahab man dhahab (8 vols., Cairo 1350/1931) was written by Ibn al-ʻImād, another ʻAbnī al-dī‘am born in the al-Sāhliyya suburb of Damascus (d. 1089/1672).

This survey of the biographical dictionaries of the 10th/16th century should include the work of Tahārīkh al-ʻulamā‘ wa-kaft al-dī‘ān (4 vols., Cairo 1290/1680 and subsequent prints). Al-Muḥibbī also was a member of a wealthy family of Damascus al-dī‘amān. The work consists of 1,298 biographies of distinguished persons. It provides important information about politics, religion and culture in the Ottoman Middle East and the Hijāz. There are also biographies about personages from India and Kurdistan.

The history of Damascus in the 12th/18th century is recorded in a detailed and uninterrupted manner by several reliable contemporary chronicles. The earliest is Ibn Kamān’s history covering the period between 1111/1699 and 1153/1740 (Muhammad b. Isā b. Kānnān al-Sāhli, Yawmīyāt al-dī‘ān, ed. A.H. al-Ulābī, Damascus 1994).

The immediate continuator of Ibn Kamān’s narrative was a chronicler who, unlike the great majority of the historians of Ottoman Syria, was not a scholar but a barber, called Ahmad al-Budayn al-Hallak (‘the Barber’). His work, Ḥawḍith Dimashq al-yawmīyya (ed. Ahmad ʻIzzāt ʻAbd al-Karim, Damascus 1959), covers the period between 1154/1740 or 1741 and 1176/1762; hence, with Ibn Kamān, we have a continuous chronological narrative of Damascus for 63 years. Al-Budayn was a ʻAbnī but his order was the Saʿdiyya [p.190], which was notoriously unorthodox.

Another Damascene chronicler, a Greek Orthodox priest of Damascus named Mīkhāl Breik, brings the historical coverage of the city to 1782 with his Tarīkh al-dī‘ām (ed. Kuştanfin al-Baṣīg, Harissa 1990). He explains that he began his history at the year 1720 because this was the time when the rule of the governors (wālib) of the ʻAzm family started. He makes a point that they were the first native Arabs (awlad ‘Arab, as distinct from the Turks) who rose to this office. Breik reports of conflicts in Damascus between Catholics and Greek Orthodox. He stands out among his contemporaries as the only historian who wrote also about events that were taking place outside the Ottoman Empire, mainly in Europe.

The last centennial dictionary for the period under survey is Sīhī al-dawār fi a‘zān al-karn al-thānī ‘a‘zāgar (4 vols., Beirut 1997) by the Damascus ʻIlm Muḥammad Ḥaślī al-Muṣirādī (d. 1206/1791-2) at the age of 31 [p.190]. He came from a family of ʻAbnī ‘ulamā‘ originating from Samarqand. Like his father before him, he served as the ʻAbnī mufti of Damascus and the nakāb al-ʻAṣghārī there. The book, which comprises 1,000 biographies, is a most valuable source for the political, social and cultural history of Syria in the 12th/18th century. In addition to using contemporary chronicles, al-Muṣirādī corresponded with other ‘ulamā‘ in Syria and Egypt, asking them to collect materials for his biographical dictionary.

LEBANON

Mount Lebanon was a separate political and administrative unit, and had its own history owing to its unique topography [see LEBANON]. It often enjoyed a degree of independence, and had a predominantly non-Muslim population of Christians and Druze. During the Ottoman period, Lebanon had many well-educated historians, several of whom were clergymen, others were professors. The former were preoccupied with the history of their sect and its institutions, recording their creed and describing the quarrels among different Christian churches. The Lebanese historians wrote about the politics of the region (some recorded the history of other parts of Syria as well), struggles between factions, the great feudal families of the Mountain, and the leaders. They also wrote about the history of the two semi-autonomous dynasties that ruled Lebanon during the Ottoman period, the Mānīds [see MA’N, BAN] and the Shihāhs [see GHAJR, BAN].

The Patriarch Isḥāq al-Duwaiḥī (1630-1704 [p.190]), the greatest of the Maronite church historians, was the author of the only history of Syria with an emphasis on Lebanon in the 16th and 17th centuries by a contemporary writer. He wrote about the Maronite community and church with the purpose of defending their Catholic orthodoxy and attacking other Christian churches, such as the Jacobites, whom he considers as hostile to his church as the Mamluk sultans. His general history, Tarīkh al-ażmīn (ed. F. Taqutel [Tawtal], in al-Maqrīzī, xlv [Beirut 1950]; another ed. by P. Fahed, Jounieh 1976, covering the period from the rise of Islam until 1098/1686) is a chronicle of Syria from the Crusades until the end of the 17th century, but the fullest and the most informative account is about the two last centuries. Al-Duwaiḥī’s emphasis is on northern Lebanon where the population was Maronite, and which was ruled by Druze amīrs or by Muslims, who were appointed by the Mamlūks, and later by the Ottomans.

ʻAbd Allāh al-Maḥaṣīfī (d. 1823), a Greek monk of the Shuwayrite religious order, wrote a history of the Shūf region of Lebanon and the Shihāhs. He concentrated on his own religious order and on other Christian religious topics (al-Durr al-maṣāfi’ fi tarīkh al-ṣūfī, ed. I. Sarkis, in al-Maqrīzī, xlvii-li [1954-7]). The most important historian of that period is Ahmad Haydar al-Shihābī (1761-1835), a cousin of the Amir Bashir II. He had access to official documents, such as Bashir’s correspondence with Ottoman governors. He wrote a history of Lebanon from the rise of Islam until 1827, called Ghawr al-tānīs fī akhbār al-zamān. Ahmad Haydar was a Maronite convert from Islam. In his history he expresses unmitigated support for the Shihāhs, in particular for Bashir II, against their
Lebanese and Ottoman enemies (his books have been published in several editions, e.g. Laura in fi 'abd al-

'Irāk

For the 10th/16th century, no historical parallel to Ibn Iyās or Ibn Tūlūn describing 'Irāk's conditions under the Ottomans—who conquered the country in 941/1534—has come down to us, and the few works that were written in Turkish. The historians tended to write about the main cities—Baghdād, Basra, Mawsīl—and several smaller towns. As expected, power struggles among the rulers are constant features in the chronicles. As for foreign affairs, wars between Persia and Ottoman 'Irāk are the main theme. Baghdād itself was occupied by the Safawīs from 1622 until 1632. The attacks of the Persians under Nādir Shāh during the first half of the 12th/18th century (1733 until 1746, including sieges of Baghdād, Mawsīl and Kīrkiḵ) were the most traumatic events in the political history of 'Irāk, and are reported in detail by the chroniclers.

The first historian of Ottoman 'Irāk worthy of the name was 'Ali al-Huwawīyyi (d. 1075/1664). He lived in the court of the asāfīn al-Afnāyīb house, founded at the end of the 10th/16th century by a local magistrate who administered the Province of Basra as his private domain. Al-Huwawīyyi's history of Basra in the first half of the century is entitled al-Sira al-mawridiyā fi 'ishār al-fardiyā. Ahmed b. 'Abd Allāh al-Ghuṭārī from Baghdād (d. 1650/1102) wrote the first chronicle that is arranged by years. For his information, he relied on Turkish official documents and eyewitnesses' reports. His book, līyān al-khadr al-dawār min madīnat amīr al-tawārīṯ wa-l-zaman, is a chronicle of the political events in Baghdād in the 11th/17th century.

Similar to the situation in Syria, 12th/18th-century 'Irāk saw the emergence of governors (wāḥisī) of local families. Muhāmmed al-Rahābī, a mufti, wrote the biog-

In general, the same kind of historiography proceeds, grosso modo, out of the Arab-Islamic historical tradition of the Middle East. As well as the implicit teleological element, it seems more distant and even irrelevant. Despite the differences between the societies of the various Arab lands and cities notwithstanding, there are strong similarities owing to the common religion (at least for the Muslim majority) and the common language and culture. The roles and status of the 'ulamā', ṣāifs, gūlīds, leaders of city quarters and the like were as a general rule similar in Cairo, Aleppo, Baghdād and Jerusalem.

As far as written documentation goes, the historiography of the mediaeval Maghrib proceeds, grosso modo, out of the Arab-Islamic historical tradition of the East. As well as the implicit teleological element, it follows the divisions and techniques of elaboration of those of the East, but nevertheless develops quite early lines of demarcation, which will be examined below, together with points of divergence.

The newly-emerging Maghribi historiography should be understood as both a result and a support of the mainstream tradition. A certain number of points need to be recognised:

Concluding remarks

Despite the differences between the various Arab provinces of the Ottoman Empire, certain common features emerge in their historiography. With the notable exception of 'Irāk, local chronicles reasonably cover the first decades or at least the first years after the Ottoman occupation in the early 10th/16th century. The rest of that century has much less historiographical coverage (it should be noted, however, that there was a rich historiography in Yemen for the 10th/16th and early 11th/17th centuries; see the book of Frédéric Soudan, below, in Bībl, and al-Mawzā'). The 11th/17th century witnessed more intensive historical writings in Arabic, which came to full maturity and richness in the 12th/18th century (this being true with regard to 'Irāk as well).
Islam, an Arabic historiography was fairly late in emerging. Taking into account the loss of the account called Fithāh Ḥīṣāya still attributed on weak grounds to Abu l-Muhājiq [q.v.], the effective appearance of this historiography seems to have been in the second half of the 3rd/9th century, that is, in the second stage of development, of powerful, centralising dynasties, under which the same outburst of historiographical writing now appears in the Far Maghrib.

The disparate nature of the historical works and the priority of Ḥīṣāya, mid-3rd/9th to late 5th/11th centuries

After a void following on from the conquests, from the mid-3rd/9th century, various initiatives appear, independently of each other, in Fās and Tāhârt and, above all, in Ifrîkiya. However, most of the works from this period have been lost. We possess Ibn Sallâm's Ḥīṣâṭ text and the chronicle of Ibn al-Saghir [q.v.] on the Rostamid Îmâms of Tâhârt from the end of this same century (ed. and Fr. tr. C. de Metylinski, in Actes du XIe Congrès International des Orientalistes, Paris 1908, 2-132, new ed. Tunis 1976), and the contemporary collection of biographies by Abu l-'Arab [q.v.], the Tabâkât 'ulamâ' Ḥīṣâya (ed. M. Ben Cheneb, Algiers 1915), but the first chronicles dealing with the Idrîsidûs of Fâs, the Khârijûtes of Sîdjîlmaâsâ, the Aghlabids and the Fâtimids of Ḥîṣâya, and the works on the heretical Barghawâta and the Ghumara [q.v.] of the Atlantic seaboard, have not survived. There are, however, some instances, viz. the biographies of al-Mâlikûs, or near-contemporary accounts of the Idrîsîds, viz. a chronicle on the Îmâms of Fâs by Ibn al-Waddîn (4th/10th century), allegedly called the T. al-Adârisa, and one from the previous century, apparently better known since it was still cited by al-Bakrî [q.v.] in the mid-5th/11th century and by Ibn 'Idhârî two centuries later, the T.-al-Mâjdîl al-mufrâkh al-waâlî fî al-Nawfâlî (El-Mennounî, 18, 27). Three works written under the Aghlabids, apparently detailed and of extended length, have also failed to survive: the T. Bnî 'l-Âchibhî by the prince Muhammad b. Ziyâdat Allâh (d. 283/896); a second chronicle with the same name; and an important Tabâkât 'ul-âlamâ' by Muhammad b. Sahnûn (d. 256/870), son of the famous Mâlîkî jurist of al-Kâyrawân.

Apart from Fâtimid Îfrîkiya, our knowledge of the Maghrib during the 4th-5th/10th-11th centuries stems essentially from eastern sources or late Andalusîs ones, and only after that from later Maghribîs sources. Hence the immense corpus of the Cordovan Ibn Hayyân [q.v.], from the mid-5th/11th century, forms one of the basic chronicles for the Far Maghrib, at that time pulled between the two influences of the Umayyâds and the Fâtimids or Fâtimids-Zirîds. In this context, the contemporary Îfrîkiyan sources would have been a counterpoise to these, in particular the lost, slightly earlier chronicle of Ibn al-Râkî [q.v.] called T. Îfrîska wa l-Maghrib. Of this most important source, a supposedly authentic fragment has been recovered and twice published (Tunis 1967, Beirut 1990). We also have, in its entirety, a text equally important for Îfrîkiyan history but one which is not a chronicle and which only concerns in a subordinate way the rest of the Maghrib, sc. the Râyâd al-nu'âsî fî al-Mâlîkî (d. 460/1068 [q.v.]), a work essentially concerned with the biographies of Mâlîkî scholars and ascetics in Îfrîkiya up to the mid-4th/9th century.

For the rest, other contemporary Îfrîkiyan texts are known only from paraphrases or from quotations by later authors. Here one would include the work called P. Abyâdîk Îfrîska wa ma-makâmîhû, plus a range of opuscula concerning strategically-placed towns such as Tâhârt, Tênès, Sîdjîlmaâsâ, Nakkîr and al-Bârâya in the northwestern Far Maghrib. Gathered together for al-Hâkim II [q.v.] of Cordova, these writings stem
from Abū 'Abd Allāh Muḥammad b. Yūsuf al-Warrāk (292-363/904-74 [q.v.]), of Kyraγarān birth and education, who was accordingly to be of great value for al-Bakrī, Ibn Ḥaγgān and Ibn Iḍḥārī. To these works by al-Warrāk, one may add those of Ibn al-Raḥmān [q.v.], whose oeuvre included also geography (the Drabes sobre Berberes [1961], 43-111) makes a large contribution to this process, as do a certain number of Almoravid writings, especially for the transition phase between the two dynasties.

The canvas thus delineated can fairly often be enriched, at the level of content, by various sources ranging from simple accounts to collections of travel accounts or information which had been transmitted subject to rigorous examination. This last procedure may have been the main one, since neither al-Yāḍībī nor Ibn Ḥabrabādīh nor even al-Bakrī, living as he did in nearby al-Andalus, knew the Maghribi first-hand (bi 'tā'ān; only al-Muqaddasī and Ibn Ḥakwāl were exceptions to this rule, and it is undoubtedly this first-hand knowledge that informs the great originality of these two eastern authors, especially of the latter.

Variations, and the Almoravid-Almohad domination (late 5th/11th to mid-7th/13th centuries) With the installation of the Almoravids in the Far Maghrib and of the western part of the Central Maghrib and of al-Andalus of the taifa, there existed at the end of the 5th/11th century the Almoravid empire and the Zirid-Hamadānī grouping. Both belonged to the great Berber group of the Sanhāda [q.v.]. These two powers co-existed, through thick and thin, till the rise, at their expense, of the Almohads in the mid-6th/12th century. Transposed to the level of history writing, this evolution was going to cause a draining away of effort towards the West. Hence till the mid-7th/13th century, the fundamental works were written either in Andalusi Arabic or in the Almoravid Berber, which reflects the new environment dominated by the Almoravids and Almohads. Despite this trend, there were many irreplaceable losses of works, a need to rely on later compilations and even the intervention of eastern authors. Nevertheless, there appear fresh nuances when compared with the earlier period.

Almoravid historical writing One of the characteristic traits of this is that it was reduced, over the centuries, to a summary of later, general accounts. Apart from the important information of al-Bakrī, one can hardly distinguish, right up to the mid-20th century, many witnesses who were near to the events described. The only contemporary narrative, that of Ibn al-Ṣajrafi (d. 557/1152 [q.v.], al-Anwār al-ajalīyya fi al-khāṣṣ al-dawla al-murdbitiyya, has not survived, although it is known that this chronicle, covering the Almoravid period up to 530/1135-6, was in current use right to the end of the mediaeval period. Authors distant in time and space, such as Ibn Khaldūn (d. 681/1282), Ibn al-Djazārī (d. 658/1260), Ibn Abī Zar' (d. between 710-20/1310-20) and Ibn al-Khāṭīb (d. 776/1375 [q.v.]) either drew material directly from it or refer to it. Moreover, the anonymous author of the chronicle al-Hulal al-mashāālīyya (written 783/1381) probably drew upon it more than he explicitly reveals. Although poor in surviving chronicles, it is possible to construct a fairly precise chronology of Almoravid history. The publication of leaves discovered of the Almoravid Būqān (in Hespārta Tāmūdā, ii [1961], 43-111) makes a large contribution to this process, as do a certain number of Almohad writings, especially for the transition phase between the two dynasties.

The canvas thus delineated can fairly often be enriched, at the level of content, by various sources ranging from simple accounts to collections of travel accounts, travel accounts (rikāta, official correspondence, personal writings and juridical literature. This is how the chronicle of Abū Zayd al-Kalāmī, on the Baṣrah state of Tāhārī (partial Fr. tr. E. Masqueray, Paris-Algiers 1878), was put together at the turn of the 6th/12th century. Also from this period date the summa of the Mādīrak of al-Kādī Ṭyād as well as the Ghafrān which he wrote, setting out his own masters. In parallel to this, one should mention the Dhikārā of Ibn Bāṣām (552/1147 [q.v.]), meant primarily for Andalusī scholars without, however, systematically excluding Maghrībs, whilst Ibn Khašāk (d. 529/1134) included in his Khulāṣ al-ṭabāqī distinguished persons, men of letters, government officials and men of state of both shores. Regarding such men, one should note the Tāhānān, the memoirs of the Zirid prince of Granada 'Abd Allāh (d. 649/1077) (ed. Lévi-Provençal, Cairo 1955; Sp. tr. idem and E. García Gómez, Madrid 1980; Eng. tr. Amin Tibi, Leiden 1992; ed. A.T. Tibi, Rabat 1995), which give an excellent impression of the struggles of the reyes de taifas with Yūsuf b. Ṭashūfuṣ [q.v.]. Of the same type of narration, there is the account left by Abū Bakr Ibn al-ʿArābī (d. 543/1148 [q.v.], concerning the official mission of his father, whom he accompanied to the East to seek the "Abbāsids' investiture of the same Yūsuf b. Ṭashūfuṣ (see Teos textos árabe sobre Berberes, ed. M. Ya'la, Madrid 1996, 275-315).
As well as this documentation concerned with the élites, Almoravid history writing also includes works depicting social-economic realities and governmental practices. The two treatises on hisba of al-Saqqā [q.v.] of Malaga (ed. Lévi-Provençal, Paris 1931) and Ibn Abīdīn [q.v.] of Seville (ed. idem, Cairo 1954; Fr. tr. Paris 1957) were concerned with the situation in the Andalus, both of them, and especially the latter, have material relevant for the dominant power on both shores, the Almoravids. Their content is quite often confirmed by legal material contained in the collections of nawāzīž of the kādī Imrān ibn Rushd (d. 520/1126 [q.v.]), forebear of the philosopher, and later, in the Mi‘yār of al-Wanshāfī (d. 914/1506-9 [q.v.]). Many of the problems raised in this nawāzīž (e.g. the status of the Christians of al-Andalus, the behaviour of the Banū Hālā in Irīkīya, the appearance of Almohad rebels, etc.) are reflected in the Nazihat al-muḥākāt, the riḥā of al-Idrīsī [q.v.], completed in 548/1154, and also in the substantial body of official correspondence emanating from the Almoravid court (see Revista de Estudios Islámicos en Madrid, ii [1954], 55-84, vii-viii [1959-60], 109-98).

Almoravid historical writing

Inasmuch as the Almohad system rested on the Islamic tradition, influences from any source outside himself, was in principle inadmissible. Whence the complete absence at the documentary level of all traces of fatawa [q.v.] and decisions on specific cases (nāzīla [q.v.]). However, this same system witnessed the spread of a mystical movement more or less tolerated which produced its own literature at the popular level, traces of which should include the great Ibn al-Mu‘īn educational texts and epistles which the Almoravid court (see Karama) is said to have corresponded to the same schema, or isolated as documents in archives or collections of official matter. One example of these collections would be the one collated by Ibn ‘Amīr [q.v.] towards the mid-7th/13th century. The diversity of the archive material can be appreciated through the Trente-sept lettres officielles almohades (ed. Lévi-Provençal, Rabat 1941, Fr. tr. in Hesperis [1941], 1-70) and Nouvelles lettres almohades (ed. A. Azzouzi, Casablanca 1995). The information in these texts is often first-hand, and they illuminate, in general, the underlying aspect of facts generally lacking in cohesion at the level of the narrative sources.

Regarding these latter sources it is, of course, true that they hardly ever deal with real situations, but there is nevertheless an exception in the work of al-Baydāḥī [q.v.], in which he describes from memory, towards the middle of the 6th/12th century, the peregrinations and stages of ascension of Ibn Tumart. From a greater distance and probably because of the distance, ‘Abd al-Wāḥīd al-Marrākūshī (d. 633/1235 [q.v.]) undertook, from Egypt, to give a lively account in his al-Mu‘ārikh of the contemporary Maghrib, using his own observations and the memories of an aged member of the Almohad court (Cairo 1949, Fr. tr. E. Fagnan, Algiers 1893). Another text now lost seems to have corresponded to the same schema, al-Maġribi fi ma‘ālik anh al-Magrib, whose author, Ibn‘Abī ‘Azz r. [q.v.], undertook, from Egypt, to give a lively account in his al-Mu‘ārikh of the contemporary Maghrib, using his own observations and the memories of an aged member of the Almohad court (Cairo 1949, Fr. tr. E. Fagnan, Algiers 1893). Another text now lost seems to have corresponded to the same schema, al-Maġribi fi ma‘ālik anh al-Magrib, whose author, Ibn‘Abī ‘Azz r. [q.v.], undertook, from Egypt, to give a lively account in his al-Mu‘ārikh of the contemporary Maghrib, using his own observations and the memories of an aged member of the Almohad court (Cairo 1949, Fr. tr. E. Fagnan, Algiers 1893). Another text now lost seems to have corresponded to the same schema, al-Maġribi fi ma‘ālik anh al-Magrib, whose author, Ibn‘Abī ‘Azz r. [q.v.], undertook, from Egypt, to give a lively account in his al-Mu‘ārikh of the contemporary Maghrib, using his own observations and the memories of an aged member of the Almohad court (Cairo 1949, Fr. tr. E. Fagnan, Algiers 1893). Another text now lost seems to have corresponded to the same schema, al-Maġribi fi ma‘ālik anh al-Magrib, whose author, Ibn‘Abī ‘Azz r. [q.v.], undertook, from Egypt, to give a lively account in his al-Mu‘ārikh of the contemporary Maghrib, using his own observations and the memories of an aged member of the Almohad court (Cairo 1949, Fr. tr. E. Fagnan, Algiers 1893). Another text now lost seems to have corresponded to the same schema, al-Maġribi fi ma‘ālik anh al-Magrib, whose author, Ibn‘Abī ‘Azz r. [q.v.], undertook, from Egypt, to give a lively account in his al-Mu‘ārikh of the contemporary Maghrib, using his own observations and the memories of an aged member of the Almohad court (Cairo 1949, Fr. tr. E. Fagnan, Algiers 1893). Another text now lost seems to have corresponded to the same schema, al-Maġribi fi ma‘ālik anh al-Magrib, whose author, Ibn‘Abī ‘Azz r. [q.v.], undertook, from Egypt, to give a lively account in his al-Mu‘ārikh of the contemporary Maghrib, using his own observations and the memories of an aged member of the Almohad court (Cairo 1949, Fr. tr. E. Fagnan, Algiers 1893). Another text now lost seems to have corresponded to the same schema, al-Maġribi fi ma‘ālik anh al-Magrib, whose author, Ibn‘Abī ‘Azz r. [q.v.], undertook, from Egypt, to give a lively account in his al-Mu‘ārikh of the contemporary Maghrib, using his own observations and the memories of an aged member of the Almohad court (Cairo 1949, Fr. tr. E. Fagnan, Algiers 1893). Another text now lost seems to have corresponded to the same schema, al-Maġribi fi ma‘ālik anh al-Magrib, whose author, Ibn‘Abī ‘Azz r. [q.v.], undertook, from Egypt, to give a lively account in his al-Mu‘ārikh of the contemporary Maghrib, using his own observations and the memories of an aged member of the Almohad court (Cairo 1949, Fr. tr. on the events of the Almohad lands between 554-68/1159-73. From this same period stem Abu Marwān al-Warrāki's al-Makhtūs fi 'Akhbār al-Maghrib wa-l-Andalus wa-Fās, and Ibn Hamādūh of Céuta's al-Makhtūs fi 'Akhbār al-Maghrib wa-Fās wa-l-Andalus, both now lost but widely used up to Ibn Khaldūn's time. As for the so-called Almohad 'akhbār, the author obviously aimed at exhaustiveness or lost sources, the author obviously aimed at exhaustive or even to discern long-term effects. For posterity archival documents. However, some documents have survived in manuscript collections, on the elaboration of jihrisfe and bāna madjās, indicating particular themes.

Biographical literature. In post-Almohad times, the focus seems to have been placed apart from on collections of usage, on the elaboration of fifris and bāna madjās indicating particular themes.

The biographical collections all have different provenances. Ibn al-Zubayr (d. 708/1309) tried to follow in the path of his Andalus compatriots in composing his Sīlat al-isla (ed. Levi-Provengal, Rabat 1938), whilst Ibn Nādir of al-Kayrawān (d. 837/1433-4) followed the work of Ibn al-Dabbāgh (d. 698/1297) on the religious figures of his city, and compiled his Mašīlim al-īmān (Tunis 1325/1907-9). Further to the west, Ibn Kunfūdḫ in Constantine composed his Wafaydt al-a'mād, whilst throughout his Nāhān al-suluk, the Sudanese Ahmad bin al-Ma'sīlīn ('Haydarābād 1348-50/1929-32).

Leaving aside archive material, we have the following:

Chronicles. Between the mid-7th/13th century and the end of the 9th/15th one, the chronicle in the Maghrib is above all the product of Ifriqiya and the Far Maghrib, reflecting the political-military situation. Accordingly, apart from Abu 'l-Abbās al-Dardājīnī's ['q.v.] K. Taḥsīl al-maghribī, dealing with the Ibn al-Farrūẖīn (d. 799/1397 [‘q.v.]), of Andalus origin, wrote in his native town of Medina a dictionary of celebrated Mālikīs, the Dīdāgh (Cairo 1315/1897-8), including the Maghribī ones. The Sudanese Ahmad Bībī (d. 1036/1627 [‘q.v.]) continued and completed the same work in his Nād la al-abbīgh (Cairo 1315/1897-8); and the Egyptian Ibn Hāǧar (d. 852/1449 [‘q.v.]) devoted considerable space in his al-Dawā'ir al-kāmirīn, to noted figures from the 8th/14th century Maghrib (Haydarābād 1348-50/1929-32).
As well as these general works, there were others devoted to the itineraries of their authors, built around famous masters of the time, each itinerary being the object of a Fikrist or Barunnaa. We have extant the Barunnaa of al-Ibshir (d. 688/1290), that of al-Kasim al-Tuqlib of Ceuta (d. 790/1329-30) (both publ., the latter in Tunis 1981), and the Fikrist, still in ms., of Ibn Rushayf of Ceuta (d. 721/1321 [g.v.]) and al-Sarradj of Fas (d. 805/1402), plus the encyclopaedic Barunnaa of al-Mantaar of Granada (d. 834/1431).

Also important are two biographical portraits, in part convergent: one drawn by Ibn Maruzkh (d. 781/1379 [g.v.]) in his Musnad (ed. M.-J. Viguera, Algiers 1981, Sp. tr. Madrid 1977), devoted to the Maridim Abu l-Hasan; and the other from the pen of Ibn Khaldun, al-Tariq, in which the life, education and career of the author are traced (ed. M.T. al-Tanghi, Cairo 1951, Fr. tr. A. Cheddadi, Paris 1980).

Genealogical works. Far from being an isolated phenomenon, these texts stem from the natural prolongation, it seems, of the old polemics between Maghrubis and Andalusis, especially from Almoravid times onwards; these polemics became, after the downfall of the Almohads, a sub-genre everywhere cultivated. One can cite three texts as testimony here: the anonymous Majalla al-barber [g.v.] (ed. Levi-Provençal, Paris 1890), composed between the two texts aboves, 123-272), which celebrates, at the opening of the 8th/14th century, the scholars, ascetics and heroes, legendary or historic, from the Berber past. The equally anonymous Tumrat al-zarff fi al-Dallc wa-Tarif (ed. Ibn Chriha, in Maqallat Kulliyat al-Umah, Rabat, i [1977], 7-50) from a few decades earlier aimed at revealing the failings of the Almohads and, finally, the opposing situation in Ibn al-Khatib's Mughaddatiit (Alexandria 1958, 55-66) between Malaga and Sale, in which, through the two opposing cities, the lively tension between the two cultures is delineated.

Whilst being set on the cultural plane, these writings seem to be the vehicles for consideration of the basic problem of origins, leading to the question of connections with the ruling power. Whilst Ibn Tumart, in the K. al-Ansdb attributed to him (in Documents indits, 18-49, Fr. tr. 25-74), could be given a Shi'ite genealogy, the legitimising process which speedily followed, as Ibn Khaldun notes (Mukaddima, Fr. tr. of Sane, Paris 1963, i, 53-6), was challenged at this same period precisely when there was a strong current displacing Berber origins, with an insistence on salient figures since the beginning of Islam. Another K. al-Ansdb, anonymous but written in 712/1312, was also composed to celebrate openly these origins (ed. Ya'lla, in op. cit., 13-121).

There developed in parallel to this, under the impulsion of Marid power, the cult of the Sa'id, a phenomenon that bore witness to Muslim Ceuta, now become Portuguese, and in his natal city, Cairo. Two famous mystics contributed. Ibn Tumart, in his Al-Durr (d. 737/1336), in which the visiting of the saints and scholars of Tlemcen, Oran and the cities. Ibn al-Khatib drew up a comparative table in his Miftah or to a group of them. On the general level, for Ibn Tumart, the various monographs relate almost exclusively to towns and cities. Ibn Khaldun drew up a comprehensive table in his Miftah of the references to this fact in the works of Ibn al-Khatib and Ibn Khaldun as well as in late compilations like those of al-Makkar, the Nafl al-tib (ed. I. 'Abbas, Beirut 1968) and the Azkar al-miyyah. Also connected with it were separate monographs like the anonymous compilation on the Buyutdt Fas al-kubra (Rabat 1972) and the Nafl muluk al-islam (lit. Fas n.d.) of Ibn al-Sakkak (d. 818/1415), followed, especially from the 10th/16th century onwards, by a host of opuscules on the genealogies of each branch of the Shi'ite

Socio-religious works. Those include monakht texts, those meant for edification and concerned with bid'a [g.v.] and legal texts (nawalz].

Regarding monakht, it would be tedious to rehearse here all the collections devoted to a particular saint or to a group of them. On the general level, for Ibr(i-kiya there is the Mafakhir al-barbar ahb al-Djazira wa-Tanf (ed. A.F. Khashem, Tunis-Libya 1979), or to a group of them. On the general level, for Ibn Tumart, the various monographs relate almost exclusively to towns and cities. Ibn Khaldun drew up a comprehensive table in his Miftah of the references to this fact in the works of Ibn al-Khatib and Ibn Khaldun as well as in late compilations like those of al-Makkar, the Nafl al-tib (ed. I. 'Abbas, Beirut 1968) and the Azkar al-miyyah. Also connected with it were separate monographs like the anonymous compilation on the Buyutdt Fas al-kubra (Rabat 1972) and the Nafl muluk al-islam (lit. Fas n.d.) of Ibn al-Sakkak (d. 818/1415), followed, especially from the 10th/16th century onwards, by a host of opuscules on the genealogies of each branch of the Shi'ite

Socio-religious works. Those include monakht texts, those meant for edification and concerned with bid'a [g.v.] and legal texts (nawalz].

Regarding monakht, it would be tedious to rehearse here all the collections devoted to a particular saint or to a group of them. On the general level, for Ibr(i-kiya there is the Mafakhir al-barbar ahb al-Djazira wa-Tanf (ed. A.F. Khashem, Tunis-Libya 1979), or to a group of them. On the general level, for Ibn Tumart, the various monographs relate almost exclusively to towns and cities. Ibn Khaldun drew up a comprehensive table in his Miftah of the references to this fact in the works of Ibn al-Khatib and Ibn Khaldun as well as in late compilations like those of al-Makkar, the Nafl al-tib (ed. I. 'Abbas, Beirut 1968) and the Azkar al-miyyah. Also connected with it were separate monographs like the anonymous compilation on the Buyutdt Fas al-kubra (Rabat 1972) and the Nafl muluk al-islam (lit. Fas n.d.) of Ibn al-Sakkak (d. 818/1415), followed, especially from the 10th/16th century onwards, by a host of opuscules on the genealogies of each branch of the Shi'ite
There remain the **rihlas**, which comprehend spatial journeys and/or varied themes. Whilst the **rihla** of al-Abdārī is a description of the intellectual centres and of the state of knowledge obtaining towards the end of the 7th/14th century, comprising the Maghrib and the lands stretching to the Hidjaz (Rabat 1968), that by al-Tījānī at the turn of the 8th/14th century has a setting of military considerations and describes the position of the tribes along the eastern littoral of Irijiyya, at the same time noting the socio-cultural peculiarities and traditions of the inhabitants there (new ed. H.H. Abdul-Wahab, Tunis 1958, Fr. tr. in *JA*, 4th series, xx, 57-208, 5th series, i, 101-66). The **rihla** called *Māʾ al-ṣayba* of Ibn Ruḥayd (Tunis n.d.) and the *Mustāfīd* of al-Tūgjībī of Čentā (Tunis-Libya n.d.) bring out the impacts of cultural relations between the Magrib and the Maghrib at their various periods. Further, the **Notes of the journey of an Andalusi in Morocco of Ibn al-Hāḍjī al-Numayrī** (d. after 768/1367) (ed. and Fr. tr. A.L. de Prémare, Lyons 1981) are a sketch of the same relations between al-Andalus and the southern shores of the western Mediterranean in the mid-8th/14th century, whilst his *Fāṣīd al-tīhāb* is rather a field report tracing the situation in the Central Magrib at the time of the Marinid Sultan Abu ʾInān’s [*q.v.*] expedition towards Irijiyya 757-8/1356-7. Shortly afterwards, a fairly different account was to be the subject of a holiday *rihla* written up by Ibn al-Ḥašrī, the *Nafṣādat al-dīrāb*, in which the society and countryside of the Moroccan southwest are described in a magistral fashion, in spite of artificialities (ed. M. Abbadi, Cairo n.d.; complement ed. F. Faghiy, Rabat 1989). Somewhat later, in the second half of the 9th century, there are two accounts to note: one written in Latin by the Fleming Anselm Adornus on Ḥafṣid Irijiyya in 1470, and the other in Arabic by the Egyptian ʿAbd al-Bāṣīr b. Khalīl (d. 920/1515), illuminating, for the same period, the socio-political situation in Fāṣ and Tlemcūn (R. Brunschvig, *Les vies de voyage inédits en Afrique du Nord au XVᵉ siècle*, Paris 1956).

Finally, there are two essential pictures of the situation in North Africa of their time, though distant from each other, sc. the *rihla* called *Tūgjībī al-maktab*, of Ibn Baṭṭānī (d. after 770/1368 [*q.v.*]) and the Description of Africa by al-Ḥasan al-Wazzān, called Leo Africanus [*q.v.*], completed in Italy in the local language. **Bibliography** (in addition to references in the text): R. Brunschvig, *La Berbère orientale sous les Ḥafṣides des origines à la fin du XVᵉ siècle*, i, Paris 1940, pp. xxv-xxi and passim; idem, Ibn ʿAbd al-Ḥakam et la *L'image d'Idrīs II, ses descendants de Fès et la politique sharifienne des sultans marocains* (563-869/1258-1455), Leiden 1989, ch. i; V. Lagardère, *Les Almoravides*, Paris 1989, 9-16 and passim. (M. KABLY)

**B. The post-1450 period**

In Magribi historiography, which to a great extent follows the patterns of mediaeval Arab historiography, *taʾrīkh* represents a wide range of knowledge; it thus has a broader semantic charge than its equivalents—e.g. history, histoire, historia—in European languages. It is a source of information for those in government, a gallery for the display of former political regimes, a repertory of significant religious events (e.g. the life of the Prophet), biographies of devout men who left to posterity commentaries and compilations of hadīth, etc. Considered from a simply formal point of view, *taʾrīkh* is the science of the narration of events, especially of dynastic policies and political, and the art of arranging them logically or chronologically. In the introduction to his *Mukaddima*, Ibn Khaldūn writes that “History (*taʾrīkh*) is a noble science... It conveys to us the biography of prophets, the chronicles of kings, their dynasties and their policies (*ṣayāra*!”) (Beirut 1967; Fr. tr. V. Montel, i, 13. Eng. tr. F. Rosenthal, New York 1958, i, 15).

Magribi historical science affirms its autonomy in relation to the historiography of the Muslim lands of the Orient, from the end of the Middle Ages onwards, as a function of the changes in political organisation, the object of its study, which unfolded in the lands of the Muslim West: the end of the Marinid empire, and the beginning of a long period of instability affecting the lands of the western Mediterranean at the end of the 15th century and the beginning of the 16th. The territorial individualities which henceforward took the specific names of al-Magrib al-akṣā, al-Magrib al-aiwāt, Irijiyya, etc., gave the intellectuals of each country the idea of belonging to a particular nation, unique and different from all others. Religion was no longer the cement of cohesion. Also, the presence of Ottoman Turks on the coasts of the Magrib, and that of Christians, Spanish and Portuguese in certain ports where concessions and consulates were established, constituted the driving force contributing to the emergence and affirmation of history specific to each state. Thus, as a result of politics, the idea of the nation was gradually crystallised in the lands of the Magrib. And history, *taʾrīkh*, fixed these successive events in time and space and was to give rise to another, hitherto little-known phenomenon, sc. that of nationalism. *Akhbār* “facts, information, news” (*on this subject, see Cl. Cahen, Introduction à l'histoire du monde musulman méditerranéen, VIIᵉ-XVᵉ siècle. Methodologie et éléments de bibliographie*, Paris 1982, 69-70) constitute the basis of all historical narration. They are the essential source of chronicles, the object of which is to narrate, from day to day, events concerning princes and dynasts, thus compiling royal annals (see below for examples relating to al-Magrib al-Akṣā). The constitution of a corpus of *akhbār* might have as its object the description (not analysis nor explanation, since either of these may engender indistinctness towards the particular) of dynastic politics, or of a wide-ranging social change; compilations of *akhbār* may show features reminiscent of hadīth.

From the 15th century onwards, Maghribi historical science abandoned the style of the major epic to concentrate on the history of more circumscribed territories, focusing on towns and local politics, and on
peoples whose ways and customs were known. Ibn Khaldūn remains the master in this field. In the first book of the Mukaddimah, the Kātib al-Bahr ("book of examples") he set out his theory, indeed his philosophy, of history. He opened the way not only for historiographers in the Maghrib, but for the theorists of other nations as well. But this science is far from within the reach of the novice, according to him; it demands qualities and extensive knowledge. "He who practises this science (ta'rikh) needs to know the rules of the political art, the nature of existing things and the difference between nations, regions and tribes in terms of way of life, qualities of character, customs, sects, schools of thought, etc. He must distinguish the similarities and the differences between the present and the past, and know the diverse origins of dynasties and of communities."

In the 16th century, the centres of study and diffusion of the culture of the Muslim West would henceforward be Fās, Marrakesh, Tlemcen, Tunis and Kayrawn. The authors whose historical works are known to us passed through at least one of these centres, articulating and formulating local themes. The best representative of this period is without doubt al-Hasan Muhammad al-Wazzān al-Fasī, better known by the name of Ibn Khaldūn (q.v.). His work, Description of Africa, 1556, translated from Italian, is made up of a series of monographs on cities, regions, populations and kingdoms (of Fās, Marrakesh, Tlemcen, Bougie, Tunis and Tripoli). This study reflects the brilliant personality of the author, as well as the ideas that were current at the time. It was to be imitated and plagiarised by numerous Arab and Christian writers, but it would never be equalled. For Luis del Marmol y Carvajal, Description general de L'Afrique (Granada 1573-99, 3 vols.), his texts are sometimes overloaded with detail but are not lacking in interest. His debt is considerable, not only to Leo Africanus but also to other "Arab" authors—Maghribis in this instance. The author lays emphasis on the natural riches of the Maghribi, and his work is extremely useful for the study of historical geography and the history of agricultural practices.

In the central Maghrib, where political unity had long been hindered by the absence of a central authority and the existence at certain times of numerous kingdoms, authors exercised their talents in the domain of urban monography, with such titles as Constantine, and some Arab authors of Constantine (see Ch. Saint-Calbre, in R, vii [1913], 70-93). Each author evoked, in his own fashion, the history of his town and of the Maghribi town in general. Not all of these studies were published; most remained in manuscript state and were ignored even by a cultured public.

In the conceptions of history held by Maghribi scholars, there is a perennial need to return to the sources, to the origins of life and mankind as far back as Adam, Eve or Noah when they are dealing with anthropology; or to the Prophet Muhammad when religious questions are being addressed. Genealogy, an area of knowledge dear to scholars, is considered a branch of history in its own right. A text belonging to this genre of writing can be the work of one or several persons, and may be the private chronicle of a family. The object of writers of this genre is to show their illustrious origins, either by associating themselves with the family of the Prophet or with some saintly person whose religious aura is recognised in the West as well as in the East; Berber dynasties, such as the Marinids and Wattasids, had recourse to this stratagem to bolster their legitimacy. The Kātib al-Nasab, by 'Abd al-Salām b. Abī 'Abd Allāh (who wrote at Fās in 1098/1687; see A. Giacobetti, in R, xlv-xlvii [1902-1]), is a good example of this. The first part of this work begins with the eulogy of the Prophet, followed by the biography of Sīdī 'Abd al-Kādir al-Djifāni. The second part (by 'Abd al-Salām b. al-Tayyib, 1089/1678), deals with the descendants of this saint, among whose number the authors of the work claim to be.

The Tunisian historian Ibn Abī Dīnār al-Kayrawnī (q.v.), considered a successor to Ibn Khaldūn although several centuries separate them, displays in his historical study of Ifrīkya a certain reserve, even scorn, towards those Arabs who settled in Tunisia in former times, following invasions and migrations. The period which he describes (the 17th century) is far removed, however, from the major invasions of the Arab tribes which left nothing but desolation in their wake. It is evident that these considerations move him closer to the author of al-Mukaddimah.

Al-Kayrawnī reclaimed the autonomy and the maturity of Tunisian scholarship. His writings may be used in the service of the history of political ideas or of Tunisian nationalism.

In Morocco, al-Maghrib al-Akṣā, historical research and historiography have been fertile in the modern period and even in the 19th century. The number of titles is impressive, but the quality sometimes mediocre. Even religious history, which once enjoyed particular esteem, remained largely incomprehensible. Its new style, sententious and emphatic, had the effect of erecting a barrier between the scholars and those whom they addressed. Although Ibn Khaldūn was known and even admired, no one took him for a model. His unequivocal statements of truth, his criticisms of governments as unrepentant, insolent, violent, power-hungry, self-seeking, etc., as applied to Morocco, could have endangered those expressing such views. The majority of Moroccan scholars turned at that time towards chronology, literature (on condition that it was not subversive), biography, hagiography and geographical descriptions. The essentials, meaning general history and political history, were utterly neglected.

In sum, the majority of Moroccan historians of the modern and contemporary eras have been chroniclers, most if not all having been historiographers in the service of Sa'dian or Alawi sultans. The following may be cited: Abī Fāris, known by the name of 'Abd al-'Azīz al-Fīghtali and his manuscript, Manāhīl al-safī fi 'akhlāk al-mulūk al-thāliqīya; al-Ifrīnī (q.v.); and his Nazhat al-ḥādī bi-akhlāq mulūk al-ḥārīr al-dāhī, and Abū l-'Āsim al-Zayyānī, al-Tawāqūlūn al-maghribī (for these works, see E. Lévi-Provençal, Chefs).

In the 17th-18th centuries, Maghribī history was enriched by increasingly numerous European accounts, such as Histoire des conquêtes de Moulay Arshya et de Maley Ilsmāl by Germain Moutet (1683) on the first Alawi sultans of Morocco; the Topografía e historia general de Angul by D. Haeus (1612); and the Memoires of the Chevalier d'Arvieux (1735), who was French consul in Algiers at the end of the 18th century.

In the 17th, 18th and 19th centuries, accounts of journeys proliferated—not least stories of Christian captives and of their ransoming by religious figures who travelled frequently to the Maghrib and to the Orient. Particular mention should be made of the work of Pére Dan, Histoire de la Barbary et de ses corsaires (Paris 1637, 1649), the Redemptorist priest who for almost half a century made it his business to ransom Christian captives and who supplied copious information on the three regions of North Africa.
Finally, since the middle of the 19th century, research in European archives (national archives, archives of foreign and marine affairs, chambers of commerce in France and in other maritime states in western Europe) has led to the study of a large number of documents relating to the see above-men- tioned lands or to those further east, comprising various treaties, commercial accords, and official correspondence, and some of these have been published, e.g. *Documents inédits sur l'occupation espagnole en Afrique*, published in 1875-77 by de la Primaudaiae; the monumental collection of *Sources inédites de l'Histoire du Maroc*, undertaken in 1905 by Paris by Colonel H. de Castries, in which are published documents drawn from the archives of France, Spain, the Netherlands, Portugal and Britain, from the 16th century onwards; and the *Correspondence des deys d'Alger avec la Cour de France (1579-1833)*, Paris 1898, published by E. Plantet.

It is to be noted that the work of the chroniclers continued into the 19th century, exemplified in the very important book written by al-Nasir al-Salawf (ed. B. Haddad, *Chronicle of the Muslim West*. His novel method of approach- ing documentation facilitates the comparison of texts and which were written from a different perspective, determined by their general Christian background so as much as by their more specific communitarian affili- ation [see *Yak'ir yihy SVN*], Nestorians [see *Asyutiyen*], Melkites, Copts [see *Al-Biyut*] and Maronites [see *Marinyya*, Suppl.]). Especially in the Universal Chronicles, Christian historiographers did not hesitate to use different genres of Muslim material, sometimes copying it in a most literal way, without comments or corrections on their side.

The aim of the present article is to give an overview of the historiographical material written by Christians till the end of the 'Abbasid period and the first years of the Mamlûks in Egypt insofar as it deals with gen- eral history and is relevant for aspects of the relations between Muslims and Christians. Chronicles describing mainly the internal life of the Christian communities, such as the recently discovered East Syrian Ecclesiastical Chronicle *Abbasidar al-dahr al-Marûya* (ed. B. Hadid, Bagdad 1980) were not taken into consideration. This article is, for this period somewhat artificially, limited to the production in Arabic. As a matter of fact, Christian historiography written in the Christian national languages, especially in Syriac, in many aspects shows the same characteristics as the works composed by Christians in Arabic.

Melkites

The first important historiographer is Euthychius, Patriarch of Alexandria from 325/935 till 328/940, known as Ariakes (unidentified) and Arabic sources, among which are Muslim authors, such as Ibn al-Aswad, Thabit b. Sinan, an anonymous *vita* of the Melkite patriarch of Antioch (877-940). It covers the period from the creation of Adam till the year 326/938, two years before the death of the author. The work exploits several Muslim sources, among which is historical, juridical and traditionist material. The Alexandrian recension presents the conquest of Egypt according to a version by the local traditionalist 'Uthman b. Sa'id.

In the manuscripts containing the Antiocian recension, Euthychius's *Tarih* is continued by a chronicle composed by Yahya b. Sa'id al-Anakti (gen. cover- ing the period between 326/937-8 to 425/1033-4 (best ed., *Historie de Yahya b. Sa'id d'Antioche*, ed. and tr. I. Kratchkovsky and A. Vassiliev, in *PO*, xviii/5, xxiii/3, Paris 1924, 1932, crit. ed. I. Kratchkovsky, Fr. ann. F. Micheau and G. Troupeau, in *PO*, xvi/4, Paris 1997, with extensive bibliography). The objec- tive of this work is clearly indicated by the author in the introduction: to write the continuation (dhayl) of the work composed by Sa'id b. Al-Bi'trik according to the method adopted by the latter. After the discov- ery of new sources, the author felt, however, obliged to rework the first recension, a first time in Egypt, a second time in Antioch. The *dhayl* is an important source for our knowledge of the his- tory of Egypt and Syria, especially the regions of Antioc and Aleppo, and the Arab-Byzantine rela- tions during this period. It is based on various Greek (unidentified) and Arabic sources, among which are on the Muslim side, 'Abd b. Sinaan, an anonymous *vita* of the Melkite patriarch of Antioch (877-940), *Abbasidar al-dahr al-Marûya* (ed. B. Hadid, Bagdad 1980) was not taken into consideration. This article is, for this period somewhat artificially, limited to the production in Arabic. As a matter of fact, Christian historiography written in the Christian national languages, especially in Syriac, in many aspects shows the same characteristics as the works composed by Christians in Arabic.
the Melkite Theophulus of Edessa, an astrologer in the service of al-Mahdi, who may also have used an unidentified Muslim chronology. Agapius's work was edited by L. Cheikho (Agapius episcopus Mabbugensis. Historia universalis/Bibûl al-Úmûn, CSCO 65, Paris 1912, and by A. Vasiliev, K. al-Makfn b. al-Amfd, Historia universale des Musulmans, Moscou-PV, 1846, vii/4, viii/3. The K. al-Úmûn, together with the work by Sa'id b. al-Bitrik, was much appreciated by al-Mas'ûdi (Tanbih, 154).

According to al-Nadim's Fihrist (ed. Flugel, i, 1871, 295), Kustâ b. Lôkâ (9th century [q.v.]) is said to be the author of a (lost) universal chronicle, al-Firdaws (or ?-ta'rikh). 

**West Syrians**

The most important historiographical work in Arabic composed by a Syrian Orthodox author is the Mukhtasar ta'rikh al-duwal of Gregorius Barhebraeus (Syriac: Bar Ébrôyo or Ibn al-Ífrî [1226-86 [q.v.]].) According to information found in his Ecclesiastical chronicle (EC), he allegedly composed this chronicle at the request of some Muslim friends in Marâgha [q.v.], who apparently had heard about Barhebraeus's fame as a historiographer and as author of a voluminous universal history, written in Syrian. This Chronography was divided into two parts, an ecclesiastical chronicle and a so-called civil chronicle, which were sometimes considered as two separate works. The structure of the Mukhtasar (ed. A. Salhanl as Ta'nkh Mukhtasar al-Ábd b. al-Bitrfk, was much appreciated by al-Mas'ûdi (Tanbih, 154). The Arabic titles suggest that the Mukhtasar is merely a summary of the EC. As a matter of fact, the Mukhtasar contains much information not found in the EC, e.g. many short biographical notices on Islamic scholars. Sometimes the information given in the Mukhtasar differs considerably from the EC or is written from a different perspective. A good example is the attitude towards Muhammad, depicted positively in the Mukhtasar as an instrument in the hands of God, whereas the EC emphasizes forced conversions and the spread of Islam "by the sword". A possible reason for these differences, as suggested by the EC, might be the public the author had in mind when he composed his chronicle. A study by L. I. Conrad, On the Arabic Chronicle of Barhebraeus: his aims and audience, in Parole de l'Orient, xix [1994], 319-78, shows that it is too simplistic to consider Muslims as the intended readership of the Mukhtasar, since a number of passages are of interest only to Christians. The best way to explain the differences between both works is to consider them as independent historical works, which are to an important extent based on different sources (H. Teule, The Crusaders in Barhebraeus' Syrian and Arabic secular chronicles, in K. Gigaar et alii (eds.), East and West in the Crusader states, Louvain 1996, 39-49). In the case of the Mukhtasar, the author used more Islamic historiographical material, such as the Ta'rikh of al-Ábd b. al-Mukaffa of al-Kifti or the Tabakdt al-umam of Mawhub, who frequently acted as an intermediary between the Fâtimid authorities and the Coptic community, is himself the author of a universal history composed by an anonymous author. This history (ed. B. Landron,Chronicon orientale, Ecumenical Councils. The so-called Fihrist of al-Mas'ûdi (12th century), or Ibn al-Rahîb [q.v.], is the author of the K. al-Úmûn, a universal history, composed by an anonymous author. The 13th century al-Makfn b. al-'Anîd [q.v.] wrote a universal history, called al-Maajmuf al-mubdrak, extend-
ing from Creation to the time of Sultan Baybars (658/1260). It exists of two parts, the second Islamic part being based on al-Tabarî or the Ta'rîkh Silâhî of Ibn Wâsî or one of its sources. The section on the Ayyûbîs (ed. C. Cahen, in BEO, xv [1955], 109-84), incorporating contemporary sources, but also, more original and based on personal observations.

II. B. In the Nilotic Sudan.

The extant Arabic historical writings of the Nilotic Sudan (including the outlying western provinces of Kordofan and Dâr Fûr [q.v.]) before 1899 are exhaustively listed in R.S. O’Fahey, Arabic literature of Africa, i, the writings of eastern Sudanic Africa to c. 1900, Leiden 1994. Most of these works are extant only in ms. Of the few published works, the most important are:

(1) The Fundj Chronicle, the conventional name of a chronicle extant in several ms. and recensions. It covers the period from the emergence of the Fundj kingdom of Sinnâr, traditionally in 910/1504-5, to (at latest) 1288/1871. The original author of the Chronicle was Ahmad b. al-Hadîjî Abû [sic] ‘Allî, known as Kâtib al-Shûnî from his post in the government grainstore. He was born near al-Masâllâmiyya (Blue Nile) in 1199/1784-5, and died after Rabî’ I 1254/May-June 1838, where his Chronicle ends. Beginning as a king-list with added blocks of information (some of anthropological interest), a continuous detailed narrative starts with the reign of Bâdî IV, on whose overthrow in 1175/1762 power passed to a clan of regents, the Hamadî Shaykhs, ruling over an ever-dwindling region of the Blue Nile until the invasion of the Sudan by the forces of Muhammad ‘Ali Pasha of Egypt [q.v.] in 1235/1820, and the establishment of the Turco-Egyptian régime (al-Turkîyya). The later editors and continuators were, like Kâtib al-Shûnî, formed by a traditional Sudanese Islamic education, and had appointments under the Turco-Egyptian administration. They were thus members of a group which had little to regret at the passing of the Fundj kingdom and the ending of the anarchic Hamadî regency. They show no hostility to the Turco-Egyptian régime as such, which brought greater security, and the consolidation under the aegis of the Islamic Ottoman Empire, although they criticize individual officers and administrators. While the latter part of the Chronicle is in no sense an official history, it was written by men who accommodated themselves reasonably comfortably to the régime of Muhammad ‘Ali and his successors.

The Chronicle has been published twice: (a) its last recension by Makki Shubayka, Ta’rîkh mulâk al-Sûdan, Khartoum 1947; (b) Kâtib al-Shûnî’s text (some collation with other ms.) by al-Shîhir Bûnîîî ‘Abd al-Djalîl, Mâshidatâ Kâtib al-Shûnî, Cairo 1963. An annotated English summary translation of the final recension was published by H.A. MacMichael, A history of the Arabs in the Sudan, Cambridge 1922, ii, 354-430. A fuller translation from a collation of the principal ms. is provided by P.M. Holt, The Sudan of the three Niles, The Fundji Chronicle 910-1288/1504-1871, Leiden 1950.

(2) Kâtib al-Tabarî, fi khasîis al-mulâk wa ‘l-‘âlâmâ wa ‘l-farsînâ wa ‘l-Sûdanîn (some minor variants of title in the published editions). As the title indicates, this is a biographical dictionary of the Muslim holy men of the Nilotic Sudan, perhaps the only representative of the genre from the region. It was written and compiled (since there is internal evidence of sources of various kinds) by Muhammad al-Nûr b. Dayî Allâh, and hence is usually referred to as the Ta’rîkh of Wad (i.e. Wad Allâh). From internal evidence it was compiled about 1219/1804-5. Wad Allâh resembled the authors of the Fundji Chronicle in being a member of the traditionally educated Muslim élite. He was born in 1139/1727 at Halfâyat al-Mulûk, north of present-day Khartoum North. Like his father, he taught in the mosque, acted as a mulla, and became celebrated for his religious writings. He died before the Turco-Egyptian conquest in 1224/1809-10.

The Ta’rîkh was published twice in 1930 in Cairo, by Ibrâhim Sâlîk (Suddâyya) and Sulaymân Dâwûd Mandîî, respectively. A critical edition, prepared by Yûsuf Fadl Hasan, was published in Khartoum in 1971 (1974). It contains 270 biographical notices, predominantly of Sufî shaykhs (mainly from the Kâdiriyya târîkh and jurists, chiefly of the Mâlikî madhâhîb. There are a few notices of persons holding formal appointments, and a small number of legendary saints are included. No full English translation has been made, but an annotated summary translation with excerpts from the Arabic text is given by MacMichael, op. cit., ii, 217-325. The text and translation of three notices appear in S. Hillelson, Sudan Arabic texts, Cambridge 1935, 172-203. One family of holy men is studied in Holt, The Sons of Jâhil and their kin, in BSOSA, xxx/1 (1967), 142-58.

The roles of charismatic holy man and Islamic reformer were momentarily fused in Muhammad (Abd Allâh, the Sudanese Mahdi) [see at-Mawlîq]; a hagiography of whom was written by Ismâ’il b. ‘Abd al-Kâdir al-Kûrfûfî (perhaps his court chronicler), and entitled Kâtib Sîwâlîd al-mulâhîd bi-sîrat al-Imâm al-Mahdi. The unique extant copy of this and its sequel, al-Tinâz al-mulâhîd bi-birût khâtîî Fâhînîn al-Mulâhîd, describing the war between the Mahdists and the Ethiopians in 1889, is now in the

The establishment of the Anglo-Egyptian Condominium in 1899 was followed by the development of westernised education. This, continuing under independence, has produced a growing number of professional historians, among their pioneers the late Prof. Makhl Shubayka (see above), and an increasing body of scholarly historical writing in Arabic and English. A link between the old and new types of historians was Muḥammad `Abd al-Raḥim (b. 1878, d. after 1935), the self-styled muʾarrīkh al-Sūdān, whose writings of historical, literary and political import, included Naṣṣāfiyya al-yarīdī n. t. al-adab wa l-ṭarīqī wa l-ʿājdāmī, Khartoum n.d.

Bibliography: Given in the article.

TAYYIBIYYA. a Sūfī brotherhood of the Maḥrīb (also ṬUHMAIYYA in western Morocco, or, further, WAZHINNYYA [sic]). Its contribution to the study of confraternities, especially the Tuhfāt al-taḡīwī, a Sufi brotherhood of the TAYYIBIYYA, in the medical realm were part of military modernisation. Thus medical schools, shaped according to the Western model, and at which French, Italian, and many European texts were translated into Muslim languages. Translations by Muhammad Ibrahim Abu Sallm and published under its own title at Beirut in 1972 (see above), and an increasing body of scholarly historical writing in Arabic and English. A link between the old and new types of historians was Muḥammad `Abd al-Raḥim (b. 1878, d. after 1935), the self-styled muʾarrīkh al-Sūdān, whose writings of historical, literary and political import, included Naṣṣāfiyya al-yarīdī n. t. al-adab wa l-ṭarīqī wa l-ʿājdāmī, Khartoum n.d.

Bibliography: Given in the article.

THATTA. A small domed entrance leads to the sahn, with smaller ones over each lateral entrance in the renovated Ghalata-Sarayi opened in 1254/1838, in the front of the original Tibbkhānā Amīr, a medical school founded at Istanbul in 1827. The official opening day of the original Tibbkhānā Amīr was 14 March 1827, adopted by the medical community of the Turkish Republic as Medicine Day (Tip Bayramı), to celebrate modern medicine. In the Tibbkhānā-i Amīr—European and Ottoman doctors taught modern Western medicine, not the traditional Muslim medicine based still on the humouralistic system from Antiquity.

During the 19th century, medicine in the Middle East underwent profound changes. European medicine was introduced on a much larger scale, and many European texts were translated into Muslim languages. Translations by `Abd al-LLāH Muḥammad Ṣūnātī (d. 1296 [sic]) were especially important in this regard. The aim of these reforms was to improve the health of the armed forces as the measures in the medical realm were part of military modernisation. Thus medical schools, shaped according to the Western model, and at which French, Italian, and
Fig. 2. *Djami' masjid*, part of a tile panel, from Plate 2 in H. Cousens, *Sindh tiles*, 1906.
Austrian and German professors taught European medicine in French, were founded in all major capitals of the Middle East during the first half of the 19th century. Muhammad ʿAlī Pasha (q.v.) established the first one in 1827 near Cairo, followed only a month later by Mahmūd II’s military medical school in Istanbul. The third, another military medical school, was included in the Dār al-Funun, a polytechnic school founded in Tehran in 1850-1.

The changes in medicine in the Ottoman Empire during Mahmūd II’s reign were part of a wide range of reforming measures. Under his rule, government functions proliferated well beyond the traditional realms of administering justice, collecting taxes and maintaining the armed forces. Matters that had traditionally been left to private hands gradually came under government administration. The final aim was to create a new generation of able administrators. Two methods were employed to achieve this. First, Ottoman students were sent to universities in Europe to acquire a profession in selected valued fields; second, new schools were established and given precedence over the traditional Muslim madrasas. One of them was the Tibbiyye-i Âdilîyye-i Şahâne. The many documents and letters produced by the Ottoman bureaucracy dealing with salaries and hiring teaching aids brought over from Europe, the school’s physical setting, etc., reflect the close attention of the central government to this school. Even everyday matters and decisions were not left to the discretion of the school administration.

The curriculum at the Tibbiyye-i Âdilîyye-i Şahâne, where the language of instruction was French, was decidedly Western. Teaching aids pertaining to medical instruction were imported from Europe. In this it parted ways from the traditional medical schools in the Ottoman Empire. The few of these that existed, for example at the Suleymaniye complex, reproduced Arab-Muslim medicine based still to a large extent on interpretations of, and additions to, mediaeval Muslim texts. In contrast, the four-year course at the Tibbiyye-i Âdilîyye-i Şahâne followed a syllabus combining general and medical subjects. The general syllabus included languages (Arabic and Turkish, but also French and Latin), French was mandatory in order to help the students communicate with the teachers, many of whom were Europeans. There was another reason for the French classes. As the sultan explained in his opening address, the first graduates of the medical school were to master French in order to be able to translate the much-needed European medical texts into Ottoman Turkish. Other non-medical subjects included arithmetic and geometry, drawing, geography, history and zoology. The general curriculum was taught by Ottoman Muslim teachers. Medical studies, taught mainly by non-Muslim and non-Ottoman teachers, comprised anatomy, dissection, pathology, chemistry, botany and pharmacology, diagnostics, ophthalmology and medical devices.

Despite the pronounced French influence, the school was the product of the close relationship at the time between the Ottoman and Habsburg empires. Dr. Karl Ambros Bernard, a medical doctor and surgeon and a graduate of the Vienna medical faculty, was brought in 1838 from the Austrian capital at the instigation of Ahmed Efendi, the hâkim-bashi (Ottoman head physician [q.v.]), to found the school. Dr. Bernard served as its first manager till his death at the early age of 38 in 1844. His widow and family were granted a stipend by the empire as a sign of respect to the man and his services to Ottoman medical education. Dr. Bernard was not the only example. Other Austrians teaching at the school were Dr. Neuner and Dr. Riegler, and in the 1840s an Austrian midwife was given a contract to teach gynaecology and obstetrics at the school.

The student body comprised mainly Muslims but also included Christians. Their numbers fluctuated from around 200 at the beginning to over 400 by the end of the 1840s. Similarly, the teaching cadre rose from fewer than ten in the 1830s to several dozen a decade later. The Tibbiyye-i Âdilîyye-i Şahâne functioned in Qalâta for ten years; a fire in August 1848 then obliged the medical school to move to the Golden Horn.

Bibliography: Many archival documents can be found in the Başbuğkanı Osmanlı Arşivi (The Archives of the Ottoman Prime Minister) in the İrade, Cevdet and Hatî-i Humayun classifications. For publications that include primary sources, see Arslan Terzioglu, Türk Avustralya tıbbi ıktisatleri, Istanbul 1987; idem, Türk tibbına batılılaşması, Istanbul 1993; Ayten Altnat, Kamil Ambros Bernard’ın Mekteb-i Tibbiye-i Şahâne’indeki kararları hakkında tarihî ve gørecek hakkında, in II. TONGUÇ, ISMAIL HAKKI (1893-1960), Turkish educator.

He was born, the son of a peasant family, in Tatatarma village, Silistre. He attended Kastamonu Teachers’ College and later the Istanbul Teachers’ College, graduating in 1918. He continued his educational career at the Karlsruhe State Academy for Graphic Arts and Ettlingen Teachers’ College in Germany during 1918-19 and 1921-2. After returning to Turkey, Ismail Hakki worked in several schools both in administrative posts and as a teacher of painting, handicrafts and physical education. In 1935, he was appointed Director General of Primary Education in the Ministry of Education where he had been working as the Director of School Museums since 1926. The fame of Ismail Hakki rests basically on his views concerning the educational problems of village children in the early Republican period, which found concrete expression in the project of Village Institutes (Canlandinlacak köy, ve meslek terbiyesi, İstanbul 1934), his major achievement. Being the brain behind the Institute, he played a leading role during their establishment and development. Forced into resigning office in 1946, because of an extensive campaign attacking the Institutes, he was first appointed a member of the Talim ve Terbiye Kurulu (Instruction and Training Board) and later in 1949 a teacher at the Atatürk Lycée, where he worked until the Ministry’s decision to remove him in 1950. Ismail Hakki retired, following the annulment of the decision by the Council of State in 1954, and died in Ankara on 23 June 1960.

Throughout his career as an educator, Ismail Hakki wrote several books and articles. In most of his works, he elaborated the educational problems from theoretical and practical perspectives and stressed the significance of vocational training in the developmental process.

The Tulunids’ incapacity, faced with the Carmathian revolt in Syria; an expedition involving ‘Abbasid and Tulunid generals (vi) Turkic languages in non-Arabic and non-Latin scripts.

Bibliography: Many sources have information on Tughd as governor of Damascus, with other commanders, to submit to the new ‘Abbasid authorities in Misr, who sent them back as a garrison in the gnd of Kinnasrin. He later returned to Baghdád where, according to Ibn Khallikan, he died in prison.

He left six sons, as well as Muhammad, the future Ikhshid, and at least one daughter who, in 326/938 married the son of the grand Amr Ibn Ra’id [q.v.], at the same time as the vizier Abu l-Fadl’s [q.v.] son married Ibn Ra’id’s daughter (al-Hamdani, Dhayl Ta’rikh al-Tabari, ed. M. Abu l-Fadl Ibráhím, Cairo 1977, 314).

Tughd was known for his passion for perfumes; when travelling, he had in his train fifty camels loaded with perfumes [sic]. He is said to have built at Damascus a cupola with latticework, forming a giant censer, from which he had wafted the aroma of perfumes for all the population of the city. Even if these accounts are clearly exaggerated, they do show how the standard of living in the Syrian-Egyptian lands, at the end of the 3rd/9th and beginning of the 4th/10th centuries, had risen, allowing the elites to enjoy a significant amount of luxury goods [see also Ibn Sa’d, al-Maghrib, 154-5].

TURKS.

II. LANGUAGES.

(vi) Turkic languages in non-Arabic and non-Latin scripts.

During the course of over fifteen centuries Turkic peoples interacted with peoples and cultures of three continents. As a result of this process they became acquainted with many writing systems, used in various regions between Central Asia and Europe. The historical scene of the emergence of the first written and literary languages of Turkic peoples is Inner Asia, the territory of modern Mongolia, the Tarim Basin (in Sinkiang) and Kansu. The first epigraphic monuments written in a Turkic idiom belong to the Orkhon Turks (A.D. 552-744) and Uyghur (744-840), who created empires in the steppe region. These monuments are written in the so-called runic or runiform script. After the collapse of their empire, the Uyghurs left the steppes and moved to the Tarim Basin and Kansu, founding the Kingdom of Kočo (866-1124) and Kan-tsu (880-1026), both becoming centres of the Uyghur culture and offering in abundance written documents mainly of religious (Manichaean, Buddhist and Nestorian) content. These monuments are written in Sogdian, Manichaean, Uyghur, and Nestorian scripts (all of Semitic origin), in Brahmi script (of Indian origin) and in Tibetan script (in the case of the latter, also in its variant, the Phags-pa script).

1. The Khazar and Karam languages

Judaism and Jewish culture played an important role in the Kazar empire [see KAZARS] in the region of the Black and Caspian Seas (7th-11th centuries).
Therefore it is very probable that the Hebrew script was in use by this Turkic people, although, unfortunately, no written documents have survived.

The Hebrew script was adopted later by the Karaim, of Jewish religion, living originally in the Crimea (see Karaites). A large part of this people migrated, probably before the 14th century, to the western Ukraine and Lithuania. They lived there until the end of the Second World War, when they moved to Poland. The rich written culture of the Karaim is represented by many manuscripts and printed works. Today, the Karaim language is an especially endangered language; some dialects of it can be considered as extinct.

The generally suggested, supposed historical continuity between the Khazars and the Karaim remains unproven.

2. The Armenian-Kipchak language

After the collapse of the Armenian Asa empire in the middle of the 11th century, Armenians moved to the Crimea, and later to the western Ukraine. As a result of intensive contact with the Kipchak Turks, they adopted their language for purposes of administration and religious practice, keeping their original Armenian language for secular life. These documents, which have come down to us from between the 16th and 17th centuries, are written in Armenian script.

3. The Armenian-Ottoman language

After the Turkicisation of Asia Minor, Armenians living in different provinces of Anatolia seem very soon to have become bilingual. Turcophone Armenians created their own Turkish literature in the so-called Armeno-Turkish language, written in Armenian script. As a result of this activity, a large body of literature (original works, translations, inscriptions, later also journals) was created. This written documentation, which is especially rich from the 17th century onwards, can be traced back until the 14th century.

4. The Greek alphabet used in the Ottoman Empire for Turkish

The Orthodox Christian Karamans (Turkish Karamanlılar), living in northeastern Anatolia until the Greek-Turkish population exchanges of 1924, created a special literature, the products of which were written in Greek script. The history of this well-documented group of monuments can be traced back to the 16th century. It is obvious that these products (at the outset, works of a religious and historical content, later also journals and newspapers, etc.) written in the so-called Karaman (Karamanlı) language (in fact, in a special dialect of Ottoman Turkish), were also used by the bilingual Greeks living in other regions, especially in the Ottoman capital. Many written texts in the Turkish language but Greek alphabet have also come down to us from this large ethnic and religious group of the empire.

5. Other alphabets used in the Ottoman Empire for Turkish

The Syriac script was used for Turkish by a small Christian community. These texts, mainly preserved in the University Library of Bonn, were destroyed during the Second World War.

At the same time, the Hebrew alphabet was also used by the Jewish community for Turkish, the best-known surviving example being a copy of an Ottoman chronicle in this script.

The Institute of Manuscripts of the Georgian Academy of Sciences in Tbilisi has a large collection of Ottoman Turkish texts written in the Georgian alphabet. Unfortunately, we do not possess any survey of or study on this precious material, so that neither its quantity nor its character and chronology are so far known. Scholars agree, however, that a systematic analysis of these materials could throw interesting light on the history of the Ottoman Turkish language in this region of the empire.

The Cyrillic alphabet was adopted in the Balkans for Turkish by intellectuals interested in the official language of the empire. We possess a few manuscripts and printed books, mainly from the 19th century.

6. Other Turkish languages written in Cyrillic script

Turkic peoples living in Eastern Europe and Siberia (Chuvash, a part of the Volga Tatars, Yakuts, Turkic peoples in the Altai Region, etc.), due to the Russian colonial expansion from the 18th century onwards, experienced Russian missionary activities, and thereby an acquaintance with the Cyrillic alphabet. All other Turkic peoples living in the former Soviet Union adopted the Cyrillic script in the second phase of the Soviet writing reform (1939-40), after a very short period of using the Latin script, introduced to these peoples between 1922 and 1930 as a replacement for the Arabic alphabet.

The collapse of the Soviet Union in 1991 created a new situation for rethinking the language and script policies of the former imperial power. In the sometimes heated discussions, all possible solutions found their supporters (keeping the Cyrillic script; reintroduction of the Latin, or even of the Arabic alphabets). In the course of the 1990s, Azerbaijan, Turkmenistan and Uzbekistan have reintroduced the Latin alphabet with some special signs. In these countries, a transition period, in which both Latin and Cyrillic scripts may be used, has been allowed. Efforts to create a Latin alphabet on a common theoretical and practical basis for all Turkic peoples have until now had no results.

were not only passive patrons of culture but also Asian Turkish legacy till the 19th century, and it was Dihlawl, Alam II (1760-)

was also attracted to the Mughal court. He is famous for his Persian poetry that set a trend which was followed even in Ottoman Turkey, but one should not forget that he was an equally gifted poet in Turkish. This side of his poetic talent almost faded into oblivion because only a handful of the manuscripts of his Persian dīwān contain Turkish pieces. At some point during the reign of Arangwād, this migrated to Hindīstān Ḥusayn Farīdī Ḥāfānī, whose Persian dīwān has preserved a couple of Turkish lines as well. Diwālī Singh (d. 1896) a well-known poet and a great stylist in Persian, became famous under his takhlīltūs "Kāfī". Following the practice of members of the Mughal elite in the 17th-18th centuries, he also learnt Turkish and wrote two short stories in this tongue. His famous work on Persian style titled Cār shāhābī contains a sketchy Turkish grammar explained in Persian.

In a multi-ethnic society like India, it is not considered an extraordinary feat if someone learns several languages, but even in such an environment the achievements of Inshā-Allah Khān "Inshā" [q.v.] earned him fame. Born to a family of Turkish immigrants from Nadir, he not only spoke Arabic, Persian, Urdu, Kaqāmīrī, Purbi, Paštūnī and Turkish but was also able to compose poetry in these tongues. His Turkish output consists of a couple of bayts, mukhammas, a few bayts in his Shāhār-nāma and a prose diary entitled Turkī rūznāmā. One of his most intimate friends and fellow poet was Sa'a'd-ud-dīn Khān "Rangīn" [q.v.], whose father Tahmīsī Beg Khān Ištād-Dīng arrived in India with the army of Nadir Shāh and later wrote his memoirs, the Ahmād-nāma. Rangīn spent most of his life in Lucknow in the service of Mirzā Sulaymān-Shukhā. His works in Turkish includes a Turkish-Urdu vocabulary titled Nābī-i Turkī and a few Turkish lines in his Ma'īnī-yi Rangīn.

It should be noted, however, that contemporary chronicles and takhlīltūs are full of references to poets of Turkish origin whose literary achievements in their mother-tongue have not yet come to light. There is further the fact that libraries, mainly throughout the former British Indian Empire, preserve manuscripts written in or on Turkish whose authors are either

III. LITERATURE.

6. (m) Turkish literature in Muslim India.

The constant stream of Turkish migrants started pouring on to Indian soil from the 5th/11th century onwards, but hardly anything is known of the role Turkish language played in the Ghaznavīd, Ghōrīd and Sultanate periods. Turkish seems to have been used mainly as a medium of communication in the army, but also in court circles (see Amir Khushraw Dihlawī, Nābī-i tarkā, ed. Muhammad Wahid Mirza, Oxford 1950, 173). The hitherto unearthed sole remnant of Turkish from this period are the Turkish words contained in a Persian dictionary, the Farhang-i zafīn-gāyā wa dāfān gāyā (see R. Dankoff, The Turkish vocabulary of the Farhang-i zafīn-gāyā, Bloomington 1987).

The Timūrid conquest and then the establishment of the Mughal dynasty altogether changed this situation. The Timūrids and their Turkish military elite arrived in India with a cultural legacy that included support for and cultivation of a Turkic-Persian literary tradition which was in a sense founded and elaborated by the activities of 'Alī Shīr Nāwā'ī [q.v.]. Timūrids in India remained true to their Central Asian Turkish legacy till the 19th century, and it was a custom for Mughal princes to be trained in Turkish as well as in the other great Islamic languages. The last member of the family whose skills in Turkish grammar, lexicography and poetry were well known in Hindīstān was Mirzā 'Alī-bāχī Gūrgānī "African" [q.v.].

Timūrid and thus also Mughal rulers and princes were not only passive patrons of culture but also played an active role in literary life (see Muhammad Khalīlī, Galsīstān-i Timūrī, Lakhnaw 1973). Quite a few of them displayed outstanding literary skills but only some of them are known to have contributed to Turkish literary output in India. Except for the first generation of Indian Timūrids, the sources do not yield much information on possible Turkish works by members of the royal family. The Turkish oeuvre of Bābur [q.v.], is, of course, well known, and some Turkish lines by Humāyūn [q.v.] and a full dīwān by Kāmran [q.v.] have been preserved. Due to the ruler's political aims and policies, Turkish seems to have been pushed into the background in court circles during the reign of Akbār [q.v.]. Nevertheless, later rulers seem to have been able at least to appreciate Turkish poetry, as was the case with Shāh ʿAlām II (1760-89, 1788-1806; see Azzāf, Watīr-i Ajarfī, ed. T. Chandrashekharan, Madras 1957, 17). Turkish manuscripts copied in India indicate that Nawātī was the most often read author, but contemporary sources remain silent on these rulers' literary activities in Turkish.

The benefits which the Mughal empire could offer was considered an extraordinary feat if someone learns several languages, but even in such an environment the achievements of Inshā-Allah Khān "Inshā" [q.v.] earned him fame. Born to a family of Turkish immigrants from Nadir, he not only spoke Arabic, Persian, Urdu, Kaqāmīrī, Purbi, Paštūnī and Turkish but was also able to compose poetry in these tongues. His Turkish output consists of a couple of bayts, mukhammas, a few bayts in his Shāhār-nāma and a prose diary entitled Turkī rūznāmā. One of his most intimate friends and fellow poet was Sa'ađ-ud-dīn Khān "Rangīn" [q.v.], whose father Tahmīsī Beg Khān Ištād-Dīng arrived in India with the army of Nadir Shāh and later wrote his memoirs, the Ahmād-nāma. Rangīn spent most of his life in Lucknow in the service of Mirzā Sulaymān-Shukhā. His works in Turkish includes a Turkish-Urdu vocabulary titled Nābī-i Turkī and a few Turkish lines in his Ma'īnī-yi Rangīn.

It should be noted, however, that contemporary chronicles and takhlīltūs are full of references to poets of Turkish origin whose literary achievements in their mother-tongue have not yet come to light. There is further the fact that libraries, mainly throughout the former British Indian Empire, preserve manuscripts written in or on Turkish whose authors are either

(G. HAZA)
not mentioned in historical sources or literary antholo-
gies, or even when contemporary records provide some
information on them, their knowledge of Turkish is
not mentioned. One should mention here Kaplan Beg,
Yolkolu Beg “Ansî” Şâmî, Müllâ Shayqâ’t Tekkelî,
Ustad Mirzâ ‘Ali Kîpîzâkî and also Pîr Muhammad
Ağbar Khan” an Uzbek from the Ağbar tribe who
distinguished himself in the wars of Awarangzîb’s reign.
He composed verses filling a full discan that is pre-
served in an Indian institution, but contemporary
sources remain silent on his contribution to Indo-
Turkish literature.

Beside being a medium for artistic expression
Turkish was also used for more mundane purposes
in Mughal India up to the 19th century, as a lan-
guage quite common in court circles, in the army
and in diplomatic correspondence, mainly with Russia
and the Ottoman Empire.

AL-TÜSI, ‘ALî AL-DIN ‘ALî b. Muhammâd,
important religious scholar of the 9th/15th cen-
tury. He grew up in Iran (in Samarkand, according
to al-Suyûtî [q.o.]), where he also finished his studies.
During the reign of the Ottoman Sultan Murâd II
[q.o.] (probably in the second phase of his rule, i.e.
between 850/1446 and 855/1451), he came to
Anatolia and was appointed as a teacher at the madrasa
al-sultânîya in Bursa [q.o.]. After the conquest of
Constantinople in 1453, Mehmed II [q.o.] assigned
him to a professorship, first in Istanbul, afterwards in
Edirne [q.o.]. It was around this time that the con-
test between al-Tüsi and Khâjûzâdâ [q.o.] took place.
Both had been summoned by the sultan to compose
a work of advice on the famous discussion between
al-Qâzîî and the philosophers. A jury classified
al-Tüsi’s treatise as the one of lesser interest. As a
consequence, he renounced his academic post in
Edirne and returned, via Tabrîz [q.o.], to Samarkand.
He is said to have returned there to live as a Sûfî,
allegedly under the guidance of ‘Ubâyd Allâh Ahrâr
[see AHRAR, KFÎDÎ ‘UBAYD ALLAH, in Suppl.]. He
is reported to have died in Samarkand in 877/1472
(according to al-Suyûtî) or in 887/1482 (according to
Tâshkörprizâde and Hâджîdî Khâdîî [q.o.]).

Notwithstanding the above-mentioned failure,
recorded in several sources, al-Tüsi was able to compose
a considerable number of scientific works. As was
the case with many scholars of the 9th/15th century,
al-Tüsi’s writings deal with the various disciplines
that were taught at the madrasa [q.o.]. His works can
be divided into the following categories:

Kurân exegesis: superglosses on the glosses of al-
Durqanî [q.o.] on the al-Kâshîfî of al-Zanâkhshîrî
[q.o.];

Fîkh: glosses on the commentary of al-Taftânî
[q.o.] on al-Mähbûbî’s Tawdîl, and also glosses
on the commentary of al-Idî [q.o.] on the Muhîdîn
manûshî al-su’dî of Ibn al-Hâdjî [q.o.];

Kalâm: glosses on al-Durqanî’s commentary on
al-Idî’s al-Maw‘ûkîî as well as on al-Durqanî’s commentary
on al-Idî’s al-ak’dâr;

Logic and philosophy: superglosses on al-Durqanî’s
glosses on Kûfî al-Dîn al-Taftânî’s commentary on
Sîrâtî al-Dîn al-Urmawî’s Mas‘ûlî al-an‘âr fî l-mantiq,
as well as the above-mentioned treatise on the dis-
cussion between al-Qâzîî and the philosophers, which
has become known under the title al-Dhâhirâ [fî l-
muhîdîn manûshî al-su’dî u‘ûs l-hukmâtî];

Several of these texts have survived in manuscript
(see Brockelmann, II, 261-2, S II 279, 292a). So far,
however, only the Dhâhirâ has appeared in print
(Haydarabâd 1899; recently also under the title Tahâfût
al-falâsîfî, ed. R. Sa’îda, Beirut 1990; cf. the Turkish
translation by R. Duran, Ankara 1990). The work
shows that al-Tüsi, following al-Qâzîî, tried to com-
bine classical doctrines of Sunnî theology with philo-
sophical concepts. Among other things, he underlines
that the rules of logic and the results of mathemat-
as and astronomy are inseparable, should the state-
ments of revelation be in contradiction with them,
they must be interpreted allegorically. In the doctrine
on the soul, too, al-Tüsi is a representative of philo-
sophical notions (the soul lives on after death; spirit-
ual enjoyments have precedence over physical
pleasures, in both this world and the hereafter). In
the case with many scholars of the 9th/15th century,
the occasionalistic theory of the early Ash’ârî theo-
logians is correct.

(U. Rudolph)
'UBayd Allāh Sultan Khān, ruler in Transoxania of the Uzbeks or Ozbegs [qa.]

He was the son of Mahmūd Sultān, son of Shāh-Būdāgh, son of the founder of the Uzbek confederacy, Abu 'l-Khayr Khān, a descendant of Čingo Čin zig Khān's grandson Shāhān (hence the epithet "Shāhānī," or "Shahānī"). During his youth, 'UBayd Allāh accompanied his uncle Muḥammad Shībānī Khān (r. 903-16/1500-16) on his sweeping victories over the Timūrids throughout Central Asia and Khorāsān in order to re-establish Čingizid rule in the area. On 7 Muḥarram 913/19 May 1507 the Uzbek forces under 'UBayd Allāh and Temūrī Sultaṇīn defeated the Timūrids outside Harāt. As a victory prize, 'UBayd Allāh was given in marriage Mihranglži Abd al-Azīfz, but he could not hold out against 'UBayd Allāh's governor out. Astarābād was given to Uzbek forces under his uncle Muḥammad Shībānī Khān appointed 'UBayd Allāh as governor of Bukhārā.

In Raḏāb 917/10 October 1511, Babur [q.v.] re-occupied Samarkand, his ancestral capital, with the help of the Saʿfāwī Shāh Ismāʿīl I [q.v.]. The Uzbek forces were not slow to retaliate, and in Raṣād 912/23 April 1512 Babur launched an ill-prepared attack on the Uzbek forces under 'UBayd Allāh at Kol'i Malik near Bukhārā, and although Babur had been winning, suddenly "through the machinations of heaven, the evil eye struck" and Babur lost. After the battle he left Transoxania forever. On 3 Ramadān 918/12 November 1512, 'UBayd Allāh defeated the Saʿfāwī general Naḏmī-i Thānī (Amīr Yār-Ahmād Iṣfahānī) at the Battle of Ghīzdhuvar (Ghīzdhuvar). The next winter, Shāh Ismāʿīl returned to western Persia to deal with incursions by the Ottoman Sultan Selīm I, and Khāzīn Khān of the Khūṭakī-Kaẓakhīs returned to Siberia to tend to his realm, leaving the Uzbek forces a free hand in Central Asia. That winter 'UBayd Allāh took Hisār, to the north of the upper Oxus, from the Moghols.

In 920/1514 the Uzbek forces headed for Andizhān, where the Moghul Sultan-Sab'īd Khān was. Since then Babur had withdrawn to Kābul, the khān went to Kašghar, leaving hisar to fall to the Uzbek

'UBayd Allāh became the khān of the Shībānīs in 940/1533, although, as Mīrāz Haydār reports, "from the year 911 [1505] until the end of the reign of the latter khāns, it was really he who had conducted the affairs of the Shībānīs, and had he accepted to be khān, no-one would really have opposed him; nonetheless, he maintained the ancient custom and let the office of khān be given to whoever was the eldest—until after Abū Saʿīd Khān, when there was no one older than him." (Tārīḫ-i-Raḥīlī, 181-2). During his ascendancy, six advances were made against Khorāsān. In 930/1523 Mashād was taken, and 'UBayd Allāh proceeded to Astarābād and drove the governor out. Astarābād was given to 'UBayd Allāh's son 'Abd al-'Azīz, but he could not hold out against Saʿfāwī reinforcements and had finally to abandon the territory. When the Uzbek forces advanced on Khorāsān the third time, they clashed with the Saʿfāwī army at Sarū Kānīn near Djām on 10 Muḥarram 935/24 September 1528, and although the battle was going badly against the Saʿfāwīs, they managed to turn it into a resounding defeat of the Uzbeks. An eyewitness account of this battle is included in Babur's memoirs (Bābur-nāma, fol. 354), where it is incorrectly recorded that 'UBayd Allāh was killed. The fifth invasion of Khorāsān was launched in 937/1530-1, but the Uzbek forces again pulled out when Shāh Tāhmsāp I advanced on them and entered Harāt on 22 Dijmādār II 939/19 January 1533. The sixth and last invasion was made in 942/1535, when the Uzbek forces again took Maḥādī. Harāt was evacuated by the Uzbeks in Shiʿbānī 943/January 1537 and re-occupied by the Saʿfāwīs under the command of Khudābānda and Muhammad Khān Sharāf al-Dīn-oğlu Taḵālū. In 945/1538-9, 'UBayd Allāh's forces occupied Khūzāt, but subsequently they were dealt a crushing defeat by Dīn-Muḥammad Khān, another Čingizid descendant with whom Shāh Tāhmsāp had formed an alliance and to whom he had given the territory of Naṣā and Abīward. Returning to Bukhārā in 946/1535, "in answer to the cries of the oppressed, 'UBayd Allāh took to his bed, overtaken by a severe illness, and while pining for Harāt and yearning to stroll along the banks of the Mālān Bridge, he hastened to the next world, and the residents of Khorāsān were released from the oppression and cruelty of that heathen butcher" (Iskandar Beg, T.i 'Amār-ānā, 66). He left two sons, 'Abd al-'Azīz and Muḥammad-Raḥīm Sultān, but the khānate went to 'Abd Allāh Khān; the son of 'UBayd Allāh's predecessor, Kūṭūm Khān, although 'Abd al-'Azīz continued to rule autonomously in Bukhārā. A valuable eyewitness accounts of events in Bukhārā, Samarkand and Tashkent during 'UBayd Allāh's reign is Zayn al-Dīn Maḥmūd Wāsīfī's Bādāyū al-wakāliyī. Thackston).

'Ukālā al-Madājānīn (A.), "wise fools," a general denomination for individuals whose actions contradict social norms, while their utterances are regarded as wisdom. It is not altogether clear whether or not wise fools were particularly numerous in the early Ābbāsid period. At any rate, several authors of classical Arabic literature have treated the phenomenon in specific works that belong to the literary genre dealing with unusual classes of people, such as the blind or misers. While the first collection devoted specifically to wise fools was appar-ently a work written by al-Madājānī (d. 228/843 [q.v.]), the only surviving work is the Kāth 'Ukālā al-madājānīn

Al-Naysabûrî, while drawing upon earlier authors such as al-Dhâbîz (d. 255/868 [q.v.] or Ibn Abî '1-Dunyâ (d. 281/894 [q.v.]), introduces his subject from a theological point of view. For him, God has created the world to be splendid and its incapacity at the same time: good is blended with evil, and health with illness. In this way, madness, even though apparently a contradiction to God's benevolence, is a perfectly normal constituent of the human condition. In the following, the author discusses the terms used to denote madness, besides classifying different connotations of madness, as ādām, mu'tâh, mansūs, mamrûr, etc.

The main part of his work is devoted to anecdotes following, the author discusses the terms used to denote madness, besides classifying different connotations of madness, as ādām, mu'tâh, mansūs, mamrûr, etc.

of their actions were considered harmful to society who were held in hospitals. Wise fools would constantly remind their fellow citizens, particularly the powerful, of their worldliness and vanity, quoting pious verses and admonishing them with stories or allegories alluding to the hereafter; some of them even acted as unofficial preachers. In particular, their quality as free-wheeling admonishers makes the Islamic wise fools appear as precursors of the mediaeval European phenomenon of the court fool (Mezger 1991). Hence it is not surprising to see Buhlul, who in later tradition was given in the article; see also Le Strange, Description of Mesopotamia and Baghdad written about the 4th/10th centuries) on the left, i.e. eastern, bank of the Tigris, ten roughly halfway between the capital and Samarra. The lands of the Eastern Caliphate, described by al-Tabarî (d. 1089-90), mentions a considerable number of scholars stemming from a-Sufism (Dols 1992, 376), and Ibn al-Djawzf (d. 1407/1987). The town was large and populous in the 4th/10th century, and a Jewish community there is mentioned in the early 3rd/9th century. But from the medieval times onwards, mentions of it in the historical and geographical sources dwindle. It appears that the bed of the Tigris above Baghdad had shifted eastwards into the channel then known as al-Shuwayta “the little shott [q.v.]”, and the ruins of Ukarûr lie at the present day on the left bank of the old channel of the Tigris (see G. Le Strange, Description of Mesopotamia and Baghdad written about the year 900 A.D. by Ibn Sa'îd, in JRAS [1895], 37-9; A. Musil, The Middle Ephrataes, a topographical itinerary, New York 1927, 137-8).

Al-Samânî, K. al-Ansâb, ed. Haydarbâdî, ïd., 345-8, mentions a considerable number of scholars stemming from Ukarûr, and at a slightly later date, the parents of the Hanbali fakîh and philologist 'Abd Allâh b. al-Husayn al-Ukarûr [q.v.] came from the town.

Bibliography: Given in the article; see also Le Strange, The lands of the Eastern Caliphate, 50-1. (C.E. Bosworth)

'UMÂN.

iii. Social structure.

'Uman is overwhelmingly an Arab, Muslim society, and tribal organisation remains an important element in national identity. The country's rapid development since 1970 has introduced a measure of physical and social mobility, as well as creating an influx of emigrants.

The migration of Arab tribes into 'Uman predates Islam, with Khaibarni or South Arabian tribes moving...
along the southern Arabian Peninsula from Yemen into 'Umān around the 2nd century A.D. They were followed several centuries later by 'Ādānī or North Arabian tribes who penetrated from the west along the Gulf coast. The Islamisation of 'Umān resulted in the eviction of the Persianised ruling class stemming from Sāsānī influence and composed the organisation of the tribal framework that continues today.

On the local level, the competition for scarce resources in water and arable land created a mosaic of tribal settlement. Many settlements stretch alongside the courses of wadis and attendant falajis (water channels); frequently the 'ālīya or upper quarter is inhabited by a tribe in traditional rivalry with another tribe occupying the sjālī and lower quarter. Regionally, a rough balance was obtained through two competing alliances and this balance was replicated on the national level by association with either the Hināwīyya confederation or the opposing Ghāfīrīyya confederation. Above these confederations stood the Ibādī īmāmate [see IBADIYYA] which served as a supertribal or quasi-national institution. Because the tribal confederations acted principally as balancers of power, membership in one or the other tended to be fluid over time. This has tended to blur earlier tendencies for al-Hinawīyya to consist of Ibādī and 'Ādānī tribes and al-Ghāfīrīyya to consist of Sunnī and Kābījānī tribes.

The power of the Ibādī īmāmate derived directly from the personal standing of the īmām, who was both dependent on the support of the principal shiqākh of the major tribes of both confederations for his position and the mediating figure between them and between tribes on the regional and local levels. This system gave enormous power to the leading shiqākh who dominated the confederations, and especially powerful shiqākh were able to use their power to determine the election of īmāms. During the second half of the 19th century, the powerful shiqākhly family of the Hināwī al-Hīrīth tribe of al-Sharkīyya region orchestrated a series of attempts to oust the Al Bāt Alī Sa'id [q.v.] rulers in Maskāt in order to restore the īmāmate. But by the early 20th century, the head of the Ghāfīrī Banī Ryāmī had become the predominant political figure in the interior, and the īmām elected in 1920 came from a Ghāfīrī tribe.

The assertion of sultanate control over interior 'Umān in the mid-1950s, with the attendant demise of the īmāmate, reduced the autonomy of the tribes and restricted the role of the shiqākh. For the first time, order and authority was maintained by a permanent army presence and, with a single exception, the shiqākh found their responsibilities restricted to leadership of their own tribes. When a new development-minded government appeared as a result of a palace coup d'etat in 1970, the role of the shiqākh was further reduced. The government assumed responsibility for public works and welfare. Social service ministries carried out improvements throughout the country, and a new system of courts and national police usurped many of the traditional functions of the shiqākh.

But even though the political power of the tribes has waned considerably since 1970, their social functions remain undiminished. Marriages take place by and large within the tribe, if not within the extended family. The government issues identity cards classifying the holder by tribal membership. Tribesmen seek the assistance of fellow tribesmen in obtaining employment, business help, and resolving problems with the police.

The great majority of the 'Umānī population is Arab and either Ibādī or Sunnī Muslim. The more prominent of these two divisions is the Ibādī sect, which, until the second half of the 20th century, provided the national leadership of 'Umān through an elected īmām. Perhaps slightly less than half of 'Umān's total population is Ibādī, all in the northern half of the country. The Ibādī form slightly more than half of the 'Umānī population. While the north contains both Ibādī and Sunnī tribes, the southern province Ṣa'īf [q.v.] (Dhofar) is entirely Sunnī. While Sunnī tribes in northern 'Umān may be Shāfī or Mālikī, Shāfīs are all Shāfīs. Much of the Sunnī population of Ṣūr and its hinterland is Ḥanbālī.

There are also several small Shī'ī communities, mostly located in the capital area of Maskāt, all of which are Ḏarfārī or Twelver. Al-Lawāṭīyya form the largest Shī'ī community, numbering perhaps 10,000 and traditionally residing in a closed quarter of Maḥrāb, Maskāt's sister settlement. The community seems to be Indian in origin, and at one time was in close connection with Agra Khānī Ismā'īlīs, all of whom have since converted or left 'Umān. The Lawāṭīyya have been settled in Maḥrāb for at least three centuries. The Arab Shī'ī community of al-Bahārīnī, formerly concentrated in Maskāt itself, is considerably smaller in number.

The reassertion of sultanate control over interior 'Umān approximately a century and a half. Most of these families hold Indian citizenship and form marriages with relations in India.

Arabic is the predominant language of 'Umān, but nearly a dozen languages are spoken by 'Umānīs. Balūc undoubtedly produces the second-largest proportion of native speakers. The Zadjāl and Lawāṭīyya speak their own languages, both akin to Gujarātī. The long 'Umānī association with East Africa has resulted in a significant number of 'Umānīs either born in or formerly resident in Zanzibar and neighbouring African countries. Some of these speak Swahili as their primary language, with English second and Arabic third. Ţa'īzī is distinct from 'Umān in several respects. Separated by the north by extensive gravel-plain desert, the region traditionally was linked with the Maḥrāb and Ḥadramawt regions of Yemen. The widespread Kaṭātī tribe is perhaps the most extensive group in the region, with subgroups including nomadic sections on the Nadjīl (the stony inland plain) and three clans that traditionally have been prominent in Ţa'īzī, Ťa'īzī's largest settlement and now a small city. Another transhumant section, the Bayt Kaṭātī, inhabits a narrow band of mountainous territory.

The other mountain tribes, commonly known as al-Balūts and traditionally transhumant as well, occupy similar strip territories, all running perpendicular to the coast and including parts of the coastal plain. These tribes speak a South Arabian language, Karawī, apparently adopted from the indigenous inhabitants whom they conquered some six or more centuries
ago. The latter, al-Shahra, maintain a separate but socially inferior identity.

Mahra tribes are also found in Zafar, mainly camel-herding nomads in either the northeastern Nadjd or along the Yemen border in the west. Some have established themselves recently on the mountains. In addition to al-Shahra, other _dal'if_ or socially inferior peoples are also present in Zafar, amongst them al-Mahşāyi and al-Barā'īma. Salāla and the smaller coastal towns are also inhabited by mixed-race _habshan_ and descendants of African slaves. Several small groups speaking South Arabian languages have been pushed out into the deserts northwest of Zafar; among these are al-Baṣaihira, al-Ḥikmān, and the larger and more important al-Harāsā.

Following the end of the civil war in Zafar in the late 1970s, the region has undergone rapid socio-economic development. Most _gīhilāt_ have built permanent homes in the mountains, often clustered in new settlements, and some maintain second homes in Salāla.

Traditionally, Umān was a rural country, with most of its population scattered in small agricultural settlements or coastal fishing villages. The process of development since 1970, however, has produced considerable urbanisation. The capital region, consisting in 1970 of the twin towns of Maskat and Matrah, with a combined population then of perhaps 25,000, grew to nearly half a million at the beginning of the 21st century. Salāla's population grew over the same period to nearly 200,000 and Sūhār (on the northwest al-Bātina coast), Nizwā (in the interior), and Sūr (near the eastern coastal tip) have become relatively large regional centres.

Umān society is relatively free from social stratification, although members of the ruling Āl Bū Sa‘īd family, tribal leaders, religious figures, and wealthy merchants occupy the upper rungs of society. A small middle class has emerged since 1970, but many Umānis in the Maskat region are employed as government employees, soldiers, drivers, and skilled and unskilled labour. The majority of the population outside the capital remains engaged in subsistence agriculture, fishing, or animal husbandry.

The government has used its modest oil revenues to extend roads, electricity, communications, schools, and health-care facilities throughout the country. The country remains dependent on oil income, however, and diversification into natural gas exports and tourism has had limited success. The first university opened in 1986.

Up to 25% of the total population is expatriate, with the greatest numbers coming from south and southeast Asia. While the heaviest concentration is in the capital area, expatriates are dispersed throughout the country and the government periodically has extended bans on expatriate labour to a growing number of occupations in an effort to 'Omanise' the labour force and provide employment for a burgeoning indigenous population.

_URA-TEPE_ (Ura-Tipa, Uri̱-Tipa), Russian _Ura_Tyblade, a town and a district on the northern slope of the Turkmen chain, now the town and district of Uroţepa in Tadjikistān. The town is located in lat. 39° 55' N. and long. 69° 00' E. at 1040 m/3,425 feet above sea level. Lying in the foothills between the steppe plains and the mountains, and on a major route linking Samarkand with Tashkent and the Farghana valley, the historical Ura-Tepe both connected and separated adjacent ecological and political regions.

The place name, signifying a "high hill" (an _tuba_/_tipa_/ _tpa_), emerges in the Timurid period. It is first mentioned in the course of events in early Muharram 1281/late May 1409 when the royal camp of Shāh Ṭukk ḡ (q.v.) was pitched in the "summer pasture (ṣayd) of Ura-Tipa" ("Abd al-Razzāk Samarkandī, _Matla' al-salādāyin_, ed. M. Ṣ̣ḥaḥi, Lahore 1941-9, ii, 141). Several 10th/16th century authorities confirm that the new toponym had come to gradually replace the earlier "Uṣrūgha" (Bābur, ed. Mano, 13), "Usrūgha" (Muhammad Ṣaḥād, _Tārīkh-i Ṣaḥād_, ed. W.M. Thackston, 91), or "Uṣrūgha" (Hafti-i Tanih, _Shoarf-nāma-i ẓibā_, ed. Salakhetdinova, i, facs. fol. 88b; and see _USRUGHANA_).

At the turn of the 10th/16th century, the district's centre was a fortified town (kūrgān) surrounded by high walls and a moat, amidst cultivated lands and pastures for horses and sheep (Muhammad Šāh, _Šibānī-nāma_, ed. and tr. H. Vambéry, 174-9). In 908/1503 the former Timurid stronghold fell to the Ozbegs led by Muhammad Šibānī Khān. During the Šibānīd and early Ashkhabānīd periods, the Ura-Tepe district (wilayat, kalamraw) at times was allotted as an individual appanage to ruling princes, and at times it was attached to larger entities, such as Taškent or Samarkand.

From the middle of the 11th/17th century, the Ozbek tribe of the Yūz, established in Ura-Tepe, as well as in Khodjand and Ḥufs (to the north and the south of Ura-Tepe, respectively), came to play an increasingly important political role, which was not strictly confined to the realm of Ura-Tepe.

One line of Yūz chiefs can be traced back to Bākī Bīy Yūz, who around 1041-4 served as chief military and administrative adviser (aṭṭilk) to an Ashkhabānīd prince (i.e. Bahrām Sulṭān b. Nādir Muhammad Khān) ruling at Taškent. Bākī Bīy's grandson, Muhammad Rahīm Bīy Yūz (b. Gūsū Bīy), who held Ura-Tepe in 1091/1680 and 1105/1693-4, proved to be loyal to the Būkhārān court, at a time when another leading figure of the Yūz joined a rebellion (Makhtaraw, _Maṣāliḥ_, 24, 29). Subsequently, Muhammad Rahīm was named governor (ḥakim) of Samarkand. In 1114/1702, when he was further raised to the rank of an aṭṭilk and "Pillar of the Amirs" (sundat al-umārā?), one of Muhammad Rahīm's major assets was said to be his prestige among the warlike tribes of "Andigān, Khodjand, Āk-Kūtal and Taškent, up to the regions of Sayrām, Turkistān and Ulugh-Tagh", which enabled him to provide auxiliaries for the Būkhārān rulers (Muhammad Amin Būkhārī, _Uṣbān allah-nāma_, ms. Taškent, no. 1532, fols. 20b, 28b, tr. Semenov, 34-5, 43-4). While Muhammad Rahīm reached the zenith of his career, his son, Muhammad Āḵūtā Bīy, followed his father's footsteps in Ura-Tepe and Khodjand, where he ruled from 1113/1701 up to 1144/1731.
A second line of Yüz chiefs emerges with Muhammad Fadil Biy (b. Sadık Biy). Fadil Beg Yüz was one of the commanders of the Bukharan army that surrendered to Nādir Shāh in 1153/1740. Subsequently, he guided a Nādirid military campaign against "the rebellious Yüz and Ming tribes seated in the mountain and on the banks of the Sir-Daryə" (Muhammad Kāẓim, ʿĀlim-ārā-yi nādir, ed. Rīyahd, ii, 790, 802, 819). While ruling in Ura-Tepe, Fadil Biy supported the Khοkand chief ʿAbd al-Karlm Biy against the Mughals (Muhammad Hakim Kāhn, Muntakhab al-tawdnkh, ii, 376), i.e. the Džunjhrs, who repeatedly invaded Khοkand between 1153/1740 and 1158/1745 (Moisēev 1991, 162-3, 167, 173; Nabiev, 14). His own decrees, issued upon the order of an unnamed kāhn, confirm Fadil Biy's rule over Ura-Tepe in 1164/1750-1 and 1187/1774-5 (Mukhtarov, op. cit., 40, 42). Under Fadil Biy, one of the most stubborn opponents of the rising Manghtī dynasty of Bukhārā, Ura-Tepe turned into a strong and nearly independent statelet dominating neighbouring territoyies such as Khοdjin, Džizzak, and even Samarkand. Around 1780, however, when the town with four gates was under Fadil Biy's son Muḥammad Khusdāyr, the ruler's authority was confined to the environment of the town (Yefremov, 114). In 1800, Khusdāyr's son Beg-Murād Biy, having ruled less than a year, was deposed by the ruler of Bukhārā Shāh Murād.

In the 19th century, Ura-Tepe lost its independence and became a disputed border area between Bukhārā and Khοkand. From 1800 to 1866, the two rival states launched dozens of military campaigns into Ura-Tepe, where more than twenty governors succeeded each other. Both sides often chose Yüz representatives as local governors, such as Muḥammad Rahim Parwānṣi b. Muḥammad Khusdāyr, who ruled in 1234/1818 (Mukhtarov, op. cit., 56).

When Fīlipp Nazarov visited Ura-Tepe in 1814, it had recently been taken by Khοkand. He observed that the town "is very large and surrounded by two high walls, separated from each other by a deep moat; openings made in these walls allow the use of fire-arms, if need be. This town is densely populated, the streets are narrow, and the houses built of clay. There are manufactories producing goat wool shawls. The inhabitants trade with the Turcomans, the Persians and the Arab nomads who are subjects of Bukhārā" (Nazarov, 65-6).

On 2 October 1866, the Imperial Russian army conquered the town. Having been ceded by the Bukhārā amīr to Russia in 1888, Ura-Tepe became part of the Khοdjin uyezd. The population of Ura-Tepe at that time was variously estimated to be between 10 and 15,000 people. There were 854 shops of artisans and traders in the town. When the Soviet Republic of Tādžikistān was founded in 1929, Ura-Tepe was its second largest city after Khοdjin. In the decade 1976-85 there were ca. 38,000 inhabitants in the town and 143,000 inhabitants in the district (Entsiklopediya sovetskogo mira, vii, Džusdžanbe 1988, 339). By a presidential decree of 10 November 2000, the town has been officially renamed Istravshan.

(W. Holzwarth)
The data supplied by Tradition hardly accord with those of pre-Islamic inscriptions. According to the latter, Wadd (Wil or Wd’), who is an important divinity in southern Arabia, is almost unknown in the rest of Arabia. It is in the kingdom of Ma‘in (capital Karawan, formerly Ma‘in, in the Wadi of Yemen) that Wadd occupies the most eminent position: he is one of the divinities of the official pantheon, always included in invocations. He had a temple at Yathill (Yl, today Barakish) (M 244 = RES 3019/1) and another in the Minaean colony of Dedan (today al-Ula) in the north of the Hidjaz (M 356 = RES 3695/2). A clan of Yathill (the Banu Dmu‘) considers itself the “clients of Wadd” (Shahr‘an “ilm Wil “hr“) (M 222 = RES 2999/2). Finally, the permanent river that irrigates the Djawf bears his name: (Hr=) Wil “Hirr“nt, torrent of Wadd) (Ma‘in 1 = M 29 = RES 2774/6; Ma‘in 13 = M 43 = RES 2789/5; Shaqab 1/1).

The god Wadd was also venerated at Saba‘ where, not far from Ma‘rib, a small temple was dedicated to him, and in the Sabaeæan tribes of the environs of San‘a‘ (Schmidt 1982, 1987; Müller 1982, 1987). In the kingdom of Awsan, based around the Wad‘i Marhka, one of the sovereigns, Yasduk‘il Fari‘im Sherab‘at, son of Ma‘add‘il Salhun (Yakli Fm ‘tm bn Mf'l Sbn) alleged that the god Wadd was his father; he is the only South Arabian sovereign to have claimed such divine parentage; and the only one to be honoured by statues, like a god, in the Ni‘mān (N‘m) temple which was dedicated to Wadd. This sovereign probably dates from the 1st century A.D., judging by the foreign influences shown by his statue (preserved in the Museum of Aden) and by the script of his inscriptions (CfAS F35/449.10 no. 3; 49.10/01 no. 2; Louvre 90).

To protect persons and property, the South Africans made use of the formula “Wadd is father” (Wdm ‘bd, with variants), which is found on amulets (Louvre 186) and on numerous buildings. It is an interesting fact that this apotropaic formula is more widely diffused than the cult of Wadd; it is found in all the regions of southern Arabia and on the Arabian shore of the Arabian-Persian Gulf (Robnik 1994, 85).

South Arabian nomenclature includes a number of theophoric anthroponyms composed with Wadd: these are most notably “grwd, Bnwd, Hwjwd, Mr’twd, Jfmwd, ‘grwd, Bnwd, Whbwd, Wd‘b, Wd’l”. These gods are associated with the title “priest of Wadd”. It may be noted, however, that except for this text, Wadd is almost unknown (see the theophoric bnwd in AH 11 and possibly 1); one may therefore wonder if the author of JS 49 did not come from the Yemen.

Inscriptions do not confirm the opinion of Hājīm Ibn al-Kalbi that Wadd's cult was transported to Dust or Dm. Ibn al-Djandal: mentioned there are Lh, Dm, Rds, trmn and Nt [see Thamūdīc], but not this god. This is not enough to lead to the conclusion that Ibn al-Kalbi made a mistake, or relayed a tendentious tradition, but a degree of doubt is permissible. Furthermore it is not impossible that the idol of Dūmat al-Djandal may have borne a name resembling Wadd and that the traditions were confused. Conversely, the god Wadd enjoyed great popularity in Yemen, a fact totally ignored by Tradition. This would seem to prove that Ibn al-Kalbi was ill-informed and that his principal source was indeed the Qur‘ānic text.

give a different name to this battle: the battle of Faţāb Sharīḥ ("plain of Jerez"); al-Sawākī ("the canals"); Kardāḏajanna (Cartagena); Wādī Umm Ḥakīm, al-Buhayra ("the lake"); Laguna de la Janda); Wādī 'Ī-Ṭīn, al-Dżazīra, etc. (cf. J. Vallvé, La Cosa de Tudmir, in And., xxxvii [1972], 146 n. 3), although it is the isle of Wādī Lakku, in the district of Al-Buhayra, a stretch of water identified by R. Dozy as being the Laguna de la Janda, source of the Rio Barbate; the Laguna of al-ldrlsl, de la Janda (al-ldrlsl, ii, 10). According to certain sources, the place in question was the banks of the Wādī Lakku, the river into which the last Visigothic Goth, allegedly took place on the Wādī Lakku, in the district, or al-Buhayra, a stretch of water identified by R. Dozy as being the Laguna de la Janda, source of the Rio Barbate. The author states (no. 186) that the encounter between Tarik b. Ziyād, the freedman of Ibn Nusayr, with Roderic, sovereign of al-Andalus and last king of the Visigothic army on the banks of the Rio Barbate, Guadalete, Salado or the Laguna de la Janda.

Although superior in numbers (the sources speak of between 40,000 and 100,000 Christians), Roderic's troops, confident of victory, were defeated. According to some authors, both wings of the Visigothic army were commanded by partisans, or actual brothers of Akhila, and at the start of the engagement, they changed sides. Roderic, on the centre, resisted, but was ultimately forced to retreat, and his troops were cut to pieces by the Muslims. According to al-Rāzī, quoted by Ibn 'Idharī (Bayān, ii, 10, tr. 13) and by al-Makkarī (Analectes, i, 163) the battle lasted a whole week, from 28 Ramaḍān to 5 Shawwāl 92/19 to 26 July 711. Captives of all social conditions were taken: nobles, plebeians and slaves, recognisable respectively by their gold, silver and leather rings (al-Himyari, Rawd al-mī'ār, 204). According to certain sources, Roderic lost his life in the battle and Tarik sent his head to Musa b. Nusayr; according to others, he succeded in escaping. The victory for Muslim arms opened the gates of the Iberian peninsula.

WAHM

2. In mysticism.

In the doctrinal texts of Muslim mysticism, the term wāhīm can appear with either the general sense of "illusory, uncertain personal conjecture" or the more precise sense of "estimative faculty" acquired through the intermediary of Hellenistic philosophy and medicine. However, in the context of the description of spiritual progress, it takes on specific connotations: it denotes a natural faculty of comprehension capable of giving sense only to sensible phenomena, inclined towards anthropomorphism (takhbīt) in religious matters and unsuited to the perception of the divine: "Imagination (waḥīm) is a cloud of dust between intellect (‘aql) and profound comprehension (fahm). It relates neither to intelligence, of which it is not an attribute, nor to comprehension, nothing in which corresponds to any of its attributes ( . . .). It resembles the drowsiness between deep sleep and waking, which is
being neither asleep nor awake. Waking, it is the transition between intelligence and comprehension, and by obscurity and intelligence, without there being any fog of obscurity between the two" (Ibrahim al-Khatwawas, quoted by al-Sarradji, 134. Al-Luma', ed. A.H. Mahfuz and T.A.B. Surur, Cairo 1960, 298; and R. Granič, Slaglakliger über das Sufism, Stuttgart 1990, 345). It is in this sense that al-Halladji declares in a celebrated poem: "No estimation (waahm) could relate to the subject of You, in such a way that in imagination it could be decided where You are!" (K. al-Tasawwuf, ed. P. Novia, v, 11-12). And subsequently, evoking the spiritual mi'rdaj, he writes: "Overturn your discourse, abandon conjectures (al-waqahm), pick up your feet behind and before!" (ibid., v, 21).

While imagination is a natural faculty, sometimes useful for meditation (see al-Muhâsibi, K. al-Tasawwuf, it needs to be mastered and left behind. More profoundly still, illusion, the fundamental waahm, consists from the Sufi point of view in believing that existence and, a fortiori, human activities, exist independently of God, outside Him. Men assume an illusory existence (waajid waahm), when this is entirely dependent on pure divine existence (waajid bukhâl). Spiritual exercises, as well as the use of discursive reasoning, amount here to means of waking up and of being freed from this illusion. The most expansive treatment of the functions of imagination is to be found in the works of Ibn al-'Arabi [q.v.]. Although he sometimes employs the terms waahm and khyâl as synonyms, he propounds a doctrine of precise human imagination where waahm regains the connotations mentioned above (for example, al-Futuhât al-makkiyya, Cairo 1911, iii, 364-5). Basically, he dissociates imagination deriving from simple individual mental representation from that which links the spirit of the person to the superior worlds. Only this second imaginative faculty constitutes a genuine way of knowledge and can become the setting for an authentic theophanic experience (see H. Corbin, L'Imagination créatrice dans le soufisme d'Ibn 'Arabi, Paris 1958, Eng. tr. R. Mannheim, Creative imagination in the Sufism of Ibn 'Arabi, Princeton 1969; W.C. Chittick, The Sufi path of knowledge: Ibn al-'Arabi's metaphysics of imagination, Albany 1983).

Bibliography: Given in the article. (P. Lorv)
Little is known about endowments in Syria of the Umayyad period. Some of the most prestigious religious buildings of early Islam were built there, financed by funds from the Muslim treasury [see BAYT AL-MAL]. In Jerusalem, the Dome of the Rock was completed in 691-2 and the al-Aqṣā Mosque in the reign of al-Walīd b. `Abd al-Malik (896-705). Nothing is known about endowments in Syria of the Umayyad period. Some of the most prestigious religious buildings of early Islam were built there, financed by funds from the Muslim treasury [see BAYT AL-MAL]. In Jerusalem, the Dome of the Rock was completed in 691-2 and the al-Aqṣā Mosque in the reign of al-Walīd b. `Abd al-Malik (896-705).

The following centuries were characterised by warfare, insecurity and changing ruling dynasties [see TULUNIDS; MÜZÄ'IMM; ABBASIDS; HAKIMIDS; AJA'IL; HAKIMIDS; SAVAD; TURKMENS; UZBEKS; ARTUKIDS; TÜRKIDS; KHANES; SAMOYS; CRMEN; KHOJAND]; the north was temporarily reoccupied by Byzantine troops, and Jerusalem and Damascus came under the domination of the Ismā'īlī Fatimids [q.v.] of Cairo. According to the legal treatises which have to be situated in the `Irāk context, various types of wakf must have existed in this period. And even though a special agency, the ḍārūr al-bīr [see ʿĪYĀN], was established in Baghdad in the early 4th/10th century to supervise pious endowments and charity (wakf ʿaṣlī and ṣādākātī) (Miskawayh, i, 151-2, 257), nothing is known about a similar institution in Syria.

The word wakf was not only a means to gain rewards in the afterlife for the sake of one’s soul (thawāb) or to secure the material well-being of one’s descendants. In the hands of various elite groups it became an eminent instrument for the propagation of status, wealth and power, aiming at other-worldly rewards, was no longer done preferably in secret, but led to open displays of worldly riches and splendour (Korn). At the same time, new forms of practicing wakf were created, such as those for descendants, other family members, clients, and organisations with more specific purposes. This feature decisively altered the notion of poverty that was at the core of the concept of wakf (Sabrā). The early legal texts had maintained that a recipient of wakf income had preferably to be poor in a material sense, excluding groups like the blind or those who were in charge of calling for prayer (muṣābilla) [see AGHĀN] in a mosque as lawful beneficiaries, because they presumably included poor and rich people alike [Korn], Charitable foundations in Islamic areas resulted in a document that also presented a list of the properties of God (al-Khassaf, op. cit., 113). Yet even though a special agency, the ḍārūr al-bīr [see ʿĪYĀN], was established in Baghdad in the early 4th/10th century to supervise pious endowments and charity (wakf ʿaṣlī and ṣādākātī) (Miskawayh, i, 151-2, 257), nothing is known about a similar institution in Syria.

In 435/1043 several descendants of the endower fought over their allotted shares, which resulted in a document that also presented a list of the properties of God (al-Khassaf, op. cit., 113). Yet even though a special agency, the ḍārūr al-bīr [see ʿĪYĀN], was established in Baghdad in the early 4th/10th century to supervise pious endowments and charity (wakf ʿaṣlī and ṣādākātī) (Miskawayh, i, 151-2, 257), nothing is known about a similar institution in Syria.

On the social, economic, intellectual and educational life of the cities (Makdisi; Pouzet; Chamberlain). Wakf stipulations now provided for the regular payment of fixed sums to a growing number of people who worked in and for the foundations. Salaried posts were established for professors and assistant professors, but also for the administration and the physical upkeep of the institutions. Endowments financed the professional reading of the Kurʿān which became more widespread and organised at this time (Pouzet, 169).

This feature decisively altered the notion of poverty that was at the core of the concept of wakf (Sabrā). The early legal texts had maintained that a recipient of wakf income had preferably to be poor in a material sense, excluding groups like the blind or those who were in charge of calling for prayer (muṣābilla) [see AGHĀN] in a mosque as lawful beneficiaries, because they presumably included poor and rich people alike [Korn], Charitable foundations in Islamic areas resulted in a document that also presented a list of the properties of God (al-Khassaf, op. cit., 113). Yet even though a special agency, the ḍārūr al-bīr [see ʿĪYĀN], was established in Baghdad in the early 4th/10th century to supervise pious endowments and charity (wakf ʿaṣlī and ṣādākātī) (Miskawayh, i, 151-2, 257), nothing is known about a similar institution in Syria.
the `asha`f, Sufi brotherhoods [see ṬARIKA; ZAWIYA], professional guilds [see ṢINF] or diaspora communities.

The first of the new institutions, the khānikh [q.v.], was introduced from the Persian world to look after the needs of travelling Sufis. Some of the earliest examples in Syria were founded in Damascus. The best known goes back to the famous Sūfī, historian and astronomer, Abu ʿl-ʿKāsim ʿAli b. Muhammad al-Sulamī al-Sumaysāṭī (d. 453/1061) (al-Nu`aymī, ii, 118-26; Banqūs, 634; Eliseeff, ed. MJ. de Goeje, Leiden 1907, 290).

During the second half of the 5th/11th century the advance of the Saldjukids [q.v.] led to hostilities with the Fātimids. Contemporaries saw the umma [q.v.] as being threatened when, at the end of the century, the armies of the Crusaders [see CRUSADES] occupied considerable tracts of Syria, among them Jerusalem in 492/1099. In this period, the madrasa was introduced into the Syrian cities, an institution specialising in the teaching of Sunni jurisprudence and law. Endowing a madrasa was often part of a larger building programme. The Saldjuk ruler Dukan b. Zæk and his mother, for instance, founded after 491/1097-8 the first bimarstān [q.v.] of Damascus, a madrasa for the Hanafiyya and a khānikh which also became their own tomb. Women of the ruling dynasties start to figure prominently among the endowers in this period (Tabbâa, 46).

iii. Zangids and Ayyūbids

The political and spiritual significance of endowments becomes more pronounced when, after 541/1146, Nūr al-Dīn Majmūd b. Zankl [q.v.] came to control the parts of Syria that were not under the domination of the Crusaders. Particularly after 558/1162-3, the Zangid ruler adopted a public image of strict religiosity following the model of the Prophet. As part of this policy, he ordered religious and other buildings serving the Muslim community all over Syria to be restored, and he assured their functioning by supplementing their endowment. Among his most important new foundations are the famous bimarstān in Damascus, as well as his tomb madrasa and the first dār al-hadith [q.v.] in Islamic history, and in Aleppo, another bimarstān and several colleges of law (for a list, see Eliseeff, op. cit., iii, 913-35).

Only for this period do the historical sources mention a state official in charge of the waqf system for Syria. The supervision of endowments (nasir al-aqḍāf) was among the functions attributed to the kāfi ʿībala [q.v.] of Damascus, the Hanafi Kamil al-Din Abu ʿl-Fadl Muhammad b. ʿAbd Allāh al-Shahrūzūrī (d. 572/1176-7) (Pouzet, 29). The way in which he exercised his prerogatives was the reason for a legal debate which allows interesting insights into contemporary legal thinking on waqf. To finance defence measures, the kāfi had been authorised to use the surplus income (jād) of endowments which occurred after the stipulated purposes had been paid for (Abū Shāma, i, 11). The debate is related by Abū Shāma [q.v.] as having taken place in the Citadel of Damascus in 554/1162-3. Nūr al-Dīn consulted several experts of the Shāfiʿī, Hanbalī and Mālikī schools of law. He wanted to know which of the Umayyad mosque's assets were part of its waqf and which were merely additions (muqāf) belonging to the treasury (op. cit., i, 17).

The distinction was significant, because it allowed the diversion of income of the mosque for other purposes. The second question aimed specifically at the surplus income of endowments. Asked whether it was permissible to spend such funds for the defence of the umma, the Shāfiʿī kāfi Ibn ʿAbī ʿArrūn forcefully denied it and maintained that the ruler should borrow the needed sums in the name of the treasury. Waqf income could only be spent for the designated beneficiaries (op. cit., i, 18). It is, however, manifest in Abū Shāma's account that not all jurists held the same opinion, and later on even the Shāfiʿīya adopted the opposite position. These discussions highlight the tensions resulting from the overlapping political and social fields of waqf, bayt al-māl, personal income of the ruler [see ʿiṣrāʾīl], and claims in the name of the general good [see MAṢLAḤA].

The impact of the Crusades is even more apparent under the Ayyūbids [q.v.]. After the reconquest of Jerusalem, Salāḥ al-Dīn pursued his policy of propa gating a strict Sunni Islam, already adopted in Fātimid Cairo, in order to turn it into a truly Muslim city. Endowing was an important part of this programme to repossess the properties of Frankish institutions. In 585/1189, Salāḥ al-Dīn established in the former residence of the patriarch of the Sūfī, which was named after him, a Sālimiyā. The deed of this foundation is the earliest extant example of a komlikf for Syria (Asāf, iii, 83-100). In the case of his madrasa, the foundation deed of 588/1192 explicitly stated that the sultan had officially purchased the properties which formerly belonged to two Latin churches from the bayt al-māl (Frenkel, Political and social aspects, Pahlitzsch).

The return to Muslim rule affected also the status of agricultural land that had been occupied by non-Muslims. In analogy with early Islamic history, several and often contradictory solutions could be drawn from the explanations of the different schools of law. In practice, some of these lands were left with those in possession of them. Others were given out as grants [see ʾiṣrāʾīl] (Frenkel, Impact, 239-47). Many of these were later incorporated into a growing number of endowments founded by members of the ruling dynasty, its military and administrative functionaries and increasing the ‘ulama (Humphreys; Tabbâa). A considerable portion of these foundations could be attributed to women. The proliferation of public buildings which resulted from these endowment activities can be traced into the smaller cities and settlements of the region.

iv. Mamluks

Many features of these waqfs continued under the Mamluks [q.v.], who after their victory over the Mongols [q.v.] in Ayn Djalut [q.v.] in 658/1260 and numerous campaigns against the Franks, came to dominate the whole of Syria. The military triumph of the Muslim forces was followed by an extensive building programme which aimed at propagating the Islamic character of the new rulers. Hence special reverence was shown for the “Sanctuaries” [see AL-HARĀMAḤ AL-SARKHĀYĀN], which was used to refer not only to Mecca and Medina but also to Jerusalem and Hebron. Sultan al-Zahir Baybars I [q.v.] is attributed with a considerable number of endowments in these cities and other places of religious interest, and many of his successors followed his example (Meinecke).

The centre of Mamluk endowment activities was undisputedly Cairo, but in the Syrian cities, mostly in ruins after the destructions caused by the Crusades and the Mongol invasion, building and restoring also resumed on a large scale. Tripoli [see TARABULUS AL-SHAM] was rebuilt in a new location (Luz). Aleppo
was slow in regaining its former glory, but new urban quarters developed in the north and north-east (Sauvaget; Gauß-Wirth). Damascus witnessed a period of considerable growth, illustrated by the endowment of several new Friday mosques outside the old city walls (Minner). These building activities came to an abrupt halt in 803/1400-1 when the army of Timur Lang [q.v.] invaded Syria. For Damascus, the extent of the destruction can be gleaned from a document which enumerates the assets of the Umayyad Mosque and describes their actual state (to be published by S. Atasî and B. ʿUlafi, IFPO, Damascus).

Although the written documentation becomes denser for this period, what we know about endowing is still very much an elite phenomenon. This is evident in the appearance of a novel wakf type: At first sight it appears as a typical charitable endowment (wakf kharî), yet founders began to stipulate that any surplus (fadl) from the wakf’s income was not to be reinvested, but was destined for themselves and their descendants (Amin, Aukaf, 73-8). It was still customary to endow new mosques and other institutions with rather small incomes (Mudjjir al-Din; al-Nuʿaymi; al-Ghazzî), but some foundations started to produce much higher revenues than warranted by their specified purposes. Such arrangements can be found in other Syrian towns (al-Ghazzî, Cairo 1914-28, iv, 191-2; ibn Battuta, tr. Gibb, i, 148-9).

v. Ottomans

The Ottoman conquest of Bilâd al-Shâm in 922/1516-17 did not radically change the wakf regime [see WAKF. IV. In the Ottoman Empire, at Vol. XI, 87b]. To establish a secure hold on the tax income of the new provinces which stemmed mainly from agricultural revenues, the Ottoman administration began early on to survey all rights concerning land or access to its produce. These tax registers (tablîn [q.v.], later called the dâfâr al-khâlik [q.v.]) or al-sultânî are a valuable source for Mamlûk and Ottoman wakf history, because they allow insights into number, types, composition and lifespan of endowments.

According to the Ottoman provincial regulations (khânî [q.v.]), wakf properties were subject to an imposition, in many cases, one-tenth of their share (ṣâfîr mîl al-wakf) [Venzke]. Only the wakf al-Harâmîn al-ṣâfîrîn, those for Jerusalem and Hebron, and the great imperial endowments, were tax-exempt. Studies of the tax regime tend to focus on the early period of Ottoman rule in Syria. Yet endowments continued as part of rural life and were involved in the conflicts over resources between the different social groups trying to control them. Many court cases and fatâwâ refer to the necessity of defending the interests of endowments against ʿābdî-holders and tax-farmers [see ULTEZÎM, MULTEZÎM] (Johansen).

The importance of land is highlighted by the issue of the appropriation of state lands [see ĠÌR]. Especially during the first century of Ottoman rule in Syria, highly-placed Ottoman officials included in their endowments large tracts of land, in different regions or even provinces (e.g. the endowments of Lâlâ Muṣṭâfâ Paşa and his wife Fatîma Khâṣîn). In fact, most of these foundations are formally genuine awkîf because a deed of possession (tamlik) from the sultan authorized such transfers. Later on, endowing agricultural land became less frequent, with the exception of privately-owned gardens and orchards. Even in the case of prominent officials and notables, only the rights of cultivation (mâşkâd masâk) and the plantations standing on the land were endowed. Agricultural revenues were appropriated by more indirect means like long-term rents and sublease contracts (Râfîk).

Ottoman endowment practice is more visible in the urban context. Like other rulers before them, the Ottoman sultans showed a marked interest in the Haramayn of Jerusalem and Hebron. At the same time, they and members of their households founded large urban complexes in other towns, which added a distinctly Ottoman element to their cityscapes. The most outstanding examples in Damascus are the endowment of Sultan Selim I [q.v.] around the tomb of Ibn al-ʿArabî [q.v.], in al-Sâliḥiya [q.v.], or the takyya [q.v.] of Sultan Süleyman [q.v.]. In Jerusalem, it was the latter’s wife, Khurram Sultan [q.v.], who founded the famous Khâṣîkt Sultan complex, including a soup-kitchen [see MâRÎT] (Singer). Numerous foundations of Ottoman officials and local notables helped to develop urban quarters and contributed in some cases to the establishing of new city centres. Yet the wakf was also used by a growing number of persons of rather modest means, among them a high proportion of women. The majority of these endowments are expenses of conveyance to their countries. There are endowments for the improvement and paving of the streets. . . . Besides these there are endowments for other charitable purposes.” And he went on to relate a story how an endowment “for orphans” (ʾašîl) helped a rival to break a broken porcelain dish (ibn Battuta, tr. Gibb, i, 148-9).

Administrators of such endowments were often accused of embezzling funds belonging to all the Muslims. Such accusations were all the more difficult to refute, as endowments increasingly were made of land that previously had belonged to the treasury and had been given out as military or administrative grants [see 1953]. This practice, known as triîd or in Ottoman times as wakf ghayr sahlî (see al-Târîbûsî, op. cit., 20; Cuno), was not acknowledged as a sound wakf by the jurists. In legal theory, it was only allowed for the purposes specified for the bayt al-mâl. Stipulations could be altered by later rulers.

The Mamlûk administration tried to control this complex wakf system [see WAKF. II. 1. In Egypt, at Vol. XI, 63b] by putting it under the supervision of local governmental agencies: In Damascus, the second capital of the realm, the nazar al-auskî belonged within the duties of the Shâfiʿî kâšî al-kudâb. This official was also charged with the supervision of the aqîfî of the Umayyad Mosque, whereas the al-Nûrî bîmîrîstân was put under the responsibility of the governor. Similar arrangements can be found in other Syrian towns (al-Kâlqâqandî, Small, Cairo 1914-28, iv, 191-2, 220-1).

By the end of the Mamlûk period, the wakf as an institution built on the initiative of individuals had taken over many functions that the treasury had fulfilled in earlier times. This is evident for instance in the dâwir al-arâr, responsible for the liberation of Muslim war prisoners: it was now financed by endowments, but stayed under the supervision of an appointed agent of the state (op. cit., iv, 191). Ibn Battuta who travelled from Cairo to Damascus in 726/1326, was struck by the “varieties of the endowments of Damascus and their expenditure . . ., so numerous are they. There are endowments in aid of persons who cannot undertake the Pilgrimage. There are endowments for supplying wedding outfits to girls, to those namely whose families are unable to provide them. There are endowments for the freeing of prisoners, and endowments for travellers, out of which they are given food, clothing, and the
rather small, consisting of one house or even a part of a house.

It may be stating the obvious to stress that ending as a social practice was influenced by gender, economic means, social distinction, ethnic and religious affiliation, and gender in Greater Syria, in Comparative Studies in Society and History, xl/1 (1998), 3-41; K.M. Meier).

WARD.

In Arabic literature.

The rose is easily the most sung flower in Arabic poetry. Its natural place is in flower, garden and spring poetry (zahrīyya, nawziyya and rahfīyya), but the rose also figures prominently in the setting of wine poetry (gawāmiyya), which is actually the place of origin for flower poems. Abu Nuwas (d. 198/813) have also attracted some attention (see al-Nuwayrī, Nihdiya, xi, 189).

"They are" ointment pots made of rubies laid on top of emeralds, inside of which is gold. . . ." (al-Nuwayrī, Nihdiya, xi, 189).

The same kind of imagery is also used with other flowers. The unusual "freezing" into gems of the various parts of the blossom may historically be explained as a result of the emergence of flower poems from wine poetry: the latter, especially in Abu Nuwas, is ripe with gem similes and metaphors to evoke the wine and the cup (cf. Schoeler, 72-5). Since the materials used as analogues are noble and incorruptible, an additional effect is that time itself freezes (cf. Hamori, 78-87). Finally, one should not forget that the recreation of natural objects, especially animals and plants, with the use of gems was not uncommon in courtly circles.

Personification

The other way of introducing a phantastic dimension is the personification of the rose, which in turn allows the poet to attribute a reason or motivation to its outward appearance or its "actions"—the phenomenon called takkyūl [q.v]—by 'Abd al-Kahir al-Dirjāndī (d. 471/1078 or later) in his Al-Dirjāndī (d. 471/1078 or later [q.v. in Suppl.]).

"Gay spring has come to you, strutting [and] laughing with beauty, almost talking even. In the darkness before daybreak, Nawruz has awakened the first roses that yesterday had still been sleeping, casting of something previously secret is cautiously for- warding news that yesterday had been concealed among them [sc. the roses]". (Dirjandī, ed. al-Sayrafi, p. 2990; the "improved" version in al-Nuwayrī, Nihdiya, xi, 189, has fa'kā'annā yahābdhna hādīthnā kāna ānū laykuttamā."

(Dirjandī, ed. al-Sayrafi, p. 2990; the "improved" version in al-Nuwayrī, Nihdiya, xi, 189, has fa'kā'annā yahābdhna hādīthnā b'aynākhunna laykuttamā and it was as if it were spreading news that had been concealed among them [sc. the roses])."

The idea that the opening of the buds is a broad-casting of something previously secret is cautiously formulated as an "as if". The second step (full personification) appears in the following line by 'Abī b. al-Dījahm:

"The roses started laughing only when the beauty of the flower beds and the sound of the chirping birds excited it."

"They appeared, and the world showed them its beauties, and, in the evening the wine came in its new clothes. . . ." (al-Sarî al-Rafī'ī, Muhāh, iii, 92, with slight divergences from the Dirjandī version).

"Laughing" is "coming into bloom". The roses wait until the stage is set for them. The possibilities of takkyūl, the poetic re-interpretation of reality, are made use of in two specific contexts: the rose-cheek equation, and the rose vs. narcissus debate.

Rose = cheek

The term "rose" became part of the poetic jargon of the Modern where it simply meant "cheek"—alongside "narcissus" for "eye" and "chamomile (petals) for "teeth", to name but these. Underlying this usage is, of course, the comparison of the red cheek with the red of the rose. But by reversing the comparison (kalb) the rose is often perceived as a cheek. Abī Hilāl al-'Askārī says (Dirjandī al-mulānī, ii, 23):
"Comparing it to the cheek is an appropriate simile (tashbih musib), but I refrained from indulging in it (al-takhrij minhu) because of its fame and frequency". Here are a few more sophisticated examples of the rose-cheek identification, showing in particular the phenomenon of "harmony of imagery" (manfair al-najir).

Abū Bakr al-Khālidī:

"They protected the roses of their cheeks, so that we could not pluck them due to the scorpions of their forelocks."

(al-Khālidīyyān: Diwan, 70).

Ibn al-Rumī:

"Those tears resemble drops of dew that fall from a narcissus (eye) onto a rose (cheek)."

(Ibn Abī `Awn: Taṣbihāt, 83, 78; 89, 16).

One of the dandies (ahad al-zawāfah):

"A fawn whose cheek and whose eyes are my rose and my narcissus."

(Ibn Abī `Awn: Taṣbihāt, 90, 2).

Kushadjīm:

"If you like, it [the wine] is, from his hands, wine and, from his cheeks, roses."

(Diwan, 140 [no. 129]).

Rose vs. narcissus

The debate about the precedence of the rose over the narcissus or vice versa was mostly decided in favour of the rose. The rose was considered the king of the fragrant plants, and each one of us is the most suitable for his counterpart (al-Nawawī, Haft al-kumayt, 235). Similarly, Abū Hālāl al-`Askarī says:

"The one who is sitting in an assembly is not like the one who is standing in it."

(Abī Hālāl al-`Askarī, Diwan al-mu'ānī, ii, 23, quoting himself; but it also occurs in Ibn al-Rumī, Diwan, 1242 [no. 1022], which, however, is strange in view of his well-known predilection for the narcissus).

I. e. the rose blossom is sitting on the bush like the ruler, while the narcissus is standing on its stem like his attendant.

It was Ibn al-Rumī (d. 283/895 [q.v.]) who objected and declared his preference for the narcissus (Diwan, 643-4 [often quoted], also 665 [no. 36], 1234 [a little prose text]; 1458 [no. 1112]). This he emphasised in a notorious invective against the rose, in which he compared it to a mule's anus with remnants of faeces in its midst (Diwan, 1452 [no. 1107]). S. Boustanī has offered a political-symbolic interpretation of Ibn al-Rumī's favouring the narcissus (Ibn ar-Rumī, Saʿāda al-imārāt, ii, 207-8, 339-40), but this has been effectively refuted by Schoeler (213-5). If it is not a simple personal predilection, it seems appropriate to consider Ibn al-Rumī's position a somewhat sensationalist game in the tradition of al-maḥāsin wa l-mustāvat [q.v.], especially if he did indeed on another occasion too the usual horn (see above).

His poem elicited a number of counterpoems, the best known being a six-liner by the famous garden poet al-Sanawbarī (Diwan, 498 [no. 123]). On the "proofs" offered by Ibn al-Rumī and al-Sanawbarī, most of them in the taḥdírī category, see Heinrichs, Rose versus narcissus, 184-6. Notable is the fact that al-Sanawbarī offers a real munkazara, i.e. the two flowers debate each other, only in a rudimentary way, while Ibn al-Rumī does use personification, but not in a sustained way and without letting the "protagonists" speak.

Some poets, such as Abū Bakr al-Khālidī, refrain from taking sides in the debate; he says:

"I disclosed to the narcissus of al-Rakkā my love, and I have no strength to avoid the roses."

"Both brothers are beloved, and I consider judging between them foolishness."

"In the army of flowers one is the vanguard that marches, the other the rear guard."

(al-Khālidīyyān, Diwan, 143 [no. 125]).

The most interesting developments in the rose vs. narcissus debate are in prose (prosimetrum, to be exact). From 11th-century al-Andalus we have two risālas, one by Abū Ḥāl Adhim b. Burd al-Saggar (d. 1053-4), addressed to Abu 'l-Walīd b. Dījarwār, ruler of Córdoba (r. 1043-69), the other by Abu 'l-Walīd al-Himyarī (d. ca. 1040/1048) and addressed to Abu 'l-Kāsīm Muhammad b. Ismā'īl b. `Abbād, ruler of Seville (r. 1023-42) (both in al-Himyarī, Badiʿ, 53-8, 58-67). The first tells a story of certain leaders among the flowers agreeing on recognising the rose as their king and drawing up a contract (a contrat social) that would be binding also on those flowers as are spatially or temporally absent. After quoting the rūla of Ahmad b. Burd, Abu 'l-Walīd al-Himyarī responds to it by entering the fictional realm created by Ibn Burd and continuing the story by pointing out that the recognition of the rose as ruler was an error and that the narcissus should have been in that position (one of the arguments being that the "eye" [narcissus] is much nobler than the "cheek" [rose], which latter is not even a sense organ!).

A political interpretation of the two flower epistles imposes itself, for it represents the recent breakdown of the Umayyad caliphate in al-Andalus, both addressees, Ibn Dījarwār and Ibn `Abbād, ruled their respective city states, Córdova and Seville, with the consent of their people (people of substance, no doubt) and without any regnal title. This democratic, or aristocratic, model was unusual. Both Ibn Burd and al-Himyarī were or had been high-ranking administrators; it is hardly strange that they attempted to make a constitutional statement in "flowery" language, most likely in the sense that they suggested to their addressees to adopt the caliphal title (for further details, see Heinrichs, Rose versus narcissus, 186-93).

In a purely literary vein, there are two more prose munkazaras between rose and narcissus, one by Tādj al-Dīn Ibn `Abd al-Maṭāfī (d. 714/1314), with the title Anwār al-salṭ wa-nasīrāt al-maṭāfī fi l-muḥākārāt bayn al-narjis wa l-ward (in the Nowayrī, Naḥāya, ii, 207-13), and one by Abu `l-Ḥasan al-Maṭāfinī (2nd half of 15th century), entitled al-Daqechar al-fard fi muḥākārāt al-narjis wa l-ward (in the Sharwarī, Naḥfat al-`Iṣām, Hooghly 1841, 107-17). Of interest here is the way in which they establish the fictionality of their debates: Ibn `Abd al-Maṭāfī states that he wanted "to personalise the two" (makhtalathum), while al-Maṭāfinī uses the phrase: "I represented them (makhṭalathum) as two adversaries in a debate and I made the tongue of their state speak in the way of conversation (wa `alamahūna li sālihi l-muḥādīnī)" (for further details see Heinrichs, op. cit., 193-8).

Rose as emblem

Given the general interest in the rose-narcissus debate, it is surprising that in two books, each of which contains a chapter on the rose, no such "enmity" is mentioned at all. Al-Wasḥābī (d. 325/937 [q.v.]) compiled a handbook of correct etiquette for the "refined" people (zawāfah, abl al-zarf). The rose chapter
contains mainly two ideas: (1) The rose represents everything beautiful and auspicious. (2) However, according to some, it is amanuous, because it is scurified. As such it is called *al-thadār*, the "traitor", as opposed to the myrtle that stays fresh for a long time. Ibn Ḥānish al-Makdisī, *Fi wasf al-rabīʿ wa-l-azhrār* (Kashf al-asrar, ed. Ed. C. de Tassis, Paris 1853 [Eng. tr. 1821]; repr. London 1980 [Eng. tr.]) *Revelation of the seeds of the birds and flowers*, 12-13 (Eng.), 10-12 (Eng.).

(W.P. Heinrichs)

**AL-WASHM**

1. In older Arab society.

Tattooing was a custom among women in pre-Islamic times. The parts of the body mentioned as decorated differ in the various references. The mer encampments of Tarafa, where the traces "appear like the remainder of a tattoo" (yazrakku). An existing tattoo could be touched up or retraced (rājfiṭa) when it had become weak (mawṣufa). The most famous reference is on the skin and the lips" (ṣawām).

In the nasb section of the *kasīfa*, the traces of former encampments (atla) are sometimes compared to a tattoo, or tattoos, in the same way that they are sometimes likened to foreign writing. The most famous example is the beginning of the *muʿallaka* of Tarafa, where the traces "appear like the remainder of a tattoo on the back of a hand" (Fi wasf al-rabīʿ wa-l-azhrār) as opposed to the myrtle that stays fresh for a long time. Ibn Ḥānish al-Makdisī, *Fi wasf al-rabīʿ wa-l-azhrār* (Kashf al-asrar, ed. Ed. C. de Tassis, Paris 1853 [Eng. tr. 1821]; repr. London 1980 [Eng. tr.]) *Revelation of the seeds of the birds and flowers*, 12-13 (Eng.), 10-12 (Eng.).

(W.P. Heinrichs)
YAGHUTH, a god of pre-Islamic Arabia, mentioned in the Kar'ân in a speech of Noah: “They have said: Forsake not your gods. Forsake not Wadd, nor Suwâ', nor Yaghuth, Ya'ûq and Nasr (LXXI, 22-3).

Traditionists and commentators (see the references given by Hawting, The idea of idolatry, 113 and n. 6) have exercised their ingenuity in the search for the traces of Yaghuth in Arabia. Ibn al-Kalbi (d. 204/819 or 206/821) in his Book of the Idols (Kitâb al-Asndm, §§ 7c, 9d, 45e, 52a) relates in laconic style: “[the tribe of] Madhhidj and of Djurash, the people of Yaghuth, etc.” Ibn al-Kalbi’s statement is usually printed together with the latter’s text (see e.g. Kâlibyât-ü divân-ı Warâh-ı Bâf ál, ed. Bîdar, Tehran 1373 Š./1994, 476-526). In prose, he wrote an imitation of Sa’dî’s Gûlîstan and he translated Atebâ al-

dhâbah, an Arabic odâb work by al-Zamakhshâfî [q.v. in Suppl.] Another aspect of his work are his religious poems, as elegies (mawdûfî) mourning the martyrs of Karbâlah.

Modern critics have pointed to the lack of originality in his poetry, the main merit of which is the perfect imitation of the old masters. Nevertheless, his reputation as a refined poet and artist lasted throughout the Kadjar period and his works were printed several times both in India and Persia. A substantial selection from his poetry is to be found in the anthologies of Rîdâ Kûlî Khân. The sons of Yaghuth followed in the footsteps of their father. One of them is Dâwâr (d. 1283/1866-7), who acquired a reputation as a poet and a painter (see further, Browne, LHP, iv, 319-25).

Yaghuth, with notation of ghw-th by means of *qam*. In these anthroponyms, the second element could be the name of a divinity or that of a particularly venerated individual. Safaitic epigraphy knows the anthroponym *īṯ* (see, for example, Winnett and Harding, Inscriptions, 625).

Finally, Arabic nomenclature attests the anthroponym ‘Abd Yaghuth (Caskel, Gambara, ii, 133-4, 42 entries). It is known that the element ‘Abd governs either the name of a divinity (see especially ‘Abd dhi l-Shārīq, ‘Abd Manāf, ‘Abd Manāt, ‘Abd Rudā, ‘Abd Suwā‘, ‘Abd Shams, ‘Abd al-Shārīq, ‘Abd al-Uzzā or ‘Abd Wadd) or the name of a person or a group (compare with ‘Abd Allāh, ‘Abd ‘Amr, ‘Abd ‘Amr, ‘Abd ‘Awf, ‘Abd Bākī, ‘Abd Hind, ‘Abd al-Hārith, ‘Abd Ḥāritha, ‘Abd al-Mundhir, ‘Abd al-Nu’mān, etc.). The distribution of ‘Abd Yaghuth in the genealogies does not make it possible to identify the tribes which particularly appreciated this name, with the exception of Madhhidj (18 entries out of 42). But regarding this tribe, there is no knowing whether it is the frequency of the name which has led traditionists to associate the god with it, or conversely whether it is the association with the god which has multiplied the instances of ‘Abd Yaghuth.

Ibn al-Kalbi also seeks to explain how it was that this man, monarchistic at the time of creation, came to worship such a multiplicity of divinities. For his purposes, he supposes that, originally, Yaghuth was a devout man; after his death, he was commemorated by a statue, then promoted to the rank of intercessor in the presence of God. It was the Flood which sometimes sends the rain, sometimes prevents the rainfall” (Caskel, Gambara, ii, 274-6). It is also attested in North Arabian epigraphy; in South Arabia, on the other hand, it is more rare and probably indicates a North Arabian influence.

Like other commentators, Yākūt was struck by the similarity of the names Yaghuth and Yaʾūk, and by a possible opposition in the sense of the two words; he speculates that it may be necessary to recognise two aspects of one and the same divinity, who “sometimes sends the rain, sometimes prevents the rainfall” (Fahd, Le panthéon, 194). It is clear that all the developments of the tradition depend on the Qur’anic text In the majority of the tribes which particularly appreciated this name, ‘Abd Yaghuth in the Kur’ān, it remains unexplained.

YAHYA, ŞEFIK— AL-ISLAM. Ottoman legal scholar and poet, d. 1053/1644.

The son of Sheyhi al-İslam Bayrâmzade Zekeriyâ Efendi, Yahya was born in Istanbul in 969/1561 (some sources give the birth date 959). As the acion of an important “ulema” family, he underwent a rigorous private education under the tutelage of his father and several other noted scholars, including ‘Abd al-Dżelbârzade Devrīgh Mehmed Efendi and Muḥādżāzâde Scvyyid Mehmed Efendi. In 988/1580, at 19 years of age, he was granted a mulâzimet and went on to teach in the most important madrasas of the day. In 1004/1595 Yahya was appointed kâdhî of Aleppo and he subsequently served as kâdhî in various parts of the empire until 1013/1604, when he was elevated to the position of kâdhî ʿaker of Anatolia. After several dismissals and reappointments, he was appointed Şehik al-İslâm in Radjab 1031/1622. A brief but turbulent tenue, during which he presided over the funeral of Sultan Othmân II [q.s.], ended in Dhu ’l-ʿAṣd 1032/September 1622 when a powerful vizier, angered by Yahya’s opposition to the practice of selling government positions, forced the young Murâd IV [q.s.] to dismiss him. Between 1034/1625 and 1041/1632 he again served as Şehik al-İslâm and was re-appointed in 1043/1634 for a period that lasted until his death in 1053/1644.

Yahya was noted as a legal scholar. Kāthb Čelebi (Fedâile) reports that, in delivering legal opinions, he embothed the perfection of Abu ʿl-Suʿūd [q.s.] and was its seal. He served in an important position during a period of great turmoil and was a powerful supporter of the reforms instituted by Murâd IV. He was widely known as an honest and decent person in a time when few like him rose to power.

Nonetheless, Yahya’s most enduring fame has derived from his talent as a ghâzal poet. He was said to possess a poet’s inborn nature: witty of speech, a cheerful countenance, a pleasant conversationalist. His poetry, in the manner of Bâkî [q.s.], consists primarily of five-couplet ghazals, most on the transitoriness of this world and life’s bitter and sweet aspects. His style is simple and flowing, free from the excesses of rhetorical complexity that marked the poetry of many of his contemporaries.

His works include: a dīwân, the Şahâb Dâms al-dârur (commentary on Muḥsin-i Kayserî’sifer), Niğâṣtân ėrmis (a Turkish translation of Kemal-Pâşâzade’s Persian parallel to Sa’dî’s [q.s.] Galâstân and Fatûva-yi Yahya Efendi) (a collection of legal opinions).

(W.G. ANDREWS and MEHMET KALPÂRLI)
In Ottoman times, it was the capital of the principality of Bogdahn [q.v.] or Moldavia. Dimitri Cantemir, from 1121-2/1710 to 1122-3/1711 resident in this town as prince of Moldavia, stated that the seat of government had been transferred to Yash by Stephen the Great (838 or 9-949 or 10/1435-1504, in reality this was done by Alexander Lapusneanu in 972-3/1565); as a reason for this, Cantemir maintained that, due to its geographical position, Yash was better suited to warfare with the Ottomans and Tatars than its predecessor, the more remote fortress town of Suceava (Demetrius Cantemir, Beschreibung der Moldau, facs. repr. Bucarest 1973, 52). Ewliya Celebi, who visited Yash around 1075/1665, called it Yashka Rubbin, due to the importance of the local monasteries. In his account, Yash appears as a town of 20,000 thatched huts (from Romanian curte “court”); he noted the absence of (private?) buildings covered with lead or roof-tiles, but commented on the existence of palaces and monasteries built of stone or brick (Evlüya Celebi Seyahatnamesi, Topkapı Sarayi Bagdat 307 yaza mimarları transkripsiyonu–dizin, v. ed. Yücel Dağlı, Seyit Ali Kahraman and Ibrahim Sestg, Istanbul 2001, 180-4).

Among ecclesiastical institutions, the Ottoman traveller refers to the Yashka Deyri, that Ewliya believed had been a mosque in the reigns of sultans Bayezid and Süleyman, in addition to the Monokola, Galata and Lipul Beg monasteries; the latter must be identical to that of the Trei Erachi/Trieh Svetiteilei, built by Vasile Lupu in 1049-50/1640–Ewliya hoped to see it one day transformed into a mosque. As to the Monokola, it was probably identical to the St. Nicholas Church, where a newly-crowned prince was blessed by a church authority (Miron Costin, Geschichte der Moldau. Die Moldauische Chronik des Miron Costin 1593-1661, tr. and comments by A. Armbruster, Graz, Vienna and Cologne 1890, 196, for a monastery called Galata, see ibid., 207; on the affairs of local monasteries in general, see C. Zach, Über Klosterleben und Klosterreformen in der Moldau und in der Walachien im 17. Jahrhundert, in Käimal Bénda et alii (eds.), Forschungen über Siebenbürgen und seine Nachbarn, Festschrift für Ailin T. Szabó und Johannes Jaff, Mathematisch–Historische Mitteilungen 11-22, Ewliya also referred to the monastery supposedly founded by Duna Bătu, the wife of Prince Lipul Beg/Vasile Lupu, which contained an “uncorrupted body” of a young woman that Ewliya claimed was the daughter of the mythical architect Yanko b. Mădăian; this may well be the relic that Lupu had brought to his capital and that was believed to be the body of St. Paraschiva (Costin, op. cit., 160-1).

To the south of Yash there was an artificial lake full of fish, that Ewliya thought had been constructed by Prince Lipul Beg/Vasile Lupu with the permission of Sultan Murad IV. The traveller also admired the princely palace with its grand reception room and numerous pavilions looking out upon the water (judging from a map of the early 20th century, the core of the palace was located at some distance from the one major lake in the town; however, the body of water seen by Ewliya may have been drained later on; see Meyers Reisebücher, Türkei, Rumänien, Serbien, Bulgarien, Leipzig and Vienna, 1908, 95). Costin confirms that Vasile Lupu greatly augmented the palace, constructing gardens, stables and bath-houses; some of the buildings supposedly were covered in tiles of “Chinese porcelain” (Costin, loc. cit.). Ewliya also claims that there were 2,060 shops covered with timber or reeds, six khans used by merchants and a guest house that also accommodated visiting Ottoman and Tartar dignitaries.

Complementary to Ewliya’s account is that of a near-contemporary embassy chaplain (Conrad Jacob Hiltebrandt’s Dreisich Schlesische Gesandtschaften nach Siebenbürgen, der Ukraine und Constantinopel (1656-1658), ed. with comm. by F. Babinger, Leiden 1937, 82 ff.). Hiltebrandt served the Swedish embassy that was received at the court of Prince George Stephen, who after his deposition by Mehemmed IV (1067-68/1657-68) emigrated to the Swedish kingdom. The author stressed the commercial activity of Yash, which was, however, unfortified; numerous Jewish traders were active here, in addition to both local and Greek merchants. At the court, where it was customary to accord a visiting Ottoman eenagh absolute precedence, there was a guard of German-speaking soldiers, yet Ewliya commented on the presence of Ottoman gunners. According to Hiltebrandt, the numerous churches of Yash rather resembled mosques without minarets; he also commented on the local folklore, including dances and fairground amusements specific to the Easter season.

Throughout the early modern period, the Polish-Lithuanian commonwealth attempted to influence the decision-making of the Moldavian princes, which meant that Polish-Lithuanian-Cossack rivalries also were fought out on Moldavian soil. In 918-19/1513 Yash was thus fired on by the Tartars, while Ottoman and Russian attacks in 944-5/1538 and 1097-8/1686 had similar consequences (art. “Jassy” in Encyclopedia Britannica, ed. 1963, xii, 972). Ewliya Celebi even claimed that the conditions of Moldavian subjection included the right of the Tartars to pillage the country once every ten years. In 1123/1711 Peter the Great briefly occupied the town, receiving the homage of the learned prince Dimitri Cantemir. On this occasion, numerous Ottoman merchants present in Yash were murdered and their goods pillaged (Akdes Nimet Kurat, Pust sefer ve barba 1123 (1711), 2 vols., Ankara 1951-3, i, 234 and passim); similar atrocities were repeated in 1236-7/1821, when the Greek uprising began in both the Peloponnese and the Principalities. Russian armies advanced as far as Yash once again in 1148-9/1736, but were not able to hold on to the town due to the defeats suffered at Ottoman hands by their Austrian ally (Barbara Jelavich, History of the Bukovina, i, Eighteenth and nineteenth centuries, Cambridge 1983, 66-8, 105, 121; H. Uechtersberger, Russlands Orientpolitik in den letzten zwei Jahrhunderten, i, Bis zum Frieden von Jassy, Stuttgart 1913, passim). On the level of international diplomacy, the Moldavian capital was known through the peace of Jassy concluded between the Ottoman and Russian empires (Djumadî II-Radjâb 1206/January 1792); this agreement confirmed many of the stipulations of the earlier treaty of Kucuk Kaynardja [q.v.], especially the loss of the Crimea. A coastal strip between Bug and Dniepr was also ceded to Russia, where the town of Odessa was founded the following year. From this time onwards, Russia maintained an influential position in Yash, which was to continue throughout the 13th/19th century.

In the late 12th/18th century, when Istanbul Greek families known as the hagopdian represented Ottoman authority in Yash, the town possessed a small but active educated stratum that purchased books both religious and secular in Greek, Italian, Romanian and other languages, with an emphasis on the Greek authors of Antiquity, as well as grammars and dictionaries covering modern European languages. Such works were procured by merchants for whom dealing in books must have formed a sideline. These educated traders maintained links to the Athos but also
to Leipzig and Vienna, in addition to stock works printed in Moldavia itself (Mihail Carata§u, La biblio-
théque d'un grand négociant du XVIIIe siècle: Grégoire Antoine Antonioș, in Syntagma l'ëpoque phanarion, 21-25 octobre 1974, à la mémoire de Clodius J. Vâlc˘ii, Sinaia 1974, 135-43). A princely academy founded by Antiôb Cantemir was attended not only by the sons of local noblemen but also by young people of more modest backgrounds; from 1173-4/1760 onwards, this school began to teach Enlightenment philosophy as well as the natural sciences (Ariadna Camariano-Gioran, Écoles grecques dans les principautes danubiennes au temps des Phanarites, in ibid., 49-56). However, given the fre-
quency of warfare, the depressed condition of the peasantry and the relative weakness of urban life in Moldavia, the level of general education remained low even in the 13th/19th century (Jelavich, op. cit., i, 270).

In the mid-19th century, Jassy came within the principality of Moldavia, now united with Wallachia
inscriptions and the vestiges of a large number of
inhabitants. The third city of Romania, with a population of
346,613, whilst the county of the same name, with
the town of Jassy as its chef-lieu, had 823,800
inhabitants.

Bibliography: Given in the article.

(SURAYYA FAROQHI)

YA'UK, a god of pre-Islamic Arabia, men-
tioned in the Kur'an in a speech of Noah: "They have
said: Forsake not your gods. Forsake not Wadd, nor
Suwa', nor Yaghuth, Ya'uk and Nast!" (LXXII, 22-3).

Traditionists and commentators have exercised their
genuity in the effort to track down the god Ya'uk,
with little success. In his "Book of the Idols"
(Kitab Ttabl, c. 834
-th century, the township marked the
boundary between Hashid and Bakll, the two tribal
groups constituting the Hamdani federation (al-
Hasan al-Hamdani, Sifat lqazrat al-Arab, ed. Müller,
66); it is today the last outpost of Ya'uk (the al-
'Usaymat clan) before entering Sufyan. On the other
hand, no divinity named Ya'uk is attested in Hamdani. However, the pantheons of the tribes of this confed-
eration, which give the highest rank to Ta'lab Riyâm
and Almakah, are quite well known through many
inscriptions and the vestiges of a large number of
temples. A god named Ya'uk is not attested elsewhere
in Yemen or in Arabia.

YAZIDI, SALIH B. SULEYMAN, the early Otto-
man author of the Shenisiye, one of the ear-

It is clear that Ibn al-Kalbi or his source felt the
need to manipulate the available information to pro-
vide a basis for the Kur'anic text. It was all the eas-
ier to locate Ya'uk in Yemen, not only because it
was a distant country, but also because polytheism
had been officially banned there since the end of the
4th century A.D. and any indications to the contrary
had been obliterated.

However, the epigraphy of Yemen is acquainted
with the appellation of Ya'uk. It is the name of a
synagogue (mkb) constructed in A.D. January 465
(d'aur 574 of the Himyarite era), at Du'la" apparently
(some 12 km to the north-west of San'a"), according
to the inscription Ry 520/4 (P'k) and 9 (P'k). In a
relief inscription on the island of Suqutra (q.s.), P'k
is apparently an anthroponym (Robin and Gorea,
Les vestiges antiques).

Among traditionists and Muslim scholars, the cult
of Ya'uk was the object of hypotheses other than that
of Ibn al-Kalbi: they localised it in the tribes of
Khawlan-Kuda'\a, Mur\d and Kin\ana (Fahd, Le pantheon, 195 n. 1) or at Balkha' (a Sabaen town known only
through traditions relating to idols: see Hawting, The idea of idolatry, 107 and n. 15) but without further
evidence.

Ibn al-Kalbi also seeks to explain how it was that
man, mankind, monotheistic at the time of creation, came
to worship such a multiplicity of divinities. For his
pur-
poses, he assumes that originally, Ya'uk was a devout
man; after his death, he was commemorated by a
statue, then promoted to the rank of intercessor in
the presence of God. It was the Flood that would
have brought his idol into Arabia near Dju\la; there
it is said to have been found by 'Amr b. Lubay\s who
entrusted it to the tribe of Hamdani (§§ 45e-
52b).

Attestations and the senses of the root from which
the name of Ya'uk is derived offer nothing further
by way of clarification. One may note only that Y\uk
underlines the similarity between the names Yaghith
and Ya'uk and wonders whether it is necessary to
recognise two aspects of one and the same divinity,

who "sometimes sends the rain, sometimes prevents
the rainfall" (Fahd, Le pantheon, 194).

It is thus difficult to follow Toufic Fahd when he
affirms that "the conclusion cannot be avoided that
Ya'uk and the other four divinities cited by Noah
belong to the most primitive pantheon of central
Arabia" (op. cit., 196); to this day, nothing has been
established with certitude as to the origin of the men-
tion of Ya'uk in the Kur'an.

YASIDI, SALIH B. SULEYMAN, the early Otto-
man author of the Shenisiye, one of the ear-

834

YASH — YAZIDI
liest works on astrology known to be written in
Anatolia. He was the father of Yazidji oghlu Mejmcd and Ahmed Bigjian [q.v.], two impor-
tant religious figures and writers of the 9th/15th century.
The place and date of his birth are uncertain. However, due to the fact that he dedicated his work (the Shemsiyeh) to Iskender b. Hadiji Paşa from the Dewlet Khân family living in Ankara, it is supposed that he was also from Ankara. On the other hand, in the introduction (sebeb-i telîf) of his Shemsiyeh, he wrote that he was strongly attached to 'Ali Beg, the son of Kaşasâb-oghlu Mahmûd Paşa, who was the tutor (lola) of Sultan Mejmcd Fâtih and vizier to Murâd II and Fâthî, and that he served him from the year 775/1373 for 36 years until 'Ali Beg's death.
Kaşasâb-oghlu Mahmûd Paşa founded a madrasa, a hospital in Malkara [q.v.], and appointed his son 'Ali Beg to administer them, so Yazidji Sâlih also lived in Malkara and in later years he settled in Gallipoli (Gelibolu) probably after 'Ali Beg's death.
The date of his death is unknown. The story that his grave is near the graves of his sons Mejmcd and Ahmed Bigjian (outside Gellibolu, on the road to Istanbul) is unauthenticated.
That his father's name was Suleyman, although Ewliya Celebi calls him Shudjiâ al-Din, is certain, because in the manuscript of the Muhammediyye, by his son Yazidji-oghlu Mejmcd, and also in his other works, he speaks of himself as Mejmcd b. Sâlih b. Suleyman. As a consequence of writing in his work his name as Sâlih al-Dîn, from the exigencies of the metre, in some sources his name has mistakenly appeared as Sâlih al-Dîn.

Although the available information about his education is uncertain, some facts, e.g. that he was a scribe, so that he was given the isakab Yazidji, that he was a very knowledgeable person about astrology, and that he used Arabic and Persian quotations and titles in his Shemsiyeh, imply a certain level of education.
The number of his works is unknown. His only extant work is the Shemsiyeh on astrology. Although Ewliya Celebi mentions a Sâlih al-Madhûn, a Talbî-nâmeh and works on medicine, no copy of them has so far been found. The work which has appeared in some sources as the Malheme is part of the Shemsiyeh. The question whether the Shemsiyeh was a compilation or a translation was long discussed. However, considering the manner of book writing of the time and also the fact that Yazidji Sâlih mentions the works and people from whom he profited (like Ebu 'l-Fadl Hubeysh b. Ibrahim b. Muhammad al-Tiflisî), it is certain, like Corfu, from the island's Byzantine appellation of Korinth that the term Korinthis (stemming, like Corfu, from the island's Byzantine names of Zaklise, Kephallenia (Cephalonia), Ithake (Ithaca), Paxoi (Antipaxos and Paxos) and Kerkyra (Corfu), sometimes the island of Kythera or Cerigo [see ÇOKA ADAO], off the southeastern tip of the Morea, is also included, albeit erratically, in the Seven Islands group (mainly by scholars of the area's Latin domination period). The relevant Arabic names of the islands appear in al-Idrîsî [q.v.], while the Ottoman Turkish names of Zaklise, Bakshiler (Paxoi islands) and Korfuz/Korfûs [q.v.] (under Latin control), the Heptanese sustained severe under Latin control, it lasted for almost two centuries. The Toccos' last domination period except for the case of Levkas, where it lasted for almost two centuries. The Toccos' last dukes had retreated to the islands in the 1460s from mainland Erios in view of the Ottoman conquest there, completed between 1449 and 1479.

In the Byzantine period lasting to the early 13th century (from 1204 onwards the area gradually passed under Latin control), the Heptanese sustained severe attacks, mainly from Muslims and Normans. Of particular importance here are the two attacks, first on Kephallenia and Zakynthos between 878 and 881 by the North African Arabs [see HEKYRA], repulsed by the celebrated Byzantine admiral Ooypas (see Elisabeth Malamut, Les îles de l'Empire byzantin, VIII: 30-31, Paris, 1835, 77 n. 236 and table p. 110; sources and refs. in A. Savvides, The Byzantine Hellenes, 11th-early 13th century [in Gk.], Athens 1986, 19). Other references to possible Muslim attacks in the area, mainly appearing in Saints' lives, cannot be corroborated.
by parallel sources. Also of importance is the information provided by al-Idrisi, who ca. 1153 visited Byzantium and gave in his Kitāb Ruhūd al-Qirān, inter alia, details on Thaνu (Othono), Korfu (Corfu), Lkata (Leukas), Dhθfaliya (Kephallenia), Fasky (Ithaka) and Djabnun or Gagni (Zakynthos) (French tr. Jaubert, ii, 121, 123; cf. Soustal-Koder, 168, 174, 195, 278; Savvides, Byz. Heptan., 68-6, and idem, in Byzantinolavica, lx/2 [1999], 544). About 12 years later (1164-5) the Spanish Jew from Tudela, Benjamin, also visited Korypho (Corfu) and Lauta (Leukas) and not Arta in the Epitor mainland, as in the Eng. tr. by Adler, 10, and in Soustal-Koder, 57-8 n. 97, 113; on this see the recent Gk. tr. by Photine Vlachopoulos, introd. and comm. by K. Megalomatis and A. Savvides, Athens 1994, 34-5 n. 8, 62.

From the second half of the 14th century onwards, Latin control in the Ionian Islands was divided between the Toccos on the southern (until ca. 1479) and Venice on the northern group (until 1797). Since there is no fixed pattern for a unified and lasting Ottoman presence in the area, this article will discuss the islands separately, beginning with Leukas, which sustained the longest Ottoman occupation. The Venetian fortress of Aya Mavra developed as the largest settlement on the island with Zakynthians and Ithakiotes in the course of the Second Venetian-Ottoman war (see G. Moschopoulos, History of Cephalonia [in Gk.], i, Athens 1985, 67-9). From then onwards, the Venetian presence was uninterrupted until 1797, despite two destructive Ottoman raids in 1537-8 and 1570-1 (Moschopoulos, op. cit., 83-6). Kephallenians, like other Heptanesians, participated in the second siege of Crete (1645-69) (Moschopoulos, 86ff.), while Kephallenia and the other islands were to receive hosts of refugees from Crete (see [see warTrgj] following its fall to the Sultanate (see A. Vakalopoulos, History of modern Hellespont [in Gk.], iii, Thessalonica 1968, 532ff.).

Ithaka. Known as Val de Compare to the Latins, Ithake, following a period of Frankish rule, was laid waste in 1430 and again in the period 1479-85 by Mehmed II's and Bāyezīd II's fleets, in the attempt of the Sultanate to consolidate its hold on the western Greek littoral. In 1500-1 it was captured (with Kephallenia) by the Venetians, who, on account of its depopulated state, resettled it in 1504 with Kephalliōnians and Zakynthians. The Venetian hold on the island lasted until 1797.

Paxos. The island was sold by Venice to a wealthy Corfiote, whose oppressive government forced its inhabitants to flee to the Ottoman-dominated Epitorean mainland. On 22 July 1537 an allied Western fleet under Andrea Doria defeated near Paxos the Ottoman vice-admiral 'Ali Celebi, seizing 12 Ottoman vessels, but in 1577 the Ottomans, recovering from their defeat at Lepanto (1571) and realising the island's vulnerability, attacked and plundered it before the Venetians took over again (until 1797).

Corfu. Although it never experienced a period of Ottoman domination, the island was severely threatened by three Ottoman attacks [see also Korf]. In 1386 it was ceded by the Navarrese Company to Venice, whose control there lasted until 1797, while after the fall of Constantinople in 1453, Corfu was to become a place of Byzantine refugees and exiles. In 1537-8, Khayr al-Dīn Paşa Barbarossa and the Grand Vizier Luft Paşa [q.v.] besieged the island but, failing to seize it, they plundered Kephallenia (see Vakalopoulos, op. cit., iii, 143 ff.). Another threatening attack against Corfu took place in the reign of Sultan Ahmed III, in 1716, in the course of the Seventh Venetian-Ottoman war of 1714-18; despite a stalling blockade by sea (by the kapudan-paşa Mehmed and land by the serifker Kara Mustafà Paşa), the Venetians and Corfiotes held out (see G. Athanasianas, The assault of Corfu, 1716 [Gk. adaptation], Athens 2001, and D. Chazopoulos, the last Venetian-Ottoman war of 1714-18 [in Gk.], Athens 2002, 235-97). Finally, following the end of Venetian rule in the Heptanese (1797) and in the reign of Sultan Selim III, the French were besieged in Corfu (Nov. 1798-March 1799) by a united Russo-Ottoman fleet under Admiral Fedor Ushakov, who had also seized Zakynthos, Kephallonia, Ithake (Oct. 1798) and Leukas (Nov. 1798) and whose operations were supported also by the Orthodox ecumenical patriarch Gregory V (detailed description of the operations by the priest Petros-Paşa Mehemet, [in Gk.], Athens 2001; cf. N. Koschonas, in IEE, xi, 390ff.). Russo-Ottoman control, in the course of which both the first independent small Greek “Ionian State” was created (1800-7) under the sovereignty of the Porte and treaties were signed with ‘Ali Paşa Tepedelenli [q.v.] of
Ioannina [see YANYA] (on these treaties, see E. Protospatels, in Delton historiae kai ethnologikei hellados, xi [1956], 59-77), lasted until 1607, when the French took over again until 1814, at which time the British prevailed in the area until its eventual cession to Greece (1834).

YEMENLI HASAN PASHA (d. 1016/1607), Ottoman Turkish governor in the Yemen. In the absence of tribal consensus and an agreed successor to the Zaydi imamate following the death of al-Mu'tahhar [q.v.] in 980/1572, the Ottomans were offered an unprecedented opportunity to extend their zone of influence beyond the Tihama [q.v.] into the Yemeni interior. Earlier Ottoman advances and the securing of Šaraf [q.v.] in 954/1547 had still left large areas of the north—including strongholds such as Kawkaban and Thula [q.vv.], located perilously close to the governor's seat itself—incompletely pacified, and it was only during Hasan Pasha's exceptionally long term of office as provincial governor between Diumaldî I 988/June 1580 and Muḥarram 1013/June 1604 (Rāghid, i, 154, 186) that the Ottoman administration began to make serious inroads against local resistance forces. Throughout the period of Hasan Pasha's governorship in the Yemen, the Ottomans were occupied by wars on both the eastern and northwestern frontiers of their empire (against the Safawids 986-98/1578-90 and the Habsburgs 1001-15/1593-1606, so that Hasan was given a free hand to secure the consolidation of Ottoman rule within his jurisdiction by his own means. One method he employed to good effect in the early years of his governorship was deportation (rañf) of prominent members of the Zaydi leadership. In 994/1586 he sent five of al-Mu'tahhar's sons and potential successors to Istanbul for incarceration at Yedî Kule (Rāghid, i, 161), where they remained until the end of his governorship (see ibid., i, 185, noting the death in captivity of Luṭf Allah b. al-Mu'tahhar in 1010/1601-2).

To reinforce his authority locally, Hasan Pasha made extensive use of an inner core of long-term associates of proven military ability and unswerving personal loyalty such as his deputy (keşfiyettî) Sinân Paşa and another right-hand man called Amir 'Ali al-Djazaârî. In 997/1589 he appointed the latter with the rank of paşâ as lieutenant-governor in Şa'da [q.v.] with key responsibilities for securing the northern districts. When at a later stage in his governorship Hasan Pasha faced a resumption of the Zaydi challenge with al-Mansûr b. 'Abâdî's declaration of independence in 1006/1597 (see al-Manṣûr b. 'Abâdî), he turned for assistance to his former associate 'Ali Paşa who was called in from his then current post as governor of Eritrea (for 'Ali Paşa's term as beyyelî of the qâlîet-i Hâbiç between Radjâb 1002/April 1594 and Ramadân 1010/March 1602, see C. Orhonlu, Hâbiç (Beïbût-i yyelî, Istanbul 1974, 183) to lend his help in the crisis. Through a combination of swift communications, rapid reaction and effective teamwork, the Ottomans succeeded in capturing al-Mansûr's base of operations at Şahlârâ in 1011/1602 and in forcing his re-submission, albeit temporary, to Ottoman rule. In sum, although Ottoman control over the province remained precarious at the close of Hasan Pasha's twenty-four year term as governor in 1013/1604, there is no question but that he had contributed significantly to Yemen's fuller incorporation into the Ottoman imperial system.

After Hasan Pasha's recall at his own request to Istanbul, he served a brief term as governor of Egypt between the early part of 1014/summer 1605 and 3 Dhu-l-Hijdja 1015/2 March 1607 (Târtikkî Nefîmî, i, 462). Shortly after his return to the capital, he died on 9 Radjâb 1016/3 October 1607 (ibid., ii, 23).

(R. MURPHY)

YOGYAKARTA, the name of a city in central Java, Indonesia, capital of the former sultanate and present-day Special District of Yogyakarta. Inhabitants (in 2002: ca. 448,760 city) or ca. 3,068,000 (whole district).

Together with the city and area of Surakarta [q.v.], it was formerly part of the kingdom of Mataram [q.v.] located in the southern parts of central Java. The first kraton (palace) of Mataram was built in 1582 in Kuţa Gêdé, a present suburb of Yogyakarta, by Kyai Gêdé Pamanahan. After his death in 1584 his son took over the kraton and military installations and was recognized by Sultan Adhîjava of Pajang as Sênopati-ing-Alaga, a military leader ("general"). After the ruler's death in 1587 Sênopati established and enlarged his new kingdom. He died in 1601. The greatest ruler among his descendants was Sultan Agung (r. 1613-45), who conquered most of central and eastern Java including Surabaya, and even some regions on other islands. Besides his deep roots in Javanese monistic traditions as susuhunan (originally a spiritual title), he also supported the spread of Islam to the interior of the island and obtained the title of sullân from a special mission from Mecca in 1641. Under his successors, however, the Islamic elements were extensively eliminated once more.

After three wars of succession and the move of the capital city to Kartasura (1677) and Surakarta (Solo, 1745), the kingdom of Mataram was divided in 1755; the Pangêran Mangkubumi III choose again
Yogyakarta as place for his kraton, thus reviving the traditions of Senopati and Sultan Agung. As Sultan Hamengku Buwono I (d. 1792) he became the founder of the dynasty of Nya Yogyakarta Hadiningrat. The situation of his kraton was just beside a sacred line reaching from Mt. Merapi the north to the mouths of the rivers Opek and Progo, the meeting place with the goddess of the South Sea Nyai Lara Kidul, thus underlining his central role in sacred geography, above all, in the cosmos. More than the sussuhan in Surakarta, the sultan of Yogyakarta gave dominance to Islamic symbols and precepts, combining them to the special brand of Javanese Islam: the normative expressions of Islam, in confession and Shari'a, as the vessel for mystical practice; divine decree (dukun, wali, wangsit, pulung) combined with the magical power (karakten, idik, from Sanskr. sakti) of the ruler, and thus the subordination of the religious scholar to the king (Woodward, 152). The tradition of Yogyakarta relates these teachings to Sunan Kali Jaga, one of the nine revered teachers of Islam (wali songo) in Java who was a particular adviser to Senopati.

The Java War (1825-30) broke out when Pangéran Diponegoro (1785-1855), son of Sultan Hamengku Buwono I, and a group of tribes, were treated in mystical practices, were taken to fight against the alliance of the court and the Dutch because of new administrative regulations. He was supported by the people, by members of the nobility and the Islamic ‘ulama* led by Kiyai Maja. After being treacherously taken prisoner, he was exiled to Makassar [q.e.], while Kiyai Maja was exiled to Menado.

In 1912 Yogyakarta witnessed the founding of the Muhammadiyah by K.H. Ahmad Dahlan as a modernist social and educational organisation which is at present the second largest Islamic organisation in Indonesia. The great popularity of Sultan Hamengku Buwono IX (1912-88, r. since 1939), a modernising reform of the village administration in 1946 in his district, and his close co-operation with the republican leaders after 1945, particularly 1946-9 when Yogyakarta was the interim capital of Indonesia because of the Dutch occupation of Jakarta, saved the special status of the district. Its role as a centre of academic learning (1946: founding of Gajah Mada University; 1959: Institute for Higher Islamic Learning, IAIN); as a modernising centre of the district. Its role as a centre of academic learning (1946: founding of Gajah Mada University; 1959: Institute for Higher Islamic Learning, IAIN); and others, including Protestant and Catholic seminaries) has been further developed by Sultan Hamengku Buwono X (b. 2 April 1946, succeeded his father in 1988).

Today, most of them live in the Republic of Türkmenistan (1926: ca. 100,000; contemporary state policy takes no cognisance of individual tribes). About 130,000 (in the 1960s, cf. Irons 1974) inhabit Iran (east of the Caspian sea, from the Gurgân plain north to the border of Türkmenistan), and between 125,000 and 400,000 (Adamec) live in northwestern Afghänistan (north of the Parápmisus range). The etymology of the name is unclear. The Yomut do not appear among the pre-Mongol Türkmen tribes listed by al-Raşîlî in his Duaín lughat al-Turk (tr. R. Dankoff and J. Kelly 1982-5), nor in Rashîd al-Dîn’s Qanûn (al-tawdrikh, Geschichte der Oğuzen, tr. K. Jahn, 1969, 46-7). Abu ‘l-Ghâzi Bahâdûr Khân [q.e.] mentions Yomut, a remote descendant of Salur, the son of the legendary Oghuz Khân’s son Tagh Khân (ShafÎra-yi Tarakhín, fol. 106b, ed. and Turkish tr. Z.K. Ölmex, 1996). Djikijew (1994) collected among the Yomut in the Türkmen SSR several genealogical tales of which show that the Yomut believe that they have the same ancestor Salur (Kazan Alps), one of the most famous heroes of Türkmen lore [see DEDE KORKUT], as the Teke, Ersari, Sarîk and Salor tribes [q.e.]. According to Bregel (1981), in the 16th century the Yomut, along with other tribal groups such as the Ersari, Salor, Sarîk and Teke, practised pastoral nomadism in the region between the Mangâlghâl peninsula and the Balkân mountains. Due to ecological factors and the pressure of the Kalmûks and Kazakhhs from the north, probably in the second half of the 17th century, some Yomut moved to the Gurgân plain while others migrated towards the oases of Khâzâr in the first half of the 18th century. Eventually they received permission from the khan to remain on the northwestern periphery of the Khâwân oasis.

In the Firdaws al-iskâl, a 19th century chronicle of Khâwân, written by Mûnîs and Ağah [q.e.], from the early 16th century onwards the Yomut are frequently mentioned among the tribal enemies whom several khans had to subdue at regular intervals. The Yomut also played a certain role in Khâwân history since, as auxiliaries, they often joined the Khân’s army, mostly in his fights with the Shî’i Persians in Khurâsân, but also in campaigns against Bûkhrâ. They were also prone to ally themselves with a Khan’s rebellious relatives or governors. Between 1178/1764-5 and 1184/1770-1, the Yomut even succeeded in capturing twice the city of Khâwân and also most other strongholds of the Khânate. After the Russians had reduced Khâwân to a protectorate (1873) and annexed the Türkmen territory from Mangâlghâl down to the Persian border (1881-4), the Yomut incursions continued across the Russian-Persian border but on a much reduced scale.

From the early 19th to the second half of the 20th century, all the Gurgân (Astarâbâd) Yomut tribes had either predominantly pastoral (çaman) or predominantly agricultural (çamor) members producing for monetary economy. Their most famous product were carpets. Up to the 1950s, they were also able to preserve slave and livestock raiding as an additional source of income, since the Iranian government exerced firmer political and fiscal control only in the 1930s and, again, from the middle of the century onwards (Irons 1994).

[BARBARA KELLNER-HENKELE]

YURTÇI (tr.) from yurt "tribal territory, camp site", a general term in the Türkic languages,
YURTÇI — YUSUF b. AL-HASAN (I) 839

cf. Turkmen yurt — yuvurt, Karakolpak, Kazak and Kırghız zurt; see KHAJAVA. iv, to whose Bibl. should be added G. Doerfer, Türksche und mongolische Elemente im Neupersischen, Wiesbaden 1963-70, iv, 212-16 no. 1914, Pers. yurtâfi, the salaried officer responsible for choosing camp sites for the army or court, organising them, and supervising their use.

Džuwâyi's use of yurt for the appanages granted by Cинgиз Kân to his brother, sons and grandsons demonstrates that yurt then included both summer and winter quarters, the whole territory of an ulus (i, 31). Raşıhi al-Dîn uses it in the same way, saying, for example, that "the dwelling and territories, makâm wa yurt-hâ" of Cîngiz Kân were next to those of the Ong Kân (Berezin, Cîngiçe, text, i, 118). The yurtâ's duties are set out by Nakhêwânî [q.v.] in 1360, in two specimen charters (i, 64-6); his appointment is to be recognised by all, from the viziers downwards through commanders of ten thousands and thousands to the tribes themselves. He alone is to designate camp sites, yurt-hâ, in a pleasant district, giving priority to the ruler, and then to his counsellors and lords wherever the camps, uthlû-hâ, are to be pitched in winter and summer quarters, mawâdî-i yurtâ wa kalâm-i dâr-i uthlû-i dîn. In the case of special local population's separate needs: they should be far from the arable land of village peasants, or troops of horse-herders, or those settled in oha, or nomads; the site should not be irksome, to the detriment of people's land, and for this reason nothing should be demanded of anyone. No-one should exceed the camp site which he had designated for them. It is emphasised that the yurtâ was selected on the basis of his long experience, and knowledge of where camp sites with plenty of water and grazing were to be found in all the districts for summer and winter quarters, and of all the communication routes used by the camp. In whatever direction a royal expedition was undertaken, he was to go in the vanguard and establish the site for royal use, and those for the principal members of the court, so that the troops on arrival at the stage [see MANZIL] should know exactly where to encamp. It is mentioned specifically that these must be far from the courses of rivers which might flood. The office was thus a highly responsible one, in which the experience and competence to be found in those living a largely nomadic life were integrated with a system of state finance and administration. Besides the yurtâ, three other officials were particularly responsible for the management of the camp: the farâahâ, or tent-pitcher, the bulâkhâ-nil or keeper of lost property, and the sâbûnâ or camel-cleer. The superintendent of the tent department, müdîr-i farâahâ-i dârâna, was accountable for the supply and maintenance of the royal tents. Such camps had to operate under a wide variety of conditions, which must have strained the vigilance of these officials. Though at times the movement from recognised summer quarters to winter quarters was regular enough, the use of at least seven different summer sites by Cîhâzân in the course of his nine-year reign shows the extent to which movement was possible in the north of Persia alone. Some sites were preferred for ceremonial purposes, most probably because of their proximity to Tabûr; a grand assembly was held at Kârbâhsh in 1295, and a great public festival of 1302 to the meadows at Uqût. Some of these sites at least were registered as royal domains, indiç: Lâr, for example, belonged to Arghûtun.

YUSUF b. AL-HASAN (I), MAWŁAY, sultan of Morocco, r. 1330-46/1912-27.

He was born in 1298/1880-1 of a Circassian mother, Amina. His early life in the royal palace remains obscure. He received education from private tutors in a traditional curriculum and did not emerge into public life until 1320-1/1912 when his brother, sultan 'Abîd al-Hâfiż (r. 1325-30/1908-12) appointed him as his khalifa (vice regent) at Fez. Later that year, he was named sultan (19 Shâbân 1330/12 August 1912) after his brother was forced to abdicate by Marshal Lyautey, Resident-General and principal architect of the French Protectorate then being established in Morocco.

Digulged, pious, intelligent, affable, possessed of no political experiences or ambitions, and apparently friendly toward France, Mawâlî Yûsuf seemed an ideal choice for an office meant by the French Protectorate authorities to serve as a legitimizing symbol and façade for their governance in the country. Under Lyautey's tutelage (1912-25) he would serve this role well: lending his prestige as an 'Alawi qâdir to French military campaigns against Moroccan resistance to the imposition of French and Spanish rule, and generally remaining publicly co-operative and uncritical of France and its Protectorate policies. He was routinely associated with the inauguration of a wide range of Protectorate initiatives in the areas of government, finance, administration, the judiciary, the education system, infrastructure and economic development.

At the same time, he gradually emerged as a more active and interested participant in the creation of a revitalised sultanate and government (makâm [q.v.]) that linked traditional forms—embodied especially in the person and reign of his father Mawâlî al-Hâsân (r. 1290-1311/1873-94)—and modern innovation represented and advocated by France. He took an active interest in the reform and encouragement of Islamic education, and gave generous royal patronage to the repair and construction of mosques, madrasas and other public buildings. He effectively opposed French efforts to reduce or replace Sharfûa courts in the country's Berber-speaking areas, and was an increasingly vocal opponent of the Protectorate's ongoing expropriation of rural and urban property. Unknown and unpopular at first, his travels throughout the country, extensive publicity and increasing association with the development of a modern Morocco that respected and preserved religious and cultural traditions, gained for him broadening popular acceptance. Recent scholarship (e.g. Rivet) shows him and his relationship to the French Protectorate to be much more complex than earlier interpretations have allowed. Though never enjoying real power, the sultanate during Mawâlî Yusuf's reign became more than a mere façade lending itself uncritically and unwillingly to the policies of the Protectorate authorities. Over the course of time, he took on substance sufficient to begin a transition from the status of a perplexed and diffident pupil to that of respected mentor, perhaps, in some ways, even partner, in the governance of the sultanate.
Yûsuf died on 22 Dûmâdâ I 1346/17 November 1927 from the effects of uraemia. He was succeeded by his third son Muhammad (V) [q.v.].

Yûzbâshî (r.), lit. “head of a hundred [men]”, a term used in later Ottoman and now modern Turkish armies for the rank of captain, and in the form yûzbâşî in modern Arab armies for this same rank. It was further used in Muslim Indian minting practice for the engraver of coin dies; see Dâr al-dârb, at Vol. II, 121a.

Z

AL-ZAMAKHSHÂRÎ, ÂBU 'L-KÂSIM MAHMUD B. 'UMAR.

1. Contributions in the fields of theology, exegesis, hadîth and adâb.

His father, al-imâm of the local mosque in Zamakhshar, taught him the Kur'an, but since he lacked the means to support the further education of his son, he wanted him to become a tailor. Yielding to his son’s wishes, however, he brought him to the capital of Khârâzam, Ïjûrîdânîyya, which henceforth became his permanent home and where he first earned his sustenance by copying for a wealthy patron. His ambition was a high secretarial career in government. For his literary education, he studied first with Abû 'Ali al-'Hasân b. al-Muzaffar al-Naysabûrî (the death date of 442/1050 commonly given for him is misstaken, since his son 'Umar died only in 536/1142), the leading man of letters in Khârâzam at the time, and after the arrival there of Abû Mu'âzjar Mahmûd b. Qâdir al-Dabîî al-Isfahânî (d. 507/1114), with the latter, who became his most influential teacher and generous patron. Al-Zamakhsharî also visited Bukhârâ to study and hear hadîth. On his way there he fell from his mount and broke a leg, which had to be amputated and replaced by a wooden substitute.

In his ambition for a high position in government, he first addressed panegyric poems to the famous 'Amîr al-Mulûk Shâh Muhammad b. Hamza b. Wahhâs, a Mu'tazâlî man of letters and learning. A close friendship developed between the two, and al-Zamakhsharî stayed with the amîr for two years as a greatly honoured guest, during which he also visited parts of Arabia and Yemen. Then he returned to Ïjûrîdânîyya, where he was honoured in this period by the Khârâzamshâhs Muhammad b. Anûshkânîn (d. 521/1127) and his son Asîz. A decade later, he again set out for Mecca and stayed for an extended time in Damascus, where he composed eulogies for the Bûrîr ruler Tâdî al-Mulûk Tughkânî (d. 526/1131) and his son Shams al-Mulûk. He reached Mecca for the Pilgrimage in 526/1132 and stayed there for three years, again hospitably received by Ibn Wahhâs, who encouraged him to assemble his diwân of poetry and to compose his Kur'an commentary al-khârijî. Al-Zamakhsharî completed the latter after two years in 528/1134. In 533/1138 he made a further trip to Mecca and passed through Baghîdâd, where he visited Abû Manşîr Mawhûb b. al-Djâwâlîîkî [q.v.], a famous man of letters, and received his ið̱âba. He died in Ïjûrîdânîyya on 9 Dhu 'l-Hijja 538/14 June 1144 and was buried near the town. On account of his prolonged stay in Mecca—he lived there for five years and performed the Pilgrimage seven times according to his own testimony—he claimed the title Ïdar Allâh, under which he remained widely known. In his home country he was commonly referred to as Fâkhî Khârâzam, “the Glory of Khârâzam”.

Although of Persian origin, al-Zamakhsharî was most basically motivated in his scholarship to serve and promote the Arabic language. Arabic was in his view the most perfect language which God had preferred to all languages as He preferred the Kur'an and Islam over all scripture and religions (see 1., at Vol. XI, 432b-434a). In the work on which his fame primarily rests, his Khârijî commentary al-khârijî, al-Zamakhsharî sought to lead thereby a position, and bowed to study and learn the ascetic life devoted to religion and teaching. After his recovery, he visited Baghîdâd where he engaged in debates and studies with scholars. He assembled with the Hanafî jurist Ahmad b. 'Ali al-Dâmghânî and the grammarian al-Shârîf Hîbat Allâh b. al-Shâdîqî. As he made the Pilgrimage in that year, he was welcomed by the amîr of Mecca, the Sharîf 'Abî b. 'Isa b. Hamza b. Wahhâs, a Mu'tazâlî man of letters and learning. A close friendship developed between the two, and al-Zamakhsharî stayed with the amîr for two years as a greatly honoured guest, during which he also visited parts of Arabia and Yemen. Then he returned to Ïjûrîdânîyya, where he was honoured in this period by the Khârâzamshâhs Muhammad b. Anûshkânîn (d. 521/1127) and his son Asîz. A decade later, he again set out for Mecca and stayed for an extended time in Damascus, where he composed eulogies for the Bûrîr ruler Tâdî al-Mulûk Tughkânî (d. 526/1131) and his son Shams al-Mulûk. He reached Mecca for the Pilgrimage in 526/1132 and stayed there for three years, again hospitably received by Ibn Wahhâs, who encouraged him to assemble his diwân of poetry and to compose his Kur'an commentary al-khârijî. Al-Zamakhsharî completed the latter after two years in 528/1134. In 533/1138 he made a further trip to Mecca and passed through Baghîdâd, where he visited Abû Manşîr Mawhûb b. al-Djâwâlîîkî [q.v.], a famous man of letters, and received his ið̱âba. He died in Ïjûrîdânîyya on 9 Dhu 'l-Hijja 538/14 June 1144 and was buried near the town. On account of his prolonged stay in Mecca—he lived there for five years and performed the Pilgrimage seven times according to his own testimony—he claimed the title Ïdar Allâh, under which he remained widely known. In his home country he was commonly referred to as Fâkhî Khârâzam, “the Glory of Khârâzam”.

Although of Persian origin, al-Zamakhsharî was most basically motivated in his scholarship to serve and promote the Arabic language. Arabic was in his view the most perfect language which God had preferred to all languages as He preferred the Kur'an and Islam over all scripture and religions (see 1., at Vol. XI, 432b-434a). In the work on which his fame primarily rests, his Khârijî commentary al-khârijî, al-Zamakhsharî sought to lead thereby a position, and bowed to study and learn the ascetic life devoted to religion and teaching. After his recovery, he visited Baghîdâd where he engaged in debates and studies with scholars. He assembled with the Hanafî jurist Ahmad b. 'Ali al-Dâmghânî and the grammarian al-Shârîf Hîbat Allâh b. al-Shâdîqî. As
cism among traditionalist Sunnis. While some of these interpretations were adopted from earlier Mu'tazilite exegeses such as Abū Bakr al-As'āmī and al-Rumānī, he also frequently presented views of his own. In concord with his Mu'tazilī outlook, he emphasised ethical and ascetic aspects and denounced Shi'i antinomian tendencies and belief in miracles of saints, Shu'ubī and the Umayyad caliphs. In legal questions, he occasionally backed al-Shāfī'ī and other positions against his own Hanafi school. The popularity of his work was in the eastern Muslim world not seriously impaired by the attempt of al-Bayḍāwī [q.v.] to furnish an ortho-
dox counterpart to it in his Anwaḍ al-tanzīl. Opposition to his Mu'tazilī tendency was stronger in the Muslim West, where the Mālikī Ahmad b. Muhammad b. al-
Manṣūrī [d. 683/1284] wrote a refutation of his Mu'tazilī interpretations entitled K. al-baṣîf min al-
Kāshīf, which is sometimes printed on the margins of the Kāshīf.

In Mu'tazilī theology, al-Zamakhshārī was familiar with the school doctrine of Kāfī ʿAbd al-Dājjār through the literary transmission of al-Ḥākim al-Dājjāshī [q.v.], which he received from his teacher Ahmad b. Muhammad b. Iṣḥāq al-Khāṣṣāzī. In addition, he studied the school doctrine of Abu al-
Husayn al-Baṣīrī [q.v.] which was first introduced into Kī'am by his teacher Abu Muṣṭafī al-Iṣfahānī, with his colleague Rukn al-Dīn Ibn al-Malāḥimī. In his Mu'tazilī creed al-Munāhib fi waṣīl al-dīn he appears to furnish an ortho-
dox interpretation of K. al-Kashf, which is sometimes printed on the margins of his Kāshīf. His poetry, collected into his Diwan, which is sometimes printed on the margins of Kāshīf, is a treatise on prosody.

ZANDIKAN [see ZINDIKAN]. AL-ZANDJANI, ʿIZZ AL-DIN ʿABD AL-WAḤAB b. ʿAbraham b. ʿAbd al-Wahhāb al-Khārāfī (often given as: al-Khazrā REFER al-ṣāyīr al-Shaṭḥī, Abu ʿl-Maṣūmī (fl. in the middle of the 7th/13th century), grammarian and adīb, who ca. 625/1228 wrote a celebrated treatise on morphology (saṣīf, Maṣūmī ʿal-tarṣīf or (Kīāb) al-Tarṣīf al-Īzī, extant in numerous mss. and the subject of many commentaries, the most popular one being that of al-Tarṣīfī (q.v.).

The Kīāb al-Tarṣīf is the third grammatical treatise (after Ibn al-Hāḍīrīfī al-Kāfīya and the Aḵtānimūya) to be made available in the West, in an edition and two Latin translations, one literal and one idiomatic, by the director of the Medici press, J.B. Raymundus (Giovanni Battista Raimondi), Kitāb al-Tarṣīf taṣfīf al-
Shāykh al-Īmām, Liber Tarṣīfī compositio est Senis Alemami, Rome 1610 (see Chr. F. Schirmer, Bibliotheca arabica, Halle 1811, 25-7, no. 47). The name of the author sometimes appears as al-Īzī (see e.g. J. Fuchs, De arabischen Studien in Europa, Leipzig 1955, 56); this seems to have arisen from a careless rendition of the title al-Tarṣīf al-Īzī rather than al-Tarṣīf al-Izī (the nisba refers to the author's nickname ʿIzī al-Dīn). In addition to other works in the fields of, inter alia, grammar and lexicography, al-Zandjānī wrote works also in adīb. One is an anthology of poetic snippets (not entire poems) with the title al-Madīrīn bīṭīʿ aṭla ḥāṣa abīl ʿabī. It deals with the following themes: books, praise, yearning, love, congratulations, dirges, complaints and invectives. An extensive commentary on it was written by ʿUbayd Allāh b. ʿAbd al-Kāfī b. ʿAbd al-Madīdī al-
Ubaydī, who finished it in 724/1324. The other book, with the title K. Miṣrī al-muẓaffīr wa ʿlum al-maṣūfīr, deals with prosody and rhetoric. It is divided into three parts: metrics (ʿlum al-ṣāyīr), rhyme taxonomy (ʿlum al-adīb), and rhetoric (ʿlum al-badī). This arrangement of the poetic disciplines imitates al-Khāṣṣāzī al-Kāfī, Fi ṭafsīr al-Izī, which likewise contains an unexpected section on al-badī\’ (ed. al-Hassānī Hāsyann ʿAbd Allāh, Cairo n.d., 170-204). Interestingly, one of his sources is the Haddātik al-ṣāyīr fi hadātik al-ṣāyīr, written in Persian by Raṣūlī al-Dīn Waṭwāt [q.v.]. Knowledge of Persian on the part of al-Zandjānī is also shown by a line of Persian poetry in al-Madārīn

AL-ZAMAKHSHARĪ — AL-ZANDJANI 841

One is an anthology of poetic snippets (not entire poems) with the title al-Madīrīn bīṭīʿ aṭla ḥāṣa abīl ʿabī. It deals with the following themes: books, praise, yearning, love, congratulations, dirges, complaints and invectives. An extensive commentary on it was written by ʿUbayd Allāh b. ʿAbd al-Kāfī b. ʿAbd al-Madīdī al-
Ubaydī, who finished it in 724/1324. The other book, with the title K. Miṣrī al-muẓaffīr wa ʿlum al-maṣūfīr, deals with prosody and rhetoric. It is divided into three parts: metrics (ʿlum al-ṣāyīr), rhyme taxonomy (ʿlum al-adīb), and rhetoric (ʿlum al-badī). 3. Usage in the dialects of the Muslim

About 14 of al-Zarkashi's works are available in

lists 22 works, all in existence.

About 14 of al-Zarkashi's works are available in

published form today, displaying the broad spectrum of

his interests. A jurist of the school of al-Shafii, al-Zarkashi

were the first all-encompassing work of its type, only
to be eclipsed a century later by al-Suyuti's al-Ibân fi

'ulûm al-Kur'an, even though (or perhaps because)
al-Suyuti benefited from al-Zarkashi's work in

providing terms of providing the structure and content of his own

work. In a total of 47 chapters in al-Barhân, al-Zarkashi

brings together every major topic related to understanding

the Kur'an, devoting what is essentially a mono-

graph to each one; he mentions previous authors who

have treated each subject and compares the opinions

of the traditionists, the theologians, the exegetes

and the grammarians on many of the topics. Al-Suyûtî

also created his own work al-Durar al-muntathara fi l-\nhadîth l-mughrabah (Beirut 1995) on the basis of al-Zarkashi's

now lost treatise al-Tadhkira fi l-\nhadîth l-mughrabah.

Däwâd, Shukr al-muâsirat, Cairo 1392, ii, 157-8 (no. 504); Ibn Hadjâr, al-Durar al-\nkadima fi a'ydn l-madim (Cairo 1333); Ibn Khaldûn, Hayyârîdâb 1349-50, iii, 397-8
(no. 1099); other sources cited in G.C. Anawati, Textes arabes anciens édités en Égypte au cours des années 1956 à 1999, in MIDEO, xxiv (2000), 223-7, entry no. 18

was “one of a pair or couple” (see 1., at Vol. XI, 464b). Its dual in a phrase such as zawidi min al-hamām meant “a pair of pigeons” (i.e. one male, one female). Zawidi also naturally came to mean “spouse, female). Hamam meant “a pair of pigeons” (i.e. one male, one female). As a consequence of which came to designate specifically “husband”. In Modern Standard Arabic, as well as the meaning “husband”, zawidi retains the original Classical meaning “one of a pair”, but is also now used to mean “pair”, as in zawidi min al-hiddī “a pair of shoes”.

In the major (urban) Arabic dialects of the eastern Mediterranean (Cairo, Damascus, Jerusalem, Beirut), the first and third radicals of zawid became metathesised (and modified phonetically in well-known ways), so that one typically hears gātī (Cairo, gātī (Jerusalem, Damascus, Beirut) for both the “pair” and “husband” meanings, but the non-metathesised forms for the feminine form, e.g. ǧātī (Cairo), ǧātī (Damascus) “wife”. In rural areas, there is a considerable amount of variation between metathesised and non-metathesised forms, as there is in the phonetic realisation of the two consonants. Thus in parts of the Nile valley and Delta, zaawī, ǧātī and even gātī “two, (the) pair” both may be heard, as in gātī `udī “two hours”, gātī `anbadar “two months”, iǧ-gāz ǧātī bād “the pair/the two are alike”, ham iz-zaawī “both of them”. The use of gātī, etc. for “two” is reminiscent of the general Maghribi form ǧētī “two” (see 2., at Vol. XI, 464b).

In ‘Ir ‘āq and Arabia, the non-metathesised forms zaqī “pair”; “husband” and ǧārī “wife” are the normal realisations, though these are koine terms when used to refer to marital partners (which in “pure” dialect are usually words whose basic meaning is “man” and “woman”, e.g. Bahrayn ǧawwūdī (jewwūdī and marī). In some derivatives from this root, metathesised forms are also heard among less educated speakers, e.g. ǧawwūd “marriage” (Gulf States), instead of zaqūd and jāwūd “to marry” (Na’dhī), instead of zaqūd, jāwūd.

It is interesting to speculate on the reasons for the metathesis so widely encountered in this root. One possible reason may be a meaning coalescence in the dialects, because of a similarity of sound, of the originally separate verbs zaqūd “marry, (legitimately) couple” (< zaq-ū-d) and ǧawwūd “to deem or make permissible” (< ǧae-w-ar-d—a process which has been referred to by Voigt as Wurzelangleichung. There is already a similarity in meaning between them, in that an imām who “marries” (jīzawwūd) a man to a woman thereby makes her “permissible” (yūjīgawaawūdī) to him. From this coalescence of sound and meaning may have arisen a secondary fusion of other words from the same root, such as we see in the variation between the modern dialectal variants zaqūd and gawa, which were separate words in Classical Arabic.

who were incorporated into the regular army. He was received in princely style and was awarded on this occasion the title of vizier. On his return to the Maghrib, Ziri seems to have demonstrated some independence towards the Amrid master of Cordova, founding in the north of Morocco a principality with Fas as its capital. Seeking the support of the Ifrаниd, al-Mansur made overtures to Yaddu b. Ya'allâ who accepted the latter rejected, moving openly into disidence. The reaction of al-Mansur was immediate: Ibn 'Abd al-Wadid received the order to call upon Ziri b. 'Atiyya to subdue Yaddu. On 18 Muḥarram 381/6 April 991, on the banks of the Wadi Moulouya, an encounter took place in the course of which Yaddu b. Ya'allâ crushed the Cordovan army and the Maghrawi reinforcements.

For Umayyad policy in the Maghrib, this constituted a serious reverse, temporally alleviated by the unexpected support of a Sanhadjî prince of Ifriqiya. In fact, the paternal uncle of the Zirid king al-Mansûr b. Buluggûn, Abu 'l-Bâhâr b. Ziri, rebelled against the Kayrawân government and declared himself for that of Cordova. According to certain authors, this allegiance was short-lived and Ziri b. 'Atiyya attacked Abu 'l-Bâhâr who took refuge first at Čeuta, in Şəswāl 382/end of 992, and then, after being rebuffed, went to Ifriqiya; Ziri took all his domains and announced his victory, in 381/391, to al-Mansûr, who invited him to pay a second visit. Arriving at Cordova in 382/992, Ziri brought numerous presents with him on this occasion, as recorded by the sources (although they are sometimes attributed to a diplomatic mission sent by Ziri in 384/November 994): 200 rachesses, some 20 of them with a documented pedigree, camels, weapons and shields of antelope hide (dâm), a parrot, a gigantic panther and a giraffe, which died en route and was stuffed, all these last for the menagerie of the Caliph's palace. On his return to the Maghrib, Ziri learned that the Ifrani Yaddu b. Ya'allâ had taken possession of Fas. After a bloody battle, Ziri regained his throne and sent Yaddu's head to al-Mansûr.

No doubt finding the location of Fas too remote in relation to the assemblage of regions which recognised his authority, in 383/994 Ziri founded the town of Oujda (Waǧdâ [q.v.], on the border between Morocco and what is now Algeria, with the aim of establishing his court and his household garrison there. Subsequently, relations with Cordova deteriorated. The precise reasons for the conflict between Ziri and al-Mansûr are not known, but it is possible that Ziri had emerged as the champion of Hishâm II in his claims against al-Mansûr: in 385/998, his battle cry (diyar) was yâ Hîshâm yâ Mansûr, while that of the 'Amridis was only yâ Mansûr (Lévi-Provençal, Fragments, 29). In 386/997, al-Mansûr sent troops to the Maghrib to intimidate Ziri, who affirmed his independence without going so far as to repudiate overtly his oath of fealty to Hishâm II. In Şəswâl 387/October 997, al-Mansûr deprived him of his title of vizier and sent against him one of his best generals, the former slave Wâdih, who commanded the middle march of al-Andalus (al-thaghr al-awsaf). In Tangier, the latter received the allegiance of numerous local chiefs who came to rally beneath his banner. Then he set out with all these forces to attack Ziri, who had taken up positions in a mountainous region of northern Morocco, the Bahlal Habîb (Ibn Khaļdûn, Histoire des Berbères, iii, 244).

As a first step, Wâdih took possession of Arcila on the Atlantic and of Nakûr on the Mediterranean. In Radjâb 388/July 998, he succeeded in surprising the bulk of Ziri's forces in a mountain pass and inflicted a severe defeat on the Maghrâwâ. Some weeks later, wanting to reap the rewards of victory, al-Mansûr sent his own son 'Abd al-Malik with fresh reinforcements. 'Abd al-Malik joined forces with Wâdih and they succeeded in capturing Ziri. The second encounter, which took place on 19 Shawâl 388/13 October 998, was at first indecisive. But Ziri's army, on hearing that its leader had been severely wounded, disintegrated; forced into flight, Ziri abandoned his camp and his wealth to the Cordovans.

Having tried in vain to take refuge in Fas, where his wives and children were, Ziri took the Sahara road. In fact, the town refused to open its gates to him and it was occupied by 'Abd al-Malik. Having barely recovered from his injuries, Ziri refrained from attempting anything in the north of Morocco, which was strongly held by the Umayyad army. But taking advantage of the death of Ziri king al-Mansûr b. Buluggûn and the quarrels between the latter's son and successor, Badîs, and his great-uncle Maksan and Zawt, Ziri b. 'Atiyya laid siege to Tāhâr, which he took in 388/998. Then he successively conquered the Sanhadjî centres of Tlemecn, Chelif, Tînes and al-Mâthâl, with the help of a rebellion instigated in the name of the Umayyad caliph Hîshâm II and his bâghâb al-Mansûr, whose pardon he sought, asking to have his former prerogatives reinstated. His appeal was accepted.

In 391/1001, Ziri laid siege to Ağhûr [q.v.], the capital of the Sanhadjî, but his state of health obliged him to raise the siege after a month, and he died shortly afterwards. On the death of Ziri, his son, al-Mu'izz, took his place at the head of the federation of Maghrâwâ, and declared himself the loyal vassal of Cordova, continuing the struggle against the Sanhadjî until the death of al-Mansûr. A little later, al-Mu'izz asked the new bâghâb, 'Abd al-Malik, to award him an official investiture. A letter of 'Abd al-Malik dated Dhu 'l-Ka'da 396/August 1006, the text of which has been preserved (Ibn Khaļdûn, Berbères, iii, 248-50, and al-Warrâk, Fragments historiques sur les Berbères, 40-1) is addressed to the inhabitants of Fas, inviting them to recognise al-Mu'izz b. 'Atiyya as governor of the whole Maghrib, with the exception of the territory of Oujda, the personal fief of Wanûdûn b. Khâzûrûn b. Fâlûûl. The rest of the reign of al-Mu'izz was turbulent, but on his death in 417/1026, the general revolt of al-Andalus smashed once and for all the ties which for almost a century had linked the Zanâta North African bloc with the Umayyads of Cordova. The fortunes of the Zanâta [q.v.] declined in the Maghrib, before the increasing power of the Almoravids, who relied for support on the Sanhadjî tribes.
